At a glance

IBM® DB2® 10.1 for Linux™, UNIX™, and Windows™ (LUW) reduces your overall database licensing, administration, and storage costs. DB2 10.1 for LUW offers:

- PL/SQL compatibility, integrated time-based analytics, and SPARQL support for new "no SQL" applications, helping to speed up application development
- Simplified administration and optimal use of your data storage resources with multi-temperature storage
- Extreme scalability and availability with DB2 pureScale®
- Adaptive compression, helping to lower storage
- Flexible definitions of role and data access control, helping you improve security
- A suite of complementary products to manage database performance, deployment, administration, monitoring, and availability that is included in the DB2 Advanced Enterprise Server Edition

Overview

IBM DB2 10.1 for Linux, UNIX, and Windows (LUW) delivers new capabilities that can help you save time and money. DB2 10.1 can help you reduce the complexity of management, improve the productivity of your developers and database administrators, ease the effort and expense of deploying new applications, and take advantage of query performance and compression improvements to help lower your overall data management cost.

DB2 10.1 LUW offers greater management efficiency. Multi-temperature storage helps you to leverage different types of storage to maximize performance at the lowest possible cost with integrated management of storage groups to migrate hot, warm, and cold data to the appropriate class of storage. New Row and Column Access Control provides you with easy and flexible rule and role definitions to manage and control data accesses for enhanced security and the building of multi-tenant applications. Continuous Data Ingest is designed to enable you to transparently load data from external sources into DB2 databases without downtime for integrated real-time analysis and decision making.

DB2 10.1 LUW includes the PL/SQL compatibility feature, which can help speed application development, and help reduce your time to market as well as costs. Time Travel Query is integrated into DB2 for easier and faster time-based analytics

applications development. SPARQL support enables new types of "no SQL" applications development with Resource Definition Framework (RDF) data stores.

DB2 10.1 LUW is designed to deliver fast performance and high reliability for your enterprise. IBM DB2 pureScale leverages proven mainframe Sysplex technology to deliver extreme redundancy and scalability. Adaptive compression, the latest addition to DB2's industry-leading database compression technology, can help to further reduce your storage costs while at the same time improve performance. Enhanced query joins and optimizer enhancements increase query performance that can enable you to respond to complex business questions within seconds or less.

DB2 Advanced Enterprise Server Edition includes a full suite of products and features to help you manage your enterprise and help reduce your overall database software costs. DB2 10.1 Advanced Enterprise Server Edition also includes a comprehensive set of tools to help you develop, manage, and deploy databases with greater efficiency, performance, and availability.

High Availability Disaster Recovery (HADR) feature is included in all the for-purchase DB2 10.1 editions (Express®, Workgroup Server, Enterprise Server, and Advanced Enterprise Server, Database Enterprise Developer).

The security features Label Based Access Control and the new Row and Column Access Control are also included in all the for-purchase DB2 10.1 editions (Express, Workgroup Server, Enterprise Server, and Advanced Enterprise Server, Database Enterprise Developer). These security features provide you with a robust and flexible set of rules and access controls to manage and help secure data accesses to help you control your security risks.

Key prerequisites

Refer to the [Hardware requirements](#) and [Software requirements](#) sections of this document.

Planned availability date

April 30, 2012: Electronic availability

June 11, 2012: Media availability

Refer to the complete letter for national language availability.

Description

IBM DB2 10.1 Linux, UNIX, and Windows (LUW) offers you a robust set of new functionality to help you reduce your costs and improve your operational efficiency through increased performance, enhanced security management features, extreme scalability, and faster applications development.

New functions

Optimized storage utilization

Multi-Temperature Data Management allows for grouping of hot, warm, and cold data on varying storage systems. You can now use different storage technologies to help optimize performance while helping to minimize cost. Storage can be allocated depending on data temperature, such as placing hot data on the fastest and most expensive Solid® State Disks (SSDs), while other data can reside on less expensive storage systems.

Multi-Temperature Data Management integration with DB2 Workload Manager is available with DB2 Advanced Enterprise Server Edition to more easily prioritize

queries, not only on "who" submitted the work or "what" type of work it is, but also on "where" the data resides. For faster performance, queries touching only hot data can be assigned higher prioritization than queries touching cold data.

Multi-Temperature Data Management is included in the DB2 Enterprise Server Edition, DB2 Advanced Enterprise Server Edition, and IBM Database Enterprise Developer Edition.

Further storage savings with improved compression

You get significant enhancements with DB2's industry-leading compression technologies that now include the new Adaptive Compression, which can further help reduce your storage needs. The enhancements deliver efficient compression of high amounts of new and changing data. The improved compression ratio further helps reduce storage needs and allows for more data in memory, therefore, helping to increase performance. The new approach used in Adaptive Compression also reduces the need for table reorganization. As a consequence, overall maintenance of compressed data is reduced, helping you achieve additional cost savings.

Adaptive Compression is included in DB2 Advanced Enterprise Server Edition and DB2 Database Enterprise Developer Edition.

Easier business trend analysis and application development

Time Travel Query, based on the SQL 2011 standard, is integrated into the database engine to provide significant performance and manageability advantages. Time Travel Query provides the infrastructure for time-aware analytics to reduce the operational complexity of collecting and analyzing time-based data.

Time Travel Query accelerates dynamic analysis of business trends and changes over time, for both new and existing applications. Time Travel Query provides the flexibility to audit for change with system-controlled temporal data, and to analyze all kinds of temporal data including forward-looking data when using user-controlled temporal data.

