CICS Transaction Server for z/OS
5.5

CICS Codes

IBM

Note

Before using this information and the product it supports, read the information in "Notices" on page 329.

Contents

About this PDF

This PDF is a reference of CICS transaction abend codes, and system abend codes. Before CICS TS V5.4, this information was in the PDF called *CICS Messages and Codes, Volume 1*.

For details of the terms and notation used in this book, see <u>Conventions and terminology used in the CICS documentation</u> in IBM Knowledge Center.

Date of this PDF

This PDF was created on 2025-07-22 (Year-Month-Date).

Chapter 1. Transaction abend codes

When abnormal conditions occur, CICS can send a message to the CSMT transient data destination that contains the transaction ID, the program name, and the abend code.

Here is an example:

```
DFHAC2236: date time applid Transaction tranid abend primary abcode
in program program name term termid backout successful
{ batchid = }batchid. message
```

Alternatively, the application can intercept abends by including an active **EXEC CICS HANDLE ABEND** command. The actual abend code can be determined by issuing the **EXEC CICS ASSIGN** command with the **ABCODE** option.

The transaction identification code *tranid* usually consists of the 4 characters defined to CICS. However, when a transaction is initiated by using a light pen, an operator identification (OPID) card reader, or 3270 PA or PF keys (specified in the TASKREQ= operand), CICS creates an internal transaction identification in the form of a 1-byte 3270 attention identification (AID) code followed by 3 bytes of X'FF'.

The code that may actually appear in the message in place of the internally-created transaction identification will be *xx*, where *xx* is the character translation of the 3270 AID code. To prevent ambiguity, the user should avoid using these codes as transaction identifiers.

The keys, the light pen (LPA), and OPID, and their corresponding printed AID codes are given in the following list:

PF1	*F1*	PF13	*C1*	LPA	*7E*
PF2	*F2*	PF14	*C2*	OPID	*E6*
PF3	*F3*	PF15	*C3®*	PA1	*6C*
PF4	*F4*	PF16	*C4*	PA2	*6E*
PF5	*F5*	PF17	*C5*	PA3	*6B*
PF6	*F6*	PF18	*C6*		
PF7	*F7*	PF19	*C7*		
PF8	*F8*	PF20	*C8*		
PF9	*F9*	PF21	*C9*		
PF10	*7A*	PF22	*4A*		
PF11	*7B*	PF23	*4B*		
PF12	*7C*	PF24	*4C*		

An abend code indicates the cause of an error that may have been originated by CICS or by a user program. For most of the abend codes described, a CICS transaction dump is provided at abnormal termination.

All CICS transaction abend codes *abcode* are 4-character alphanumeric codes of the form **A***xxx*.

Format of information

For each transaction abend code, the following information is given:

- An explanation of events leading to or following the message.
- The action that has been or will be taken by CICS (system action).
- The action recommended for the user (console or terminal operator).

- The module or modules that can determine that the message should be sent (not necessarily the module or modules that can issue the macro to write the message).

AAxx abend codes

AACA

Explanation

An invalid error code has been passed to the DFHTFP or DFHACP programs.

System action

CICS terminates the task abnormally with a dump.

User response

Notify the system programmer.

Module:
DFHTFP,DFHACP

AAL1

Explanation

DFHALP was processing a request that deadlocked. The most likely reason for the abend is that an ALLOCATE QUEUE request has been suspended because there are no contention-winning links available.

AAL1 is issued for non time-out related deadlocks, for instance the task may have been cancelled.

AAL8 is issued for stall purges and deadlock time-outs.

System action

CICS terminates the task abnormally. A dump is taken.

User response

Ensure that there are enough contention-winning sessions available to satisfy the ALLOCATE QUEUE request.

If you are running with modegroups, ensure that there are contention-winning sessions available to satisfy the ALLOCATE request in that modegroup.

Module:
DFHALP

AAL2

Explanation

Either an incorrect response (other than PURGED) was returned from the suspend of the allocated task, or an incorrect response was returned from the resume.

System action

The transaction is abnormally terminated with a dump.

User response

Check the return code from the resume or the suspend to determine the cause of the error.

Module:
DFHALP

AAL3

Explanation

The task has been purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The task that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason why the task was purged. It was purged either by the main terminal operator or as a result of a deadlock timeout.

Module:
DFHALP

AAL4

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error provides an exception trace, a console message, and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHALP

AAL6

Explanation

An error (INVALID, DISASTER or EXCEPTION response) has occurred on a call to SIGNOFF_TERMINAL_USER by DFHALP during sign-off for a surrogate terminal session running CRTE. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHALP

AAL7

Explanation

An error (INVALID, DISASTER or EXCEPTION response) has occurred on a call to schedule a remote terminal delete by DFHALP during sign-off for a surrogate terminal session running CRTE. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHALP

AAL8

Explanation

DFHALP was processing a request that deadlocked. The most likely reason for the abend is that an ALLOCATE QUEUE request has been suspended because there are no contention-winning links available.

AAL1 is issued for non time-out related deadlocks.

AAL8 is issued for stall purges and deadlock time-outs.

System action

CICS terminates the task abnormally. A transaction or system dump is not taken unless the transaction dump table has been modified for AAL8.

User response

Ensure that there are enough contention-winning sessions available to satisfy the ALLOCATE QUEUE request.

If you are running with modegroups, ensure that there are contention-winning sessions available to satisfy the ALLOCATE request in that modegroup.

It might be necessary to increase the deadlock timeout (DTIMEOUT) value for the transaction to prevent this abend from recurring.

If you require a transaction or system dump for this abend then add AAL8 to the transaction dump table.

Module:
DFHALP

AALA

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Atomservice Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMW2

AALB

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the CICS/MQ Connection Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMMQ

AALC

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the JVMSERVER Resource Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMSJ

AALM

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the log manager (LM) domain. The domain that detected the original error provides an exception trace, a console message, and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHAMLM

AALN

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the TD manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMTD

AALO

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the CICS/DB2 table manager DFHD2TM. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMD2

AALP

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Program Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMPG

AALQ

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Business Application Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMBA

AALR

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Temporary Storage Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMBA

AALS

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Global Enqueue Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMBA

AALT

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Internet Inter-Orb Protocol Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMOP

AALU

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Sockets Domain Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMSO

AALV

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Enterprise Java Domain. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMEJ

AALW

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Web Domain. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMWB

AALX

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Pipeline Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMPI

AALY

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the ISC/IP Domain. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMIS

AALZ

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Document Handler. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMDH

AAM1

Explanation

DFHXMCL has returned an unexpected response during the install of a transaction class. This can be caused by the task being purged during the install.

System action

The transaction is abnormally terminated with a CICS transaction dump.

If an error has occurred, at the time the error is detected, CICS issues a DFHXM*nnnn* console message, records an exception trace entry and takes a system dump.

User response

Determine why the task has failed. If there is a system dump, use it together with the trace entry and the console message to resolve the problem. If there is no system dump, the task has been purged either by

the main terminal operator or as a result of deadlock timeout.

Module:
DFHAMP

AAM2

Explanation

DFHXMXD has returned an unexpected response during the install of a transaction definition. This can be caused by the task being purged during the install.

System action

The transaction is abnormally terminated with a CICS transaction dump.

If an error has occurred, at the time the error is detected, CICS issues a DFHXM*nnnn* console message, records an exception trace entry and takes a system dump.

User response

Determine why the task has failed. If there is a system dump, use it together with the trace entry and the console message to resolve the problem. If there is no system dump, the task has been purged either by the main terminal operator or as a result of deadlock timeout.

Module:
DFHAMP

AAM3

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Loader Domain. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMLD

AAM4

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the Resource Lifecycle Manager. The domain that detected the original error provides a trace entry and possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMRL

AAMA

Explanation

There is an internal logic error in DFHAMP.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAMC

Explanation

The task was purged before a GETMAIN request to the storage manager domain was able to complete successfully.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason the task was purged. It was purged either by the main terminal operator or as a result of deadlock timeout.

Module:
DFHAMP

AAMD

Explanation

An unexpected return code has been received from DFHDMP. This is due to an internal logic error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAMF

Explanation

An unexpected return code has been received following a call to the kernel (KE) domain. This might be due to an internal logic error.

System action

CICS terminates the task abnormally with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAMH

Explanation

An unexpected return code has been received following a call to DFHFCMT. This might be due to an internal logic error.

System action

CICS terminates the task abnormally with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAMI

Explanation

An unexpected return code has been received following a call to DFHFCRL. This might be due to an internal logic error.

System action

CICS terminates the task abnormally with a dump. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

User response:

Module:
DFHAMP

AAMJ

Explanation

While installing a file, using RDO, a call was made to DFHFCFS to enable the file. An irrecoverable error was returned from DFHFCFS.

System action

The task is abnormally terminated with a CICS transaction dump.

At the time the error is detected, CICS writes a message to the console, records an exception trace entry and takes a system dump.

User response

Inform the system programmer. Examine the trace and the dump to identify the point of error.

Module:
DFHAMP

AAMK

Explanation

While installing a file, using RDO, a call was made to DFHFCDN. An irrecoverable error was returned from DFHFCDN.

System action

The task is abnormally terminated with a CICS transaction dump. At the time the error is detected, CICS writes a message to the console, records an exception trace entry, and takes a system dump.

User response

Inform the system programmer, Examine the trace and dump to identify the point of error.

Module:
DFHAMP

AAMN

Explanation

There has been an unexpected return code from a call to DFHPRPT. This might be due to an internal logic error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAMO

Explanation

An invalid return code was returned from DFHTOR, the CICS terminal object resolution program.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAMP

Explanation

An unexpected return code has been received from DFHPUP. This might be due to an internal logic error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAMQ

Explanation

An attempt has been made to install a partner using RDO. However, the partner resource manager (PRM) is unavailable having failed to initialize during CICS initialization.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need to use the PRM, correct the problem which prevented the PRM from initializing, and restart CICS.

Module:
DFHAMP

AAMS

Explanation

There has been an unexpected return code following a GETMAIN request to the storage manager. This is due to an internal logic error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

DFHAMP

AAMT

Explanation

There is an internal logic error in DFHAMP due to an unexpected return code from DFHTMP.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAMZ

Explanation

An unexpected return code has been received from DFHZCP. This is due to an internal logic error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAMP

AAO2

Explanation

CPI Communications has detected an unexpected response from DFHLUC.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is a CICS internal logic error.

A level 2 CICS trace for 'CP' of the transaction documents the course of events prior to this error (such as the modules called and their parameters). The level 2 trace also provides details of the error itself.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPCBA

AA03

Explanation

The CPI interface detected that a call was made to a CPI Communications function without CPI Communications being initialized. This implies that CPI Communications initialization failed while CICS was initializing.

System action

The transaction is abnormally terminated with a CICS transaction dump. An exception trace entry is also written when this event occurs.

User response

Check the console listing to determine the reason why CPI Communications failed to initialize during CICS initialization. Correct the problem and restart CICS.

If the console listing indicates that CPI Communications initialized successfully, you need further assistance to resolve the problem. Collect the console listing, the traces and the transaction dump. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPI

AA04

Explanation

DFHZARL, or a module called by DFHZARL, has detected a logic error. This error is almost certainly caused by the module receiving invalid data or indicators from VTAM.

System action

Before returning to the CPI Communications layer, DFHZARL calls DFHZNAC to clean up the session and put out messages on the CSNE log. CPI Communications abnormally terminates the

transaction with a CICS transaction dump, and produces an exception trace entry.

User response

Check the CSNE log to determine the type of error. You may need further assistance from IBM to fully resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPCLR

AA05

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason why the task was purged. It was purged either by the main terminal operator or as a result of deadlock timeout.

Module:
DFHCPCBA, DFHCPCBI, DFHCPCBS

AA07

Explanation

The CPI Communications syncpoint request handler has been passed an invalid DFHLUC parameter list. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events before this error occurred (such as the modules called and their parameters) plus details of the error itself. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPSRH

AAO8

Explanation

The CPI Communications syncpoint request handler has been passed an invalid conversation control block (CPC). This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events before this error occurred (such as the modules called and their parameters) plus details of the error itself. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPSRH

AAO9

Explanation

A task has been purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged.

If the task was purged by the main terminal operator, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, the number of tasks in the system should be reduced to avoid short-on-storage situations. Another possibility would be to increase the value of the DTIMOUT option for the transaction.

Module:
DFHCPCLR

AAOA

Explanation

An application has issued a CPI verb which CICS does not support. The entry point referenced in the application program was resolved in the link edit stub, but the function requested could not be resolved when control passed to CICS.

There are two possible reasons for this:

- You have linkedited your application program with a CPI stub which supports more function than this release of CICS.
- The linkedit stub has been corrupted.

System action

The transaction is abnormally terminated with a CICS transaction dump. An exception trace entry is also written.

User response

At the time of the error, general register 0 points to an 8-byte character string which should match the name of the issued CPI call. Use the trace or the dump to verify that this character string is the name of a CPI function which is supported.

If the character string is not an intelligible character string, the stub has probably been corrupted.

Module:
DFHCPI

AAOB

Explanation

An application has issued a CPI verb which specifies more than eight parameters.

System action

The transaction is abnormally terminated with a CICS transaction dump and an exception trace entry is also written.

User response

Change your application program so that the correct number of parameters is specified on the CPI call.

Module:
DFHCPI

AAOC

Explanation

CPI Communications is invoked with an invalid number of parameters for call

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

The exception trace point produced with this abend contains the incorrectly issued CPI Communications verb name. Use this to determine where the application program was in error and amend it accordingly.

The z/VM: CPI Communications User's Guide manual, SC26-4399, provides a detailed description of all the CPI Communications verbs and how they should be called.

Module:
DFHCPARH

AAOD

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason the task was purged. It was purged either by the main terminal operator or as a result of deadlock timeout.

Module:
DFHCPCBI

AAOE

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason the task was purged. It was purged either by the main terminal operator or as a result of deadlock timeout.

Module:
DFHCPCBA

AAOF

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason the task was purged. It was purged either by the main terminal operator or as a result of deadlock timeout.

Module:
DFHCPCBS

AAOG

Explanation

During the processing of CMACCP (accept conversation), CPI Communications detected that the application was attached with an unsupported sync level.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This condition is caused by a back-end CPI Communications transaction being attached with a sync level that is not CM_NONE (0) or CM_CONFIRM (1).

Change the front-end transaction, (that is, the initiator of the conversation in the other system) so that it defines the sync level correctly.

Module:
DFHCPCBA

AAOH

Explanation

Journaling of data sent on a CPI communications mapped conversation has failed. This condition is caused by a nonzero response from the CICS log manager.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the dump to ascertain why the journal or log record could not be written correctly. If a journal record length error is indicated, TIOATDL may have been corrupted.

Problem determination

Register 12 addresses the current TCA and field TCAJCAAD and register 4 address the JCA. The log manager request is contained in JCATR2 and the response code is in JCAJCRC.

Possible request codes are:

```
X'8001' - WRITE
X'8003' - PUT
```

Possible response codes are:

```
X'01' - IDERROR - Journal identification error
X'02' - INVREQ  - Invalid request
X'03' - STATERR - Status error
X'05' - NOTOPEN - Journal not open
X'06' - LERROR  - Journal record length error
X'07' - IOERROR - I/O error.
```

The address of the TIOA is contained in register 8 and its data length is in TIOATDL.

Analysis:

Register	Label	Description
R4=@JCA	TCZARQPJ	JCAJCRC is nonzero.

Module:
DFHCPCOJ

AAOI

Explanation

The journaling of data received on a CPI Communications mapped conversation has failed.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This condition is caused by an invalid response from the log manager. Use the dump to ascertain why the journal or log record could not be written correctly. If a journal record length error is indicated, TIOATDL may have been corrupted.

Problem determination

Register 12 addresses the current TCA and field TCAJCAAD and register 4 address the JCA. The CICS log manager request is contained in JCATR2 and the response code is in JCAJCRC.

Possible request codes are:

```
X'8001' - WRITE
X'8003' - PUT
```

Possible response codes are:

```
X'01' - IDERROR - Journal identification error
X'02' - INVREQ  - Invalid request
X'03' - STATERR - Status error
X'05' - NOTOPEN - Journal not open
X'06' - LERROR  - Journal record length error
X'07' - IOERROR - I/O error
```

The address of the TIOA is contained in register 8 and its data length is in TIOATDL.

AAOO

Explanation

CPI Communications has been invoked with an invalid first parameter. The first parameter should be the code of the function to be performed. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events before this error occurred (such as the modules called and their parameters) plus details of the error itself.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPARH

AAOP

Explanation

The CPI Communications state machine has been requested to perform a state transition request that is considered to be an 'impossible' situation. (The z/VM: CPI Communications User's Guide manual, (SC26-4399) documents all these situations.)

There are two possible causes of this error:

- The CPC (conversation control block) has been overwritten in such a way that the conversation state has been altered, or

- There is an error in the CPI Communications state machine.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself.

The transaction dump shows the CPC. You may need further assistance from IBM to fully resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPCFS

AAOQ

Explanation

The return code generated by CPI Communications does not have an entry in the state table against the current CPI Communications verb. This error is detected by the CPI Communications state machine.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is a CICS internal logic error.

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPCFS

AAOR

Explanation

CPI Communications has detected an invalid value in the CPC (conversation control block).

There are 2 possible causes of this error:

- The CPC (conversation control block) has been overwritten, or

- There is an error in CPI Communications which causes it to reject valid values.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself.

Module:
DFHCPIC

AAOS

Explanation

CPI Communications has detected that the conversation state is RESET for a situation where this should not occur. That is, the conversation control block (CPC) is about to be deleted.

There are two possible causes of this error:

- The CPC has been overwritten, or
- There is an error in CPI communications.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself. You may need further assistance from IBM to fully resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPIC

AAOT

Explanation

While chaining through the CPCs (conversation control blocks) for a given conversation, CPI Communications detected that the chain was broken.

There are two possible causes of this error.

1. The CPC chain has been overwritten, or
2. There is an error in the CPI Communications chaining mechanism.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Determine which of the above caused the error.

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself.

You may need further assistance from IBM to fully resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPCBI

AAOU

Explanation

CPI Communications has detected an error in the TP_name or partner_LU_name while processing an initialize conversation request. The TP_name or partner_LU_name is obtained by lookup of the sym_dest_name in the partner resource table (PRT).

There are two possible causes of this error.

1. The entry in the PRT contains invalid data, or
2. There is an error in the mechanism that returns the data from the PRT and interprets it.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPCBI

AAOV

Explanation

CPI Communications has detected that its internal state table is corrupted.

This error is detected by the CPI Communications state machine.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is a CICS internal logic error.

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPCFS

AAOW

Explanation

CPI Communications has detected an internal logic error in DFHCPCLC.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is a CICS internal logic error.

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself.

Module:
DFHCPCLC

AAOX

Explanation

CPI Communications has detected a bad syncpoint return code which has been set on a synclevel 0 or 1 conversation. The bad return code is only expected on a synclevel 2 conversation.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is a CICS internal logic error.

A level 2 trace for 'CP' of the transaction shows the course of events prior to this error, for example, the modules called and their parameters. The level 2 trace also provides details of the error itself.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPIC

AAOY

Explanation

CPI Communications detected an invalid LL field in the GDS records from which it was receiving on a mapped conversation.

Although it is possible that the remote system is sending invalid records, it is more likely to be an error in the receive logic because DFHZARRC (a lower level receive module) also checks the LLs before passing them to CPI Communications.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use CICS traces and, possibly a VTAM trace, to determine the data that was sent between both systems.

A level 2 CICS trace for 'CP' of the transaction documents the course of events prior to this error (such as the modules called and their parameters). The level 2 trace also provides details of the error itself.

You may need further assistance from IBM to fully resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPCRB

AAOZ

Explanation

CPI Communications has detected an invalid ID field in the GDS records it was receiving on a mapped conversation. The exception trace point that accompanies this abend gives the ID field in data 3. The valid IDs are '12FF'X for application data and '12F1'X for null data.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use CICS traces and, possibly, a VTAM trace to determine the data that was sent between both systems.

A level 2 CICS trace for 'CP' of the transaction documents the course of events prior to this error (such as the modules called and their parameters). The level 2 trace also provides details of the error itself.

You may need further assistance from IBM to fully resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

ABAC

Explanation

An activity issued EXEC CICS RETURN (without the ENDACTIVITY option) but no events were processed during the activation. The activity was executed with a RUN command.

System action

The task is abnormally terminated with a CICS transaction dump. The EXEC CICS HANDLE ABEND command cannot handle this abend.

User response

Investigate why the activity did not process any events.

Module:
DFHBASP

ABAD

AASA

Explanation

An unexpected EXCEPTION response was received from a call to the user (US) domain during initialization of a child task.

The call was issued during initialization of a transaction that was started without a terminal. The call was made as part of processing to associate the transaction with its intended user.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Examine the messages produced for the CICS job by the external security manager (ESM). This may require the assistance of a security administrator.

It may be necessary to examine the transaction dump to determine why the external security manager has informed CICS that the user is not correctly defined.

Module:
DFHASXM

Explanation

An activity issued EXEC CICS RETURN ENDACTIVITY while there were activity completion events pending. The activity was executed with a RUN command.

System action

The task is abnormally terminated with a CICS transaction dump. The EXEC CICS HANDLE ABEND command cannot handle this abend.

User response

Investigate why the activity had pending activity completion events.

Module:
DFHBASP

ABAE

Explanation

An activity issued EXEC CICS RETURN (without the ENDACTIVITY option) but no events were processed

during the activation. The activity was executed with a LINK command.

System action

The task which issued the LINK is abnormally terminated with a CICS transaction dump. The EXEC CICS HANDLE ABEND command cannot handle this abend.

User response

Investigate why the activity did not process any events.

Module:
DFHEIBAM

ABAF

Explanation

An activity issued EXEC CICS RETURN ENDACTIVITY while there were activity completion events pending. The activity was executed with a LINK command.

System action

The task which issued the LINK is abnormally terminated with a CICS transaction dump. The EXEC CICS HANDLE ABEND command cannot handle this abend.

User response

Investigate why the activity had pending activity completion events.

Module:
DFHEIBAM

ABLA

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either by the main terminal operator or as a result of deadlock timeout.

If the task was purged by the main terminal operator, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, the number of tasks in the system should be reduced to avoid short-on-storage situations. Another possibility would be to increase the value of the DTIMOUT option for the transaction.

Module:
DFHMCP, DFHMCPE, DFHM32, DFHPBP, DFHRLR

ABLB

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Please see the related message produced by the domain that originally detected the error.

Module:
DFHMCP, DFHMCPE, DFHM32, DFHPBP, DFHRLR

ABM0

Explanation

The map specified for a basic mapping support (BMS) request could not be located.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check if the map has been defined. If it has, check that it has been specified correctly.

Module:
DFHMCP, DFHMCX, DFHMCY

ABM1

Explanation

A basic mapping support (BMS) service is requested by a task associated with a terminal that is not supported by BMS. The request is not a routing request.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Do not use terminals not supported by BMS for applications using BMS services.

Check the terminal type and model number. Confirm that it is a terminal that is not supported by BMS. A list of terminals supported by BMS is given in the Developing CICS Applications. Check that the resource definition for the terminal accurately describes the physical terminal.

Problem determination

At the time of the abend, register 11 addresses the TCTTE, and TCTTETEA and register 6 address the TCTTE extension, TCTETTE.

Relevant fields are:

```
TCTTEDDS   the device dependent suffix.
TCTTEMSS   the map set suffix.
```

Analysis: DFHRLR tests the device dependent suffix and the map set suffix in the TCTTE extension. If both of these are zero, the terminal is not supported by BMS and DFHRLR abends the task with the abend code ABM1.

Register	Label	Description
R4=	RLRSFXCK	TCTEDDS=X'00' and TCTEMSS=X'00'.
@TCTTETE		The device dependent suffix and the map set suffix have loaded into the lower two bytes of register 3 by the subroutine RLRSUFXS.

Module:
DFHRLR

ABM2

Explanation

No user data was supplied for this BMS request. That is, the address of a user data area was not found in either TCTTEDA or TCAMSIOA.

When a BMS macro level output request is issued, the user must have placed the address of the data to be passed to BMS in TCTTEDA or TCAMSIOA before issuing the macro. The choice is made on the following criteria:

- If the data is to be passed in a TIOA by a terminal-oriented task, the address of this TIOA may be placed either at TCTTEDA, or in TCAMSIOA together with the setting of binary zeros into TCTTEDA.
- If the data is being passed by a terminal-oriented task but not in a TIOA, the address of the TIOA-like area of this data must be placed in TCAMSIOA and binary zeros set into TCTTEDA.
- If the data is being passed by a non-terminal-oriented task, the address of the TIOA-like area of this data must be placed in TCAMSIOA. TCTTEDA cannot be referenced, because there is no TCTTE associated with this task.

If a task attempts to pass addresses from both TCTTEDA and TCAMSIOA, the address in TCTTEDA is the one selected.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

The programmer must place the address of the data into TCTTEDA or TCAMSIOA, whichever is appropriate.

Firstly, check that the user has loaded TCTTEDA or TCAMSIOA with the address of the user data, by checking the application listing and the contents of TCTTEDA and/or TCAMSIOA.

Next, check that the BMS request has been correctly decoded by CICS by referring to the OSPWA request bytes (OSPTR1-8) or decoding the last BMS entry in the trace table. See OSPIND01 to check correct decoding of PAGEBLD or TEXTBLD, and TCAFCI bit 7 to identify whether the task is terminal-oriented or not.

At the abend point, register 1 contains the user data address last loaded, and register 4 the address of OSPTIOA as an address of null data.

If a CICS error is suspected, concentrate initially on subroutine MCPFTIOA, because this is a simple piece of code that shows the data-fetch logic. ABM2

condition is trapped early in the CICS decoding of the DFHBMS request and involves module DFHMCP only.

Case/Register	Label	Description
R9=@OSPWA	MCPMAP	OSPTR4 has OSPTRM (X'04') bit set for TYPE=MAP.
R9=@OSPWA	MCPPGBLD	OSPTR5 has OSPTRB (X'80') bit set and BMS sets bit OSPLMPB (X'08') in OSPIND01 for TYPE=PAGEBLD. OSPTR4 has X'40', X'80', or X'C0' set for DATA=NO, ONLY, or YES respectively, so should be X'80' or X'C0'.
R9=@OSPWA	MCPTXBLD	OSPTR7 has OSPTRX (X'80') bit set and BMS sets bit OSPLMTB (X'04') in OSPIND01 for TYPE=PAGEBLD. OSPTR4 has X'40', X'80', or X'C0' set for DATA=NO, ONLY, or YES respectively, so should be X'80' or X'C0'.
R9=@OSPWA	MCPMAPNG	OSPTR3 has OSPTSN (X'01'), OSPTSA (X'02'), or OSPTMN (X'04') bits set, or OSPTR4 has OSPTMA (X'10') bit set for mapping. OSPTR4 has X'04' or X'80' or X'C0' set for DATA=NO, ONLY, or YES respectively, so should be X'80' or X'C0'.
All R12=@TCA	MCPFTIOA	TCAFCI has TCAFCTRM (X'01') bit set if the task is terminal-oriented.
All R11=@TCTTE	MCPFTIOA	TCTTEDA could point to a use TIOA but does not, thus causing the abend.
All R12=@TCA	MCPFTIOA	TCAMSIOA could point to a user data area (TIOA or otherwise), but does thus causing the abend.
All R9=@OSPWA	MCPNTOTM	OSPTIOA contains the address of the user area found, so is zero. OSPSIOA points to OSPIOA (which is copied from TCAMSIOA) as being the second-dry data area sought by BMS for data . OSPIA (TCAMSIOA) was also zero so causing the abend.

Module:

DFHMCP

ABM3

Explanation

A BMS input or output request has been issued from a task that is not terminal-oriented.

System action

The task is abnormally terminated with a CICS dump.

User response

The task issuing a BMS input or output request must be attached to a terminal.

Module:
DFHMCP

ABM4

Explanation

An invalid request response has been received to a temporary storage PUT or PUTQ request issued by BMS. The data passed to the temporary storage program has an invalid length.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Determine from the trace table whether the abend occurred in DFHMCP or DFHTPP.

Check the length of the appropriate area.

If the MCR length is invalid, possible reasons are:

- The title record specified in the TITLE option on a BMS ROUTE request has an invalid format, that is, it does not begin with a halfword length field or is more than 64 characters.

- The message is being routed to more terminals than intended. OSPTTCNT is very large, for example, if LIST=ALL is specified on a ROUTE request and there are a large number of terminals in the TCT.

If the page buffer length is too large, this may be because more data than intended is being built into the page. If the page buffer length is greater than the length of the storage area indicated in the preceding

storage accounting area, an error has occurred in page or text building, and the page buffer extends beyond the area allocated to it (that is, storage violation).

Problem determination

Abend in DFHMCP (see Analysis)

The OSPWA (output services work area) is in user storage and is printed in a transaction dump. It is addressed by register 9 at the time of the abend. Relevant fields are:

```
OSPTITLE
OSPTTCNT
OSPPLTI
OSPTOTPG
```

The message control record (MCR) is an area of user storage obtained by BMS. It is addressed by register 8 at the time of the abend. The first 8 bytes contain storage accounting information. MCRLLBB contains the length of the MCR (halfword) abend in DFHTPP.

The page buffer is addressed by register 7 at the time of the abend. It contains storage accounting fields in the first 8 bytes and a halfword length at offset 8 (TSIOAVRL).

In both cases, the temporary storage use map (DFHTSMAP) is addressed from CSATSATA. TSMAPCOM contains the number of available bytes in a control interval on the temporary storage data set.

Analysis: If the temporary storage request preceding the abend is a DFHTS PUT, the abend occurred in DFHMCP. If the temporary storage request preceding the abend is a DFHTS PUTQ, the abend occurred in DFHTPP. If the abend occurred in DFHMCP, DFHMCP is attempting to put the message control record to temporary storage. Check the length of the MCR (MCRLLBB). It may be negative.

The length of the MCR is calculated by code following label MCPNODDS and is:

```
28 + 21 * OSPTTCNT + (length of title record)
                   + (space for page/LDC table,
                      if needed)
```

The address of the title record is at OSPTITLE and the length is contained in the first halfword. Space for the page/LDC table is required if OSPPLT1 is nonzero, which should occur only for messages routed to LDC devices (3600, 3650, 3767, 3770, 3790). The number of entries is in OSPTOTPG. 2 bytes are required per entry.

If the abend occurred in DFHTPP, BMS is attempting to add a page to the temporary storage queue, and

the page buffer will not fit in the control interval. TSIOAVRL contains the length of the page buffer.

For messages directed to 3270 devices, the page buffer consists of a 3270 data stream with a 4-byte page control area following it (a 3270 data stream may be larger than the number of characters available on the screen, particularly if extended 3270 attributes are used). For messages directed to other devices, the page buffer consists of a message formatted with NL characters, a 4-byte page control area following it. The length in TSIOAVRL should be less than the length in the preceding storage accounting area, otherwise an error has occurred in constructing the page, possibly in prior BMS requests.

In either of the above cases, if the length of the area being output appears valid, it is necessary to increase the control interval size for the temporary storage data set.

Register	Label	Description
DFHMCP R8=@MCR	MCPMCRTS	The MCR is too long or has invalid length ($4).
DFHTPP R7=@pgbuf	TPNOPGL or TPNODDS	The page buffer is too large.

Module:
DFHMCP, DFHTPP

ABM5

Explanation

A DFHTS TYPE=PURGE request has been issued with an invalid REQID. This incorrect request was issued by basic mapping support (BMS).

DFHTPR cannot find the terminal identifier for the current terminal in the terminal list in the message control record (MCR).

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check the trace table and find the preceding PUT/PUTQ TS requests. Check whether the identifier for the PUT/PUTQ is the same as that for the PURGE. If it is not, find out how they differ. Check to see if the OSPWA has been corrupted.

This error is very unlikely, as the label indicates (TPRSNH - "Should Not Happen"). DFHTPS has scanned the MCR to identify the terminals to which this message is directed, and has created an AID to initiate CSPG (DFHTPR) at each of them. However, when DFHTPR retrieves the MCR, it cannot find the current terminal identifier in the list of terminals. Presumably the MCR has been corrupted between creation of the AID and dispatching of CSPG at the terminal. Check back through the trace table to find the instance of DFHTPS that built the AID for this terminal (transaction CSPS); it will have issued a TC LOCATE request to verify that the terminal identifier is valid, and this identifier can be seen in the trace entry.

Problem determination

The TS identifier is built in TCATSDI before the TS purge is issued, although this has probably been overwritten before the dump is taken. The trace table entry for the DFHTS TYPE=PURGE contains the TS identifier in the last 8 bytes.

The OSPWA is addressed by register 9.

OPSTSID temporary storage identifier (8 bytes).

Register 8 points to the MCR.

Register 5 points to the current entry.

Register 0 points to the end of table.

Register 9 points to the TCTTE.

The terminal list starts at MCRIDLST and the terminal identifier is at the start of the terminal entry. Each terminal entry is X'15' bytes long.

Analysis: DFHMCP uses the temporary storage identifier in OSPTSID.

Cannot find the terminal identifier for this terminal in the terminal list in the MCR.

Register	Label	Description
R9=@(OSPWA)	MCPCKPGS	Code builds the temporary storage code in TCATSDI and issues DFHTS TYPE=PURGE macro, specifying IDERROR exit of MCPTSIDE, where the abend is raised.
R8=@(MCR)	TPRCKID	Code scans terminal list for a terminal entry that has the id of the current terminal, and if it cannot be found, links to TPRSNH to raise the abend.

Module:
DFHMCP, DFHTPR

ABM6

Explanation

Transaction CSPS, scheduled internally by BMS, has not been installed.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Install the transaction CSPS (Group DFHBMS).

Module:
DFHMCP

ABM7

Explanation

The trailer specified to be used while building pages of text data is longer than the page.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correct the application program that issues the request with too long a trailer.

Module:
DFHPBP

ABM8

Explanation

A BMS text request specified a value for the JUSTIFY option which is zero or too large for the page being built.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correct the application program that specified too large or zero value for the JUSTIFY option.

Module:
DFHPBP

ABM9

Explanation

The text data overflow routines have been reentered while text overflow was in process. This condition occurs when the line requirements for the text header and/or trailer exceed the line capacity of the page for which data is being formatted.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Reduce the number of lines required for the header and/or trailer or increase the page size of the terminal.

Module:
DFHPBP

ABMA

Explanation

The user has supplied a terminal I/O area (TIOA) with an invalid data length that was either equal to zero or greater than the storage accounting length minus 12.

Alternatively, the length field of a header or trailer area provided by the application program is invalid (that is, not positive).

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correct the program that supplied the erroneous data length.

Check the TIOA. If either of the conditions described is present, check the application program. For programs using command-level interface, the TIOA is obtained by CICS using the length of the data item passed in the FROM option on an EXEC CICS SEND MAP or EXEC CICS SEND TEXT command, or in the TRAILER or HEADER option on an EXEC CICS SEND TEXT or an EXEC CICS SEND PAGE command. Check the data item for zero length.

Header and trailer records have a special format described in the CICS Application development reference. An ABMA abend occurs if the first halfword (the length) is not positive. Check the remainder of the header/trailer record for validity when the length is checked.

Problem determination

The output services work area (OSPWA) is in user storage and will be printed in a transaction dump. It is addressed by register 2 at the time of the abend. Relevant fields are:

- OSPTR7
- OSPHDRA
- OSPTRLA

Register 4 or OSPTIOA points to the TIOA. In the TIOA, the following fields are relevant:

- TIOATDL
- TIOASAL

Analysis:

```
Register      Label       Description

R4=@TIOA      PBCKTDL     TIOATDL is zero or
greater
                          than TIOASAL-12.

R2=@OSPWA     PBD20080    R0 (= first halfword of
R0=length                 trailer)  is zero.
of trailer                R8=OSPTRLA.
R8=@trailer               OSPTR7 has X'20' bit set.

R2=@OSPWA     PBDTXHDR    R0 (= first halfword of
R8=@header                header) is zero.
R0=length                 R8=OSPHDRA.
 of header.               OSPTR7 has X'40' bit set.
```

Module:
DFHPBP, DFHMCP

ABMB

Explanation

The user has specified a cursor position in the BMS output request. It is larger than the current screen size for the 3270 for which output is being built.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correct the program that specified the incorrect cursor location.

Use trace to identify the statement issuing the request. Check that the cursor position is being correctly set. The program may have been designed to run in alternate screen size mode but is being run in default screen size mode, or it may have been designed to run on a 3270 model different from the one in use. If the

program is routing a message, the route list should be checked. If the program is to run with various 3270 models, the cursor position should be within the size of the smallest screen.

Problem determination

If the abend occurs in DFHPBP:

At the time of the abend, register 2 points to the OSPWA and register 1 to the TTP. Relevant fields are:

- OSPTR3 has X'10' bit set to indicate a user-specified cursor position
- OSPCP contains a halfword cursor position specified by user
- TTPSCSZ contains the halfword value of the screen size to compare against.

If the abend occurs in DFHMCP or DFHMCX:

- Register 6 points to the OSPWA (in LIFO storage)
- OSPCP contains a halfword cursor position specified by user
- OSPTR3 has X'10' bit set to indicate a user-specified cursor position
- OSPSCSZ contains the halfword value of the screen size to compare against.

Analysis:

```
Register    Label       Description

In DFHPBP:
R2=@OSPWA   PBDBADC     OSPTR3 X'10' bit set
                        indicates the user-
R1=@TTP                 specified cursor
                        position.
                        TTPSCSZ halfword screen
                        size.
                        OSPCP halfword cursor
                        position.

In DFHKCP or DFHMCX:
R6=@OSPWA   MCENEAU2    OSPTR3 X'10' bit set
                        indicates the user-
                        specified cursor
                        position.
                        OSPSCSZ halfword screen
                        size.
                        OSPCP halfword cursor
                        position.
```

Module:
DFHPBP, DFHMCP (for minimum-function BMS), DFHMCX

ABMC

Explanation

The CMSG transaction is attempting to send a message to a greater number of terminals than is

possible. There is no fixed maximum because the value depends on the other operands specified on the routing command.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Redefine the route list.

Module:
DFHMCP

ABMD

Explanation

DFHTPR or DFHTPP has issued a DFHDI TYPE=SEND and has received a return code other than "FUNCERR-REQUEST FOR CHANGE DIRECTION SIGNALED" or "NORESP"

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Inform your system programmer.

Module:
DFHTPP, DFHTPR

ABME

Explanation

DFHTPR or DFHTPP has detected an invalid datastream or DFHWBBMS detected invalid forms data while processing a basic mapping support (BMS) request.

System action

The transaction is abnormally terminated with a CICS transaction dump. If the ABEND was issued from DFHTPR or DFHTPP then register 7 indicates the location at which the ABEND was detected.

User response

If DFHTPR or DFHTPP issued the ABEND then examine the transaction dump for bad data in the TIOA. If the origin of the bad data is an application program, correct the program. If DFHWBBMS issued the ABEND

then check the validity of the incoming forms data in the CICS trace.

Module:
DFHTPP, DFHTPR, DFHWBBMS

ABMF

Explanation

The value specified for the length option of the basic mapping support (BMS) send map is greater than the length of the 'from' area.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Redefine the value for the length option.

Module:
DFHPBP

ABMG

Explanation

The user has requested a basic mapping support (BMS) service that was not specified at system generation, or at initialization.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correlate services requested against options specified in the system generation of BMS.

Follow this procedure:

1. Scan the trace table for the transaction ID that issued the abend. If this is CSPQ (page cleanup), module DFHTPQ abnormally terminated because a message purge delay of zero has been specified and CSPQ has been entered via a terminal. The message purge delay is specified in the PRGDLAY of the DFHSIT macro, and its value can be found in SITPRGD.
2. Scan the trace table for the last BMS request (code 'FA'). Use the option bytes at the start of the failing module to see if the requested functions have been generated. For example, paging may have been requested, but standard or minimum BMS was specified in the SIT.

3. If the BMS request is compatible with the BMS options in the CICS system generation, some incompatible suffixing amongst BMS modules must have occurred. This can happen if the DFHSIT macro specified individual suffixes for the BMS modules.

The following modules differ between standard and full-function BMS:

  DFHMCP
  DFHRLR
  DFHPBP
  DFHTPP

Module:
DFHMCP, DFHTPQ

ABMH

Explanation

The BMS mapping program DFHMCX or DFHMCY failed in an attempt to update the output TIOA because it detected that storage outside the TIOA would have been corrupted.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Identify and inspect the BMS map being used with the BMS SEND command. Check the map for errors in the map definition such as inconsistencies between the length specified on the DFHMDF macro and the actual length of data included in the field. If no errors can be identified contact IBM support for further assistance.

Module:
DFHMCX, DFHMCY

ABMI

Explanation

The map specified for a BMS input mapping request was not an input map.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Either define another input map or redefine the existing map.

Module:
DFHMCP, DFHMCX, DFHMCY

ABML

Explanation

The terminal control locate routine received invalid data from DFHRLR and returns with an error return code. DFHRLR is attempting to scan the TCT for a BMS ROUTE request with LIST=ALL or operator class or operator ID specified in the route list. The terminal control table may have been corrupted.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

The terminal control table has probably been corrupted during execution. Attempt to scan through the TCT in a dump. (Because the system dump uses the same technique for printing all TCTTEs, the system dump fails at the same point.)

Determine which entry is incorrect. It may be that the TCTTE has been overwritten by user data that is recognizable in the dump.

Check the application program for references to the TCTTE pointer. Check for user data that may be addressed from the same pointer.

In an assembler program, there may be multiple equates for the TCTTE base register.

It may be that the TCT is being overwritten by some earlier transaction. If this is so, it is probably one associated with the terminal whose TCTTE is overwritten.

Problem determination

Register 11 points to the current TCTTE in the search.

The TCT prefix (DFHTCTFX) can be located from CSATCTBA.

The first terminal entry (TCTTE) in the TCT is addressed by TCTVTEBA.

TCTTETEL is the halfword offset from current TCTTE to the next.

Analysis: The current TCTTE address is either not on a full-word boundary or is not within the limits of the TCT, or the address of the next TCTTE, obtained by

adding TCTTETEL to the current address, is invalid. This check is made by locate code (DFHZLOC) in DFHZCX.

```
Register    Label     Description
R11=@TCTTE  RLRLOCN   Issue DFHTC CTYPE=LOCATE
```

Module:
DFHRLR for full-function BMS

ABMM

Explanation

An invalid map was specified.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the supplied dump to diagnose the problem. Register 6 contains the address of the BMS instruction being executed when the error was recognized.

Module:
DFHPBP

ABMO

Explanation

The map specified for a BMS output mapping request was not an output map.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Either define another output map or redefine the existing map.

Module:
DFHMCP, DFHMCX, DFHMCY

ABMQ

Explanation

The query transaction (CQRY) has been initiated and either the task is not terminal-oriented, or the associated terminal is not defined to CICS as a 3270 or SCSPRINT device. This abend will occur if CQRY is entered at a console, even when the console is a 3270 device, since the console has the appearance to CICS

of a keyboard/printer device. The CQRY transaction does not have an operator interface, and under normal conditions there is no need for an operator to invoke CQRY or for a user transaction to START the CQRY transaction. CQRY is run automatically by CICS when a 3270 or SCSPRINT device connects. In the transaction dump, register 8 contains the address of the TCTTE for the associated terminal. If register 8 contains zero, this indicates that the task is not terminal-oriented.

System action

The task is abnormally terminated with a CICS dump.

User response

Ensure that the terminal associated with CQRY is of the 3270 or SCSPRINT family of devices.

Module:
DFHQRY

ABMR

Explanation

The Page Retrieval transaction (CSPG) has been initiated but the task is not terminal-oriented.

System action

The task is abnormally terminated with a CICS dump.

User response

Ensure that a terminal is associated with the CSPG transaction.

Module:
DFHTPR

ABMT

Explanation

A BMS request has been issued for a terminal type which does not support the level of BMS required by the request. This might be a non-3270 type terminal for an input or output request, or a non-bridge facility for a locate map request. Locate map requests are only issued internally by CICS 3270 bridge related code.

This abend might also be issued if the level of BMS required by the request is not supported by the CICS region.

System action

The task is abnormally ended with a CICS transaction dump.

User response

Ensure that the terminal and the CICS region supports the BMS request.

Module:
DFHMCP, DFHMCX

ABMU

Explanation

The application program supplied an address that is not within region boundaries. The low-order 3 bytes of general register 1 in the transaction dump contain the erroneous address. The high-order byte of register 1 indicates the address type as follows:

```
X'01' - Title address (TCAMSTA)
X'02' - Alternate I/O area address (TCAMSIOA)
X'03' - Map address (TCABMSMA)
X'04' - Header address (TCAMSHDR)
X'05' - Route list address (TCAMSRLA)
X'06' - Trailer address (TCAMSTRL)
X'07' - Map set address (TCAMSMSA)
X'08' - TIOA address (TCTTEDA)
```

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correct the application program that is supplying the erroneous address.

Module:
DFHMCP, DFHEMS

ABMV

Explanation

DFHRLR has detected an invalid route list entry.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check that the route list is correctly built with reserved field in the entry containing blank and a stopper of halfword X'FFFF' to terminate the list.

Module:
DFHRLR

ABMX

Explanation

A text string passed to BMS contained a set attribute order that was invalid for one of the following reasons:

1. The set attribute sequence was less than three characters.
2. The attribute type was invalid.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the application program.

Module:
DFHPBP

ABMY

Explanation

BMS is building a TTP (Terminal Type Parameter) control block but the pagesize selected for a terminal by BMS is zero because either the default or alternate screensize has been defined as zero.

In the transaction dump, significant general purpose register contents are as follows:

1. Register 6 points to the BMS extension of the TCTTE
2. Register 10 points to the TTP (Terminal Type Parameter) control block
3. Register 11 points to the TCTTE

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the TERMINAL and TERMTYPE definitions which determined the attributes of the offending TCTTE.

Module:
DFHRLR

ABMZ

Explanation

The address of the terminal I/O area (TIOA) in TCTTEDA was found to be zero.

When using BMS fast path as a result of an EXEC CICS RECEIVE MAP, DFHEMS always initializes

TCTTEDA with the address of the TIOA. If TCTTEDA is subsequently found to be zero by DFHMCX, an overwrite must have occurred.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Investigate why TCTTEDA is zero.

Scan the trace table for the last BMS request (code FA) for the failing task and try to determine which user programs have been given control since that BMS request.

Module:
DFHMCP, DFHMCX, DFHMCY

ABNA

Explanation

No route list was supplied with a route request received from the :i1.DFHTPS abend codes remote system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTPS

ABNB

Explanation

Either the principal facility of the task is not a TCTTE of the correct type, or the task has no principal facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that DFHTPS has not been specified as the initial program of a transaction other than CSPS. Check that the operator did not enter CSPS from the terminal.

Module:
DFHTPS

ABNC

Explanation

An attempt to access a temporary storage queue failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that temporary storage is correctly generated.

Module:
DFHTPS

ABNE

Explanation

An error response was received from an invocation of a BMS TYPE=ROUTE or TYPE=STORE request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that BMS was correctly generated.

Module:
DFHTPS

ABNF

Explanation

The transaction was not in send mode when it sent data to the remote system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTPS

ABNG

Explanation

An attach request was received from the remote system without any data indicating the reason for the request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTPS

ABNH

Explanation

An attempt to ship data to the remote system failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTPS

ABNI

Explanation

CICS could not find a profile for an LU6.2 transaction routing request.

System action

CICS terminates the task abnormally.

User response

Either you have specified an incorrect name in the PROFILE parameter of an EXEC CICS ALLOCATE command, or you have not installed the profile. Correct the error before resubmitting the transaction.

Module:
DFHTPS

ABNJ

Explanation

The task was purged before a call to another domain was able to complete successfully. The task that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason why the task was purged. It was purged either by the main terminal operator or as a result of a deadlock timeout.

Module:
DFHTPS

ABNK

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call another domain. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHTPS

ABR3

Explanation

An unsupported BMS request was received by the bridge exit.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The bridge only supports minimum function BMS and SEND TEXT. This transaction cannot be used in a bridge environment.

Module:
DFHEMS

ABR4

Explanation

The link DFHL3270 command did not specify a commarea.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The link DFHL3270 command must specify a commarea to contain the BRIH and any message vectors.

Module:
DFHBRMR

ABR5

Explanation

The commarea specified in the link DFHL3270 command is shorter than the BRIH.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The link DFHL3270 command must specify a commarea to contain the BRIH and any message vectors.

Module:
DFHBRMR

ABR6

Explanation

The commarea specified in the link DFHL3270 command does not contain a valid BRIH.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The link DFHL3270 command must specify a commarea which must contain a valid BRIH.

Module:
DFHBRMR

ABRC

Explanation

The bridge exit is not defined and could not be autoinstalled.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

Either define the program using RDO or change the program autoinstall exit to allow it to be autoinstalled.

Module:
DFHBRMS, DFHBRTC

ABRD

Explanation

The bridge exit is disabled.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

Identify why the bridge exit is disabled. Enable the bridge exit and retry the action.

Module:
DFHBRMS, DFHBRTC

ABRE

Explanation

The bridge exit could not be loaded.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

Investigate why it cannot be loaded. It may not have been defined in the DFHRPL library.

Module:
DFHBRMS, DFHBRTC

ABRF

Explanation

The bridge exit is defined as remote.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

Define the bridge exit as a local program.

Module:
DFHBRMS, DFHBRTC

ABRG

Explanation

An invalid bridge facility token was specified

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

This error was probably caused by the incorrect data being sent to the bridge exit from the client application.

Check the data set by tracing the data sent from the client application.

Ensure that the bridge facility token in the data transmitted by the application is correct.

Module:

DFHBRXM

ABRH

Explanation

The bridge facility token specified is not known to CICS.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

The most likely error is that the client application specified too small a keep time for the bridge facility. Before the client reused the bridge facility token, CICS had already discarded it. Check the bridge facility keep time in the outbound messages. CICS will use the keep time value specified in the last message used by a transaction. Alternatively use the trace or CEDX to look at the keep time in the BRXA passed back on the terminate call to the bridge exit.

Another possible error is that the client application passed a request to a CICS system other than that on which the original request was sent. Bridge facilities are only valid on a single CICS system.

Module:
DFHBRXM

ABRI

Explanation

There are no free bridge facility tokens available. This is probably due to excessive keep time values being specified on the bridge exit termination call.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

Review the keep time values used by the client applications. If some client applications are returning excessive values, modify the bridge exit to specify a limit to the values.

Module:
DFHBRXM

ABRJ

Explanation

An invalid FACILITYLIKE value was specified.

The FACILITYLIKE value can be specified on the bridge exit initialization call. If the default value (blanks) is returned, the value in the user transaction profile definition is used. If no FACILITYLIKE value is specified in the profile definition, a value of CBRF is used.

The name must be that of an installed VTAM 3270 terminal.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

Define the terminal specified by FACILITYLIKE, change the value on the profile definition, change the value supplied by the client application, or install a terminal definition for CBRF

Module:
DFHBRXM

ABRK

Explanation

The user ID check failed following the call to run the Link3270 bridge request, because it does not match the user ID that created the bridge facility that is being used to service the request.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction will not be started.

User response

A Link3270 bridge facility must run under the control of a single userid for the lifetime of its use. Ensure that all of the programs that use Link3270 sessions run uder the same user ID.

Module:
DFHBRXM

ABRN

Explanation

The bridge exit returned a value in BRXA_RESP that is not valid for the command for which it was invoked.

System action

The transaction is backed out.

User response

Change the bridge exit to only return valid response settings.

Module:
DFHBRIC, DFHBRMS, DFHBRSP, DFHBRTC

ABRP

Explanation

The bridge client is no longer available.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Determine why the bridge client is no longer available. It might have been purged.

Module:
DFHBRME

ABRQ

Explanation

The bridge exit issued an abend.

System action

The transaction is backed out.

User response

Identify why the bridge exit abended.

Module:
DFHBRMS, DFHBRTC

ABRR

Explanation

The user transaction's profile could not be found.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction is not started.

User response

Check that the profile name in the user transaction definition is correct, and that this profile has been defined.

Module:
DFHBRXM

ABRX

Explanation

The bridge facility was invalid when a transaction started. This can occur when MAXTASK is reset to a low value on a busy system. The bridge facility can time out and be deleted before the user transaction is started.

System action

The user transaction will abend during initialisation.

User response

None.

Module:
DFHBRXM

ABRY

Explanation

CICS returned an unexpected error running the bridge exit. This is a CICS internal error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHBRMS, DFHBRTC

ABRZ

Explanation

The bridge exit returned invalid data in the BRXA.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If a user supplied bridge exit was used, review the format of the data returned by the exit.

If a CICS supplied exit was used, this is a CICS error. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHBRIC, DFHBRMS, DFHBRSP, DFHBRTC, DFHXMBR

ABSA

Explanation

A message passed to DFHBSMSG is too long. This is a CICS internal error.

System action

CICS terminates the task abnormally with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTBS

ABSX

Explanation

CICS has detected that a BMS protected field has been updated by the client.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The message DFHTF0200 will give details of the client and the field updated.

Refer to this message for further actions.

Module:
DFHMCPE

ABX1

Explanation

The bridge exit or formatter was called with an invalid BRXA-HEADER. This indicates a storage overwrite.

System action

An exception trace is made of the data in error. The task is abnormally terminated with a CICS transaction dump.

As CICS also does a check of the BRXA on return from the call to the exit, there will probably be a subsequent ABRZ abend.

User response

Investigate the cause of the storage error, and retry.

Module:
DFH0CBAE,DFH0CBRE,DFH0CBRF

ABX2

Explanation

The bridge exit or formatter was called with an invalid BRXA-TRANSACTION-AREA. This indicates a storage overwrite.

System action

An exception trace is made of the data in error. The task is abnormally terminated with a CICS transaction dump.

As CICS also does a check of the BRXA on return from the call to the exit, there will probably be a subsequent ABRZ abend.

User response

Investigate the cause of the storage error, and retry.

Module:
DFH0CBAE,DFH0CBRE,DFH0CBRF

ABX3

Explanation

The bridge exit or formatter was called with an invalid BRXA-COMMAND-AREA. This indicates a storage overwrite.

System action

An exception trace is made of the data in error. The task is abnormally terminated with a CICS transaction dump.

As CICS also does a check of the BRXA on return from the call to the exit, there will probably be a subsequent ABRZ abend.

User response

Investigate the cause of the storage error, and retry.

Module:
DFH0CBAE,DFH0CBRE,DFH0CBRF

ABX5

Explanation

The bridge exit or formatter was called without a user-area. This probably indicates an error in the bridge exit.

System action

An exception trace is made of the data in error. The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the cause of the storage error, and retry.

Module:
DFH0CBAE,DFH0CBRE,DFH0CBRF

ABX6

Explanation

The bridge exit or formatter was called with an invalid user-area. This indicates a storage overwrite or an error in the bridge exit.

System action

An exception trace is made of the data in error. The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the cause of the storage error, and retry.

Module:
DFH0CBAE,DFH0CBRE,DFH0CBRF

ABX7

Explanation

A TC command passed to the formatter, exceeded the maximum message size.

System action

An exception trace is made of the first 4K of data in error. The task is abnormally terminated with a CICS transaction dump.

User response

Check that the user transaction is passing the correct data. If it is, it will be necessary to change the size of the buffer. This is in field block-length in the sample exit. Recompile and reload the exit and retry.

Module:
DFH0CBRF

ABX8

Explanation

A next BMS BRMQ vector in the input message passed to the formatter does not contain the mapset requested to answer a RECEIVE MAP request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

This may just indicate that the transaction has gone down an error path which should result in a transaction backout. If not, the input message should have a BRMQ vector for this mapset. Change the client application, recompile and retry.

Module:
DFH0CBRF

ABXA

Explanation

A next BRMQ vector in the input message passed to the formatter is the wrong type of a RECEIVE vector. RECEIVE and RECEIVE MAP have separate vectors.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

This may just indicate that the transaction has gone down an error path which should result in a transaction backout. If not, the input message should have a BRMQ vector for this command. Change the client application, recompile and retry.

Module:
DFH0CBRF

ABXB

Explanation

The BRIH requested that outbound BMS vector must include the ADS descriptor. The map did not contain an ADS descriptor. This means that the mapset was not assembled with CICS TS 1.2 or later.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Either reassemble the mapset using the current level of BMS macros, or set BRIH-ADSDESCRIPTOR to BRIHADSD-NO (the default value is BRIHADSD-YES). Note that BRIHADSD-YES is required when codepage conversion of the Link3270 message is required (e.g. using ECI). If you need to reassemble the mapset and don't have the mapset source, the utility DFHBMSUP can be used to recreate it.

Module:
DFHBRMF

ABXC

Explanation

An error occurred when a SYNCPOINT request was issued by the bridge exit.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check for other CICS messages and exception trace entries to investigate the cause of the SYNCPOINT error.

Module:
DFH0CBRE

ABXD

Explanation

An error occurred when a SYNCPOINT ROLLBACK request was issued by the bridge exit.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check for other CICS messages and exception trace entries to investigate the cause of the SYNCPOINT ROLLBACK error.

Module:
DFH0CBRE

ABXE

Explanation

The bridge exit was expecting data to be passed on the BRDATA parameter of the START command. No data was found.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the transaction which issued the START. Recompile, reload and retry.

Module:
DFH0CBAE,DFH0CBRE

ABXF

Explanation

An error was detected by the bridge exit when it tried to input the next message.

System action

An exception trace is made of any error information. The task is abnormally terminated with a CICS transaction dump.

User response

Check for other CICS messages and exception trace entries to investigate the cause of the input error.

Module:
DFH0CBAE,DFH0CBRE,DFH0CBAI

ABXG

Explanation

An error was detected by the bridge exit when it tried to output the next message.

System action

An exception trace is made of any error information. The task is abnormally terminated with a CICS transaction dump.

User response

Check for other CICS messages and exception trace entries to investigate the cause of the output error.

Module:
DFH0CBAE,DFH0CBRE

ABXH

Explanation

The user transaction issued a request which requires more data (such as a RECEIVE request). No data was available in the message, and mqcih-conversationaltask was set to mqcct-no which specifies that the transaction is non conversational.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

This may be correct behaviour as defined by the client application. If it is not, the client application should either supply additional data, or be redesigned to allow the transaction to be conversational.

Module:
DFH0CBRF

ABXI

Explanation

A message received by the bridge exit, exceeded the maximum message size.

System action

An exception trace is made of the first 4K of data in error. The task is abnormally terminated with a CICS transaction dump.

User response

Check that the client application is passing the correct data. If it is, it will be necessary to change the size of the buffer. This is in field block-length in the sample exit. Recompile and reload the exit and retry.

Module:
DFH0CBAE,DFH0CBRE

ABXJ

Explanation

The bridge exit detected an error in the MQCIH header passed by the client application.

System action

An exception trace is written containing the MQCIH header. The task is abnormally terminated with a CICS transaction dump.

User response

The client application has either not set the MQCIH header, or is using a version of the header which is incompatible with the bridge exit. Correct the client application. Recompile, reload and retry.

Module:
DFH0CBAE,DFH0CBRE

ABXK

Explanation

The bridge exit detected an error in the data passed on the BRDATA parameter of the START command.

System action

An exception trace is made of the data in error. The task is abnormally terminated with a CICS transaction dump.

User response

Correct the transaction which issued the START. Recompile, reload and retry.

Module:
DFH0CBAE,DFH0CBRE

ABXM

Explanation

The bridge exit or formatter was called with a function or command which it doesn't support. This either indicates a storage overwrite, or that the bridge exit is not designed for this command.

System action

An exception trace is made of the data in error. The task is abnormally terminated with a CICS transaction dump.

User response

Check the BRXA data in the trace to see if there has been a storage overwrite, or whether the exit supports this command.

Module:
DFH0CBAE,DFH0CBRE,DFH0CBRF

ABXN

Explanation

The formatter detected that the input message was truncated.

System action

An exception trace is made of the first 4K of the message. The task is abnormally terminated with a CICS transaction dump.

User response

Check that the transport mechanism allows for messages of this length. If this is correct, it indicates that the client application is issuing an incorrect message. Trace the outbound message on the client application. Recompile, reload and retry.

Module:
DFH0CBRF

ABXO

Explanation

The formatter detected an error in a BRMQ vector passed by the client application.

System action

The field MQCIH-ERROROFFSET is set to indicate the position of the error in the message An exception trace is made of the MQCIH and BRMQ vector. The task is abnormally terminated with a CICS transaction dump.

User response

Correct the client application. Recompile, reload and retry.

Module:
DFH0CBRF

ABXP

Explanation

The formatter detected an error in a BRMQ vector header passed by the client application.

System action

The field MQCIH-ERROROFFSET is set to indicate the position of the error in the message An exception trace is made of the MQCIH and BRMQ vector. The task is abnormally terminated with a CICS transaction dump.

User response

Correct the client application. Recompile, reload and retry.

Module:
DFH0CBRF

ABXQ

Explanation

The formatter could not find an ADSD vector as part of the BRMQ-RM vector when MQCIH-ADSDESCRIPTOR specified MQCADSD-MSGFORMAT.

