App modernization: Why do anything? and why IBM?

Business pressures demand faster time to market and app modernization. Your existing estate determines the best approach to modernization. Containers, Kubernetes, and microservices are proven to deliver speed and simplicity, and are being adopted rapidly. IBM can make this easy for you. Leverage IBM’s unique approach and capabilities to accelerate your application modernization journey.

MODERNIZATION PROVIDES IMMEDIATE BENEFITS

**Accelerate digital transformation.** App modernization is driven by the need to transform business to build new capabilities and deliver them quickly.

**Change the developer experience.** Create and deliver new applications and services quickly through adoption of cloud native and containerization.

**Accelerate Delivery.** Adopt DevOps best practices to drive a culture of automation and transformation.

**Deploy enterprise applications on hybrid cloud platforms.** Transform operations to multicloud environments automation and transformation.

---

What’s inside?

This field guide provides a high-level overview of IBM’s application modernization approach.

**LEARN IT**
A summary of the concepts.

**GET STARTED**
Tips to start the journey to modernize your apps.
IBM’s unique approach

Rewriting your entire estate is a pipe dream. Modernization comes in many flavors. IBM’s skills and experience in middleware provide unique insights and approaches to modernize your existing estate with speed, confidence, and reduced risk. View your development investments as an asset, not a liability.

REFACTOR WHAT’S NECESSARY, BUT DON’T NECESSARILY REFACTOR

Think. More than a simple, one-size-fits all approach, IBM provides flexible guidance you can trust.

Transform. Manage risk by choosing the right approach to modernize your current estate. Accelerate your journey through automation and technology.

Thrive. Get ahead of your competition by improving your DevOps efficiency.

Check out the IBM Cloud Garage website. [https://www.ibm.com/cloud/garage](https://www.ibm.com/cloud/garage)
IBM is a trusted partner, providing technology and prescriptive guidance to deliver immediate business value. Modernize your applications quickly and safely using our accelerators and tools.
Modernization journey

To get started on your modernization journey, you must understand the approaches that are right for your inventory. The IBM Transformation Advisor helps you select the best entry point to deliver value at each step in your journey. IBM can assist you in understanding the path that is right for you.

**CHOOSE THE APPROACH THAT BEST FITS YOUR NEEDS**

**Containerize the monolith.** Reduce costs and simplify operations.

**Expose on-premise assets with APIs.** APIs enable legacy assets that are difficult to cloud enable.

**Refactor into macroservices.** Break down monoliths into deployable components.

**Add new microservices.** Innovate incrementally and establish success early.

**Strangle the monolith.** Incrementally sunset the monolith.

Check out the Modernize your application practice. [https://www.ibm.com/cloud/garage/architectures/application-modernization/application-modernization-journeys](https://www.ibm.com/cloud/garage/architectures/application-modernization/application-modernization-journeys)
Mix and match your approaches as needed!

Increase your delivery velocity along the journey.
Assess your app portfolio

Before tackling the job of modernizing your applications, you need to understand your application inventory and how it aligns with business priorities. This will help you determine the best technical path to modernization and evaluate the effort required.

APPLICATION MODERNIZATION IS BUSINESS MODERNIZATION

Align to your business priorities. Understand where your business needs are driving you to modernize.

Take inventory of your apps. Run IBM Transformation Advisor to collect information from your existing environment and recommend modernization activities.

Spend your modernization dollars wisely. Make better decisions by understanding how your application portfolio aligns to your business priorities.

Select the modernization approach with confidence

Classify your application modernization portfolio by choosing an optimal combination of modernization techniques and effort required to meet the business outcomes.

NOT ALL APPLICATIONS ARE CREATED EQUAL

Simplify. Run the IBM Transformation Advisor to gain clarity on your modernization options.

Understand effort, cost and outcomes. Evaluate all possible modernization options.

Leverage IBM tools and expertise. The secret sauce behind Transformation Advisor recommendations is a built-in cognitive engine based on real life IBM modernization experience.

Modernization approach depends on your application code timeline and appetite for risk.
Plan & prioritize

Plan your modernization based on matching effort to business priorities. Identify quick wins that are shovel-ready to move immediately. Choose the right modernization strategy driven by your business needs.

“IF YOU FAIL TO PLAN, YOU ARE PLANNING TO FAIL!”
- BENJAMIN FRANKLIN

Prioritize. You must balance both time and business priority. Low priority projects are good learning vehicles, but might not drive as much real business value.

Quick wins. Quick wins are important to reassure stakeholders and justify investment for longer-term projects.

Perfect match. Your first few projects should be both short in duration and high in potential business value. Starting with the longest, hardest project can lead to a loss of confidence about the overall outcome before value is realized.

*Quick Win!!!!*

Modernize with a plan.
Establish the foundation

Container platforms, like Kubernetes, provide the foundation for app modernization. This open source-based container management system targets both development and operations staff. With containerization, developers can treat configuration as code to enable a modern DevOps toolchain. IBM provides a consistent container platform for application modernization across IBM Cloud—both public and private.

**CONTAINERS - THE FOUNDATION FOR MODERNIZATION**

**Kubernetes-based platform.** Container orchestration is the starting point. A strong foundation with resiliency and security in the forefront is essential.

**Containerized middleware and services.** Prebuilt container images and Helm charts can greatly accelerate your containerization.