Time Travel Query is available in all editions of DB2.

DB2 10.1 LUW can now be used as the Resource Definition Framework (RDF) data store with built-in query processor and SPARQL support. With this support, you will be able to build highly scalable and reliable semantic data applications on the DB2 platform. Application developers will have a flexible and expressive API to develop or rapidly prototype applications where the schema is changing or where there is a wide spectrum of disparate entity types to be stored with an evolving relationships between them. SPARQL query features, with open source Jena API, are supported. Utilities to create, load, and reorganize RDF data are provided.

SPARQL and RDF datastore are available to all DB2 editions.

Security enhancements

Row and Column Access Control provides easy and flexible control over data access. With Row and Column Access Control, you can define the security policies that are optimal for your environment by creating permissions for rows and masks for columns based on rules defined for users, groups, and roles. This very fine granularity is designed to allow you to easily control access by roles such as departmental, supervisory, database administrators (DBAs), system administrators, and others, and allow for full separation of duty between security officers and DBAs.

Row and Column Access Control is available in all the for-purchase DB2 10.1 editions (Express, Workgroup Server, Enterprise Server, and Advanced Enterprise Server, Database Enterprise Developer).

Performance enhancements

DB2 10.1 LUW adds many enhancements designed to further increase the performance of queries.

Zigzag join is now available and is capable of delivering sub-second response time on complex multi-dimensional queries. Other join methods are also enhanced for memory usage efficiency, early predicate evaluation, support of expressions in predicates, as well as optimizer costing and query plan optimization. Additionally, you may now set the INTRA_PARALLELISM variable dynamically to optimize performance on multicore systems for specific applications or workloads.

These performance enhancements are available in all editions of DB2.

Continuous Data Ingest utility

The ingest utility allows the seamless roll-in of external data feeds with minimal impact on operations, including long-running queries. It enables real-time business analytics with massive volumes of streaming external data. It is designed to avoid trade-off between data concurrency and data availability.

The Continuous Data Utility is available in DB2 Advanced Enterprise Server Edition and DB2 Database Enterprise Developer Edition.

DB2 pureScale

The DB2 pureScale Feature brings clustering technology to DB2 on distributed IBM Power® System and System x® platforms. It helps you to meet your business needs around availability and scalability, and at the same time, it is easy to configure and administer. By combining the extensive features of DB2 with the availability and scalability of the DB2 pureScale Feature along with IBM system dependability and flexibility, the result is a comprehensive data management solution that helps you meet the most demanding business needs.

The DB2 pureScale Feature is designed to keep your critical data available during both planned and unplanned outages. For planned outages, where you are performing maintenance on your cluster, you can do rolling maintenance on individual members without affecting the availability of the cluster. For unplanned outages, where a member of the cluster fails due to hardware or software reasons, the DB2 pureScale Feature is designed to allow the cluster, with its remaining members, to continue to function with minimal interruption to your application or business.

The DB2 pureScale Feature allows you to add members to the cluster and remove them from the cluster on demand. You can scale up or scale down the cluster to meet your dynamic business needs. DB2 pureScale, developed with ease of use in mind, has a single installation process for all the software components.

The DB2 pureScale Feature is included in DB2 Workgroup Server Edition and is restricted to up to 16 cores and 64 GB memory total across the cluster, not including the DB2 Cluster Facility and quorum host. DB2 pureScale Feature is included in DB2 Database Enterprise Developer Edition for development use. DB2 pureScale, with no core or memory restrictions, is available for purchase with DB2 Advanced Enterprise Server Edition and DB2 Enterprise Server Edition.

Advanced tools for DB2 LUW

InfoSphere® Optim™ Tools are updated to accelerate adoption and enhance the value of key DB2 features including Time Travel Query, Row and Column Access Control, Multi-Temperature Data Management, and IBM DB2 pureScale.

Optim Tools are available for purchase to use with DB2 editions. Refer to the [Product positioning](#) section for details about which Optim Tools are included in each DB2 edition.

New releases supporting DB2 10.1 LUW are:

- Data Studio V3.1.1
- InfoSphere Data Architect V8.1
- InfoSphere Optim Query Workload Tuner V3.1.1

- InfoSphere Optim pureQuery Runtime V3.1.1
- InfoSphere Optim Performance Manager V5.1.1
- InfoSphere Optim Configuration Manager V2.1.1
- InfoSphere Optim High Performance Unload V4.2.1
- DB2 Merge Backup V1.1.1
- DB2 Recovery Expert V3.1.1

Performance enhancements

Using InfoSphere Optim Tools, developers, DBAs, or security administrators can:

- Design, develop, and deploy temporal tables, develop and validate SQL access, and view row history.
- Use Data Studio and InfoSphere Data Architect for collaboration to help safeguard data and enable security administrators to define, view, and deploy fine grained access control, and DBAs to analyze impact of new security controls and update routines accordingly.
- Use IBM Data Studio to monitor multiple standby availability and alert availability risks.
- Use Data Studio and Optim Configuration Manager to get recommendations for adaptive compression use, deploy compression, and validate compression savings.
- Use Optim Configuration Manager and Optim Performance Manager to enhance value of multi-temperature technology delivery by analyzing storage group growth and contents, enabling Workload Manager configurations to prioritize queries against high performing storage, and automating period roll-off for range partitioned tables to help lower storage cost.
- Analyze access plan improvements and regressions based on new optimization strategies and get actionable recommendations for improvements. Optim Query Workload Tuner is now the one-stop-shop for query improvement recommendations subsuming all DB2 Design Advisor functions under its broader value-add capability.
- Use Optim High Performance Unload to unload, extract, and repartition data in DB2 10 databases. It helps to work with large quantities of data with less effort and faster results.
- Use DB2 Merge Backup to create fast DB2 backups for your production system designed to enable you to have full current backups available for shorter restore times. DB2 Merge Backup combines incremental and delta backups with the latest full backup to create a new and current full DB2 backup.
- Use DB2 Recovery Expert to recover faster and with greater granularity than what is offered with traditional database recovery. The log analysis features enable organizations to monitor changes to a database and gives the DBA the capability to quickly restore or correct erroneous data using fewer resources and helping to reduce data outages.