System action

An exception trace is made of the request. The task is abnormally terminated with a CICS transaction dump.

User response

Correct the client application. Recompile, reload and retry.

Module:
DFH0CBRF

ABXS

Explanation

An error was detected by the bridge exit when it tried to open the queue for the input or output message.

System action

An exception trace is made of any error information. The task is abnormally terminated with a CICS transaction dump.

User response

Check for other CICS messages and exception trace entries to investigate the cause of the open error.

Module:
DFH0CBRE

ABXU

Explanation

The conversion between client code page and server code page is not supported by CICS/390; for example conversion has been requested between Japanese code page 932 and Latin-1 code page 500.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Ensure that the Client codepage, both default and overrides are in the same group as the Server codepage. for example client code page 852 from Latin-2 group, is only supported to server code page 870.

Module:

ACxx abend codes

ACAA

Explanation

This explanation applies to the two transaction abend codes, ACAA and ACAD. CICS cannot find a match for a function code in the language definition table because the parameterized resource definition contains an unrecognized resource type code. The abend code issued depends on the DFHCAP operation that was invoked before the error occurred:

Abend
 DFHCAP operation

ACAA

 ANALYZE

ACAD

 DEFAULTS

The cause of the abend is either:

• The language definition table, DFHEITCU, in the library is invalid for the release of CICS you are running, **or**
• A CICS logic error has occurred.

System action

• In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
• In a batch environment, processing is abnormally terminated with an operating system dump.

DFHBRMF

ABXV

Explanation

The client code page which has been requested by the client is not one which CICS can support.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Ensure that the Client codepage is valid.

Module:
DFHBRMF

User response

Ensure that the DFHEITCU module is in the library and is valid for this release of CICS.

If a valid version of DFHEITCU is already in the library, a CICS logic error has occurred. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCAP

ACAD

Explanation

See **ACAA**.

System action:

User response:

Module:
DFHCAP

ACAI

Explanation

An internal error has occurred when module DFHCAP was invoked. There was an invalid function code for a domain call to DFHCAP.

System action

• In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.

- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCAP

ACAJ

Explanation

An internal error has occurred when module DFHCAP was invoked while processing an EXEC CICS CREATE command. The preallocated dynamic storage area was too small.

System action

The transaction executing the EXEC CICS CREATE command is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCAP

ACAM

Explanation

An internal error has occurred when module DFHECBAM was invoked while processing a CBAM transaction.

System action

CBAM is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHECBAM

ACC1

Module:

ACFA

Explanation

During the loading of a Coupling Facility Data Table by the CFCL transaction, an abend was detected or a domain call returned a response (such as DISASTER) after which normal processing could not continue.

System action

A message is issued (one of DFHFC7100, DFHFC7101, DFHFC7103 or DFHFC7104). Loading of the data table is terminated and CFCL abends.

User response

If this abend is produced as a result of an abend during loading, message DFHFC7103 is issued. If it is a result of a domain call failure, depending on which domain the failure was returned by, one of the messages DFHFC7100, DFHFC7101 or DFHFC7104 is issued. Refer to the description of the message for further information and guidance.

Module:
DFHFCDL

ACFB

Explanation

A transaction has issued a request to a coupling facility data table for which it holds an active lock, but after the lock was acquired, the coupling facility data table server for the pool in which this coupling facility data table resides failed and was restarted. This request is of a type which cannot continue against a new instance of the server, because it is reliant on the lock which was acquired before the server failed.

System action

The requesting transaction abends with a transaction dump.

CICS continues normally.

User response

Retry the failed transaction.

Module:
DFHEIFC

ACFC

Explanation

A transaction has issued a request to a coupling facility data table which was last accessed using a previous instance of the coupling facility data table server (that is, the server for the pool in which this coupling facility data table resides has failed and been restarted one or more times since the last access). We therefore need to reopen the access between this CICS file and the coupling facility data table, but the attempt to reopen access has failed.

System action

The requesting transaction abends with a transaction dump.

CICS continues normally.

User response

Retry the failed transaction. If the error continues to occur, issue an explicit close request for the file, followed by an explicit open request.

Module:
DFHEIFC

ACFD

Explanation

During the loading of a Coupling Facility Data Table by the CFCL transaction, a call to the CICS Transaction Manager has returned a response (such as DISASTER) after which normal processing could not continue.

System action

Message DFHFC7121 is issued. Loading of the data table is terminated and CFCL abends.

User response

Refer to the description of the message for further information and guidance.

Module:
DFHFCDL

ACFE

Explanation

An attempt was made to attach a transaction specifying DFHFCDL as the program to be given control, but the transaction was not internally attached by CICS.

DFHFCDL is for use by CICS system transaction CFCL. This loads a Coupling Facility Data Table.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why an attempt was made to attach CFCL illegally, or why a transaction definition specified DFHFCDL as the program to be given control.

Module:
DFHFCDL

ACHA

Explanation

The remote server transaction, CEHS, is not at a compatible level to operate with the CICS/CMS system. This usually indicates that the service levels of CICS/CMS and the remote server are different.

System action

CICS terminates the remote server transaction abnormally with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Problem determination

To diagnose a problem with the remote server, it is generally helpful to obtain a trace of the remote server's activity up to the point of failure.

A remote server trace is obtained by invoking the remote server with the TRACE option, (type CEHS TRACE). The remote server operates as normal but causes entries to be written to a trace log in temporary storage. Note that main storage, not auxiliary, is used for this queue hence large amounts of memory can be used up if this trace is left on for long.

The trace is found in a queue whose name is 'CEHS*xxxx*', where '*xxxx*' is the four-character terminal identifier. The queue can be browsed in text form or in hexadecimal form using CEBR. To find the terminal identifier, invoke CEBR on the terminal that has run CEHS, without giving a queue name. The queue name will default to 'CEBR*xxxx*', where '*xxxx*' is the terminal identifier.

Note: CEBR requires the queue name to be in UPPER CASE.

For a description of the remote server and its trace entries and abend codes, see the CICS/VS Remote Server Diagnosis Manual (LC33-0438).

Module:
DFHCHS

ACHB

Explanation

The remote server has received a data frame from CICS/CMS that is out of sequence. A frame may have been lost in transmission.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHC

Explanation

The remote server did not receive the expected acknowledgement type data frame from CICS/CMS.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHD

Explanation

The remote server did not receive the expected response type data frame from CICS/CMS.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote

server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHE

Explanation

The remote server received an unexpected data frame from CICS/CMS. This indicates a logic error in the remote server.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHF

Explanation

The remote server attempted to send one of a series of data frames to CICS/CMS when, at this time, only a single frame is allowed. This indicates a logic error in the remote server.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHG

Explanation

The remote server attempted to send data to CICS/CMS. However, it was not set to the correct mode to do so. This indicates a logic error in the remote server.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHH

Explanation

A TIOA has not been created from the data received by the remote server from CICS/CMS.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHI

Explanation

The remote server has received an unexpected return code from the Transformer 2 program.

System action

CICS terminates the remote server abnormally with a dump.

User response

For further information, see the 'Problem Determination' section for abend code ACHA.

Module:
DFHCHS

ACHJ

Explanation

An error has occurred processing a request from CICS/CMS which had the 'No-Reply' option. The remote server cannot, therefore, return the error condition to CICS/CMS.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the remote server and diagnose the problem by executing the same command from CECI under CICS/CMS without the NOCHECK option. For further information, see the 'Problem Determination' section for abend code ACHA.

Module:
DFHCHS

ACHK

Explanation

The transformer program has requested neither EIP nor DLI to execute the request received from CICS/CMS. This indicates a logic error because the request has to be destined for either EIP or DLI.

System action

CICS terminates the remote server abnormally with a dump.

User response

For further information, see the 'Problem Determination' section for abend code ACHA.

Module:
DFHCHS

ACHL

Explanation

CICS/CMS has supplied a buffer to the remote server which is not large enough to hold the reply that the remote server has to return.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHM

Explanation

The remote server has tried to receive a response from CICS/CMS which failed repeatedly until the retry limit was exceeded.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHN

Explanation

The remote server has tried to receive a request from CICS/CMS which failed repeatedly until the retry limit was exceeded.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHO

Explanation

The remote server has tried to receive a reply from CICS/CMS which failed repeatedly until the retry limit was exceeded.

System action

CICS terminates the remote server abnormally with a dump.

User response

Reestablish the connection between CICS/CMS and the remote CICS system and try to use the remote server again. For further information, see the 'Problem Determination' section for abend code ACHA.

If the problem persists, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCHS

ACHP

Explanation

CICS/CMS has made a request to the remote server for which the reply would need more than the maximum

storage allowed (32660 bytes). This indicates that a logic error has occurred.

System action

CICS terminates the remote server abnormally with a dump.

User response

For further information, see the 'Problem Determination' section for abend code ACHA.

Module:
DFHCHS

ACHR

Explanation

The CICS/CMS remote server transaction (CEHS) has been initiated and either the task is not terminal-oriented, or the associated terminal is a console.

System action

CICS abnormally terminates the remote server with a dump.

User response

Ensure the transaction is initiated with an associated terminal and that the terminal is not defined as a console. For further information, see the 'Problem Determination' section for abend code ACHA.

Module:
DFHCHS

ACHS

Explanation

The CICS/OS2 remote server transaction (CEHP) has been initiated and either the task is not terminal-oriented, or the associated terminal is a console.

System action

CICS abnormally terminates the remote server with a dump.

User response

Ensure the transaction is initiated with an associated terminal and that the terminal is not defined as a console. For further information, see the 'Problem Determination' section for abend code ACHA.

Module:

DFHCHS

ACL0

Explanation

The new operator failed to allocate storage whilst creating an object. This problem will occur if there is insufficient storage available to the CICS region to satisfy the request.

System action

CICS abnormally terminates the transaction.

User response

This abend may occur if you are in a loop creating objects and not deleting them. Alternatively CICS might be short on storage and you should try resubmitting the transaction.

Module:
ICCGLBIC

ACL1

Explanation

The CICS Foundation Classes have thrown an exception which the application programmer failed to catch.

System action

CICS abnormally terminates the transaction.

User response

Check that you have coded your application to catch exceptions. Interrogate the message object contained within the exception object to establish the cause of the exception being thrown.

Another possible cause of this abend is that you are running a Foundation Classes program on a machine that does not have the C++ runtime installed. Check that your machine has the C++ runtime installed.

Module:
ICCGLBIC

ACL2

Explanation

The CICS Foundation Classes invoked the default handleEvent method (defined in class IccResource) in order to handle a CICS condition because the application programmer did not implement his own handleEvent method.

System action

CICS abnormally terminates the transaction.

User response

Implement your own handleEvent method or customize your resource objects so they do not call the handleEvent method for any of the possible CICS conditions.

Module:
ICCRESEC

ACL3

Explanation

The CICS Foundation Classes responded to an application programmer's request to abend a CICS task.

System action

CICS abnormally terminates the transaction.

User response

The application programmer requested that the CICS Foundation Classes abend the transaction using the appropriate return enumeration from the handleEvent method (see IccResource class).

Module:
ICCRESIC

ACL4

Explanation

The CICS Foundation Classes detected an internal error.

System action

CICS abnormally terminates the transaction.

User response

This abend indicates a CICS Foundation Classes internal problem. Please contact your support organization.

Module:
ICCGLIBC

ACL5

Explanation

The CICS Foundation Classes received an error from a CICS storage request (GETMAIN). In response to a new operator request the CICS Foundation Classes issued a CICS GETMAIN request to allocate storage which CICS was unable to satisfy.

System action

CICS abnormally terminates the transaction.

User response

This abend may occur if you are in a loop creating objects and not deleting them. Alternatively CICS might be short on storage and you should try resubmitting the transaction.

Module:
ICCBASEC

ACL6

Explanation

The CICS Foundation Classes detected an error while processing a storage release request.

System action

CICS abnormally terminates the transaction.

User response

This abend can occur if you try to delete an object that does not exist (that is, it has already been deleted). It may also indicate a CICS memory management problem, or a storage corruption problem. If the error persists, please contact your support organization.

Module:
ICCBASEC

ACL7

Explanation

The CICS Foundation Classes have thrown an exception which the application programmer failed to catch.

System action

CICS abnormally terminates the transaction.

User response

Check that you have coded your application to catch exceptions. Interrogate the message object contained

within the exception object to establish the cause of the exception being thrown.

Another possible cause of this abend is that you are running a Foundation Classes program on a machine that does not have the C++ runtime installed. Check that your machine has the C++ runtime installed.

Module:
ICCGLBIC

ACL8

Explanation

The CICS Foundation Classes have thrown an exception which the application programmer failed to catch.

System action

CICS abnormally terminates the transaction.

User response

Check that you have coded your application to catch exceptions. Interrogate the message object contained within the exception object to establish the cause of the exception being thrown.

Another possible cause of this abend is that you are running a Foundation Classes program on a machine that does not have the C++ runtime installed. Check that your machine has the C++ runtime installed.

Module:
ICCGLBIC

ACL9

Explanation

The CICS Foundation Classes responded to an application programmer's request to abend a CICS task.

System action

CICS abnormally terminates the transaction.

User response

A resource object was customized to cause a transaction abend if a particular CICS condition was raised, and this condition was subsequently raised by CICS.

Module:
ICCRESIC

ACLA

Explanation

The CICS Foundation Classes detected an internal error.

System action

CICS abnormally terminates the transaction.

User response

This abend indicates a CICS Foundation Classes internal problem. Please contact your support organization.

Module:
ICCGLIBC

ACLB

Explanation

The CICS Foundation Classes detected an internal error.

System action

CICS abnormally terminates the transaction.

User response

This abend indicates a CICS Foundation Classes internal problem. Please contact your support organization.

Module:
ICCGLIBC

ACLC

Explanation

The CICS Foundation Classes detected an internal error.

System action

CICS abnormally terminates the transaction.

User response

This abend indicates a CICS Foundation Classes internal problem. Please contact your support organization.

Module:
ICCGLIBC

ACLD

Explanation

The CICS Foundation Classes detected an internal error.

System action

CICS abnormally terminates the transaction.

User response

This abend indicates a CICS Foundation Classes internal problem. Please contact your support organization.

Module:
ICCGLIBC

ACLE

Explanation

The CICS Foundation Classes detected an internal error.

System action

CICS abnormally terminates the transaction.

User response

This abend indicates a CICS Foundation Classes internal problem. Please contact your support organization.

Module:
ICCGLIBC

ACLF

Explanation

The CICS Foundation Classes detected an internal error.

System action

CICS abnormally terminates the transaction.

User response

This abend indicates a CICS Foundation Classes internal problem. Please contact your support organization.

Module:
ICCGLIBC

ACLG

Explanation

The CICS Foundation Classes detected an internal error.

System action

CICS abnormally terminates the transaction.

User response

This abend indicates a CICS Foundation Classes internal problem. Please contact your support organization.

Module:
ICCGLIBC

ACLH

Explanation

The CICS Foundation Classes detected an error while processing a storage release request.

System action

CICS abnormally terminates the transaction.

User response

This abend can occur if you try to delete an object that does not exist (that is, it has already been deleted). It may also indicate a CICS memory management problem, or a storage corruption problem. If the error persists, please contact your support organization.

Module:
ICCBASEC

ACN1

Explanation

The table DFHCNV cannot be loaded. This is probably because a table has not been pregenerated. It could also occur if the table DFHCNV has been linked above 16MB but DFHCCNV has been linked below 16MB.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Check that the DFHCNV module is in the library and is valid for this release of CICS. Check the linkage of DFHCNV and relink it with the correct AMODE if necessary.

Module:
DFHCCNV

ACN2

Explanation

The table DFHCNV has been loaded but the first record is in the wrong format. This is probably due to an error during assembly or linkedit, but could also be the result of a storage overwrite.

System action

The transaction is abnormally terminated with a transaction dump.

User response

The table should be reassembled and linked. Check the assemble and linkedit output. Check for any messages issued from CICS indicating that storage overwrites have occurred.

Module:
DFHCCNV

ACN3

Explanation

The program DFHUCNV cannot be linked. A user conversion program must be available (even if it only returns).

System action

The transaction is abnormally terminated with a transaction dump.

User response

Check that the DFHUCNV module is in the library and is valid for this release of CICS. Check the linkage of DFHUCNV and relink it with the correct AMODE if necessary.

Module:
DFHCCNV

ACN4

Explanation

An unrecognized format of a DFHCNV table has been encountered.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Re-assemble and re-link edit the DFHCNV macro.

Module:
DFHCCNV

ACN5

Explanation

An override for the default client code page has been received; however the value is not recognized.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Check that the client system is using one of the client code pages supported by CICS/390.

Module:
DFHCCNV

ACN6

Explanation

The client sent data in unicode but the client and server code pages are not the same. Unicode data is only tolerated provided that conversion is not required.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Ensure that the Client codepage and the Server codepage are the same.

Module:
DFHCCNV

ACN7

Explanation

An override for the default binary format has been received; however the value is not recognized.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Data formats should be either S/370 or INTEL, anything else is unsupported by CICS/390.

Module:
DFHCCNV

ACN8

Explanation

CICS data conversion is processing a FIELD defined as containing GRAPHIC characters (which are only DBCS): that is DFHCNV TYPE=FIELD,DATATYP=GRAPHIC,... However the client code page (defined in the CLINTCP operand), and the server code page (defined in the SRVERCP operand) imply that the FIELD contains only SBCS characters, for example DFHCNV TYPE=ENTRY,CLINTCP=437,SRVERCP=037

System action

The transaction is abnormally terminated with a transaction dump.

User response

Correct the FIELD definition.

Module:
DFHCCNV

ACN9

Explanation

The table DFHCNV cannot be loaded. This abend code is issued following a NOTAUTH condition being raised during loading of the DFHCNV table.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Ensure the resource security definitions are correct.

Module:
DFHCCNV

ACNA

Explanation

The table DFHCNV cannot be loaded. This is a general purpose abend code indicating that the LOAD request for the conversion table, DFHCNV, has failed.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Examine the transaction dump to determine the exact condition returned from LOAD request.

Module:
DFHCCNV

ACNB

Explanation

The program DFHUCNV cannot be linked This is a general purpose abend code indicating that the LINK request for the conversion program DFHUCNV, has failed.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Examine the transaction dump to determine the exact condition returned from LINK request.

Module:
DFHCCNV

ACNC

Explanation

The client code page which has been requested by the client is not one which CICS can support.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Ensure that the Client codepage is valid.

Module:
DFHCCNV

ACND

Explanation

The conversion between client code page and server code page is not supported by CICS/390; for example conversion has been requested between Japanese code page 932 and Latin-1 code page 500.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Ensure that the Client codepage, both default and overrides are in the same group as the Server codepage. for example client code page 852 from Latin-2 group, is only supported to server code page 870.

Module:
DFHCCNV

ACNE

Explanation

The conversion between client code page and server code page is not supported by CICS/390. Although the code pages are in the same group, CICS does not have a conversion table to match the requested server code page for the client code page specified.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Ensure that the Client codepage and the server codepage are correct. If they are as intended, then CICS can not support the requested conversion.

Module:
DFHCCNV

ACP1

Explanation

DFHIC TYPE=GET response code is other than the normal response during print key processing.

System action

The transaction is abnormally terminated with a CICS transaction dump. The keyboard of the terminal on which the print key was depressed remains locked to indicate the failure of the operation.

User response

Analyze the dump. The response code is in the low order byte of register 0.

Module:
DFHCPY

ACP2

Explanation

DFHIC TYPE=INITIATE response code is other than the normal response during print key processing.

System action

The transaction is abnormally terminated with a CICS transaction dump. The keyboard of the terminal on which the print key was depressed remains locked to indicate the failure of the operation.

User response

Analyze the dump. The response code is in low-order byte of register 0.

Module:
DFHCPY

ACQA

Explanation

The Connection Quiesce Protocol transaction has been initiated by user action, such as a START command or by typing the transaction identifier at a terminal. The transaction is not intended to be initiated in this way.

System action

1. If the transaction was not initiated by terminal input, message DFHZC4951 is written to destination CSNE.

2. An exception trace record is written to all active trace destinations.

3. The transaction is abnormally terminated with a CICS transaction dump.

User response

Determine what caused the transaction to be initiated. The exception trace record contains information which will help you.

Module:
DFHCLS5

ACQB

Explanation

The Connection Quiesce Protocol transaction has encountered an error when communicating with another system on an APPC session.

System action

1. Message DFHZC4951 is written to destination CSNE.
2. An exception trace record is written to all active trace destinations.
3. The transaction is abnormally terminated with a CICS transaction dump.

User response

Determine what caused the failure. A likely cause is a failure of the session with the partner system.

Module:
DFHCLS5

ACQC

Explanation

The Connection Quiesce Protocol transaction has encountered an unexpected error.

System action

1. Message DFHZC4951 is written to destination CSNE.
2. An exception trace record is written to all active trace destinations.
3. The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCLS5

ACRA

Explanation

The relay program has been invoked without a terminal as its principal facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that DFHAPRT has not been specified as the initial program of a task that is not terminal-related.

Module:
DFHAPRT

ACRB

Explanation

The relay program has been invoked by a transaction that is not defined as remote.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that the relay program is defined correctly. Determine why DFHAPRT was invoked if the transaction is not a remote transaction.

Module:
DFHAPRT

ACRC

Explanation

The relay program received an invalid response from DFHZCX or DFHAPRR.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRT

ACRD

Explanation

The system entry for the system to which routing is to be performed could not be found or, for CICS TS 4.1 and earlier releases, an attempt has been made to send a transaction that is defined as routable=yes over an IPIC connection.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the installed transaction definition to confirm that the system was correctly specified. Check that the system entry is defined to CICS with a CONNECTION or IPCONN resource definition.

Module:
DFHAPRT

ACRE

Explanation

A transaction invoked from an APPC terminal and specified in the installed transaction definition as remote has abnormally terminated because the link is out of service.

System action

The task is abnormally terminated.

User response

Wait until the link is available. The CICS supplied transaction CEMT INQUIRE CONNECTION can be used to check the states of the links.

Module:
DFHAPRT

ACRF

Explanation

The relay program received a nonzero return code from the dynamic router following its first invocation.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the dump to determine why the dynamic routing program has failed by checking the contents of the passed COMMAREA DFHDYE for correctness. The COMMAREA address can be found from field TCACOMM in the system TCA for the task. The COMMAREA fields are mapped via the DFHDYPDS DSECT.

Module:
DFHAPRT

ACRG

Explanation

An ATI initiated remote transaction defined with DYNAMIC(YES) has failed because there is no matching entry in the AID chain.

Each AID in the chain has been checked and none has been found where

- The AID terminal ID matches that of the TCTTE
- The installed transaction definition and the AID transaction IDs match
- The AID is for a remote transaction
- The AID has not been canceled.

System action

The task is abnormally terminated with a CICS system dump.

User response

The dump can be used to help ascertain the mismatch. Check the transactions listed in the TCTTE and PCT fields of the system dump against the AID chain.

Module:
DFHAPRT

ACRH

Explanation

The profile for the session that will carry intersystem flows during transaction routing could not be found.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the installed transaction definition to confirm that TRPROF is correctly specified.

Module:
DFHAPRT

ACRI

Explanation

An error occurred when attempting to link to the dynamic routing program.

System action

The transaction is abnormally terminated with a CICS transaction dump.

A message in the range DFHRT4417 to DFHRT4420 is written to the CSMT log.

User response

Refer to the message sent to the CSMT log. It identifies the cause of the link failure and provides further user guidance.

Module:
DFHAPRT, DFHEPC

ACRJ

Explanation

An abend has occurred in the dynamic routing program after a link has been executed from DFHAPRT or DFHEPC.

System action

The transaction is abnormally terminated with a CICS transaction dump. Message DFHRT4416 is written to the CSMT log.

User response

Refer to message DFHRT4416. It identifies the abend in the dynamic routing program and provides further user guidance.

Module:
DFHAPRT, DFHEPC

ACRK

Explanation

The relay program has been invoked with no address for the principal facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRT

ACRL

Explanation

The task does not own the facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRT

ACRM

Explanation

In response to a request from the dynamic routing program, DFHAPRT has attempted an INITIAL_LINK to a program that is not the initial program of the transaction for which the dynamic router has been invoked. The attempt has failed.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Examine the following possibilities:

- The autoinstall user-replaceable module (URM) was called but is unable to do the autoinstall.
- The autoinstall URM was called but data supplied by the autoinstall URM is invalid.
- The autoinstall URM was called, but there is no definition for the autoinstall model.
- There is a problem with the autoinstall URM.
- There is no resource definition for the program and either the autoinstall is not active or the autoinstall URM indicated that the program should not be autoinstalled.
- The program is disabled.
- The program cannot be loaded.
- The program is defined as remote.

Module:
DFHAPRT

ACRN

Explanation

The dynamic routing program has indicated that the transaction should not be routed, but execute in the local system. Prior to invoking the application program, a security check is performed. This check has failed.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Ensure that the transaction security definition is correct.

Module:
DFHAPRT

ACRO

Explanation

An attempt has been made to invoke the CRSQ transaction from a terminal. CRSQ is an internal CICS transaction and cannot be invoked in this way.

System action

The task is abnormally terminated.

User response

None. You can use CEMT and EXEC CICS commands to cancel AIDs.

Module:
DFHCRQ

ACRP

Explanation

The dynamic router has supplied a sysid whose supported functions are unknown. This may be due to either a backlevel release, or APPC is used for communication and no work has flowed across this connection.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Give an alternative sysid, or revert to the old style START, or flow some routed work across the connection.

Module:
DFHAPRT

ACRQ

Explanation

An attempt has been made to route unsupported function across an IPIC connection. If message DFHIS1035 is issued immediately before the ACRQ abend, the ACRQ abend is caused by an attempt to route to a backlevel release. If message DFHIS1035 is not issued, the ACRQ abend is caused by an attempt to route an APPC device.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Provide an alternative SYSID, or make an MRO or ISC connection available.

Module:
DFHAPRT

ACSA

Explanation

The remote scheduler task (CRSR) does not own an intersystem link TCTTE as its principal facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that DFHCRS is not specified as the initial program of a task other than CRSR. Check that the terminal operator did not enter CRSR.

Module:
DFHCRS

ACSB

Explanation

An unexpected reply was received from a remote system in response to a request to schedule a task on that system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRS

ACSC

Explanation

An unexpected request was received from a remote system when expecting a request to schedule a task.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRS

ACSD

Explanation

An internal logic error has been detected.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRS

ACSE

Explanation

Module DFHCRS has been attached in an unsupported manner.

System action

CICS abnormally terminates the transaction with a transaction dump.

User response

Module DFHCRS should be executed only by transaction CRSR, which executes with an MRO session, an LU6.1 session or an LU type 6.2 conversation as its principal facility. Ensure that the transaction is being attached by a CRSR transaction in the connected system, and not by a user transaction.

If the transaction is being attached by a CRSR transaction, you will need assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRS

ACSF

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The task that first detects the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason why the task was purged. It was purged either by the main terminal operator or as a result of a deadlock timeout.

Module:
DFHCRS

ACSG

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Please see the related error message produced by the domain that detected the original error.

Module:
DFHCRS

ACSH

Explanation

The processing of APPC mapped data requires the generation of an LU6.2 attach FMH with default values. In particular, the sync level requested is defaulted to 2. However, the session that is to be used has been bound with a sync level of 1.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that:

- The CONNECTION resource for the remote system has not been defined as single-session.
- The remote system can support a sync level of 2
- The correct sync level has been requested.

Module:
DFHCRS

ACSI

Explanation

An APPC conversation failure occurred when an attach between CICS systems was issued.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the connection to the remote CICS system and try to reestablish it.

Module:
DFHCRS

ACSJ

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the recovery manager (RM) domain. The domain provides an exit trace, and possibly a console message and a system dump (depending on the options specified in the dump table). This failure is either the result of a task purge, or a CICS logic error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related diagnostic material produced by the recovery manager domain and determine the reason for the failure.

In the case of a CICS logic error, you need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRS

ACSK

Explanation

The transaction wait was purged while waiting for a VTAM INQUIRE macro to complete.

CICS issued a VTAM INQUIRE OPTCD=NQN or INQUIRE OPTCD=SESSNAME request then waited for VTAM to post the ECB, but the wait was terminated either as a result of an explicit FORCEPURGE request, or due to a 3 minute time out.

System action

A transaction dump is taken together with CICS issuing message DFHZC0001.

User response

Investigate the reason why the wait was terminated.

In the case of a time out, you may need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZGIN

ACSL

Explanation

CICS has been unable to attach a transaction to perform a mass flag (CFTS) or mass remote delete (CDTS) request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRS

ACSM

Explanation

Transaction CFTS has abended. The mass flagging of terminals for deletion has failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRS

ACSN

Explanation

Transaction CFTS has stalled. The mass flagging of terminals for deletion has exceeded the expected time and is therefore assumed to have failed.

System action

The task is abnormally terminated with a CICS transaction dump. A flag is set in the remote work element (RWE) to indicate that the mainline transaction has assumed that CFTS has failed.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRS

ACSO

Explanation

An IPIC conversation failure occurred when an attach between CICS systems was issued.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the connection to the remote CICS system and try to reestablish it. Use the transaction dump to determine why the conversation failed. This may be the result of a security error that occurred when invalid credentials were sent, or if they were missing from the IPIC message when the connection was configured to expect them.

Module:
DFHCRS

ACTA

Explanation

The relay program running in the terminal-owning region has received an unexpected request from the application owning region. The request received is in violation of CICS transaction routing protocols.

The request will be in the DFHLUCDS DSECT in DFHZTSP's LIFO - field LUCOPN0

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

ACTB

Explanation

The relay program running in the terminal-owning region issued a terminal control WRITE,LAST request to the application-owning system, and received a nonzero return code from terminal control.

This is the usual return code from terminal control in TCATPAPR.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why terminal control was unable to process the request.

Module:
DFHZTSP

ACTC

Explanation

The relay program running in the terminal-owning region issued a terminal control request to free its session to the application-owning system, and received a nonzero return code from terminal control.

This is the usual return code from terminal control in TCATPAPR.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why terminal control was unable to process the request.

Module:
DFHZTSP

ACTD

Explanation

The relay program running in the terminal-owning region issued a terminal control WRITE,WAIT,READ request to the application-owning system, and received a nonzero return code from terminal control.

This is the usual return code from terminal control in TCATPAPR.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why terminal control was unable to process the request.

Module:
DFHZTSP

ACTE

Explanation

The relay program running in the terminal-owning region attempted to free its session with the APPC terminal, and received a nonzero return code from terminal control.

The return code will be in the DFHLUCDS DSECT in DFHZTSP's LIFO field, LUCRCODE.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why terminal control was unable to process the request. The terminal session may have failed.

Module:
DFHZTSP

ACTF

Explanation

The relay program running in the terminal-owning region issued a terminal control request to free its session to the application-owning system, and received a nonzero return code from terminal control.

This return code can be found in the TCA field, TCATPAPR.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why terminal control was unable to process the request. The transaction on the application-owning region may have abnormally terminated or the session may have failed.

Module:
DFHZTSP

ACTG

Explanation

The relay program running in the terminal-owning region issued a request to attach a transaction in the application-owning region, but the response received from that region was invalid.

The return code in the TCA (field TCATPAPR) will be nonzero, and either there will be no TIOA (field TCTTEDA in the TCTTE is zero) or there will be no FMH7 at the start of the TIOA.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why terminal control was unable to process the request. The transaction on the application-owning region may have abnormally terminated or the session may have failed.

Module:
DFHZTSP

ACTH

Explanation

A privileged allocate was issued against a remote LU 6.2 system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZISP

ACTI

Explanation

The relay transaction has an ISC or MRO session as its principal facility. However the TCTTE for that session is not owned by the task.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRT

ACTJ

Explanation

The principal facility of the relay transaction is not a TCTTE.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Task CXRT should only be started in a terminal-owning region by an ALLOCATE request issued in an application-owning region against a remote APPC device. The principal facility of the task should be an ISC or MRO link. Check that your CICS system is defined in such a way that this will always be the case. Also ensure that program DFHCRT is started only by task CXRT.

Module:
DFHCRT

ACTK

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The task that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason why the task was purged. It was either purged by the main terminal operator or as a result of a deadlock timeout.

Module:
DFHZISP

ACTL

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an

exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHZISP

ACU0

Explanation

The transaction routing program in the application-owning region issued a terminal control WRITE,LAST,WAIT request to the terminal-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The relay program in the terminal-owning region terminates abnormally. In this case, determine the reason why the relay program has abnormally terminated.
- The session has failed.

Module:
DFHZXRL

ACU1

Explanation

Refer to the description of abend ACUO.

System action:

User response:

Module:
DFHZXRL

ACU2

Explanation

The transaction routing program in the application-owning region received a response from the terminal-owning region which violates CICS transaction routing protocols.

The trace from the terminal-owning region will show its response to the application-owning region.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACU3

Explanation

The transaction routing program in the application-owning region attempted to set the conversation state machine to a state which violates CICS transaction routing protocols.

The register containing the state can be determined from the assembler listing.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACU4

Explanation

The transaction routing program in the application-owning region issued a SET request to the conversation state machine and received a nonzero return code. This violates CICS transaction routing protocols.

The trace entry on return from DFHZUSR will show the request type and current state.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACU5

Explanation

An program running in an application-owning region has issued an ALLOCATE against an APPC device attached to a terminal owning region, but the connection between the two systems is not installed.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Install the connection between the two regions.

Module:
DFHZXRL

ACU6

Explanation

A request to DFHRTSU to prepare the surrogate TCTTE for syncpoint gave an unexpected response and reason code. The response and reason code are included in DFHRTSU's parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

DFHZXRL

ACU7

Explanation

A request to allocate a session between the application-owning region and the terminal-owning region was issued, but the connection with the remote system is not an APPC or MRO connection.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Redefine the connection as APPC or MRO, or avoid using transaction routing on this connection.

Module:
DFHZXRL

ACU8

Explanation

A request to DFHRTSU to get the recovery status of a surrogate TCTTE gave an unexpected response and reason code. The response and reason code are included in DFHRTSU's parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACU9

Explanation

A request to recovery manager to set the recovery status of a link gave an unexpected response and reason code. The response and reason code are included in DFHRMLN's parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUA

Explanation

DFHZXRL was called with a request which is not supported for transaction routing.

The request is located in the DFHLUC parameter list which is printed in the exception trace. DFHZXRL is called from DFHZARL, which will put details of the request in its trace entry.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUB

Explanation

The parameter list passed to DFHZXRL for an ALLOCATE request does not contain the TCTSE address of a remote APPC terminal.

The TCTSE address is located in the DFHLUC parameter list which is printed in the exception trace. DFHZXRL is called from DFHZARL, which will put details of the request in its trace entry.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUC

Explanation

The TCTSE address passed to DFHZXRL is not that of a remote LU 6.2 terminal.

The TCTSE address is located in the DFHLUC parameter list which is printed in the exception trace. DFHZXRL is called from DFHZARL, which will put details of the request in its trace entry.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUD

Explanation

The profile DFHCICSR could not be located as an installed profile definition.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Check that the IBM-supplied profile DFHCICSR is correctly defined and installed to CICS.

Module:
DFHZXRL

ACUE

Explanation

A request to DFHZTSP to build a surrogate TCTTE was not satisfied.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUF

Explanation

A session between the application-owning region and the terminal-owning region was not allocated because the request was incorrectly specified.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUG

Explanation

A request to allocate a session between the application-owning region and the terminal-owning region failed. The return code from the ALLOCATE request indicated that the profile could not be located as an installed transaction definition, although an earlier attempt to locate it was successful.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUH

Explanation

A request to allocate a session between the application-owning region and the terminal-owning region failed. The return code from the ALLOCATE request indicated that the requested session is already owned by the TCA.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUI

Explanation

An ISC session between the application-owning region and the terminal-owning region was not allocated because the MODENAME named in the profile could not be found. The profile DFHCICSR as supplied by IBM does not specify a MODENAME. Therefore, this error will occur when a MODENAME has been added to the IBM-supplied profile, but that MODENAME is not defined in the SESSIONS definition for the terminal-owning region.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Ensure that the MODENAME specified in profile DFHCICSR was also specified when defining the SESSIONS to the terminal-owning region.

Module:
DFHZXRL

ACUJ

Explanation

A session between the application-owning region and the terminal-owning region was not allocated because the maximum session count for the mode group specified in profile DFHCICSR is zero.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the CEMT transaction to set sessions in the required mode group available for use.

Module:
DFHZXRL

ACUK

Explanation

No TCT entry was found for the terminal-owning region specified in the TCTSE for the remote terminal.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Ensure that the terminal-owning region defined in the remote system entry is also defined to CICS.

Module:
DFHZXRL

ACUL

Explanation

The transaction routing program in the application-owning region issued a terminal control WRITE,WAIT,READ request to the terminal-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The relay program in the terminal-owning region terminates abnormally. In this case, determine the reason why the relay program has abnormally terminated.
- The session has failed.

Module:
DFHZXRL

ACUM

Explanation

A request to DFHZTSP to free a surrogate TCTTE was not satisfied.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUO

Explanation

A terminal control READ request has failed. The transaction routing program in the application-owning region attempted to receive data from the terminal-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The relay program in the terminal-owning region terminates abnormally. In this case, determine the reason why the relay program has abnormally terminated.
- The session has failed.

Module:
DFHZXRL

ACUP

Explanation

The transaction routing program in the application-owning region did not receive a rollback from the terminal-owning region. This violates CICS transaction routing protocols.

The trace from the terminal-owning region will show its response to the application-owning region.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

DFHZXRL

ACUS

Explanation

Refer to the description of abend ACUO.

System action:

User response:

Module:
DFHZXRL

ACUT

Explanation

The transaction routing program in the application-owning region did not receive either a syncpoint or a rollback from the terminal-owning region. This violates CICS transaction routing protocols.

The trace from the terminal-owning region will show its response to the application-owning region.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRL

ACUV

Explanation

The transaction routing program in the application-owning region issued a terminal control ISSUE ABEND request on an MRO link to the terminal-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZIS1.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The relay program in the terminal-owning region terminates abnormally. In this case, determine the

reason why the relay program has abnormally terminated.

- The session has failed.

Module:
DFHZXRL

ACUW

Explanation

The transaction routing program in the application-owning region issued a terminal control ISSUE ERROR request on an MRO link to the terminal-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZIS1.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The relay program in the terminal-owning region terminates abnormally. In this case, determine the reason why the relay program has abnormally terminated.
- The session has failed.

Module:
DFHZXRL

Explanation

The transaction routing program in the terminal-owning region issued a terminal control WRITE,WAIT,READ request to the application-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the application-owning region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:
DFHZXRT

ACVB

Explanation

The transaction routing program in the terminal-owning region attempted to issue an ISSUE SIGNAL request on an MRO link to the application-owning region. This violates CICS transaction routing protocols.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRT

ACVC

Explanation

The transaction routing program in the terminal-owning region issued an ISSUE SIGNAL request on an LU 6.2 link to the application-owning region, and received a nonzero return code from terminal control.

The return code is located in the DFHLUC parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the application-owning region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:

DFHZXRT

ACVD

Explanation

The transaction routing program in the terminal-owning region issued a READ,WAIT request to the application-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the application-owning region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:
DFHZXRT

ACVE

Explanation

The transaction routing program in the terminal-owning region issued a WRITE request to the application-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- the program in the application-owning region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- the session has failed.

Module:
DFHZXRT

ACVF

Explanation

The transaction routing program in the terminal-owning region issued a WRITE,LAST,WAIT request to the application-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the application-owning region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:
DFHZXRT

ACVG

Explanation

The transaction routing program in the terminal-owning region issued a FREE request to free the session with the LU 6.2 terminal, and received a nonzero return code from terminal control.

The return code is located in the DFHLUC parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. The terminal session may have failed.

Module:
DFHZXRT

ACVH

Explanation

The transaction routing program in the terminal-owning region issued a FREE request to free the session with the application-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZARQ.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the application-owning region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:
DFHZXRT

ACVK

Explanation

The transaction routing program in the terminal-owning region issued an ISSUE ABEND request on an LU 6.2 link, and received a nonzero return code from terminal control.

The return code is located in the DFHLUC parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the connected region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:
DFHZXRT

ACVL

Explanation

The transaction routing program in the terminal-owning region issued an ISSUE ABEND request on an MRO link to the application-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZIS1.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the application-owning region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:
DFHZXRT

ACVM

Explanation

The transaction routing program in the terminal-owning region issued an ISSUE ERROR request on an LU 6.2 link, and received a nonzero return code from terminal control.

The return code is located in the DFHLUC parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the connected region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:
DFHZXRT

ACVN

Explanation

The transaction routing program in the terminal-owning region issued an ISSUE ERROR request on an MRO link to the application-owning region, and received a nonzero return code from terminal control.

The return code is located both in TCATPAPR and in the trace entry on return from DFHZIS1.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. This abend code may result when:

- The program in the application-owning region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Module:
DFHZXRT

ACVO

Explanation

The transaction routing program in the terminal-owning region issued an ISSUE PREPARE request and received either a nonzero return code or a response which violates CICS transaction routing protocols.

The return code is located in TCASPRC and the response is located in TCASPSN1.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine whether the problem is caused by the return code or the response. If terminal control was unable to process the request, the abend may occur when:

- The program in the connected region terminates abnormally. In this case, determine the reason why the program has abnormally terminated.
- The session has failed.

Otherwise the distributed application programs may have violated APPC conversation protocols.

Module:
DFHZXRT

ACVP

Explanation

The transaction routing program in the terminal-owning region did not receive an FMH43 from the application-owning region. This violates CICS transaction routing protocols.

The trace from the application-owning region will show its response to the terminal-owning region.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZXRT

ACVQ

Explanation

The transaction routing program in the terminal-owning region issued a request to the APPC terminal, and received a nonzero return code from terminal control.

Both the request and the return code are located in the DFHLUC parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. The terminal session may have failed or be in the wrong state, for example, as the result of both the terminal and application issuing SYNCPOINT ROLLBACK at the same time.

Module:
DFHZXRT

ACVR

Explanation

The transaction routing program in the terminal-owning region issued a SEND,LAST,WAIT request to the LU 6.2 terminal, and received a nonzero return code from terminal control.

The return code is located in the DFHLUC parameter list which is printed in the exception trace.

System action

The task is abnormally terminated with a transaction dump and an exception trace entry.

User response

Use the transaction dump to determine why terminal control was unable to process the request. The terminal session may have failed.

Module:
DFHZXRT

ACWA

Explanation

CICS CWTO transaction has failed because the task does not own a terminal (TCTTE) as its principal facility. This has probably happened because CWTO has been started as an EXEC CICS START transid without a terminal ID.

System action

The transaction is abnormally terminated without a transaction dump.

User response

Retry with a terminal ID value or enter CWTO from a terminal.

Module:
DFHCWTO

ADxx abend codes

AD21

Explanation

The CICS-DB2 attachment facility received a request for a resource manager with the incorrect name. Message DFHDB2045 is output to transient data detailing the invalid name.

System action

The transaction is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD22

Explanation

The CICS-DB2 attachment facility EDF processor was unable to interpret the SQL request.

System action

The command is not interpreted by EDF. A CICS transaction dump is taken with abend code AD22.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EDF

AD23

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a LOCK call to the lock manager (LM) domain made by the CICS-DB2 attachment facility service transaction CEX2. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The CICS-DB2 service task initiates a force shutdown of the CICS-DB2 interface.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX2

AD24

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on an UNLOCK call to the lock manager (LM) domain made by the CICS-DB2 attachment facility service transaction CEX2. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The CICS-DB2 Service task initiates a force shutdown of the CICS-DB2 interface.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX2

AD25

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a LOCK call to the lock manager (LM) domain made by the CICS-DB2 attachment facility while processing a DSNC command. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DSNC command fails and the transaction is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CC

AD26

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on an UNLOCK call to the lock manager (LM) domain made by the CICS-DB2 attachment facility while processing a DSNC command. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DSNC command fails and the transaction is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CC

AD27

Explanation

The CICS-DB2 attachment facility attempted to attach a TCB on which a DB2 thread was to be created to service the SQL request from the application. The attach of the TCB failed due to lack of storage.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Increase the size of the CICS region or lower the TCBLIMIT value specified in the DB2CONN.

Module:
DFHD2EX1

AD28

Explanation

The CICS-DB2 attachment facility attempted to attach a TCB on which a DB2 thread was to be created to service the SQL request from the application. The attach of the TCB failed.

System action

The transaction is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD29

Explanation

The CICS-DB2 attachment facility was unable to link to its EDF processor DFHD2EDF.

System action

The command is not interpreted by EDF. Message DFHDB2048 is output to transient data and a transaction dump is taken with abend code AD29.

User response

Examine the trace in the CICS transaction dump to determine why the link to module DFHD2EDF failed.

Module:
DFHD2EDF

AD2A

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a LOCK call to the lock manager (LM) domain. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2B

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on an UNLOCK call to the lock manager (LM) domain. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2C

Explanation

An unexpected EXCEPTION response has occurred on a locate call to directory manager (DD) domain to locate a DB2TRAN control block. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2D

Explanation

An error (INVALID or DISASTER response) has occurred on a locate call to directory manager (DD) domain to locate a DB2TRAN control block. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2E

Explanation

An unexpected EXCEPTION response has occurred on a locate call to directory manager (DD) domain to locate a DB2ENTRY control block. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2F

Explanation

An error (INVALID or DISASTER response) has occurred on a locate call to directory manager (DD) domain to locate a DB2ENTRY control block A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2G

Explanation

A transaction attempted to use a DB2ENTRY that is DISABLED or is DISABLING. The DISABLEDACT attribute of the DB2ENTRY specified ABEND meaning that new transactions that attempt to use the DB2ENTRY should be abended.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use CEMT INQ DB2TRAN TRANSID(tttt) where tttt is the transid, to determine the name of the DB2ENTRY involved. Re-enable the DB2ENTRY or discard the DB2ENTRY so that the transid will use a pool thread.

Module:
DFHD2EX1

AD2H

Explanation

The CICS-DB2 attachment facility detected that a dynamic plan exit program abended.

System action

CICS trapped the abend from the dynamic plan exit, issued message DFHDB2050, and then abnormally terminated the task with a CICS transaction dump.

User response

See the associated DFHDB2050 transient data message to determine the abend code with which the dynamic plan exit program abended. Determine why the exit program abended.

Module:
DFHD2EX1

AD2I

Explanation

The CICS-DB2 attachment facility failed to link to a dynamic plan exit program because it was not link edited AMODE 31.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the associated DFHDB2051 transient data message to determine the name of the dynamic plan exit program involved. Re-linkedit the dynamic plan exit program AMODE 31.

Module:
DFHD2EX1

AD2J

Explanation

The CICS-DB2 attachment facility failed to link to a dynamic plan exit program because it is disabled.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the associated DFHDB2053 transient data message to determine the name of the dynamic plan exit program involved. Enable the dynamic plan exit program.

Module:
DFHD2EX1

AD2K

Explanation

The CICS-DB2 attachment facility failed to link to a dynamic plan exit program because no program definition was found.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the associated DFHDB2057 transient data message to determine the name of the dynamic plan exit program involved. Ensure that the dynamic plan exit program has been correctly defined to CICS.

Module:
DFHD2EX1

AD2L

Explanation

The CICS-DB2 attachment facility failed to link to a dynamic plan exit program because the program could not be loaded.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the associated DFHDB2058 transient data message to determine the name of the dynamic plan exit program involved. Ensure that the dynamic plan exit program has been correctly defined and is in a load library accessible to CICS.

Module:
DFHD2EX1

AD2M

Explanation

The CICS-DB2 attachment facility failed to link to a dynamic plan exit program because the program is defined as remote.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the associated DFHDB2066 transient data message to determine the name of the dynamic plan exit program involved. Correct the program definition for the dynamic plan exit program so that it is defined as local.

Module:
DFHD2EX1

AD2N

Explanation

The CICS-DB2 attachment facility failed to link to a dynamic plan exit program.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the associated DFHDB2054 transient data message to determine the name of the dynamic plan exit program involved. Examine the transaction dump to determine why the link failed.

Module:
DFHD2EX1

AD2O

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on an WAIT_MVS call to the dispatcher (DS) domain. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2P

Explanation

The transaction was unable to obtain a DB2 thread from a DB2ENTRY or the pool. See the associated transient data message DFHDB2011 to determine which DB2ENTRY was involved or whether it was the pool. The transaction was abended because the DB2ENTRY or the pool specified threadwait(no) meaning do not wait for a thread if all threads are currently in use. Note if message DFHDB2011 indicates that the pool was being used, it means the transaction was using the pool directly rather than overflowing to the pool. (An abend AD3T is produced

when a transaction overflows to the pool and no pool threads are available.)

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Determine whether more threads should be allocated to the DB2ENTRY or the pool, or whether the number of instances of this transaction should be limited using TRANCLASS.

Module:
DFHD2EX1

AD2Q

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on an getmain call to the storage manager (SM) domain. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2R

Explanation

The CICS-DB2 attached TCB connection that processes the DB2 request for this transaction has abended. An exception trace, AP 319D, is written containing the MVS abend code; MVS reason code; and the relevant CICS-DB2 control blocks that are used by the CICS task and by the CICS-DB2 TCB connection. One of the control blocks returned is the CSUB control block. This control block contains data from the MVS SDWA at the time of the abend, for example, the CSB_SDWA_REGS (regs 0-15) and the CSB_SDWA_PSW fields. The CSB_SDWA_REGS is the 16 words following the SDWA eye catcher. The

CSB_SDWA_PSW field is the two words following the CSB_SDWA_REGS field.

The TCB connection is terminated if a CICS transaction is forcepurged from CICS when the thread is still active in DB2.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Examine the trace in the CICS transaction dump to determine why the CICS-DB2 thread TCB abended.

Module:
DFHD2EX1

AD2S

Explanation

The thread TCB servicing the DB2 request for the transaction issued a sign-on request to DB2 which failed. The installed DB2CONN specifies THREADERROR(N906D) or THREADERROR(ABEND).

System action

If THREADERROR(N906D) is specified in the DB2CONN, processing continues. A -906 sqlcode is returned to the application, and a transaction dump is taken with abend code AD2S.

If THREADERROR(ABEND) is specified in the DB2CONN, the task is abnormally terminated with a CICS transaction dump.

User response

Examine the dump to determine why the signon request to DB2 failed. One such reason could be the thread has been cancelled. For authorization failures, examine the AUTHID or AUTHTYPE parameter of the DB2ENTRY or pool used for the transaction. Ensure the id is authorised to access the plan in DB2.

Module:
DFHD2EX1

AD2T

Explanation

An attempt to create a DB2 thread by the TCB servicing the DB2 request for the transaction failed with DB2 reason code 00F30040. The installed DB2CONN specifies THREADERROR(N906D) or THREADERROR(ABEND).

System action

If THREADERROR(N906D) is specified in the DB2CONN, processing continues. A -906 sqlcode is returned to the application and a transaction dump is taken with abend code AD2T.

If THREADERROR(ABEND) is specified in the DB2CONN, the task is abnormally terminated with a CICS transaction dump.

User response

Either the plan is unavailable or is not known to DB2.

Module:
DFHD2EX1

AD2U

Explanation

An attempt to create a DB2 thread by the TCB servicing the DB2 request failed. The installed DB2CONN specifies THREADERROR(N906D) or THREADERROR(ABEND).

System action

If THREADERROR(N906D) is specified in the DB2CONN, processing continues. A -906 sqlcode is returned to the application and a transaction dump is taken with abend code AD2U.

If THREADERROR(ABEND) is specified in the DB2CONN, the task is abnormally terminated with a CICS transaction dump.

User response

Examine the dump to determine why the create thread failed.

Module:
DFHD2EX1

AD2V

Explanation

The CICS-DB2 attachment facility issued a commit or abort request to DB2 but received a reason code 00F30805 indicating that connection to DB2 has been lost. This is due to DB2 terminating abnormally or being in the process of terminating abnormally. If the commit or abort request was preceded by a prepare request, DB2 may well still be indoubt. In this case, the CICS-DB2 attachment facility instructs CICS to remember the outcome of the UOW pending resynchronisation, which will happen when CICS and DB2 are reconnected. For an abort request not preceded by a prepare, i.e. a transaction abend or syncpoint rollback, DB2 will not be indoubt as the UOW was still inflight. DB2 will backout updates made by the UOW when restarted so there is no need for CICS to remember the outcome of the UOW.

System action

The transaction completes normally but a transaction dump is taken with abend code AD2V. If DB2 is indoubt about the outcome of the UOW it will be resolved when CICS and DB2 are reconnected.

User response

Contact your system programmer to restart the DB2 subsystem.

Module:
DFHD2EX1

AD2W

Explanation

The CICS-DB2 attachment facility issued a single-phase commit call to DB2 but received an unexpected response. Transient data message DFHDB2055 details the DB2 reason code received. The commit request may have been processed or it may have been ended. There is no resynchronisation needed, as no CICS recoverable resources were updated.

System action

The CICS-DB2 attachment facility abnormally terminates the transaction with abend code AD2W. The CICS recovery manager will supersede the AD2W abend code with abend code ASPR. A transaction dump is taken.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2X

Explanation

The CICS-DB2 attachment facility detected that the CICS task and the thread TCB were in an invalid state. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD2Y

Explanation

The transaction was unable to obtain a DB2 thread from a DB2ENTRY or the pool because there were no TCBs available on which to create the thread. The number of thread TCBs currently running is at the TCBLIMIT defined in the DB2CONN. Message DFHDB2010 is output to transient data. The transaction was abended because either:

- The DB2ENTRY specifies threadwait(no), meaning do not wait for a thread, including having to wait to create a thread because a TCB is not available - that is, do not wait for a TCB either.
- The DB2ENTRY specified threadwait(pool), but the pool definition within the DB2CONN specifies threadwait(no), and again there were no TCBs available.
- The transaction was using the pool directly, the pool specifies threadwait(no) and no TCB was available.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Determine whether TCBLIMIT should be increased or whether the number of transactions using DB2 at any one instance should be limited using transaction classes.

Module:
DFHD2EX1

AD2Z

Explanation

DB2 detected a deadlock and the CICS-DB2 attachment facility attempted a syncpoint rollback command for the transaction as DROLLBACK(YES) was specified for the DB2ENTRY or POOL. The syncpoint rollback command failed. Message DFHDB2070 is output to transient data detailing the transid involved and the EIBRESP2 from the failed syncpoint rollback command.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Examine the eibresp2 value to determine why the syncpoint rollback request failed. One possible reason could be that the transaction running is a DPL server transaction which was DPLed to by a client transaction without specifying the SYNCONRETURN parameter. In this case syncpoints, or syncpoint rollbacks, cannot be taken by the server transaction, so DROLLBACK(YES) is invalid in this case.

Module:
DFHD2EX1

AD31

Explanation

An unexpected EXCEPTION response has occurred on a locate call to directory manager (DD) domain to locate a PACKAGESET control block. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD32

Explanation

An error (INVALID or DISASTER response) has occurred on a locate call to directory manager (DD) domain to locate a PACKAGESET control block. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD33

Explanation

The CICS-DB2 attachment facility detected that the set packageset program DFHD2SPS abended.

System action

CICS trapped the abend from DFHD2SPS, issued message DFHDB2080, and then abnormally terminated the task with a CICS transaction dump.

User response

See the associated DFHDB2080 transient data message to determine the abend code with which DFHD2SPS abended. Determine why DFHD2SPS abended.

Module:
DFHD2EX1

AD35

Explanation

The CICS-DB2 attachment facility failed to link to the set packagset program DFHD2SPS because it is disabled.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Enable the DFHD2SPS program.

Module:
DFHD2EX1

AD36

Explanation

The CICS-DB2 attachment facility failed to link to the set packagset program DFHD2SPS because no program definition was found.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that DFHD2SPS has been correctly defined to CICS. The definition for DFHD2SPS cannot be autoinstalled.

The definition for DFHD2SPS is supplied in CICS defined group DFHDB2. Ensure CSD definitions have been upgraded.

Module:
DFHD2EX1

AD37

Explanation

The CICS-DB2 attachment facility failed to link to the set packageset program DFHD2SPS because the program could not be loaded.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that DFHD2SPS has been correctly defined and is in a load library accessible to CICS.

Module:
DFHD2EX1

AD38

Explanation

The CICS-DB2 attachment facility failed to link to the set packagset program DFHD2SPS because the program is defined as remote.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the program definition for DFHD2SPS so that it is defined as local.

Module:
DFHD2EX1

AD39

Explanation

The CICS-DB2 attachment facility failed to link to the set packagset program DFHD2SPS.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Examine the transaction dump to determine why the link failed.

Module:
DFHD2EX1

AD3A

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a LOCK call to the lock manager (LM) domain made by the CICS-DB2 attachment facility startup program. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

Startup of the CICS-DB2 interface is terminated, and the interface is closed. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2STR

AD3B

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on an UNLOCK

call to the lock manager (LM) domain made by the CICS-DB2 Attachment facility startup program. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

Startup of the CICS-DB2 interface is terminated, and the interface is closed. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2STR

AD3C

Explanation

An error (INVALID, DISASTER response) has occurred on a CONNECT_TO_DB2 function call to the CICS-DB2 Coordinator program DFHD2CO made by the CICS-DB2 Attachment facility startup program. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

Startup of the CICS-DB2 interface is terminated, and the interface is closed. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2STR

AD3D

Explanation

An unexpected response was received while attempting to delete a record from a temporary storage queue during processing of a DSNC STRT command. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DSNC STRT command fails. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CM1

AD3E

Explanation

During processing of a DB2 request for the transaction, an identify request was made to identify the calling TCB to DB2. The identify request failed. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DB2 request fails. The task is abnormally terminated with a CICS transaction dump.

User response

Examine the exception trace in the dump to determine why the identify request failed. The CSUB control block is output as part of the exception trace entry, and it contains a record of all calls to DB2 starting at field CSB_TRACE_ENTRIES_START. The identify request contains eyecatcher "IDEN" and is followed by the DB2 FRB response and reason codes.

Module:
DFHD2D2

AD3F

Explanation

During processing of a DB2 request for the transaction, a terminate thread request was made to DB2 which failed. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DB2 request fails. The task is abnormally terminated with a CICS transaction dump.

User response

Examine the exception trace in the dump to determine why the terminate thread request failed. The CSUB control block is output as part of the exception trace entry, and it contains a record of all calls to DB2 starting at field CSB_TRACE_ENTRIES_START. The terminate thread request contains eyecatcher "TERM" and is followed by the DB2 FRB response and reason codes.

Module:
DFHD2D2

AD3G

Explanation

An unexpected response was received from an EXEC CICS GETMAIN issued during processing of a CICS-DB2 DSNC command. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DSNC command fails. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CM1

AD3H

Explanation

The issuing of an EXEC SQL command or IFI call from a Dynamic Plan Exit is not allowed.

System action

The task is abnormally terminated.

User response

Remove any EXEC SQL commands or IFI calls from the Dynamic Plan Exit.

Module:
DFHD2EX1

AD3I

Explanation

An unexpected response was received from an EXEC CICS INQUIRE DB2CONN command issued during startup of the CICS-DB2 interface. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

Startup of the CICS-DB2 interface is terminated, and the interface is closed. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CM1

AD3J

Explanation

A commit request to DB2, issued during the second phase of syncpoint, failed. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump. CICS maintains a record that the UOW committed pending a future resynchronization request with DB2.

User response

Examine the exception trace in the dump to determine why the commit request failed. The CSUB control block is output as part of the exception trace entry, and it contains a record of all calls to DB2 starting at field CSB_TRACE_ENTRIES_START. The commit request contains eyecatcher "COMM" and is followed by the DB2 FRB response and reason codes.

Module:
DFHD2D2

AD3K

Explanation

An abort request to DB2, issued during the second phase of syncpoint, failed. A console message is

output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump. CICS maintains a record that the UOW backed out pending a future resynchronization request with DB2.

User response

Examine the exception trace in the dump to determine why the abort request failed. The CSUB control block is output as part of the exception trace entry, and it contains a record of all calls to DB2 starting at field CSB_TRACE_ENTRIES_START. The abort request contains eyecatcher "ABRT" and is followed by the DB2 FRB response and reason codes.

Module:
DFHD2D2

AD3L

Explanation

During processing of a DB2 request for the transaction, an associate request was made to associate the DB2 connection with the calling TCB. The associate request failed. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DB2 request fails. The task is abnormally terminated with a CICS transaction dump.

User response

Examine the exception trace in the dump to determine why the associate request failed. The CSUB control block is output as part of the exception trace entry, and it contains a record of all calls to DB2 starting at field CSB_TRACE_ENTRIES_START. The associate request contains eyecatcher "ASSO" and is followed by the DB2 FRB response and reason codes.

