DFHFC3010   *date time applid* **Diagnostic information for unit of work**

X'local-uowid' **and file** *filename.* **Update was a** *{read-update | write-add}* **made by transaction** *tranid* **at terminal** *termid* **under task number** *tasknum.* **Key length** *key-length*, **data length** *data-length*, **base ESDS RBA** *X'base-RBA-or-zero'*, **record key** *X'record-key'*

Explanation

This message follows each DFHFC3001, DFHFC3002, DFHFC3003, or DFHFC3004 message, and provides additional information to help diagnose and correct the situation reported in the preceding message.

For any given filename and unit of work CICS normally issues messages of only one type; for example, a series of DFHFC3001 messages each followed by DFHFC3010, or a series of DFHFC3003 messages each followed by DFHFC3010.

The exception to this is when an exit program enabled at the XFCBOVER global user exit point elects to backout some updates and not to backout others. In this situation CICS might issue a combination of DFHFC3001 and DFHFC3002 messages (each followed by DFHFC3010) for the same filename and unit of work.

This message includes the following information:

local-uowid

> The local unit-of-work identifier for correlation with the preceding message.

filename

> The file name for correlation with the preceding message.

read-update or *write-add*

> The type of before-image log record presented to file control. The type is *read-update* if the update made to the file was either: a READ UPDATE, READNEXT UPDATE or READPREV UPDATE request (which will normally have been followed by a REWRITE or DELETE request), or a DELETE request which specified a RIDFLD. The type is *write-add* if the update made to the file was a WRITE request.

tranid

> The transaction under which the original update was made.

termid

> The terminal from which the transaction which made the original update was run.

tasknum

>The task number under which the transaction which made the original update was run

key-length

>The length of the record key

data-length

>The length of the data in the before-image.

base-RBA-or-zero

>The base RBA if the update was made to a standard addressing ESDS, or zero if the update was made to any other kind of data set. If the update was made to an extended addressing ESDS, the XRBA of the record can be found in record-key.

record-key

>The value of the record key field, in hexadecimal.

System action

None beyond the system action described under the preceding message.

User response

Use the diagnostic information to determine any changes that need to be made to the data set to ensure that the contents are correct. Once you have identified the record which may not now contain the correct contents, and the transaction which originally updated it, a knowledge of your application programs should allow you to determine the necessary action.

CSFL

| DFHFC4700 | *applid {An unexpected | A VSAM | A length | A lock | A timeout | An unexpected delete} error has occurred during file backout. (Module DFHFCFR has returned reason code (X'xx'), access method code (X'cccccccc') and length error code (X'yy').)* |

Explanation

File backout has called module DFHFCFR as part of its processing, and an error has been returned which should not be possible during backout. The message text includes the type of error that has occurred.

Additional diagnostic information is provided by: the reason code *xx* returned from DFHFCFR, the code *cccccccc* which was returned to DFHFCFR from the access method that it called, and the length error code *yy*.

The length error code is normally either X'00', indicating that length errors are not applicable to the type of request which was in error, or X'01', indicating that there was no length error. A value greater than X'01' occurs when the message text indicates that the type of error is a length error.

System action

An exception trace point is written, and a system dump is taken.

The error is processed as a backout failure. Unless a user exit program enabled at the XFCBFAIL exit point bypasses backout failure processing, message DFHFC4701 or DFHFC4702 follows and gives details of the file and data set involved.

CICS continues. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer. This indicates a possible error in CICS, VSAM or BDAM code. The severity of its impact depends on whether the backout can be successfully retried.

If the data set being backed out is a VSAM data set, you can retry the backout. Message DFHFC4701

names the data set, and the failed backout can be retried using SET DSNAME RETRY. If the problem is due to some transient condition which has since cleared, the backout will now succeed.

If the data set being backed out is a BDAM data set, the backout cannot be retried. The data is committed and the locks are released, unless an exit program enabled at the XFCBFAIL exit point terminates CICS, in which case data integrity can be preserved by performing an emergency restart.

If the backout cannot be successfully retried, then take action depending on the type of error indicated in the message text:

- An unexpected error

  This probably indicates either a corruption of storage or an error within CICS code. It might also indicate an error within the access method called to process the request (VSAM or BDAM).

  The reason code *xx* is the reason code from the DFHFCFR parameter list and has been included as additional documentation in case you need further help from IBM.

  The access method code *cccccccc* is information returned to file control in the VSAM RPL if the error was detected by VSAM, or the BDAM DECB if the error was detected by BDAM. For VSAM, the first byte is the VSAM return code and the second byte is the VSAM reason code; the third and fourth bytes may contain additional VSAM diagnostics (for more information, see z/OS DFSMS Macro Instructions for Data Sets). For BDAM, the access method code is the 4-byte exception codes field from the DECB (for more information, see z/OS DFSMS Using Data Sets).

- A VSAM error

  This indicates that an error has occurred within VSAM.

  The access method code *cccccccc* is information returned to file control in the VSAM RPL. The first byte is the VSAM return code and the second byte is the VSAM reason code; the third and fourth bytes may contain additional VSAM diagnostics (for more information, see z/OS DFSMS Macro Instructions for Data Sets).