Additionally, Data Studio and Optim Query Workload Tuner are now tightly integrated to provide an improved startup experience. Users can now enable Optim Query Workload Tuner functionality with a simple license activation. Data Studio, which includes a rich set of developer and database administrator productivity tools, is the replacement of the legacy DB2 Control Center tools. Data Studio is available for all editions of DB2 at no extra charge.

Furthermore, InfoSphere Optim Tools continue to support production deployment for DB2 pureScale environments with added configuration, administration, and monitoring capabilities. Developers will also benefit from new tool support that facilitates migration to DB2, with added support for PL/SQL procedure profiling and database federation definition. Finally, Eclipse based offerings are updated to Eclipse 3.6 platform providing integration with Rational® Software Development Platform V8 software.

Summary of DB2 10.1 edition changes

Resource limits for each edition, where applicable, are also listed below.

DB2 Express-C:

- Time Travel Query.
- IBM Data Studio.
- Memory limit has been increased to 4 GB. Processor core limit remains at two. Both limits are per physical server, or where partitioned, virtual server.

DB2 Express Edition:

- Row and Column Access Control.
- Label Based Access Control
- Time Travel Query.
- High Availability Disaster Recover (HADR).
- IBM Data Studio.
- Memory limit has been increased to 8 GB. Processor core limit remains at four. Both limits are per physical server, or where partitioned, virtual server.

DB2 Workgroup Server Edition:

- Row and Column Access Control.
- Label Based Access Control.
- Time Travel Query.
- IBM Data Studio.
- Memory limit remains at 64 GB. Processor core limit remains at 16. Both limits are per physical server, or where partitioned, virtual server.

DB2 Enterprise Server Edition:

- Row and Column Access Control
- Label Based Access Control
- Time Travel Query
- Multi-Temperature Data Management
- IBM Data Studio

DB2 Advanced Enterprise Server Edition:

- Row and Column Access Control
- Label Based Access Control
- Time Travel Query
- Multi-Temperature Data Management
- Storage Optimization Feature, including Adaptive Compression
- Continuous Data Ingest
- IBM Data Studio
- InfoSphere Data Architect (10 users)
- InfoSphere Optim Configuration Manager
- InfoSphere Optim Performance Manager Extended Edition
- InfoSphere Optim Query Workload Tuner
- InfoSphere Optim pureQuery Runtime for LUW

IBM Database Enterprise Developer Edition:

- Row and Column Access Control
- Label Based Access Control
- Time Travel Query
- Multi-Temperature Data Management
- Storage Optimization Feature, including Adaptive Compression
- Continuous Data Ingest
- IBM Data Studio
- InfoSphere Data Architect
- InfoSphere Optim Configuration Manager
- InfoSphere Optim Performance Manager Extended Edition
- InfoSphere Optim Query Workload Tuner
- InfoSphere Optim pureQuery Runtime for LUW

Product positioning

IBM DB2 Editions for production deployment

IBM DB2 10.1 Advanced Enterprise Server Edition for Linux, UNIX and Windows

DB2 Advanced Enterprise Server Edition is designed to meet the data server needs of the most demanding businesses. DB2 Advanced Enterprise Server Edition is bundled with the functionality and tools needed for large complex enterprise environments. DB2 Advanced Enterprise Server Edition includes all the functionality from the DB2 Enterprise Server Edition, and it also integrates the capabilities of DB2 Enterprise Server Edition with replication and federation required for today's complex data environments. The use of Queue-based Replication (Q Replication) in InfoSphere Data Replication, which is restricted to replication between three DB2 LUW systems, and InfoSphere Federation Server between Oracle and DB2 LUW databases, helps you rapidly integrate DB2 into mixed database platform environments. Additionally, DB2 Advanced Enterprise Server Edition helps reduce storage costs by inclusion of the DB2 Storage Optimization Feature.

To simplify administration, tuning, and development, DB2 10.1 Advanced Enterprise Server Edition includes a rich set of tools:

- IBM Data Studio
- DB2 Workload Management
- InfoSphereOptim Performance Manager Extended Edition
- InfoSphereOptim Query Workload Tuner
- InfoSphereOptim Configuration Manager
- InfoSphere Data Architect (10 authorized users)
- InfoSphere Optim pureQuery Runtime for LUW

DB2 Advanced Enterprise Server Edition can be deployed on Linux, UNIX, or Windows servers of any size, from one processor to hundreds of processors, and on both physical and virtual servers.