Module:
DFHD2D2

AD3M

Explanation

An unexpected error occurred during processing of a DSNC MODIFY command. A console message is

output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DSNC MODIFY command fails. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CM1

AD3P

Explanation

An unexpected error occurred during processing of a DSNC STOP command. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DSNC STOP command fails. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CM1

AD3Q

Explanation

An unexpected response was received while attempting to read a record from a temporary storage queue during processing of a DSNC STRT command. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DSNC STRT command fails. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CM1

AD3R

Explanation

An unexpected response was received while attempting to read a record from a temporary storage queue during startup of the CICS-DB2 interface. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

Startup of the CICS-DB2 interface is terminated, the interface is closed. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2STR

AD3S

Explanation

An unexpected response was received from an EXEC CICS SET DB2CONN command issued during startup of the CICS-DB2 interface. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

Startup of the CICS-DB2 interface is terminated, and the interface is closed. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CM1

AD3T

Explanation

The transaction was unable to obtain a DB2 thread from the pool. Message DFHDB2011 is output to transient data. The transaction was abended because the transaction tried using a DB2ENTRY but all threads were in use on the DB2ENTRY, and despite threadwait(pool) being specified, all threads in the pool were also in use. The pool definition within the DB2CONN specifies threadwait(no).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Determine whether more threads should be allocated to the DB2ENTRY or the pool, or whether the number of instances of this transaction should be limited using TRANCLASS.

Module:
DFHD2EX1

AD3U

Explanation

An error (INVALID or DISASTER response) has occurred on a locate call to transaction manager (XM) domain to locate a transaction definition. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

AD3W

Explanation

An unexpected response was received while attempting to write a record to a temporary storage queue during startup of the CICS-DB2 interface. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

Startup of the CICS-DB2 interface is terminated, and the interface is closed. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2STR

AD3X

Explanation

An unexpected response was received while attempting to write a record to a temporary storage queue during processing of a DSNC STRT command. A console message is output, an exception trace written and, possibly, a system dump taken (depending on the options specified in the dump table).

System action

The DSNC STRT command fails. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2CM1

AD3Z

Explanation

The CICS-DB2 thread TCB processing the DB2 request for this transaction has abended because the DB2 adapter is being shutdown.

System action

The task is abnormally terminated.

User response

If this abend should occur at CICS or DB2 shutdown then it can be ignored, because the DB2 adapter is

abending the task as part of shutdown processing, otherwise you will need assistance from IBM.

Module:
DFHD2EX1

AD4A

Explanation

The CICS-DB2 set packageset program issued an EXEC SQL SET CURRENT PACKAGESET command which failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Examine the transaction dump to determine why the command failed.

Module:
DFHD2EX1

AD4B

Explanation

The CICS-DB2 attachment facility failed to locate a valid dfhd2pkgset control block.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHD2EX1

ADCA

Explanation

This abend is issued if DBCTL returns a non-zero response code when a DL/I request has been issued from an application program.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Look up accompanying message DFHDB8109 that appears on the CDBC transient data destination.

Module:
DFHDLIDP

ADCB

Explanation

This abend occurs when DBCTL has notified CICS that a task has issued a DL/I request, but it did not have a PSB scheduled. If your application does have a PSB scheduled then a possible cause for this abend is that the DBCTL STOP THREAD command may have been used to terminate the DBCTL thread that corresponds to this task.

System action

CICS abnormally terminates the transaction with a transaction dump. CICS processing continues.

User response

Check if the DBCTL operator has issued a STOP THREAD command for the task that has abnormally terminated. Look up DBCTL response code 28 in the DBCTL return code section of the IMS messages and codes.

Module:
DFHDLIDP

ADCC

Explanation

This abend occurs when DBCTL has notified CICS that a task has issued program specification block (PSB) request, but it has a PSB already scheduled. CICS prevents a task from issuing a PSB schedule request to DBCTL when it has already issued a PSB schedule request by returning a PSBSCH response in UIBDLTR. However, in this case it is DBCTL that has rejected the subsequent PSB schedule request. A possible cause for this abend is a storage over-write.

System action

CICS abnormally terminates the transaction with a transaction dump. CICS processing continues.

User response

Check for any messages issued from your CICS system indicating that storage over-writes have taken place.

Look up DBCTL response code 32 in the DBCTL return code section of the IMS messages and codes.

Module:
DFHDLIDP

ADCD

Explanation

This abend is issued when a deadlock has been detected by IMS and this transaction has been selected for abnormal termination.

This abend can occur when a transaction is accessing IMS resources via DBCTL or via a remote DLI request to a remote CICS region. The remote CICS region can be accessing IMS via DBCTL, or if it is a CICS 4.1 region or earlier, accessing IMS via local DLI.

System action

Access to IMS resources via DBCTL is withdrawn for this transaction. Further attempts to access IMS will result in an AEY9 abend.

CICS abnormally terminates the transaction with a transaction dump. CICS processing continues.

User response

If ADCD abends occur infrequently in your system, no action is required although you may like to consider setting your system up in such a way that, after an ADCD abend is issued, the transaction is automatically restarted. See the Administering recovery and restart for further information.

If ADCD abends are occurring frequently in your system, you may need to review the design of your applications. Some general techniques for deadlock avoidance are described in the Administering recovery and restart.

Module:
DFHDLIDP

ADCE

Explanation

This abend is issued when the module DFHDBAT returns a nonzero return code in reply to a DL/I request issued from an application program to DBCTL. DFHDBAT is a task related user exit and forms part of the CICS-DBCTL interface. This abend is accompanied by message DFHDB8110.

System action

CICS abnormally terminates the transaction with a transaction dump. CICS processing continues.

User response

Look up the accompanying message DFHDB8110 that appears on the CDBC transient data destination.

Module:
DFHDLIDP

ADCF

Explanation

This abend is issued when the module DFHDLIDP detects that the CICS-DBCTL Interface has been configured using a DRA startup table (DFSPZPxx) which specifies option PCBLOC=31, and the application is amode 24.

PCBLOC=31 specifies that the PCB address list and PCBs can be stored above the line. This is incompatible with amode 24 applications.

System action

CICS abnormally terminates the transaction with a transaction dump. CICS processing continues.

User response

Linkedit the application amode 31, or change the DRA startup table option to PCBLOC=24.

Module:
DFHDLIDP

ADCI

Explanation

This abend is issued when IMS returns a user abend 3303 response for a DL/I request issued from an application program.

System action

Access to IMS resources via DBCTL is withdrawn for this transaction. Further attempts to access IMS will result in an AEY9 abend.

CICS abnormally terminates the transaction with a transaction dump. CICS processing continues.

User response

Check the description in the IMS messages and codes for the meaning of IMS user abend 3303.

Module:
DFHDLIDP

ADCJ

Explanation

This abend is issued when an application has been using DBCTL, and while the application was still scheduled to DBCTL, the CICS-DBCTL interface was terminated.

System action

CICS abnormally terminates the transaction with a transaction dump. CICS processing continues.

User response

Check the CDBC transient data destination for messages indicating the reason for termination of the CICS-DBCTL interface. If you do not know where the CDBC transient is, then please check with your system programmer. Check for messages issued from the DBCTL system.

Module:
DFHDLIDP

ADCP

Explanation

When checking the DBCTL program specification block (PSB), the external security manager checked the usage of the PSB, and found that:

- The user was unauthorized to access the PSB, or
- The PSB was unknown to the external security manager, or
- The user was set to the capability of the default user.

The meaning of the term "user" in the above context depends on the way the transaction was invoked.

- If the transaction is being run from a local terminal, or has been routed from a remote terminal, the user is the terminal user. (For a routed transaction, if PSBCHK=NO is specified in the SIT, or RESSEC=NO is specified in the transaction definition (CEDA DEFINE TRANSACTION command), the security manager does *not* check the terminal user.)
- If the transaction is being run as a result of a request from another CICS MRO region, the user is the owner of the other CICS system (as defined to the external security manager in the JOB statement of the initializing JCL).
- If the transaction is being run as a result of a request from a connected ISC system, the user

is defined in the SECURITYNAME operand of the installed CONNECTION definition that defines the link between the remote system and the local system. Ensure that the name in the SECURITYNAME operand is the same as that supplied by the connected CICS system. This will depend upon the type of CONNECTION between the two systems. For further information about this, refer to the CICS intercommunication.

Notes.

By the above definitions, a PSB used by a routed transaction has two users, the terminal user and the communicating region. Therefore, for routed transactions, the external security manager makes two checks, on the terminal user (as qualified in 1 above), and on the communicating region (2 or 3 above).

System action

CICS abnormally terminates the task attempting to schedule the PSB. CICS processing continues.

User response

Ensure that the PSB is defined to the external security manager, and that all users have the correct level of authorization. If the system setup is correct, note the security violation.

Module:
DFHDLIDP

ADCQ

Explanation

This abend can occur when an application has issued an EXEC DLI SCHD request for a PSB that contains no DBPCBs, and the SYSSERVE keyword was not specified. Secondly this abend can occur when an application has issued a PCB request for a PSB that contains no DBPCBs and the IOPCB option was not specified. Otherwise it may indicate an IMS processing error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check that the application program has scheduled the appropriate PSB. If the PSB is correct, then contact your IMS administrator.

Module:
DFHDLIDP

ADCR

Explanation

This abend occurs when an application has issued a DL/I request other than a schedule request, and the DBCTL DRA return code of 40 indicates that there was no active communication with DBCTL.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check the CDBC transient data destination for messages indicating the reason for termination of the CICS-DBCTL interface. If you do not know where the CDBC transient data destination is, check with your system programmer. Check for messages issued from the DBCTL system.

Module:
DFHDLIDP

ADCS

Explanation

CICS issued a single-phase commit request to DBCTL and an unexpected response was returned from DBCTL.

System action

CICS issues message DFHDB8119 to transient data queue CDBC, then terminates the task abnormally with a CICS transaction dump.

User response

Message DFHDB8119 shows the unexpected response from DBCTL, along with the recovery token of the LUW involved. The explanation of message DFHDB8119 indicates how the outcome of the LUW can be determined.

Module:
DFHDBAT

ADCT

Explanation

A user has attempted to invoke the CICS-DBCTL control transaction from a terminal.

System action

CICS rejects the request.

User response

Do not try to invoke CICS internal transactions directly.

Module:
DFHDBCT

ADCV

Explanation

The connection to DBCTL was terminated and then re-established. The failing task had issued a schedule request against an earlier run of DBCTL and is therefore no longer scheduled.

System action

CICS abnormally terminates the transaction with a transaction dump. CICS processing continues.

User response

No action is required, although you may like to consider setting your system up in such a way that, after an abend ADCV is issued, the transaction is automatically restarted.

Module:
DFHDLIDP

ADDA

Explanation

An error (INVALID or DISASTER response) has occurred on a call to the storage manager domain. The domain that detected the original error provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump (depending on the options in the dump table).

User response

See related message from the domain that detected the original error.

Module:
DFHDBME, DFHDLI, DFHDLIDP

ADDB

Explanation

An error (INVALID or DISASTER response) has occurred on a call to the catalog (CC) domain. The domain that detected the original error provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump (depending on the options in the dump table).

User response

See related message from the domain that detected the original error.

Module:
DFHDBCON, DFHDBDSC

ADDC

Explanation

An error (INVALID or DISASTER response) has occurred on a call to the loader (LD) domain. The domain that detected the original error will have provided an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump (depending on the options in the dump table).

User response

See related message from the domain that detected the original error.

Module:
DFHDBCON, DFHDBDI

ADDI

Explanation

CICS has been notified of a DBCTL failure. However, it has been unable to complete the search for a DBCTL alternate. This is possibly due to an unexpected return code from an IEFSSREQ request.

System action

A CICS transaction dump is produced. CICS continues as if no XRF DBCTL alternate has been found. This abend is accompanied by message DFHDX8323.

User response

Refer to message DFHDX8323 for further information. It may be necessary to restart DBCTL manually.

Module:
DFHDBCT

ADDJ

Explanation

CICS has failed to connect to DBCTL because program DFHDBAT could not be ENABLED.

System action

A CICS transaction dump is produced. The state of the CICS/DBCTL interface remains not connected.

User response

Refer to the transaction dump to determine why the ENABLE failed.

Module:
DFHDBCON

ADDK

Explanation

CICS failed to obtain or release a lock on either the adapter's Global Work Area(GWA) or the DBCTL Global Block (DGB).

System action

The task is abnormally terminated with a CICS transaction dump (depending on the options in the dump table).

User response

Refer to the transaction dump to determine why lock failed.

Module:
DFHDBAT

ADEF

Explanation

A severe error has been encountered when executing transaction CLS3.

System action

CLS3 is abnormally terminated with a transaction dump. CICS issues message DFHZC4948.

User response

See message DFHZC4948 for further guidance.

Module:
DFHCLS3

ADIR

Explanation

The abend code is issued for either of the following reasons:

- A DFHDI or DFHBMS request was issued when the DFHDIP program was generated as a dummy.
- A DFHDI TYPE=RECEIVE or TYPE=NOTE was attempted but the transaction identification did not specify either INBFMH=DIP or INBFMH=ALL.

System action

A CICS transaction dump is provided to assist in problem determination.

User response

Either generate a DFHDIP program into the system or specify INBFMH correctly on the profile definition.

Module:
DFHDIP

ADIS

Explanation

EXEC CICS ISSUE SEND request has been issued from a task that has a non-terminal principal facility.

System action

A CICS transaction dump is provided to assist in problem determination.

User response

Use a terminal or device that is properly supported.

Module:
DFHEDI

ADLE

Explanation

A DL/I request was made for a remote database, but the system named in the remote PDIR entry was unknown to CICS, that is, not specified in a DFHTCT TYPE=SYSTEM macro or CEDA DEFINE CONNECTION command.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Either correct the SYSIDNT parameter in the relevant DFHDLPSB entry, or define the remote system to CICS with a DFHTCT TYPE=SYSTEM macro or a CEDA DEFINE CONNECTION command.

Module:
DFHDLIRP

ADLF

Explanation

A DL/I request was made for a remote database, but the link to the system on which the database resides was down.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer. Once the link to the remote system has been reestablished, resubmit the transaction.

Module:
DFHDLIRP

ADLG

Explanation

A DL/I request was made for a remote database, but there were errors in the DL/I argument list that was provided by the user.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Ensure that any errors in the DL/I argument are corrected.

Module:
DFHDLIRP

ADLP

Explanation

When checking the DLI program specification block (PSB), the external security manager checked the usage of the PSB, and found that:

- The user was unauthorized to access the PSB, or
- The PSB was unknown to the external security manager, or
- The user was set to the capability of the default user.

The meaning of the term "user" in the above context depends on the way the transaction was invoked.

- If the transaction is being run from a local terminal, or has been routed from a remote terminal, the user is the terminal user. (For a routed transaction, if PSBCHK=NO is specified in the SIT, or RESSEC=NO is specified in the transaction definition (CEDA DEFINE TRANSACTION command), the security manager does *not* check the terminal user.)
- If the transaction is being run as a result of a request from another CICS MRO region, the user is the owner of the other CICS system (as defined to the external security manager in the JOB statement of the initializing JCL).
- If the transaction is being run as a result of a request from a connected ISC system, the user is defined in the SECURITYNAME operand of the installed CONNECTION definition that defines the link between the remote system and the local system. Ensure that the name in the SECURITYNAME operand is the same as that supplied by the connected CICS system. This will depend upon the type of CONNECTION between the two systems. For further information about this, refer to the CICS intercommunication.

Note:

By the above definitions, a PSB used by a routed transaction has two users, the terminal user and the communicating region. Therefore, for routed transactions, the external security manager makes two checks, on the terminal user (as qualified in 1 above), and on the communicating region (2 or 3 above).

System action

The task attempting to schedule the PSB abnormally terminates.

User response

Ensure that the PSB is defined to the external security manager, and that all users have the correct level of authorization. If the system setup is correct, note the security violation.

Module:
DFHDLIRP

ADMA

Explanation

The alternate CICS task responsible for tracking the DBCTL connection status of the active CICS has received an error from the CICS Availability Manager (CAVM) message input service.

System action

The tracking transaction terminates with a CICS transaction dump. No further action is taken in response to DBCTL status changes. The global exits, XXDFB and XXDTO, are never invoked and no attempt at a DBCTL restart is made in the event of a takeover. This abend is accompanied by DFHDX8331.

User response

Check for any other messages relating the CAVM dataset problems. In the event of a takeover, it may be necessary to restart DBCTL manually.

Module:
DFHDBCR

ADMB

Explanation

The CICS/XRF DBCTL tracking task has received an unrecognizable message from the CICS/XRF message manager. This abend is preceded by message DFHDX8333.

System action

The CICS/XRF DBCTL tracking task abends.

User response

Refer to the instructions for message DFHDX8333.

Module:
DFHDBCR.

ADMD

Explanation

The alternate CICS system task responsible for tracking the DBCTL connection status of the active CICS has been unable to complete its search for a DBCTL alternate, possibly due to an unexpected return code from an IEFSSREQ request.

System action

A CICS transaction dump is produced. The tracking transaction continues as if no DBCTL alternate had been found. This abend is accompanied by message DFHDX8335.

User response

Refer to message DFHDX8335 for further information. It may be necessary to restart DBCTL manually.

Module:
DFHDBCR.

ADPA

Explanation

The CICS supplied transaction for managing debugging profiles, CADP, has received a exception response from the file manager, with reason file error. The file manager will have issued a message to the CICS joblog containing a code which indicates the precise nature of the error. For example this abend will be issued if the underlying file DFHDPFMB used by CADP is disabled or doesn't exist.

System action

CICS abends the transaction with a transaction dump.

User response

Examine the CICS joblog for associated messages, correct the problem and retry the CADP transaction.

Module:
DFHDPLU

ADPB

Explanation

The CICS supplied transaction for managing debugging profiles, CADP, has received a disaster response from the file manager, with reason internal error. There is an error in the file manager program.

System action

CICS abends the transaction with a transaction dump.

User response

Examine the CICS joblog for associated messages. Contact IBM for assistance with this type of error.

Module:
DFHDPLU

ADPC

Explanation

The CICS supplied transaction for managing debugging profiles, CADP, has received a disaster response from the file manager, with reason disaster percolation. There is an error in one of the CICS domains called by the file manager.

System action

CICS abends the transaction with a transaction dump.

User response

Examine the CICS joblog for associated messages. Contact IBM for assistance with this type of error.

Module:
DFHDPLU

ADPD

Explanation

The CICS supplied transaction for managing debugging profiles, CADP, has received a purged response from the file manager. reason disaster precolation. It is likely that an underlying request to CICS File Control has timed out because the record that CADP is trying to access, is held up by another transaction. For example this would occur if CECI was bing used to access the underlying file, DFHDPFMB, at the same time as using CADP.

System action

CICS abends the transaction with a transaction dump.

User response

Investigate if there are other tasks running against the file used by CADP.

Module:
DFHDPLU

ADPI

Explanation

The CICS supplied program for inactivating all debugging profiles, DFHDPIN, has received a exception response from the file manager, with reason file error. The file manager will have issued a message to the CICS joblog containing a code which indicates the precise nature of the error. For example this abend will be issued if the underlying file DFHDPFMB used by CADP was disabled or deleted whilst DFHDPIN was running.

System action

CICS abends the transaction with a transaction dump.

User response

Examine the CICS joblog for associated messages, correct the problem and retry the CADP transaction.

Module:
DFHDPIN

ADPL

Explanation

A server program has issued a command which is restricted in the distributed program link (DPL) environment. Certain API and CPI-RR requests, and the DL/I terminate request are not allowed in the DPL environment. See the Developing CICS Applications for a list of these restricted commands.

A server program is a program which has been remotely linked, or a program defined to run with the DPL subset.

System action

CICS abends the transaction with a transaction dump.

User response

Remove the restricted commands from the server program, or run the server program locally.

AExx abend codes

AEC1

Explanation

An attempt has been made to use the Command Level Interpreter (CECI) or the Enhanced Main Terminal (CEMT) or an RDO (CEDA, CEDB, CEDC) transaction on a terminal that is not supported.

Module:
DFHEIP, DFHCPIR, DFHDLI

ADXA

Explanation

The XRF DBCTL state catch-up transaction, DXCU, has failed.

System action

DXCU is abnormally terminated with a CICS transaction dump. This abend is accompanied by DFHDX8319.

User response

Diagnose the error from the CICS transaction dump. Refer to DFHDX8319 for further information.

Module:
DFHDXCU

ADXB

Explanation

The XRF DBCTL state catch-up transaction, DXCU, has failed.

System action

DXCU is abnormally terminated with a CICS transaction dump. This abend is accompanied by DFHDX8318.

User response

Use the dump to help diagnose the problem. Refer to DFHDX8318 for further information. Check for any other messages relating to CICS availability manager (CAVM) data set problems.

Module:
DFHDXCU

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use a terminal that is supported by the Command Level Interpreter, Enhanced Main Terminal, or RDO transaction.

Module:
DFHECIP, DFHECSP, DFHEMTP, DFHESTP, DFHEOTP,
DFHEDAP

AEC2

Explanation

An attempt has been made to use the Command Level
Interpreter (CECI) or the Enhanced Main Terminal
(CEMT) or an RDO (CEDA, CEDB, CEDC) transaction on
a display terminal of size less than 24 X 80.

System action

The task is abnormally terminated with a CICS
transaction dump.

User response

Use a display terminal that is supported by the
Command Level Interpreter or Enhanced Main
Terminal or RDO transaction.

Module:
DFHECIP, DFHECSP, DFHEMTP, DFHESTP, DFHEOTP,
DFHEDAP

AEC7

Explanation

Language Environment has encountered an
unexpected error during the THREAD INITIALIZATION
phase while attempting to execute a Language
Environment enabled program. The return code
received from Language Environment is placed into the
field EIBRESP2.

System action

Message DFHAP1200 is issued and the transaction is
abnormally terminated. The program is disabled.

User response

Refer to the error message or messages issued by
Language Environment to determine the cause of the
problem.

Module:
DFHAPLI

AEC8

Explanation

Language Environment has encountered an
unexpected error during the RUNUNIT

INITIALIZATION phase while attempting to execute a
Language Environment enabled program.

System action

The return code received from Language Environment
is placed into the field EIBRESP2. Message
DFHAP1200 is issued and the transaction is
abnormally terminated. The program is disabled.

User response

Refer to the error message or messages issued by
Language Environment to determine the cause of the
problem.

Module:
DFHAPLI

AEC9

Explanation

Language Environment has encountered an
unexpected error during the RUNUNIT BEGIN
INVOCATION phase while attempting to execute a
Language Environment enabled program.

System action

The return code received from Language Environment
is placed into the field EIBRESP2. Message
DFHAP1200 is issued and the transaction is
abnormally terminated. The program is disabled.

User response

Refer to the error message or messages issued by
Language Environment to determine the cause of the
problem.

Module:
DFHAPLI

AECA

Explanation

An attempt has been made to run one of the CICS
internal EP Adapter transactions: CEPQ, CEPT, CEPR,
or CEPS as a user transaction.

System action

CICS terminates the task.

User response

Investigate why the attempt was made to run a CICS
supplied EP Adapter as a user transaction.

Module:
DFHECEAM, DFHECEAQ, DFHECEAS, DFHECEAT

AECC

Explanation

An error occurred while emitting an event. This problem is likely to have been caused by an error in the specification of the event or in the configuration of the EP adapter.

System action

An exception trace entry is written. The EP adapter task is abnormally terminated with a CICS transaction dump.

User response

Inspect the CICS trace and message log to determine the cause of the failure.

Module:
DFHECEAM, DFHECEAQ, DFHECEAS, DFHECEAT

AECE

Explanation

An unexpected error occurred in the event processing deferred filtering task CEPF.

System action

An exception trace entry is written. The CEPF task is abnormally terminated with a CICS transaction dump.

User response

Inspect the CICS trace and message log to determine the cause of the failure.

Module:
DFHECDF

AECM

Explanation

An attempt was made to attach a CICS event processing deferred filtering task CEPF, but the transaction was not attached internally by CICS.

System action

An exception trace entry is written. The CEPF task is abnormally terminated.

User response

Investigate why an attempt was made to run a CICS supplied event processing deferred filtering task as a user transaction.

Module:
DFHECDF

AECO

Explanation

An unexpected error occurred while emitting an event.

System action

An exception trace entry is written. The EP adapter task is abnormally terminated with a CICS transaction dump.

User response

Inspect the CICS trace and message log to determine the cause of the failure.

Module:
DFHECEAM, DFHECEAQ, DFHECEAS, DFHECEAT

AED1

Explanation

This abend is produced as a result of either:

- An attempt to use the execution diagnostic facility (EDF) on an unsupported terminal,
- Using the temporary storage browse transaction (CEBR) on an unsupported device, or
- An attempt to initiate the temporary storage browse transaction (CEBR) with a non-terminal principal facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use a terminal or device that is properly supported.

Module:
DFHEDFP, DFHEDFBR

AED2

Explanation

The program EDF has terminated a task and placed this abend code in the terminated task's TCA. This

occurs because execution of EDF is about to be abnormally terminated. A probable reason for EDF being terminated is that a line, control unit, or a terminal has been put out of service.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use a terminal that is supported as a display terminal by EDF. A CICS transaction dump of the task terminated with this abend code is available for review.

Module:
DFHEDFX

AED3

Explanation

The program EDF has terminated a task and placed this abend code in the terminated task's TCA. The termination occurs because execution of EDF is about to be abnormally terminated.

One possible cause of an abend in EDF is incorrect data being sent to the terminal by the user task.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

A CICS transaction dump of the terminated task and also a similar dump for EDF, when its termination was abnormally terminated, are available for review.

Module:
DFHEDFX

AED4

Explanation

An internal logic error has been detected in EDF module DFHEDFP.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

This indicates a CICS logic error. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEDFP

AED5

Explanation

An internal logic error was been detected in EDF. Insufficient dynamic storage was pre-allocated.

System action

EDF is terminated abnormally with dumps having dump codes CXSP, RMIN, PAGE, LDIN. The user task continues.

User response

The problem may be avoided by less complex user interactions with EDF. If the problem persists, you may need further assistance. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEDFD

AED6

Explanation

An internal logic error was detected in EDF.

System action

EDF is terminated abnormally with dumps having dump codes CXSP, RMIN, PAGE, LDIN. The user task continues.

User response

The problem may be avoided by less complex user interactions with EDF. If the problem persists, you may need further assistance. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEDFU

AED7

Explanation

The installed definition of the transaction CEDF has a TWA size which is too small.

System action

CICS abnormally terminates the transaction with a CICS transaction dump.

User response

If you have an updated copy of the CEDF transaction installed, ensure that you have a TWA size at least as big as the one defined by the IBM supplied definition. If you do not have an updated CEDF you may need further assistance to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEDFP

AED8

Explanation

A terminal control error has occurred in DFHEDFX.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEDFX

AED9

Explanation

A temporary storage error has occurred in EDF. This could be caused by an input/output error on temporary storage or because temporary storage data is full.

System action

EDF is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason for the temporary storage request failure. Ensure that the definition of the temporary storage data set is correct.

See the Troubleshooting and support for further guidance in dealing with temporary storage problems.

Module:

DFHEDFD

AEDA

Explanation

The CEDF transaction has been started with an invalid start code. This could be the result of attempting to start the execution diagnostic facility (EDF) with EXEC CICS START(CEDF).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why the start has failed.

Module:
DFHEDFX

AEDB

Explanation

DFHEDFP has been passed an invalid EDFXA. This is an internal CICS error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEDFX

AEDC

Explanation

The program EDF has terminated because a GETMAIN request to the storage manager failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why the request has failed.

Module:
DFHEDFX

AEDD

Explanation

CICS has attempted to attach the EDF task to display the user request but the attach has failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why the attach has failed.

Module:
DFHEDFX

AEDE

Explanation

CICS has suspended the user task to allow the EDF task to complete but an error has occurred while performing the suspend.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why the suspend has failed.

Module:
DFHEDFX

AEDF

Explanation

CICS has suspended the user task to allow the EDF task to complete. The user task has been purged while suspended, before control was returned from EDF.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The task was probably purged by the main terminal operator.

Investigate the reason why the task was purged. This may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

Module:
DFHEDFX

AEDG

Explanation

CICS has suspended the user task to allow the EDF task to complete. The user task has gone away while suspended, before control was returned from EDF.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine the reason why the task finished before being resumed.

Module:
DFHEDFX

AEDH

Explanation

An error occurred when CICS called the Program Manager in order to discover details of the user program that has invoked EDF.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why the call has failed.

Module:
DFHEDFX

AEE0

Explanation

An application that is executing in AMODE(64) called CICS using a stub program that does not support AMODE(64).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that the application program calls the correct stub program in the correct AMODE.

The application must either call the AMODE(64) version of the stub program or switch AMODE before calling CICS with the stub program that it is currently using.

For an application to call the AMODE(64) version of the stub program, the SYSSTATE macro with the option AMODE64=YES must be invoked before any CICS-supplied macros are invoked.

Module:
DFHCPI,DFHEIP, DFHEIPA, DFHERM

AEE1

Explanation

The application program called an AMODE(64) command stub, but was not executing in AMODE(64).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that the application program is in the correct AMODE and is calling the correct stub program.

The application must either call the non-AMODE(64) version of the stub program, or switch to AMODE(64) before calling CICS with the current stub program.

Module:
DFHEIG, DFHEIGA

AEE2

Explanation

The initial AMODE(64) command processor module, DFHEIG, detected an application program error. An exception trace is produced immediately before the abend to identify the error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the exception trace to identify and correct the error.

Module:
DFHEIG

AEE3

Explanation

An AMODE(64) assembler application used DFHEIRET to return, but the dynamic storage area (DSA) that is being released by the CICS epilog code is not at the front of the chain. The assembler DSAs are obtained by the DFHEIENT macro and CICS prolog code, and are chained together, with each one added to the front of the chain.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that all assembler application programs that are directly called and use DFHEIENT use either DFHEIRET or the EXEC CICS RETURN command to return to their caller.

Module:
DFHEIGA

AEI0

Explanation

PGMIDERR condition not handled.

This is one of a number of abends issued by the EXEC interface program. Because of their similar characteristics these abends are described as a group.

See the description of abend AEIA for further details.

AEI9

Explanation

MAPFAIL condition not handled.

This is one of a number of abends issued by the EXEC interface program. Because of their similar characteristics these abends are described as a group.

See the description of abend AEIA for further details.

System action:

User response:

Module:
DFHEIP

AEIA

Explanation

The EXEC interface program issues an abend when an exceptional condition has occurred but the command does not have the RESP option (or NOHANDLE option), or the application program has not executed an EXEC CICS HANDLE CONDITION command for that condition. This will cause DFHEIP to take the system action for the condition in question. In most cases, the system action will be to abend the transaction.

Because of their similar characteristics, the above-named abend codes for the EXEC interface program are described as a group. The codes and their corresponding exceptional conditions are as follows:

Code	Condition
AEIA	ERROR
AEID	EOF
AEIE	EODS
AEIG	INBFMH
AIEH	ENDINPT
AEII	NONVAL

Code	Condition	Code	Condition
AEIJ	NOSTART	AEX4	UOWNOTFOUND

AEZV	CHANNELERR
AEZW	CCSIDERR
AEZX	TIMEDOUT
AEZY	CODEPAGEERR
AEZZ	INCOMPLETE
AEZ1	APPNOTFOUND
AEZ2	BUSY

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Change the application program either to prevent the condition recurring, to check it by using the RESP option, or to handle the condition when it does occur (by using the EXEC CICS HANDLE CONDITION command). If necessary, use the contents of the EIBRESP2 field or the EIBRCODE in the EIB to assist in determining the cause of the exceptional condition.

Problem determination

The function code of the command that produced the exceptional response and the response code can be found in the EXEC interface block (EIB). The EIB is part of a larger control block, used by DFHEIP, known as the EXEC interface storage block (EIS). The EIS is addressed by the TCAEISA, which is the system part of the TCA + X'90' The EIB is pointed to from the EIS + X'8'.

The function code may be located at offset X'1B' in the EIB while the response codes may be one of the following at the given offsets:

EIBRCODE

X'1D'

EIBRESP

X'4C'

EIBRESP2

X'50'

The CICS Application development reference gives translations of the encoded functions and their responses.

Analysis: Because these abend codes are directly related to exceptional conditions that can be specified in HANDLE CONDITION commands, the application programmer should decide whether the condition is one that should be handled by the application (for example ENDFILE), or one that requires modifications to the application or CICS tables. :i1.DFHEIP abend codes

Module:
DFHEIP

AEID

Explanation

EOF condition not handled.

This is one of a number of abends issued by the EXEC interface program. Because of their similar characteristics these abends are described as a group.

DFHEIP

AELA

Explanation

The executing function has been purged before control could be returned.

System action

The transaction is marked to be abnormally terminated with abend code AELA.

User response

Investigate the reason the task was purged. It was purged either by the main terminal operator, or as a result of a deadlock timeout.

If the task was purged by the main terminal operator, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased then the number of tasks in the system should be reduced to avoid short-on-storage situations. Another possibility would be to increase the value of the DTIMOUT option for the transaction.

Module:
DFHETL

AELB

Explanation

The executing function has been purged before control could be returned.

System action

The transaction is marked to be abnormally terminated with abend code AELB.

User response

Investigate the reason the task was purged. It was purged either by the main terminal operator, or as a result of a deadlock timeout.

If the task was purged by the main terminal operator, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased then the number of tasks in the system should be reduced to avoid short-on-storage situations. Another possibility would be to increase the value of the DTIMOUT option for the transaction.

Module:
DFHEGL

AEMA

Explanation

An error (INVALID or DISASTER response) has occurred on a call to the application (AP) domain when a request for set user exit active could not be serviced.

System action

The task is abnormally terminated. The domain that detected the original error issues a console message and might provide an exception trace, and depending on the options specified in the dump table, a system dump.

User response

See the associated console message for further guidance.

Module:
DFHUEM

AEMB

Explanation

An error (INVALID or DISASTER response) has occurred on a call to the loader (LD) domain. The domain that detected the original error will have provided an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump (depending on the options in the dump table).

User response

See the related message from the domain that detected the original error.

Module:

DFHUEM

AEMP

Explanation

The task was purged before a set active request to the application (AP) domain was able to complete successfully. The domain that first detected the purged condition may provide an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHUEM

AEMQ

Explanation

The task was purged before an IDENTIFY_PROGRAM request to the loader (LD) domain was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump (depending on the options in the dump table).

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out

after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHUEM

AEPD

Explanation

An unexpected error occurred while dispatching events.

System action

An exception trace entry is written. The EP dispatcher task is abnormally terminated with a CICS transaction dump.

User response

Inspect the CICS trace and message log to determine the cause of the failure.

Module:
DFHEPDS

AEPM

Explanation

An attempt was made to attach a CICS EP dispatcher task, but the transaction was not attached internally by CICS.

System action

An exception trace entry is written. The EP dispatcher task is abnormally terminated.

User response

Investigate why the attempt was made to run a CICS supplied EP dispatcher task as a user transaction.

Module:
DFHEPDS, DFHEPSY

AEPO

Explanation

An unexpected error occurred in the EP dispatcher event queue server task.

System action

An exception trace entry is written. The EP dispatcher task is abnormally terminated with a CICS transaction dump.

User response

Inspect the CICS trace and message log to determine the cause of the failure.

Module:
DFHEPSY

AETA

Explanation

A CICS transaction has issued a non-CICS command via an application "stub" (an expansion of a DFHRMCAL macro). Program DFHERM has determined that the exit has been disabled since the previous DFHRMCAL request was issued from the transaction.

System action

The task is abnormally terminated with a transaction dump

User response

Notify your system programmer.

Module:
DFHERM

AETC

Explanation

A CICS transaction has issued a non-CICS command via an application "stub" (an expansion of a DFHRMCAL macro). However, the task-related user exit (TRUE) is not known to program manager.

System action

The task is abnormally terminated with a transaction dump

User response

Ensure that the TRUE as identified to the DFHRMCAL macro has been correctly defined to CICS.

Module:

DFHERM

AETF

Explanation

The task was purged before a request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHERM

AETG

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHERM

AETH

Explanation

The task was purged before a request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHERM

AETI

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHERM

AETJ

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an ADD_LINK call to the recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHERM provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHERM

AETK

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an SET_LINK call to the recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHERM provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHERM

AETL

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an SET_UOW call to the recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHERM provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHERM

AETM

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR, or PURGED) has occurred on an INQUIRE_TRANSACTION call to the transaction manager (XM) domain. For errors other than EXCEPTION, the XM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHRMSY provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRMSY

AETN

Explanation

An EXCEPTION response with an unexpected reason occurred on an INITITIATE_RECOVERY call to recovery manager (RM) domain. DFHRMSY provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRMSY

AETO

Explanation

An error (DISASTER, INVALID, KERNERROR, or PURGED) has occurred on an INITIATE_RECOVERY call to the recovery manager (RM) domain. The RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

DFHRMSY also provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRMSY

AETP

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR, or PURGED) has occurred on an TERMINATE_RECOVERY call to recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHRMSY provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRMSY

AETQ

Explanation

An EXCEPTION response with an unexpected reason occurred on an INQUIRE_UOW call to the recovery manager (RM) domain. DFHRMSY provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRMSY

AETR

Explanation

An error (DISASTER, INVALID, KERNERROR, or
PURGED) has occurred on an INQUIRE_UOW call to
the recovery manager (RM) domain. The RM domain
provides an exception trace, a console message, and
possibly a system dump (depending on the options in
the dump table).

DFHRMSY also provides an exception trace, console
message DFHAP0002, and possibly a system dump
(depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS
transaction dump.

User response

If you need further assistance from IBM to resolve this
problem, see Working with IBM to solve your problem
for guidance on how to proceed.

Module:
DFHRMSY

AETS

Explanation

An error (EXCEPTION, DISASTER, INVALID,
KERNERROR, or PURGED) has occurred on an
INQUIRE_STARTUP call to recovery manager (RM)
domain. For errors other than EXCEPTION, the
RM domain provides an exception trace, a console
message, and possibly a system dump (depending on
the options in the dump table).

For all errors, DFHRMSY provides an exception trace,
console message DFHAP0002, and possibly a system
dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS
transaction dump.

User response

If you need further assistance from IBM to resolve this
problem, see Working with IBM to solve your problem
for guidance on how to proceed.

System action:

User response:

Module:
DFHEIP

AEXU

Explanation

During execution of an EXEC CICS command, a NOTPOSS condition has been raised on encountering an invalid parameter. This is probably caused by a previous storage overlay.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Refer to abend AEIA for an explanation of how to determine the function code of the CICS command that caused the abend.

It is not possible to set an EXEC CICS HANDLE CONDITION for NOTPOSS.

The system programmer should investigate the cause of the storage overlay.

Module:

System action:

User response:

Module:
DFHEIP

AEXY

Explanation

The executing transaction has been purged before control could be returned.

This can arise when the transaction is purged while

- A CICS command was being processed
- The transaction was waiting to be dispatched

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Contact your system programmer to determine why the transaction has been purged.

For module list, see Diagnostics reference.

Module:
DFHACP, DFHAPRR, DFHAPRX, DFHBEP, DFHBREX, DFHBRIC, DFHBRMS, DFHBRSP, DFHBRTC, DFHBSTS, DFHBSTZO, DFHD2CC, DFHD2EX1, DFHD2EX2, DFHD2STR, DFHEDCP, DFHEDFP, DFHEDI, DFHEEI, DFHEGL, DFHEIBAM, DFHEICRE, DFHEIIC, DFHEIG, DFHEIP, DFHEIPA, DFHEIPI, DFHEIPRT, DFHEIPSE, DFHEIPSH, DFHEIQAS, DFHEIQBA, DFHEIQBR, DFHEIQCF, DFHEIQCS, DFHEIQDE, DFHEIQDI, DFHEIQDN, DFHEIQDS, DFHEIQDU, DFHEIQD2, DFHEIQEJ, DFHEIQIR, DFHEIQML, DFHEIQMQ, DFHEIQMS, DFHEIQMT, DFHEIQPF, DFHEIQPI, DFHEIQPN, DFHEIQRL, DFHEIQRQ, DFHEIQSA, DFHEIQSC, DFHEIQSJ, DFHEIQSK, DFHEIQSL, DFHEIQSM, DFHEIQSP, DFHEIQSQ, DFHEIQST, DFHEIQSX, DFHEIQSY, DFHEIQTM, DFHEIQTR, DFHEIQTS, DFHEIQUE, DFHEIQVT, DFHEIQWB, DFHEIQWR, DFHEIQW2, DFHEIUOW, DFHEIWB, DFHEKC, DFHEMS, DFHEOP, DFHEPC, DFHEPS, DFHERM, DFHESC, DFHESE, DFHESN, DFHETC, DFHETL, DFHETRX, DFHTACP, DFHTFP, DFHTIEM, DFHUEM, DFHWBTC, DFHXMBR, DFHXTP, DFHZATS, DFHZNCA, DFHZNCE, DFHZTSP, DFHZXQO, DFHZXST

AEXZ

Explanation

A command has failed due to a serious failure in a CICS component (resource manager).

System action

The transaction is abnormally terminated with abend code AEXZ. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

For module list, see Diagnostics reference.

Module:

AEY3

Explanation

PARTNFAIL condition not handled.

This is one of a number of abends issued by the EXEC interface program. Because of their similar characteristics these abends are described as a group.

See the description of abend AEIA for further details.

System action:

User response:

Module:
DFHEIP

AEY6

Explanation

Internal logic error in DFHUEM. This arises when using EXITALL to DISABLE an exit program from all exit points for which it has been enabled. The entire user exit table has been scanned and all associations of the program have been found. But the activation count for the program in its exit program block indicates there should be more associations (for example, the activation count has not been reduced to zero). The

user exit table and associated control blocks (EPBs and EPLs) are out of step and have probably been corrupted.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHUEM

AEY7

Explanation

NOTAUTH condition not handled.

This is one of a number of abends issued by the EXEC interface program. Because of their similar characteristics these abends are described as a group.

See the description of abend AEIA for further details.

System action:

User response:

Module:
DFHEIP

AEY8

Explanation

No DSA was found on the chain while trying to free dynamic storage for an assembler language program using an EXEC CICS command.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Ensure that the DFHEIENT, DFHEISTG, and DFHEIEND macro invocations are correctly positioned and retry. If the error persists, you will need further assistance. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEIP

AEY9

Explanation

One of the following:

- An EXEC CICS command has been issued that is not supported by the EXEC interface program DFHEIP.
- A transaction has issued an EXEC CICS command which is supported in principle by the EXEC interface program DFHEIP, but for which the prerequisite function has not been included in the current CICS start-up.
- A non-CICS command has been issued via an application stub (expansion of a DFHRMCAL macro), and the program DFHERM has detected that the necessary non-CICS support is not available.
- An attempt has been made to use remote resources, but the local SYSID has been specified in an EXEC CICS command, or vice versa.
- An attempt has been made to use remote resources, but ISC is not supported.
- An EXEC CICS command contains an invalid AID or CONDITION identifier. This indicates that the EXEC CICS command has become corrupted.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check that the sysid specified and the resource names were correct. If not, notify the system programmer. Either the command (or an application stub) has become corrupted, or the unavailable function needs to be generated (CICS command), ENABLEd (non-CICS command), or exceptionally the non-CICS support has suffered damage and is attempting to withdraw itself from the CICS system.

Module:
DFHEIG, DFHEIP, DFHEEI

AEYA

Explanation

INVERRTERM condition not handled.

IGREQID condition not handled.

This is one of a number of abends issued by the EXEC interface program. Because of their similar characteristics these abends are described as a group.

See the description of abend AEIA for further details.

System action:

User response:

Module:
DFHEIP

AEYD

Explanation

A transaction has requested that CICS access a storage area that the transaction itself could not access. This occurred when an invalid storage area was passed to CICS as an output parameter on an EXEC CICS command.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Examine the trace to find the exception trace entry created by DFHEISR and then identify the parameter in error. If the abend is handled, EXEC CICS ASSIGN ASRASTG, ASRAKEY, and ASRASPC give additional information about the abend. At the time of the abend, register 2 points to the storage area at fault.

Change one or more of the following:

- Correct the code in error in the transaction issuing the EXEC CICS command in order to supply a valid storage area.
- If storage protection is active, change the EXECKEY on the CEDA definition for the program that issued the EXEC CICS command from USER to CICS.
- If storage protection is active, change the TASKDATAKEY attributes on the transaction definition from CICS to USER.
- If transaction isolation is active, change the ISOLATE attribute on the transaction definition from YES to NO.

Module:
DFHSRP

AEYE

Explanation

INVLDC condition not handled.

This is one of a number of abends issued by the EXEC interface program. Because of their similar characteristics these abends are described as a group.

See the description of abend AEIA for further details.

System action:

User response:

Module:
DFHEIP

AEYF

Explanation

A transaction has requested that CICS access a storage area that the transaction itself could not access. This occurred when an invalid storage area was passed to CICS on a PUT CONTAINER, PUT 64 CONTAINER, GET CONTAINER or GET64 CONTAINER command. The error can occur when:

- Either the FROM or INTO address is specified incorrectly.
- The FLENGTH value specifies a value large enough to cause the area to include storage which the transaction can not access.

A common cause of this error is specifying the address of a halfword area in the FLENGTH parameter, which expects a fullword area. This error can arise when a program which previously used commareas, which have halfword lengths, has been modified to use containers which have fullword lengths.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Examine the trace to find the entry trace entry created by DFHEISR and then identify the parameter in error. If the abend is handled, EXEC CICS ASSIGN ASRASTG, ASRAKEY, and ASRASPC give additional information about the abend. At the time of the abend, register 2 points to the storage area at fault.

You will most likely need to do the following:

- Correct the program in error that issued the EXEC CICS PUT CONTAINER or EXEC CICS GET CONTAINER command. Ensure that it supplies the address of a valid storage area and that it supplies an FLENGTH such that no part of the storage area is inaccessible to the transaction. Ensure that FLENGTH refers to a fullword length.

You may also need to consider changing one or more of the following:

- If storage protection is active, change the EXECKEY on the CEDA definition for the program that issued the EXEC CICS command from USER to CICS.

- If storage protection is active, change the TASKDATAKEY attributes on the transaction definition from CICS to USER.

- If transaction isolation is active, change the ISOLATE attribute on the transaction definition from YES to NO.

System action:

User response:

Module:
DFHEIP

AEZA

Explanation

A transaction has been defined with a TASKDATALOC(ANY), but the programs within the transaction are running amode 24. The exec interface program is therefore is unable to access the TCA for the application. Furthermore, any reference to the EIB would cause the transaction to fail with an OC4 protection exception.

System action

The transaction is abnormally terminated.

User response

Either redefine and install a new definition for the transaction with TASKDATALOC(BELOW), or relink the programs as amode 31.

Module:
DFHEIP

AEZB

Explanation

A transaction has been defined with a TASKDATALOC(ANY), and the application is attempting to call a task related user exit. However the task related user exit has been linkedited AMODE 24 and enabled with the LINKEDITMODE option, thereby directing CICS to invoke it in AMODE 24. An AMODE 24 task related user exit cannot run when the calling application is running with TASKDATALOC(ANY), as

this would cause a protection exception, or a storage overwrite.

System action

The transaction is abnormally terminated.

User response

Either redefine and install a new definition for the transaction with TASKDATALOC(BELOW), or modify the task related user exit so that it is invoked in AMODE 31.

Module:
DFHERM

AEZC

Explanation

A transaction has been defined with a TASKDATALOC(ANY), but a program within the transaction is defined to run AMODE 24. CICS cannot invoke the AMODE 24 program when the transaction is running with TASKDATALOC(ANY), as this would cause a protection exception, or a storage overwrite.

System action

The transaction is abnormally terminated.

User response

Either redefine and install a new definition for the transaction with TASKDATALOC(BELOW), or relink the program as AMODE 31.

Module:
DFHAPLI

AEZD

Explanation

An attempt has been made to run a program defined as EXECKEY(USER) as part of a transaction defined as TASKDATAKEY(CICS). These attributes are incompatible and the transaction is abended. This incompatibility could occur as a result of the program definition being autoinstalled. See the Developing system programs for CICS and the Defining resources for more information about program autoinstall.

System action

The transaction is abnormally terminated. Message DFHAP1226 will show the incompatible program and transaction.

User response

Redefine and install a new definition either for the transaction with TASKDATAKEY(USER), or for the program with EXECKEY(CICS).

If this abend occurs when running a CICS transaction, a possible cause is that you are not using the CICS-supplied definition for the program. If you are using your own copies of CICS-supplied program definitions, they must be defined as EXECKEY(CICS).

AFxx abend codes

AFC0

Explanation

An attempt has been made to update a file after file control restart failed.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Determine the cause of the failure in file control restart. Restart CICS.

Module:
DFHEIFC, DFHDMPCA

AFC2

Explanation

DFHFCU issued a call to DFHFCFS to open a file. A disastrous error was returned from DFHFCFS.

System action

The task is abnormally terminated with a CICS transaction dump.

At the time the disastrous error is detected, CICS writes a message to the console, records an exception trace entry and takes a system dump.

CICS processing continues.

User response

The system programmer should examine the trace, the system dump and any related CICS messages to identify the cause of the error.

Module:
DFHFCU

AFC7

Explanation

The CICS definition file (CSD) manager (DFHDMPCA) issued a request to DFHFCFS to enable, open or close the DFHCSD file. A "disastrous error" response was returned from DFHFCFS to DFHDMPCA.

System action

The task is abnormally terminated with a CICS transaction dump.

At the time the disastrous error is detected, CICS writes a message to the console, records an exception trace entry and takes a system dump.

CICS processing continues.

User response

The system programmer should examine the trace, the system dump and any related CICS messages to identify the cause of the error.

Module:
DFHDMPCA

AFCB

Explanation

Module DFHEIFC issued a resource level security check (RSLC) request to module DFHXSRC and received a response other than OK or EXCEPTION.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Examine the trace to find the exception trace entry created by DFHXSRC at the time of the error. Use this trace entry to determine the cause of the return code from DFHXSRC.

Module:
DFHEIFC

AFCC

Explanation

An internal logic error was detected when calling the file control request processing module DFHFCFR. Either DFHFCFR returned an INVALID response to its caller indicating an error in the caller's parameter list, or DFHFCFR passed back a return code that was not recognized by its caller.

System action

The transaction is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEIFC, DFHDMPCA

AFCE

Explanation

A GETMAIN for FFLE storage has failed.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Retry the failed transaction.

Module:
DFHEIFC

AFCF

Explanation

A deadlock has been detected between two or more tasks issuing file control requests.

System action

The task that would have entered deadlock is abended with a CICS transaction dump.

User response

Examine this transaction and other transactions in the system that update the same files to find the cause of the deadlock, then correct the error.

When transactions update several files within the same unit of work, all transactions should update these files in the same order. A transaction that abends AFCF may be retried by specifying RESTART(YES) in the transaction definition and by coding a suitable DFHREST program.

Module:
DFHEIFC, DFHDMPCA

AFCG

Explanation

A transaction has issued a sequence of file control requests that would cause the file to deadlock itself.

This response arises for different reasons depending upon the file type.

If the file is being accessed in non-RLS mode, the response is caused by the transaction making conflicting requests against the same CI. For example, if the file is being accessed using LSR, a self deadlock will arise when an attempt is made to read a record that is in the same CI as a record that is the subject of a READ UPDATE or WRITE MASSINSERT request issued by the same transaction.

If the file is accessed in RLS mode there is no CI locking, but self deadlock responses can still arise. They are caused by sequences of requests that are either logically meaningless or which cannot be performed by VSAM RLS.

With VSAM RLS the most likely causes of this abend are as follows:

- Two successive READ UPDATE requests against the same record by the same transaction without an intervening REWRITE, DELETE or UNLOCK command.

  This is an incorrect use of file control requests.

- A transaction has created a record by WRITE MASSINSERT and then, without terminating the WRITE MASSINSERT sequence by issuing an UNLOCK request, the same transaction has attempted to modify the same record by issuing a READ UPDATE or DELETE request.

  This sequence of requests fails if VSAM has not written the record out to disk. The only way to guarantee that the record has been written to disk is to issue the UNLOCK request.

- A transaction has updated or deleted a record using a browse for update sequence and then, without terminating the browse for update sequence by issuing an ENDBR request, the same transaction has attempted to modify the same record by issuing a separate READ UPDATE or DELETE or WRITE request.

  This sequence of requests fails if VSAM has not written the record out to disk. The only way to guarantee that the record has been written to disk is to issue the ENDBR request.

If the file is used to access a coupling facility data table, then self deadlock responses are caused by sequences of requests that are either logically meaningless or which cannot be performed by coupling facility data tables support.

For coupling facility data tables, the most likely cause of this abend is as follows:

- Two successive READ UPDATE requests have been issued against the same record by the

same transaction without an intervening REWRITE, DELETE or UNLOCK command.

This is an incorrect use of file control requests.

System action

The task that would have entered deadlock is abended with a CICS transaction dump.

User response

Examine the previous requests made by this transaction against this file to identify the cause of the deadlock, then correct the error. In some cases (particularly when the file is being accessed in RLS mode or is using a coupling facility data table) this abend may indicate a programming error in the program that issued the file control requests.

When the file is being accessed in RLS mode, if the programming error is a READ UPDATE with RIDFLD specified followed by a DELETE with RIDFLD specified, consider using the feature toggle com.ibm.cics.rls.delete.ridfld to allow the DELETE with RIDFLD command to succeed. This is intended as a migration aid when you are converting to RLS from local VSAM with CILOCK=NO specified in CICS. For more information, see VSAM RLS.

Module:
DFHEIFC, DFHDMPCA

AFCH

Explanation

The transaction has issued a request for a remote shared data table for which it has an active browse, but in the meantime the table has been disabled or closed by the owning CICS system, or the owning CICS system has failed.

System action

The requesting transaction abends with a transaction dump.

CICS continues normally.

User response

In the application owning region, take whatever action normally follows the issue of a FORCE request in, or the failure of, the file owning CICS system.

See the Introduction to shared data tables for further guidance.

Module:
DFHEIFC

AFCI

Explanation

The transaction issued a file request resulting in a call to the main file control program (DFHFCFR). During the processing of the request the transaction was purged. That is, the transaction was the subject of an explicit PURGE or FORCEPURGE request, was timed out, or was selected by CICS for termination in an attempt to alleviate an SOS condition.

System action

A CICS transaction dump is issued with abend code AFCI.

A "purged" response is returned from DFHFCFR to its caller. The transaction issuing the file control request will eventually issue an AFCY abend with a further transaction dump.

User response

In some instances, for example if the transaction was explicitly purged, no further action is necessary.

Otherwise examine the exception trace and the transaction dump to identify the point at which the purge occurred.

Module:
DFHFCFR

AFCJ

Explanation

DFHFCU issued a call to DFHFCFS to open a file. A purged error was returned from DFHFCFS because the task has been waiting for a resource longer than the DTIMEOUT interval specified for the CSFU transaction.

System action

The task is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

Examine the dump to determine the cause of the error. A system dump can be produced by adding the appropriate dump table entry using the CEMT SET TRDUMPCODE command.

Module:
DFHFCU

AFCK

Explanation

The transaction issued a file update request (READ UPDATE, WRITE or DELETE) against an RLS mode data set for which a DFSMSdss non-BWO backup was in progress.

System action

The transaction is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

All new file update requests are prohibited when a non-BWO backup is in progress for an RLS mode data set. This restriction is automatically lifted when the backup completes. (A non-BWO backup is any type of backup operation other than a Backup While Open backup.) When the backup has completed, retry the transaction.

Module:
DFHDMPCA, DFHEIFC

AFCL

Explanation

During the loading of a Shared Data Table by the CFTL transaction, a call to the CICS Transaction Manager has returned a response (such as DISASTER) after which normal processing could not continue.

System action

Message DFHFC0949 is issued. Loading of the data table is terminated and CFTL abends.

User response

Refer to the description of the message for further information and guidance.

Module:
DFHDTLX

AFCM

Explanation

During the loading of a data table by the CFTL transaction, an abend was detected, or a domain call returned a response (such as DISASTER) after which normal processing could not continue.

System action

A message is issued (one of DFHFC0945, DFHFC0946, or DFHFC0947). Loading of the data table is terminated and CFTL abends.

User response

If this abend is produced as a result of an abend during loading, message DFHFC0945 is issued. If it is a result of a domain call failure, depending on which domain the failure was returned by, one of the messages DFHFC0946 or DFHFC0947 is issued. Refer to the description of the message for further information and guidance.

Module:
DFHDTLX

AFCN

Explanation

The transaction issued a file request that caused file control to attempt to create a journal record but the record was too large for the journal buffer to accommodate. This indicates that a journal referenced in the file definition is using an MVS logstream, which in turn, is using a coupling facility structure which has been defined with a MAXBUFSIZE parameter less than the recommended 64000.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Redefine the coupling facility structure that the logstream is using with a MAXBUFSIZE parameter of 64000. The journal in error can be the forward recovery log or the journal used for auto-archiving. If the module that detected the error is DFHDMPCA, the error is associated with a journal referenced in the definition of the CSD (DFHCSD).

Module:
DFHDMPCA, DFHEIFC

AFCO

Explanation

An attempt was made to attach a transaction specifying DFHDTLX as the program to be given control, but the transaction was not internally attached by CICS.

DFHDTLX is for use by CICS system transaction CFTL. This loads a Shared Data Table.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why an attempt was made to attach CFTL illegally, or why a transaction definition specified DFHDTLX as the program to be given control.

Module:
DFHDTLX

AFCR

Explanation

The program issued a file control request against a file opened in RLS mode. While executing this request, CICS detected that the SMSVSAM server address space had failed.

System action

The task is abnormally terminated with a CICS transaction dump.

CICS disables all further RLS accesses and initiates error recovery.

User response

Retry the transaction when the server is available again

If the SMSVSAM server fails, it should normally automatically restart itself as quickly as possible. If this does not happen, consult the VSAM documentation which provides further guidance on debugging problems in the SMSVSAM server.

Module:
DFHEIFC, DFHDMPCA

AFCS

Explanation

The program issued a file control request against a file opened in RLS mode. VSAM was unable to perform this request because the SMSVSAM server address space was inactive.

However, if an offsite restart is being performed (that is, OFFSITE=YES was specified as a system initialization override), this transaction abend is also issued even if the SMSVSAM server address space is active. This is because RLS access is not allowed during an offsite restart for any RLS file control requests other than those issued by transactions which have been attached by CICS to perform RLS recovery work.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Retry the transaction when the server is available again.

If the SMSVSAM server fails, it should normally automatically restart itself as quickly as possible. If this does not happen, consult the VSAM documentation which provides further guidance on debugging problems in the SMSVSAM server.

If an offsite restart is being performed, retry the transaction after RLS recovery has been completed when RLS access by user transactions is allowed again.

Module:
DFHEIFC, DFHDMPCA

AFCT

Explanation

The program has made a file control request against a file opened in RLS mode. The SMSVSAM server has been recycled since an earlier RLS request from the same unit of work. The same unit of work cannot issue requests against two different instances of the SMSVSAM server. Note that this abend will occur even if the earlier request was not successful.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Resubmit the transaction.

Module:
DFHEIFC, DFHDMPCA

AFCU

Explanation

A program made a file control request against a file that is being accessed in VSAM RLS mode. The underlying data set is in lost locks state. File control requests are not allowed against a data set that is in lost locks state.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Recovery from lost locks is normally automatic. See the Administering recovery and restart for a full explanation of lost locks recovery. You will not be able to issue any file control requests against this data set until all systems that owned locks at the time of the lock structure failure have completed their lost locks recovery.

See the Administering recovery and restart for guidance on how to determine which CICS systems still have lost locks recovery pending, for information on commands that allow you to find the work that these systems have outstanding, and on commands that allow you to force a system to immediately complete lost locks recovery. The commands that force immediate completion of lost locks recovery should only be used as a last resort as they may cause loss of data integrity. It is better to allow the automatic recovery procedures to complete normally.

Module:
DFHEIFC, DFHDMPCA

AFCV

Explanation

A request made against a file opened in RLS mode was unable to acquire a record lock. It waited for the lock, but the wait time exceeded the maximum wait time applicable to that request.

System action

The task is abnormally terminated with a CICS transaction dump.

CICS prints message DFHFC0164 and message(s) DFHFC0165 or DFHFC0175 which identify the transaction(s) or Transactional VSAM unit(s) of recovery that were immediately in front of this transaction in the queue for the lock. Normally these transaction(s) or Transactional VSAM unit(s) of recovery are the owners of the lock, although this is not the case if a chain of requests for the record has built up.

User response

Retry the transaction.

If the problem recurs, see messages DFHFC0164 and DFHFC0165 or DFHFC0175 to determine the transaction or Transactional VSAM unit of recovery

that is holding the lock. In most cases the problem lies with the lock owner rather than the transaction that has failed.

Examples of reasons why CICS transactions may cause a timeout:

- The transaction that holds the lock has a design error. For example:

  – A conversational transaction updates a recoverable record and then issues a terminal control read. It does not issue syncpoint (and therefore does not release the lock) until the end user has responded to the terminal control read. It may therefore hold the lock for a considerable period.

  – A transaction updates very many records in recoverable files before issuing syncpoint. You are recommended to keep the number of updates made within a unit of work small and to issue frequent syncpoints to ensure that locks are released regularly.

- The system in which the lock holder is running is experiencing severe performance degradation. Investigate the reason for the performance degradation.

