Overview

Enhancements to IBM i 7.1 licensed program products

IBM PowerHA SystemMirror for i 7.1 is the next generation of PowerHA for i and is available in two packages: PowerHA SystemMirror for i Standard Edition and PowerHA SystemMirror for i Enterprise Edition.

PowerHA SystemMirror Standard Edition, optimized for data center operations, includes support for LUN level switching, space efficient flash copy, and geographic mirroring synchronous mode. The PowerHA SystemMirror Enterprise Edition includes the Standard Edition capabilities plus the multi-site availability and disaster recovery HA/DR functions such as geographic mirroring asynchronous mode as well as Global Mirror and Metro Mirror support for the IBM DS8000™ and DS6000™ servers.

PowerHA SystemMirror is restructured to better align ordering with other IBM Power Systems Software™ offerings. You have three priced tier options within each of the editions: small, medium, and large.

PowerHA SystemMirror:

- Is designed, tested, and integrated to provide the most robust, easy-to-use HA/DR clustering solution for IBM i environments.
- Provides monitoring, detection, and automation for both the data center and multi-site deployments.

- Is the IBM Power Systems™ strategic solution for business resiliency and continues to be enhanced for function, robustness, and usability.

Key prerequisites

For clients doing a no-charge upgrade to PowerHA SystemMirror on IBM i 7.1 from PowerHA on IBM i 6.1, opt 41 (HASR) is a required prerequisite. Opt 41 must either be installed or purchased at the time of the PowerHA 6.1 acquisition in order for the client to be eligible for the no-charge upgrade. Client must also have a current Software Maintenance Agreement.

Planned availability date

April 23, 2010

Description

IBM Backup, Recovery and Media Services for i (5770-BR1):

- Management enhancements
 - Support for the IBM Systems Director Web browser environment.
 - Scheduling support for IBM Systems Director Navigator for i Web browser environment.
 - High availability independent auxiliary storage pools enhancement.
 - Enhanced the current e-mail function to support multiple e-mail addresses.
 - Enhanced the BRMS log filter to provide the option to filter on control groups.
 - BRMS maintenance feature in the Backup Policy now allows the user to run movement, expire partial volume sets, and reorganize BRMS database files.
- Recovery enhancements
 - New outfile support parameters have been added on the BRMS restore commands as well as the BRMS recovery policy.
 - New *COMPATIBLE special value has been added for the Allow object differences parameter on BRMS restore commands.
 - A new parameter Saved auxiliary storage pool (SAVASP) has been added on the BRMS restore commands to provide better control on the selection of which library or object was saved.
 - On the work with object displays the "Objects saved" columns have been increased to support more than 999,999 objects.
 - New recovery report enhancements:
 - The "Verify System Information" step in the recovery report has been updated to include new instructions to use the Update System Information (UPDSYSINF) command.
 - The "Recover User Profiles" step in the recovery report, under the "Attention" section where the user is instructed what restore defaults to use, the user is asked to use *COMPATIBLE now for the Allow object differences prompt.
 - On the Start Recovery using BRM (STRRCYBRM) command, a new parameter recovery element override has been added to allow the user to override specific sections on the recovery report.
 - The objects saved column on the recovery report has been increased to support more than 999,999 objects.
- Media services enhancements
 - Better handling of non-BRMS media when a customers inventory has a mixed media pool of BRMS media and non-BRMS media.
 - Increased protection on backups saved to virtual media that have not been saved off to physical media.

- The Print Media Movement (PRTMOVBRM) command now includes media scheduled to move including media that are at the beginning of the media rotation.
- Advanced feature enhancements
 - A new high availability enhancement has been added for independent auxiliary storage pools.

IBM PowerHA SystemMirror for i (5770-HAS)

PowerHA SystemMirror for i Standard Edition 7.1 is focused on HA for the data center and includes support for LUN level switching, space efficient flash copy, and synchronous geographic mirroring (IBM i mirroring over IP).

- PowerHA SystemMirror LUN level switching capability is designed to enable Standard Edition customers to configure an IASP on a set of logical units (LUNs) within a DS8000 or DS6000, and those LUNs can be reassigned from one IBM i instance to another. Customers may prefer this configuration (verses using Metro Mirror) for economic reasons although a Metro Mirror configuration is clearly more robust. For all other disk configurations including internal disks, the data center option is geographic mirror synchronous mode. In both cases, Metro Mirror or geographic mirror sync mode, the rule of thumb distance for typical IBM i workloads is 40KM. When you are approaching 40KM or going beyond this distance you need to consider asynchronous mirroring. Space efficient flash copy is also supported with the Standard Edition. Space efficient flash copy, as its name implies, provides the capability to flash a production volume to a target volume that has less physical capacity. This applies to the consistency group processing affiliated with global mirroring and flashes for off line backups.