You can upgrade from DB2 Enterprise Server Edition to DB2 Advanced Enterprise Server Edition using a Processor Value Unit (PVU) based upgrade part number. You can also upgrade to DB2 Advanced Enterprise Server Edition from DB2 Enterprise Server Edition with DB2 Storage Optimization Feature and have the entitlement of both products converted to entitlement for DB2 Advanced Enterprise Server Edition. You can upgrade to DB2 Advanced Enterprise Server Edition from DB2 Enterprise with DB2 Performance Optimization Feature and have the entitlement of both products converted to entitlement for DB2 Advanced Enterprise Server Edition.

Program charges: DB2 10.1 Advanced Enterprise Server Edition includes all the functionality from the DB2 Enterprise Server Edition, DB2 Storage Optimization feature, DB2 Workload Management, InfoSphere Optim Performance Manager Extended Edition, IBM Data Studio, InfoSphere Optim Query Workload Tuner, InfoSphere Optim Configuration Manager, InfoSphere Data Architect, InfoSphere Optim pureQuery Runtime for LUW, InfoSphere Federation Server between DB2 LUW and Oracle databases, and queue-based replication from InfoSphere Data Replication between three DB2 LUW servers.

DB2 Advanced Enterprise Server Edition is available on either a PVU or a per Authorized User Single Install charge metric. Under the Authorized User Single Install charge metric, you must acquire a minimum of 25 Authorized User Single Install licenses per 100 PVUs.

IBM DB2 10.1 Enterprise Server Edition for Linux, UNIX and Windows

DB2 Enterprise Server Edition is designed to meet the data server needs of midsize to large-size businesses. It can be deployed on Linux, UNIX, or Windows servers of any size, from one processor to hundreds of processors, and on both physical and virtual servers. DB2 Enterprise Server Edition is an ideal foundation for building on-demand enterprise-wide solutions such as high-performing 24 x 7 available high-volume transaction processing business solutions or web-based solutions. DB2 Enterprise Server Edition is the data server backend of choice for industry-leading ISVs building enterprise solutions such as content management, e-commerce, business intelligence, enterprise resource planning, customer relationship management, or supply chain management. Additionally, DB2 Enterprise Server Edition offers connectivity, compatibility, and integration with other enterprise DB2 and Informix® Dynamic Server (IDS) data sources.

Program charges: DB2 10.1 Enterprise Server Edition includes IBM Data Studio, Label Based Access Control, Row and Column Access Control, Multi-Temperature Data Management, Time Travel Query, Table Partitioning, High Availability Disaster Recovery (HADR), Online Reorganization, Materialized Query Tables (MQTs), Multidimensional Clustering (MDC), Query Parallelism, Scan Sharing, Connection Concentrator, pureXML®, backup compression, and Tivoli® System Automation for Multiplatforms. The product also includes DB2 Homogeneous Federation and Homogeneous SQL Replication allowing federated data access and replication between DB2 LUW servers as well as web services federation.

DB2 Enterprise Server Edition is available on either a PVU or a per Authorized User Single Install charge metric. Under the Authorized User Single Install charge metric, you must acquire a minimum of 25 Authorized User Single Install licenses per 100 PVUs.

IBM DB2 10.1 Workgroup Server Edition for Linux, UNIX and Windows

DB2 Workgroup Server Edition is the data server of choice for deployment in a departmental, workgroup, or medium-sized business environment. It is offered in multiple charge metrics to provide an attractive price point for medium-size environments while providing a full-function data server. DB2 10.1 Workgroup Server Edition, running on either IBM System x or IBM Power servers, includes the usage of DB2 pureScale with a maximum cluster size of 16 cores total across all servers, excluding the DB2 Cluster Facility and quorum host. Defined Red Hat and SUSE Linux distributions are supported for DB2 pureScale on System x, and AIX® is supported for DB2 pureScale on Power servers.

Program charges: DB2 Workgroup Server Edition includes IBM Data Studio, Label Based Access Control, Row and Column Access Control, Time Travel Query, HADR, Online Reorganization, pureXML, web services federation support, DB2 LUW Homogeneous Federation, Homogeneous SQL Replication, backup compression, and Tivoli System Automation for Multiplatforms. DB2 Workgroup Server Edition can be deployed in Linux, UNIX, and Windows server environments and will use up to 16 cores and 64 GB of memory per physical or, where partitioned, virtual server. There is no limit on the cores or memory available to the physical server, which makes DB2 Workgroup Server Edition ideal for consolidating multiple workloads onto a large physical server running DB2 Workgroup Server Edition in multiple virtual servers.

DB2 Workgroup Server Edition is available on a per Limited Use Socket, PVU, or Authorized User Single Install charge metric. You must acquire a minimum of five Authorized User Single Install licenses per Install.

IBM DB2 10.1 Express Edition for Linux, UNIX and Windows

DB2 Express Edition is a full-function DB2 data server, which provides very attractive entry-level pricing for the small and medium business (SMB) market. It is offered in multiple pricing models to provide choices to match SMB customer needs. It comes with simplified packaging and is easy to transparently install within an application. With DB2 Express Edition, it is easy to subsequently upgrade to the other editions of DB2 10.1 since DB2 Express Edition includes most of the same features, including security and HADR, as the more scalable editions. You never have to change your application code to upgrade; simply install the license certificate to upgrade.

Program charges: DB2 Express can be deployed on pervasive SMB, x86-based operating systems, such as Linux, Windows, or Solaris, and includes IBM Data Studio, Label Based Access Control, Row and Column Access Control, Time Travel Query, pureXML, web services federation, DB2 LUW Homogeneous Federation, Homogeneous SQL Replication, backup compression, and HADR. DB2 Express Edition can be deployed in x86 server environments and will use up to 4 cores and 8 GB of memory per physical or, where partitioned, virtual server. On the Limited Use Virtual Server charge metric, there is no limit on the size of the physical server, which makes DB2 Express ideal for consolidating multiple workloads onto a large physical server running DB2 Express in multiple virtual servers.

