

Release Notes

Product: IBM Security Guardium Insights
Release version: Guardium Insights 3.2.1
Completion date: October 2022

This patch of IBM Security Guardium Insights contains security and other fixes.

IBM Security Guardium Insights is a hybrid cloud data security hub that helps you improve visibility into user data activity and risk. Guardium Insights helps you protect data more efficiently, enhance information technology flexibility, and reduce operational costs as you embrace new business paradigms (such as moving data to the cloud). Guardium Insights helps reduce the cost and complexity related to collecting, managing, and retaining data security and compliance data. It provides new analytics to enhance threat investigations - and it provides quick reporting functionality (including pre-built reports). Risk scoring and alerting in Guardium Insights help you prioritize your activities.

IBM Security Guardium Insights is a powerful tool that can help you secure your data. Simple to use, Guardium Insights allows you to set up connections to your data sources.

Guardium Insights provides tools to help you analyze data:

- Outlier mining: Detect anomalies in activities and exceptions.
- Risk events: Identify assets at risk using broad data points.
- Reports: Dive into the raw data for deep investigation.

Performance and other fixes

Issue key	Description
INS-18077	If the ingestion queue has 65536 or more files waiting to be ingested, the ingestion stops.
INS-20962	In <code>uc_gi_templates.json</code> , there may be a nested sensitive field (credential) that cannot be updated in the edit sidebar in the connections page.
INS-22169 INS-22838	Existing temp tables created for scheduled audit tasks take most of the Db2 space and cause remaining scheduled jobs fail to save new temp tables. These remaining jobs will fail.
INS-22749	Deprecated v3.1 Anomaly Rules appear enabled in v3.2.
INS-23033	This error occurs for IBM Cloud VPC Gen 2 when running reports or when there are API timeouts: Report error Cannot retrieve the report data. Refresh the page or retry later. <code>NetworkError</code> when attempting to fetch resource.
INS-23168	If there is a bad record (for example, one that Db2 fails to parse) in the upper half of a CSV file, Db2 fails to ingest the entire file.
INS-23223	By default, the all-in-one script uses the RWX storage class for backup and restore support. This forces you to stop the deployment, update the CR, and apply it (in the case that you want to use a different RWX storage class for the backup and restore support in the deployment).

Known limitations and workarounds

With the exception of any fixed bugs that are listed above, this patch of Guardium Insights carries forward the known limitations and workarounds from Guardium Insights Version 3.2. You can find the list of limitations in the [release notes](#) for that version.

In addition, this patch includes this known limitation:

Guardium Insights component	Issue key	Description
Installation	INS-24933	Cannot backup and restore Guardium Insights after upgrading to Version 3.2.1. There is no workaround for this limitation.