PowerHA SystemMirror for i Enterprise Edition is focused on multi-site deployments where the capability to conduct role swap operations (planned or unplanned) over long distances is required. For clients using the DS8000 or DS6000, the mirroring or replication option is Global Mirroring. For customers with internal disk, PowerHA SystemMirror for i 7.1 supports geographic mirroring asynchronous mode. The Enterprise Edition includes all of the Standard Edition capabilities plus the support for multi-site configurations based on geographic mirror async mode, Metro Mirror, or Global Mirror.

Additional PowerHA SystemMirror enhancements include:

- Additional Cluster Administrative Domain monitored resources: Authorization lists and printer device descriptions.
- Centralized cluster configuration for easier set up and management of the PowerHA environment.
- Cross IASP/Sysbas commitment control transaction support.
- Enhanced cluster wide failure detection via interaction with the HMC or IVM.
- And (introduced with PowerHA 6.1) Memory Partitioning, which eliminates the need to IPL after a flash copy operation as was the case in the pre-PowerHA implementations.
- IPv6 enablement: PowerHA SystemMirror now supports configurations using pure IPv6 networks as well as network environments where IPv4 and IPv6 coexist.

IBM Advanced Job Scheduler for i (5770-JS1)

IBM Advanced Job Scheduler for i now has update capabilities for most of the product functions within the Systems Director Navigator for i Web interface. Using a Web browser, you can remotely access scheduled jobs, job groups, report distribution, notification features, scheduled job activity, and activity log information for Advanced Job Scheduler.

The following features were added to the Web interface: Advanced Job Scheduler Properties, Start/Stop Scheduler, Predefined Schedules, Systems and System groups, Data Libraries, Users, Scheduling Calendars, Holiday Calendars, Reset All Scheduled Jobs, Scheduled Job Properties, Add and Update Job Groups, Recipients,

Report Distribution Lists, New E-mail, Escalation Lists, Sent E-mail, Output Queue Monitor, Scheduled Job Activity Properties, Activity Log Properties.

Advanced Job Scheduler was enhanced with the ability to send a spooled file to an IFS path name with the option to replace the file if it already exists. Replacement variables can be used to create a path and file name that are unique. The path name is specified in a recipient.

Within the Multiple Scheduling Environments (MSE) feature, the Monitor job name, Automatically start monitor, and Text parameters were added to the Change Data Library using JS (CHGDLJS) command. These new parameters are helpful during the switchover from a production system to a backup system.

Jobs in a group with a sequence number greater than one can now use a predefined schedule. This new capability will allow groups that run weekly to have a job or jobs that should only run monthly. It will also allow jobs in the group to contain a holiday calendar. Jobs that contain a predefined schedule will only run on the days determined by the definition of the schedule.

To go along with the enhancement of jobs in a group containing a Predefined schedule, the Start Group using JS (STRGRPJS) command was changed. A Based on date parameter was added to the command. For instance, if Monday December 21, 2009, is specified, the only group jobs that will run after the initial job will be those that contain *MON in the list of days of the week to process or those that use a predefined schedule and December 21, 2009 would be calculated from the predefined schedule. This new parameter is also found in the graphical user interface (GUI) and Web interface.

The Submit Job using Job Scheduler (SBMJOBJS) command has a new parameter called Submit time offset. You can specify the amount of time in minutes from 1 to 720 to add to the current time in order to calculate the submit time. This new parameter is also found in the GUI and Web interface.

Jobs can now be dependent on the contents of a data area or a value returned from a program. When specifying a resource dependency for object type data area, you can specify a value that must exist in the data area before the associated job will run. A starting position and a length may also be used. The value can be up to 50 alphanumeric characters. For object type program, you may specify a value that must be returned after calling the program before the associated job will run. For example, program CHKFILE may be specified as a Program resource dependency. The user-defined program could check the contents of a file or other criteria and pass back **yes** when all the criteria has been met otherwise it would return **no**. The value in the resource dependency would contain **yes**, starting position 1, and length of 3. The program will be called periodically until the correct value is found or until the wait limit has been met.

IBM Query for i (5770-QU1)

Query for i (5770-QU1) is not directly orderable on i 7.1. The product to order for query support is DB2® Web Query for i (5733-QU2). When you order DB2 Web Query for i (5733-QU2), you also receive Query for i 7.1 (5770-QU1).

Software Maintenance (SWMA) for 5733-QU2 is not included in the upgrade from 5722-QU1 or 5761-QU1 to 5733-QU2. SWMA for 5733-QU2 is available for an additional charge when you upgrade. The configurator includes the 5733-QU2 SWMA on upgrades from 5722-QU1 or 5761-QU1, but it is not required and may be removed, resulting in no SWMA coverage on 5733-QU2.