DB2 Express Edition is available on a per Authorized User Single Install, PVU, Limited Use Virtual Server, or 12 month Fix Term licensing model. You must acquire a minimum of five Authorized User Single Install licenses per Install. DB2 Express Edition can also be licensed on a yearly Fixed Term License pricing model.

DB2 10.1, Express-C is a no-charge, entry-level edition of the DB2 data server for the developer and partner community. It is designed to be up and running in minutes, easy-to-use and embed, includes self-management features, and embodies all of the core capabilities of DB2 for Linux, UNIX and Windows such as Time Travel Query. Solutions developed using DB2 Express-C can be seamlessly deployed using more scalable DB2 editions without modifications to the application code.

Program charges: DB2 Express-C can be used for development and deployment at no charge. It can be installed on x86-based physical or virtual systems and may use up to a maximum of 2 processor cores and 4 GB of memory. DB2 Express-C comes with online community-based assistance. Users requiring more formal support, access to fix packs, or additional capabilities such as high availability, Homogeneous Federation, and replication can purchase an optional yearly subscription for DB2 Express Edition (Fixed Term License) or upgrade to other DB2 editions. In addition, IBM Data Studio is also available to facilitate solutions deployment and management.

IBM DB2 10.1 Database Enterprise Developer Edition

IBM DB2 10.1 Database Enterprise Developer Edition offers a package for a single application developer to design, build, and prototype applications for deployment on any of the IBM Information Management client or server platforms. This comprehensive developer offering includes DB2 Workgroup Server Edition DB2 Enterprise Server Edition, DB2 Advanced Enterprise Server Edition, IDS Enterprise

Edition, DB2 Connect™ Unlimited Edition for System z®, and all of the DB2 10.1 features, allowing you to build solutions that utilize the latest data server technologies.

Program charges: The software in this package cannot be used for production systems. You must acquire a separate Authorized User license for each authorized user of this product.

IBM DB2 10.1 LUW, Enterprise Edition and Advanced Enterprise Edition for purchase features

IBM DB2 Storage Optimization Feature for Linux, UNIX and Windows

This feature includes data row, index, temporary table, and adaptive compression and other compression types to help maximize the use of existing storage:

- Data Row Compression uses a static dictionary-based compression algorithm to compress data by row. Compressing data at the row level is advantageous because it allows repeating patterns that span multiple column values within a row to be replaced with shorter symbol strings, helping to improved performance. In I/O-bound systems it will not only help reduce storage requirements but it might help improve overall performance.
- Index Compression utilizes multiple algorithms to help reduce the storage requirements for indexes as well as the total storage footprint of your DB2 database.
- Temp Compression will automatically compress the amount of space used for temp tables. This automated compression will help to both improve performance of business intelligence workloads using large temp tables as well as reduce the total storage needed by DB2.
- Adaptive Compression lets you use the above mentioned compression methods in parallel with table and page level dictionaries.

Program charges: This feature is included in the DB2 Advanced Enterprise Server Edition and IBM Database Enterprise Developer Edition.

This feature is available as an option for DB2 Enterprise Server Edition, and can only be acquired if the underlying data server is licensed with the PVU charge metric.

DB2 pureScale Feature

This feature introduces clustering technology to DB2 on distributed platforms, so you can deploy continuously available and scalable database clusters. By allowing the database to continue processing through most planned and unplanned outages, it helps improve the availability of DB2. It supports higher transaction rates by letting you grow your business to meet the most demanding business needs. This feature additionally delivers the necessary tools to easily and flexibly administer databases. Defined Red Hat and SUSE Linux distributions are supported for DB2 pureScale on System x, and AIX is supported for DB2 pureScale on Power servers.

Program charges: This feature is included in the DB2 Workgroup Server Edition with a limit of up to 16 cores and 64 GB memory total in a cluster, not including the DB2 Cluster Facility and quorum host, and is included in the Database Enterprise Developer Edition.

This feature is available as an option for the DB2 Advanced Enterprise Server Edition and the DB2 Enterprise Server Edition. You must acquire this feature under the same charge metric as the underlying DB2 data server.

IBM Professional Certification

Information Management Professional Certification is a business solution for skilled IT professionals to demonstrate their expertise to the world. Certification validates skills and demonstrates proficiency with the most recent IBM technology and solutions.

For certification information, refer to

http://www-03.ibm.com/certify/tests/test_index_bd.shtml

Offering Information

Product information is available via the Offering Information website

The IBM Publications Center

<http://www.ibm.com/shop/publications/order>

The Publications Center is a worldwide central repository for IBM product publications and marketing material with a catalog of 70,000 items. Extensive

search facilities are provided. Payment options for orders are via credit card (in the U.S.) or customer number for 20 countries. A large number of publications are available online in various file formats, and they can all be downloaded by all countries free of charge.

News of many publications may be subscribed to via Mysupport.

IBM Redbooks®

IBM Redbooks offer deep technical insight from IBM and industry experts. These books highlight real-time experiences, and include sample code, typical scenarios and step-by-step, "how-to" guidelines.

