Performance	Workflow Analysis Utility	Performance Logging	Performance Analysis	Process Analysis
-------------	---------------------------	---------------------	----------------------	------------------

How do you enable performance logging?

You use the IBM TRIRIGA Administration Console, **Platform Logging** page to enable the workflow performance logging.

To enable the performance-timing logging, go to **Performance Timings**, and select the **Workflow** check box. This selection also selects the **Asynchronous** and **Synchronous** check boxes. Click the **Apply** button. The performance timing will log specifically to the **performance-XXXX-XX-XX.log**.

Notes:

- If you are using IBM TRIRIGA Application Platform 3.5.3, you can also enable performance logging via the [Performance Analyzer](#).

To enable the step-trace logging, go to **Workflow Logging > Trace**, and select the **Start, End, and Steps** check box. Click the **Apply** button. The step trace will log specifically to the **server.log**.

Notes:

- The steps are shown **only** when you load the step-trace LOG that **corresponds** to the performance LOG. For example, if you load the step trace from a different day than the workflows, none of the steps will match the workflows, and the steps will not load.

Admin Console > Platform Logging > Performance Timings > Workflow.