- There is a deadlock between RLS and another resource manager. For example one transaction may be holding an RLS lock and waiting for a lock on a transient data queue. The transaction that times out may hold the lock on the transient data queue and be waiting for the RLS lock. RLS can detect deadlocks only when all the locks involved in the deadlock are RLS locks. A deadlock such as this can appear to RLS to be a long wait for a lock and is reported as a time out. Examine the design of the transactions to determine whether resource manager deadlocks can occur.

- It may be possible for RLS deadlocks to be reported as RLS timeouts if VSAM does not perform deadlock detection until after the time out value for the request occurred. For example, assume that DEADLOCK_DETECTION is specified as (15,4) in SYS1.PARMLIB, member IGDSMSxx. This means that VSAM does not attempt to detect cross-MVS deadlocks until 4 periods of 15 (that is, 60) seconds have elapsed. If DTIMOUT was not active for the transaction and the SIT specified FTIMEOUT=30, the RLS request times out after 30 seconds, before VSAM has attempted to detect cross-MVS deadlocks. Adjust FTIMEOUT, DTIMOUT, and DEADLOCK_DETECTION to avoid such effects.

DFHFC0175 messages identify Transactional VSAM units of recovery owning an RLS lock. If a Transactional VSAM application is the lock owner it should be investigated to determine why it is holding the lock.

Some of the above considerations will be similar for Transactional VSAM applications.

Module:
DFHEIFC, DFHDMPCA

AFCW

Explanation

The program issued a file control request against a file opened in RLS mode. VSAM RLS detected that this request would cause a deadlock. This transaction is abended in order to break the deadlock chain.

System action

The task is abnormally terminated with a CICS transaction dump.

CICS prints message DFHFC0166 and message(s) DFHFC0167 or DFHFC0177 which identify the other transactions or Transactional VSAM units of recovery in the deadlock chain.

User response

Retry the transaction.

Examine the logic of all the programs involved in the deadlock chain to determine whether they could be improved to avoid possible sources of deadlock. See the Developing CICS Applications for guidance on how to write programs that avoid deadlocks.

Module:
DFHEIFC, DFHDMPCA

AFCY

Explanation

The transaction issued a file request resulting in a call to the main file control program (DFHFCFR). During the processing of the request the transaction was purged (that is, was the subject of an explicit PURGE or FORCEPURGE request, was timed out, or was selected by CICS for termination in an attempt to alleviate an SOS condition). A "purged" response was returned from DFHFCFR to its caller.

System action

The task is abnormally terminated with a CICS transaction dump.

Exception trace entries are made between the point at which the purge is detected and the issuing of the abend.

If a task times out while waiting for a lock on a record in a coupling facility data table, CICS will issue

message DFHFC7130 identifying the key of the locked record and the system and unit of work that owns the lock.

A transaction dump with abend code AFCI is taken when the purged response is detected by DFHFCFR.

User response

In some instances, for example if the transaction was explicitly purged, no further action is necessary.

If using a coupling facility data table, look for any relevant DFHFC7130 messages.

Otherwise examine the exception trace and the AFCI/AFCY transaction dumps to identify the point at which the purge occurred.

Module:
DFHDMPCA, DFHEIFC

AFCZ

Explanation

The transaction issued a file request resulting in a call to the main file control program (DFHFCFR). A "disastrous error" response was returned from DFHFCFR to its caller.

System action

At the time the error is detected, CICS writes a message to the console, records an exception trace entry, and takes a system dump. The trace and dump identify the point of error.

Subsequently, the task is abnormally terminated with a CICS transaction dump.

User response

The system programmer should use the trace and dumps to determine what the error is, and why it has occurred.

Module:
DFHDMPCA, DFHEIFC

AFDA

Explanation

An attempt was made to attach a transaction specifying DFHFCQT as the program to be given control, but the transaction was not internally attached by CICS.

DFHFCQT is for use by CICS system transactions CFQS and CFQR. These provide support for VSAM RLS data set quiesce and unquiesce operations, DFSMSdss

BWO and non-BWO backups, and certain other data set related operations.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why an attempt was made to illegally attach CFQS or CFQR, or why a transaction definition specified DFHFCQT as the program to be given control.

Module:
DFHFCQT

___

AFDB

Explanation

An attempt was made by CICS to internally attach a transaction specifying DFHFCQT as the program to be given control, and the transaction id was other than CFQS or CFQR.

DFHFCQT is for use by CICS system transactions CFQS and CFQR. These provide support for VSAM RLS data set quiesce and unquiesce operations, DFSMSdss BWO and non-BWO backups, and certain other data set related operations.

System action

The transaction is abnormally terminated with a CICS transaction dump. CICS processing continues but it is probable that VSAM RLS data set quiesce support has been lost.

User response

Restart CICS. If the problem reoccurs, a more severe error is indicated. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHFCQT

___

AFDC

Explanation

CICS system transaction CFQS has failed due to a serious error. An attempt will be made to reattach the transaction. CICS messages should indicate the cause of the error.

CFQS provides support for the initiation of VSAM RLS data set quiesce and unquiesce operations.

System action

CFQS is abnormally terminated with a CICS transaction dump. CFQS is reattached and CICS processing continues.

User response

Check Transient Data Queue CSFL for message DFHFC6028, indicating that the reattach of CFQS was successful. If the reattach fails, VSAM RLS data set quiesce initiation support is lost. If this support is required, CICS must be restarted.

If it is not possible to restore VSAM RLS quiesce initiation support, a more severe error is indicated. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHFCQT

___

AFDD

Explanation

CICS system transaction CFQR has failed due to a serious error. An attempt will be made to reattach the transaction. CICS messages should indicate the cause of the error.

CFQR provides support for VSAM RLS data set quiesce and unquiesce operations, DFSMSdss BWO and non-BWO backups, and certain other data set related operations.

System action

CFQR is abnormally terminated with a CICS transaction dump. CFQR is reattached and CICS processing continues.

User response

Check Transient Data Queue CSFL for message DFHFC6028, indicating that the reattach of CFQR was successful. If the reattach fails, VSAM RLS data set quiesce support is lost. If this happens, CICS must be restarted.

If it is not possible to restore VSAM RLS quiesce support, a more severe error is indicated. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHFCQT

___

AFDE

Explanation

An attempt was made to attach a transaction specifying DFHFCRD as the program to be given control, but the transaction was not internally attached by CICS.

DFHFCRD is for use by CICS system transaction CSFR. This provides support for error recovery after a failure of the SMSVSAM server.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why an attempt was made to illegally attach CSFR, or why a transaction definition specified DFHFCRD as the program to be given control.

Module:
DFHFCRD

AFDF

Explanation

An attempt was made to attach a transaction specifying DFHFCOR as the program to be given control, but the transaction was not internally attached by CICS.

DFHFCOR is for use by CICS system transaction CFOR. This provides part of the RLS offsite recovery support.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why an attempt was made to illegally attach CFOR, or why a transaction definition specified DFHFCOR as the program to be given control.

Module:
DFHFCOR

AFDG

Explanation

CICS system transaction CFOR has failed due to a serious error. CICS messages should indicate the cause of the error.

DFHFCOR provides part of the RLS offsite recovery support.

This abend indicates that this CICS system has completed its RLS offsite recovery, but an error occurred either in attempting to issue message DFHFC0575D which reports this fact, or in attempting to process the reply to message DFHFC0575D.

System action

CFOR is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

If you are using an automated procedure to check for and reply to message DFHFC0575D, then you should shut this CICS down and restart it specifying OFFSITE=YES again. If you are using manual procedures to check for completion of all RLS offsite recovery and to reply to message DFHFC0575D then you can "tick" this CICS off the list of systems which have completed their recovery, but you must ensure that it is not restarted with OFFSITE=NO until all other CICS systems have completed their RLS offsite recovery. Also note that until the system is restarted, RLS access will not be allowed by this system.

Module:
DFHFCOR

AFDH

Explanation

VSAM has returned a response indicating that the RLS lock structure in the coupling facility is full. VSAM RLS is unable to create any new locks.

This abend code is usually issued from various CICS systems residing within the same sysplex.

System action

The transaction which issued the VSAM RLS request is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

Allocate a larger VSAM RLS lock structure and rebuild the RLS structure into the new larger structure. See MVS Setting Up a Sysplex, (GC28-1779) and z/OS DFSMSdfp Storage Administration, (SC26-4920) for further details on creating RLS lock structures and rebuilding lock structures.

Module:
DFHEIFC, DFHDMPCA

AFDI

Explanation

A call to directory domain failed when trying to locate an fct entry.

System action

The task is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

Examine the dump to determine the cause of the error. A system dump can be produced by adding the appropriate dump table entry using the CEMT SET TRDUMPCODE command.

Module:
DFHFCU

AFDJ

Explanation

A call to lock manager failed when trying to locate an fct entry.

System action

The task is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

Examine the dump to determine the cause of the error. A system dump can be produced by adding the appropriate dump table entry using the CEMT SET TRDUMPCODE command.

Module:
DFHFCU

AFDK

Explanation

A file control update request was made against an NSR file whilst transaction isolation was active for the task. Using NSR files with transaction isolation active is not supported. The TRANISO SIT parm is YES and the transaction definition has ISOLATE set to YES.

System action

The task is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

If transaction isolation is required, consider converting the file to use LSR pools or RLS. However, if transaction isolation is not required, another option is to change the transaction definition to specify ISOLATE(NO) which will cause that individual transaction to be run without transaction isolation. Examine the dump to determine the cause of the error. A system dump can be produced by adding the appropriate dump table entry using the CEMT SET TRDUMPCODE command.

Module:
DFHEIFC, DFHDMPCA

AFDL

Explanation

A file control update request was made but the task has already updated a file that uses a different replication log stream.

System action

The task is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

Using multiple replication log streams for one transaction causes data integrity issues on the mirror site. This abend affects only transactions that update two different recoverable files in the same unit of work. Review your replication setup to ensure that data sets cannot be updated by different subscriptions. If the replication setup meets this requirement, update the LOGSTREAMID on the data set definition so that it uses the correct log stream. A system dump can be produced by adding the appropriate dump table entry using the CEMT SET TRDUMPCODE command.

Module:
DFHEIFC

AFDN

Explanation

A program has issued a file control request with an unrecognised request type.

System action

The transaction is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEIFC

___

AFDO

Explanation

An attempt was made to attach a transaction specifying DFHFCRN as the program to be given control, but the transaction was not internally attached by CICS.

DFHFCRN is for use by CICS system transaction CFCR. This transaction is used to disable a file defined in a CICS bundle.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why an attempt was made to inappropriately attach CFCR, or why a transaction definition specified DFHFCRN as the program to be given control.

Module:
DFHFCRN

___

AFDP

Explanation

CICS failed to disable a file defined in a CICS bundle.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why the file cannot be disabled, fix the issue, and try to disable the bundle again.

Module:
DFHFCRN

___

AFDQ

Explanation

An attempt has been made to start transaction CFCT manually which is not supported.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why an attempt has been made to start transaction CFCT manually. This transaction is automatically attached by CICS at startup.

Module:
DFHFCLJ1

AGxx abend code

AGMA

Explanation

An attempt to initiate the good morning message transaction was made without specifying a termid for it to be displayed.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the dump to determine how the attempt to start the transaction was made. Ensure that no EXEC CICS STARTs are made for the good morning message transaction where no termid is specified.

Module:
DFHGMM

AIxx abend codes

AICA

Explanation

A task has been executing for longer than the runaway time interval (defined by the ICVR operand on the system initialization table macro, DFHSIT) without giving up control. The runaway task condition indicates a possible loop in the application.

System action

The task is terminated with an AICA transaction dump.

User response

See the Troubleshooting and support for guidance on dealing with loops.

Module:
DFHSRP

AICB

Explanation

A RETRIEVE WAIT request has been reissued in system shutdown.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

None

Module:
DFHICP

AICC

Explanation

An incorrect response was returned from a timer (TI) domain request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTAJP, DFHICP

AICD

Explanation

A incorrect response was returned from a kernel (KE) domain request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHICP

AICE

Explanation

An incorrect response was returned from a dispatcher (DS) domain request (other than AICG).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHICP

AICF

Explanation

An incorrect response was returned from a transaction manager (TM) domain request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHICP

AICG

Explanation

A PURGED response was returned from a dispatcher domain (DS) request, with a reason code of TASK_CANCEL. TASK_CANCEL was returned as the transaction had been explicitly cancelled.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Notify your system programmer to determine why the task has been purged.

Module:
DFHICP

AICH

Explanation

The task was purged before a request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHICP, DFHEIIC

AICJ

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHICP

AICK

Explanation

Module DFHEIIC has issued a resource level security check (RSLC) request to module DFHXSRC and received a response other than OK or EXCEPTION.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Examine the trace to find the exception trace entry created by DFHXSRC at the time of the error. Use this trace entry to determine the cause of the return code from DFHXSRC.

Module:
DFHEIIC

AICL

Explanation

DFHEIIC detected an invalid function code in the command level parameter list. This is caused either by a storage overwrite or a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 trace of the IC and EI components would aid problem determination. Look in the program storage section of the transaction dump and compare argument 0, the exec interface descriptor (EID), for the command being processed with the argument 0 produced by the translator for the same command. Any differences mean that an overwrite of the application program may have occurred. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEIIC

AICN

Explanation

An incorrect response has been returned from a user domain (US) request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHICP

AICO

Explanation

An unexpected EXCEPTION response was received from a call to the user (US) domain.

The call was issued during initialization of a transaction that was started without a terminal. The call was made as part of processing to associate the transaction with its intended user. The attempt to associate the intended user with the transaction has failed.

The userid for the intended user of the transaction may not be correctly defined.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Determine why the intended user of the transaction is not correctly defined.

Examine messages produced for the CICS job by the external security manager (ESM). This may require the assistance of a security administrator.

It may be necessary to examine the transaction dump to determine why the external security manager has informed CICS that the user is not correctly defined.

When the user has been correctly defined, consider rerunning the transaction.

Module:
DFHICXM

AICQ

Explanation

Module DFHDFST is executing at a terminal which is not permitted.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Determine why this transaction is executing at a terminal.

Module:
DFHDFST

AICR

Explanation

A DFHTC write request has failed for IRC. The return codes within TCATPAPR and TCTEIRET should be examined to determine the cause of failure.

System action

The CSNC transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRR

AICS

Explanation

Module DFHDFST has encountered an error during Retrieve processing.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Use level 1 trace entries to determine the cause of the failure.

Module:
DFHDFST

AICT

Explanation

Module DFHDFST has encountered an error during START processing.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Use level 1 trace entries to determine the cause of the error.

Module:
DFHDFST

AIEA

Explanation

An unexpected EXCEPTION response was received from a call to the user (US) domain.

The call was issued during initialization of a transaction that was started without a terminal. The call was made as part of processing to associate the transaction with its intended user. The attempt to associate the intended user with the transaction has failed.

The userid for the intended user of the transaction may not be correctly defined.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Determine why the intended user of the transaction is not correctly defined.

Examine messages produced for the CICS job by the external security manager (ESM). This may require the assistance of a security administrator.

It may be necessary to examine the transaction dump to determine why the external security manager has informed CICS that the user is not correctly defined.

When the user has been correctly defined, consider rerunning the transaction.

Module:
DFHIEXM

AIEB

Explanation

The transaction id (CIEP) of the ECI for TCP/IP listener task has been initiated invalidly, probably by entering the id at a terminal. This transaction must only be initiated by CICS internal processes.

System action

The transaction is abnormally terminated.

User response

Do not initiate CIEP directly.

Module:
DFHIEP

AINA

Explanation

An application program has issued an EXEC CICS LINK command to the indoubt testing tool program DFHINDT but has failed to pass a commarea containing the request to be executed. Valid requests are: ON, OFF, RESYNC COMMIT or RESYNC BACKOUT.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the application program so that it passes a commarea to DFHINDT containing a valid request for DFHINDT.

Module:
DFHINDT

AINB

Explanation

An application program has issued an EXEC CICS LINK command to the indoubt testing tool program DFHINDT passing a commarea that did not contain a valid request to be executed, Valid requests are: ON, OFF, RESYNC COMMIT or RESYNC BACKOUT

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the application program so that it passes a commarea to DFHINDT containing a valid request for DFHINDT.

Module:
DFHINDT

AINC

Explanation

The indoubt testing tool issued a EXEC CICS INQUIRE EXITPROGRAM command to inquire on the status of

the indoubt testing tool task related user exit program DFHINTRU, and the command failed with a NOTAUTH response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The indoubt testing tool can be run under transaction CIND , under a user transaction where the program EXEC CICS LINKs to DFHINDT. or under a transaction where the program EXEC CICS LINKs to DFHINDAP. If command security checking is active for the transaction (CMDSEC=YES), check that the user has read access to resource EXITPROGRAM. If resource security checking is active for the transaction (RESSEC=YES), check that the user has read access to resource DFHINTRU.

Module:
DFHINDT, DFHINDAP

AIND

Explanation

The indoubt testing tool issued a EXEC CICS INQUIRE EXITPROGRAM command to inquire on the status of the indoubt testing tool task related user exit program DFHINTRU, and the command failed with an unexpected response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT, DFHINDAP

AINE

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an START_LINK_BROWSE command issued by the indoubt tool to recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a

system dump (depending on the options in the dump table).

For all errors, DFHINDT provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AINF

Explanation

An EXCEPTION response with an unexpected reason occurred on an GET_NEXT_LINK call issued by the indoubt testing tool to recovery manager (RM) domain. DFHINDT provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AING

Explanation

An error (DISASTER, INVALID, KERNERROR, or PURGED) has occurred on an GET_NEXT_LINK call issued by the indoubt testing tool to recovery manager (RM) domain. The RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

DFHINDT also provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AINH

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an END_LINK_BROWSE command issued by the indoubt tool to recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHINDT provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AINI

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an INQUIRE_UOW command issued by the indoubt testing tool to recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHINDT provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AINJ

Explanation

An EXCEPTION response with an unexpected reason occurred on an INITIATE_RECOVERY call issued by the indoubt testing tool to recovery manager (RM) domain. DFHINDT provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AINK

Explanation

An error (DISASTER, INVALID, KERNERROR, or PURGED) has occurred on an INITIATE_RECOVERY call issued by the indoubt testing tool to recovery manager (RM) domain. The RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

DFHINDT also provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AINL

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an SET_RECOVERY_STATUS command issued by the indoubt testing tool to recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHINDT provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AINM

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an TERMINATE_RECOVERY command issued by the indoubt testing tool to recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHINDT provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT

AINN

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an ADD_LINK command issued by the indoubt testing tool to recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHINTRU provides an exception trace, console message DFHAP0002, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINTRU

AINO

Explanation

The indoubt testing tool task related user exit DFHINTRU issued an EXEC CICS INQUIRE TRANSACTION command to inquire whether the current transaction was in the indoubt transaction class DFHTCIND. The command failed with a NOTAUTH response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

When the indoubt testing tool is active, the task related user exit DFHINTRU is invoked whenever a CICS transaction is started. For all transactions

for which command security checking is active, ensure that the user has read access to resource TRANSACTION. If started transaction resource security checking is specified, for all transactions for which resource security checking is active, ensure that the user has read access to the transaction name in the specified RACF resource class.

For more information on command security and resource security see the CICS Security.

Module:
DFHINTRU

AINP

Explanation

The indoubt testing tool task related user exit DFHINTRU issued an EXEC CICS INQUIRE TRANSACTION command to inquire whether the current transaction was in the indoubt transaction class DFHTCIND. The command failed with an unexpected response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINTRU

AINQ

Explanation

The indoubt testing tool task related user exit DFHINTRU issued an EXEC CICS INQUIRE TASK command to inquire on the current task to obtain the unit of work ID to include in message DFHIN1009. The command failed with a TASKIDERR response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

DFHINTRU

AINR

Explanation

The indoubt testing tool task related user exit DFHINTRU issued an EXEC CICS INQUIRE TASK command to inquire on the current task to obtain the unit of work ID to include in message DFHIN1009. The command failed with a NOTAUTH response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

When the indoubt testing tool is active, the task related user exit DFHINTRU is invoked whenever a CICS transaction is started. For all transactions for which command security checking is active (CMDSEC=YES), ensure that the user has read access to resource TASK.

Module:
DFHINTRU

AINS

Explanation

The indoubt testing tool task related user exit DFHINTRU issued an EXEC CICS INQUIRE TASK command to inquire on the current task to obtain the unit of work ID to include in message DFHIN1009. The command failed with an unexpected response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINTRU

AINT

Explanation

The indoubt testing tool issued a EXEC CICS ENABLE command to enable the indoubt testing tool task

related user exit program DFHINTRU, and the command failed with a NOTAUTH response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The indoubt testing tool can be run under transaction CIND , under a user transaction where the program EXEC CICS LINKs to DFHINDT. or under a transaction where the program EXEC CICS LINKs to DFHINDAP. If command security checking is active for the transaction (CMDSEC=YES), check that the user has update access to resource EXITPROGRAM. If resource security checking is active for the transaction (RESSEC=YES), check that the user has update access to resource DFHINTRU.

Module:
DFHINDT, DFHINDAP

AINU

Explanation

The indoubt testing tool issued a EXEC CICS ENABLE command to enable the indoubt testing tool task related user exit program DFHINTRU, and the command failed with an unexpected response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHINDT, DFHINDAP

AIPA

Explanation

IP interconnectivity program DFHISCOP has been initiated invalidly, probably by entering a transaction id that refers to it, for example CISC or CISS, at a terminal. This program must only be initiated by CICS internal processes.

System action

The task is abnormally terminated.

User response

Do not initiate CISC or CISS directly.

Module:
DFHISCOP

AIPB

Explanation

IP interconnectivity receiver program DFHISRRP has been initiated invalidly, probably by entering a transaction id that refers to it, for example CISR, at a terminal. This program must only be initiated by CICS internal processes.

System action

The task is abnormally terminated.

User response

Do not initiate CISR directly.

Module:
DFHISRRP

AIPC

Explanation

IP interconnectivity error and message program DFHISEMP has been initiated invalidly, probably by entering a transaction id that refers to it, for example CISE, at a terminal. This program must only be initiated by CICS internal processes.

System action

The task is abnormally terminated.

User response

Do not initiate CISE directly.

Module:
DFHISEMP

AIPD

Explanation

IP interconnectivity program DFHISCOP has been initiated with invalid attach parameters by CICS internal processes. This could be the result of a configuration error or a storage overwrite.

DFHISCOP should be defined as the initial program for the IS domain connectivity transactions; these are CISC and the transactions for TCPIPSERVICEs with protocol IPIC, CISS by default. This error could occur

if DFHISCOP is defined as the initial program for some other CICS internal transaction.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that DFHISCOP is correctly defined.

If necessary, examine the dump and any exception trace entries to determine why the attach parameters are missing or invalid.

Module:
DFHISCOP

AIPE

Explanation

IP interconnectivity program DFHISCOP received an INVALID, DISASTER, or EXCEPTION response from a call to the intersystems communication (IS) domain to acquire or release an IPCONN, or from another domain during IS domain initialization processing.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

See the related message from the domain that detected the original error and examine the dump and any exception trace entries for further information if necessary.

Module:
DFHISCOP

AIPF

Explanation

IP interconnectivity program DFHISCOP received an PURGED response from a call to the intersystems communication (IS) domain to acquire or release an IPCONN.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHISCOP

AIPG

Explanation

IP interconnectivity long-running request/response receiver program received an INVALID, DISASTER, or EXCEPTION response from its PROCESS_INPUT call to the intersystems communication (IS) domain.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

See the related message from the domain that detected the original error and examine the dump and any exception trace entries for further information if necessary.

Module:
DFHISRRP

AIPH

Explanation

IP interconnectivity long-running error and message program received an INVALID, DISASTER, or EXCEPTION response from its PROCESS_ERROR call to the intersystems communication (IS) domain.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

See the related message from the domain that detected the original error and examine the dump and any exception trace entries for further information if necessary.

Module:
DFHISEMP

AIPI

Explanation

IP interconnectivity program DFHISREU or DFHISREX has been initiated invalidly, probably by entering the transaction ID that refers to it, CISU or CISX, at a terminal. This program must only be initiated by CICS internal processes.

System action

The task is abnormally terminated.

User response

Do not initiate CISU or CISX directly.

Module:
DFHISREU, DFHISREX

AIPJ

Explanation

The IS attach client module DFHISXM received an INVALID, DISASTER, or unexpected EXCEPTION response from its INITIALIZE_RECEIVER call to module DFHISIS.

The call was issued during initialization of a transaction that was started by a transaction attach message received on an IP connection. The call was made as part of processing to associate the transaction with its intended user. The attempt to

associate the intended user with the transaction has failed.

The userid for the intended user of the transaction may not be correctly defined.

Security attributes defined for the IPCONN may not be consistent with the security parameters received in the transaction attach message.

System action

The task is abnormally terminated with a transaction dump.

User response

Examine the dump and any exception trace entries for further information if necessary.

Verify the userid for the intended user is correctly defined to the external security manager. :p Verify the IPCONN security attributes are correctly defined.

Module:
DFHISXM

AIPK

Explanation

The IS attach client module DFHISXM received a PURGED response from its call to another module.

The call was issued during initialization of a transaction that was started by a transaction attach message received on an IPIC connection.

The ISSB representing the IPIC receive session allocated to this transaction has been flagged for abend following an error on the IPCONN or purge request from the initiating system.

System action

The task is abnormally terminated with a transaction dump.

User response

Look for related messages reported in the error log. Examine the dump and any exception trace entries for further information if necessary.

Module:
DFHISXM

AIPL

Explanation

The IS attach client module DFHISXM received an INVALID, DISASTER, or unexpected EXCEPTION response from its call to another module.

The call was issued during initialization of a transaction that was started by a transaction attach message received on an IPIC connection. The attempt to initialize the transaction has failed.

The input message received may not be in the expected format.

System action

The task is abnormally terminated with a transaction dump.

User response

Examine the dump and any exception trace entries for further information if necessary.

Module:
DFHISXM

AIPM

Explanation

The transaction was connected to another transaction in another CICS system via an IPIC link. This other transaction has abnormally terminated.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the cause of the abend in the connected transaction.

Module:
DFHISIS

AIPN

Explanation

IP interconnectivity program DFHISLQP has been initiated invalidly, probably by entering a transaction ID that refers to it, CISQ, at a terminal. This program must be initiated only by CICS internal processes.

System action

The task is abnormally terminated.

User response

Do not initiate CISQ directly.

Module:
DFHISLQP

AIPO

Explanation

IP interconnectivity program DFHISLQP has been initiated with invalid attach parameters by CICS internal processes. This could be the result of a configuration error or a storage overwrite.

DFHISLQP should be defined as the initial program for the IS domain connectivity transaction CISQ. This error could occur if DFHISLQP is defined as the initial program for some other CICS internal transaction.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that DFHISLQP is correctly defined.

If necessary, examine the dump and any exception trace entries to determine why the attach parameters are missing or invalid.

Module:
DFHISLQP

AIPP

Explanation

IP interconnectivity program DFHISLQP received an INVALID, DISASTER, or EXCEPTION response from a call to the intersystems communication (IS) domain to process requests that are locally queued for an IPCONN.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

See the related message from the domain that detected the original error and examine the dump and any exception trace entries for further information if necessary.

Module:
DFHISLQP

AIPR

Explanation

IP interconnectivity program DFHISLQP received an PURGED response from a call to the intersystems communication (IS) domain to acquire or release an IPCONN.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHISLQP

AIPS

Explanation

IP interconnectivity remote scheduler program DFHISRSP has been started invalidly, probably because a transaction id that refers to DFHISRSP, for example CISM, has been entered at a terminal. DFHISRSP must be started by CICS internal processes only.

System action

The task is abnormally ended.

User response

Do not start CISM directly.

Module:
DFHISRSP

AIPT

Explanation

IP interconnectivity remote scheduler program DFHISRSP received an INVALID, DISASTER, or EXCEPTION response from its PROCESS_SCHEDULER call to the intersystems communication (IS) domain.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally ended with a transaction dump.

User response

See the related message from the domain that detected the original error and examine the dump and any exception trace entries for further information if necessary.

Module:
DFHISRSP

AIPU

Explanation

For CICS 4.1 and later, IPCONN names that are longer than four characters are not supported in transaction routing between CICS regions.

System action

The task is abnormally ended with a transaction dump.

User response

Correct the IPCONN names so that they are not longer than four characters if used in transaction routing between CICS regions.

Module:
DFHISXM

AIS1

Explanation

An unexpected return code has been returned after a DFHMROQM FUNC=ENQ command was issued.

This command was issued when enqueueing work for the IRC control task (CSNC) during IRC initialization.

System action

If IRC is being initialized during CICS initialization (as a result of IRCSTRT being specified in the DFHSIT or override parameters), then CICS is abnormally terminated.

If IRC is being initialized during the execution of a CEMT SET IRC OPEN command, then the CEMT transaction is abnormally terminated.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRSP

AIS2

Explanation

An unexpected return code has been returned after a DFHMROQM FUNC=WAIT_Q command was issued.

This command was issued when waiting for more IRC work to process.

System action

CSNC is abnormally terminated with a system dump. All tasks using MRO links to other systems are abnormally terminated.

All tasks in other CICS regions (including shared database batch regions) that are currently communicating with this system are also abended.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRNP

AIS3

Explanation

An attempt to issue a STCK (Store Clock) instruction failed.

System action

CSNC is abnormally terminated with a system dump.

All tasks using MRO links to other systems are abnormally terminated.

All tasks in other CICS regions (including shared database batch regions) that are currently communicating with this system are also abended.

User response

Repair or enable the system clock.

Module:
DFHCRNP

AIS4

Explanation

An unexpected return code has been returned after a DFHMROQM FUNC=ENQUEUE command. This command was issued when enqueueing work to the IRC 'delayed work' queue.

System action

CSNC is abnormally terminated with a system dump. All tasks using MRO links to other systems are abnormally terminated.

All tasks in other CICS regions (including shared database batch regions) that are currently communicating with this system are also abended.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRNP

AIS5

Explanation

An unexpected return code has been returned after a DFHMROQM FUNC=ENQUEUE command was issued.

This command was issued when enqueueing work to the IRC 'immediate work' queue.

System action

CSNC is abnormally terminated with a system dump. All tasks using MRO links to other systems are abnormally terminated.

All tasks in other CICS regions (including shared database batch regions) that are currently communicating with this system are also abended.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRNP

AIS6

Explanation

An INVALID, DISASTER or EXCEPTION condition has occurred on a call to the storage manager domain (SM) to GETMAIN or FREEMAIN a file control read set buffer.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHMIRS

AIS7

Explanation

A PURGED condition has occurred on a call to the storage manager domain (SM) to FREEMAIN a file control read set buffer.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

Investigate the reason why the task was purged. It was purged either by the main terminal operator , or as a result of a deadlock timeout.

Module:
DFHMIRS

AIS8

Explanation

An internal logic error has been detected in module DFHMIRS.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMIRS

AIS9

Explanation

The mirror program has detected that a DPL server program has returned in an invalid state following the completion of the LINK command. The server program or a program it linked to has initiated a synclevel 2 conversation with another program which in turn has issued a syncpoint. The server program has not responded to the syncpoint request which is still outstanding when control returns to the mirror program.

The mirror program only issues this abend code if the LINK request did not specify SYNCONRETURN.

System action

The task is abnormally terminated with a transaction dump.

User response

Correct the design of the DTP application or applications initiated by the server program. If the SYNCONRETURN option is not specified on the LINK request, only the client program should initiate the syncpoint. If it is necessary to issue syncpoint requests from the DTP applications, consider using the SYNCONRETURN option on the LINK request. See the CICS intercommunication for further details of the LINK command and its options.

Module:
DFHMIRS

AISA

Explanation

The mirror transaction (CSMI) has been attached from some facility other than a terminal. This is not permitted.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Using the dump, check the field TCAFCAAA to identify the invalid attach.

Module:
DFHMIRS

AISB

Explanation

The mirror transaction (CSMI) has detected errors in the data passed to it from the attaching transaction.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The invalid input will be visible in the transaction dump. This error is likely to be caused by some mismatch between the two systems. A typical example might be a DL/I request received on a system generated without DL/I.

Module:
DFHMIRS

AISC

Explanation

The mirror transaction (CSMI) has not received a TIOA from the terminal.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Use the trace in the dump and the dumped TCTTE to analyze the problem further.

Module:
DFHMIRS

AISD

Explanation

The mirror program executed the request and received a nonzero return code as a result. The data flow control state of the intersystem link being used was such that this information could not be returned normally.

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

The transaction dump provided will provide information required to analyze the source of the nonzero return code at its point of origin.

Module:
DFHMIRS

AISF

Explanation

The CICS mirror program DFHMIRS has been attached in an unsupported manner. The principal facility for the mirror transaction is defined as APPC, however the conversation is unmapped.

System action

CICS abnormally terminates the transaction with a transaction dump.

User response

There is a problem with the system that caused the mirror transaction to be attached. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMIRS

AISG

Explanation

The mirror program executed the request and produced the reply. This would not be sent because the data flow control state of the intersystem link was such that this could not be done.

System action

The task (CSMI) is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump provided to analyze the problem.

Module:
DFHMIRS

AISH

Explanation

The new connection task, CSNC, has been invoked in an incorrect manner (for example, from a terminal or via an EXEC CICS START request).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

None.

Module:
DFHCRNP

AISI

Explanation

A function shipping request was passed by DFHEIP to DFHISP. This was found to be invalid by the transformer, DFHXFP.

System action

The transaction issuing the function shipping request is abnormally terminated with a CICS transaction dump.

User response

The transaction dump will provide information to further analyze the problem.

Module:
DFHISP

AISJ

Explanation

The IRC control task CSNC has abended because the attempt to LINK to DFHCRR failed.

System action

CSNC is abnormally terminated with a system dump. All tasks using MRO links to other systems are abnormally terminated. All tasks in other CICS regions (including shared database batch regions) that are currently communicating with this system are also abnormally terminated.

User response

Ensure that program DFHCRR is available.

Module:
DFHCRNP

AISK

Explanation

The user transaction has been abnormally terminated during the execution of a function shipping request on an APPC session. This has happened because the mirror transaction on the remote system has abnormally terminated, and caused a request for syncpoint rollback to be sent across the session. CICS abends the user transaction in these circumstances so that function shipping remains transparent to the transaction.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the log on the mirror system to determine the reason for the original abend of the mirror task.

Module:
DFHISP

AISL

Explanation

The LU services manager transaction has been started directly from a user terminal. This is not permitted.

System action

The task is abnormally terminated with a transaction dump.

User response

None. The LU services manager transaction must be started internally by CICS.

Module:

DFHLUP, DFHCLS3, DFHCLS4, DFHZLS1

AISN

Explanation

Task CSNC attempted to acquire a SUSPEND TOKEN to enable it to suspend itself until further work arrives. The attempt failed.

System action

CSNC is abnormally terminated with a dump. The IRC facility is disabled.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRNP

AISO

Explanation

Task CSNC attempted to suspend itself, awaiting further work. The attempt failed.

System action

CSNC is abnormally terminated with a dump. The IRC facility is disabled.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRNP

AISP

Explanation

A mirror transaction (transaction identifiers CSHR, CSM1, CSM2, CSM3, CSM5, or CSMI) has been invoked with an invalid principal facility. The mirror transaction executes with an MRO session, an LU6.1 session or an APPC session as its principal facility.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Do not attempt to invoke the mirror transaction by entering the transaction identifier at a terminal.

Module:
DFHMIRS

AISQ

Explanation

An EXEC CICS command has been issued against a CPI Communications session. A CPI Communications session is one that has a CPI-Communications Control Block (CPC) associated with it.

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

Do not mix EXEC commands with CPI Communications calls on the same end of a conversation.

Module:
DFHMIRS

AISR

Explanation

The CICS Inter-Region Session Recovery Program (DFHCRR) has been invoked in an incorrect manner, for example, from a terminal.

System action

The program DFHCRR is abnormally terminated with a CICS transaction dump.

User response

None.

Module:
DFHCRR

AISS

Explanation

A security violation has occurred while CICS was attempting to start a conversation with a remote APPC system. The security access level of the requestor was insufficient to access the transaction on the connected APPC system. Depending on the nature of the request and the way security has been set up, the requestor with an insufficient access level can be the local CICS

system, the requesting transaction, or the terminal user.

Note:

DTP programs do not abend with code AISS after a security failure in the remote region.

System action

The transaction is abnormally terminated with a transaction dump.

User response

First, verify that the access was correctly denied. Then, if required, change the access level.

Module:
DFHZARM

AIST

Explanation

An unexpected return code has been returned after a DFHTC TYPE=LOCATE command.

System action

CSNC is abnormally terminated with a system dump. All tasks using MRO links to other systems are abnormally terminated. All tasks in other CICS regions (including shared database batch regions) that are currently communicating with this system are also abended.

User response

The trace in the system dump should be used to analyze the problem further.

Module:
DFHCRNP

AISU

Explanation

An INVALID, DISASTER, or EXCEPTION condition has occurred on a call to the storage manager domain (SM) to FREEMAIN a FCENT control block.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHMIRS

AISV

Explanation

A PURGED condition has occurred on a call to the storage manager domain (SM) to FREEMAIN a FCENT control block.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHMIRS

AISW

Explanation

An INVALID, DISASTER, or EXCEPTION condition has occurred on a call to the storage manager domain (SM) to GETMAIN or FREEMAIN a CRB control block.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHCRSP

AISX

Explanation

A PURGED condition has occurred on a call to the storage manager domain (SM) to GETMAIN or FREEMAIN a CRB control block.

The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHCRSP

AISY

Explanation

The LU services manager transaction has been started, but invalid parameters have been detected.

System action

The task is abnormally terminated with a transaction dump.

User response

See message DFHZC4921 for further guidance.

Module:
DFHLUP

AISZ

Explanation

DFHMXP has received an unexpected reply when committing START PROTECT NOCHECK requests sent on a LUTYPE6.2 synclevel 1 conversation.

System action

The task is abnormally terminated.

User response

Determine what happened to transaction CVMI in the partner system. If the START PROTECT NOCHECK requests had been committed, no further action is necessary. If they had not been committed, user-defined action is required to recover from the error.

Module:
DFHMXP

AITA

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the recovery manager (RM) domain to initialize the recovery status of an IRC session. The domain provides an exit trace, and possibly a console message and a system dump (depending on the options specified in the dump table).

This failure is either the result of a task purge, or a CICS logic error,

System action

The CSNC task is abnormally terminated with a CICS transaction dump.

User response

See the related diagnostic material produced by the recovery manager domain and determine the reason for the failure. In the case of a CICS logic error, you need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRNP

AITB

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the recovery manager (RM) domain. The domain provides an exit trace, and possibly a console message and a system dump (depending on the options specified in the dump table).

This failure is either the result of a task purge, or a CICS logic error,

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related diagnostic material produced by the recovery manager domain and determine the reason for the failure. In the case of a CICS logic error, you need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHISP DFHMXP

AITC

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the recovery manager (RM) domain. The domain provides an exit trace, and possibly a console message and a system dump (depending on the options specified in the dump table).

This failure is either the result of a task purge, or a CICS logic error,

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

See the related diagnostic material produced by the recovery manager domain and determine the reason for the failure. In the case of a CICS logic error, you

need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMIRS

AITD

Explanation

The mirror program has received an unexpected response from the RX domain.

There are several reasons why this error may occur:

- A request received from an EXCI client is inconsistent with an earlier request in the same Unit of Work
- CICS has received an unexpected response from the Recoverable Resource Management Services component of MVS.
- There has been an internal error in the RX domain.

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

Use the exception trace provided by the RX domain to determine the reason for the failure. If the error is caused by an inconsistent request from an EXCI client, there may be an error in the client program.

In the other cases, you might need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMIRS

AITE

Explanation

A transaction has executed a transactional EXCI request from a batch region, and has been waiting for one of the following events for longer than the interval specified in the RTIMOUT or DTIMOUT value for the transaction.

- A further transactional EXCI request from the batch region
- A syncpoint initiated by Resource Recovery Management Services (RRMS).

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

Determine why the expected event has not occurred:

If a further transactional EXCI request is expected:

- The batch program may be suspended

If a syncpoint is expected:

- The batch program may be suspended before reaching syncpoint
- RRMS may have started syncpoint processing but is waiting for another Resource Manager to respond to the syncpoint request.

See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMIRS

AITF

Explanation

A transaction has executed a transactional EXCI request from a batch region, and has been purged while waiting for one of the following events:

- A further transactional EXCI request from the batch region
- A syncpoint initiated by Resource Recovery Management Services (RRMS).

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

Determine why the expected event has not occurred:

If a further transactional EXCI request is expected:

- The batch program may be suspended

If a syncpoint is expected:

- The batch program may be suspended before reaching syncpoint
- RRMS may have started syncpoint processing but is waiting for another Resource Manager to respond to the syncpoint request.

See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMIRS

AITG

Explanation

A transaction has executed a transactional EXCI request from a batch region, and both of the following events has occurred:

- A further transactional EXCI request from the batch region
- A syncpoint initiated by Resource Recovery Management Services (RRMS).

Normally, only one event should occur, and not both.

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

Determine why both events have occurred. This situation may arise when an EXCI client times out on a DPL request that CICS is not ready to receive and then proceeds to take a syncpoint. If this is not the case, you may need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMIRS

AITH

Explanation

A mirror transaction processing an ECI request from a TCP/IP connected client has failed while trying to receive data from, or send data to, a client. This could be a read time out, or a more serious error in the flows that prevented CICS from correctly processing the data.

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

If the error was a time out, determine why the client has not continued with the extended ECI conversation. Other errors will have associated IE domain messages to aid in problem determination.

Module:

DFHMIRS

AITI

Explanation

A mirror transaction processing a START CHANNEL or LINK CHANNEL request has failed while trying to receive data from, or send data to, a connected CICS system. Because a channel may include a considerable amount of data, it may require many calls to terminal control to transmit channel data. DFHMIRS calls program DFHAPCR to perform all the inter-system transmission of channel data. Terminal control has detected an error in one of these calls. The error could be a read time out, or a more serious error in the flows that prevented CICS from correctly processing the data.

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

If the error was a time out, determine why the other end has not continued with the conversation. Other errors will have associated terminal control messages to aid in problem determination. Examine trace entries from DFHAPCR to determine terminal control error and sense information.

Module:

AITJ

Explanation

A mirror transaction processing a request from a client connected using IP interconnectivity has failed while trying to receive data from, or send data to, a client. This could be a read time out, or a more serious error in the flows that prevented CICS from correctly processing the data.

System action

The mirror task is abnormally terminated with a CICS transaction dump.

User response

If the error was a time out, determine why the client has not continued with the conversation. Other errors will have associated IS domain messages to aid in problem determination.

Module:
DFHMIRS

AITK

Explanation

The ISCINVREQ condition has been raised. This can happen when the resource proves to be on yet another remote system, that is, when daisy-chaining is active.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that daisy-chaining of requests is intended and that all relevant intersystem links are in service.

Module:
DFHMIRS

AITL

Explanation

The IPIC client sent a CCSID that was not recognized.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that the client system is using one of the client code pages supported by CICS TS.

Module:
DFHMIRS

AITM

Explanation

A command has been received by the mirror program to call itself.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the API command in the client system program so that it does not request an EXEC CICS LINK PROGRAM to be executed that specifies the name of the mirror program.

Module:

DFHMIRS

AITN

Explanation

An attempt to change the TCB DFHMIRS was running on has failed.

System action

The transaction is terminated.

User response

Contact your IBM support center.

Module:
DFHMIRS

AITO

Explanation

IP interconnectivity program DFHISPHP and DFHISPRP has been initiated invalidly, probably by entering a transaction ID that refers to it, CISP or CIS1, at a terminal. This program must be initiated only by CICS internal processes.

System action

The task is abnormally terminated.

User response

Do not initiate CISP or CIS1 directly.

Module:
DFHISPHP

AITP

Explanation

The application context handling module, DFHMNAC, has returned an unexpected response from function MIRROR_ACD.

System action

The transaction is terminated.

User response

Contact your IBM support center.

Module:
DFHMIRS

AJxx abend codes

AJ01

Explanation

The main method of the Java environment setup class, Wrapper, has been invoked without an argument. Wrapper main expects the class name of the user's main to be passed as the first argument.

The callUserClass method of Wrapper detects this, sets return code INVALID_ARGUMENTS and invokes native method SetAbend to abend the task.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFJCICS

AJ02

Explanation

A CICS AbendError has been caught by the Java environment setup class, Wrapper.

The callUserClass method of Wrapper detects this, sets return code ABEND_RECEIVED and invokes native method SetAbend to abend the task.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See related messages and JVM error output in stderr to determine the reason for the original abend.

Module:
DFJCICS

AJ03

Explanation

A CicsConditionException has been caught by the Java environment setup class, Wrapper.

The callUserClass method of Wrapper detects this, sets return code CONDITION_RECEIVED and invokes native method SetAbendForCondition to abend the task. The appropriate default abend code for the condition should be issued but, if for some reason this is not possible, an AJ03 abend may be issued.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See related messages and JVM error output in stderr to determine the reason for the original CicsConditionException.

Module:
DFJCICS

AJ04

Explanation

An unexpected error has been caught by the Java environment setup class, Wrapper, attempting to invoke the user class or an unhandled exception has been thrown in the Java environment.

In the first case, the callUserClass method of Wrapper detects this, sets return code UNEXPECTED_EXCEPTION and invokes native method SetAbend to abend the task. In the second case, the JNI code invokes the SetAbend method to abend the task and AJ04 is set as the default abend code.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See related messages and JVM error output in stderr to determine the reason for the original exception.

Module:
DFJCICS

AJ05

Explanation

An unhandled exception has been caught by the Java environment setup class, Wrapper, as an InvocationTargetException from the user class.

The callUserClass method of Wrapper detects this, sets return code INVOCATION_TARGET_EXCEPTION and invokes native method setAbend to abend the task.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See related messages and JVM error output in stderr to determine the reason for the original exception.

Module:
DFJCICS

AJ07

Explanation

The Java environment setup class, Wrapper, has been unable to invoke the user's main method. The class whose name was passed as an input parameter to its CallUserClass method was not found.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that CICS has been granted read permission to the target class and the entire zFS directory structure in which the class or Jar file is located.

Module:
DFJCICS

AJ09

Explanation

The Java environment setup class, Wrapper, has been unable to invoke the user's main method. A public static method, taking either a CommAreaHolder or a String array as input, was not found in the class whose name was passed as an input parameter to the CallUserClass method of Wrapper.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that you have provided a main method, with an appropriate method signature, in the specified class. Also check that the target class explicitly uses the 'public' class modifier and that it is stored in a jar file on the JVM's classpath. CICS must have read permission for the jar file.

Module:
DFJCICS

AJ10

Explanation

The Java environment setup class, Wrapper, has detected that the user's class has used JDBC or SQLJ. It however has been unable to load the DB2 JDBC classes necessary to call back the JDBC/SQL driver for cleanup processing following completion of the user class.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFJCICS

AJ11

Explanation

The Java environment setup class, Wrapper, has detected that the user's class has used JDBC or SQLJ. It however has been unable to find the DB2 JDBC static method to call back the JDBC/SQL driver for cleanup processing following completion of the user class.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFJCICS

AJ12

Explanation

The Java environment setup class, Wrapper, has detected that the user's class has used JDBC or SQLJ. It however has been unable to invoke the DB2 JDBC static method to call back the JDBC/SQL driver for cleanup processing following completion of the user class.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFJCICS

AJ13

Explanation

An exception occurred and CICS was unable to instantiate an instance of the user's class.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See related messages and JVM error output in stderr to determine the reason for the exception. Check that the class has a no argument constructor as CICS requires this in order to instantiate the class.

Module:
DFJCICS

AJ99

Explanation

The Java environment setup class, Wrapper, has detected an AbendException and issued setAbend. The abend code extracted from the AbendException is too long.

System action

Task abnormal termination continues with the abend code set to AJ99

User response

Correct the abend code String used to create the AbendException.

Module:
DFJCICS

AJA0

Explanation

The native method SetAbendForCondition has been passed an invalid Resp value by the Wrapper class.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFJCICS

AJCD

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHJCP

AJCE

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHJCP

AJCS

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the log manager (LM) domain. The domain that detected the original error provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHJCP

AJCT

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the recovery manager (RM) domain. The domain that detected the original error provides an exception trace,

a console message, and possibly a system dump (depending on the options in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHJCP

AJCU

Explanation

A purge response has been received from either the log manager or or the recovery manager. The domain that detected the original purge condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHJCP

AJVM

Explanation

A JVM has thrown an Exception that was caught by CICS. An abend has not been triggered, the AJVM code exists for use in messages that expect to reference

an abend code. Messages that reference this code are preceded by other diagnostics that document the exception, typically a DFHSJ1004 message.

System action

Processing continues.

User response

See related messages and JVM error output in stderr to determine the reason for the original exception.

Module:
DFHSJSC

AJST

AKxx abend codes

AKC0

Explanation

An attempt has been made to run the CICS internal task CSSY as a user transaction.

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the attempt was made to run CSSY as a user transaction.

Module:
DFHAPATT

AKC1

Explanation

A DFHKC WAIT request was issued when the ECB was already marked as waiting.

System action

There is a probable user error. The transaction is abnormally terminated.

User response

Correct the program that issued the request.

Module:
DFHXCP

AKC2

Explanation

Program DFHJSON was called using EXEC CICS LINK, but no channel was provided.

System action

CICS terminates the task with a transaction dump.

User response

Change the application program to pass a channel.

Module:
DFHJSON

Explanation

A bad response has been received from a dispatcher (DS) domain call.

System action

The transaction is abnormally terminated with a transaction dump and a trace entry.

User response

Examine the trace entry for further information.

Module:
DFHXCP

AKC3

Explanation

The task has been purged, probably due to operator action such as a CEMT TASK PURGE command. The task might also have been purged as a result of CICS issuing a purge request.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Use the transaction dump to determine why the task was purged. In particular, if the purge was operator initiated, the dump should be useful in determining why this task needed to be explicitly purged.

Module:
DFHXCP, DFHXMAT, DFHXMCL, DFHXMIQ, DFHXMTA

AKC6

Explanation

DFHKC RESUME should always be preceded by DFHKC SUSPEND. If this protocol is violated then the transaction is abnormally terminated with abend code AKC6.

System action

Transaction is abnormally terminated with abend code AKC6.

User response

Examine the trace entry for further information.

Module:
DFHXCP

AKC8

Explanation

A bad response has been received from a call to the kernel (KE) domain during the processing of a task purge request.

System action

The transaction is abended with a transaction dump.

User response

Examine the dump and any exception trace entries for further information.

Module:
DFHXCP

AKC9

Explanation

An incorrect response has been received from a call to the enqueue (NQ) domain during the processing of a DFHKC TYPE=ENQ or a DFHKC TYPE=DEQ request.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Examine the dump and any exception trace entries for further information. Since the DFHKC service is only used for internal enqueues, this abend indicates an error in CICS. If you need further assistance from IBM

to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXCP

AKCB

Explanation

The CICS transaction manager restart task could not complete because a necessary step failed. The task has done some essential recovery operations and abnormally terminated itself with code AKCB.

System action

CICS writes a transaction dump for the transaction manager restart task.

CICS sends three messages to the console, one to identify the error detected by the transaction manager restart task, one to say that the task has failed, and one that gives you the option of cancelling CICS or letting it continue. Depending on the nature of the original error, you may see messages from some other system component (for example, an access method).

User response

Use the messages and dumps to find out the cause of the failure.

Module:
DFHKCRP

AKCC

Explanation

The CICS transaction manager has abended the transaction because the purge threshold of its TRANCLASS has been reached. This is specified by the PURGETHRESH parameter on CEDA DEFINE TRANCLASS. See the Defining resources manual for more details of this parameter.

System action

The transaction is abended and messages DFHAC2004 and DFHAC2036 are issued. The transaction dump is suppressed for this abend code.

User response

Resubmit the transaction. The cause of the abend may be a temporary stress condition in the system.

If the problem persists, determine why the TRANCLASS purge threshold has been reached. Ensure that PURGETHRESH has been specified

correctly. Also, ensure that the MAXACTIVE value of the TRANCLASS has not been set too low. Transactions attached after the MAXACTIVE limit has been reached are immediately queued subject to the PURGETHRESH limit.

If PURGETHRESH and MAXACTIVE are set correctly, look for a more general problem which has caused a decrease in the capacity of the system to execute transactions in the TRANCLASS. The decrease might, for example, be caused by a connected CICS region which processes requests for transactions in the TRANCLASS, if this connected region has slowed down.

Examine all resources (files, links, storage, and so on) used by the transactions in the TRANCLASS which is reaching the purge threshold and determine why the capacity of the system is reduced.

Module:
DFHXMAT, DFHXMCL

AKCE

Explanation

While CICS transaction manager was recording changes to a transaction or profile definition, a write to the system log failed.

System action

CICS terminates the transaction with a transaction dump.

User response

Use the dumps to find out why the write to the log failed.

Module:
DFHKCQ

AKCF

Explanation

While CICS transaction manager was recording changes to a profile definition, a write to the catalog failed.

System action

CICS terminates the transaction with a transaction dump.

User response

Use the dumps to find out why the write to the catalog failed.

Module:
DFHKCQ

AKCR

Explanation

Transaction manager has received an invalid request code. The last AP F000 trace entry before the program control program (PCP) ABEND TRACE entry (TRACE ID 'F2', request code X'6000') will contain the invalid transaction manager request code in the fifth byte of the first section of the trace.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Determine the cause of the invalid request code and correct the problem.

Module:
DFHXCP

AKCS

Explanation

A deadlock timeout condition has been detected. This condition may occur within a transaction that specifies DTIMOUT to be nonzero on its installed transaction definition. Deadlock timeout occurs when a transaction has been waiting or has been suspended for longer than the time specified in DTIMOUT.

The abend may be driven by a variety of internal CICS events, for example:

- A short on storage condition
- A temporary storage shortage
- ENQUEUE
- An ALLOCATE request
- A RETRIEVE WAIT request.

The abend can also occur if CICS stops running for a time, for example while an sdump is taken. This is because deadlock timeout is based on total elapsed time, and not just the time CICS is executing.

Analysis: The transaction receiving the AKCS abend must have been suspended or must be waiting for a reason such as a short on storage, enqueued on a lock, a short on temporary storage, a suspend after RETRIEVE WAIT, a suspend after ALLOCATE, or an implicit ALLOCATE within function shipping or terminal sharing support. If none of these apply, the trace

might reveal some event that has caused CICS to stop running for a time.

System action

The transaction is abnormally terminated. A dump is not provided unless the dump table entry for transaction dump code AKCS indicates that one should be taken.

User response

The transaction should be reexecuted, and the situation causing the SUSPEND to occur may clear itself.

The AKCS abend is to be expected occasionally, unless DTIMOUT is set to zero. No special action is necessary.

Module:
DFHXCP

AKCT

Explanation

A terminal read-time-out condition has been detected. The transaction has been waiting for a terminal input message for an interval longer than specified in the RTIMOUT value for that transaction.

If an EXEC CICS HANDLE ABEND has been issued for this task, the read that was timed-out is still outstanding. To cancel this read you should issue an EXEC CICS ABEND at the end of the user exit routine so that CICS can clean up the terminal's TCTTE.

System action

The transaction is abnormally terminated. A transaction dump is not provided.

User response

This abend is a normal one. Coding RTIMOUT in the PROFILE entry asks for the task to be abnormally terminated if the terminal does not send input within the specified time.

Module:
DFHXCP

AKCV

Explanation

A bad return code was passed as a result of the resume of a task suspended by ICP.

System action

The transaction is terminated with a dump.

User response

Check the response from the resume in the trace to determine the cause of the error.

Module:
DFHALP

AKEA

Explanation

A program check has been detected by the kernel (KE) domain.

System action

If an application is in control, the ASRA abend is presented to the application. Otherwise, the functional recovery routine of the CICS module in control at the time is given control. This recovery routine produces suitable diagnostics and may terminate CICS.

User response

Look at the kernel domain section of the system dump to determine where the program check has occurred.

Module:
DFHKESTX

AKEB

Explanation

An operating system abend has been detected by the kernel (KE) domain.

System action

If an application is in control, the ASRB abend is presented to the application. Otherwise, the functional recovery routine of the CICS module in control at the time is given control. This recovery routine produces suitable diagnostics and may terminate CICS.

User response

Check the console for any MVS messages that may have caused this abend.

Look at the kernel domain section of the system dump to determine where the abend has occurred.

Module:
DFHKESTX

AKEC

Explanation

The kernel (KE) domain has detected runaway.

System action

If an application is in control, the AICA abend is presented to the application. Otherwise, the functional recovery routine of the CICS module in control at the time is given control. This recovery routine produces suitable diagnostics and may terminate CICS.

User response

Look at the kernel domain section of the system dump to determine where the runaway has occurred.

Module:
DFHKESTX, DFHKERRU

AKED

Explanation

The kernel (KE) domain has been requested to initiate abend processing as a result of a deferred abend request.

System action

Abend processing starts for the task that is subject to the deferred abend request.

User response

The task is not abended with AKED but by an abend code specified by the requestor of the deferred abend. See the description of this abend for further guidance.

Module:
DFHKEEDA

AKEF

Explanation

The kernel (KE) domain has detected an error while processing a domain call. The error may have been caused by a domain gate that was not yet active during initialization

System action

If an application is in control, the transaction terminates with a system dump. Otherwise, the functional recovery routine of the CICS module in control at the time is given control. This recovery routine produces suitable diagnostics and may terminate CICS.

User response

See any related messages from the kernel domain.

Look at the kernel domain section of the system dump to determine where the error has occurred. Check that a call has not been made to a domain gate that has not yet been made active. Check that the caller has not specified KERNERROR(YES).

If the abend occurs during CICS system initialization, ensure that the utility (DFHCCUTL) used to initialize the local catalog (DFHLCD) is at the correct level. A sample job is provided in SDFHINST(DFHDEFDS).

Module:
DFHKERKE

AKEG

Explanation

The kernel (KE) domain issued an SM GETMAIN for kernel stack storage, but the GETMAIN request failed.

System action

If an application is in control, the transaction terminates with a system dump. Otherwise, the functional recovery routine of the CICS module in control at the time is given control. This recovery routine produces suitable diagnostics and may terminate CICS.

User response

Look at the kernel domain section of the system dump to determine why sufficient storage was not available.

If the short-on-storage condition persists, consider increasing the size limit of the CICS DSA. You can vary the DSA dynamically using the DSALIM parameter on the CEMT main terminal command.

Module:
DFHKESGM

AKEH

Explanation

The transaction was purged while running outside the control of CICS.

System action

CICS terminates the transaction abnormally.

The EXEC CICS HANDLE ABEND command can not handle this abend.

User response

Investigate the reason why the transaction was purged.

Possible reasons are

- An operator purged the transaction
- The transaction was purged because DTIMEOUT has been exceeded
- Another transaction purged the transaction

Module:
DFHKESTX

AKEI

Explanation

The kernel (KE) domain has detected runaway while the transaction is running outside the control of CICS.

System action

If an application is in control, the AICA abend is presented to the application. Otherwise, the functional recovery routine of the CICS module which was last in control at the time of runaway detection is given control. This recovery routine produces suitable diagnostics and may terminate CICS.

The EXEC CICS HANDLE ABEND command can not handle this abend.

User response

See the Troubleshooting and support for guidance on dealing with loops.

Module:
DFHKESTX

AKEJ

Explanation

A backlevel XPI call has been detected by the kernel (KE) domain.

System action

Additional error messages will be produced by CICS that identify the global user exit or task related user exit that made the backlevel XPI call. If an AP domain global user exit or task related user exit issued the backlevel XPI call the ASRJ abend is presented to the application.

User response

Reassemble the exit program identified by the additional error messages using the latest CICS libraries.

Module:
DFHKESTX

AKER

Explanation

A task has been recovered from a JVM server onto the QR TCB following a KILL against the JVM server.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

None

Module:
DFHAPLJP

AKEX

Explanation

A program check has been detected by the kernel (KE) domain while executing under a TCB that is not enabled for EXEC CICS commands. This is probably because of an attempt to execute a CICS command in an environment where this is not possible.

System action

If an application is in control, the ASRA abend is presented to the application. Otherwise, the functional recovery routine of the CICS module in control at the time is given control. This recovery routine produces suitable diagnostics and may terminate CICS.

User response

Look at the kernel domain section of the system dump to determine where the program check has occurred.

Module:
DFHKESTX

AKEZ

Explanation

A user attach has failed because there are insufficient kernel tasks available. This indicates an internal logic error.

System action

Message DFHKE0001 is issued and a system dump is taken. The attach of the user transaction fails.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHKETA

AKKA

Explanation

A kill request has been actioned when a transaction was not protected from purge or force purge. The transaction is either in a dispatcher suspend, the deferred abend processor is in control, the application is calling CICS, CICS is returning to the application, or the application is outside of the control of CICS.

System action

If an application is in control, the abend is presented to the application. Otherwise, the functional recovery module of the CICS module in control at the time is given control. This recovery routine produces diagnostics and might terminate CICS. This abend code cannot be handled by the application.