IBM form number	Title
SG24-7736-00	Oracle to DB2 Conversion Guide for Linux, UNIX, and Windows (update)
SG24-7048-01	Oracle to DB2 Conversion Guide for Linux, UNIX, and Windows
SG24-7301-00	DB2 Express-C: The Developer Handbook for XML, PHP, C/C++, Java, and .NET
SG24-6672-00	Microsoft™ SQL Server to IBM DB2 UDB Conversion Guide
SG24-7363-01	High Availability and Disaster Recovery Options for DB2 on Linux, UNIX, and Windows
SG24-7218-00	Developing PHP Applications for IBM Data Servers
SG24-7259-00	Powering SOA with IBM Data Servers
SG24-7467-00	Database Partitioning, Table Partitioning, and MDC for DB2 9
SG24-7653-00	DB2 Deployment Guide
SG24-7555-00	DB2 Security and Compliance Solutions for Linux, UNIX, and Windows
SG24-6899-01	Up and Running with DB2 on Linux

For additional Redbooks, refer to

<http://www.redbooks.ibm.com/>

Technical information

Specified operating environment

Hardware requirements

Minimum hardware requirements:

- 32-bit and 64-bit Windows and Linux: All systems based on Intel™ or AMD processors that are capable of running the supported Windows or Linux operating systems (x86 and x64 systems).
- AIX and Linux for IBM System p® and for IBM System i® systems: Systems with POWER4, or later processors are required.
- Solaris: Systems with UltraSPARC processors or x64 systems are required.
- HP-UX: Itanium-based HP Integrity Series systems are required.

The hardware requirements of DB2 products may be occasionally updated. To obtain the current information for supported hardware, visit

Memory requirements: The amount of memory required for the IBM Data Server Runtime client depends on the operating system and the database applications that are running. In most cases, it should be sufficient to use the minimum memory requirements of the operating system as the minimum requirement for running the IBM Data Server Runtime client. Graphical administration and application development tools, that are part of the IBM Data Server Client, require an additional 256 MB.

The following table shows the minimum memory in MBs that are prerequisite to installation. The actual requirement depends on the applications you intend to run. Additional memory may be required to handle heavy workloads and a large number of concurrent users. The following numbers are for planning purposes only.

DB2 products and components	Memory requirement
DB2 for Linux, UNIX, and Windows (all editions)	256 MB
Net Search Extender	256 MB

Disk space requirements: The following table shows the minimum disk space in MB for a typical installation. The actual space required may vary depending on your file system and the components installed. The following numbers are for planning purposes only.

DB2 products and components	Disk space requirement
DB2 for Linux, UNIX, and Windows (all editions)	450 MB (1)
IBM Data Server Runtime client	100 MB
IBM Data Server Client	256 MB (2)
DB2 Information Center	120 MB (3)
Net Search Extender	50 MB

(1) Does not include any DB2 databases. An empty DB2 database requires 200 MB of disk space.

(2) Includes the JDK and graphical tools.

(3) English only. Other languages may require more disk space.

563 MB of the 600 MB is for United States geocoder reference data.

Software requirements

This section indicates the minimal requirements for operating systems at the time of this announcement.

Linux

- Red Hat Enterprise Linux (RHEL) 5 and 6
- SUSE Linux Enterprise Server (SLES) 10 and 11
- Linux for System i - SLES 10, SLES 11; 32 bit and 64 bit
- Linux for System i - RHEL 5 and 6; 32 bit and 64 bit
- Linux for System p - SLES 10, SLES 11; 64 bit
- Linux for System p - RHEL 5 and 6; 64 bit
- Linux for System z - SLES 10, SLES 11; 64 bit
- Linux for System z - RHEL 5 and 6; 64 bit

Windows

- 32-bit and 64-bit (x64) Windows Server 2003, Standard Server, Enterprise Server, and Datacenter Editions
- 32-bit and 64-bit (x64) Windows Server 2008, Standard Server, Enterprise Server, and Datacenter Editions

- 32-bit and 64-bit (x64) Windows XP Professional Edition
- 32-bit and 64-bit (x64) Windows Vista Business, Enterprise, and Ultimate editions
- 32-bit and 64-bit (x64) Windows 7

AIX

- AIX V6.1
- AIX V7.1

HP-UX

- HP-UX 11i v3 for HP Integrity servers (Itanium-based systems)

Solaris

- Solaris 10 for UltraSPARC or SPARC64 servers
- Solaris 10 for x64 servers

DB2 on Linux on System z is only supported on DB2 Enterprise Server Edition and on DB2 Advanced Enterprise Server Edition.

The operating system support level for various DB2 products is frequently updated. To obtain the current information for supported software levels, including recommended maintenance levels, refer to

<http://www.ibm.com/software/data/db2/udb/sysreqs.html>

For more information, refer to the installation prerequisites in the documentation accompanying each product.

The program's specifications and specified operating environment information may be found in documentation accompanying the program, if available, such as a readme file, or other information published by IBM, such as an announcement letter. Documentation and other program content may be supplied only in the English language.

Planning information

Software Subscription and Support (also referred to as Software Maintenance) is included with licenses purchased through Passport Advantage and Passport Advantage Express. Product upgrades and technical support are provided by the Software Subscription and Support (also referred to as Software Maintenance) offering as described in the Agreements. Product upgrades provide the latest versions and releases to entitled software, and technical support provides voice and electronic access to IBM support organizations, worldwide.

IBM includes one year of Software Subscription and Support (also referred to as Software Maintenance) with each program license acquired. The initial period of Software Subscription and Support (also referred to as Software Maintenance) can be extended by the purchase of a renewal option, if available.

