Migrating SAP® workloads to the cloud is more complex than moving general-purpose workloads, with challenges like lengthy timelines, high costs, and integration across SAP and non-SAP applications. To address these issues, IBM is launching an investment program customized for RISE with SAP on IBM Power Virtual Server. This program includes support for early-stage technical assessments by SIs or partners, migration execution, and moving the surrounding non-RISE (SAP and non-SAP) workloads to cloud.

Additionally, RISE with SAP on IBM Power Virtual Server customers and IBM Business Partners will also have access to a new *IBM Transformation Suite for SAP Applications* to help accelerate the migration to SAP S/4HANA® and RISE with SAP. The Transformation Suite bundles software and services from IBM and industry-leading suppliers to automate the technical assessment of the current SAP landscape, data and code migration, code analysis and automated testing.

Furthermore, to help clients drive the most value from their existing Power investments, the program also includes a buyback offer for eligible Power servers running SAP landscape on-premises.

Assess

SI and reseller partners can leverage IBM investments to perform a technical assessment, which can include discovery, recommendation of a migration strategy, and conceptual architecture to support a RISE business case and timeline.

Clients and partners can also bundle the industry-leading assessment software and services through the *IBM Transformation Suite for SAP Applications*.

Migrate

SIs, partners, and clients can use the IBM investment program to offset the costs of migrating to RISE with SAP on IBM Power Virtual Server. Transformation Suite can also be leveraged to streamline and accelerate the migration process.

Expand

As clients transform to RISE with SAP, they will continue to operate SAP and non-SAP components critical to their ERP landscape. The IBM Investment Program provides financial support for clients to accelerate cloud migration, expand their landscape, and build cloud workloads around SAP using IaaS, PaaS, and SaaS products from IBM Cloud, including scaling AI-powered applications on watsonx.

IBM recognizes the significant investments that clients have made in running their SAP landscape on IBM Power servers and the need for additional infrastructure during their transformation to RISE with SAP. To support this, the *IBM Power investment protection program* offers [buyback of eligible IBM Power10 and IBM Power11 processor-based servers](#) in good and working condition, and consideration for other Power servers and OEM equipment running SAP on a case-by-case basis.

With IBM's investment program for RISE with SAP on Power Virtual Server, migrating SAP workloads to the cloud becomes faster, more cost-effective, and less complex, ensuring a seamless transformation to RISE with SAP.

Ready to accelerate your SAP transformation? Contact IBM today to learn how our tailored investment program can protect your investments and modernize your SAP landscape.