User response

Notify the system programmer to determine why the task has been killed.

Module:
DFHDSSR, DFHKEEDA, DFHEIP, DFHKEDS

AKKB

Explanation

A kill request has been actioned when a transaction was not protected from forcepurge but was protected from purge. The transaction is either in a dispatcher suspend, the deferred abend processor is in control, the application is calling CICS, CICS is returning to the application, or the application is outside of the control of CICS.

System action

If an application is in control, the abend is presented to the application. Otherwise, the functional recovery module of the CICS module in control at the time is given control. This recovery routine produces

diagnostics and might terminate CICS. This abend code cannot be handled by the application.

User response

Notify the system programmer to determine why the task has been killed.

Module:
DFHDSSR, DFHKEEDA, DFHEIP, DFHKEDS

AKKC

Explanation

A kill request has been actioned when a transaction was protected from force purge. The transaction is either in a dispatcher suspend, the deferred abend processor is in control, the application is calling CICS, CICS is returning to the application, or the application is outside of the control of CICS.

System action

If an application is in control, the abend is presented to the application. Otherwise, the functional recovery module of the CICS module in control at the time is given control. This recovery routine produces diagnostics and might terminate CICS. This abend code cannot be handled by the application.

User response

Notify the system programmer to determine why the task has been killed.

Module:
DFHDSSR, DFHKEEDA, DFHEIP, DFHKEDS

AKKD

Explanation

A CEKL purge has been requested. Abend processing has started for the task that is subject to the deferred abend request.

System action

The task is abended with abend code AKKD.

User response

Notify the system programmer to determine why the task has been purged.

Module:
DFHKEEDA

AKKE

Explanation

A CEKL force purge has been requested. Abend processing has started for the task that is subject to the deferred abend request.

System action

The task is abended with abend code AKKE.

User response

Notify the system programmer to determine why the task has been purged.

Module:
DFHKEEDA

AKKG

Explanation

The kernel (KE) domain has detected a kill request from the runaway exit program. The task was not protected from runaway when the kill request was actioned.

System action

If an application is in control, the abend is presented to the application. Otherwise, the functional recovery module of the CICS module in control at the time is given control. This recovery routine produces diagnostics and might terminate CICS. This abend code cannot be handled by the application.

User response

Notify the system programmer to determine why the task has been killed.

Module:

The recovery routine of the module in control is invoked which issues message DFHLG0002 with a system dump. DFHLG0002 reports the module in control at the time of the error.

User response

See the description of message DFHLG0002 for further guidance.

Module:
DFHLGGL, DFHLGJN, DFHLGST

ALGG

Explanation

Transaction CSQC has been issued from a terminal. This is not permitted. The transaction can only be started internally by CICS.

System action

The transaction is abnormally terminated.

User response

Do not try to invoke CSQC from a terminal.

Module:
DFHLGQC

___

ALIC

Explanation

CICS has issued a GETMAIN request during the initialization phase for an application program in order to obtain run time execution storage for Language Environment above the 31-bit line. However insufficient storage was available to satisfy the request.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

See the related message from the Storage Manager domain where the original error was detected.

Module:
DFHAPLI

___

ALID

Explanation

CICS has issued a GETMAIN request during the initialization phase for an application program in order to obtain run time execution storage for Language Environment below the 31-bit line. However insufficient storage was available to satisfy the request.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

See the related message from the Storage Manager domain where the original error was detected.

Module:
DFHAPLI

___

ALIF

Explanation

CICS has issued a GETMAIN request during the initialization phase for an application program in order to obtain thread storage for Language Environment. However insufficient storage was available to satisfy the request.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

See the related message from the Storage Manager domain where the original error was detected.

Module:
DFHAPLI

___

ALIG

Explanation

CICS has been unable to determine the language of the user application program about to be executed. Either the program was compiled against an old level of compiler that is no longer supported by CICS, or the language of the program is not supported by CICS.

System action

CICS abnormally terminates the task and disables the program. CICS processing continues.

User response

Ensure that the program to be run is written in one of the languages and compiled against a level of compiler supported by CICS. See the Developing CICS Applications for details of the languages and compilers currently supported.

Module:
DFHAPLI

___

ALIH

Explanation

CICS has determined the language of a program to be VS COBOL II, but Language Environment has indicated that it is unable to execute the program. Normally Language Environment is able to execute VS COBOL II programs in compatibility code.

System action

CICS abnormally terminates the task and disables the program. CICS processing continues.

User response

Ensure that the program to be run is written in one of the languages supported by CICS and Language Environment, and compiled against a level of compiler supported by Language Environment. See the Language Environment Migration Guide for details of the languages and compilers currently supported, and any actions which may be necessary by the user such as re-compilation or re-linking.

Module:
DFHAPLI

ALII

Explanation

CICS has determined the language of a program to be OS/PLI, but Language Environment has indicated that it is unable to execute the program. Normally Language Environment is able to execute OS/PLI programs in compatibility code.

System action

CICS abnormally terminates the task and disables the program. CICS processing continues.

User response

Ensure that the program to be run is written in one of the languages supported by CICS and Language Environment, and compiled against a level of compiler supported by Language Environment. See the Language Environment Migration Guide for details of the languages and compilers currently supported, and any actions which may be necessary by the user such as re-compilation or re-linking.

Module:
DFHAPLI

ALIJ

Explanation

CICS has determined that an C or C++ program compiled with the XPLINK option is about to be executed but the program is defined with attribute CONCURRENCY(QUASIRENT). XPLINK programs execute on open TCBs and cannot rely on quasi-reentrancy. They must be coded to threadsafe standards and defined to CICS with CONCURRENCY(REQUIRED).

System action

CICS abnormally terminates the task and disables the program. CICS processing continues.

User response

Ensure that the program is coded to threadsafe standards and defined as CONCURRENCY(REQUIRED), or recompile the program without the XPLINK option.

A program can be defined as threadsafe by using standard CICS or CPSM resource definition facilities, via program auotinstall, or by using a Language Environment runtime option. The runtime option can be specified in the source of the program by means of a #pragma runopts(ENVAR(CICSVAR=REQUIRED)) statement. Alternatively ENVAR=('CICSVAR=REQUIRED') can be specified in a CEEUOPT CSECT which is then linkedited with the program.

Module:
DFHAPLI

ALIK

Explanation

CICS has determined that an OS/VS COBOL program is about to be executed. However CICS no longer supports such programs.

System action

CICS abnormally terminates the task and disables the program. CICS processing continues.

User response

Ensure that the program is recompiled against a level of COBOL compiler supported by CICS. See the Developing CICS Applications for details of the languages and compilers currently supported.

Module:
DFHAPLI

ALIL

Explanation

CICS has attempted to change to an OPEN TCB on which to execute the JAVA, XPLINK or OPENAPI program, but the change mode was unsuccessful. CICS may be short on storage and have insufficient storage to allow creation of the new TCB.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

Check other messages from CICS to determine whether CICS is short on storage. Consider reducing max tasks (MXT) to reduce the storage requirements from concurrent transactions

Module:
DFHAPLI, DFHAPLJ, DFHAPLX

ALX1

Explanation

CICS has issued an initialize request to the Language Environment preinitialized services system (CEEPIPI). However, CEEPIPI has returned an error condition. This error strongly indicates an internal failure in Language Environment.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

The full trace entry will indicate the return code from Language Environment. Consult the Language Environment Programming Guide manual for an explanation of the return code.

Module:
DFHAPLX

ALX2

Explanation

CICS has issued an add_entry request to the Language Environment preinitialized services system (CEEPIPI). However, CEEPIPI has returned an error condition. This error strongly indicates an internal failure in Language Environment.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

The full trace entry will indicate the return code from Language Environment. Consult the Language

Environment Programming Guide manual for an explanation of the return code.

Module:
DFHAPLX

ALX3

Explanation

CICS has issued a call_main request to the Language Environment preinitialized services system (CEEPIPI). However, CEEPIPI has returned an error condition. This error strongly indicates an internal failure in Language Environment.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

The full trace entry will indicate the return code from Language Environment. Consult the Language Environment Programming Guide manual for an explanation of the return code.

Module:
DFHAPLX

ALX4

Explanation

CICS has issued a remove_entry request to the Language Environment preinitialized services system (CEEPIPI). However, CEEPIPI has returned an error condition. This error strongly indicates an internal failure in Language Environment.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

The full trace entry will indicate the return code from Language Environment. Consult the Language Environment Programming Guide manual for an explanation of the return code.

Module:
DFHAPLX

ALX5

Explanation

CICS has issued a terminate request to the Language Environment preinitialized services system (CEEPIPI). However, CEEPIPI has returned an error condition. This error strongly indicates an internal failure in Language Environment.

System action

CICS abnormally terminates the task. CICS processing continues.

AMxx abend codes

AMGB

Explanation

A task has been purged due to lack of storage.

System action

The task is abnormally terminated with a transaction dump.

User response

Try the transaction again later. If the short-on-storage condition persists, increase the size of the dynamic storage areas.

Module:
DFHMGP

AMI1

Explanation

When the mirror task is resumed, a bad response other than a time out or a cancellation was given by the dispatcher.

System action

The mirror transaction is abnormally terminated with a transaction dump.

User response

Use the dump and the trace to determine the cause of the error.

Module:
DFHMIRS

AMNA

User response

The full trace entry will indicate the return code from Language Environment. Consult the Language Environment Programming Guide manual for an explanation of the return code.

Module:
DFHAPLX

Explanation

An exception response has been received from the monitoring (MN) domain while processing a user event monitoring point (EMP) request. The exception response is produced when the 4-byte DATA1 field in the user parameter contains an invalid address.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why the DATA1 value passed to the monitoring (MN) domain was invalid.

Module:
DFHCMP

AMNB

Explanation

An exception response has been received from the monitoring (MN) domain whilst processing a user event monitoring point (EMP) request. The exception response is produced when the 4-byte DATA2 field in the user parameter contains invalid data.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to determine why the DATA2 value passed to the monitoring (MN) domain was invalid.

Module:
DFHCMP

AMNZ

Explanation

An unexpected error response has been received from the monitoring (MN) domain while processing a user event monitoring point (EMP) request.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This indicates a possible error in CICS code. An earlier CICS message is issued from the monitoring domain. Follow the user response for that message.

Module:
DFHCMP

AMPB

Explanation

A task exceeded a policy threshold and the action defined is to abend the task.

System action

A DFHMP3002 message precedes this abend.

User response

See DFHMP3002 message for diagnostics to determine the cause of the abend.

Module:
DFHMPXM

AMPC

Explanation

An unexpected error occurred in the deferred rule evaluation task CMPE.

System action

An exception trace entry is written. The CMPE task is abnormally terminated with a CICS transaction dump.

User response

Inspect the CICS trace and message log to determine the cause of the failure.

Module:
DFHMPDE

AMPD

Explanation

An attempt was made to attach a CICS deferred rule evaluation task CMPE, but the transaction was not attached internally by CICS.

System action

An exception trace entry is written. The CMPE task is abnormally terminated.

User response

Investigate why an attempt was made to run a CICS supplied deferred rule evaluation task as a user transaction.

Module:
DFHMPDE

AMQA

Explanation

DFHMQCON had enabled DFHMQTRU with a global work area smaller than that needed by DFHMQTRU. This could be due to a mismatch of version level between DFHMQCON and DFHMQTRU.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check that the versions of DFHMQCON and DFHMQTRU are compatible. If you are unable to solve the problem, contact your IBM support center.

Module:
DFHMQTRU

AMQB

Explanation

DFHMQCON had enabled DFHMQTRU with a task local work area smaller than that needed by DFHMQTRU. This could be due to a mismatch of version level between DFHMQCON and DFHMQTRU.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check that the versions of DFHMQCON and DFHMQTRU are compatible. If you are unable to solve the problem, contact your IBM support center.

Module:
DFHMQTRU

AMQC

Explanation

Unrecognizable WebSphere MQ API call. All supported API calls are documented in the IBM MQ applications reference manual.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

See the IBM MQ applications reference manual for details of the supported WebSphere MQ API.

Module:
DFHMQTRU

AMQD

Explanation

Unrecognizable RMI API call. The CICS-MQ task related user exit (TRUE) was invoked with an unrecognizable request type.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Contact your IBM support center.

Module:
DFHMQTRU

AMQE

Explanation

An attempt to EXEC CICS LOAD the data conversion service module CSQAVICM was unsuccessful.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Ensure that the WebSphere MQ SCSQAUTH library has been specified in the CICS DFHRPL concentation and that CSQAVICM is defined as a program to CICS. A definition for CSQAVICM is supplied in the DFHMQ CSD group.

Module:
DFHMQCON

AMQF

Explanation

An internal logic error has been detected in the CICS bridge monitor.

System action

Message DFHMQ0750 is written to the CICS CSMT transient data queue and the CICS bridge monitor task is ended abnormally.

User response

See the description of message DFHMQ0750 for more information.

Module:
DFHMQBR0

AMQG

Explanation

The CICS DPL bridge program has detected an error in a request message for this unit of work.

System action

All request messages for this unit of work are copied to the dead-letter queue with an MQFB_CICS_* reason code. Corresponding error messages are written to the CICS CSMT transient data queue. An MQCRC_BRIDGE_ERROR reply is sent to the reply-to queue if requested. The CICS bridge task is ended abnormally.

User response

See the description of the accompanying messages for more information.

Module:
DFHMQBP0

AMQH

Explanation

The CICS bridge monitor or DPL bridge program abended due to an unexpected return code from an EXEC CICS API call.

System action

Message DFHMQ0704 is written to the CICS CSMT transient data queue and the CICS bridge monitor or DPL bridge program is abnormally terminated.

User response

See the description of message DFHMQ0704 for more information.

Module:
DFHMQBR2

AMQI

Explanation

The CICS bridge monitor or DPL bridge program abended due to an unexpected return code from an WebSphere MQ API call.

System action

Message DFHMQ0710 is written to the CICS CSMT transient data queue and the CICS bridge monitor or DPL bridge program is abnormally terminated.

User response

See the description of message DFHMQ0710 for more information.

Module:
DFHMQBP2

AMQJ

Explanation

The CICS DPL bridge program abended before processing any messages for the unit of work.

System action

All request messages for this unit of work are left on the CICS bridge queue to be handled by the CICS bridge monitor.

User response

See the description of the accompanying messages for more information.

Module:

DFHMQBP2

AMQK

Explanation

The CICS DPL bridge program abended during error processing.

System action

An unexpected error occurred during CICS DPL bridge error processing.

User response

See the description of the accompanying messages for more information. If the problem reoccurs, contact your IBM support center.

Module:
DFHMQBP2

AMQM

Explanation

DFHMQBP0 attempted to process a Link3270 bridge request but received an unspecified error. This abend code is only ever issued within message DFHMQ0778.

System action

Input messages are backed out to the backout-requeue queue or dead-letter queue.

User response

Examine the CICS log immediately prior to the DFHMQ0778 message for further information on the type of error encountered. If the problem reoccurs, contact your IBM support center.

Module:
DFHMQBP0

AMQN

Explanation

The Link3270 bridge has returned one or more bridge vectors. DFHMQBP0 has detected that one of the bridge vector lengths is invalid.

System action

The transaction is abended. Input messages are backed out to the backout-requeue queue or dead-letter queue.

User response

Check whether a transaction HANDLE ABEND routine has recovered from a 3270 Bridge abend and suppressed the abend. If this is the case the HANDLE ABEND routine should be coded to allow the 3270 Bridge abend to continue by reissuing the abend. If the problem reoccurs, contact your IBM support center.

Module:
DFHMQBP0

AMQO

Explanation

An attempt has been made to invoke DFHMQTSK using a transaction identifier that is not CKTI.

System action

The transaction is abended.

User response

Do not attempt to invoke program DFHMQTSK as a user transaction.

Module:
DFHMQTSK

AMSA

Explanation

An input data stream received from a 3270 begins with a set buffer address (SBA) order but is not followed by two 1-byte address fields. This is probably due to a hardware error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

It may be possible to bypass the problem by entering two spaces before the data to be entered.

If the problem persists, you need further assistance. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMSP

AMSB

Explanation

An internal logic error has been detected in module DFHMSP.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Retry the CMSG transaction, specifying operands in a different order. If this fails, keep the dump and contact your IBM Support Center.

Module:
DFHMSP

AMSC

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The task that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHMSP

AMSD

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

ANxx abend codes

ANJ1

Explanation

An attempt has been made to run the CICS internal task CNJL as a user transaction.

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the attempt was made to run CNJL as a user transaction.

Module:
DFHSJNS

ANJ2

Explanation

An unexpected error was encountered in the CNJL transaction.

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the CNJL task failed.

Module:
DFHSJNS

ANJ3

Explanation

An attempt has been made to run the Node.js worker task CNJW as a user transaction.

User response

See the related error message produced by the domain that detected the original error.

Module:
DFHMSP

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the attempt was made to run CNJW as a user transaction.

Module:
DFHSJNW

ANJ4

Explanation

An unexpected error was encountered processing a local Node.js call to CICS

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the task failed.

Module:
DFHSJNW

ANQA

Explanation

An error has occurred obtaining a lock within the enqueue domain.

System action

The recovery routine of the module in control is invoked which issues message DFHNQ0002 with a system dump. DFHNQ0002 reports the module in control at the time of the error.

User response

See the description of message DFHNQ0002 for further guidance.

Module:
DFHNQED, DFHNQIB, DFHNQNQ, DFHNQST

ANQB

Explanation

An error has occurred releasing a lock within the enqueue domain.

System action

The recovery routine of the module in control is invoked. This routine issues message DFHNQ0002 with a system dump. DFHNQ0002 reports the module in control at the time of the error.

User response

See the description of message DFHNQ0002 for further guidance.

Module:
DFHNQED, DFHNQIB, DFHNQNQ, DFHNQST

ANQC

Explanation

An error has occurred obtaining a sysplex enqueue. The limit for the number of concurrent sysplex resource ENQ requests has been reached.

System action

Module DFHNQED issues message DFHNQ0103 and the task issuing the EXEC ENQ request is abended.

User response

See the description of message DFHNQ0103 for further guidance.

Module:
DFHNQED

ANQD

Explanation

An error has occurred obtaining a sysplex enqueue. An unexpected environmental error has been detected.

System action

Module DFHNQED issues message DFHNQ0104 and the task issuing the EXEC ENQ request is abended.

User response

See the description of message DFHNQ0104 for further guidance.

Module:
DFHNQED

ANQE

Explanation

An EXEC ENQ has been issued on a resource for which the enqmodel is either disabled or in the waiting state.

System action

Module DFHNQRN issues message DFHNQ0105 and the task issuing the EXEC ENQ request is abended.

User response

See the description of message DFHNQ0105 for further guidance.

Module:
DFHNQRN

ANQF

Explanation

An EXEC CICS ENQ request has been issued too early during transaction initialization, before a recoverable transaction environment has been established.

System action

The transaction is abnormally terminated.

User response

This error should only occur when an exit such as the 3270 Bridge Exit is executing. If the exit program is written in a high level language, the ENQ may have been issued by Language Environment.

Module:
DFHEKC

ANSA

Explanation

An error has occurred obtaining the numberspace lock within the AP domain.

System action

The recovery routine of the module in control is invoked which issues message DFHAP0002 with a system dump. DFHAP0002 reports the module in control at the time of the error.

User response

See the description of message DFHAP0002 for further guidance.

Module:
DFHBRNS

ANSB

Explanation

An error has occurred releasing a lock within the AP domain.

AOxx abend codes

AOTA

Explanation

The OT domain resynchronization transaction CJTR has been started in an incorrect manner (for example, from a user terminal, or by a start request). This is not permitted.

System action

The task is abnormally terminated with a transaction dump.

User response

None. The OT domain resynchronization transaction must be started internally by CICS.

Module:
DFHOTR

AOTB

System action

The recovery routine of the module in control is invoked which issues message DFHAP0002 with a system dump. DFHAP0002 reports the module in control at the time of the error.

User response

See the description of message DFHAP0002 for further guidance.

Module:
DFHBRNS

Explanation

An unexpected error was encountered by the OT domain resynchronization transaction CJTR. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHOTR

APxx abend codes

APC0

Explanation

A serious error occurred in a call to the program manager domain when trying to link a system program.

System action

CICS terminates the task with a transaction dump.

User response

Use the dump to investigate why the error occurred. Look at the trace records prior to the error for abnormal conditions in processing the PGLK domain call. This may be due to a problem with directory manager, loader, or storage manager. Check the program size. It may be necessary to increase the overall size limits of the DSAs or EDSAs.

Module:

DFHEICRE, DFHEIG, DFHEIP, DFHEIQCS, DFHPCP, DFHMCY

APC1

Explanation

A request for a TGT exceeding 64KB has been detected.

System action

CICS abnormally terminates the transaction and disables the installed program definition.

User response

Change the application program to reduce the working storage requirement. Perform CEMT NEWCOPY and ENABLE for the program when it has been corrected.

Module:
DFHAPLI

APC2

Explanation

An illegal branch has been attempted by a Language Environment user program following an abend condition with an active handle label abend. Usually an Out-Of-Block GOTO will have resulted, implying that the program tried to branch to, for example, an inactive block.

System action

The transaction is abnormally terminated and the program is disabled.

User response

Use the dump and trace to determine the cause of the error and amend the GOTO in error.

Module:
DFHAPLI

APC3

Explanation

An attempt to run the program has failed because CICS has identified the program as 'Language Environment enabled' but Language Environment support is not present in the system.

System action

The transaction is abnormally terminated and the program is disabled.

User response

Refer to messages issued during CICS initialization to determine why Language Environment is not present in the system.

Module:
DFHAPLI

APCF

Explanation

A CICS task has invoked a program which was defined as PL/I, but the program was not compiled with a supported PL/I compiler, or the program may not be written in the PL/I language.

System action

CICS terminates the task, and disables the program.

User response

Check that the program is PL/I. If the program is PL/I, recompile it with a Language Environment conforming compiler such as Enterprise PL/I for z/OS, in which case you might need to change the source program. If the program is not PL/I, redefine it correctly.

Module:
DFHAPLI

APCG

Explanation

The transaction was purged either by main terminal actions or due to deadlock timeout actions as part of a request to the loader for a usable program copy. Deadlock timeout could be caused by a program whose size exceeds the available space in the DSAs or EDSAs.

System action

CICS terminates the task with a transaction dump.

User response

Use the dump to investigate why the transaction was purged. This may be due to waiting for loader resources or for program storage. Check the program size. It may be necessary to increase the overall size limits of the DSAs or EDSAs.

For module list, see Diagnostics reference.

Module:
DFHACP, DFHCRNP, DFHCRSP, DFHDBCT, DFHDBDSC, DFHEDFP, DFHEIG, DFHEIP, DFHEICRE, DFHEIQCS, DFHEIPSH, DFHEIQIR, DFHEIQSJ, DFHFCRP, DFHFEP, DFHICP, DFHKCQ, DFHMCP, DFHMCPE, DFHMCY, DFHMSP, DFHPCPG, DFHPHP, DFHPSIP, DFHPUP, DFHRDCAL, DFHRTC, DFHSII1, DFHSIJ1, DFHSPP, DFHSTP, DFHTACP, DFHTBSGB, DFHTCRP, DFHTDX, DFHTFP, DFHTSPA, DFHTSRP, DFHUSBP, DFHXRCP, DFHXRE, DFHXRSP, DFHZATA, DFHZATD, DFHZCPLN, DFHZGAI, DFHZQ00, DFHZNCA, DFHZOPA, DFHZXCU

APCH

Explanation

A request for a program which CICS has identified as VS COBOL II cannot be executed because either Language Environment is not active in this address space or Language Environment cannot provide support for the COBOL language.

System action

The transaction is abnormally terminated and the program is disabled.

User response

Ensure that the correct Language Environment support is present. Refer to messages issued during CICS initialization to determine why COBOL support is not present.

Module:
DFHAPLI

APCI

Explanation

A request for a program which CICS as identified as an OS/PLI program cannot be executed because either Language Environment is not active in this address space or Language Environment cannot provide support for the PL/I language.

System action

The transaction is abnormally terminated and the program is disabled.

User response

Ensure that the correct Language Environment support is present. Refer to messages issued during CICS initialization to determine why PL/I support is not present.

Module:
DFHAPLI

APCJ

Explanation

A request for a C/370 program could not be executed either because Language Environment was unable to recognize the program as having been compiled under the C/370 Compiler, or because the program was not link-edited with the attribute AMODE(31).

System action

The transaction is abnormally terminated and the program is disabled.

User response

Ensure that the program is link-edited with the attribute AMODE(31). If necessary, recompile the program with a Language Environment conforming compiler such as OS/390 C/C++.

Module:
DFHAPLI

APCK

Explanation

A request for a C program could not be honored either because Language Environment is not active in this address space or because Language Environment cannot provide support for the C language.

System action

The transaction is terminated abnormally and the program is disabled.

User response

Ensure that the correct Language Environment support is present. Refer to messages issued during CICS initialization to determine why C support is not present.

Module:
DFHAPLI

APCL

Explanation

A request for a program which CICS has identified as 'LE-enabled' has failed because Language Environment is unable to execute the program.

System action

The transaction is abnormally terminated and the program is disabled.

User response

Ensure that the program has been compiled either with a Language Environment conforming compiler or with a compiler which is supported by Language Environment in compatibility mode. Refer to the Language Environment Migration Guide to verify this conformance.

If the compiler is supported, and the relevant language migration guides do not indicate any special actions, refer this problem to your installation systems programming facility.

Module:
DFHAPLI

APCN

Explanation

An attempt to release an internal CICS program, a mapset, or a partitionset because the program, mapset or partitionset has not been loaded or has already been deleted. This is probably an internal CICS error.

System action

The transaction is abnormally terminated with a CICS transaction dump. The name of the program for which the RELEASE was attempted can be found in the abend dump at TCAPCPI.

User response

This is either an internal CICS error or is due to the overwriting of CICS internal control blocks. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

For module list, see Diagnostics reference.

Module:
DFHAMPEN, DFHFEP, DFHMCP, DFHMCPE, DFHMCY, DFHPHP, DFHTBSSP, DFHZCPLN

APCO

Explanation

A GETMAIN of storage for LEVEL 2 trace failed during transaction initialization.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHAPXM

APCS

Explanation

An attempt to run the program failed because CICS was unable to make a successful connection with Language Environment to determine the run-time characteristics of the program. This abend is accompanied by message DFHAP1200 which gives the reason code set by Language Environment indicating the nature of the error.

System action

The transaction is abnormally terminated and the program is disabled.

User response

Refer to the Language Environment z/OS Language Environment Debugging Guide manual for the meaning of the reason code, and take whatever action is necessary to correct the error.

Module:
DFHAPLI

APCT

Explanation

One of the following has occurred:

1. The program name in the EXEC CICS HANDLE ABEND program is not usable at the time an abend occurs because:

   - The program is not on the relocatable program library (RPL).
   - The program is disabled.
   - The program cannot be loaded.

2. An attempt to load a mapset or partitionset failed because although the program is defined to CICS

   - It is not available on the RPL, or
   - It is disabled, or
   - It cannot be autoinstalled.

3. An attempt to link to, load, or release an internal CICS program failed because:
   - The program is not on the RPL.
   - The program is disabled.
   - The program cannot be loaded.

System action

The transaction requiring the program is abnormally terminated with a CICS transaction dump.

User response

In cases 1 and 2, define the program, mapset partitionset to CICS using CEDA and ensure it is enabled.

In case 3, the definition of a CICS-provided module is incorrect. Check for associated messages issued during CICS start up.

For module list, see Diagnostics reference.

Problem determination

The trace preceding the abend indicates the program, mapset, or partitionset that could not be loaded, linked to, or released. The name is also in TCAPCEPI.

Module:
DFHACP, DFHAMPEN, DFHCRSP, DFHEDFP, DFHEIG, DFHEIP, DFHEICRE, DFHEIPSH, DFHEIQCS, DFHEIQSJ, DFHFEP, DFHICP, DFHMCP, DFHMCPE, DFHMCY, DFHMELDE, DFHPCPG, DFHPHP, DFHPUP, DFHRDCAL, DFHSII1, DFHTBSGB, DFHTFP, DFHTSRP, DFHZCPLN, DFHZQ00, DFHZXCU

APCW

Explanation

The program language is defined as COBOL but the level of the compiler under which it is compiled cannot be determined. Most probably, the program was compiled under an OS/VS COBOL compiler but the required level of support for that compiler is not present in the system.

System action

The transaction is abnormally terminated and the program is disabled.

User response

The program source will need to be converted and compiled with a Language Environment conforming COBOL compiler such as Enterprise COBOL.

Module:
DFHAPLI

APCY

Explanation

In an MVS/ESA environment, a CICS macro request has been issued from a PL/I or COBOL application. Alternatively, it is possible that the application program has been link edited without the EXEC interface module (for example, DFHECI or DFHELII) which is used by the CICS high-level language programming interface. See the Configuring for details of what has to be done to include this module.

System action

The transaction is abnormally terminated and the program is disabled.

User response

Remove the macro request from the application program.

Module:
DFHAPLI

APCZ

Explanation

An attempt has been made to run an 'old-style' application program (that is, a program with a pre-release 1.6 or a DFHE program stub) that has been link-edited with the RENT or REFR attributes. These types of programs are not reentrant and therefore cannot be loaded into read-only storage.

System action

The transaction is abnormally terminated.

User response

Relink the program without the RENT and REFR attributes.

Module:
DFHAPLI

APGA

Explanation

An error has occurred obtaining a lock within the Program Manager domain.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

Contact your local IBM support center for assistance.

Module:
DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGIS, DFHPGLD, DFHPGLE, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRE, DFHPGRP, DFHPGST, DFHPGUE, DFHPGXE, DFHPGXM

APGB

Explanation

An error has occurred releasing a lock within the Program Manager domain.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

Contact your local IBM support center for assistance.

Module:
DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGIS, DFHPGLD, DFHPGLE, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRE, DFHPGRP, DFHPGST, DFHPGUE, DFHPGXE, DFHPGXM

APGC

Explanation

A transaction has tried to allocate an excessive amount of storage for containers. A transaction must not allocate more than 5% of the storage available for holding containers above the bar.

System action

CICS issues message DFHPG0400, and abnormally terminates the task. CICS processing continues.

User response

If the program is incorrect, correct it to allocate less container storage. If the program is correct, increase MEMLIMIT so that the program does not use more than 5% of the storage available.

Module:
DFHPGCR

APGD

Explanation

The entry point of an assembler application program indicates that it is AMODE(64), but the AMODE(64) CICS stub program, DFHEAG, is not included at the front of the load module.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

For an AMODE(64) assembler application program, ensure that the binder places the AMODE(64) CICS stub, DFHEAG, at the front of the load module. You can use the CICS-supplied procedure DFHEGTAL to translate, assemble and bind the AMODE(64) program. .p:If the assembler application program is not AMODE(64), change any AMODE 64 statements in the program or the binder job to the correct AMODE. You can use the CICS-supplied procedure DFHEITAL to translate, assemble and bind the AMODE(24) or AMODE(31) program.

Module:
DFHAPLI3

APGE

Explanation

The AMODE(64) CICS stub program, DFHEAG, is included at the front of the load module, but the entry point of the assembler application program indicates that it is not AMODE(64).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

For an AMODE(24) or AMODE(31) assembler application program, ensure that the binder places the DFHEAI stub program at the front of the load module. You can use the CICS-supplied procedure DFHEITAL to translate, assemble and bind the AMODE(24) or AMODE(31) program.

For an AMODE(64) assembler application program, change any AMODE statements in the program or the binder job to AMODE 64. If there are no AMODE statements then include an AMODE 64 statement in the program, the binder job, or both, you can use

the CICS-supplied procedure DFHEGTAL to translate, assemble and bind the AMODE(64) program.

Module:
DFHAPLI3

APIA

Explanation

The transaction id (CPIH) of the Pipeline Inbound HTTP router program has been initiated invalidly, probably by entering the id at a terminal. This transaction must only be initiated by CICS internal processes.

System action

The transaction is abnormally terminated.

User response

Do not initiate CPIH directly.

Module:
DFHPIDSH

APIB

Explanation

The Pipeline outbound router program received an error response from the Pipeline Manager when it started the pipeline.

System action

The outbound router program is abnormally terminated.

User response

Examine the trace and associated messages to determine why the Pipeline Manager failed to start successfully.

Module:
DFHPIRT

APIC

Explanation

The Pipeline HTTP outbound router program received an error response from its attempt to do an EXEC CICS GET CONTAINER call to obtain the pipeline name from the DFHWS-PIPELINE container. Both a trace and message DFHPI0998 are issued and these will be an indication of what the error was. If the trace point id is '09DD'x then a CONTAINERERR was returned

to DFHPIRT. A point id of '09DE'x indicates that a LENGERR was returned.

System action

The outbound router program is abnormally terminated.

User response

Examine the trace and associated messages to determine why the Pipeline failed to start successfully.

Module:
DFHPIRT

APIG

Explanation

A provider mode Web service invocation has failed. This may be due to a problem whilst processing a SOAP request message or generating a SOAP response message.

System action

CICS abends the transaction and a SOAP Fault message is sent to the requester.

User response

Examine the CICS trace for exception traces issued from DFHPITL. These will identify the source of the failure. If validation is currently disabled for the failing WEBSERVICE then consider enabling it and reproduce the problem. This causes CICS to call a Java based program to validate the SOAP message against the WSDL for the WEBSERVICE. If the SOAP message is malformed then a message will be issued to describe the problem in more detail.

Module:
DFHPITP

APIH

Explanation

The transaction id (CPIL) of the Pipeline WebSphere MQ Listener program has been initiated invalidly, probably by entering the id at a terminal. This transaction must only be initiated by being triggered by an inbound WebSphere MQ message.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Do not initiate CPIL directly.

Module:
DFHPILSQ

APII

Explanation

An attempt has been made to use WebSphere MQ as the transport for CICS Web Services, but the WebSphere MQ stub CSQCSTUB could not be loaded during CICS Initialisation. The WebSphere MQ library CSQCLOAD needs to be included in the DFHRPL concatenation to permit use of WebSphere MQ as a transport for CICS Web Services

System action

The attempt to use WebSphere MQ as a transport for CICS Web Services has been rejected. Any further such attempts will also be rejected.

Message DFHAP0900 is produced.

The task is abnormally terminated with a CICS transaction dump.

User response

The WebSphere MQ library CSQCLOAD must be included in the DFHRPL concatenation to allow use of WebSphere MQ as a transport for CICS Web Services. This is in addition to the other WebSphere MQ libraries needed for WebSphere MQ support in CICS.

Module:
DFHPILSQ

APIJ

Explanation

A WebSphere MQ function call issued by transaction CPIL was unsuccessful and has set a non-zero reason code. The transaction CPIL is used to start a PIPELINE for a message received from WebSphere MQ.

System action

Message DFHPI0111 is produced, which includes the WebSphere MQ reason code. The task is abnormally terminated with a CICS transaction dump.

User response

Check the WebSphere MQ reason code in the IBM MQ messages manual, and examine the trace to determine why the WebSphere MQ function call failed. You may need help from IBM to resolve this problem.

Module:
DFHPILSQ

APIK

Explanation

The CICS supplied SOAP Handler received an unexpected response from another module.

System action

CICS attempts to run the pipeline in an error mode. No dump is taken.

User response

Examine the CICS joblog for associated messages.

Module:
DFHPISN

APIL

Explanation

The CICS supplied SOAP Handler has failed with a disaster response.

System action

CICS attempts to run the pipeline in an error mode. A dump is taken.

User response

Keep the dump and contact your IBM Support Center.

Module:
DFHPISN

APIM

Explanation

The transaction id (CPIQ) of the Pipeline Inbound WebSphere MQ router program has been initiated invalidly, probably by entering the id at a terminal. This transaction must only be initiated by CICS internal processes.

System action

The transaction is abnormally terminated.

User response

Do not initiate CPIQ directly.

Module:
DFHPIDSQ

APIN

Explanation

The Web Services Atomic Transaction (WS-AT) handler has detected a problem. The transaction id (CPIS) of the Pipeline WSAT resync program has been initiated invalidly, probably by entering the id at a terminal. This transaction must only be initiated by CICS internal processes.

System action

The transaction is abnormally terminated.

User response

Do not initiate CPIS directly.

Module:
DFHPIR

APIO

Explanation

The Web Services Atomic Transaction (WS-AT) handler has detected a problem. The WSAT Registration Services program has encountered an error, which has prevented it from completing the processing of a registration or 2PC protocol request. The program is abnormally terminated.

System action:

User response

Examine the trace and associated messages to determine why the Registration Services program has failed.

Module:
DFHPIRS

APIP

Explanation

The Web Services Atomic Transaction (WS-AT) handler has detected a problem. The WSAT Coordination Context header handler program has encountered an unrecoverable error, which has prevented it from successfully creating or processing a coordination context. The program is abnormally terminated.

System action:

User response

Examine the trace and associated messages to determine why the Coordination Services program has failed.

Module:
DFHWSATH

APIQ

Explanation

The Web Services Atomic Transaction (WS-AT) handler has detected a problem. The WSAT application handler program has encountered an unrecoverable error, which has prevented it from creating or processing a registration message or a protocol message. The program is abnormally terminated.

System action:

User response

Examine the trace and associated messages to determine why the Registration/Protocol Services program has failed.

Module:
DFHWSATX.

APIR

Explanation

The Web Services Atomic Transaction (WS-AT) handler has detected a problem. The WSAT application handler program has encountered an attempt to use one-way messages in a WS-AT message. This combination is not permitted in WS-AT. The program is abnormally terminated.

System action:

User response

Examine the trace and associated messages to determine which messages are at fault.

Module:
DFHWSATH.

APIS

Explanation

CICS encountered a GETMAIN failure during transaction initialization.

System action

A severe error message and system dump should have preceded this abend.

User response

Use related diagnostics to determine the cause of the problem.

Module:
DFHPIXM.

APIT

Explanation

The Web Services Atomic Transaction (WS-AT) handler has detected a problem. The attempt to resynchronize outstanding units of work has failed.

System action

The transaction is abnormally terminated.

User response

Investigate why the UOWs cannot be resynchronized.

Module:
DFHPIR

APIU

Explanation

The Pipeline WebSphere MQ Listener program has encountered an attempt to parse a target URI that is longer than 255 bytes. The maximum length of a target URI in the RFH2 header is expected to be 255 bytes.

System action

The program is abnormally terminated.

User response

Examine the trace and associated messages to determine which messages are at fault.

Module:
DFHPILSQ.

Module:

APP1

Explanation

The DFHIC TYPE=GET response code was not a normal response.

System action

The transaction is abnormally terminated with a CICS transaction :i1.DFHP3270 abend codes dump.

User response

Analyze the dump. The response code is in the low-order byte of register 0.

Module:
DFHP3270

APP2

Explanation

The length of data that has been passed to DFHP3270 via temporary storage is less than or equal to 5.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check the user DFHTEP. If it is not at fault, submit an APAR.

If this abend has occurred, the data that DFHP3270 obtained from temporary storage was probably put there with an incorrect length. The user may have requested indirectly that this data be placed in temporary storage either by an application request for printing (for example ISSUE PRINT) or by pressing the Print Request key. However, CICS should control the data length for this request. Under normal circumstances, the only way the user could have requested directly that data is to be placed in temporary storage is in the user's TEP. The user should check any invocations of DFHIC TYPE=PUT in handling print requests, particularly when dealing with the "printer unavailable or busy" condition, and ensure that the length field is set correctly.

Problem determination

Register 6 points to the data retrieved from temporary storage via a DFHIC TYPE=GET macro invocation. The layout of this data is:

- Terminal data area length (2 bytes)
- Write control indicator (1 byte)
- Write control or carriage control character (1 byte)
- Data (variable length)

Analysis: DFHP3270 has been called to handle a print request from a 3270 Information Display System terminal. It obtains from temporary storage the data to be printed, via a DFHIC TYPE=GET invocation. It ensures that some data to be printed is present. The area returned from temporary storage contains the data to be printed preceded by 4 bytes as described above. DFHP3270 has found that, because the length of data passed to it is less than or equal to 5, there is no data to be printed.

Module:
DFHP3270

APP3

Explanation

An attempt to request data has been sent to a nonprinter or unsupported device type by either:

- A terminal operator entering CSPP as a transaction code, **or**
- A transaction issuing a DFHTEP request.

System action

The transaction is abnormally terminated. A CICS transaction dump **is not** provided.

User response

1. Ensure that the terminal operator ceases to use CSPP as a transaction code, or

2. Correct the user DFHTEP program.

Module:
DFHP3270

APR1

Explanation

An abnormal DFHIC TYPE=PUT response code was received during print key processing.

System action

The transaction is abnormally terminated with a CICS transaction dump. The keyboard of the terminal on which the print key was depressed remains locked to indicate the failure of the operation.

User response

Analyze the dump. The response code is in low-order byte of register 0.

Module:
DFHPRK

APSJ

Explanation

The abending transaction invoked the system spooler initialization program (DFHPSIP) illegally, that is from a program other than the CICS module, DFHSIJ1.

System action

CICS terminates the transaction abnormally. The EXEC CICS HANDLE ABEND command can not handle this abend.

User response

Remove any calls or links to DFHPSIP from your application programs. If you can find no invocation of DFHPSIP in your application, you need further assistance to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPSIP

APST

Explanation

A task issued a SPOOL command without the mandatory NOHANDLE operand.

System action

CICS terminates the task abnormally with a dump.

User response

Correct the syntax of the command, specifying NOHANDLE.

Module:
DFHEPS

APSU

Explanation

The CICS SVC passed an invalid JES interface return code to the CICS system spooler (an MVS subtask).

System action

CICS terminates the task abnormally.

User response

This is an internal error - check any JES failures that occurred at the same time.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPSPST

APSV

Explanation

A storage area for VSAM macro return codes contained an invalid value.

System action

CICS terminates the task abnormally with a dump.

User response

Check the syntax and input data of the spool commands issued by the failing transaction. Check any JES failures that occurred at the same time.

Module:
DFHPSPST

APSW

Explanation

An abend occurred within a CICS system spooler subtask.

System action

CICS terminates the task abnormally with a dump.

User response

This is an internal CICS error. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPSPST

APSX

Explanation

A CICS storage area used for notification of invalid parameters contained an invalid value.

System action

CICS terminates the task abnormally with a dump.

User response

Check the syntax and input data of the spool commands issued by the failing transaction. Check any JES failures that occurred at the same time.

Module:
DFHPSPST

APSY

Explanation

A CICS storage area for MVS macro return codes contained an invalid value.

System action

CICS terminates the task abnormally with a dump.

User response

Check the syntax and input data of the spool commands issued by the failing transaction. Check any JES failures that occurred at the same time.

Module:
DFHPSPST

APSZ

Explanation

A CICS area, used to store a JES interface return code, contained an invalid value.

System action

CICS terminates the task abnormally with a dump.

User response

Check the syntax and input data of the spool commands issued by the failing transaction. Check any JES failures that occurred at the same time.

This is an internal CICS error. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPSPST

APTI

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHPSPST

APTJ

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHPSPST

APUA

Explanation

An internal error was detected when module DFHPUP was invoked. The GETSTG parameter is missing on a call to DFHPUP (PUPF).

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUB

Explanation

An internal error was detected when module DFHPUP was invoked. The GETSTG parameter is missing on a call to DFHPUP (PUPU).

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUC

Explanation

An internal error was detected when module DFHPUP was invoked. An invalid function code was supplied for a domain call to DFHPUP.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUD

Explanation

The RDO language definition table (DFHEITSP) could not be located in the library.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

Ensure that module DFHEITSP is in the library and is valid for this release of CICS.

Module:
DFHPUP

APUE

Explanation

The RDO language definition table (DFHEITSP) could not be loaded because of a lack of available storage.

System action

Processing is abnormally terminated with an operating system dump.

User response

Allocate more storage and resubmit the offline COPY or APPEND command(s) that failed.

Module:
DFHPUP (Batch environment)

APUF

Explanation

Either the RDO language definition table is invalid or it is missing from the library.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

Ensure that module DFHEITSP is in the library and is valid for this release of CICS.

Module:
DFHPUP

APUG

Explanation

An internal error was detected in module DFHPUP. Storage could not be obtained for the CSD record buffer.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUH

Explanation

An internal error was detected in module DFHPUP. Storage could not be obtained for the argument list.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUI

Explanation

An internal error was detected in module DFHPUP. Storage cannot be freed for the argument list.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUJ

Explanation

An internal error was detected in module DFHPUP. Storage cannot be freed for the CSD record buffer.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUK

Explanation

- In a CICS environment, storage could not be acquired for a buffer to contain logged RDO commands in the CEDA transaction.
- In a batch environment, storage could not be acquired for a buffer to contain back-translated resource definitions from the CSD.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUL

Explanation

Note:

The description of this abend also applies to APUM, APUN and APUO.

CICS cannot find a match for a function code in the language definition table, because the parameterized resource definition contains an unrecognized resource type code.

The abend code issued depends on the DFHPUP operation that was invoked before the error occurred:

Abend
    DFHPUP operation

APUL
    FLATTEN

APUM
    TRANCASE

APUN
    COMPARE

APUO
    BACKTRANS

The cause of the abend is either:

1. A language definition table (DFHEITSP or DFHEITCU) in the library is invalid for the CICS release you are running, **or**

2. A CICS logic error has occurred.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

Your response depends on which of the two possible reasons apply:

1. Ensure that the DFHEITSP and DFHEITCU modules in the library are valid for this release of CICS.

2. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUM

Explanation

Refer to the description of abend APUL.

System action:

User response:

Module:
DFHPUP

APUN

Explanation

Refer to the description of abend APUL.

System action:

User response:

Module:
DFHPUP

APUO

Explanation

Refer to the description of abend APUL.

System action:

User response:

Module:
DFHPUP

APUP

Explanation

An internal error occurred in DFHPUP processing of the language definition table for RDO. There was a stack error building a keyword list for the syntax tree.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUQ

Explanation

An internal error occurred in DFHPUP processing of the language definition table for RDO. Too many keywords found in syntax expansion.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APUR

Explanation

An internal error occurred in DFHPUP processing of an argument list or a CSD record buffer. The data type for a keyword field conflicts with the data type specified in the language definition table.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

Ensure that the module DFHEITSP is in the library and is valid for this release of CICS.

Module:
DFHPUP

APUS

Explanation

An internal error occurred in DFHPUP processing of a CSD record buffer. The integer data length for a keyword field is invalid.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

Ensure that the module DFHEITSP is in the library and is valid for this release of CICS.

Module:
DFHPUP

APUT

Explanation

An internal error occurred in DFHPUP processing of an argument list or a CSD record buffer. The keyword existence bit number, which is the KEP(1) value in language definition table DFHEITSP, is not valid.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump.
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

Ensure that the module DFHEITSP is in the library and is valid for this release of CICS.

Module:
DFHPUP

APUZ

Explanation

CICS has found an unrecognized resource type code in a CSD record. The unrecognized code does not match any of the function codes in the language definition table. This abend can occur for one of the following reasons:

1. You are using a CICS release that does not support a type of definition that was created on the CSD file by a later CICS release.
2. The language definition table (DFHEITSP or DFHEITCU) is invalid for this CICS release.

3. The CSD manager (DFHDMP) has passed an invalid CSD record buffer to DFHPUP. This is a CICS internal logic error.

System action

- In a CICS environment, the CEDA transaction is abnormally terminated with a CICS transaction dump
- In a batch environment, processing is abnormally terminated with an operating system dump.

User response

Determine which of the possible reasons caused the error. If you can eliminate reasons 1 and 2, you can assume that reason 3 applies.

Take action corresponding to the reason you have established as follows:

1. Avoid operations on groups containing definition-types that are unsupported by the CICS release you are running.
2. Ensure that the library contains versions of DFHEITSP and DFHEITCU that are valid for the CICS release you are running.
3. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPUP

APXA

Explanation

The user transaction's profile could not be found.

System action

The task is abnormally terminated with a CICS transaction dump. The user transaction is not started.

User response

Check that the profile name in the user transaction definition is correct, and that this profile has been defined.

Module:
DFHAPXM

ARxx abend codes

ARCB

Explanation

CICS has attempted to enable a task-related user exit, or a global user exit during initialization, but failed because the exit program could not be found.

On all types of start, CICS attempts to enable DFHEDP, the EXEC DLI task-related user exit and DFHLETRU, the language environment task-related user exit. On an emergency restart, CICS enables transaction backout exit programs as specified by the first two TBEXITS system initialization parameters.

On all types of start, CICS attempts to enable file control backout programs as specified by the third, fourth, fifth and sixth TBEXITS system initialization parameters.

System action

CICS issues a message to the console indicating which exit program is involved. CICS initialization then terminates abnormally with a system dump.

User response

If the associated message indicates that program DFHEDP could not be found, check that IBM-supplied group DFHEDP is included in the group list used at CICS cold or initial start time.

If the associated message indicates that program DFHLETRU could not be found, check that IBM-supplied group DFHMISC is included in the group list used at CICS cold or initial start time.

For transaction backout exit programs, including the file control backout programs, ensure the program has been defined and is in a library available to CICS.

If necessary, use the dump to find out why the exit program could not be enabled.

Module:
DFHRCEX

ARHA

Explanation

The SAA resource recovery interface has been invoked with an invalid first parameter. The first parameter should be the code of the function to be performed. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events before this error occurred (such as the modules called and their parameters) plus details of the error itself. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPIR

ARHB

Explanation

The SAA resource recovery interface has been invoked with an invalid number of parameters for the call.

System action

the transaction is abnormally terminated with a CICS transaction dump.

User response

The exception trace point produced with this abend contains the SAA resource recovery verb name that was issued incorrectly. Use this to determine where the application program was in error and amend application program accordingly. The Systems Application Architecture Common Programming Interface Resource Recovery Reference, SC31-6821, provides a detailed description of the SAA resource recovery verbs and how they should be called.

Module:
DFHCPIR

ARHC

Explanation

The SAA resource recovery interface has detected an unexpected return code from the syncpoint program. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

A level 2 trace for 'CP' of the transaction shows the course of events before this error occurred (such as the modules called and their parameters) plus details of the error itself. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCPIR

ARLA

Explanation

An error has occurred obtaining a lock within the Resource Lifecycle domain.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

Contact your local IBM support center for assistance.

Module:
DFHRLDM

ARLB

Explanation

An error has occurred releasing a lock within the Resource Lifecycle domain.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

Contact your local IBM support center for assistance.

Module:
DFHRLDM

ARLC

Explanation

An attempt has been made to run the CICS internal task CRLR as a user transaction.

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the attempt was made to run CRLR as a user transaction.

Module:
DFHRLRP

ARLD

Explanation

The Resource Lifecycle resolution transaction, CRLR, experienced a failure.

System action

CICS terminates the task with a transaction dump.

User response

Contact your local IBM support center for assistance.

Module:
DFHRLRP

ARM0

Explanation

An attempt was made to attach a transaction specifying DFHRMXN3 as the program to be given control, but the transaction was not internally attached by CICS.

DFHRMXN3 is for use by CICS system transaction CSKP. This provides support for activity keypoints,

System action

The transaction is abnormally terminated. CICS processing continues.

User response

Establish why an attempt was made to attach CSKP incorrectly, or why a transaction definition specified DFHRMXN3 as the program to be given control.

Module:
DFHRMXN3

ARP2

Explanation

The server controller detected an internal error during CICS ONC RPC enable processing.

System action

One of the following messages is issued: DFHRP0508, DFHRP0509, DFHRP0528, DFHRP0529, DFHRP0590, DFHRP0591.

User response

See the user response for the message.

Module:
DFHRPMS

ARP4

Explanation

The server controller has performed an exception disable because of an internal error.

System action

One of the following messages is issued: DFHRP0503, DFHRP0559, DFHRP0697, DFHRP0726, DFHRP0728, DFHRP0730, DFHRP0741.

User response

You need further assistance from IBM to resolve this problem. See External Interfaces Guide and Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRPMS

ARP5

Explanation

An invalid attempt was made to start the server controller.

System action

The following message is issued: DFHRP0640.

User response

See the user response for the message.

Module:
DFHRPMS

ARP9

Explanation

There was not enough storage for the connection manager.

System action

None.

User response

You need further assistance from IBM to resolve this problem. See External Interfaces Guide and Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRPC01

ARPA

Explanation

An unexpected response from DFHSUSN has occurred when trying to sign off a user of the CRTE transaction in the target system when processing a CANCEL request.

This abend can be caused by incorrect use of the VTAM VARY INACT command. Otherwise it indicates that there may be an error in CICS.

System action

The CSSF transaction (CRTE cancel processor transaction) is terminated with an ARPA abend.

User response

Ensure that the VTAM VARY inact command is used correctly. If this is not the cause of the abend, you need further assistance from IBM to correct this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRTC

ARPF

Explanation

The alias could not be initialized.

System action

One of the following messages is issued: DFHRP0103, DFHRP0104, DFHRP0106, DFHRP0108, DFHRP0109.

User response

See the user response for the message.

Module:
DFHRPAS

ARPG

Explanation

The alias was not able to link to the CICS program or the **Encode** function of the converter one of the following reasons:

- The userid supplied for the alias was not valid.
- The CICS program is not defined as a resource to the external security manager.
- The CICS program name is not valid.
- The CICS program was on a different system from CICS ONC RPC, and the specified system name was not valid.
- The converter program name was not valid.
- The converter program is defined as remote.
- The alias is not authorized to use the converter

System action

One of the following messages is issued: DFHRP0121, DFHRP0131, DFHRP0138, DFHRP0139, DFHRP0141, DFHRP0156, DFHRP0157, DFHRP0159.

User response

See the user response for the message.

Module:
DFHRPAS

ARPH

Explanation

The alias detected a global work area error.

System action

The following message is issued: DFHRP0118.

User response

See the user response for the message.

Module:
DFHRPAS

ARPI

Explanation

The alias detected a logic error.

System action

One of the following messages is issued: DFHRP0107, DFHRP0133, DFHRP0135, DFHRP0137, DFHRP0143, DFHRP0144, DFHRP0148, DFHRP0149, DFHRP0155, DFHRP0164, DFHRP0168, DFHRP0170.

User response

See the user response for the message.

Module:
DFHRPAS

ARPJ

Explanation

The alias ends for one of the following reasons:

- An unexpected response was received from CICS during transaction initialization.
- The external security manager is no longer available.
- The remote CICS region in which the CICS program was running abended.
- The CICS program, which was running in a remote CICS region, abended.
- The reply could not be sent to the client.

System action

One of the following messages is issued: DFHRP0105, DFHRP0132, DFHRP0136, DFHRP0140, DFHRP0145, DFHRP0146, DFHRP0147, DFHRP0150, DFHRP0165, DFHRP0166, DFHRP0167.

User response

See the user response for the message.

Module:
DFHRPAS

ARPK

Explanation

The alias detected a CICS logic error.

System action

One of the following messages is issued: DFHRP0102, DFHRP0122, DFHRP0142, DFHRP0160.

User response

See the user response for the message.

Module:
DFHRPAS

ARPL

Explanation

The alias detected an authorization error.

System action

One of the following messages is issued: DFHRP0119, DFHRP0120, DFHRP0132, DFHRP0134.

User response

See the user response for the message.

Module:
DFHRPAS

ARPM

Explanation

The alias detected an error in user code.

System action

One of the following messages is issued: DFHRP0161, DFHRP0162, DFHRP0163, DFHRP0169.

User response

See the user response for the message.

Module:
DFHRPAS

ARPN

Explanation

The alias detected an error while trying to switch TCBs.

System action

The following message is issued: DFHRP0151.

User response

See the user response for the message.

Module:
DFHRPAS

ARPO

Explanation

The alias program detected an abend.

System action

One of the following messages is issued: DFHRP0181, DFHRP0182, DFHRP0183.

User response

See the user response for the message.

Module:
DFHRPAS

ARPU

Explanation

The connection manager could not access the CICS ONC RPC data set, and received an error response when it tried to send message DFHRP1512.

System action

None.

User response

You need further assistance from IBM to resolve this problem. See External Interfaces Guide and Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRPC01

ARPV

Explanation

The connection manager received an unexpected response from CICS following an EXEC CICS command.

System action

One of the following messages is issued: DFHRP1540, DFHRP1651, DFHRP1954.

User response

See the user response for the message.

Module:
DFHRPC0E

ARPW

Explanation

The connection manager received an unexpected response from CICS following an EXEC CICS command.

System action

The following message is issued: DFHRP1969.

User response

See the user response for the message.

Module:
DFHRPC0E

ARPX

Explanation

The connection manager was started against an invalid terminal.

System action

The following message is issued: DFHRP1522.

User response

See the user response for the message.

Module:
DFHRPC01

ARPZ

Explanation

The connection manager has insufficient authority.

System action

The following message is issued: DFHRP1902.

User response

See the user response for the message.

Module:
DFHRPC0B

ARSA

Explanation

An attempt has been made to invoke the CRST transaction from a terminal. CRST is an internal CICS transaction and cannot be invoked in this way.

System action

The task is abnormally terminated.

User response

None.

Module:
DFHRSTK

ARTA

Explanation

The task does not own a terminal as its principal facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that DFHRTE has not been specified as the program for a task other than CRTE. Ensure that CRTE has not been initiated by means other than terminal input.

Module:
DFHRTE

ARTB

Explanation

There is no input TIOA or the data length is zero.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that DFHRTE has not been specified as the program for a task other than CRTE. Ensure that CRTE has not been initiated by means other than terminal input.

Module:
DFHRTE

ARTC

Explanation

The link to the required system is not usable for an unknown reason.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRTE

ARTD

Explanation

An internal logic error has been detected.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRTE

ARTE

Explanation

An error was encountered when attempting to read from or write to temporary storage.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Determine the cause of the temporary storage problem and correct it.

Module:
DFHRTE

ARTF

Explanation

An attempt has been made to use the routing transaction (CRTE) from a terminal that has a permanent transaction code set.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer.

Module:
DFHRTE

ARTG

Explanation

CICS could not find the profile specified for a transaction being routed.

System action

CICS terminates the task abnormally with a dump.

User response

Check your transaction and profile definitions.

Module:
DFHRTE

ARTH

Explanation

An error (INVALID, DISASTER or EXCEPTION response) has occurred on a call to schedule a remote terminal delete by DFHRTE during sign-off for a surrogate terminal session running CRTE. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

CICS terminates the task abnormally with a dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHRTE

ARUA

Explanation

An exception condition was returned on the ADD_LINK during the BIND phase of ATTACH for the transaction invoked by the RUN command.

System action

CICS terminates the invoked transaction abnormally with a dump. The RUN SYNCHRONOUS command that was issued by the application returns with an error response of INVREQ (RESP2 28).

User response

More details can be found in the trace.

Module:

DFHXMRU

ARUB

Explanation

A RUN SYNCHRONOUS command caused an attempt to attach a transaction defined as remote. Only transactions defined as local may be run synchronously.

System action

CICS terminates the invoked transaction abnormally with a dump. The RUN SYNCHRONOUS command that was issued by the application returns with an error response of ACTIVITYERR or PROCESSERR (RESP2 27).

User response

More details can be found in the trace.

Module:
DFHXMXM

ARUC

Explanation

A RUN SYNCHRONOUS command caused an attempt to attach a transaction with an invalid USERID.

System action

CICS terminates the invoked transaction abnormally with a dump. The RUN SYNCHRONOUS command that was issued by the application returns with a resp2 value of 27.

User response

More details can be found in the trace.

Module:
DFHXMRU

ARUD

Explanation

A RUN SYNCHRONOUS command caused an attempt to attach a child transaction. The parent transaction which issued the RUN SYNCHRONOUS command was then purged before the child task could be run.

System action

CICS terminates the invoked transaction abnormally with a dump.

User response

None

Module:
DFHXMXM

ARXA

Explanation

A transactional EXCI request has been received from a batch region. CICS has encountered an error when attempting to express interest in an RRMS Unit of Recovery.

DFHRXUW provides an exception trace, console message DFHRX0002, and possibly a system dump (depending on the options in the dump table).

System action

The transaction is terminated with a CICS transaction dump.

User response

Resource Recovery Services (RRS) may have been shut down after the request was received by CICS. If this is the case, retry the EXCI request once RRS has been restarted.

If this is not the case, use the exception trace provided by the RX domain to determine the reason for the failure. You might need further assistance from IBM in this situation. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRXUW

ARXB

Explanation

An error (EXCEPTION, DISASTER, INVALID, KERNERROR or PURGED) has occurred on an ADD_LINK call to the recovery manager (RM) domain. For errors other than EXCEPTION, the RM domain provides an exception trace, a console message, and possibly a system dump (depending on the options in the dump table).

For all errors, DFHRXUW provides an exception trace, console message DFHRX0002, and possibly a system dump (depending on the options in the dump table).

System action

The transaction is terminated with a CICS transaction dump.

User response

See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRXUW

ARXC

Explanation

A transactional EXCI request has been received from a batch region when either:

- CICS did not register as a resource manager with Recoverable Resource Management Services (RRMS) because system initialization parameter RRMS=NO was specified.

- the RX domain did not succesfully complete its initialization.