Packaging

IBM DB2 10.1, Advanced Enterprise Server Edition - Authorized User Single Install and PVU Options

Media:

- IBM DB2 10.1 Advanced Enterprise Server Edition - Quick Start and Activation CD

Security, auditability, and control

To protect data and resources associated with a database server, DB2 uses a combination of external security services and internal access control information. To access a database server, the user must pass some security checks before being given access to database data or resources.

DB2 products interface with external security mechanisms available with operating systems on which DB2 products are supported as well as support for the Kerberos security mechanism. DB2 has an integrated audit facility that can be used to track data access by users. The subsequent analysis of an audit log can lead to improvements in the control of data access and the ultimate prevention of malicious or careless unauthorized access to the data.

The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communication facilities.

Global Technology Services

Contact your IBM representative for the list of selected services available in your country, either as standard or customized offerings for the efficient installation, implementation, or integration of this product.

Ordering information

For ordering information, consult your IBM representative or authorized IBM Business Partner, or visit

Charge metrics definitions

Authorized User Single Install

Authorized User Single Install is a unit of measure by which the program can be licensed. An Authorized User is a unique person who is given access to the program. An Install is an installed copy of the program on a physical or virtual disk made available to be executed on a computer. The program may be installed on any number of computers or servers, but if the Authorized User has accessed or has access to more than one Install of the program, the Authorized User requires a separate entitlement for each such Install. Licensee must obtain separate, dedicated entitlements for each Authorized User given access to the program on each Install in any manner directly or indirectly (for example: via a multiplexing program, device, or application server) through any means. An entitlement for an Authorized User is unique to that Authorized User and may not be shared, nor may it be reassigned other than for the permanent transfer of the Authorized User entitlement to another person.

Processor Value Unit (PVU)

PVU is a unit of measure by which the program can be licensed. The number of PVU entitlements required is based on the processor technology (defined within the PVU Table by processor value, brand, type, and model number at

http://www.ibm.com/software/lotus/passportadvantage/pvu_licensing_for_customers.html

and the number of processors made available to the program. IBM continues to define a processor, for the purpose of PVU-based licensing, to be each processor core on a chip. A dual-core processor chip, for example, has two processor cores.

Licensee can deploy the program using either full capacity licensing or virtualization capacity (sub-capacity) licensing according to the Passport Advantage Sub-Capacity Licensing Terms (refer to the webpage below). If using full capacity licensing, licensee must obtain PVU entitlements sufficient to cover all activated processor cores* in the physical hardware environment made available to or managed by the program, except for those servers from which the program has been permanently removed. If using virtualization capacity licensing, licensee must obtain entitlements sufficient to cover all activated processor cores made available to or managed by the program, as defined according to the Virtualization Capacity License Counting Rules at

http://www.ibm.com/software/lotus/passportadvantage/Counting_Software_licenses_using_specific_virtualization_technologies.html

* An activated processor core is a processor core that is available for use in a physical or virtual server, regardless of whether the capacity of the processor core can be or is limited through virtualization technologies, operating system commands, BIOS settings, or similar restrictions.

Cross-platform products

Cross-platform products for use on System z

Order the part numbers that follow when the product is used for either the development of code that will be deployed on System z servers or when the product will be communicating or transferring data between a distributed server and a System z server. Otherwise order from the other set of part numbers in this announcement. This set of part numbers provides the identical supply and authorization as the other set in this announcement.

Cross-platform product for use on System z IFL engines

Order the part numbers that follow when the product is intended to run on the Linux operating system on System z IFL engines. If the product is not intended to run on the Linux operating system on System z IFL engines, order from the other set of part numbers in this announcement. This set of part numbers provides the identical supply and authorization as the other set in this announcement.

The information provided in this announcement letter is for reference and convenience purposes only. The terms and conditions that govern any transaction with IBM are contained in the applicable contract documents such as the IBM

International Program License Agreement, IBM International Passport Advantage Agreement, and the IBM Agreement for Acquisition of Software Maintenance.

Licensing

IBM International Program License Agreement including the License Information document and Proof of Entitlement (PoE) govern your use of the program. PoEs are required for all authorized use.

Part number products only, offered outside of Passport Advantage, where applicable, are license only and do not include Software Maintenance.

This software license includes Software Subscription and Support (also referred to as Software Maintenance).

License Information form numbers

Program name	Program number	Form number
DB2 AESE	5725-B76	L-VACA-8N2QVW
DB2 Advanced CEO Offering	5725-E89	NA
DB2 CEO Offering	5724-R28	NA
DB2 Enterprise Server Edition	5765-F41	L-VACA-8N6KP9
DB2 Express Edition	5724-E49	L-VACA-8N7Q7H
DB2 Storage Optimization Feature	5724-N78	L-VACA-8NHTFR
DB2 Workgroup Server Edition	5765-F35	L-VACA-8N6RZZ
DB2 pureScale Feature	5724-Y69	L-VACA-8NHS9S
Database Enterprise Developer Edition	5724-N76	L-VACA-8N7THG
IBM DB2 Express Edition FTL	5724-S40	L-VACA-8N7Q7H
IBM HR Feature for DB2 ESE	5724-T19	L-VACA-8NHRBD

The program's License Information will be available for review on the IBM Software License Agreement website

<http://www.ibm.com/software/sla/sladb.nsf>

Limited warranty applies

Yes

Limited warranty

IBM warrants that when the program is used in the specified operating environment, it will conform to its specifications. The warranty applies only to the unmodified portion of the program. IBM does not warrant uninterrupted or error-free operation of the program or that IBM will correct all program defects. You are responsible for the results obtained from the use of the program.