IBM Performance Tools for i (5770-PT1)

In 7.1, there are now Performance Explorer perspectives in the Performance Data Investigator. These Performance Explorer perspectives are for PEX profile collections. In order to enable these new perspectives, you must have installed the 7.1 Performance Tools Manager feature.

IBM i Access Family (5770-XW1)

The following IBM i Access Family products include new and enhanced functions for 7.1.

Overview of enhancements to IBM i Access Family 7.1 products:

- IBM i Access for Windows 7.1 offers:
 - Enhancements to the .NET, ODBC, and OLE DB providers.
 - Enhancements to Data Transfer.
 - Updated PC5250 Display and Printer Emulation based on IBM Personal Communications V6.0.
 - Help files converted to HTML help format.
 - Enhancements to install, including install-time support for secondary languages.
- IBM i Access for Web 7.1 includes:
 - Additional option for viewing spooled files as PDF documents.

IBM i Access Family refresh (5770-XW1)

IBM System i® Access Support on i 6.1 (5761-XW1) clients who want to remain at IBM i 6.1 and who have a software maintenance agreement can acquire and use the 7.1 versions of the following products by ordering 5761-XW1 refresh feature 6221:

- IBM i Access for Windows
- IBM i Access for Web

<http://www.ibm.com/support>

Packaging

IBM i 7.1 is shipped on DVD and is also available for download using the Entitled Software Support Web Site

<http://www.ibm.com/servers/eserver/ess>

This program, when downloaded from a Web site, contains the applicable IBM license agreement and License Information, if appropriate, and will be presented for acceptance at the time of installation of the program. For future reference, the license and License Information will be stored in a directory such as LICENSE.TXT.

Security, auditability, and control

IBM i 7.1 programs use the security and auditability features of the IBM i 7.1.

The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communication facilities.

Software Services

IBM Software Services has the breadth, depth, and reach to manage your services needs. You can leverage the deep technical skills of our lab-based, software services team and the business consulting, project management, and infrastructure expertise of our IBM Global Services team. Also, we extend our IBM Software Services reach through IBM Business Partners to provide an extensive portfolio of capabilities. Together, we provide the global reach, intellectual capital, industry insight, and technology leadership to support a wide range of critical business needs.

To learn more about IBM Software Services or to contact a Software Services sales specialist, visit

Charge metric

Per processor core pricing

A processor (commonly called a CPU or core) is the unit of measure by which this program is licensed. It is a functional unit within a computing device that interprets and executes instructions. A processor consists of at least an instruction control unit and one or more arithmetic or logic unit. With multicore technology, each core is considered a processor. A Proof of Entitlement (PoE) must be obtained for the appropriate number of processors based on the level of all processor cores activated and available for use by the program on the server.

Concurrent User

Concurrent User is the unit of measure by which this program is licensed. A Concurrent User is a shared user access to the program within or outside of your enterprise. The program may be installed only on one computer or one server. The total number of Concurrent Users simultaneously accessing the program at any moment in time may not exceed the highest number of Concurrent Users authorized by the PoE. You must have an entitlement for each Concurrent User simultaneously accessing the program or any program component in any manner directly or indirectly (for example, via a multiplexing program, device, or application server) through any means.

Terms and conditions

The information provided in this announcement letter is for reference and convenience purposes only. The terms and conditions that govern any transaction with IBM are contained in the applicable contract documents such as the IBM International Program License Agreement, IBM International Passport Advantage® Agreement, and the IBM Agreement for Acquisition of Software Maintenance.

Licensing

IBM International Program License Agreement including the License Information document and PoE govern your use of the program. PoEs are required for all authorized use.

This software license includes Software Subscription and Support (also referred to as Software Maintenance).

Agreement for Acquisition of Software Maintenance

The IBM Agreement for Acquisition of Software Maintenance (Z125-6011) agreement applies for subscription and support (also referred to as Software Maintenance) and does not require customer signatures.

These programs are licensed under the IBM Program License Agreement (IPLA) and the associated Agreement for Acquisition of Software Maintenance, which provide for support with ongoing access to releases and versions of the program. IBM includes one year of Software Subscription and Support (also referred to as Software Maintenance) with the initial license acquisition of each program acquired. The initial period of Software Subscription and Support (also referred to as Software Maintenance) can be extended by the purchase of a renewal option, if available. These programs have a one-time license charge for use of the program and an annual renewable charge for the enhanced support that includes telephone assistance (voice support for defects during normal business hours), as well as access to updates, releases, and versions of the program as long as support is in effect.