System action

The transaction is terminated with a CICS transaction dump.

User response

If CICS was started with system initialization parameter RRMS=NO, restart CICS specifying RRMS=YES (or route transactional EXCI requests to another CICS system).

Otherwise, investigate why the RX domain did not initialize succesfully. A failure during initialization of the domain is accompanied by a console message and a system dump. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRXUW

ARZ2

Explanation

An attempt to service a GIOP request failed during task attach due to required resources being unobtainable, or missing information from request data.

System action

The request fails and the task is abnormally terminated with abend code ARZ2. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHRZXM

ARZ3

Explanation

An attempt to service a GIOP request failed during task attach due to required resources being unobtainable, or missing information from request data.

System action

The request fails and the task is abnormally terminated with abend code ARZ3. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHRZIX, DFHRZTCX

ARZ4

Explanation

An attempt to service a GIOP request failed during task attach due to required resources being unobtainable, or missing information from request data.

System action

The request fails and the task is abnormally terminated with abend code ARZ4. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHRZRM, DFHRZSO1

ARZ5

Explanation

The target request stream task detected that the source task was no longer active. The target task is unable to process the request it was attached for.

System action

The request fails and the task is abnormally terminated with abend code ARZ5. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Investigate why the source task has terminated before this target began initialisation. There may be relevant messages in the CICS log. Otherwise a CICS trace or system dump will be required to identify the problem. One possible cause is that the source task was timed out and purged before the target task started.

Module:
DFHRZXM

ARZE

Explanation

A command has failed due to a serious failure in a CICS component (resource manager).

System action

The transaction is abnormally terminated with abend code ARZE. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHRZLN, DFHRZRM, DFHRZSO, DFHRZSO1, DFHRZTA, DFHRZXM

ARZF

Explanation

A command has failed due to a serious failure in a CICS component (resource manager).

System action

The transaction is abnormally terminated with abend code ARZF. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHRZLN, DFHRZRM, DFHRZSO, DFHRZSO1, DFHRZTA, DFHRZXM

ARZI

Explanation

A command has failed due to a serious failure in a CICS component (resource manager).

System action

The transaction is abnormally terminated with abend code ARZI. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHRZLN, DFHRZRM, DFHRZSO, DFHRZSO1, DFHRZTA, DFHRZXM

ARZJ

Explanation

A command has failed due to a serious failure in a CICS component (resource manager).

System action

The transaction is abnormally terminated with abend code ARZJ. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHRZLN, DFHRZRM, DFHRZSO, DFHRZSO1,
DFHRZTA, DFHRZXM

ARZR

Explanation

A request stream task encountered a failure while
trying to join with an existing target request stream
task. This may be caused by the existing target task
taking too long to respond and the new task reaching
its DTIMOUT limit.

System action

The request fails and the task is abnormally
terminated with abend code ARZR. CICS takes a

transaction dump, unless module DFHDUIO is not
loaded.

User response

Use the transaction dump to determine the cause
of the failure. For further assistance, or if module
DFHDUIO is not loaded and no transaction dump is
available, contact your system programmer.

Module:
DFHRZJN

ASxx abend codes

ASCA

Explanation

A DFHSC TYPE=GETMAIN request has resulted in a
call to the storage manager (SM) domain which has
returned an INVALID or DISASTER response.

System action

The transaction is terminated with a CICS transaction
dump.

User response

There has been an earlier failure which led to
the response from the storage manager domain.
Investigate the earlier failure (which is accompanied
by a console message and a system dump).

Module:
DFHSMSCP

ASCB

Explanation

A DFHSC TYPE=FREEMAIN request has resulted in a
call to the storage manager (SM) domain which has
returned an INVALID or DISASTER response.

System action

The transaction is terminated with a CICS transaction
dump.

User response

There has been an earlier failure which led to
the response from the storage manager domain.
Investigate the earlier failure (which is accompanied
by a console message and a system dump).

Module:
DFHSMSCP

ASCP

Explanation

A task which has issued an unconditional DFHSC
TYPE=GETMAIN request has been purged while
waiting for sufficient contiguous main storage to
become free.

System action

The task is abnormally terminated with a CICS
transaction dump.

User response

Investigate why the task was purged. This will either
have been as a result of a purge from the main
terminal operator via the CEMT transaction, or by the
task being timed out after waiting for longer than the
DTIMOUT (deadlock timeout) value specified for the
transaction.

If the task was purged by the main terminal operator
then this may have been in an attempt to clear the
system which appeared to be deadlocked for some
reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded then this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased then the number of tasks in the system should be reduced to avoid short-on-storage situations. Another possibility would be to increase the value of the DTIMOUT option for the transaction.

Module:
DFHSMSCP

ASCR

Explanation

A DFHSC macro request has been issued with an invalid request type.

System action

The transaction is terminated with a CICS transaction dump.

Detection of the invalid request by DFHSMSCP causes a console message and a system dump to be produced.

User response

Use the associated console message and system dump to investigate the problem.

Module:
DFHSMSCP

ASDA

Explanation

The default shutdown transaction (CESD) has been started directly from a terminal. This is not permitted. This transaction can only be started internally by CICS.

System action

The transaction is abnormally terminated with a transaction dump.

User response

None.

Module:
DFHCESD

ASFA

Explanation

An internal logic error occurred in DFHSFP because of an unexpected response from EXEC CICS. This abend code is usually accompanied by message DFHCE3598 which contains the associated return codes.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHSFP

ASFB

Explanation

An attempt was made to execute the CICS signoff program without an associated terminal.

System action

CICS terminates the transaction with a dump. This abend code is usually accompanied by message DFHCE3598.

User response

Only use the signoff program when there is a related terminal.

Module:
DFHSFP

ASFC

Explanation

An attempt was made to execute the CICS signoff program against an APPC session.

System action

CICS terminates the transaction with a dump. This abend code is usually accompanied by message DFHCE3598.

User response

Only use the signoff program when there is a related terminal.

Module:

DFHSFP

ASH2

Explanation

An attempt to service a Scheduler Services request failed due to required resources being unobtainable. This may result in a request being unserviceable or an Activity being marked abended depending on the nature of the failure.

System action

The transaction is abnormally terminated with abend code ASH2. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Check that any required links between regions are available. Check the Distributed Routing Program name is correct and the program is usable. Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHSHXM

ASH3

Explanation

A transaction bound to a Scheduler Services request has backed out. No other abend code has been set. The SH abend request uses this abend code by default.

System action

The transaction continues backing out. A subsequent task will process the SH abend request.

User response

None.

Module:
DFHSHRM

ASH4

Explanation

A Scheduler Services request attempted to attach a transaction that is currently disabled.

System action

The transaction is abnormally terminated with abend code ASH4. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Check the status of the transaction. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHSHXM

ASHA

Explanation

A command has failed due to a serious failure in a CICS component (resource manager).

System action

The transaction is abnormally terminated with abend code ASHA. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHSHDM

ASHB

Explanation

A command has failed due to a serious failure in a CICS component (resource manager).

System action

The transaction is abnormally terminated with abend code ASHB. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHSHDM

ASHR

Explanation

A command has failed due to a serious failure in a CICS component (resource manager).

System action

The transaction is abnormally terminated with abend code ASHR. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHSHRSP

ASHU

Explanation

In the process of transferring the request from one region to another an abend occurred due to a routing failure. The Request cannot be routed to a suitable region. The request is unserviceable.

System action

The transaction is abnormally terminated with abend code ASHU. CICS takes a transaction dump, unless module DFHDUIO is not loaded.

User response

Check the links between regions are available. Check the Distributed Routing Program name is correct and the program is usable. Use the transaction dump to determine the cause of the failure. For further assistance, or if module DFHDUIO is not loaded and no transaction dump is available, contact your system programmer.

Module:
DFHSHRSP

ASIA

Explanation

An error has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump. CICS then terminates abnormally.

User response

See the related message from the domain that detected the original error.

Module:
DFHSII1

ASIB

Explanation

An attempt has been made to run the CICS internal task CPLT as a user transaction.

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the attempt was made to run CPLT as a user transaction.

Module:
DFHSIPLT

ASJ7

Explanation

An error has caused the JVM server to receive a SIGABRT signal.

System action

CICS produces a system dump and terminates immediately.

User response

Contact IBM support.

Module:
DFHSJSC

ASJA

Explanation

An error has occurred obtaining a lock within the Java domain.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

Contact your local IBM support center for assistance.

Module:
DFHSJST

ASJB

Explanation

An error has occurred releasing a lock within the Java domain.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

Contact your local IBM support center for assistance.

Module:
DFHSJST

ASJH

Explanation

A JVM has terminated due to a program check or other reason.

System action

CICS terminates the task with a transaction dump.

User response

Check the JVM's STDOUT and STDERR files, and any JVM dumps for further information.

Module:
DFHSJIN

ASJI

Explanation

Program DFHSJJI was called using EXEC CICS LINK, but no channel was provided.

System action

CICS terminates the task with a transaction dump.

User response

Change the application program to pass the correct channel.

Module:
DFHSJJI

ASJL

Explanation

An error has occurred after linking to an application running in Liberty.CICS issues this abend in order to release resources associated with the task that issued the LINK.

System action

CICS abnormally terminates the task. CICS processing continues.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHSJJS

ASJO

Explanation

The JVMServer resolution transaction CJSR, has encountered an internal error.

The CICS system transaction CJSR provides support for initializing new JVMServers. If this fails it is likely that there is an underlying error with the CICS system.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHSJIT

ASJS

Explanation

A Java application running in a JVMSERVER invoked the System.exit() method.

System action

CICS produces a system dump and terminates immediately.

User response

Change the application to avoid invoking System.exit(), or implement a Java Security Manager to prevent System.exit() from being invoked.

Module:
DFHSJSC

ASJR

Explanation

DFHSJJS was invoked by a caller running within a JVM server. While the request was being processed, the JVM server terminated. DFHSJJS is not able to return control to the caller in the usual manner.

System action

The transaction is abnormally terminated. CICS processing continues.

User response

None.

Module:
DFHSJJS

ASNA

Explanation

An internal logic error occurred in DFHSNP because of an unexpected response from EXEC CICS.

System action

CICS terminates the transaction with a dump. This abend code is usually accompanied by message DFHCE3548.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHSNP

ASNB

Explanation

An attempt was made execute the CICS sign on program without an associated terminal. This abend code is usually accompanied by message DFHCE3548.

System action

CICS terminates the transaction with a dump.

User response

Only use the sign on program when there is a related terminal.

Module:
DFHSNP

ASNC

Explanation

The signon program attempted to send a request to the user but failed to do so.

System action

CICS terminates the transaction with a dump. This abend code is usually accompanied by message DFHCE3548.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHSNP

ASND

Explanation

A request from DFHSNTU to ENQ on the address of the SNEX has failed during signoff terminal user.

System action

A transaction dump is taken and the task which issued the signoff is abended.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHSNTU

ASOA

Explanation

The TCP/IP listener task CSOL has been incorrectly started from a terminal. It can only be enabled by the Sockets Domain at CICS system initialization or by using CEMT SET TCPIP OPEN or the equivalent SPI function.

System action

The transaction is abnormally terminated with a transaction dump.

User response

None.

Module:
DFHSOL

ASOB

Explanation

The Sockets Domain has encountered a locking error while attempting to issue a lock.

System action

The transaction is abnormally terminated with a transaction dump.

User response

The exception trace prior to this abend gives more information as to why this abend was issued.

Module:
DFHSOCK DFHSODM DFHSOIS DFHSOLS DFHSOUE DFHSOS00-23

ASOC

Explanation

The TCP/IP listener task CSOL has encountered an unlocking error while attempting to issue an unlock.

System action

The transaction is abnormally terminated with a transaction dump.

User response

The exception trace prior to this abend gives more information as to why this abend was issued.

Module:
DFHSOL

ASOD

Explanation

The TCP/IP transaction attach module DFHSOXM encountered an error during the bind stage of transaction attach processing for a new task.

System action

The transaction is abnormally terminated with a transaction dump.

User response

The exception trace prior to this abend gives more information as to why this abend was issued.

Module:
DFHSOXM

ASOL

Explanation

The TCP/IP listener task CSOL has abended.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Investigate why the transaction was abended. The exception trace prior to this abend gives more information as to why this abend was issued.

Module:
DFHSOL

ASP1

Explanation

Intersystem communication failed while a syncpoint was being taken. Communication with the coordinator system has been interrupted, and the failure occurred during the critical indoubt period of syncpoint processing. As a result this CICS system is in doubt about the outcome of the unit of work for the transaction.

Alternatively, a transaction may have timed out while waiting for Recoverable Resource Management Services (RRMS) to provide the outcome of the unit of work, or RRMS may have failed during the critical indoubt period.

The transaction definition specifies WAIT(YES) as an indoubt attribute. Therefore the unit of work is not completed but is shunted and allowed to wait for resynchronization with the coordinator system. If the WAITTIME attribute is specified on the transaction definition, the unit of work waits for the specified time. If after that time the coordinator system has not resynchronized, a unilateral decision is made about the unit of work as specified by the ACTION keyword on the transaction definition. A WAITTIME of zero, the default, means an indefinite wait. The unit of work can also be forced to take a unilateral decision by means of a CEMT SET UOW command.

System action

The transaction is abnormally terminated. The EXEC CICS HANDLE ABEND command cannot handle this abend.

The associated unit of work is shunted awaiting the return of the coordinator system. Recoverable resources updated by the unit of work remain locked. The locks are released when the unit of work is backed out or committed at resynchronization time, or when a unilateral decision is made by this system.

Message DFHAC2201 is sent to the terminal end user if possible, and message DFHAC2231 is sent to transient data destination CSMT.

User response

None. Any updates performed by the unit of work are resolved automatically when resynchronization with the coordinator system takes place.

Alternatively, the user can force resolution of the updates independently of the coordinator system by making a CEMT request to commit or back out the unit of work.

Module:
DFHAPAC

ASP2

Explanation

A syncpoint has been attempted when an intersystem conversation is in a state in which the EXEC CICS SYNCPOINT command is not allowed. If CICS is connected to a system which must act as LAST AGENT, such as IMS, then this ABEND will be issued from SYNCPOINT processing if a PREPARE has been received on a link to another system. In order to support syncpointing CICS must act as COORDINATOR when it is directly connected to the LAST AGENT, the COORDINATOR system may send PREPARE syncpoint commands but never receives them.

System action

The task is abnormally terminated with a CICS transaction dump which includes terminal control information. In particular, the dump contains state information for the links used by this transaction. The EXEC CICS HANDLE ABEND command cannot handle this abend.

User response

Ensure that the application issues an EXEC CICS SYNCPOINT command only when its sync level 2 conversations are in the correct state. The EXEC CICS SYNCPOINT command may be issued only when each conversation is in one of the following states:

    SEND
    PEND-RECEIVE (Not for MRO)
    PEND-FREE
    SYNC-RECEIVE
    SYNC-SEND (Not for MRO)
    SYNC-FREE

Module:
DFHAPAC

ASP3

Explanation

An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. The coordinator of the syncpoint is not this CICS system but is remote. During the syncpoint protocol the remote coordinator has decided that the unit of work cannot be committed and must be backed out.

This error can occur with external resource managers connected to CICS via the resource manager interface (RMI) as well as CICS systems connected via LU 6.2, MRO and IPIC. If an external resource manager such as DB2 is the only recoverable resource updated in the transaction, the recovery manager (RM) domain can optimize the syncpoint protocol. In this instance, the external resource manager becomes the syncpoint coordinator. In this instance if the external resource manager returns with a backed out response, an ASP3 abend results.

System action

The transaction is abnormally terminated and recoverable resources updated by the unit of work are backed out. The EXEC CICS HANDLE ABEND command cannot handle this abend.

Message DFHAC2220 is sent to the terminal end user if possible, and message DFHAC2250 is sent to transient data destination CSMT.

User response

Refer to the remote coordinator system to determine why the unit of work was backed out.

Module:
DFHAPAC

ASP7

Explanation

A resource manager involved in syncpoint protocols has replied 'No' to a request to 'Prepare'. The resource manager may be local to this CICS system, or may be a remote resource manager on another CICS system, or an external resource manager communicating through the resource manager interface (RMI).

System action

CICS terminates the transaction abnormally. Recoverable resources updated by the unit of work are backed out. The EXEC CICS HANDLE ABEND command cannot handle this abend.

If it is a local resource manager that has voted no, message DFHAC2218 is sent to the terminal end user if possible, and message DFHAC2248 is sent to transient data destination CSMT.

If it is a remote resource manager that has voted no, message DFHAC2219 is sent to the terminal end user if possible, and message DFHAC2249 is sent to transient data destination CSMT.

User response

This abend is caused by a prior problem. For example:

- the resource manager cannot flush its buffers because of an I/O error
- the resource manager cannot communicate with CICS because of a TP failure.
- Event Processing is unable to emit a synchronous event

Inspect the CICS message log to determine the cause of the earlier problem and corrrect it. An ASP7 can also occur during terminal or connection install if CICS is short on storage. For instance if message DFHAC2248 shows the transaction as CATA then look for earlier short on storage messages.

Module:
DFHAPAC

ASP8

Explanation

The transaction requested syncpoint rollback, but was using a type of processing for which syncpoint rollback is not supported.

System action

CICS terminates the transaction abnormally. The EXEC CICS HANDLE ABEND command cannot handle this abend.

Message DFHAC2217 is sent to the terminal end user if possible, and message DFHAC2247 is sent to transient data destination CSMT.

User response

This error may be an application error or a configuration error. Some communication sessions, (for example, LU6.1) do not support syncpoint rollback, and if CICS detects such a session during rollback processing, the task is abended. This restriction is described in the CICS intercommunication. To resolve the problem, either:

- Change the application so that it does not issue syncpoint rollback commands while the non-supporting sessions are allocated (e.g. issue an EXEC CICS FREE first), or
- Change the configuration so that either APPC or MRO sessions are used for communication. These are the only two session types which support syncpoint rollback.

Alternatively, following a session failure during a previous syncpoint, CICS may have decided to rollback this unit-of-work in order to preserve data integrity. Since the unit-of-work contains a session which does not support syncpoint rollback, this abend ensues. In this case, no action is required in response to this abend, although action may be required to deal with the original failure.

Module:
DFHAPAC

ASP9

Explanation

The transaction requested syncpoint via EXEC CICS SYNCPOINT, but this is not allowed in a transaction that is acting on behalf of an Activity.

System action

CICS terminates the transaction abnormally. EXEC CICS HANDLE ABEND command cannot handle this abend.

User response

The error indicates an invalid attempt to syncpoint the transaction.

Module:
DFHEISP

ASPA

Explanation

The task was purged before a request to recovery manager (RM) domain was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump. If processing is at a point where data integrity might not be maintained, CICS is abnormally terminated.

User response

Investigate why the task was purged. This is either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

If CICS is abnormally terminated, it should be emergency restarted to ensure that data integrity is maintained.

Module:
DFHAPAC

ASPB

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the recovery manager (RM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump. If processing is at a point where data integrity might not be maintained, CICS is abnormally terminated.

User response

See the related message from the domain that detected the original error. If CICS was abnormally terminated, it should be emergency restarted to ensure that data integrity is maintained.

Module:
DFHAPAC

ASPC

Explanation

An error (INVALID or DISASTER) has occurred on a call to the bridge syncpoint routine (DFHBRSP). The domain that detected the original error will have provided an exception trace, and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHSPP

ASPD

Explanation

The transaction requested syncpoint via EXEC CICS SYNCPOINT, or rollback via EXEC CICS SYNCPOINT ROLLBACK, but this is not allowed in a transaction that is associated with an OTS transaction.

System action

CICS terminates the transaction abnormally. EXEC CICS HANDLE ABEND command cannot handle this abend.

User response

The error indicates an invalid attempt to syncpoint the transaction.

If DB2 is being accessed in the transaction, check that the DB2ENTRY or DB2CONN pool definition used by the transaction does not specify DROLLBACK(YES).

Module:
DFHEISP

ASPF

Explanation

CICS issued an internal syncpoint request resulting in a syncpoint with an intersystem session which has returned ROLLEDBACK to recovery manager (RM) domain. As a result, the transaction is abnormally terminated because the unit of work which was being syncpointed has been backed out.

This could result from shutting down IRC or from the failure of a connected CICS region.

System action

The transaction is abnormally terminated. Recoverable resources updated by the unit of work are backed out and locks released. The EXEC CICS HANDLE ABEND command cannot handle this abend.

Message DFHAC2215 is sent to the terminal end user if possible, and message DFHAC2245 is sent to transient data destination CSMT.

User response

Determine why the remote intersystem session returned a ROLLEDBACK response to the syncpoint request. Once this has been corrected retry the transaction.

To avoid ASPF abends in future, ensure that no in-flight units of work exist before shutting down IRC.

Module:
DFHAPAC

ASPI

Explanation

During CICS synchronization level 1 (synclevel 1) commit, an unexpected FMH or no data has been received from the partner system. Local resources and synclevel 2 partners have been committed, but synclevel 1 function-shipped resource updates may have been backed out.

System action

The transaction does not abend. CICS synclevel 1 commit processing continues, with the aim of committing as many synclevel 1 resources as possible.

User response

Examine the transaction dump to determine why the FMH was invalid or missing, It is likely that the error is in the remote system.

See the Using SNA for more information about syncpointing.

Module:
DFHCR2U

ASPJ

Explanation

During CICS synchronization level 1 (synclevel 1) commit, unexpected syncpoint message data has been received from the partner system. Local resources and synclevel 2 partners have been committed, but synclevel 1 function-shipped resource updates may have been backed out.

System action

The transaction does not abend. CICS synclevel 1 commit processing continues, with the aim of committing as many synclevel 1 resources as possible.

User response

Examine the transaction dump to determine why the message data was invalid. It is likely that the error is in the remote system.

See the Using SNA for more information about syncpointing.

Module:
DFHCR2U

ASPN

Explanation

A transaction has issued an EXEC CICS RETURN in backout required program state. The backout required program state is set when an application receives or issues an abend, or receives a backout request on a protected conversation.

System action

The transaction is abnormally terminated. Recoverable resources updated by the unit of work are backed out and locks released. The EXEC CICS HANDLE ABEND command cannot handle this abend.

Message DFHAC2216 is sent to the terminal end user if possible, and message DFHAC2246 is sent to transient data destination CSMT.

User response

To avoid the transaction abend, the application should code an EXEC CICS SYNCPOINT command before the EXEC CICS RETURN. A syncpoint issued in 'backout required' program state results in a backout being performed, and the ROLLEDBACK condition returned on the EXEC CICS SYNCPOINT command. If this condition is then handled, a subsequent EXEC CICS RETURN will complete successfully. For LU61 conversations the application should issue an EXEC CICS FREE followed by an EXEC CICS SYNCPOINT ROLLBACK, in order to avoid a subsequent ASP8 abend.

Module:
DFHAPAC

ASPO

Explanation

An intersystem session failed while a syncpoint was being taken. The intersystem session that failed was the link to the coordinator system. The failure occurred during the indoubt period of syncpoint processing. As a result this CICS system is in doubt as to the outcome of the unit of work for the transaction.

The unit of work is not shunted to await the return of the coordinator system, but is instead unilaterally committed. The unit of work is not shunted for one of the following reasons:

- The transaction definition specifies WAIT(NO).
- The unit of work includes an MRO session to a back-level CICS system which does not support the WAIT(YES) option, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work includes an LU6.1 session, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work involves a task related user exit which is not enabled with the INDOUBTWAIT option.
- The unit of work has updated a recoverable transient data destination, which is defined with WAIT(NO).

- The unit of work involves the installation of CICS resource definitions from the CSD (CICS system definition) file.

The unit of work is committed, rather than backed out, because the transaction definition specifies ACTION(COMMIT).

The fact that the unit of work is committed is remembered by the recovery manager (RM) domain until the unit of work is resynchronized with the coordinator system. At this time, according to whether the coordinator system committed or backed out, the recovery manager domain issues resynchronization messages reporting whether or not the resolution of the unit of work in the subordinate system was consistent with the coordinator system.

System action

The transaction is abnormally terminated. Recoverable resources updated by the unit of work are committed and locks released. The EXEC CICS HANDLE ABEND command cannot handle this abend.

Message DFHAC2202 is sent to the terminal end user if possible, and message DFHAC2232 is sent to transient data destination CSMT.

User response

Any updates performed by the unit of work are committed. There is a danger that recoverable resources will be inconsistent with the coordinator system if the coordinator system has backed out. If the reason for the failure is the first of those listed above and if you wish CICS to ensure that data integrity is maintained, change the indoubt transaction definition to specify WAIT(YES) so that CICS automatically handles indoubt failures and resynchronizes the unit of work when the link to the coordinator system is reestablished.

Module:
DFHAPAC

ASPP

Explanation

An intersystem session failed while a syncpoint was being taken. The intersystem session that failed was the link to the coordinator system, and the failure occurred during the critical indoubt period of syncpoint processing. As a result this CICS system is in doubt as to the outcome of the unit of work for the transaction.

The unit of work is not shunted to await the return of the coordinator system. Instead it is unilaterally backed out. The unit of work is not shunted for one of the following reasons:

- The transaction definition specifies WAIT(NO).
- The unit of work includes an MRO session to a back-level CICS system which does not support the WAIT(YES) option, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work includes an LU6.1 session, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work involves a task related user exit which is not enabled with the INDOUBTWAIT option.
- The unit of work has updated a recoverable transient data destination, which is defined with WAIT(NO).
- The unit of work involves the installation of CICS resource definitions from the CSD (CICS system definition) file.

The unit of work is backed out, rather than committed, because the transaction definition specifies ACTION(BACKOUT).

The fact that the unit of work is backed out is remembered by recovery manager (RM) domain until the unit of work is resynchronized with the coordinator system. At this time, according to whether the coordinator system backed out or committed, the recovery manager domain issues resynchronization messages reporting whether or not the resolution of the unit of work in the subordinate system was consistent with the coordinator system.

System action

The transaction is abnormally terminated. Recoverable resources updated by the unit of work are backed out and locks released. The EXEC CICS HANDLE ABEND command cannot handle this abend.

Message DFHAC2203 is sent to the terminal end user if possible, and message DFHAC2233 is sent to transient data destination CSMT.

User response

Any updates performed by the unit of work are backed out. There is a danger that recoverable resources will be inconsistent with the coordinator system if the coordinator system has committed. If the reason for the failure is the first of those listed above and if you wish CICS to ensure that data integrity is maintained, change the indoubt transaction definition to specify WAIT(YES) so that CICS automatically handles indoubt failures and resynchronizes the unit of work when the link to the coordinator system is reestablished.

Module:
DFHAPAC

ASPQ

Explanation

During phase 2 of the two phase syncpoint protocol an error occurred while communicating with a remote system. The error occurred after the recoverable resources were committed or backed out, so data integrity is not in danger.

System action

The transaction is abnormally terminated. Recoverable resources updated by the unit of work will have backed out or committed depending on the decision taken by the recovery manager (RM) domain, which was not influenced by this later problem. The EXEC CICS HANDLE ABEND command cannot handle this abend.

Message DFHAC2221 is sent to the terminal end user if possible, and message DFHAC2251 is sent to transient data destination CSMT.

User response

Refer to earlier messages issued by the communication or remote resource management components of CICS to determine the cause of the intersystem communication problem.

Module:
DFHAPAC

ASPR

Explanation

Intersystem communication failed while a syncpoint was being taken. Communication with the coordinator system has been interrupted, and the failure occurred during the critical indoubt period of syncpoint processing. As a result this CICS system is in doubt as to the outcome of the unit of work for the transaction.

However, this CICS system has not updated any recoverable resources in the unit of work and hence does not require the unit of work to be shunted to await resynchronization of its resources later. The coordinator system commits or backs out its resources. No resources on this system need to be kept in step.

This error can occur with external resource managers connected to CICS via the resource manager interface (RMI) as well as CICS systems connected via IPIC, LU 6.2 and MRO. If an external resource manager such as DB2 is the only recoverable resource updated in the transaction, the recovery manager (RM) domain can optimize the syncpoint protocol. In this instance,

the external resource manager becomes the syncpoint coordinator. If the link to the external resource manager is lost during this time, CICS will be indoubt as to whether the external resource manager updates were committed or backed out.

System action

The transaction is abnormally terminated. There are no recoverable resources affected in this CICS system. The EXEC CICS HANDLE ABEND command cannot handle this abend.

Message DFHAC2222 is sent to the terminal end user if possible, and message DFHAC2252 is sent to transient data destination CSMT.

User response

Refer to messages on the remote system to determine if the remote resources were backed out or committed.

Module:
DFHAPAC

ASQA

Explanation

The CLS2 transaction was processing resynchronization work but the communications session which it was using has failed.

System action

The work is reexecuted on a new session. If reexecution has has already been attempted, the transaction terminates.

User response

The error may be caused by the failure of several sessions between communicating systems during the resynchronization process. To confirm this, examine the CSMT transient data queue for the relevant period.

Another cause could be logic errors within the resynchronization program, either on this system or on the partner system, which caused the session to be terminated. In this case, CSMT transient data messages indicate the nature of the error.

Module:

ASQB

Explanation

The CLS2 transaction was executing exchange log names or resynchronization with a remote system when a logic error occurred.

System action

The transaction is abnormally terminated with a transaction dump.

Message DFHRS2158 may also be issued.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRRSY

ASQC

Explanation

The CLS2 transaction was attached with an unexpected start code. The transaction can be attached due to terminal input (on a communications session), or via a system attach. Neither of these methods was used.

System action

The transaction is abnormally terminated.

User response

The error indicates an invalid attempt to start the transaction.

Module:
DFHCRRSY

ASQD

Explanation

The CLS2 transaction was attached but could not use the transaction manager interface to obtain input parameters.

System action

The transaction is abnormally terminated.

User response

The error indicates a failure in the transaction manager. See the exception trace entries produced by

the transaction managed to determine the reason for the error.

Module:
DFHCRRSY

ASQE

Explanation

The CLS2 transaction was executing exchange log names with a remote system and 3 retry attempts have failed to solicit a warm exchange log names reply, in response to a warm exchange log names request sent by CICS.

System action

The transaction is abnormally terminated with a transaction dump.

User response

This abend indicates an error in the remote system. It should have saved the log name sent by CICS and, on receiving a later exchange lognames request, should then respond with a warm reply.

Module:
DFHCRRSY

ASQG

Explanation

The CLS2 transaction was executing resynchronization work and has failed during the receipt of data from remote system via an MRO session. The data was longer than expected.

System action

The transaction is abnormally terminated with a transaction dump.

User response

The abend indicates a CICS logic error, possibly in the remote system. The transaction storage in the dump shows the data received. The transaction trace shows the preceding flows between the systems, which should match those documented in the z/OS Communications Server: SNA Programmer's LU 6.2 Reference manual, SC30-6808.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRRSY

ASQH

Explanation

The CLS2 transaction was executing resynchronization work and has failed during the receipt of data from remote system via an MRO session. The data was shorter than the minimum length expected.

System action

The transaction is anormally terminated with a transaction dump.

User response

This indicates a CICS logic error, possibly in the remote system. The transaction storage in the dump shows the data received. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRRSY

ASQI

Explanation

The CLS2 transaction was executing the exchange lognames process as part of the initialization sequence for an APPC connection. An attempt to invoke the CICS recovery manager to save a logname failed.

System action

The transaction is abnormally terminated with a transaction dump.

Message DFHRS2157 may also be issued.

User response

This indicates an error in the CICS recovery manager which has produced its own exception trace records. Look at the trace records and the CSMT message log for further information about the error.

Module:
DFHCRRSY

ASQK

Explanation

The CLS2 transaction was processing exchange lognames or resynchronization for a connected partner identified by a netname. The connection entry associated with the netname was located and locked,

but could not be unlocked in subsequent processing. This indicates a CICS internal logic error.

System action

The transaction is abnormally terminated with a transaction dump.

Message DFHRS2156 may also issued.

User response

This indicates an error either in the CICS table manager, (which may have produced its own exception trace records) or in the resynchronization program itself. Look at the trace records and the CSMT message log for further information which might have indicated an error in the table manager program or in the table entry for the connection. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRRSY

ASQL

Explanation

The CLS2 transaction was executing the resynchronization of a unit of work with a connected partner, and has locked the associated data managed by the CICS recovery manager. The invocation of the TERMINATE_RECOVERY command to unlock the data failed.

System action

The transaction is abnormally terminated with a transaction dump.

Message DFHRS2154 is also issued.

User response

This indicates an error either in the CICS recovery manager (which may have produced its own exception trace records) or in the resynchronization program itself. Look at the trace records and the CSMT message log for further information. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRRSY

ASQM

Explanation

A CICS internal logic error has occurred in the management of dynamic storage for the resynchronization program.

System action

The transaction is abnormally terminated with a transaction dump.

User response

This indicates that the resynchronization program has exhausted the available space for recording storage areas. The symptoms may indicate that the program was looping without executing the error recovery process. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCRRSY

ASRA

Explanation

The task has terminated abnormally because of a program check.

System action

The task is abnormally terminated and CICS issues either message DFHAP0001 or DFHSR0001. Message DFHSR0622 may also be issued.

User response

Refer to the description of the associated message or messages to determine and correct the cause of the program check.

Module:
DFHSRP

ASRB

Explanation

An operating system abend has occurred and CICS has been able to abend the current transaction.

System action

The task is abnormally terminated and CICS issues either message DFHAP0001 or DFHSR0001

User response

Refer to the description of the associated message to determine the cause of the original operating system abend, and take the necessary corrective action.

Module:
DFHSRP

ASRD

Explanation

The task has been abnormally terminated for one of these reasons:

- A program contains an assembler macro call which is no longer supported by CICS.
- An invalid attempt has been made to access the CSA or TCA.
- An attempt to access a TCA via field CSAQRTCA (previously CSACDTA) has been made.
- A non-assembler program has been wrongly defined to CICS as an assembler program.
- An application program has been link-edited without an appropriate exec interface stub.

This error appears as a program check.

System action

The task is abnormally terminated and CICS issues message DFHSR0618, followed by either DFHAP0001 or DFHSR0001.

User response

Refer to the description of the associated messages to determine and correct the error.

It is likely that either R12 which usually addresses the TCA or R13 which usually addresses the CSA is pointing to an area of storage that you are not allowed to access.

Module:
DFHSRP

ASRE

Explanation

The task has been abnormally terminated because an attempt has been made to access a CICS-DB2 RCT load module.

The RCT nolonger exists as a load module and cannot be accessed directly.

To access information about CICS DB2 resource definitions, use the CICS SPI commands EXEC CICS INQUIRE/SET DB2CONN, EXEC CICS INQUIRE/SET DB2ENTRY and EXEC CICS INQUIRE/SET DB2TRAN.

This error appears as a program check.

System action

The task is abnormally terminated and CICS issues message DFHSR0619, followed by either DFHAP0001 or DFHSR0001.

User response

Change the application to use the CICS SPI commands to access information about CICS DB2 resource definitions.

Module:
DFHSRP

ASRJ

Explanation

The task has terminated abnormally because a AP domain global user exit or task related user exit invoked by the task has made a backlevel XPI call.

System action

The task is abnormally terminated. CICS will have issued error message DFHAP0702 or DFHAP0708 which will have identified the exit program that made the backlevel XPI call.

User response

Reassemble the exit program using the latest CICS libraries.

Module:
DFHSRP

ATxx abend codes

ATC1

Explanation

The CICS terminal control restart task could not complete because a necessary step failed. The task has done some essential recovery operations and abnormally terminated itself with code ATC1.

System action

CICS writes a transaction dump for the terminal control restart task.

CICS sends two messages to the console, one to identify the error detected by the terminal control restart task, and DFHTC1001 to report that the task has failed. A third message follows either to say that CICS has terminated abnormally with a dump, or to ask you to reply GO or CANCEL. Depending on the nature of the original error, you may see messages from some other system component (for example, an access method).

User response

First, if CICS has requested a response, you must reply. If you reply 'GO', CICS continues processing, but without terminal control. If you reply 'CANCEL', CICS terminates abnormally with a dump.

Use the messages and dumps to find out the cause of the failure.

Module:
DFHTCRP

ATC2

Explanation

A CICS SET VTAM OPEN command has failed due to VTAM rejecting a CICS request.

System action

Message DFHZC2302, DFHZC2304 or DFHZC2307 is sent to the console, and CICS terminates the transaction abnormally with a transaction dump.

User response

The RPL with the VTAM request code and return code can be found in the RA pool addressed from TCTVRVRA. Use the z/OS Communications Server: SNA Programming manual, to determine the cause of the error and the actions necessary to correct it. After correcting the error, either retry the request or terminate CICS and restart the network in your own time.

Module:
DFHZSLS

ATC3

Explanation

A write to a TLX device was issued with a data length of 0 causing TIOA data length (TIOATDL) to be zero.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

For an error writing to a TLX device correct the error in the user program by ensuring that a data length for data to be placed in the terminal input/output area (TIOA) is provided at write time.

Module:
DFHZARL DFHZARQ

ATC4

Explanation

A serious CAVM error has occurred. The XRF TCB has abended.

System action

CICS abnormally terminates with a system dump.

User response

Use the dump and the guidance in any messages issued by other system components to diagnose and correct the original error.

See the Troubleshooting and support for further guidance on using system dumps.

Module:
DFHTCRP

ATC5

Explanation

An internal logic error has been detected during APPC mapped processing. The conversation state maintained by DFHZARL does not match the state which is jointly maintained by DFHETL and DFHZARM.

This problem could also arise when CICS is receiving application data. CICS may receive and end of chain notification before receiving all the data expected.

System action

The task is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHETL

ATC6

Explanation

DFHETL has a SEND DATA request with a data length greater than 65 528 bytes which is the maximum that it can process.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is a CICS internal logic error. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHETL

ATC7

Explanation

DFHZSUP has detected a bad response from an INITIAL-CALL request to DFHZARL. This response is returned to DFHZSUP in the DFHLUC parameter list.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Examine field LUCCDRCD in the DFHLUC parameter list. This appears in the ENTRY/EXIT trace points for DFHZARL. If trace is switched off, then it can be found in DFHZSUP's LIFO entry in the transaction dump.

- LUCCDRCD = 'A0000100' - session failure
- LUCCDRCD = 'A0010100' - read timeout
- LUCCDRCD = 'A0010000' - deadlock timeout.

(The offset for LUCCDRCD can be found in CICS Data Areas).

If LUCCDRCD is X'00000000', the error is the result of a connection failure. In this case examine the CSMT log for further diagnostic information.

Module:
DFHZSUP

ATC8

Explanation

An error has occurred during the processing of an inbound function management header (FMH). Either a length error has been detected, for example, incomplete FMH received, or an invalid field has been detected within the FMH.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer of the error. The problem is probably in the remote system that has sent the invalid FMH.

Module:
DFHETL

ATC9

Explanation

A DFHKC RESUME macro call has been issued for a task without first issuing DFHKC SUSPEND. DFHKC RESUME must be preceded by DFHKC SUSPEND.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Examine the trace entry to locate the error.

Module:
DFHZNCE

ATCA

Explanation

The system was in a final quiesce mode when the CICS application program issued a DFHTC macro.

System action

The task requesting the I/O is abnormally terminated with a CICS transaction dump.

User response

None.

Module:
DFHZARQ

ATCB

Explanation

The CICS application program issued two consecutive DFHTC writes or two consecutive DFHTC reads, but in either case did not issue an intervening wait.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Take corrective action within the program being executed.

This is almost certainly an application program error. Determine the flow of control through the application and determine why an intervening wait is not issued. The trace table may be useful to discover where the application is issuing the read and write requests. If necessary, start trace or auxiliary trace using the main terminal command and rerun the transaction to obtain a trace. The output of the auxiliary trace can be printed using the trace utility program, DFHTU720.

Problem determination

A transaction dump is provided with this abend. In the dump, register 12 addresses the current TCA, and register 10 and the field TCAFCAAA address the TCTTE associated with this task. In TCATPOS2, bit TCATPOWR (X'01') indicates that a write is requested by the DFHTC macro, and bit TCATPORR (X'10') indicates that a read is requested. In TCTTEOS, bit TCTTEOWR (X'01') indicates that a write is in progress, and bit TCTTEORR (X'10') indicates that a read is in progress.

Analysis:

```
Register    Label       Description

R10=@TCTTE  TCZARQ05    Bit TCATPOWR is on in byte
R12=@TCA    (TCZAQ1W)   TCATPOS2, and bit TCTTEOWR
                        is on in byte TCTTEOS.

R10=@TCTTE  TCZARQ05    Bit TCATPOWR is on in byte
R12=@TCA    (TCZAQ2W)   TCATPOS2, and bit TCTTEORR
                        is on in byte TCTTEOS.

R10=@TCTTE  TCZARQ12    Bit TCATPORR is on in byte
R12=@TCA                TCATPOS2, and bit TCTTEORR
                        is on in byte TCTTEOS.
```

Module:
DFHZARQ

ATCC

Explanation

An application program, using a pipeline session, has either issued more than one write request or issued a read request.:sysact. The transaction is abnormally terminated with a CICS transaction dump.

System action:

User response

Correct the application program so that it will not issue more than one consecutive WRITE to a pipeline session terminal.

Module:
DFHZARQ

ATCD

Explanation

This abend code is used whenever a CTYPE request or a QUEUE request is issued and VTAM or a ZCP function has not been included in the system.

It is also used to abend a task that issues an APPC command when the CICS system is not at a level to support APPC.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correct the transaction so that it does not issue a CTYPE macro instruction if VTAM is not generated into the system, or include the ZCP function for which the CTYPE or QUEUE request was issued.

Module:

DFHZDSP, DFHZERH

ATCE

Explanation

A CICS application program has issued a DFHTC request without specifying the address of a TIOA, but the request is not an ERASE ALL UNPROTECTED or a READBUF request for a 3270 data stream terminal.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correct the error in the user program by ensuring that a terminal input/output area (TIOA) is provided at write time.

This is almost certainly an application program error. Determine the flow of control through the application and determine why a TIOA has not been specified.

Problem determination

A transaction dump is provided with this abend. In the dump, register 12 addresses the current TCA, and register 10 and the field TCAFCAAA addresses the TCTTE associated with this task. Register 8 and TCTTEDA should contain the address of the TIOA to be used in the I/O request, but actually they contain zero. For a 3270 data stream terminal, byte TCTETDST has bit TCTETTSI (X'01') set. An erase-all-unprotected request is indicated by the setting of bit TCTTEEUI (X'40') in byte TCTTEEUB, and a read buffer request is indicated by the setting of bit TCTTERBI (X'80') in byte TCTTERBB. **Analysis:**

```
Register    Label      Description

R10=@TCTTE  TCZARQ41   NIOABAR (register 8)
                       contains zero.
R8=0                   Register 8 has been loaded
                       field TCTTEDA of the TCTTE
                       associated with this task.
```

Module:
DFHZARQ

ATCF

Explanation

A DFHTC CTYPE macro was issued to a non-VTAM terminal control table terminal entry (TCTTE), or a DFHTC CTYPE=COMMAND or RESPONSE macro was issued to a VTAM 3270 TCTTE.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Ensure that the program issues CTYPE macros to VTAM terminals only, and does not issue CTYPE=COMMAND or RESPONSE to a VTAM 3270.

Module:
DFHZCRQ

ATCG

Explanation

A CICS application program has issued a DFHTC request for a terminal that it does not own. The problem of ownership may be because the task previously issued a WRITE,LAST request (which would have detached the terminal from that task) or because the task incorrectly specified the terminal to which the request is directed.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is most probably an application error (unless storage has been completely overwritten). Determine the flow from the trace table and when a request to the DFHZCP detach routine, DFHZDET, or a DFHTC WRITE,LAST was issued.

Problem determination

Register 12 addresses the current TCA and register 10 contains the address of the TCTTE. The address of the TCTTE was obtained either from TCAFCAAA in the case of a non-ISC transaction, or from TCATPTA if bit TCATPTTA (X'40') is on in byte TCATPOC3 (this indicates that TERM=YES was specified on the DFHTC request and that this is an ISC transaction). In the TCTTE thus located, the field TCTTECA does not contain the address of the TCA, indicating that this TCA is not owned by this task.

Analysis: A DFHTC request has been issued specifying a TCTTE in which the field TCTTECA does not contain the address of the TCA.

Register	Label	Description
R10=@TCTTE	TCZARQ05	TCTTECA is not equal to register 12.

Module:
DFHZARQ

ATCH

Explanation

The task was purged before a domain call was able to complete successfully. The task that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction, or by CICS issuing a purge request.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

When CICS purges a task, it does so to allow an operation to complete which would be held up by the presence of active tasks, or to ensure data integrity. For example, CICS will purge a task which has made recoverable updates to a coupling facility data table if it determines that the coupling facility data table server for the pool in which that table resides has recycled, to ensure that all updates in the unit of work will be backed out.

For module list,see Diagnostics reference.

Module:

ATCI

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to module DFHRTSU. The module that detected the original error provides an exception trace, a console message and, possibly a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the module that detected the original error.

Module:
DFHZSUP DFHMRXM DFH62XM

ATCJ

Explanation

This abend is issued by DFHZATA in the following circumstances:

- Transaction CATA is issued from a terminal
- The address of the AWE (TCAFCAAA) is 0
- The AWE is invalid (TCTWETYP should be TCTTEAWE)
- An abend is issued early in DFHZATA.

This abend is issued by DFHZATD in the following circumstances:

- Transaction CATD is issued from a terminal
- The address of the AWE (TCAFCAAA) is 0
- TCAFCAAA is an AWE and not a terminal
- An abend is issued early in DFHZATD.

This abend is issued by DFHZATR in the following circumstances:

- Transaction CATR is issued from a terminal

- An abend is issued early in DFHZATD.

System action

CICS rejects the request.

User response

Determine the issuing program and the reason for the abend and take the appropriate action as follows:

Do not try to invoke CATA, CATD or CATR from a terminal.

If the address in TCAFCAAA is incorrect, the calling mechanism has failed. This is a CICS logic error.

If an abend has been issued, use the transaction dump to determine where the abend occurred. This is a CICS logic error.

Module:
DFHZATA DFHZATD DFHZATR

ATCK

Explanation

An application program has issued a WRITE to a VTAM terminal specifying CCOMPL=NO without being authorized to do so.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Specify CHAINCONTROL in the transaction profile.

Module:
DFHZARQ

ATCL

Explanation

An error has occurred either during automatic journaling or automatic logging of terminal messages to or from this transaction. The message being logged will be one associated with an explicit READ or WRITE in the application program.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the dump to ascertain why the journal or log record could not be written correctly. If a journal record length error is indicated, TIOATDL may have been corrupted.

Problem determination

Register 12 addresses the current TCA and field TCAJCAAD and register 4 address the JCA. The log manager request is contained in JCATR2 and the response code is in JCAJCRC.

Possible request codes are:

```
X'8001' - WRITE
X'8003' - PUT
```

Possible response codes are:

```
X'01' - IDERROR - Journal identification error
X'02' - INVREQ  - Invalid request
X'03' - STATERR - Status error
X'05' - NOTOPEN - Journal not open
X'06' - LERROR  - Journal record length error
X'07' - IOERROR - I/O error.
```

The address of the TIOA is contained in register 8 and its data length is in TIOATDL.

Analysis:

Register	Label	Description
R4=@JCA	TCZARQPJ	JCAJCRC is nonzero.

Module:
DFHETL, DFHTCPCM, DFHZARQ

ATCN

Explanation

An error has occurred during the automatic journaling or automatic logging of the initial input message of this transaction. This input message is the message that actually caused the transaction to be invoked.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the dump to ascertain why the log record could not be written correctly.

If a journal record length error is indicated, TIOATDL (X'08') may have been corrupted.

Problem determination

Register 12 addresses the current TCA and field TCAJCAAD and register 4 address the JCA. The log manager request is contained in JCATR2 and the response code is in JCAJCRC.

Possible request codes are:

```
X'8001' - WRITE
X'8003' - PUT
```

Possible response codes are:

```
X'01' - IDERROR - Journal identification error
X'02' - INVREQ  - Invalid request
X'03' - STATERR - Status error
X'05' - NOTOPEN - Journal not open
X'06' - LERROR  - Journal record length error
X'07' - IOERROR - I/O error.
```

Analysis:

```
Register   Label      Description

R4=@JCA    TCZARQJP   JCAJCRC is nonzero.
           TCZSUPJW   Journal error.
```

Module:
DFHZSUP DFH62XM DFHTFXM

ATCO

Explanation

An application program has attempted to perform a function not supported by a terminal or system.

Possible errors are:

1. **SIGNAL not supported**.

   A DFHTC TYPE=SIGNAL request with the WAIT=YES option was issued to a VTAM logical unit that CICS does not support for the receipt of the SIGNAL indicator.

2. **WRITE STRUCTURED FIELD not supported**.

   This write may have been attempted as a result of a SEND command with the STRFIELD keyword to a device that does not support this function.

3. **APPC mapped conversation not supported**.

   The application has attempted to perform a normal terminal control command on a session that is in use for an APPC unmapped conversation. (Only EXEC CICS GDS commands are permitted.)

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Correct the application program.

Module:
DFHZARQ

ATCQ

Explanation

The application program issued a write operation to a terminal that was in send status. In order to allow this write to proceed, a signal command was sent, and DFHZCP started to read data from the terminal waiting for the change direction indication. As each data record is received, it is placed on temporary storage and, for one of these operations, a temporary storage error has occurred.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Check that temporary storage has been included in the system and that it has sufficient space.

If an invalid request is indicated, check that the length of the data being written to temporary storage is not greater than the VSAM control interval size minus 84. The length of the data is in TIOATDL (which is 8 greater than the length of the data that is read in by DFHZCP).

Problem determination

Register 12 addresses the current TCA. TCACCSV1 contains a saved copy of TCATSTR containing the temporary storage response code. The temporary storage response code may be one of:

```
X'04' - IOERROR - I/O error
X'08' - NOSPACE - No temporary storage space
X'20' - INVREQ  - Invalid request.
```

The temporary storage identification is constructed by concatenating the character string "DFHQ" with the terminal identification from TCTTETI. The temporary storage identification is placed in TCATSDI.

Register 8 and field TCTTEDA address the TIOA that is being written to temporary storage. The address passed to temporary storage is that of TIOATDL.

Analysis: After the DFHTS TYPE=PUTQ, the temporary storage response code was not zero.

```
Register  Label    Description

R12=@TCA  ZRAQ60   TCATSTR is nonzero.
```

Module:
DFHZRAQ

ATCR

Explanation

An application program has issued a read operation, after a previous write operation has caused DFHZCP to read-ahead data from the terminal in order to avoid a lock-out. DFHZCP has now issued a DFHTS GETQ to retrieve the saved data from temporary storage, and an error has occurred.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Determine the cause of the temporary storage error and correct it.

If a temporary storage identification error is indicated, examine TCTTETI for a valid terminal identification.

Problem determination

Register 12 addresses the current TCA. TCACCSV1 contains a saved copy of TCATSTR that contains the temporary storage response code. The temporary storage response code may be one of:

```
X'01' - ENERROR - Entry error
X'02' - IDERROR - Identification error
X'04' - IOERROR - I/O error
X'20' - INVREQ  - Invalid request
```

The temporary storage identification is constructed by concatenating the character string "DFHQ" with the terminal identification from TCTTETI. The temporary storage identification is placed in TCATSDI.

Analysis: After the DFHTS TYPE=GETQ, the temporary storage response code was not zero.

```
Register   Label    Description

R12=@TCA   ZRAR90   TCATSTR is not zero.
```

Module:

ATCS

Explanation

An application program attempted to send data to a logical unit after a SIGNAL data flow command with an RCD (request change direction) has been received. This condition arises when the application handles the IGREQCD exceptional condition incorrectly.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Handle the IGREQCD exceptional condition correctly.

Module:
DFHZARQ

ATCT

Explanation

An attempt to build a surrogate TCTTE to represent a remotely-owned terminal failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSUP DFHMRXM DFH62XM

ATCU

Explanation

An application program attempted to send data to a logical unit, but was in receive mode (EIBRECV is set), and read-ahead queuing was not specified in installed profile definition (RAQ=NO).

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Either change the application program to issue receives until EIBRECV is not set, or specify RAQ=YES in the installed profile definition (If RAQ=YES is specified, ensure that all input messages are read before the transaction is terminated.)

Module:
DFHZARQ

ATCV

Explanation

An application attempted an operation on a logical unit, but was not in the correct mode for one of the following reasons:

1. When issued by DFHZARQ, CICS cannot perform the current request because another request is outstanding (EIBSYNC is set). This holds for APPC or non-APPC systems

2. When issued by DFHETL, the application is communicating with an APPC system, and is not in the correct state to perform the attempted operation. This holds for APPC systems only

3. When issued by DFHZISP, a TCTTE free was requested, and there is an outstanding sync point request. This holds for non-APPC systems only

4. When issued by DFHZISP, a TCTTE free was requested, the TCTTE is in receive mode, and RAQ=NO was specified in the installed profile definition. This holds for non-APPC systems only.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

The response depends on the reason for the error as follows:

1. Issue a sync point and then issue the request.

2. Issue the free request and reallocate the session.

3. Either change the application to issue receives until EIBRECV is not set, or specify RAQ=YES in the installed profile definition. (If you specify RAQ=YES in the installed profile definition, ensure that all input messages are read before the transaction is terminated.)

4. See the CICS documentation where rules for the correct use of commands are given. Then correct the application.

The application program has attempted an operation on a logical unit that is invalid, because the program's current status on the session with that logical unit does not permit it. An investigation of the TCTTE (that is, Session), status bytes, and TCA type of request bytes will reveal which of the above problems are relevant.

When the cause of the problem has been ascertained, the application program should be changed to ensure that the session-oriented information is acted upon before any further requests are sent across that session. The session status information is made available to the application program in the exec interface block (EIB) immediately following the execution of RECEIVE, CONVERSE, or RETRIEVE requests across the session. The relevant bytes must be tested, strictly in the order shown, and acted upon, before any further operations are attempted on the session. In addition, the status information bytes themselves are necessarily volatile in that they are reset before the execution of every EXEC CICS... statement. Thus it is good programming practice to save them into application user storage after a RECEIVE, CONVERSE, or RETRIEVE for later testing. The states are:

1. EIBSYNC

the application must take a syncpoint

2. EIBFREE

the application must free the session (or terminate when the session will be freed automatically)

3. EIBRECV

the application must continue receiving data by issuing further RECEIVE commands; by definition, data cannot be sent while in this state.

Some of these status tests can sometimes be omitted (for example, testing of the EIBSYNC status is not essential if it is known that the application program on the remote system never issues sync point requests itself). However, the tests should always be carried out, particularly if the remote application might be amended at a future date, in which event the session handling logic may well be altered. Also, it may be that the remote transaction itself causes an unsuspected flow on the session. For example, if the remote program issues EXEC CICS SEND..... LAST across the session, followed by RETURN, a syncpoint request (RQD2) will be added onto the transmitted data. (The application programmer is referred to the CICS documentation for a discussion of this topic). As a result of this addition, an unsuspected syncpoint request is received by the local application, which abend if the session is freed without the sync point request being honored.

Note:

An ATCV abend is also raised by module DFHETL if a state error occurs during processing of an APPC mapped application (that is, the program attempts to perform an operation while in the wrong state). The handling of APPC mapped applications is described in the CICS Diagnostics reference. Some commands are processed by DFHZARQ, as above, and others by various other modules invoked by DFHETL. Rules for using commands for APPC are given in the CICS documentation. Reference to this guide should reveal the programming error.

Problem determination

Register 12 addresses the current TCA. Register 10 and field TCAFCAAA address TCTTE. The terminal byte TCTTECRE has bit TCTEUCOM (X'02') set if sync point is required, and TCTEUFRT (X'04') set if Free Session is required; TCTESMDI has TCTEUSMD (X'02') set if the application is in SEND mode. TCTERCVI has TCTEURCV (X'01') set if the application is in RECEIVE mode. Bit TCTESRAQ (X'80') in byte TCTEIRAQ indicates that read-ahead queuing is coded on the installed profile definition for this transaction.

The type-of-request bits in the TCA are set as follows:

- TCATPOS1 TCATPIS (X'01') Signal requested.
  - TCATPFRE (X'03') Free TCTTE.
- TCATPOS2 TCATPORR (X'10') Receive requested.
  - TCATPOWR (X'01') Send requested.

Analysis:

```
Number    Label       Description

DFHZARQ
1.        TCZAQW8     Attempting to receive
                      when sync point or Free
                      Session outstanding.
2.        TCZAQ2W     Attempting to send while
                      in receive mode.
3.        ZARQNOPG    Issuing SIGNAL while in
                      send mode.

DFHZISP
4.        ZISPVTCK    Attempting to free session
                      while sync point request is
                      outstanding.
```

Module:
DFHETL, DFHZARQ, DFHZISP

ATCW

Explanation

The system has been generated without an installed profile definition for an LU6.1 or APPC session.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer of the error.

Module:
DFHZSUP DFHMRXM DFH62XM

ATCX

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

An application program that issues terminal control requests after an ATCX abend may cause further problems.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

For module list, see Diagnostics reference.

Module:
DFHBSMIR, DFHBSMPP, DFHBSM62, DFHBSS, DFHBSTB, DFHBSTB3, DFHBSTC, DFHBSTZ, DFHBSTZB, DFHBSTZO, DFHBSTZR, DFHBSTZV, DFHBSTZ1, DFHBSTZ2, DFHBSZZS, DFHAPRT, DFHCRP, DFHQRY, DFHZARL, DFHZARQ, DFHZERH, DFHZGET, DFHZFRE, DFHZNAC, DFHZRVS, DFHZSUP, DFHMRXM, DFH62XM DFHZTSP, DFHZXST

ATCY

Explanation

An error has occurred during the processing of an inbound function management header (FMH). Either a length error has been detected, for example, incomplete FMH received, or an invalid field has been detected within the FMH.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer of the error. The problem is probably in the remote system that has sent the invalid FMH.

If the inbound FMH is from a system with an earlier release of CICS then you may need to set USEDFLTUSER. See 'Attach Time Security and the USEDFLTUSER option' in chapter 12 of the CICS Security.

Module:
DFHZARQ, DFHZSUP DFHMRXM DFH62XM

ATCZ

Explanation

An error (INVALID, DISASTER or EXCEPTION response) has occurred on the SET_NETWORK_IDENTIFIER call to the security domain as part of opening the CICS VTAM ACB (for example, EXEC CICS SET VTAM OPEN or CEMT SET VTAM OPEN). The domain that detected the original error provides an exception trace, a console message, and depending on the options specified in the dump table, a system dump.

System action

The task is abnormally terminated with a CICS transaction dump. The VTAM ACB is closed.

User response

Use the dump, the trace and the console message to diagnose and correct the original error. Retry the command when the earlier error is resolved.

Module:
DFHZSLS

ATD3

Explanation

The task has been purged, probably due to operator action such as a CEMT TASK PURGE command. The task might also have been purged as a result of CICS issuing a purge request.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Use the transaction dump to determine why the task was purged. In particular, if the purge was operator initiated, the dump should be useful in determining why this task needed to be explicitly purged.

Module:
DFHTDB

ATD9

Explanation

An incorrect response has been received from a call to the enqueue (NQ) domain during the processing of an ENQUEUE or a DEQUEUE request.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Examine the dump and any exception trace entries for further information. Since this is only used for internal enqueues, this abend indicates an error in CICS. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTDB

ATDC

Explanation

A transaction has issued an EXEC CICS READQ, WRITEQ or DELETEQ command against a transient data queue. The task was suspended, waiting for a resource. While suspended, the task was purged.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Investigate why the transaction was purged. It may have been purged via CEMT or automatically, by DTIMEOUT for example.

Module:
DFHETD

ATDS

Explanation

A deadlock timeout condition has been detected. This condition may occur within a transaction that specifies DTIMOUT to be nonzero on its installed transaction definition. Deadlock timeout occurs when a transaction has been waiting or has been suspended for longer than the time specified in DTIMOUT.

The abend is driven by the internal CICS event, ENQUEUE.

Analysis: The transaction receiving the ATDS abend must have been suspended after issuing an ENQUEUE request.

System action

The transaction is abnormally terminated. A dump is not provided (even if a dump table entry has been set up).

User response

The transaction should be reexecuted, and the situation causing the SUSPEND to occur may clear itself.

The ATDS abend is to be expected occasionally, unless DTIMOUT is set to zero. No special action is necessary.

Module:
DFHTDB

ATDY

Explanation

Transient data initialization has failed. A console message, DFH12*xx*, gives the reason for the failure.

System action

Transient data initialization terminates abnormally. This abend is always followed by an ATDZ abend for the failing function, and by message DFHSI1521 (if CICS abends unconditionally), or message DFHSI1522, which prompts you to reply GO or CANCEL.

User response

See the associated console message for information regarding the cause of the failure. Then respond to message DFHSI1522, if it has been issued.

Module:
DFHTDRP

ATDZ

Explanation

A CICS function invoked by transient data initialization has failed. If the failing function is a transient data routine, this abend is preceded by a console message and an ATDY abend.

System action

Transient data initialization terminates abnormally. This abend is always followed by message DFHSI1521 (if CICS abends unconditionally), or message DFHSI1522, which asks you to reply GO or CANCEL.