**Automate.** You need capabilities to orchestrate existing VMs, new finer grained deployment pipelines, and new operations stacks.

**Leverage IBM Multicloud Manager.** Establish a common control plan for multicloud deployment.

Learn more

Check out IBM Cloud Private.
IBM realizes containerization through the IBM Container Service and IBM Cloud Private, based on Kubernetes.
Modernize your developer experience

Dive into a fast incremental, intelligent, end-to-end development experience for containerized applications that puts developers in charge.

MOVE, MIGRATE & DEPLOY WITH IBM MICROCLIMATE

**Containerized development.** Start developing applications using lightweight containers that are easily reproducible to match your production environment locally or on IBM Cloud Private.

**Rapid iteration.** Quickly edit, build and run applications while gaining real-time performance insights, regardless of what development phase you are in.

**Integrated DevOps pipeline.** Speed production with a preconfigured DevOps pipeline that can be tailored to your needs.

**Diagnostic services.** Add capabilities at development time to improve problem determination in production.

**Intelligent feedback.** Benefit from best practices and immediate feedback to help improve your application development.

Check out IBM Microclimate.
Experience a fast incremental, intelligent, end-to-end development experience with IBM Microclimate.
Containerize your apps

Wrapping an application in a Docker image is a good first step toward modernization, but many applications are not optimized for containers. Load balancing, application state handling, and monitoring are different in containerized applications. As a result, you might need to rewrite portions of your applications. Likewise, performance tuning and DevOps processes must be aligned to containers.

YOU WRAPPED YOUR APP IN A DOCKER IMAGE - NOW WHAT?

Adapt your applications. You need accelerators to adapt your application to a containerized environment. IBM provides prebuilt containerized middleware and services and prescriptive guidance.

Modernize your DevOps and Configuration. IBM provides tools that automatically generate pipelines for new applications as well as orchestration tools that automate configuration.

Modern Operations. IBM provides out of the box management and monitoring based on open technologies.

Learn more

Check out the microservices architecture.
https://www.ibm.com/cloud/garage/architectures/microservices
Containerized middleware and applications are key to moving to modern development and operations approaches.

An integrated, container-native operations and DevOps platform is a requirement.
Expose and integrate

Some existing applications are best exposed as APIs. They then become reusable assets that are easily leveraged for building new capabilities that augment the existing application. Integrate other applications into the ecosystem by leveraging those APIs.

UNLOCK BUSINESS VALUE FROM EXISTING SYSTEMS

Expose. Expose existing value as REST APIs for easy access from any endpoint.

Manage. Place APIs under management control to improve security, performance and visibility.

Leverage. New applications can leverage API’s from existing applications without requiring changes to existing applications.

Learn more

Check out the API architecture.
https://www.ibm.com/cloud/garage/architectures/apiArchitecture
Create new capabilities by leveraging APIs.

APIs allow incremental creation of value to extend current application ecosystems.
Refactor

Refactoring is the process of replacing existing, hard to maintain code with new, better code in a piecewise way. You “strangle” the old monolith by replacing each business function incrementally.

MODERNIZE INTELLIGENTLY

Productivity. Refactoring an application to microservices improves developer productivity. It allows you to quickly release more code.

Scalability. Refactoring to a more scalable architecture should be done incrementally. It’s important to provide real business value at each step in a refactoring while improving operational efficiency.

Containerize. You can begin with repackaging your monolith as a container with Liberty, then add new containers to your solution as you separate business functions into new microservices.

Learn more

Check out the microservices architecture.
https://www.ibm.com/cloud/garage/architectures/application-modernization
Incremental Value is delivered at every point in the process.

When you replace a monolith piecewise, you gain additional efficiency and improvements at each step.
Place selected apps on VMs

Not every application is easily landed on containers. In some cases, parts of an overall solution might need to be executed on VMs. This is a valid and complementary choice as part of the overall modernization journey.

ROUNDING OUT A MODERNIZATION SOLUTION

Fit for purpose. Some existing application infrastructure is optimized for working within VMs. These apps should remain within a VM.

Migrate WAS ND workloads to IBM Cloud Private. Run WAS ND for traditional WAS topologies side-by-side with WAS Liberty in Containers with WebSphere Application Server for IBM Cloud Private VM Quickstarter!

Improve Developer Productivity. Developer self service via IBM Cloud Private catalog to rapidly create new WAS ND Clusters.

Increase Operational Efficiency and Standardization. Integrate WAS VMs in IBM Cloud Private container management services for standardized monitoring/logging.

Learn more

Check out the infrastructure architectures.
https://www.ibm.com/cloud/garage/architectures/infrastructure
VM based assets are part of an overall modernization solution.
Cloud adoption and transformation

Cloud adoption and transformation services help you balance your current and future technology needs with an understanding of the integrated set of decisions that need to be made. Work with us to align the talent and capabilities you’ll need, the management systems you’ll use, and the business goals on which you will be measured with your organization’s adoption and transformation vision.

A STRATEGIC ROADMAP

Think. Assess your current state, and ideate on and prioritize future state goals.

Transform. Get guidance to help you adopt cloud, build confidence, and realize your initial set of business outcomes.

Thrive. Work together to adjust and expand your plan to build on your success and amplify your new agile culture.
