

InfoSphere Optim Performance Manager for DB2 for Linux, UNIX, and Windows

Version 5.3.1

Quick Start Guide

This guide describes a quick and easy way to install the product.

National Language Version: To obtain the Quick Start Guide in other languages, print the language-specific PDF from the installation media.

Product overview

IBM® InfoSphere® Optim™ Performance Manager for DB2® for Linux, UNIX, and Windows is a tool for database administrators (DBAs) to use to monitor performance indicators and identify and resolve performance problems in DB2 databases.

1 Step 1: Access the software and documentation

If you download your product, follow these instructions:

http://www.ibm.com/support/knowledgecenter/SS9PE5_5.3.1/com.ibm.datatools.perfmgmt.installconfig.doc/pm_download_images.html

After you download all of the necessary files, follow the instructions in the online documentation to extract the files to a temporary directory on your computer.

This product offering includes the following components:

- The InfoSphere Optim Performance Manager server software
- The InfoSphere Optim Performance Manager License Activation Kit
- A restricted-use copy of DB2 for Linux, UNIX, and Windows that InfoSphere Optim Performance Manager can use as its data repository.
- The optional DB2 Performance Expert (PE) legacy client software

2 Step 2: Evaluate the hardware and system configuration

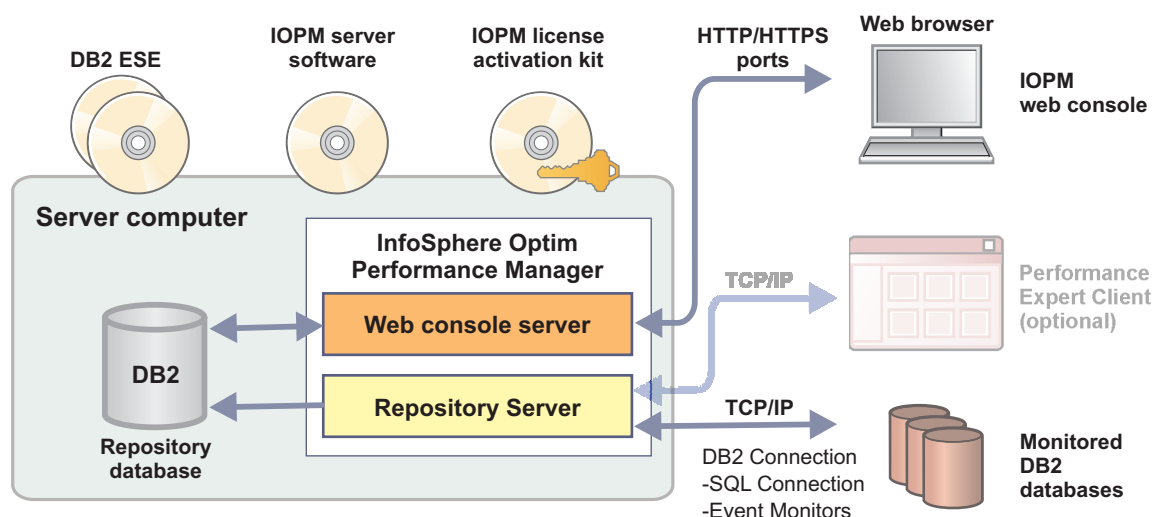

Database monitoring requires careful resource planning. Before you install or update the product, read the planning information in the online documentation:

http://www.ibm.com/support/knowledgecenter/SS9PE5_5.3.1/com.ibm.datatools.perfmgmt.installconfig.doc/pm_preparing_install.html

3 Step 3: Review the installation architecture

The following diagram illustrates the architecture of the product and provides a basis for planning your installation.

For information about some alternative architectures, see:

http://www.ibm.com/support/knowledgecenter/SS9PE5_5.3.1/com.ibm.datatools.perfmgmt.installconfig.doc/architectures.html

4 Step 4: Optional: Use the installation planner to gather all required information

Before you begin your installation or update, use the InfoSphere Optim Performance Manager installation planner to gather the information that you will need to enter during installation and configuration. The planner is available on the Quick Start Guide CD or in the online documentation:

http://www.ibm.com/support/knowledgecenter/SS9PE5_5.3.1/com.ibm.datatools.perfmgmt.installconfig.doc/install_planner.html

5 Step 5: Install or prepare the instance for the DB2 repository database

InfoSphere Optim Performance Manager requires a supported version of DB2 to use as its repository database. If you do not have a supported version of DB2 already installed, you can install and use the restricted-use license of IBM DB2 Enterprise Server Edition (DB2 ESE) that is provided with InfoSphere Optim Performance Manager.

If you have the IBM DB2 Storage Optimization Feature license, and this feature is entitled to be used with InfoSphere Optim Performance Manager, then apply the IBM DB2 Storage Optimization Feature license to the DB2 installation before installing InfoSphere Optim Performance Manager.

If you want to use an existing DB2 instance for the repository database, ensure that the instance is running before you start the InfoSphere Optim Performance Manager server installation. Check the system requirements for information about supported DB2 versions.

6 Step 6: Create an administrative user or group for the DB2 instance

Create an administrative user or group that will be used to log on to the web console for the first time. This user must have SYSADM authority on the DB2 instance for the repository database. DBADM rights will be granted to this user account during installation.

For information about user authentication, see:

http://www.ibm.com/support/knowledgecenter/SS9PE5_5.3.1/com.ibm.datatools.perfmgmt.installconfig.doc/understanding_user_access_auth_methods.html

7 Step 7: Install or update the InfoSphere Optim Performance Manager server software

Before you start a new installation, ensure that you extracted the license file. See Step 1. If you are performing an update installation, you do not need to reapply the license.

Run the `IOPM.server.version.install-on-operatingsystem` file to install or update to the InfoSphere Optim Performance Manager V5.3.1 server software for your selected platform. You can append `-i console` to the command to run the installation program in console mode.

For example: `IOPM.server.v5.3.1.install-on-win64.exe`

For more information about this step, including information about how to do a silent installation, see:

http://www.ibm.com/support/knowledgecenter/SS9PE5_5.3.1/com.ibm.datatools.perfmgmt.installconfig.doc/pm_install_modes.html

8 Step 8: Configure InfoSphere Optim Performance Manager and set up your system for monitoring

After you run the installation program, you need to do a few additional tasks to configure your environment and set up your system for monitoring.

The following tasks configure your environment and set up your system for monitoring:

1. Open the InfoSphere Optim Performance Manager web console from the Start menu (Windows only) or by navigating in a browser to the InfoSphere Optim Performance Manager web console URL that was provided when the server installation completed, for example: `http://hostname:55000/optimdatatools/console`.
Enter the user ID and password that you specified or created during the InfoSphere Optim Performance Manager server installation.
2. Click **Add and configure a database for monitoring** from the Task Launcher to add a connection for the DB2 database that you want InfoSphere Optim Performance Manager to monitor.
3. In the wizard that opens, create the connection to the database. Then configure the database for monitoring.
4. View performance data. After issuing a few queries to the newly added data source, select the **Open** menu then select **Health Summary** or one of the inflight dashboards to view performance data.

If you want to monitor DB2 v9.7 or lower databases, you can install and configure the legacy DB2 Performance Expert Client or the CIM server.

For information about how to install and configure these optional components, see:

[http://www.ibm.com/support/knowledgecenter/SS9PE5_5.3.1/
com.ibm.datatools.perfmgmt.installconfig.doc/installing_configuring_components.html](http://www.ibm.com/support/knowledgecenter/SS9PE5_5.3.1/com.ibm.datatools.perfmgmt.installconfig.doc/installing_configuring_components.html)