License Information form number

The program's License Information will be available for review on the IBM Software License Agreement Web site

<http://www.ibm.com/software/sla/sladb.nsf>

Limited warranty applies

Yes

Limited warranty

IBM warrants that when the program is used in the specified operating environment, it will conform to its specifications. The warranty applies only to the unmodified portion of the program. IBM does not warrant uninterrupted or error-free operation of the program or that IBM will correct all program defects. You are responsible for the results obtained from the use of the program.

IBM provides you with access to IBM databases containing information on known program defects, defect corrections, restrictions, and bypasses at no additional charge. For further information, consult the IBM Software Support Handbook found at

<http://www.ibm.com/support/handbook>

IBM will maintain this information for at least one year after the original licensee acquires the program (warranty period).

Money-back guarantee

If for any reason you are dissatisfied with the program and you are the original licensee, you may obtain a refund of the amount you paid for it, if within 30 days of your invoice date you return the program and its PoE to the party from whom you obtained it. If you downloaded the program, you may contact the party from whom you acquired it for instructions on how to obtain the refund.

For clarification, note that for programs acquired under any of IBM's On/Off Capacity on Demand (On/Off CoD) software offerings, this term does not apply since these offerings apply to programs already acquired and in use by you.

Authorization for use on home/portable computer

You may not copy and use this program on another computer without paying additional license fees.

Other terms

Volume orders (IVO)

Yes. Contact your IBM representative.

IBM International Passport Advantage Agreement

Passport Advantage applies

No

Usage restriction

Yes. For additional information, refer to the License Information document that is available on the IBM Software License Agreement Web site

<http://www.ibm.com/software/sla/sladb.nsf>

Software Subscription and Support (Software Maintenance) applies

Yes. All distributed software licenses include Software Subscription and Support (also referred to as Software Maintenance) for a period of 12 months from the date of acquisition, providing a streamlined way to acquire IBM software and assure technical support coverage for all licenses. Extending coverage for a total of three years from date of acquisition may be elected.

While your Software Subscription and Support (Software Maintenance) is in effect, IBM provides you assistance for your routine, short duration installation and usage (how-to) questions, and code-related questions. IBM provides assistance via telephone and, if available, electronic access, only to your information systems (IS) technical support personnel during the normal business hours (published prime shift hours) of your IBM support center. (This assistance is not available to your end users.) IBM provides Severity 1 assistance 24 hours a day, every day of the year. For additional details, consult your IBM Software Support Handbook at

<http://www.ibm.com/support/handbook>

Software Subscription and Support (Software Maintenance) does not include assistance for the design and development of applications, your use of programs in other than their specified operating environment, or failures caused by products for which IBM is not responsible under this agreement.

IBM Operational Support Services - SoftwareXcel

Yes

System i Software Maintenance applies

Yes

Variable charges apply

No

Educational allowance available

Yes. A 15% education allowance applies to qualified education institution customers.

IBM Electronic Services

IBM has transformed its delivery of hardware and software support services to help you achieve higher system availability. Electronic Services is a Web-enabled solution that offers an exclusive, no-additional-charge enhancement to the service and support available for IBM servers. These services are designed to provide the opportunity for greater system availability with faster problem resolution and preemptive monitoring. Electronic Services comprises two separate, but complementary, elements: Electronic Services news page and Electronic Services Agent.

The Electronic Services news page is a single Internet entry point that replaces the multiple entry points traditionally used to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The Electronic Service Agent™ is no-additional-charge software that resides on your server. It monitors events and transmits system inventory information to IBM on a periodic, client-defined timetable. The Electronic Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to deliver proactive service that may result in higher system availability and performance. In addition, information collected through the Service Agent is made available to IBM service support representatives when they help answer your questions or diagnose problems. Installation and use of IBM Electronic Service Agent for problem reporting enables IBM to provide better support and service for your IBM server.

To learn how Electronic Services can work for you, visit

IBM Global Financing

IBM Global Financing offers competitive financing to credit-qualified customers to assist them in acquiring IT solutions. Offerings include financing for IT acquisition, including hardware, software, and services, from both IBM and other manufacturers or vendors. Offerings (for all customer segments: small, medium, and large enterprise), rates, terms, and availability can vary by country. Contact your local IBM Global Financing organization or visit

<http://www.ibm.com/financing>

IBM Global Financing offerings are provided through IBM Credit LLC in the United States, and other IBM subsidiaries and divisions worldwide to qualified commercial and government customers. Rates are based on a customer's credit rating, financing terms, offering type, equipment type, and options, and may vary by country. Other restrictions may apply. Rates and offerings are subject to change, extension, or withdrawal without notice.

Financing from IBM Global Financing helps you preserve cash and credit lines, enables more technology acquisition within current budget limits, permits accelerated implementation of economically attractive new technologies, offers payment and term flexibility, and can help match project costs to projected benefits. Available worldwide for credit qualified customers.

For more financing information, visit