IBM provides you with access to IBM databases containing information on known program defects, defect corrections, restrictions, and bypasses at no additional charge. For further information, consult the IBM Software Support Handbook found at

<http://www.ibm.com/support/handbook>

IBM will maintain this information for at least one year after the original licensee acquires the program (warranty period).

Program technical support

Technical support of a program product version or release will be available for a minimum of five years from the general availability date, as long as your Software Maintenance is in effect. This technical support allows you to obtain assistance (via telephone or electronic means) from IBM for product-specific, task-oriented questions regarding the installation and operation of the program product. Software Maintenance also provides you with access to updates (modifications or fixes), releases, and versions of the program. You will be notified, via announcement

letter, of discontinuance of support with 12 months' notice. If you require additional technical support from IBM, including an extension of support beyond the discontinuance date, contact your IBM representative or IBM Business Partner. This extension may be available for a fee.

Money-back guarantee

For clarification, note that if for any reason you are dissatisfied with the program and you are the original licensee, you may obtain a refund of the amount you paid for it, if within 30 days of your invoice date you return the program and its PoE to the party from whom you obtained it. If you downloaded the program, you may contact the party from whom you acquired it for instructions on how to obtain the refund.

For clarification, note that for programs acquired under the IBM International Passport Advantage Agreement, this term applies only to your first acquisition of the program.

For clarification, note that for programs acquired under any of IBM's On/Off CoD software offerings, this term does not apply since these offerings apply to programs already acquired and in use by you.

Volume orders (IVO)

No

Passport Advantage applies

Yes, and through the Passport Advantage website at

<http://www.ibm.com/software/passportadvantage>

This product is only available via Passport Advantage. It is not available as shrinkwrap.

Usage restriction

Yes.

For additional information refer to the License Information Document that is available on the IBM Software License Agreement website

<http://www.ibm.com/software/sla/sladb.nsf>

International Passport Agreement

Software Subscription and Support applies

Yes. Software Subscription and Support is included with licenses purchased through Passport Advantage and Passport Advantage Express. Product upgrades and technical support are provided by the Software Subscription and Support offering as described in the Agreements. Product upgrades provide the latest versions and releases to entitled software and Technical Support provides voice and electronic access to IBM support organizations, worldwide.

IBM includes one year of Software Subscription and Support with each program license acquired. The initial period of Software Subscription and Support can be extended by the purchase of a renewal option, if available.

While your Software Subscription and Support is in effect, IBM provides you assistance for your routine, short duration installation and usage (how-to) questions, and code-related questions. IBM provides assistance via telephone and, if available, electronic access, to your information systems (IS) technical support personnel during the normal business hours (published prime shift hours) of your IBM support center. (This assistance is not available to your end users.) IBM provides Severity 1

assistance 24 hours a day, 7 days a week. For additional details, consult your IBM Software Support Handbook at

<http://www.ibm.com/support/handbook>

Software Subscription and Support does not include assistance for the design and development of applications, your use of programs in other than their specified operating environment, or failures caused by products for which IBM is not responsible under the applicable agreements.

For additional information about the International Passport Advantage Agreement and the IBM International Passport Advantage Express Agreement, visit the Passport Advantage website at

Other terms

System i Software Maintenance applies

No

Educational allowance available

Education allowance does not apply.

Education software allowance does not apply.

Special education prices are available for qualified customers through Passport Advantage.

Statement of good security practices

IT system security involves protecting systems and information through prevention, detection, and response to improper access from within and outside your enterprise. Improper access can result in information being altered destroyed or misappropriated or can result in misuse of your systems to attack others. Without a comprehensive approach to security, no IT system or product should be considered completely secure and no single product or security measure can be completely effective in preventing improper access. IBM systems and products are designed to be part of a comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products, or services to be most effective. IBM does not warrant that systems and products are immune from the malicious or illegal conduct of any party.

On/Off Capacity on Demand (CoD)

To be eligible for On/Off CoD pricing, customers must be enabled for temporary capacity on the corresponding hardware, and the required contract - Z125-6907, Amendment for iSeries® and pSeries® Temporary Capacity On Demand - Software - must be signed prior to use.

IBM Electronic Services

IBM has transformed its delivery of hardware and software support services to help you achieve higher system availability. Electronic Services is a web-enabled solution that offers an exclusive, no-additional-charge enhancement to the service and support available for IBM servers. These services are designed to provide the opportunity for greater system availability with faster problem resolution and preemptive monitoring. Electronic Services comprises two separate, but complementary, elements: Electronic Services news page and Electronic Services Agent.

The Electronic Services news page is a single Internet entry point that replaces the multiple entry points traditionally used to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The Electronic Service Agent™ is no-additional-charge software that resides on your server. It monitors events and transmits system inventory information to IBM on a periodic, client-defined timetable. The Electronic Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to deliver proactive service that may result in higher system availability and performance. In addition, information collected through the Service Agent is made available to IBM service support representatives when they help answer your questions or diagnose problems. Installation and use of IBM Electronic Service Agent for problem reporting enables IBM to provide better support and service for your IBM server.

Prices

Passport Advantage

For Passport Advantage information and charges, contact your IBM representative or authorized IBM Business Partner, or authorized IBM Business Partner for Software ValueNet®, if applicable. Additional information is also available at