User response

Refer to the associated console message for further information regarding the cause of the failure. Then respond to message DFHSI1522, if it has been issued.

Module:
DFHTDRP DFHTDB

ATFE

Explanation

A FREEMAIN request to the storage manager has failed while CICS was executing a CEDA CHECK or CEDA INSTALL command.

System action

CICS abnormally terminates the task with a transaction dump.

User response

Use the dump and any associated messages issued by the storage manager to investigate the FREEMAIN failure.

Module:
DFHTOUT1

ATGE

Explanation

A GETMAIN request to the storage manager has failed while CICS was executing a CEDA CHECK or CEDA INSTALL command.

System action

CICS abnormally terminates the task with a transaction dump.

User response

Use the dump and any associated messages issued by the storage manager to investigate the GETMAIN failure.

Module:
DFHTOUT1

ATMA

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The domain that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction, or by CICS issuing a purge request.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

When CICS purges a task, it does so to allow an operation to complete which would be held up by the presence of active tasks.

Module:
DFHTMP

ATMB

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a

system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHTMP

ATNA

Explanation

A terminal operator entered the transaction identification for NACP.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Do not reenter the NACP transaction identification (CSNE).

Module:
DFHZNAC

ATNB

Explanation

The application program has issued a terminal control request for a terminal for which a previous request was terminated with an abend AZCT, because of a read timeout condition. The terminal control blocks are not in a fit state to allow a new request to be processed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Change the application program to issue an abend when handling an abend AZCT.

Module:
DFHZARQ

ATNC

Explanation

The application program has issued a terminal control request for a terminal for which a previous terminal control request was terminated with an abend ATCH, because the task was purged. The terminal control blocks are not in a fit state to allow a new request to be processed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Change the application program to issue an abend when handling an abend ATCH.

Module:
DFHZARQ

ATND

Explanation

The node error program (NEP) or NACP decides that a task should abnormally terminate, but the task is at a critical point of processing and immediate termination would put the integrity of the system at risk.

System action

The task is abnormally terminated with a CICS transaction dump when the task next requests any action against the terminal, or issues a sync point request involving the terminal.

User response

Check destination CSMT for possible further information. Use the dump to determine why the task was abnormally terminated by NEP. Abend ATND is often associated with delayed response by the task due to a problem with a resource. If delayed long enough, a user might cancel their emulator session, triggering an ATND abend. If you suspect this is the case, investigate possible slow down or hangs in tasks.

Module:
DFHZARQ, DFHZARL, DFHZSUP

ATNI

Explanation

There are two forms of this abend:

VTAM form

The node error program (NEP) or NACP decides the task should be abnormally terminated. DFHZNAC informs the request module to abend the transaction after the TC unit has completed.

Non-VTAM form

The terminal error program (TEP) or terminal abnormal condition program (TACP) decides the task should be abnormally terminated. DFHTACP informs DFHZARQ to abend the transaction after the TC unit has completed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

This usually occurs when, due to a hardware failure, a network device rejects the data stream sent to it. The device itself may indicate an error code that will give a specific reason for the rejection. Check the CSMT log for further information.

This abend can also result from an error in a connected system such as a mirror transaction abend.

Abend ATNI can occur if a user application does not correctly handle an error return code from an external resource manager, such as DB2.

For the NEP (VTAM) form, run a VTAM trace type=BUF for the logical unit and repeat the error.

For the TEP (non-VTAM) form, run a link trace for the line or local channel address for the device.

Examine the data stream and error response to determine the cause of the error.

This type of error occurs if the definitions in the TCT do not match the attributes of the actual device.

Module:
DFHZARL, DFHZARM, DFHZARQ, DFHZRAQ, DFHZSUP

ATOA

Explanation

You have attempted to invoke the CESC transaction with a terminal as principal facility. This is not allowed.

System action

CICS terminates the CESC transaction. No dump is produced.

User response

Ensure that the CESC transaction is not run against a terminal.

Module:
DFHCESC

ATOB

Explanation

CICS has received an abnormal response from an EXEC CICS START TRANSACTION(CESC) request. This is caused by an internal error.

System action

CICS terminates the CESC transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCESC

ATOC

Explanation

CICS has received an abnormal response from a request to DFHZCUT to timeout a local userid table (LUIT). This is caused by an internal error in DFHZCUT.

System action

CICS terminates the CESC transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCESC

ATOD

Explanation

CICS has received an abnormal response from an EXEC CICS CANCEL TRANSACTION(CESC) request.

System action

CICS terminates the CESC transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCESC

ATOE

Explanation

CICS cannot determine the time at which an XRF takeover began.

System action

CICS terminates the CESC transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCESC

ATOF

Explanation

CICS has received an abnormal response from an EXEC CICS DELAY TRANSACTION(CESC) request.

System action

CICS terminates the CESC transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCESC

ATOG

Explanation

CICS has received an abnormal response from an EXEC CICS START TRANSACTION(CEGN) request. This is caused by an internal error.

System action

CICS terminates the CEGN transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCESC

ATOH

Explanation

An attempt has been made to invoke the CESC transaction with an invalid function code. The CESC transaction should only be invoked by CICS. Valid codes are TERM_TIMEOUT, XRF_TIMEOUT, and ENABLE_TIMEOUT.

The most likely cause of this error is an invalid attempt by a user to invoke CESC.

System action

CICS terminates the CESC transaction with a transaction dump.

User response

Determine how CESC was invoked. If it was invoked by CICS, you will need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCESC

ATOT

Explanation

An error has occurred in the invocation of the CEGN transaction. CEGN has issued an EXEC CICS RETRIEVE command to retrieve the CEGN parameter list. Either the EXEC CICS RETRIEVE command has failed or it has succeeded but the retrieved data is invalid.

The most likely cause of this error is an invalid attempt by a user to invoke CEGN (for example, from a terminal or via an EXEC CICS START request).

System action

CICS terminates the CEGN transaction with a transaction dump.

User response

Determine how CEGN was invoked. If it was invoked by CICS, you will need further assistance from IBM to

resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCEGN

ATOU

Explanation

The CEGN transaction has attempted to issue an EXEC CICS RETURN but the command has failed.

System action

CICS terminates the transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCEGN

ATOV

Explanation

The CEGN transaction has attempted to issue an EXEC CICS GETMAIN, ASSIGN, or SEND but the command has failed.

System action

CICS terminates the transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCEGN

ATPA

Explanation

An error occurred when trying to estimate the length of a CICS message owned by the message domain.

System action

CICS terminates the transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTPR.

ATPB

Explanation

An error occurred when trying to retrieve a CICS message from the message domain.

System action

CICS terminates the transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTPR.

ATPC

Explanation

An error occurred when trying to estimate the length of a CICS message owned by the message domain.

System action

CICS terminates the transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTPQ.

ATPD

Explanation

An error occurred when trying to retrieve a CICS message from the message domain.

System action

CICS terminates the transaction with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTPQ.

ATPE

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The task that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction, or by CICS issuing a purge request.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

When CICS purges a task, it does so to allow an operation to complete which would be held up by the presence of active tasks.

Module:
DFHTPQ, DFHTPR.

ATPF

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error will have provided an exception trace, a console message and, possibly, a

system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHTPQ, DFHTPR.

ATRA

Explanation

The field engineering global trap exit program, DFHTRAP, requested task abnormal termination. However, the currently active task was **not** a system task (for example, task dispatcher) and it was not about to abend.

System action

CICS disables the trap exit so that it will not be reentered, and terminates the currently active task abnormally.

User response

This is a user-requested task abend.

If you want to use the trap again, you must reactivate it as follows:

CSFE DEBUG,TRAP=ON

You should use the global trap exit only in consultation with an IBM support representative.

Module:
DFHTRP

ATSA

Explanation

The transaction CTSD was attached other than by an internal request from the TS domain.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Investigate why the CTSD transaction was started. This transaction is intended for CICS internal use only and should not be started by a user or from a terminal.

Module:
DFHTSDQ

ATSB

Explanation

The transaction CTSD was attached with invalid parameters.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

You need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHTSDQ

ATSC

Explanation

The task was canceled during execution of a temporary storage command.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason the task was canceled. The task has been canceled by the main terminal operator or automatically by either the deadlock timeout (DTIMEOUT) mechanism or the read timeout (RTIMOUT) mechanism.

Module:
DFHEITS, DFHICP, DFHTSP

ATSD

Explanation

An INVALID or DISASTER response was received from a request to the Temporary Storage (TS) Domain.

System action

The transaction is terminated with a CICS transaction dump.

User response

There has been an earlier failure which lead to the response from TS. Investigate the earlier failure (which is accompanied by a console message and a system dump).

Module:
DFHEITS, DFHICP, DFHTSP

ATSP

Explanation

A task has attempted to issue a WRITEQ TS request for a recoverable TS queue that has already been deleted in the same unit of work.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the application to avoid issuing a WRITEQ TS request to a recoverable queue in a unit of work in which the queue has already been deleted.

Module:
DFHEITS, DFHTSP

ATSQ

Explanation

A move of data to or from temporary storage has failed. The probable reason is that the size of the area being passed to CICS is inconsistent with the data length being used.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Identify the failing temporary storage request in the application and verify whether the length supplied on the request agrees with the data area size. Correct the application as appropriate.

Note:

If the error occurs in DFHTSP and not in DFHETS, there is probably an internal logic error in temporary storage. In this case you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEITS

ATSU

Explanation

A DISASTER response caused by an IOERR was received from a request to the Temporary Storage (TS) Domain.

System action

The transaction is terminated with a CICS transaction dump.

User response

There has been a failure during the creation of a temporary storage record. The likelihood is that an IOERR occurred during the buffer preparation prior to the new record being added to it. It is recommended that the queue be deleted to avoid future references to the failed record.

Module:
DFHEITS, DFHTSP, DFHICP

ATUF

Explanation

Insufficient space exists to build the parameter list for the DYNALLOC SVC.

System action

The task is abnormally terminated and a dump is taken.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFH99KO

AUxx abend codes

AUEL

Explanation

Internal logic error in CICS user exit management. This arises when an attempt to obtain or release the lock on the chain of EPB's fails unexpectedly.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHUEM, DFHERM.

AUEP

Explanation

The task has been abnormally terminated because a return code of UERCPURG has been sent to the User Exit Handler by a User Exit Program. The value of UERCPURG is defined by the macro DFHUEXIT TYPE=EP, ID=*xxxxxxxx*, where *xxxxxxxx* is the exit point by which the exit program is enabled. This code does not apply to exit points in domains. The exit program returns this value when it has made a request for CICS services using the exit programming Interface (XPI) and when the XPI call has had a RESPONSE code of PURGED. Exit programs must not set UERCPURG return code under any other circumstance.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Refer to the Developing system programs for CICS for the use of this return code.

Module:
DFHUEH

AWxx abend codes

AW2A

Explanation

The DFHW2A Web2.0 alias program was executed in a transaction that was not attached by CICS Web Support. This is usually caused by attempting to issue the CW2A transaction directly from a terminal. This is not supported.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Do not attempt to execute the CW2A transaction from a terminal.

Module:
DFHW2W2

AWB2

Explanation

The CICS Web Interface has encountered an error while performing a transaction attach call for the alias task.

System action

Message DFHWB0727 describing the error is written to the CWBO transient data destination and a trace entry is made.

User response

See the associated message for guidance.

Module:
DFHWBXN

AWB3

Explanation

CICS Web transaction, CWXN, has been illegally started either with data, or by a user at a terminal, with the wrong start code.

System action

The CICS Web Interface is not started.

User response

CICS Web Transaction Execution should only ever be started by Sockets Domain using DFHXMAT ATTACH, not by a user at a terminal or with data.

Module:
DFHWBXN

AWB4

Explanation

The CICS Web Transaction Execution has received a bad response from an INQUIRE_TRANSACTION call to determine the start code for the CWXN transaction.

System action

The CICS Web Interface is not started.

User response

CICS Web Transaction Execution should only ever be started by Sockets Domain using DFHXMAT ATTACH, not by a user at a terminal or with data.

Module:
DFHWBXN

AWB5

Explanation

The CICS Web Interface Server Controller could not continue with enable processing because the requested port is not available.

System action

An exception trace entry 4106 is written, and message DFHWB0131 is issued.

User response

Terminate the TCP/IP application which is using the requested port, and use CBWB to enable the feature again, or use CWBC to enable the CICS web Interface using a different port number.

Module:
DFHWBM

AWB7

Explanation

The CICS Web Interface environment variables program was invoked, but the invoking transaction does not appear to be executing in a valid Web environment.

System action

The program writes an exception trace point 4623.

User response

Determine how the environment variables program was invoked. It is only meaningful to execute the program from a transaction that has been initiated from the Web, either through the CICS Web Interface or through the Business Logic Interface.

Module:
DFHWBENV

AWB8

Explanation

The CICS Web Interface environment garbage collection task CWBG has been started directly from a terminal. This is not permitted.

System action

The transaction is abnormally terminated with a transaction dump.

User response

None.

Module:
DFHWBGB

AWB9

Explanation

The CICS Web Interface connection manager failed due to lack of storage.

System action

A transaction dump is taken.

User response

You need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHWBC01

AWBA

Explanation

CICS Web Receive process has received an exception response from the Web Send Receive function, DFHWBSR, which could be one of the following errors:

- An error in the Analyzer program
- No Analyzer program specified
- Unable to link to Analyzer program
- An Analyzer data length error
- An Analyzer header length error
- A codepage conversion error
- A storage error occurred
- An error that the connection has been closed
- A sockets receive error

System action

An error message is sent to the client and the CWBO transient data queue.

User response

Refer to any error messages accompanying this abend to determine why the abend has occurred.

Module:
DFHWBXN

AWBB

Explanation

The incoming parameter list to the CICS Web Business Logic Interface program is not in the expected format. At present, the structure is assumed to be fixed and only a single version level is recognized.

System action

The CICS Web Business Logic Interface program is not executed.

User response

Ensure that the program receives a parameter list in the correct format.

Module:
DFHWBBLI

AWBC

Explanation

No commarea was passed to a CICS Web Interface utility program. One of the utility programs supplied with the CICS Web Interface was executed, but the commarea that was passed was absent or was too short to contain valid information.

System action

The CICS Web Interface utility is not executed.

User response

Ensure that the program passes a commarea that is long enough to contain the expected parameters for the utility you are invoking.

Module:
DFHWBENV, DFHWBTL

AWBD

Explanation

CICS detected an error during transaction initialization for a directly attached user transaction because CICS either failed to authenticate the user or Web Receive process has received an exception response from the Web Send Receive function, DFHWBSR, which could be one of the following errors:

- A storage error occurred
- Method in the request not implemented by the server
- A socket receive error
- Request header is invalid
- A codepage conversion error
- An error that the connection has been closed

System action

An error message is sent to the client and the CWBO transient data queue.

User response

Refer to any error messages accompanying this abend to determine why the abend has occurred.

Module:
DFHWBXM

AWBE

Explanation

The CICS Web Interface detected that a Converter program attempted to change the address of the response buffer when it was not allowed to do so.

System action

The data in the new response buffer is not returned to the Web browser. A CICS transaction dump is taken.

User response

The Converter program is only allowed to replace the response buffer if the `converter_volatile` flag in the Converter parameter list is set to '1'. Check that your Converter program is not trying to return a new response buffer when this flag is set to '0'.

Module:
DFHWBBLI

AWBF

Explanation

The CICS Web Interface alias detected an error in its initialization. The alias was not started by EXEC CICS START, or there was an error in the EXEC CICS RETRIEVE command for the start data.

System action

If there is an error in EXEC CICS RETRIEVE, message DFHWB0103 is written to the CWBO destination. A CICS transaction dump is taken.

User response

If the alias was not started by EXEC CICS START, check if it is being started from a terminal. This is not allowed. Otherwise, see the associated message for guidance.

Module:
DFHWBA

AWBH

Explanation

The CICS Web Interface alias detected a logic error.

System action

An exception trace entry 454F is written. Message DFHWB0106 is written to the CWBO destination. A CICS transaction dump is taken.

User response

Use related diagnostics to determine the user response.

Module:
DFHWBA

AWBI

Explanation

The CICS Web Interface alias received an unexpected response from EXEC CICS ASSIGN STARTCODE

System action

An exception trace entry 4544 is written. Message DFHWB0102 is written to the CWBO destination.

User response

You need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHWBA

AWBJ

Explanation

The CICS Web Interface alias received an unexpected response when it switched to the RP TCB.

System action

An exception trace entry 454E is written. Message DFHWB0105 is written to the CWBO destination. A transaction dump is taken.

User response

See the associated message for guidance.

Module:
DFHWBA

AWBK

Explanation

The CICS Web Interface alias detected an abend in the converter or the CICS program servicing the request.

System action

An exception trace entry 4550 is written. Message DFHWB0108 is written to the CWBO destination.

User response

Use related diagnostics to determine the user response.

Module:
DFHWBA

AWBL

Explanation

The CICS Web Interface alias detected an error in an EXEC CICS LINK command for program DFHWBBLI.

System action

An exception trace entry 4543 is written. Message DFHWB0101 is written to the CWBO destination. A transaction dump is taken.

User response

See the associated message for guidance.

Module:
DFHWBA

AWBM

Explanation

The CICS Web Interface alias detected error response from the Business Logic Interface program DFHWBBLI.

System action

Message DFHWB0101 is written to the CWBO destination. A transaction dump is taken.

User response

See the associated message for guidance.

Module:
DFHWBA

AWBN

Explanation

The CICS Web Interface alias detected an error in an EXEC CICS LINK command for program DFHWBEP.

System action

Message DFHWB0101 is written to the CWBO destination. A transaction dump is taken.

User response

See the associated message for guidance.

Module:
DFHWBA

AWBO

Explanation

The CICS Web Interface alias program has received a non-HTTP request for an HTTP service or a SSL request has been sent to a non-SSL TCPIPSERVICE.

System action

Message DFHWB0114 is written to the CWBO transient data destination and a transaction dump is taken. An exception trace entry, 4567, is also written.

User response

See the associated message for guidance.

Module:
DFHWBA

AWBP

Explanation

The CICS Web Interface alias has detected that the application has started sending a chunked response over the socket but has not terminated the sequence of web send chunk commands with a zero length chunk.

System action

A transaction dump is taken.

User response

Check the application to see why the terminating chunk was not sent.

Module:
DFHWBA

AWBQ

Explanation

The CICS Web Business Logic Interface program detected an error in its parameter list.

System action

If the abend was issued from the Business Logic Interface program, DFHWBBLI, an exception trace

entry '4581' is made and message DFHWB0119 is written to the CWBO transient data destination. If the abend was issued from the Web Interface program, DFHWBA1, an exception trace entry '4560' is written and message DFHWB0124 is sent to the CWBO destination. A transaction dump is taken.

User response

See the associated message for guidance.

Module:
DFHWBA1, DFHWBBLI

AWBR

Explanation

The CICS Web Business Logic Interface program detected a logic error.

System action

If the abend was issued from the Business Logic Interface program, DFHWBBLI, an exception trace entry '4583' is made and message DFHWB0118 is written to the CWBO transient data destination. If the abend was issued from the Web Interface program, DFHWBA1, an exception trace entry '4558' is written and message DFHWB0123 is sent to the CWBO destination.

User response

Use related diagnostics to determine the user response.

Module:
DFHWBA1, DFHWBBLI

AWBU

Explanation

The CICS Web Interface connection manager could not get storage to send a message to the terminal.

System action

Processing continues.

User response

Use related diagnostics to determine the user response.

Module:
DFHWBC01

AWBV

Explanation

The CICS Web Interface connection manager detected an error response on EXEC CICS DEQ.

System action

An exception trace entry 4345 is written. Message DFHWB1651 is written to the CWBO destination.

User response

You need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHWBC04

AWBX

Explanation

The CICS Web Interface connection manager was started against an invalid terminal type.

System action

An exception trace entry 4308 is written. Message DFHWB1522 is written to the CWBO destination.

User response

See the associated message for guidance.

Module:
DFHWBC01

AWBZ

Explanation

The CICS Web Interface connection manager detected a NOTAUTH response to EXEC CICS EXTRACT EXIT.

System action

Message DFHWB1902 is written to the CWBO destination.

User response

See the associated message for guidance.

Module:
DFHWBC0B

AWC1

Explanation

The CICS Web Interface 3270 bridge exit DFHWBLT could not establish a partnership with the Web terminal translation task which started the abended transction.

System action

An exception trace entry 4106 is written, and message DFHWB0131 is issued.

User response

Use related diagnostics to determine the user response.

Module:
DFHWBLT

AWC2

Explanation

The CICS Web Interface 3270 bridge exit DFHWBLT was passed an invalid state token by attach processing.

System action

An exception trace entry 410C is written, and message DFHWB0130 is issued.

User response

Use related diagnostics to determine the user response. On a busy CICS region, the most likely cause is that the bridged transaction started after the state data had been discarded by Web 3270 garbage collection process.

Module:
DFHWBLT

AWC3

Explanation

An application using the CICS Web 3270 function issued an unsupported combination of BMS and Terminal Control commands.

System action

An exception trace entry is written.

User response

Use related diagnostics to determine the user response.

Module:
DFHWBLT

AWC4

Explanation

The CICS Web Interface 3270 bridge exit DFHWBLT has been reinvoked after returning an earlier error.

System action

An exception trace entry is written.

User response

Use related diagnostics to determine the user response.

Module:
DFHWBLT

AWC5

Explanation

The CICS Web Interface 3270 bridge exit DFHWBLT abended during attach processing because it could not getmain a brxa user area.

System action

Message DFHWB0132 is issued, and an exception trace entry 410D is written.

User response

Use related diagnostics to determine the user response. The most likely cause of this abend is that CICS is having storage problems.

Module:
DFHWBLT

AWC6

Explanation

The CICS Web Interface 3270 bridge exit DFHWBLT has detected an inconsistency in its request parameters or state data.

System action

Message DFHWB0133 is issued, and an exception trace entry is written.

User response

Use related diagnostics to determine the user response. The most likely cause of this abend is a storage overwrite.

Module:
DFHWBLT

AWC7

Explanation

CICS detected an error during transaction initialization for a CICS Web alias transaction.

System action

Message DFHWB0360 is issued. No transaction dump is taken for this abend.

User response

Use related diagnostics to determine the user response. The most likely cause of this abend is an invalid userid being passed to CICS by the CICS Web Interface Analyzer user replaceable module. The userid is invalid if:

- It is not defined in the external security manager
- It is revoked
- It is not authorized to access this CICS region

Module:
DFHWBXM

AWC8

Explanation

CICS detected an error during transaction initialization for a CICS Web alias transaction.

System action

A transaction dump is taken for this abend.

User response

Use related diagnostics to determine the user response.

Module:
DFHWBXM

AWC9

Explanation

CICS detected an error during transaction initialization for a CICS IPCONN acquire server-side transaction.

System action

A severe error message and system dump should have preceeded this abend.

User response

Use related diagnostics to determine the cause of the problem.

Module:
DFHWBXM

AWKY

Explanation

A request to PURGE or WRITE a record using the global catalog during warm keypointing has failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check for problems with the global or local catalog. See any DFHCC*nnnn* messages issued by the CICS catalog domain for further guidance.

Module:
DFHWKP

AWSA

Explanation

DFHWSSE1 failed to address the EIB.

System action

The task is abnormally terminated.

User response

You need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHWSSE1

AWSC

Explanation

A container which is required by a SOAP Feature pipeline stage was not found.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that user-written programs in earlier pipeline stages use the correct containers.

Module:
DFHWSPMI,DFHWSPMO

AWSD

Explanation

DFHWSSE1 failed to read a Container.

System action

The task is abnormally terminated.

User response

You need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHWSSE1

AWSH

Explanation

A BTS activity that represents a stage in the SOAP Feature pipeline was found by the pipeline manager to be in an incorrect state.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that user-written programs in earlier pipeline stages use the correct BTS protocols.

Module:
DFHWSPMI,DFHWSPMO

AWSJ

Explanation

DFHWSSE1 failed to get the length of a Container.

System action

The task is abnormally terminated.

User response

You need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHWSSE1

AWSL

Explanation

The SOAP Feature inbound pipeline manager could not link to the message adapter.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check previous CICS messages to determine why the message adapter could not be linked to.

Module:
DFHWSPMI

AWSN

Explanation

An EXEC CICS DEFINE COUNTER or EXEC CICS GET COUNTER command has returned a bad response.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the options table DFHNCOPT for possible errors. Look in the CICS job log for any AXMSCnnnn messages.

Module:
DFHWSDSH

AWSP

Explanation

An application making a Web Service request passed a SOAPAction HTTP request header exceeding 256 bytes in length to the SOAP Feature pipeline.

System action

The task is abnormally terminated.

User response

Check that SOAPAction headers exceeding 256 bytes in length are not constructed by applications invoking Web Services.

Module:
DFHWSRT

AWSQ

Explanation

This is normal behavior when a user stage of the pipeline abends.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the user abend.

Module:
DFHWSPMI

AWSR

Explanation

Either the TARGET-URI or the REQUEST-BODY container was not found when an application invoked the SOAP Feature pipeline to make a Web Service request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that the application making the Web Service request supplies the required containers.

Module:
DFHWSRT

AWSS

Explanation

The SOAP Feature service provider pipeline was requested to invoke the message adapter under a

different transaction ID or user ID to the pipeline, but was unable to satisfy the request.

System action

The task is abnormally terminated.

User response

Check that transaction ID and user ID requested are valid, and that the user ID with which the pipeline is running is a surrogate of the requested user ID.

Module:
DFHWSPMI

AWST

Explanation

The HTTP or WebSphere MQ transport stage of the SOAP Feature pipeline has encountered an input or output error.

System action

The task is abnormally terminated.

User response

Use CICS or WebSphere MQ messages to help you determine the cause of the problem. The error may be transient, in which case you can retry.

Module:
DFHWSTOH

AWSU

Explanation

An invalid URI was passed to the SOAP Feature requester pipeline as the location of a Web Service provider.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that applications making Web Service requesting specify valid URIs for locations of Web Service providers.

Module:
DFHWSRT

AWSX

Explanation

DFHWSSE1 received an unexpected response from the WSSE API.

System action

The task is abnormally terminated.

User response

You need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHWSSE1

AWSY

Explanation

A problem was encountered in the DFHPIRT outbound router program. This usually implies that one of

the containers used by DFHPIRT was not populated correctly.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that applications using DFHPIRT correctly populate the control containers required for pipeline processing.

Module:
DFHPIRT

AXxx abend codes

AXF0

Explanation

A task has been purged due to lack of storage in a dynamic storage area (DSA).

System action

The task is abnormally terminated with a transaction dump.

User response

Try the transaction again later.

If the short-on-storage condition persists, consider increasing the size limit of the CICS DSAs. You can vary the DSAs dynamically using the DSALIM and EDSALIM parameters on the CEMT main terminal command.

Module:
DFHXFP

AXF1

Explanation

The storage manager module, DFHSMGF, has returned a condition not expected by DFHXFP.

System action

The task is abnormally terminated with a transaction dump.

User response

Look for any related CICS messages and abends to determine if there has been a prior failure in CICS storage.

Module:
DFHXFP

AXF2

Explanation

A task has been purged due to lack of storage in the DSA.

System action

The task is abnormally terminated with a transaction dump.

User response

Try the transaction again later.

If the short-on-storage condition persists, increase the size of the dynamic storage area using the DFHSIT DSA parameter.

Module:
DFHXFP

AXF3

Explanation

The storage manager module DFHSMMC has returned a condition not expected by DFHXFP.

System action

The task is abnormally terminated with a transaction dump.

User response

Look for any related CICS messages and abends to determine if there has been a prior failure in CICS storage.

Module:
DFHXFP

AXF4

Explanation

The task was purged before a GET_BUFFER request to the EXEC interface service routines module (DFHEISR), was able to complete successfully. The domain that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:

DFHXFX

AXF5

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the EXEC interface service routines module(DFHEISR). The domain that detected the original error provides an exception trace, a console message, and possibly, a system dump (depending on the options specified the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message from the domain that detected the original error.

Module:
DFHXFX

AXF8

Explanation

A keyword such as TOKEN, CONSISTENT, REPEATABLE, UNCOMMITTED, or NOSUSPEND has been specified on a file control command for shipping to a system which does not support these functions.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that CICS in the file-owning region is at the correct level.

Module:
DFHXFX

AXFA

Explanation

The key length for a file control request that is to be sent to a remote system has to be obtained from the file control table, and has proved to be zero.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that the key length has been defined either in the remote file definition that is being used, or as a length option from the application program that is using it.

Module:
DFHXFP

AXFB

Explanation

An unacceptable function management header (FMH) type has been found. It must be type 05, type 06, or type 43.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

AXFC

Explanation

The request passed to the data transformation program is unknown to CICS. This abend can also occur in an MRO/IRC system as a result of an invalid EXEC CICS START request issued from the user's node error program (DFHZNEP).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the Developing system programs for CICS for restrictions on the use of EXEC CICS commands from within an NEP. If this is not the cause of the abend, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

AXFD

Explanation

The request that is passed to the data transformation program cannot be sent to a remote system; for example, a storage control request.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

AXFE

Explanation

The transformation requested does not exist; for example, a DL/I schedule reply is not recognized by the outbound request processor in the data transformation program.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

AXFF

Explanation

An unacceptable queue organization has been found in a queue model function management header (FMH).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

___

AXFG

Explanation

An unacceptable argument number has been found in the data following a function management header (FMH) of type 43.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

___

AXFH

Explanation

The argument number in the data following a function management header (FMH) of type 43 is acceptable, however, the argument itself is not expected.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

___

AXFI

Explanation

The data length for a WRITEQ TD or READQ TD is zero. The abend can also occur when determining the length for file control requests.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer.

Module:
DFHXFP

___

AXFJ

Explanation

The error code held in UIBFCTR and UIBDLTR cannot be converted to an equivalent SNA error code.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

___

AXFL

Explanation

Transformers 2 and 4 expect to receive a function management header (FMH), possibly followed by user data. A null chain of data has been received.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

___

AXFM

Explanation

The ISCINVREQ condition has been raised. This can happen when the resource proves to be on yet another remote system, that is, when daisy-chaining is active.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that daisy-chaining of requests is intended and that all relevant intersystem links are in service.

Module:
DFHXFP

AXFN

Explanation

The user domain module, DFHUSAD, has returned a condition not expected by DFHXFX.

System action

The task is abnormally terminated with a transaction dump.

User response

Look for any related CICS messages, abends or exception traces to determine if there has been a prior failure in user domain or security domain.

Module:
DFHXFX

AXFO

Explanation

The check on the DS and DBA parameters in an attach function management header (FMH) has failed. This abend represents a user error resulting from a mismatch in the system definitions for both ends of an intersystem link.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer.

Module:
DFHXFP

AXFP

Explanation

CICS requires a second function management header (FMH) to follow an attach FMH. No second FMH was received.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer.

Module:
DFHXFP

AXFQ

Explanation

Either the function management header (FMH) just received is too short or too long to be a valid FMH, or an expected FMH is not present.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that the transaction profile parameter, INBFMH, is set to ALL. If communicating across a distributed program link, ensure that the requested function is supported on the partner system.

Module:
DFHXFP

AXFR

Explanation

The CICS command level interface imposes a maximum length of 32 767 for data. The length of the data just received exceeds this limit.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer.

Module:
DFHXFP

AXFS

Explanation

A PSB has been scheduled successfully. However, the maximum possible length of an I/O area exceeded 65 535. This abend is likely to occur if path calls are used to retrieve large segments, and/or if FLS causes excessive expansion of segments.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer.

Module:
DFHXFP

AXFT

Explanation

An estimate of the size of the output I/O area has been made, and it exceeds the maximum possible size of 65 535.

Note:

While the estimated size may exceed the actual size, the difference will only be a few bytes.

This abend is likely to occur if a database calls, inserts, or replaces multiple segments, and many qualified segment search arguments are specified.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Notify the system programmer.

Module:
DFHXFP

AXFU

Explanation

A two-level cursor is present in a function management header (FMH) relating to a linear (temporary storage) queue. However, these cursors are valid only for hierarchical queues that are not supported by CICS.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHXFP

AXFV

Explanation

The user domain module, DFHUSAD, has returned a condition not expected by DFHXFX.

System action

The task is abnormally terminated with a transaction dump.

User response

Look for any related CICS messages, abends or exception traces to determine if there has been a prior failure in user domain or security domain.

Module:
DFHXFX

AXFW

Explanation

An invalid length specification has been given in a CICS command-level request corresponding to one of the data variables.

The CICS-architected FMH is followed by zero or more self-describing data variables for each parameter specified.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check for an invalid or zero length specified in a CICS command-level request, or for data truncation in a user-written node error program (NEP).

Module:
DFHXFP

AXFX

Explanation

A function shipping request by an APPC link failed because

- the remote system does not support full syncpoint protocols, or
- the exchange log name sequence could have failed, resulting in a mismatch, or
- the request has not completed within the allocated time (10 seconds).

System action

CICS terminates the task abnormally.

User response

Check that the request was directed to the correct remote system, and that the remote system is set up to support full syncpoint protocols (synclevel 2).

Module:
DFHXFP

AXFY

Explanation

An APPC conversation failure has occurred when an attach between CICS systems was issued.

System action

The task is abnormally terminated with a transaction dump.

User response

Check the connection to the remote CICS system and try to reestablish it.

Module:
DFHXFP

AXFZ

Explanation

The monitoring domain module, DFHMNOD, has returned a condition not expected by DFHXFX.

System action

The task is abnormally terminated with a transaction dump.

User response

Look for any related CICS messages, abends or exception traces to determine if there has been a prior failure in the monitoring domain.

Module:
DFHXFX

AXGA

Explanation

Program DFHAPCR has returned an unexpected response. DFHAPCR performs the following functions:-

- Extracts the contents of all containers making up a channel and transmits them to a remote system.
- Recreates the channel and containers from inbound data received from a remote system.

DFHAPCR has either detected an error in inbound data or has received an unexpected response whilst extracting or recreating channel data.

One cause of this error is that an EXCI job using channels and containers has sent a DFHTRANSACTION channel to a CICS release that does not support transaction channels. Transaction channels are supported in CICS TS 5.2 and higher.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Look for any related CICS messages and abends to determine if there has been a prior failure in Program Manager, which manages containers. Look for exception trace entries from Program Manager or DFHAPCR to determine the cause of the error.

If an EXCI job is sending a transaction channel to a pre CICS TS 5.2 system, change the EXCI job to use a non transaction channel.

Module:
DFHXFX,DFHXFP

AXGB

Explanation

The application context handling module, DFHMNAC, has returned an unexpected response from function IS_ACD_SET.

System action

The task is abnormally terminated with a transaction dump.

User response

Contact your IBM support center.

Module:
DFHXFP

AXGC

Explanation

The application context handling module, DFHMNAC, has returned an unexpected response from function GET_ACD.

System action

The task is abnormally terminated with a transaction dump.

User response

Contact your IBM support center.

Module:
DFHXFX, DFHXFP

AXGD

Explanation

The application context handling module, DFHMNAC, has returned an unexpected response from function MIRROR_ACD.

System action

The task is abnormally terminated with a transaction dump.

User response

Contact your IBM support center.

Module:
DFHXFX, DFHXFP

AXGE

Explanation

A distributed program link (DPL) request, specifying channel name DFHTRANSACTION, has also specified a COMMAREA that is too large for the terminal I/O area (TIOA).

System action

The task is abnormally terminated with a transaction dump.

User response

Check if the request is using the correct length for the COMMAREA. If a DFHTRANSACTION channel is specified the COMMAREA size should not exceed 24 KB. In this case to accommodate a size greater than 24 KB specify a user channel instead of a COMMAREA.

Module:
DFHXFP

AXMA

Explanation

An error has occurred obtaining a lock within the transaction manager domain.

System action

The recovery routine of the module in control is invoked which issues message DFHXM0002 with a system dump. DFHXM0002 reports the module in control at the time of the error.

User response

See the description of message DFHXM0002 for further guidance.

For module list, see Diagnostics reference.

Module:
DFHXMAT, DFHXMBD, DFHXMCL, DFHXMDD, DFHXMFD, DFHXMLD, DFHXMQD, DFHXMST, DFHXMTA, DFHXMXD, DFHXMXE

AXMB

Explanation

An error has occurred releasing a lock within the transaction manager domain.

System action

The recovery routine of the module in control is invoked. This routine issues message DFHXM0002

with a system dump. DFHXM0002 reports the module in control at the time of the error.

User response

See the description of message DFHXM0002 for further guidance.

For module list, see Diagnostics reference.

Module:
DFHXMAT, DFHXMBD, DFHXMCL, DFHXMDD, DFHXMFD, DFHXMLD, DFHXMQD, DFHXMST, DFHXMTA, DFHXMXD, DFHXMXE

AXMC

Explanation

An severe error has occurred allocating a unique transaction number to a new transaction.

System action

The recovery routine of the module in control is invoked. This routine issues message DFHXM0002 with a system dump. DFHXM0002 reports the module in control at the time of the error.

User response

See the description of message DFHXM0002 for further guidance.

Module:
DFHXMAT, DFHXMXE

AXMD

Explanation

An attempt has been made to run the CICS internal task CSXM as a user transaction.

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the attempt was made to run CSXM as a user transaction.

Module:
DFHXMAB

AXMU

Explanation

During transaction attach the userid that had been assigned to the transaction was found to be invalid.

System action

CICS terminates the task with a transaction dump.

User response

Determine how the invalid userid had been assigned to the transaction. It might have been output by a user-replaceable module.

Module:
DFHXMAT

AXMY

Explanation

During transaction attach an unexpected error occurred obtaining transaction class membership.

System action

The transaction is no longer considered for class membership. It is then abnormally terminated with a CICS transaction dump.

User response

Use the dump to determine why the transaction failed to obtain membership of its transaction class.

Module:
DFHXMAT

AXMZ

Explanation

A serious failure in another component has been detected by the transaction manager domain.

System action

The task in control is abnormally terminated with a transaction dump. Further diagnostics should have been taken by the failing component.

User response

Look for earlier messages identifying the source of the problem. Refer to the descriptions of these messages for further guidance.

Module:
DFHXMTA

AXSA

Explanation

The CICS security control task could not complete because a necessary step failed. The task has done some essential recovery operations and abnormally terminated itself with code AXSA.

System action

CICS writes a transaction dump for the security control restart task.

CICS sends messages to the console, one to identify the error detected by the security control task, and, if the error occurred during initialization, one to say that security initialization or CEMT PERFORM SECURITY REBUILD has failed. A third message follows either to say that CICS has terminated abnormally with a dump, or to ask you to reply GO or CANCEL. Depending on the nature of the original error, you may see messages from some other system component (for example, an access method).

User response

First, if CICS has requested a response, you must reply. If you reply 'GO', CICS continues processing, but without support for the external security manager. CICS security still operates. If you reply 'CANCEL', CICS terminates abnormally with a dump.

Use the messages and dumps to find out the cause of the failure.

Module:
DFHXSMN

AXSB

Explanation

A system transaction has been started from a terminal; this is not permitted. Category 1 transactions can only be started internally by CICS.

System action

The task is abnormally terminated. No transaction dump is taken.

User response

None.

Module:
DFHXMTA

AXSC

Explanation

The task was purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The task that first detected the purged condition will have provided an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHXSMN

AXSD

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHTCRP

AXSE

Explanation

The CICS security token service has been called without a channel.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Change the program calling the DFHSAML processor. Ensure that you call it using the interface defined in the SAML programming interface.

Module:
DFHSAML

AXSF

Explanation

The CICS security token service encountered a severe error.

System action

A system dump will be taken with an associated DFHAP0002 message. The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHSAML

AXSG

Explanation

The DFHSAML program is not running in CICS key.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Install the DFHSAML program definition provided in the group DFHSAML.

Module:

DFHSAML

AXTA

Explanation

The calculation of the length of data to be shipped has failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTB

Explanation

An attempt to obtain a buffer to ship data has failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTC

Explanation

An attempt to transform data ready for shipment has failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTD

Explanation

No buffer was received from a remote system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTE

Explanation

Incorrect data was received from a remote system. The data was not long enough.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTF

Explanation

No relay process function management header (FMH) was received from the remote system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTG

Explanation

Transformation of data received from remote system failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that the reason for failure of the transformation process was not incorrect definition of the remote terminal. In particular check that the user area length specified for the terminal is the same in both local and remote systems. If the terminal definitions are correct, you need further assistance to resolve this problem. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTH

Explanation

An attempt to locate terminal identifier failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTI

Explanation

The major request byte LUCOPN0 of the DFHLUC parameter list specified to the transaction-routing transformer is invalid, or corresponds to a request that is not shipped to a remote system. The parameter list will be found in the dynamic storage of the transformer's caller and may be located using the output from auxiliary trace.

System action

The task is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTJ

Explanation

An unexpected combination of bit settings in the fields XTSSTAT and XTSTCOPC in the parameter list of the transaction-routing transformer was made.

System action

The task is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTK

Explanation

An APPC conversation failure occurred when an attach between CICS systems was issued.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the connection to the remote CICS system and try to reestablish it.

Module:
DFHXTP

AXTL

Explanation

The processing of APPC mapped data requires the generation of an APPC attach FMH with default values. In particular, the sync level requested is defaulted to 2. However, the session that is to be used has been bound with a sync level of 1.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that:

- The CONNECTION resource for the remote system has not been defined as single-session.
- The remote system is capable of supporting a sync level of 2.
- Exchange lognames has completed for the connection. You can use the command CEMT INQUIRE CONNECTION to do this. See the CICS intercommunication for more details of the exchange lognames process.
- The correct sync level has been requested.

Module:
DFHXTP

AXTM

Explanation

An attempt has been made to route a message-protected transaction over an APPC link bound at sync level 1. The attempt has failed because such transactions can be routed only over an APPC link that has been bound at sync level 2.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If the transaction is to be routed to CICS OS/2 (which is bound at synclevel 1), remove the message

protection option. If the transaction is to be routed to another host system and message protection is required, the link must be redefined so that it can be bound at synclevel 2.

Module:
DFHXTP

AXTN

Explanation

The transaction-routing transformer module detected that the application buffer chained off a TCTTE at offset TCTERCSA has a corrupted header. This is caused either by a CICS logic error or by a storage overwrite.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is a CICS internal logic error. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTO

Explanation

An exception response has been returned to the transaction-routing transformer module from the CICS security manager. Prior to the call to the CICS security manager, the transformer module detected that a shipped terminal definition had preset security. The transformer then invoked the CICS security manager in order to perform a preset security signon for the userid sent with the shipped terminal information. It is this preset security signon attempt which failed.

System action

The transaction routing request is terminated and a message is sent to the terminal owning region (TOR) to indicate that the transaction routing request has failed. The CICS security manager issues a DFHSNxxxx message to the transient data queue, CSCS.

User response

The most likely cause of this abend is that the terminal being shipped to the application owning region (AOR) has preset security with a userid which is not valid

in the AOR. To confirm this, check the associated DFHSNxxxx message on the CSCS transient data queue in the AOR which gives the precise reason for the failure of the preset security signon request. This could be the result of an unauthorized transaction routing request.

Module:
DFHAPRX, DFHXTP

AXTP

Explanation

An exception response has been returned to the transaction-routing transformer module from DFHCCNV FUNCTION(CONVERT_DS3270_FOR_SBCS). The module was called for a CICS client virtual terminal which requested conversion from ASCII to EBCDIC for data coming from the client. However, the conversion failed.

System action

The transaction routing request is terminated and a message is sent to the terminal owning region (TOR) to indicate that the transaction routing request has failed. The CICS security manager issues a DFHSN*nnnn* message to the transient data queue, CSCS.

User response

Examine the response and reason returned in the DFHCCNV commarea DFHC32. The client and server codepages will have already been validated so this may be a CICS error. You may need to contact IBM for further assistance. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTQ

Explanation

An exception response has been returned to the transaction-routing transformer module from DFHCCNV FUNCTION(CONVERT_DS3270_FOR_SBCS). The module was called for a CICS client virtual terminal which requested conversion from EBCDIC to ASCII for data to be sent to the client. However the conversion failed.

System action

The transaction routing request is terminated and a message is sent to the terminal owning region (TOR) to indicate that the transaction routing request has failed.

The CICS security manager issues a DFHSN*nnnn* message to the transient data queue, CSCS.

User response

Examine the response and reason returned in the DFHCCNV commarea DFHC32. The client and server codepages will have already been validated so this may be a CICS error. You may need to contact IBM for further assistance. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHAPRX, DFHXTP

AXTR

Explanation

An exception response has been returned to the transaction-routing transformer module from DFHPGLE FUNCTION(LOAD_EXEC) whilst trying to load EXEC program DFHCCNV.

System action

The transaction routing request is terminated and a message is sent to the terminal owning region (TOR) to indicate that the transaction routing request has failed. The CICS security manager issues a DFHSN*nnnn* message to the transient data queue, CSCS.

User response

Examine the response and reason returned from DFHPGLE to determine why CICS was unable to call DFHCCNV.

Module:
DFHAPRX, DFHXTP

AXTS

Explanation

One of the following conditions has occured.

- A transaction running in an AOR has created a channel. The transaction has terminated by issuing EXEC CICS RETURN TRANSID CHANNEL to name the next transaction in the pseudo-conversation and pass the channel to it. However the TOR is not at a high enough CICS level to support channels.

- A transaction running in an AOR has created a channel. The transaction has terminated by issuing EXEC CICS RETURN TRANSID CHANNEL to name

the next transaction in the pseudo-conversation and pass the channel to it. The channel is transmitted to the TOR and is held there until the next transaction in the pseudo-conversation starts. However, when the next transaction is initiated, it is found to reside in an AOR that is not at a high enough CICS level to support channels.

System action

The transaction routing request is terminated and a message is sent to the terminal owning region (TOR) to indicate that the transaction routing request has failed.

User response

If channels are passed between transactions in a pseudo-conversation, you must ensure that all TOR and AOR systems involved in passing the channel are at a high enough CICS level to support channels.

Module:
DFHAPRX, DFHXTP

AXTU

Explanation

Program DFHAPCR has returned an unexpected response. DFHAPCR performs the following functions:-

- Extracts the contents of all containers making up a channel and transmits them to a remote system.

- Recreates the channel and containers from inbound data received from a remote system.

DFHAPCR has either detected an error in inbound data or has received an unexpected response whilst extracting or recreating channel data.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Look for any related CICS messages and abends to determine if there has been a prior failure in Program Manager, which manages containers. Look for exception trace entries from Program Manager or DFHAPCR to determine the cause of the error.

Module:
DFHAPRX, DFHXTP

AZxx abend codes

AZAB

Explanation

DFHZARM has a SEND DATA request with a data length greater than 65 528 bytes which is the maximum that it can process.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

This is a CICS internal logic error. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARM

AZAD

Explanation

DFHZCN1 has been started from an unexpected system. The CCIN transaction can only be issued by a client.

System action

The transaction is abnormally terminated. Exception trace point AP3008 is written. Data1 holds the XMIQ start type.

User response

Issue the CCIN transaction only from a client.

Module:
DFHZCN1

AZAE

Explanation

DFHZCN1 was started from a terminal facility, but not an LU6.2 session. The CCIN transaction may only be issued by a client.

System action

The transaction is abnormally terminated.

User response

Issue the CCIN transaction only from a client.

Module:
DFHZCN1

AZAF

Explanation

DFHZCN1 was started for transaction CCIN. However either the environment is wrong or the client architecture has been violated. This abend is always issued in conjunction with a DFHZC32nn message which explains the problem in more detail.

System action

Exception trace point AP30xx is written. The transaction is abnormally terminated.

User response

Look for a DFHZC32nn message on the console or CSNE and look for exception trace points AP30xx. Use these to diagnose the problem.

Module:
DFHZCN1

AZAG

Explanation

DFHZCT1 has been started from an unexpected system. The CTIN transaction can only be issued by a client.

System action

The transaction is abnormally terminated with a CICS transaction dump. Exception trace point AP302A is written. Data1 holds the XMIQ start type.

User response

Issue the CTIN transaction only from a client.

Module:
DFHZCT1

AZAH

Explanation

DFHZCT1 was started from a terminal facility, but not an LU62 session. The CTIN transaction can only be issued by a client.

System action

The transaction is abnormally terminated with a CICS transaction dump. Exception trace point AP3032 is written. Data1 holds the principal facility address.

User response

Issue the CTIN transaction only from a client.

Module:
DFHZCT1

AZAI

Explanation

DFHZCT1 was started for transaction CTIN. However either the environment is wrong or the client architecture has been violated. This abend is always issued in conjunction with a DFHZC32nn message which explains the problem in more detail.

System action

Exception trace point AP30xx is written. The transaction is abnormally terminated.

User response

Look for a DFHZC32nn message on the console or CSNE and look for exception trace points AP30xx. Use these to diagnose the problem.

Module:
DFHZCT1

AZAJ

Explanation

DFHZCN1 was started for transaction CCIN. However, the CCIN transaction is being started on a surrogate, which means that it has been defined as a remote transaction. CCIN must be a local transaction and be run on a CICS region which is directly connected to a client.

System action

Exception trace point AP3041 is written. The transaction is abnormally terminated.

User response

Either use the default definitions for CCIN or ensure that it is defined as a local transaction.

Module:
DFHZCN1

AZAK

Explanation

DFHZCT1 was started for transaction CTIN. However, the CTIN transaction is being started on a surrogate, which means that it has been defined as a remote transaction. CTIN must be a local transaction and be run on a CICS region which is directly connected to a client.

System action

Exception trace point AP3039 is written. The transaction is abnormally terminated.

User response

Either use the default definitions for CTIN or ensure that it is defined as a local transaction.

Module:
DFHZCT1

AZCA

Explanation

An internal logic error has been detected during APPC mapped processing. The conversation state maintained by DFHZARL does not match that maintained jointly by DFHETL and DFHZARM.

The problem may also arise when CICS is assembling application data and receives end of chain before receiving all of the data that is expected.

System action

The task is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARM

AZCB

Explanation

CICS has received sense code X'088901*xx*' during APPC mapped processing. This should be followed by an error data GDS (generalized data stream) variable.

CICS has attempted to receive the error data. However this attempt has failed because no data has been

received or because the data received is not for an CICS ISSUE ERROR of the correct length.

CICS expects the error data to indicate that the other system does not recognize GDS ID X'12F2' (function management data).

System action

The task is abnormally terminated with a CICS transaction dump.

The erroneous GDS ID is returned to the remote system for further analysis there.

User response

Check for session failure and for abend by the transaction in the other system.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARM

AZCC

Explanation

The failing transaction has sent function management data to a transaction running in a system that does not provide support for application function management data.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that the remote system can support application function management data.

Module:
DFHZARM

AZCD

Explanation

A possible intersystem logic error has been detected during APPC mapped processing. The length of application data that is to be received (as determined from the LL fields and concatenation flags) does not match the length actually received. CICS determines the length of application data that is to be received from the LL fields and concatenation flags. However, CICS has not received all of the data that is expected.

This abend can be caused by a loss of data following the failure of a persistent sessions restart in a partner system. In this case, no logic error has occurred because any updates are backed out.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If this abend is not caused by the failure of a persistent sessions restart in a partner system, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHETL, DFHZARM

AZCE

Explanation

An intersystem error has been detected during APPC mapped processing. The length of application data that is to be received (as determined from the LL fields and concatenation flags) exceeds the CICS implementation limit of 32 767, for receive and converse commands, or 65 000 for CICS transaction routing or function shipping requests.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Reduce the amount of data that the transaction in the remote system is transmitting to CICS.

Module:
DFHETL, DFHZARM

AZCF

Explanation

An internal logic error has been detected during APPC mapped processing. An invalid request has been passed to DFHZARL.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARM

AZCG

Explanation

An internal logic error has been detected during APPC mapped processing. DFHZARM expects the TCTTE passed to have been defined as APPC, TCTEILUC (TCTELUC) set on, and TCTECVT set to TCTEMAPD (to indicate a mapped conversation).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARM

AZCH

Explanation

Sense code X'0889*xxxx*' has been received unexpectedly during the processing of APPC mapped data.

This represents a violation of the APPC architecture by the remote system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHETL, DFHZARM

AZCI

Explanation

The processing of APPC mapped data requires generation of an APPC attach function management header (FMH) with default values. In particular, the sync level requested is defaulted to 2. However, the session that is to be used has been bound with a sync level of 1.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check that:

- The CONNECTION resource for the remote system has not been defined as single-session.
- The remote system is capable of supporting a sync level of 2.
- Exchange lognames has completed for the connection. You can use the CEMT INQUIRE CONNECTION to do this. See the CICS intercommunication for details of the exchange lognames process.

Module:
DFHETL, DFHZARM, DFHZARQ

AZCJ

Explanation

An APPC structured field with GDS ID X'12F1' (null data) has been sent to a remote system that does not support the receipt of these fields. The remote system has responded negatively and has terminated the conversation.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The problem is in the remote system. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARM

AZCK

Explanation

An internal logic error has been detected during error recovery for APPC mapped processing. The conversation was being switched to RECEIVE state by an internal CICS SEND INVITE, but the conversation had already been FREEd by the partner.

System action

The task is abnormally terminated with a CICS transaction dump. CICS processing continues.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARM

AZCL

Explanation

CICS has received sense code X'088901xx' during APPC mapped processing. The generalized data stream (GDS) should contain a valid GDS identity in the error data but CICS does not recognize the value. The values recognized by CICS are:

```
X'12F1'    null data
X'12F2'    function management data
X'12FF'    application data.
```

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check for session failure and for an abend by the transaction in the other system.

Module:
DFHZARM

AZCM

Explanation

An error (INVALID, DISASTER, or unexpected EXCEPTION response) has occurred on a call to the storage manager (SM) domain. The domain that detected the original error provides an exception trace, a console message and, possibly, a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the related message produced by the domain that detected the original error.

Module:
DFHZARM

AZCN

Explanation

The task has been purged before a GETMAIN request to the storage manager (SM) domain was able to complete successfully. The task that first detected the purged condition provides an exception trace.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHZARM

AZCO

Explanation

The VTAM persistent sessions initialization transaction CGRP has been started directly from a terminal. This is not permitted. This transaction can only be started internally by CICS.

System action

The transaction is abnormally terminated with a transaction dump.

User response

None.

Module:
DFHZCGRP

Explanation

A logic error has been detected in ZCP. An allocation request for a starting task cannot be satisfied.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSUP DFH62XM

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the recovery manager (RM) domain to change the recovery status of an intercommunication session. The domain provides an exit trace, and possibly a console message and a system dump (depending on the options specified in the dump table).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

This failure is either the result of a task purge, or it represents a CICS logic error and you will need assistance from IBM.

See the related diagnostic material produced by the recovery manager domain.

Module:
DFHZSUP DFHMRXM DFH62XM

Explanation

A logic or protocol error has been detected during processing of an APPC SYNCPOINT ROLLBACK request. An attempt has been made to restore the conversation state to what it was after completion of the last successful unit of work. This saved state does not match flows received from the partner.

The problem arises during rollback in one of the following situations:

- The saved state is receive, and the partner sent change direction on the last flow, indicating that the partner expects CICS to be in send state
- The saved state is send, and the partner did not send the change-direction indicator on the last flow, indicating that the partner expects CICS to be in receive state.

System action

The task is abnormally terminated with a CICS transaction dump. Other processing continues.

User response

The problem can arise because of a failure in CICS, or a failure in the partner. To determine which is failing, analyze the flows at the last successful syncpoint. Try to determine the states the two LUs were in at this point. Look at the last syncpoint flow into CICS from the partner, before the abend. From this flow, calculate whether the change-direction indicator on the SPCMOD modifier byte is on. (See the Systems Network Architecture Formats (GA27-3136) manual for further information on the SPCMOD modifier byte.) The indicator must only be set when the saved CICS conversation state is send. If the last CICS state was send, and the indicator is on, CICS is at fault. Similarly, if the last CICS state was receive, and the indicator is off, CICS is at fault.

If the last CICS state was send and the indicator is off, or the last CICS state was receive, and the indicator is on, CICS has received a change-direction indicator when it was not expecting one. In this case, examine the partner for a logic error.

Module:
DFHZARL

Explanation

A terminal read-time-out condition has been detected. The transaction has been waiting for a terminal input

message for an interval longer than specified in the RTIMOUT value for that transaction.

Coding RTIMOUT in the PROFILE entry causes the task to be abnormally terminated if the terminal does not send input within the specified time.

System action

The transaction is abnormally terminated. A dump is not provided unless the dump table entry for transaction dump code AZCT indicates that one should be taken.

User response

If a HANDLE ABEND command has been issued for this task, the read that was timed-out is still outstanding. In order to cancel this read, issue an ABEND command at the end of the user exit routine so that CICS can clean up the terminal's TCTTE. No further terminal control commands should be issued.

Module:
DFHZARQ

AZCU

Explanation

The COVR transaction has been started directly from a terminal, or by a START command. This is not permitted. This transaction can only be started internally by CICS.

System action

The transaction is abnormally terminated. No transaction dump is taken.

User response

None.

Module:
DFHZCOVR

AZCV

Explanation

A logic error has been detected in the COVR transaction while trying to connect to VTAM.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZCOVR

AZCW

Explanation

An attempt has been made to run the CICS internal task CSTP as a user transaction.

System action

CICS terminates the task with a transaction dump.

User response

Investigate why the attempt was made to run CSTP as a user transaction.

Module:
DFHZCSTP

AZI1

Explanation

An IRC data transmission request has been issued, but cannot be completed because the transmission protocol has been violated.

If the session is not used for distributed transaction processing, that is if it is used for function shipping or transaction routing, then the problem is caused by a CICS logic error.

If the session is used for distributed transaction processing, then the following are possible causes of the abend:

- An invalid terminal control command, such as ISSUE SIGNAL, was issued
- A send request was issued but the session was not in send state, or a read request was issued but the session was not in receive state.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Determine the cause of the abend and if appropriate, correct the application. For further guidance, refer to the section on the EXEC Interface block (EIB) in the

CICS intercommunication. The EIB describes the state of the session after a request has been issued.

Module:
DFHZARQ

AZI2

Explanation

An IRC data transmission request has been issued but cannot be completed. Possible causes of the problem include:

- The transaction running in the connected system has been purged, or
- The transaction running in the connected system has been timed out, or
- The abending transaction has attempted to SEND while in RECEIVE state, or
- The abending transaction has attempted to RECEIVE while in SEND state.

If the abend was caused by DFHIRP rejecting the transmission request, the dump will contain DFHIRP's return code in the field TCTEIRET for the TCTTE representing the failed IRC session. The address of this TCTTE is in field B of the trace entry representing the DFHTC data transmission request.

The meanings of the DFHIRP return codes are given in the copybook, DFHIRSDS.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If the cause of the error was a purge or a time-out, no further action is required.

If the error was caused by a condition such as an attempted SEND while in RECEIVE state or vice versa, analyze the dump and correct the protocol violation.

Module:
DFHZARQ

AZI3

Explanation

A terminal control request issued by an application to a remotely-owned terminal failed because the conversation with the other system failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARQ

AZI4

Explanation

An IRC data transmission request has been issued, but cannot be completed because the other system has become unavailable for interregion communication.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Rerun the transaction when IRC is available.

Module:
DFHZARQ

AZI5

Explanation

An IRC data transmission request has been issued, but the data sent by the connected system in response to the request violated IRC protocols.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARQ

AZI6

Explanation

The transaction was connected to another transaction in another CICS system via an IRC link. This other transaction has abnormally terminated.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Correct the cause of the abend in the connected transaction.

Module:
DFHZARQ

AZI7

Explanation

The transaction was processing an MRO request which involved waiting for a response from a connected subsystem. The 'wait' request was rejected by the CICS dispatcher.

System action

The transaction is abnormally terminated with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZIS2

AZI8

Explanation

The error log data received with an ISSUE-ABEND flow on an IRC connection was not in the correct format.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZIS1

AZI9

Explanation

The transaction was processing an MRO request which involved waiting for a response from a connected subsystem. During the wait, the failing transaction was purged. The purge can only have been the result of operator action, such as a CEMT SET TASK PURGE.

System action

The task is abnormally terminated with a dump.

User response

Investigate the reason the transaction was purged.

Module:
DFHZIS2

AZIA

Explanation

The transaction attempted to acquire or free storage during MRO processing. The response from the CICS storage manager (SM) domain indicated that the request was invalid.

System action

The task is abnormally terminated with a dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZIS2

AZIB

Explanation

The transaction was purged whilst waiting for storage to receive MRO data from a connected subsystem. The purge may have been the result of operator action, such as CEMT SET TASK PURGE, or as the result of the waiting time exceeding the DTIMOUT value for the transaction.

System action

The task is abnormally terminated with a dump.

User response

If the condition is caused by time-out, examine the DTIMOUT value for the failing transaction and increase it if it is too low.

Module:
DFHZIS2

AZIC

Explanation

An INVALID, DISASTER, or EXCEPTION condition has occurred on a call to the storage manager domain (DFHSMGFM) to FREEMAIN a CRB control block.