- A length error

  When a length error is reported, the length error code *yy* will be greater than X'01'. This normally indicates a serious error in CICS, VSAM, or BDAM processing. If it occurs for a BDAM data set, check the FCT and DCB definitions in case there is a mismatch between, for example, the blocksizes, which would result in a length error.

- A lock error

This indicates that backout processing has encountered a LOCKED response on attempting to acquire a lock on a record which is held as a retained lock by another unit of work. This should not be possible because the record should be locked by the unit of work being backed out. If this error occurs for a file being accessed in RLS mode, then it probably indicates an error in the SMSVSAM server. If this error occurs for a file being accessed in non-RLS mode, then it probably indicates an error in CICS enqueue processing.

- A timeout error

  This indicates that backout processing has timed out attempting to acquire an RLS lock. This should not be possible during backout because the record should already be locked by the unit of work being backed out. If this error occurs then it probably indicates an error in the SMSVSAM server.

- An unexpected delete error

  This indicates that the request to be backed out was a delete request, but that the file type is one for which deletes are not supported (VSAM ESDS or BDAM). The most likely cause of this error would be some corruption of the data set, although it might also indicate an error within CICS, or a storage corruption.

You may need assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHFCRC

XMEOUT parameters/Message inserts

1. *applid*
2. Value chosen from the following options:

   1=An unexpected,

   2=A VSAM,

   3=A length,

   4=A lock,

   5=A timeout,

   6=An unexpected delete

3. *X'xx'*
4. *X'cccccccc'*
5. *X'yy'*

Console

DFHFC4701   *date time applid* **Backout failed for transaction** *tranid*, **VSAM file** *filename*, **unit of work** *X'local_uowid'*, **task** *task_number*, **base** *base_dsname*, **path** *path_dsname*, **failure code** *X'bfail_code'*.

Explanation

File backout has been unable to backout an uncommitted change made to a VSAM data set via file *filename*, that was made by the unit of work *local_uowid*.

The file is associated with the data set *path_dsname*. This is either a base cluster data set if the *path_dsname* and *base_dsname* given in the message are the same, or is a path data set whose base cluster is the *base_dsname* given in the message if the two names differ.

The change that is being backed out was originally made by task *task_number* servicing transaction code *tranid*, running under the unit of work *local_uowid* The current task number will differ from the original one that is given in the message if this backout is itself a retry of an earlier backout which also failed, or is a backout being carried out following resolution of an indoubt situation, and the current transaction code will differ from the original one if the transaction has been disabled.

The failure code X'*bfail_code*' indicates the reason for the failure.

System action

The system continues normally.

Backing out of the unit of work continues, but no further attempts to backout updates made by this unit of work to the *base_dsname* named in the message are made.

When the unit of work has been backed out as far as is possible, those updates which could not be backed out are deferred (shunted) until the backout can be retried.

It is possible for other work to continue to access the base cluster data set, but the records in that data set that were changed by this unit of work are locked by retained locks. This ensures that any attempt to access these records results in a LOCKED response being returned to the application. The records must remain locked until the backout has been successfully retried in order to preserve data integrity.

If, when the backout is retried, it fails again for either the same or another reason, this message is issued again, with the failure code indicating the reason for the failure on this occasion.

User response

You may decide to leave the data set online for any of the errors indicated by X'*bfail_code*', especially if you believe that the backout failure may have been due to some transient situation, and that the backout may succeed if retried. You can manually drive retry of the backout using the SET DSNAME RETRY command, or alternatively wait until some event triggers retries of the shunted backouts in the system.

As a last resort, and at the cost of losing data integrity, you could bypass the deferred backout of uncommitted changes to this data set using the SET DSNAME RESETLOCKS command.

The user response depends on the value of the failure code X'*bfail_code*'.

10

The backout attempted to add a duplicate key value to a unique alternate index. The backout can never be carried out unless you can delete the existing record with this alternate key value, then retry the backout using SET DSNAME RETRY. This failure can only occur for a file being accessed in non-RLS mode.

20

The data set ran out of storage while the request was being processed. You should reallocate the data set with more space, then retry the backout using SET DSNAME RETRY. Do not forward recover the data set. If you accessed the file in RLS mode, there are extra steps required to ensure that the retained locks remain associated with the data set. These are explained in the Administering recovery and restart.

24

An I/O error has occurred on the data set. You should consider the possibility that the data set needs restoring, especially if there have been a large number of these messages referring to the same base cluster data set, or if there have also been I/O errors issued during request processing for that data set.

If you do decide to restore the data set, you should take the following steps:

1. Prevent access to the data set
2. Restore a backup copy and forward recover the data set (for example, using CICSVR)
3. Reallow access to the data set
4. Retry deferred backouts.

For an RLS mode data set, prevent access by issuing a SET DSNAME QUIESCED command which closes all open files throughout the sysplex and prevents further RLS opens. Reallow access by issuing a SET DSNAME UNQUIESCED command, which also retries deferred backouts automatically.