The domain that detected the original error provides an exception trace, a console message, and possibly a system dump.

System action

The task is abnormally terminated with a transaction dump.

User response

Please see the related message from the domain that detected the original error.

Module:
DFHZIS2

AZID

Explanation

A PURGED condition has occurred on a call to the storage manager domain (DFHSMGFM) to FREEMAIN a CRB control block.

The domain that detected the original error provides an exception trace.

System action

The task is abnormally terminated with a transaction dump.

User response

Investigate why the task was purged. It was purged either as a result of a purge from the main terminal operator via the CEMT transaction, or by the task being timed out after waiting for longer than the DTIMOUT (deadlock timeout) value specified for the transaction.

If the main terminal operator purged the task, this may have been in an attempt to clear the system which appeared to be deadlocked for some reason.

If the task was timed out automatically as a result of the DTIMOUT value being exceeded, this may be due to insufficient main storage being available for the number of tasks in the system. If the amount of main storage cannot be increased, reduce the number of tasks in the system to avoid short-on-storage situations. Another possibility is to increase the value of the DTIMOUT option for the transaction.

Module:
DFHZIS2

AZIE

Explanation

An interregion communication (IRC) ISSUE-ERROR or ISSUE-ABEND flow has been received in violation of IRC protocols. This can be caused by:

- A CICS logic error. IRC protocols are not available to MRO distributed transaction processing applications. They are for CICS internal use only.
- A transaction abend on a connected system. This results in an FMH 7 flow over an LU6.2 connection and causes this abend to be issued.

System action

The task is abnormally terminated with a transaction dump.

User response

Check whether a mixture of mapped and unmapped conversations are being used as this can cause this abend. Check for any other reasons for transactions to be abending on the attached system.

If a CICS logic error is involved, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARQ

AZIF

Explanation

An error (INVALID, DISASTER or unexpected EXCEPTION response) has occurred on a call to the recovery manager (RM) domain to change the recovery status of an intercommunication session. The domain provides an exit trace, and possibly a console message and a system dump (depending on the options specified in the dump table).

This is either the result of a task purge, a CICS logic error, or of the inappropriate use of the indoubt test transaction, CIND. CIND should be activated only on

the CICS system where the syncpoint processing was initiated. In particular, CIND should not be used on any of the CICS mirror transactions.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Determine whether CIND has been activated for a transaction that did not initiate the syncpoint processing. If CIND is not being used see the related diagnostic material produced by the recovery manager domain and determine the reason for the failure.

In the case of a CICS logic error, you need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARQ

AZIG

Explanation

An MRO session read-time-out condition has been detected. The transaction has been waiting for an MRO session for an interval longer than specified in the RTIMOUT value for that transaction.

Coding RTIMOUT in the PROFILE entry causes the task to be abnormally terminated if the session does not respond within the specified time.

System action

The transaction is abnormally terminated. A dump is not provided unless the dump table entry for transaction dump code AZIG indicates that one should be taken.

User response

If a HANDLE ABEND command has been issued for this task, the read that was timed-out is still outstanding. In order to cancel this read, issue an ABEND command at the end of the user exit routine so that CICS can clean up the terminal's TCTTE. No further terminal control commands should be issued.

Module:
DFHZIS2

AZR2

Explanation

Module DFHZARRA is unable to acquire main memory for a new application buffer because the storage manager GETMAIN failed.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the trace to identify the failing return from the storage manager and analyze the reason for failure.

Module:
DFHZARRA

AZR3

Explanation

During a GETMAIN request, the storage domain detected that the task has been purged.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the trace to investigate why the task was purged. Check if the main terminal operator was responsible.

Module:
DFHZARRA

AZR4

Explanation

An unexpected response has been received from a dispatcher domain call.

System action

The transaction is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARER

AZR5

Explanation

An unexpected response has been received from a dispatcher domain call.

System action

The transaction is abnormally terminated with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARR1

AZR6

Explanation

An exception condition was raised as the result of a request from the APPC communications routine DFHZARL to the CICS recovery manager domain. This is either caused by a CICS logic error or by the inappropriate use of the indoubt test transaction, CIND. CIND should be activated only on the CICS system where the syncpoint processing was initiated. In particular, CIND should not be used on any of the CICS mirror transactions.

System action

The transaction is abnormally terminated with a transaction dump.

User response

Determine whether CIND has been activated for a transaction that did not initiate the syncpoint processing. If CIND is not being used, you will need further assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARER

AZRA

Explanation

DFHZARRC detected that the address of an FMH in the APPC was not in the receive buffer. The cause could either be a storage overwrite or a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. Check the TCTTE in the transaction dump for printable characters or other signs of a storage violation error.

Module:
DFHZARRC

AZRB

Explanation

Module DFHZARR0 was called with an invalid first parameter. The first parameter should be the code of the function to be performed. This is a CICS logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, then a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARR0

AZRD

Explanation

The logical and physical APPC receive buffers have become out of step. This problem is caused either by a storage overwrite or by a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, then a level 1 and 2 trace of the TC component would aid problem determination. Check the TCTTE in the transaction dump for printable characters or other signs of a storage violation error.

Module:

DFHZARR0

AZRE

Explanation

The logical APPC receive buffer (addressed by TCTERBLA) starts before or after the physical receive buffer (addressed by TCTERBLA). This is not valid as the logical receive buffer is the part of the physical receive buffer that is yet to be processed. This problem could be caused either by a storage overwrite or by a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible then a level 1 and 2 trace of the TC component would aid problem determination. Check the TCTTE in the transaction dump for printable characters or other signs of a storage violation error.

Module:
DFHZARR0

AZRF

Explanation

The DFHZUSR state machine has returned an invalid state error at a point where it should not be possible. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, then a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARRF

AZRG

Explanation

The DFHZUSR state machine has returned an invalid state error at a point where it should not be possible. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, then a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARR

AZRH

Explanation

The DFHZARR state variable RECEIVE_TYPE, used to control receive processing, has been set to an invalid value. The only other module that has access to this variable is DFHZARRF. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, then a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARR

AZRI

Explanation

One of the parameters passed to DFHZARR1. was invalid. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, then a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARR1

AZRJ

Explanation

The length of a record that DFHZARR0 has been requested to remove from the APPC receive buffer, is longer than the buffer itself. This problem could be caused either by a storage overwrite or by a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. Check the TCTTE in the transaction dump for printable characters or other signs of a storage violation error.

Module:
DFHZARR0

AZRK

Explanation

The DFHLUC parameter list passed back from DFHZERH to DFHZARRF contained an invalid combination of LUCCIERR, LUCCIFRE, and LUCCIRBK fields. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARRF

AZRL

Explanation

Module DFHZARRF was called with an invalid first parameter. The first parameter should be the code of the function to be performed. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARRF

AZRM

Explanation

Module DFHZARR called one of its own internal routines at the wrong time. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARR

AZRN

Explanation

The DFHLUC parameter list passed back from DFHZERH to DFHZARRF did not have LUCCIERR set on. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARRF

AZRO

Explanation

Module DFHZARER was called with an invalid first parameter. The first parameter should be the code of the function to be performed. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARER

AZRP

Explanation

Module DFHZARER detected an invalid response from DFHZNAC. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARER

AZRQ

Explanation

Module DFHZARRA was called with an invalid parameter. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARRA

AZRR

Explanation

Module DFHZARRA detected that the application buffer chained off of a TCTTE at offset TCTERCSA had a corrupted header. This is caused either by a CICS logic error or by a storage overwrite. The exception trace point that accompanies this abend code gives the TCTTE address.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. Check the TCTTE in the transaction dump for printable characters or other signs of a storage violation error.

Module:
DFHZARRA

AZRS

Explanation

Module DFHZARRA is unable to acquire main memory for a new application buffer into which it is supposed to copy some data. This is because the DFHLUC receive request is SUBTYPE=LLID, SET=YES and

DFHZARRA does not know the length to acquire on the GETMAIN. DFHZARRA requires the length of the record currently being received, but it has been set to 0 in error. This is a CICS logic error. The exception trace point that accompanies this abend code gives the TCTTE address.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARRA

AZRT

Explanation

Module DFHZARRA has detected that the application buffer, into which it is supposed to copy some data, is invalid. This is either because the address of the buffer is zero or because its length is less than that of the data to be copied into it. This is a CICS logic error. The exception trace point that accompanies this abend code gives the buffer address and length plus the data address and length.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARRA

AZRU

Explanation

Module DFHZARRF detected an unexpected response from DFHZARR0. This is a CICS logic error. The exception trace point that accompanies this abend code gives the invalid response code.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, then a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARRF

AZRV

Explanation

Module DFHZARR1 detected an unexpected response from DFHZARR0. This is a CICS logic error. The exception trace point that accompanies this abend code gives the invalid response code.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
One of the parameters passed to DFHZARR1

AZRW

Explanation

Module DFHZARRA detected a negative record length in the TCTTE (field TCTELLC). This is caused either by a CICS logic error or by a storage overwrite. The exception trace point that accompanies this abend code gives the TCTTE address and the value of TCTELLC.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. Check the TCTTE in the transaction dump for printable characters or other signs of a storage violation error.

Module:
DFHZARRA

AZRY

Explanation

Module DFHZARR detected an unexpected response from DFHZARRC. This is a CICS logic error. The exception trace point that accompanies this abend code gives the invalid response code.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARR

AZRZ

Explanation

Module DFHZARR detected an unexpected response from an internal subroutine. This is a CICS logic error. The exception trace point that accompanies this abend code gives the invalid response code.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If this problem is reproducible, a level 1 and 2 trace of the TC component would aid problem determination. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZARR

AZS0

Explanation

An invalid request was passed via the DFHZSTAM macro to the processing DFHZSTAP program. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSTAP

AZS1

Explanation

No TCTTE pointer was passed via the DFHZSTAM macro to the processing DFHZ program. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSTAP

AZS2

Explanation

The TCTTE passed via the DFHZSTAM macro to the processing DFHZSTAP program does not relate to an MRO or an APPC Conversation. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSTAP

AZS3

Explanation

The TCTTE passed via the DFHZSTAM macro to the processing DFHZSTAP program for an APPC Conversation, but the LUC Extension Control Block was not located. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSTAP

AZS4

Explanation

While processing a DFHZSTAM request in DFHZSTAP, the DFHZUSRM LUC State Machine was found to have an invalid setting. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSTAP

AZS5

Explanation

Whilst processing a DFHZSTAM request in DFHZSTAP, the Internal State number was found to have an invalid setting. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSTAP

AZS6

Explanation

Whilst processing a DFHZSTAM request in DFHZSTAP, the Internal State number was found to have an invalid setting. This is a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZSTAP

AZT1

Explanation

The task has been attached improperly in the application-owning region when transaction routing.

System action

CICS abnormally terminates the transaction with a transaction dump.

User response

The conversation with the routing system should be an MRO session or an LU type 6.2 conversation. Ensure that the transaction is being attached by the CICS relay program in the connected system and not by a user program.

If the transaction is being attached by the CICS relay program in the connected system, you need further assistance to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZT3

Explanation

The task is being routed back to the region from where it came.

System action

CICS abnormally terminates the transaction with a transaction dump.

User response

Correct the transaction definition.

Module:
DFHZTSP, DFHAPRT, DFHRTE

AZT6

Explanation

The task in the application-owning region has received a ROLLBACK request from the terminal-owning region, but the conversation is continuing. The terminal-owning region has violated the transaction routing protocol.

System action

CICS abnormally terminates the transaction with a transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZT7

Explanation

A session terminal control table (TCT) entry for a remotely owned APPC terminal or connection could not be added to the TCT.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZT8

Explanation

A session terminal control table (TCT) entry for a remotely owned APPC terminal or connection could not be deleted from the TCT.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZT9

Explanation

A session terminal control table (TCT) entry for a remotely owned APPC terminal or connection could not be deleted from the TCT because it is locked by another task.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

The other task may be transitory in nature, and if so, another attempt will succeed.

Module:
DFHZTSP

AZTA

Explanation

The task does not own a terminal as its principal facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP, DFHAPRR

AZTB

Explanation

An attempt to install or delete a remote terminal in this CICS system has failed. This may be because CATA was trying to install a local terminal at the same time as CITS was installing a remote terminal with the same termid. In this situation CICS gives priority to the locally installed terminal (CATA). This abend can occur if the CITS/CDTS/CMTS/CFTS transactions take an excessively long time to execute, for example due to the CICS system having reached MAXTASK or the short on storage (SOS) condition. This abend can also occur if the CITS/CDTS/CMTS/CFTS transactions are not available (that is , if the transactions have not been installed).

System action

The task which is being initialized for transaction routing is abnormally terminated with a CICS transaction dump.

User response

If there was an abend AZI6/AZTS abend in the TOR then retry the request after the locally installed terminal with the same TERMID has logged off. If the CICS system reached MAXTASK or short on storage (SOS) conditions, retry the request when the CICS system is processing less work. Alternatively it may be necessary to update the MAXTASK value or the storage allocation for the CICS system. Otherwise, verify that the listed transactions exist and have been installed. If the failure persists then you need further assistance to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP, DFHAPRA

AZTC

Explanation

An attempt to install or delete a remote terminal in this system has failed. This is because a short-on-storage (SOS) condition has caused the failure of a GETMAIN for the attach of CITS, CDTS, or CFTS.

This abend can also occur during shutdown if the transaction definition specifies SHUTDOWN(DISABLED).

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Investigate the reason for the SOS condition. See the Troubleshooting and support for guidance on dealing with the SOS condition.

Retry the transaction later.

Module:
DFHZTSP, DFHAPRA

AZTE

Explanation

An attempt to use EDF and to route a transaction to a remote region has failed.

This is because the CEDF transaction was used to start an EDF session and then there was an attempt to route a transaction to a remote region.

Communication between the local region and the remote region uses an IPIC connection.

However the remote region is an earlier version of CICS which does not support use of EDF with an IPIC connection.

System action

The task is abnormally ended with a CICS transaction dump.

User response

You can do one of the following:

- Enable CEDX for the transaction on the remote region.
- Release the IPIC connection and run the transaction with EDF enabled using another connection type.

Module:
DFHAPRT

AZTF

Explanation

DFHZTSP tried to GETMAIN or FREEMAIN a TCTTE whose length (TCTTETEL) is longer than the largest TCTTE SUBPOOL and is therefore invalid. This implies a storage violation or a CICS internal logic error.

System action

The transaction is abnormally terminated with a CICS transaction dump.

User response

Use the transaction dump to identify the TCTTE in error. First, check whether this is a storage overwrite. If so, check in your statistics to see if you are getting a number of storage violations caused by the same transaction. If this is the case, then a user-supplied application is probably causing the problem.

If it is not a storage violation problem, or if there is a random storage violation, there might be an error in CICS. In this case, you need further assistance to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZTG

Explanation

An attempt has been made to attach a task on a remotely-owned terminal without an intersystem TCTTE as its principal facility.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZTH

Explanation

An error response was received from the remote terminal control macro.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZTI

Explanation

An attempt has been made to attach a task on a remotely-owned terminal, but the terminal is not defined in this system as a remotely-owned terminal.

This may occur after an AZVK abend when CICS attempts to delete the surrogate TCTTE, but there is still a transaction running against it.

Alternatively, another task holds a lock on this terminal.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the terminal control table definitions in the systems involved. If the definitions are correct, check that no other tasks have locks held on the terminal (CECI, for example).

Check to see if an AZVK abend occurred earlier for this terminal and determine if the link session timing out was the original cause. All should be well once the long running transaction finishes.

Module:
DFHZTSP, DFHAPRA

AZTL

Explanation

An attempt has been made to attach a task to a remotely-owned terminal that cannot be used to run this transaction.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Check the terminal resource definitions in the systems involved.

Module:
DFHZTSP, DFHAPRA

AZTM

Explanation

The data received from the remote system does not contain an FMH (function management header).

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZTN

Explanation

Conversation with a remote system has been unexpectedly terminated.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZTO

Explanation

The TCTTE ownership chain is in error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZTP

Explanation

A BMS TYPE=STORE request issued on behalf of a remote transaction failed.

System action

The task abnormally terminates with a CICS transaction dump.

User response

Inform the system programmer. Check that the required BMS support has been generated.

Module:
DFHZTSP, DFHAPRR

AZTQ

Explanation

Invalid BMS data received from remote system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP, DFHAPRR

AZTR

Explanation

A BMS TYPE=PAGEOUT request issued on behalf of a remote system failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Ensure that the required BMS support has been generated.

Module:
DFHZTSP, DFHAPRR

AZTS

Explanation

The conversation with the remote system failed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Investigate why the conversations with the remote system failed. The transaction on the remote system has probably been abnormally terminated or the session has failed.

If message 'DFHZC4930 Session unbound following read timeout.' occurred just before the AZTS then the AZTS is caused by a timeout occurring on an APPC session when CICS attempted to converse with the remote system.

Module:
DFHZTSP, DFHAPRR, DFHAPRA

AZTT

Explanation

An attempt was made to attach a task on a remote system, but the connection with the remote system is not an APPC or MRO connection.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Redefine the connection as APPC or MRO, or avoid using transaction routing on this connection.

Module:
DFHZTSP

AZTU

Explanation

The task does not own the link TCTTE after a sync point has been taken.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZTV

Explanation

An invalid function management header (FMH) has been received from the remote system.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZTW

Explanation

An attempt was made to attach a task on a remotely-owned terminal that was already running a task.

This may be caused by a read time out occurring in the terminal owning region for the link session being used by this transaction. The read timeout is specified in profile DFHCICSS. Although the session has timed out the transaction may still be running and the surrogate TCTTE is unable to accept any more transactions until the first one has finished.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the terminal control table definitions in the systems involved.

Check to see if a read timeout abend occurred on the TOR for the same terminal to determine if this is the cause. Wait until the transaction terminates before retrying any further transactions on this terminal.

Module:
DFHZTSP, DFHAPRA

AZTY

Explanation

A session TCT entry for a remotely owned APPC terminal or connection could not be created because to do so would exceed the maximum number of APPC sessions permitted.

The maximum number of sessions depends on whether the PTF shipped for APAR PQ27823 is installed. The basic limit is 46656 and the names are in the range -AAA to -999. The APAR doubles this limit to 93312 giving an additional range of AAA- to 999-.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Inform the system programmer. Either wait for the system to become less busy, or delete some APPC sessions.

The system programmer should consider increasing the number of CICS TORs.

Module:
DFHZTSP

AZTZ

Explanation

The CICS relay program DFHCRT has been attached in an unsupported manner.

System action

CICS abnormally terminates the transaction with a transaction dump.

User response

The relay transaction executes with an MRO session or an LU type 6.2 conversation as its principal facility. Ensure that the transaction is being attached by APPC terminal sharing logic and not directly by a user transaction.

If the transaction is being attached by APPC terminal sharing logic, you need further assistance to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZTSP

AZVA

Explanation

DFHZTSP has timed out waiting for service transaction CITS to complete during the creation of a remote terminal while attaching a task in the application-owning region.

The probable cause of this is that the application-owning region is very busy, so the CITS transaction has been waiting to be dispatched for longer than the timeout value allowed by DFHZTSP. Lack of storage on the target system is one possible reason why CITS has not been dispatched, or has been dispatched but has not completed.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Retry the transaction when the system becomes less busy. For more information on improving transaction throughput on the target system, see the Improving performance.

Module:
DFHZATS

AZVB

Explanation

DFHZCQ has failed to create the remote terminal definition. A previous message or messages should indicate the reason for the failure.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

See the previous message or messages for further guidance.

Module:
DFHZATS

AZVC

Explanation

An unexpected error has occurred in DFHZATS. This is probably caused by DFHZATS being unable to address the CSA, EIB or the TCA. It can also occur if DFHZATS is called with an EXEC CICS START command for transactions CITS, CFTS, CMTS or CDTS. These are internal CICS transactions and should not be called in this way.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATS

AZVD

Explanation

An unexpected error has occurred in the install procedure of DFHZATS.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

This is a CICS logic error. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATS

AZVE

Explanation

DFHZATS is trying to install a remote terminal with the same terminal id as an existing TCT entry.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Change the terminal names to ensure that a duplicate does not occur in the same system.

Module:
DFHZATS

AZVF

Explanation

One of the remote install or delete transactions of DFHZATS (CITS, CFTS, CMTS or CDTS) has been started directly from a terminal. This is not permitted. These transactions can only be started internally by CICS.

System action

The transaction is abnormally terminated with a transaction dump.

User response

None.

Module:
DFHZATS

AZVG

Explanation

An error has occurred in the remote delete routines.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATS

AZVH

Explanation

An error has occurred in the remote delete routine during the mass deletion of remote terminals.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATS

AZVI

Explanation

An error has occurred in the remote delete routine while an attempt was being made to delete a single remote terminal.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Check the CADL transient data queue for any associated messages indicating the reason for the error. If you cannot resolve the problem, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATS

AZVJ

Explanation

An error has occurred during the mass deletion of remote terminals. This is caused by a CICS logic error.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATS

AZVK

Explanation

An unexpected return code has been received from the remote delete routine during the deletion of a single remote terminal.

This may occur after an AZTW abend when CICS attempts to delete the surrogate TCTTE, but there is still a transaction running against it. It may also occur without an AZTW if the link session timed out leaving the transaction in the AOR still running but followed by a logoff from the terminal which initiated the long running transaction.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Look for an accompanying DFHZC6911 message indicating the reason for the delete failure, and take appropriate action.

Check to see if the link session for this terminal timed out and whether the terminal then issued another transaction or logged off. All should be well once the long running transaction finishes.

Module:
DFHZATS

AZVL

Explanation

An error has occurred during the mass flagging of remote terminals for deletion.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATS

AZVM

Explanation

An error has occurred in DFHZATMF. This is probably caused by DFHZATMF being unable to address the CSA, EIB, or the TCA.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATMF

AZVN

Explanation

The remote delete flag transaction of DFHZATMF (CRMF) has been started directly from a terminal. This is not permitted. This transaction can only be started internally by CICS.

System action

The transaction is abnormally terminated with a transaction dump.

User response

None.

Module:
DFHZATMF

AZVO

Explanation

The remote delete transaction of DFHZATMD (CRMD) has been started directly from a terminal. This is not permitted. This transaction can only be started internally by CICS.

System action

The transaction is abnormally terminated with a transaction dump.

User response

None.

Module:
DFHZATMD

AZVP

Explanation

An error has occurred in DFHZATMD. This is probably caused by DFHZATMD being unable to address the CSA, EIB, or the TCA.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATMD

AZVQ

Explanation

A request to install a shipped terminal definition has been rejected by the autoinstall user program.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Retry the transaction when the system is less busy.

Module:
DFHZATS

AZVR

Explanation

An attempt to install a shipped terminal definition has failed because the autoinstall user program has issued an unexpected return code.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Examine the autoinstall user program to determine why this return code was issued.

Module:
DFHZATS

AZVS

Explanation

An attempt to install a shipped terminal definition has failed because an error has occurred in the autoinstall user program.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

Examine the autoinstall user program to determine the reason for the failure.

Module:
DFHZATS

AZVU

Explanation

DFHZATS was attempting to autoinstall a shipped terminal, a virtual terminal or a shipped connection and the autoinstall URM was called. However the autoinstall failed for one of the following reasons:

- The name returned by the URM in SELECTED_SHIPPED_TERMID started with one of these characters:

    <
    >
    -

- The value in the SIT VTPREFIX parameter contained imbedded blanks or a character that is not allowed for terminal names.

System action

The task is abnormally terminated with a CICS transaction dump.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHZATS

AZXA

Explanation

An unexpected error, with reason code 5, has been detected in the catchup program, DFHZXCU. See the description of message DFHXG6492 for further details.

System action

Console message DFHXG6492 is issued, and CICS continues after abending the transaction.

User response

Refer to message DFHXG6492.

Module:
DFHZXCU

AZXB

Explanation

An unexpected error, with reason code 4, has been detected in the catchup program, DFHZXCU. See the description of message DFHXG6492 for further details.

System action

Console message DFHXG6492 is issued, and CICS continues after abending the transaction.

User response

Refer to message DFHXG6492.

Module:
DFHZXCU

Chapter 2. System abend and dump codes

Abend and dump codes are used by the following system components and products:

- The CICS system
- IMS
- The CICS translator
- The CICS system dump program
- The CICS utility program, DFHCSDUP
- The external CICS interface
- The CICS JVM interface
- Language Environment®

CICS system dump codes

To help proceed with problem diagnosis, CICS references a system dump code that corresponds to the event that requested a CICS system dump. In most cases, system dump codes correspond to a DFH message with the DFH prefix removed.

For example, system dump code DM0001 corresponds to message DFHDM0001 with the DFH tag removed. For further information, look up the relevant message where appropriate.

However, there are some exceptions to this format, as shown in the following list.

System dump code
  Corresponding message or exception condition

ABNDU603
  This system dump code refers to a USER abend code and is associated with message DFHSR0603.

ABNDU605
  This system dump code refers to a USER abend code and is associated with message DFHSR0605.

APTRAPPC
  This system dump code is associated with message DFHTR1001.

APTRAPUS
  This system dump code is associated with message DFHTR1000.

APUSER
  This system dump code is issued through the use of the CEBT transaction when performing a PERFORM SNAP command.

APXRFTO
  This system dump code has no DFH message associated with it. An error in the currently active CICS system has occurred. An alternate CICS system is now taking control and is requesting that the active CICS system produces a dump of itself.

CCVNOSP
  This dump along with the DFHCC0203 message is provided for diagnostic purposes when a "no space" response is received from VSAM while attempting to write a catalog record.

MT0001
  This system dump code has no DFH message associated with it. It indicates that a dump was requested by a user of CEMT, issuing either a PERFORM SNAP or a PERFORM DUMP.

For more information about using dumps in problem diagnosis, see Using dumps in problem determination.

DHxx (IMS) abend codes

If the IMS high-level programming interface (HLPI) has found a condition caused by a programming error, or if DL/I has returned a status code to HLPI that indicates an error, IMS returns a status code *xx* to CICS Transaction Server for z/OS. Some more common abend codes are listed here. For a full list of xx status codes that can make up a DHxx abend, see DL/I status codes in IMS product documentation.

DHTA

Explanation

A task has issued a program specification block (PSB) schedule request but the PSB could not be found.

See the description of the DL/I status code TA in the IMS messages and codes manual for guidance.

System action:

User response:

Module:

DHTC

Explanation

A task has issued a program specification block (PSB) schedule request but the PSB has already been scheduled.

See the description of the DL/I status code TC in the IMS messages and codes manual for guidance.

System action:

User response:

Module:

DHTE

Explanation

A task has issued a program specification block (PSB) schedule request but a PSB initializaton error occurred.

See the description of the DL/I status code TE in the IMS messages and codes manual for guidance.

System action:

User response:

Module:

DHTG

Explanation

A task has issued a terminate request but the request failed because the program specification block (PSB) is not scheduled.

See the description of the DL/I status code TG in the IMS messages and codes manual for guidance.

System action:

User response:

Module:

DHTH

Explanation

A task has issued a DL/I request but the request failed because the program specification block (PSB) is not scheduled.

See the description of the DL/I status code TH in the IMS messages and codes manual for guidance.

System action:

User response:

Module:

DHTJ

Explanation

A task has issued a program specification block (PSB) schedule request but the request failed because CICS is not connected to DBCTL.

See the description of the DL/I status code TJ in the IMS messages and codes manual for guidance.

System action:

User response:

Module:

01xx (translator) abend codes

0100

Explanation

The listing data set has not opened successfully.

System action

The CICS command level translator terminates abnormally. A system dump is produced if a SYSABEND or SYSUDUMP DD statement is provided.

User response

Ensure correct JCL or determine what is causing the open error.

Module:
DFHEAP (for assembler language), DFHECP (for COBOL), DFHEDP (for C), DFHEPP (for PL/I)

0101

Explanation

The translator encountered a program check from which it could not recover.

02xx (DFHPD720) abend codes

0211

Explanation

A program check has occurred while the system dump formatting program was handling an earlier program check.

System action

The system dump formatting program terminates abnormally. A system dump is produced if a SYSABEND or SYSUDUMP DD statement is provided.

User response:
The program check preceding the abend is accompanied by message DFHPD0123. See the description of this message for more guidance.

Module:
DFHPD0680

03xx (DFHCSDUP) abend codes

0300

Explanation

The SYSIN data set has not opened successfully.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSDUMP DD statement is provided, a system dump is produced.

System action

The CICS command-level translator terminates abnormally. A system dump is produced if a SYSABEND or SYSUDUMP DD statement is provided.

User response:
If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHEAP (for assembler language), DFHECP (for COBOL), DFHEDP (for C), DFHEPP (for PL/I)

0212

Explanation

A sixth program check has occurred during execution of the system dump formatting program.

System action

The system dump formatting program terminates abnormally. A system dump is produced if a SYSABEND or SYSUDUMP DD statement is provided.

User response

This abend is preceded by five DFHPD0123 messages, one for each of the five earlier program checks. See the description of this message for more guidance.

Module:
DFHPD0680

User response

Ensure that the JCL is correct and that the SYSIN data set exists in sequential form. If necessary, examine the SYSIN DD statement to determine the cause of the error.

Module:
DFHCSDUP

0301

Explanation

The RECFM parameter specified in the SYSIN data set is invalid.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

Ensure that the RECFM parameter in the SYSIN data set is either F or V.

Module:
DFHCSDUP

0302

Explanation

The record length specified in the SYSIN data set is invalid.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

Ensure that the record length specified in the SYSIN data set is no greater than 80.

Module:
DFHCSDUP

0303

Explanation

The SYSPRINT data set did not open successfully.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

Ensure that the SYSPRINT data set exists. If necessary, examine the SYSPRINT DD statement to determine the cause of the error.

Module:
DFHCSDUP

0304

Explanation

DFHCSDUP has found an unrecognized resource type code in a CSD record. The unrecognized code does not match any of the function codes in the language definition table. This can occur for one of the following reasons:

1. You are using a CICS release that does not support a type of definition that was created on the CSD file by a later CICS release.
2. The language definition table (DFHEITSP or DFHEITCU) is invalid for this CICS release.
3. The CSD manager (DFHDMP) has passed an invalid CSD record buffer to DFHPUP. This is a CICS internal logic error.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

Determine which of the possible reasons caused the error. If you can eliminate reasons 1 and 2, you can assume that reason 3 applies.

Take action corresponding to the reason you have established as follows:

1. Ignore the message.
2. Ensure that the library contains versions of DFHEITSP and DFHEITCU that are valid for the CICS release you are running.
3. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0305

Explanation

An unexpected return code was received either while trying to close the alternate SYSIN and SYSPRINT DCBs (CLOSEDCB) or while trying to free the task local storage (FREETLS).

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0307

Explanation

An attempt to print the input command failed. Since messages cannot be issued, the utility must terminate.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0308

Explanation

During the migration of a TCT table, a bad command sequence was found. This can occur for one of the following reasons:

- TYPETERM was not preceded by TERMINAL
- TERMINAL was not followed by TYPETERM

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

Correct the TCT table to be migrated and rerun the job.

Module:
DFHCSDUP

0309

Explanation

DFHCSDUP has found an unrecognized function code in a command. This is a CICS internal logic error.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0321

Explanation

An internal error has occurred in module DFHCSDUP when invoked by a CSD utility command.

System action

Message DFH5100 is issued and the CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0322

Explanation

While processing a MIGRATE command, the specified table to be migrated could not be loaded.

System action

Message DFH5601 is issued and the CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0323

Explanation

While processing a command, VSAM detected an error.

System action

Message DFH5179 is issued preceded by either DFH5177 or DFH5178 depending on the error and the CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

See the description of the issued messages to determine the cause of the error.

Module:
DFHCSDUP

0325

Explanation

When the LIST command invoked DFHDMP to scan the objects on the CSD file, an error occurred during execution of the DFHDMP function.

System action

Message DFH5180 is issued and the CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0326

Explanation

There has been an internal logic error in the DFHCSDUP utility program. The data in the back-translated output buffer is invalid. The length code may be out of range or the data fields in the wrong sequence. One or more of the data fields may be invalid.

System action

Message DFH5184 is issued and the CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0327

Explanation

The language table DFHEITCU could not be loaded.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

Refer to the preceding message which should specify the reason for the failure. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0328

Explanation

The language table DFHEITCU could not be unloaded.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP DD statement is provided, a system dump is produced.

User response

Refer to the preceding message which should specify the reason for the failure. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0330

Explanation

The cross reference table size for the table being migrated is too small.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP statement is provided, a system dump is produced.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0331

Explanation

DFHCSDUP was invoked to perform an EXTRACT command using a Language Environment-conforming HLL user exit, but the utility failed to initialize the CEE environment successfully.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP statement is provided, a system dump is produced. Register 15 contains the initialization return code.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

0332

Explanation

DFHCSDUP was invoked to perform an EXTRACT command using a Language Environment-conforming HLL user exit, but during execution the utility recived a bad return code from the Language Environment.

System action

The CSD batch update utility terminates abnormally. If a SYSABEND or SYSUDUMP statement is provided, a system dump is produced. Register 15 contains the Language Environment return code. code.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHCSDUP

04xx (external CICS interface) abend codes

0401

Explanation

An external CICS interface (EXCI) request was issued using the CALL API or the EXEC API, and the EXCI stub DFHXCSTB link-edited with the application detected that it was running in AMODE 24 or AMODE 64. The external CICS interface only supports calls made in AMODE 31.

System action

The application terminates abnormally.

User response

Change the application so that EXCI calls are made in AMODE 31, or relink-edit the application AMODE 31.

Module:
DFHXCSTB.

0402

Explanation

The external CICS interface module DFHXCPRH issued an MVS ESTAE macro to establish a recovery environment, but a nonzero return code was returned from MVS.

System action

The application terminates abnormally with a dump.

User response

Examine the dump and any associated MVS messages produced to determine why the MVS ESTAE request failed.

If the error occurred while processing an INITIALIZE_USER request on behalf of the application, an attempt to format the dump using the CICS IPCS dump formatter does not produce any formatted output. This is because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCPRH

0403

Explanation

The external CICS interface module DFHXCPRH issued an MVS GETMAIN request to obtain storage for its XCGLOBAL block, but a nonzero return code was returned from MVS.

System action

Module DFHXCPRH issues an MVS abend with abend code 0403 which invokes its ESTAE routine to clear up its environment. A SYSMDUMP is taken before returning control to the application. An application using the EXCI CALL API receives RESPONSE(SYSTEM_ERROR) REASON(XCGLOBAL_GETMAIN_ERROR) in its return area. The subreason1 field of the return area contains the R15 return code from MVS indicating why the GETMAIN failed. An application using the EXCI EXEC API receives RESP(LINKERR) RESP2(602).

User response

Use the MVS R15 return code obtained from the application or from the dump to determine why the MVS GETMAIN request failed. If the reason is insufficient storage, increase the region size of the batch application.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCPRH

0404

Explanation

The external CICS interface module DFHXCPRH needed to take an MVS SDUMP for an earlier reported problem. However the error has occurred too early in EXCI initialization for EXCI dump services to be available.

System action

Module DFHXCPRH issues an MVS abend with abend code 0404 which invokes its ESTAE routine from which a SYSMDUMP is taken instead of an SDUMP to capture the earlier reported problem.

User response

Examine the SYSMDUMP to determine the cause of the earlier reported problem.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCPRH

0405

Explanation

The external CICS interface module DFHXCPRH issued an IEFSSREQ SSI verify request to MVS to determine the number of the CICS SVC type 3 SVC to use. The SSI VERIFY request failed.

System action

Module DFHXCPRH issues an MVS abend with abend code 0405 which invokes its ESTAE routine to clear up its environment. A SYSMDUMP is taken before returning control to the application. An application using the EXCI CALL API receives RESPONSE(SYSTEM_ERROR) REASON(SSI_VERIFY_FAILED) in its return area. The subreason1 field of the return area contains the R15 return code from MVS indicating why the SSI verify failed. An application using the EXCI EXEC API receives RESP(LINKERR) RESP2(606).

User response

Use the MVS R15 return code obtained from the application or from the dump to determine why the SSI VERIFY request failed.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce

any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCPRH

0406

Explanation

The external CICS interface module DFHXCPRH called the CICS SVC to initialize the EXCI environment. The CICS SVC call failed.

System action

Module DFHXCPRH issues an MVS abend with abend code 0406 which invokes its ESTAE routine to clear up its environment. A SYSMDUMP is taken before returning control to the application. An application using the EXCI CALL API receives RESPONSE(SYSTEM_ERROR) REASON(CICS_SVC_CALL_FAILURE) in its return area. The subreason1 field of the return area contains the R15 return code from the CICS SVC indicating why it failed. An application using the EXCI EXEC API receives RESP(LINKERR) RESP2(607).

User response

Use the MVS R15 return code obtained from the application or from the dump to determine why the CICS SVC call failed.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCPRH

0407

Explanation

The external CICS interface module DFHXCPRH issued a call to the CICS SVC to check whether the SVC in use is at the correct level to be used with the external CICS interface. The check failed indicating that the CICS SVC is not at the correct level.

System action

Message DFHEX0100 is output, and module DFHXCPRH issues an MVS abend with abend code 0407 which invokes its ESTAE routine to clear up its environment. A SYSMDUMP is taken before returning

control to the application. An application using the EXCI CALL API receives RESPONSE(SYSTEM_ERROR) REASON(INCORRECT_SVC_LEVEL) in its return area. An application using the EXCI EXEC API receives RESP(LINKERR) RESP2(627).

User response

See the explanation of message DFHEX0100 for guidance.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCPRH

0408

Explanation

The external CICS interface module DFHXCPRH issued an MVS GETMAIN request for its working storage but a nonzero return code was returned from MVS.

System action

Module DFHXCPRH issues an MVS abend with abend code 0408 which invokes its ESTAE routine to clear up its environment. A SYSMDUMP is taken before returning control to the application. An application using the EXCI CALL API receives RESPONSE(SYSTEM_ERROR) REASON(WS_GETMAIN_ERROR) in its return area. The subreason1 field of the return area contains the R15 return code from MVS indicating why the GETMAIN failed. An application using the EXCI EXEC API receives RESP(LINKERR) RESP2(601).

User response

Use the MVS R15 return code obtained from the application or from the dump to determine why the MVS GETMAIN request failed. If the reason is insufficient storage, increase the region size of the batch application.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCPRH

0409

Explanation

The external CICS interface module DFHXCPRH issued an MVS GETMAIN request for storage required for its SSI VERIFY request, but a nonzero return code was returned from MVS.

System action

Module DFHXCPRH issues an MVS abend with abend code 0409 which invokes its ESTAE routine to clear up its environment. A SYSMDUMP is taken before returning control to the application. An application using the EXCI CALL API receives RESPONSE(SYSTEM_ERROR) REASON(VERIFY_BLOCK_GM_ERROR) in its return area. The subreason1 field of the return area contains the R15 return code from MVS indicating why the GETMAIN failed. An application using the EXCI EXEC API receives RESP(LINKERR) RESP2(605).

User response

Use the MVS R15 return code obtained from the application or from the dump to determine why the MVS GETMAIN request failed. If the reason is insufficient storage, increase the region size of the batch application.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCPRH

0410

Explanation

The external CICS interface module DFHXCPRH issued an MVS GETMAIN request for an XCUSER block but a nonzero return code was returned from MVS.

System action

Module DFHXCPRH issues an MVS abend with abend code 0410 which invokes its ESTAE routine to clear up its environment. A SYSMDUMP is taken before returning control to the application. An application using the EXCI CALL API receives RESPONSE(SYSTEM_ERROR) REASON(XCUSER_GETMAIN_ERROR) in its return area. The subreason1 field of the return area contains the R15 return code from MVS indicating why the GETMAIN failed. An application using the EXCI EXEC API receives RESP(LINKERR) RESP2(603).

User response

Use the MVS R15 return code obtained from the application or from the dump to determine why the MVS GETMAIN request failed. If the reason is insufficient storage, increase the region size of the batch application.

Module:
DFHXCPRH

0411

Explanation

The external CICS interface dump module DFHXCDMP was attempting to call the CICS SVC in order for an MVS SDUMP to be taken to capture an earlier problem. DFHXCDMP was unable to call the SVC as no SVC number was available. DFHXCDMP issued an 0411 abend in order that the callers ESTAE routine is invoked which takes a SYSMDUMP instead.

System action

A SYSMDUMP is taken instead of an SDUMP for an earlier reported problem.

User response

Use the SYSMDUMP produced to diagnose the earlier reported problem.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCDMP

0412

Explanation

The external CICS interface dump module DFHXCEIP was processing an EXCI EXEC API request and detected that the EXEC parameter list passed to it contained a function that is not supported by the external CICS interface.

System action

The application is abnormally terminated with a dump.

User response

This error indicates the parameter list being passed to the EXCI has not been generated by the CICS translator. The translator should always be used.

Correct the application to specify the correct EXCI EXEC API command.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter may not produce any formatted output for the job if this was the first EXCI request for this TCB.

Module:
DFHXCEIP

0413

Explanation

The external CICS interface dump module DFHXCEIP was processing an EXCI EXEC API request and detected that the EXEC parameter list passed to it did not require the mandatory RETCODE parameter in which return codes are returned to the application.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter may not produce any formatted output for the job if this was the first EXCI request for this TCB.

System action

The application is abnormally terminated with a dump.

User response

This error indicates the parameter list being passed to the EXCI has not been generated by the CICS translator. The translator should always be used. Correct the application to specify RETCODE.

Module:
DFHXCEIP

0414

Explanation

The external CICS interface module DFHXCEIP issued an MVS ESTAE macro to establish a recovery environment but a nonzero return code was returned from MVS.

System action

The application terminates abnormally with a dump.

User response

Examine the dump and any associated MVS messages to determine why the MVS ESTAE request failed.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter may not produce any

formatted output for the job if this was the first EXCI request for this TCB.

Module:
DFHXCEIP

0415

Explanation

The external CICS interface module DFHXCEIP detected an error early in EXCI initialization before EXCI dump services were available. DFHXCEIP issues abend 0415 so that its ESTAE routine is invoked from where an SYSMDUMP is taken instead to capture the error.

System action

The application terminates abnormally with a dump.

User response

Examine the SYSMDUMP to determine the cause of the earlier reported error.

An attempt to format the SYSMDUMP produced with the CICS IPCS dump formatter does not produce any formatted output for the job because the error occurred too early in EXCI initialization for there to be any control blocks.

Module:
DFHXCEIP

0416

Explanation

The external CICS interface module DFHXCEIP received an unexpected return code from DFHXCBAM when processing a channels and containers command.

System action

The application terminates abnormally with a dump.

User response

Examine the SYSMDUMP to determine the cause of the earlier reported error.

Module:
DFHXCEIP

0417

Explanation

The External CICS interface has refused to store data in a Container because the total storage allocated for the Channel will exceed 5% of MEMLIMIT.

System action

The application terminates abnormally with a dump.

User response

Review the storage requirements for the PROGRAM. If the volume of data is correct, either delete any unnecessary Containers from the Channel, or increase MEMLIMIT so that the program does not use more than 5% of the storage available.

Module:
DFHXBAM

0418

Explanation

The external CICS interface module DFHXCBAM received a purged response when processing a channels and containers command.

System action

The application terminates abnormally with a dump.

User response

Examine the SYSMDUMP to determine the cause of the earlier reported error.

Module:
DFHXCBAM

0419

Explanation

The external CICS interface module DFHXCBAM received a disaster response when processing a channels and containers command.

System action

The application terminates abnormally with a dump.

User response

Examine the SYSMDUMP to determine the cause of the earlier reported error.

Module:
DFHXCBAM

4xxx LE/370 abend codes

Abend codes in the range 4000 to 4095 are issued by LE/370 runtime library modules for LE enabled applications running on CICS.

When LE/370 detects an unrecoverable error, LE/370 terminates the transaction with an EXEC CICS abend with an abend code numbered from 4000-4095. A write-to-operator (WTO) is performed to write a CEE1000S message to the system console. This message contains the abend code and the reason code associated with the abend.

Some of these abends can occur when the system is under stress and LE/370 is unable to acquire the resources required to report a previous abend or failure. In this case there will usually be other symptoms that the system is under stress (for example short on storage messages or other transactions being purged with AEXY or AKC3 abends), and inspection of the transaction dump should allow identification of the original abend.

LE/370 abend codes and run-time messages are described in Language Environment abend codes in z/OS Language Environment Runtime Messages.

CICSPlex SM Abend and dump codes

When abnormal conditions occur, CICSPlex® SM attempts to recover in an orderly manner and continue with normal processing. Occasionally conditions arise that prevent or preclude such recovery and a task, component, or system might end. In this situation, an abend or dump code is issued.

CICS abend and dump codes

If you have to contact IBM in response to an abend or dump code, gather as much diagnostic information as possible.

The following diagnostic information is required by IBM support to help diagnose the problem:

- Job log from the MAS.
- EYULOG from the CMAS to which the MAS was connected or was attempting to connect.
- CICS TRANDUMP data set from the MAS. Use the CICS DFHDUP utility to format the dump data set.
- CICS AUXTRACE data set from the MAS, if available. Use the EYU9XZUT trace format utility to format the data set, as described in Using trace in CICSPlex SM. Also keep a copy of the unformatted trace data set.

EYUI

Explanation:
A non-recoverable error occurred during initialization.

System action:
MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

User response:
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then restart the MAS. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLEV

EYUK

Explanation:
Either a non-recoverable abend occurred during MAS initialization or a proper environment did not exist when attempting to recover from an abend.

System action:
MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

System action:
If this abend occurred during initialization, MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

User response:
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then

restart the MAS, if necessary. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLRV

EYUO

Explanation:
The environment create routine in a CMAS or MAS was called invalidly. The calling process was not a CICSPlex SM service.

System action:
CICS system processing continues.

User response
Make sure that:

- No site-written programs are attempting to call CICSPlex SM environment create.
- Users are not attempting to use CICSPlex SM TRANIDS directly, either from a terminal or via an EXEC CICS START.

If neither of these conditions exists, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLOP

EYUR

Explanation:
An error occurred while attempting to recover from an abend.

System action:

The failing task terminates. The CICS system continues to run normally, but it may not be known to CICSPlex SM.

User response:
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then restart the MAS, if necessary. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLRV

EYUV

Explanation:
The Web User Interface environment create routine in a CMAS or MAS was called invalidly. The calling process was not a CICSPlex SM service.

System action:
The failing task terminates. A transaction dump is taken. CICS system processing continues.

User response
Make sure that:

- No site-written programs are attempting to call CICSPlex SM Web User Interface environment create.

- Users are not attempting to use CICSPlex SM TRANIDS directly, either from a terminal or via an EXEC CICS START.

If neither of these conditions exists, contact your IBM Support Center.

Module:
EYU0VGIN

EYUX

Explanation:
An exception condition was detected in a remote MAS but a full CICSPlex SM exception trace could not be written at that time. This condition is not necessarily a failure in the application, but the reporting of an exception condition, which is usually the result of communications problems. Communications exceptions cannot be sent to the connected CMAS.

System action:
A transaction dump is taken to document the exception. Task execution continues, taking the appropriate action for the exception condition.

User response:
Examine the MAS and CMAS job logs for any messages that might indicate a problem, especially for those related to the communications network. If such messages exist, follow the instructions associated with those messages. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLEV, EYU9XLOP

EYUY

Explanation:
A CMAS-to-CMAS connection has terminated abnormally. The receive task component of the connection has tried to terminate as cleanly as possible, but it has detected that it is still in a network receive state. This makes it impossible for it to terminate, without CICS generating an additional transaction abend describing this apparent transmission state discrepancy. However, this network state cannot be reset because of the reported connection failure. This abend is issued to preempt the normal CICS abend code related to these network state errors.

System action:
The CPI-C or MRO receive task should now end completely with this abend. When all task components for the connection have terminated, the first speaker CMAS of the connection pair should attempt to reestablish the connection.

User response:
Check the CMAS job log, EYULOG, and CICS message log for previous failures or error conditions and follow the User Response for these messages.

Module:
EYU0CLCT, EYU0CLCU, EYU0CLMT, EYU0CLMU

Uxxxx abend codes

In response to any of the Uxxxx abend codes, gather as much diagnostic information as possible and contact IBM support.

For a list of available diagnostic information, see "CICS abend and dump codes" on page 323.

U100

Explanation:
An ISPF interface failure has occurred.

U1600

Explanation:
A PC has issued a call to an unavailable service.

U1700 through
U1798

Explanation:
Recovery Manager abends.

U1799

Explanation:
A should-not-occur condition has occurred.

U1800

Explanation:
Indicates that a C housekeeping failure has occurred.

U1801

Explanation:
A failure has occurred in GSI housekeeping.

U1802

Explanation:
A failure has occurred in GSI router housekeeping.

U1803

Explanation:
A transaction manager housekeeping failure has occurred.

U1804

Explanation:
A failure has occurred in the SAS/C resident module.

U1899

Explanation:
System environmental conditions have caused a failure with DYNAEC EPD.

U1900

Explanation:
A failure has occurred with the storage manager.

U3000

Explanation:
An error has occurred in a built in service function routine.

U4000

Explanation:
Indicates that a pseudo GSI service failure has occurred.

U4080

Explanation:
An unrecoverable control task error has occurred.

U4090

Explanation:
A server or application initialization error has occurred.

U4095

Explanation:
A task has been terminated by PGTERM.

System dump codes

In response to any of these dump codes, gather the following diagnostic information and contact your IBM Support Center:

- Job log and EYULOG from the CMAS.
- Unformatted SVC dump (SDUMP). Have access to IPCS.
- CICS AUXTRACE data set from the CMAS. Use the EYU9XZUT trace format utility to format the data set. Also keep a copy of the unformatted trace data set.

EYUXL001

Explanation:
The initialization process failed.

System action:
initialization terminates.

Module:
EYU9XLEV

EYUXL002

Explanation:
The recovery routine was entered during initialization.

System action:
initialization terminates.

Module:
EYU9XLRV

EYUXL003

Explanation:
The recovery routine was entered, but could not successfully recover from the abend.

System action:
processing terminates.

Module:
EYU9XLRV

CICSPlex SM Abend and dump codes

When abnormal conditions occur, CICSPlex SM attempts to recover in an orderly manner and continue with normal processing. Occasionally conditions arise that prevent or preclude such recovery and a task, component, or system might end. In this situation, an abend or dump code is issued.

CICS abend and dump codes

If you have to contact IBM in response to an abend or dump code, gather as much diagnostic information as possible.

The following diagnostic information is required by IBM support to help diagnose the problem:

- Job log from the MAS.
- EYULOG from the CMAS to which the MAS was connected or was attempting to connect.
- CICS TRANDUMP data set from the MAS. Use the CICS DFHDUP utility to format the dump data set.
- CICS AUXTRACE data set from the MAS, if available. Use the EYU9XZUT trace format utility to format the data set, as described in Using trace in CICSPlex SM. Also keep a copy of the unformatted trace data set.

EYUI

Explanation:
A non-recoverable error occurred during initialization.

System action:
MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

User response:
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then restart the MAS. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLEV

EYUK

Explanation:
Either a non-recoverable abend occurred during MAS initialization or a proper environment did not exist when attempting to recover from an abend.

System action:
MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

System action:
If this abend occurred during initialization, MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

User response:
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then

restart the MAS, if necessary. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLRV

EYUO

Explanation:
The environment create routine in a CMAS or MAS was called invalidly. The calling process was not a CICSPlex SM service.

System action:
CICS system processing continues.

User response
Make sure that:

- No site-written programs are attempting to call CICSPlex SM environment create.
- Users are not attempting to use CICSPlex SM TRANIDS directly, either from a terminal or via an EXEC CICS START.

If neither of these conditions exists, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLOP

EYUR

Explanation:
An error occurred while attempting to recover from an abend.

System action:

The failing task terminates. The CICS system continues to run normally, but it may not be known to CICSPlex SM.

User response:
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then restart the MAS, if necessary. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLRV

EYUV

Explanation:
The Web User Interface environment create routine in a CMAS or MAS was called invalidly. The calling process was not a CICSPlex SM service.

System action:
The failing task terminates. A transaction dump is taken. CICS system processing continues.

User response
Make sure that:

- No site-written programs are attempting to call CICSPlex SM Web User Interface environment create.

- Users are not attempting to use CICSPlex SM TRANIDS directly, either from a terminal or via an EXEC CICS START.

If neither of these conditions exists, contact your IBM Support Center.

Module:
EYU0VGIN

EYUX

Explanation:
An exception condition was detected in a remote MAS but a full CICSPlex SM exception trace could not be written at that time. This condition is not necessarily a failure in the application, but the reporting of an exception condition, which is usually the result of communications problems. Communications exceptions cannot be sent to the connected CMAS.

System action:
A transaction dump is taken to document the exception. Task execution continues, taking the appropriate action for the exception condition.

User response:
Examine the MAS and CMAS job logs for any messages that might indicate a problem, especially for those related to the communications network. If such messages exist, follow the instructions associated with those messages. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLEV, EYU9XLOP

EYUY

Explanation:
A CMAS-to-CMAS connection has terminated abnormally. The receive task component of the connection has tried to terminate as cleanly as possible, but it has detected that it is still in a network receive state. This makes it impossible for it to terminate, without CICS generating an additional transaction abend describing this apparent transmission state discrepancy. However, this network state cannot be reset because of the reported connection failure. This abend is issued to preempt the normal CICS abend code related to these network state errors.

System action:
The CPI-C or MRO receive task should now end completely with this abend. When all task components for the connection have terminated, the first speaker CMAS of the connection pair should attempt to reestablish the connection.

User response:
Check the CMAS job log, EYULOG, and CICS message log for previous failures or error conditions and follow the User Response for these messages.

Module:
EYU0CLCT, EYU0CLCU, EYU0CLMT, EYU0CLMU

Uxxxx abend codes

In response to any of the Uxxxx abend codes, gather as much diagnostic information as possible and contact IBM support.

For a list of available diagnostic information, see .

U100

Explanation:
An ISPF interface failure has occurred.

U1600

Explanation:
A PC has issued a call to an unavailable service.

U1700 through
U1798

Explanation:
Recovery Manager abends.

U1799

Explanation:
A should-not-occur condition has occurred.

U1800

Explanation:
Indicates that a C housekeeping failure has occurred.

U1801

Explanation:
A failure has occurred in GSI housekeeping.

U1802

Explanation:
A failure has occurred in GSI router housekeeping.

U1803

Explanation:
A transaction manager housekeeping failure has occurred.

U1804

Explanation:
A failure has occurred in the SAS/C resident module.

U1899

Explanation:
System environmental conditions have caused a failure with DYNAEC EPD.

U1900

Explanation:
A failure has occurred with the storage manager.

U3000

Explanation:
An error has occurred in a built in service function routine.

U4000

Explanation:
Indicates that a pseudo GSI service failure has occurred.

U4080

Explanation:
An unrecoverable control task error has occurred.

U4090

Explanation:
A server or application initialization error has occurred.

U4095

Explanation:
A task has been terminated by PGTERM.

System dump codes

In response to any of these dump codes, gather the following diagnostic information and contact your IBM Support Center:

- Job log and EYULOG from the CMAS.
- Unformatted SVC dump (SDUMP). Have access to IPCS.
- CICS AUXTRACE data set from the CMAS. Use the EYU9XZUT trace format utility to format the data set. Also keep a copy of the unformatted trace data set.

EYUXL001

Explanation:
The initialization process failed.

System action:
initialization terminates.

Module:
EYU9XLEV

EYUXL002

Explanation:
The recovery routine was entered during initialization.

System action:
initialization terminates.

Module:
EYU9XLRV

EYUXL003

Explanation:
The recovery routine was entered, but could not successfully recover from the abend.

System action:
processing terminates.

Module:
EYU9XLRV

Notices

This information was developed for products and services offered in the United States of America. This material might be available from IBM in other languages. However, you may be required to own a copy of the product or product version in that language in order to access it.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property rights may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Client Relationship Agreement, IBM International Programming License Agreement, or any equivalent agreement between us.

The performance data discussed herein is presented as derived under specific operating conditions. Actual results may vary.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to actual people or business enterprises is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. The sample programs are provided "AS IS", without warranty of any kind. IBM shall not be liable for any damages arising out of your use of the sample programs.

Programming interface information

IBM CICS supplies some documentation that can be considered to be Programming Interfaces, and some documentation that cannot be considered to be a Programming Interface.

Programming Interfaces that allow the customer to write programs to obtain the services of CICS Transaction Server for z/OS, Version 5 Release 5 (CICS TS 5.5) are included in the following sections of the online product documentation:

- Developing applications
- Developing system programs
- CICS security
- Developing for external interfaces
- Reference: application development
- Reference: system programming
- Reference: connectivity

Information that is NOT intended to be used as a Programming Interface of CICS TS 5.5, but that might be misconstrued as Programming Interfaces, is included in the following sections of the online product documentation:

- Troubleshooting and support
- Reference: diagnostics

If you access the CICS documentation in manuals in PDF format, Programming Interfaces that allow the customer to write programs to obtain the services of CICS TS 5.5 are included in the following manuals:

- Application Programming Guide and Application Programming Reference
- Business Transaction Services

- Customization Guide
- C++ OO Class Libraries
- Debugging Tools Interfaces Reference
- Distributed Transaction Programming Guide
- External Interfaces Guide
- Front End Programming Interface Guide
- IMS Database Control Guide
- Installation Guide
- Security Guide
- CICS Transactions
- CICSPlex System Manager (CICSPlex SM) Managing Workloads
- CICSPlex SM Managing Resource Usage
- CICSPlex SM Application Programming Guide and Application Programming Reference
- Java™ Applications in CICS

If you access the CICS documentation in manuals in PDF format, information that is NOT intended to be used as a Programming Interface of CICS TS 5.5, but that might be misconstrued as Programming Interfaces, is included in the following manuals:

- Data Areas
- Diagnosis Reference
- Problem Determination Guide
- CICSPlex SM Problem Determination Guide

Trademarks

IBM, the IBM logo, and ibm.com® are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the Web at Copyright and trademark information at www.ibm.com/legal/copytrade.shtml.

Terms and conditions for product documentation

Permissions for the use of these publications are granted subject to the following terms and conditions.

Applicability
These terms and conditions are in addition to any terms of use for the IBM website.

Personal use
You may reproduce these publications for your personal, noncommercial use provided that all proprietary notices are preserved. You may not distribute, display or make derivative work of these publications, or any portion thereof, without the express consent of IBM.

Commercial use
You may reproduce, distribute and display these publications solely within your enterprise provided that all proprietary notices are preserved. You may not make derivative works of these publications, or reproduce, distribute or display these publications or any portion thereof outside your enterprise, without the express consent of IBM.

Rights
Except as expressly granted in this permission, no other permissions, licenses or rights are granted, either express or implied, to the publications or any information, data, software or other intellectual property contained therein.

IBM reserves the right to withdraw the permissions granted herein whenever, in its discretion, the use of the publications is detrimental to its interest or, as determined by IBM, the above instructions are not being properly followed.

You may not download, export or re-export this information except in full compliance with all applicable laws and regulations, including all United States export laws and regulations.

IBM MAKES NO GUARANTEE ABOUT THE CONTENT OF THESE PUBLICATIONS. THE PUBLICATIONS ARE PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, AND FITNESS FOR A PARTICULAR PURPOSE.

IBM online privacy statement

IBM Software products, including software as a service solutions, (*Software Offerings*) may use cookies or other technologies to collect product usage information, to help improve the end user experience, to tailor interactions with the end user or for other purposes. In many cases no personally identifiable information (PII) is collected by the Software Offerings. Some of our Software Offerings can help enable you to collect PII. If this Software Offering uses cookies to collect PII, specific information about this offering's use of cookies is set forth below:

For the CICSPlex SM Web User Interface (main interface):
Depending upon the configurations deployed, this Software Offering may use session and persistent cookies that collect each user's user name and other PII for purposes of session management, authentication, enhanced user usability, or other usage tracking or functional purposes. These cookies cannot be disabled.

For the CICSPlex SM Web User Interface (data interface):
Depending upon the configurations deployed, this Software Offering may use session cookies that collect each user's user name and other PII for purposes of session management, authentication, or other usage tracking or functional purposes. These cookies cannot be disabled.

For the CICSPlex SM Web User Interface ("hello world" page):
Depending upon the configurations deployed, this Software Offering may use session cookies that do not collect PII. These cookies cannot be disabled.

For CICS Explorer®:

Depending upon the configurations deployed, this Software Offering may use session and persistent preferences that collect each user's user name and password, for purposes of session management, authentication, and single sign-on configuration. These preferences cannot be disabled, although storing a user's password on disk in encrypted form can only be enabled by the user's explicit action to check a check box during sign-on.

If the configurations deployed for this Software Offering provide you, as customer, the ability to collect PII from end users via cookies and other technologies, you should seek your own legal advice about any laws applicable to such data collection, including any requirements for notice and consent.

For more information about the use of various technologies, including cookies, for these purposes, see IBM Privacy Policy and IBM Online Privacy Statement, the section entitled *Cookies, Web Beacons and Other Technologies* and the IBM Software Products and Software-as-a-Service Privacy Statement.