For a non-RLS mode data set, prevent access by issuing a SET DSNAME UNAVAILABLE command to prevent further non-RLS opens and issue SET FILE CLOSED commands for all open files. Reallow access by issuing a SET DSNAME AVAILABLE command, and retry deferred backouts using SET DSNAME RETRY.

40

Logical delete for an ESDS data set was not performed because the XFCLDEL exit either chose not to carry out the logical delete, or was not enabled.

41

A DFSMSdss non-BWO backup is in progress for the data set. The backout will be automatically retried when the backup completes.

B0

A deadlock was detected. This can only happen for files opened in non-RLS mode. Since this is a transient condition, you should just retry the backout using SET DSNAME RETRY.

C0

A failure of the VSAM RLS server was detected by this request. The backout is automatically retried when the server becomes available again.

C1

VSAM RLS access is disabled because the server is unavailable. The backout is automatically retried when the server becomes available again.

C2

The VSAM RLS server has recycled (failed and restarted) whilst a record was being backed out. This is a very rare occurrence since the failure and restart must have taken place after the record to be backed out was read for update, and before it was rewritten or deleted. A retry of the backout should be successful, but because the server has already become available, backout will not be automatically retried. You should use SET DSNAME RETRY to drive backout retry.

C3

The VSAM RLS cache structure to which the data set was bound has either failed or has lost connectivity, and VSAM has been unable either

to rebuild the failed cache structure, or to bind the data set to an alternative cache structure in the cache set. The backout is automatically retried when the cache structure becomes available again.

C4

VSAM has returned a response indicating that the RLS lock structure in the coupling facility is full. Allocate a larger lock structure, rebuild into it and retry the backout using set dsname retry. See MVS Setting Up a Sysplex, (GC28-1779) and z/OS DFSMSdfp Storage Administration, (SC26-4920) for further information on how to allocate, and build into, larger lock structures.

F0

There was no space to add another alternate key value to a non-unique alternate index. You should rebuild the data set with a larger alternate index data CI size (unless you are already at the maximum), and then retry the backout using SET DSNAME RETRY. If you accessed the file in RLS mode, there are extra steps required to ensure that the retained locks remain associated with the data set. These are explained in the Administering recovery and restart. Do not forward recover the data set.

FB

An error occurred when opening the file for backout. Determine why the file would not open, and if it is possible to correct it, do so and then issue SET DSNAME RETRY to retry the backout. If the error occurred because the data set was quiesced, the backout is automatically retried when the data set is unquiesced. If the error occurred because the VSAM RLS server was not available, the backout is automatically retried when it becomes available again.

FE

An error occurred which is not expected to be possible during backout. An exception trace point is written, message DFHFC4700 is issued and a system dump is taken. Use these to determine the cause of the error. It might be worth retrying the backout, using SET DSNAME RETRY, since the problem could have been some transient condition which has since cleared.

CSFL and Console

DFHFC4702	***date time applid* Backout failed for transaction *tranid*, BDAM file *filename*, unit of work *X'local_uowid'*, task *task_number*.**

Explanation

File backout has been unable to backout an uncommitted change made to a BDAM data set via file *filename*, that was made by the unit of work *local_uowid*.

The change that is being backed out was originally made by task *task_number* servicing transaction code *tranid*, running under the unit of work *local_uowid*. However, if this backout is being attempted after waiting for an indoubt situation to be resolved, the current task number will be different from the original one given in the message, and transaction code will be different from the original one if the transaction has been disabled.

System action

The system continues normally.

Backing out of the unit of work continues, and any further failures to backout changes made to this BDAM data set result in the message being reissued.

Unless a program invoked at the backout failure exit point, XFCBFAIL, took some action to prevent it, it is possible for other work to continue to access the BDAM data set, but data integrity is compromised because the changes have not been backed out.

User response

Unless you are prepared to continue using the data set in spite of the loss of data integrity, you should take some action to correct matters, such as closing all files that are using the data set and backing out the uncommitted changes offline.

One possible cause of a BDAM backout failure is that a logical delete could not be performed because the XFCLDEL exit either chose not to carry out the logical delete or was not enabled. If this is the case then you may want to ensure that a suitable exit program is enabled at the XFCLDEL exit point, so that any future attempts at backing out writes made to BDAM data sets will succeed.

CSFL and Console

DFHFC4801	*date time applid* **A failure has been detected on forward recovery log stream *log_stream*. The associated non-RLS data set has been set unavailable and its files closed. Data set *dsname***

Explanation

The logger domain has detected an error on the forward recovery log stream *log_stream*. As a result, the associated non-RLS data set *dsname* cannot safely continue to be used.

System action

Processing continues. The data set *dsname* has been set unavailable and all files associated with it have been closed.

User response

First, take a backup of the data set to establish a new forward recovery point. Then, having corrected the problem which caused the log stream failure, you can delete and redefine the failed MVS log stream. If the name of the forward recovery log stream for the data set is held in the VSAM catalog, you can now make the data set available again, using SET DSNAME AVAILABLE. If the name of the forward recovery log stream for the data set is held in the file definition, you must issue SET JOURNALNAME RESET for the forward recovery log before making the data set available again using SET DSNAME AVAILABLE.

Module:
DFHFCLF

Destination

CSFL and Console

DFHFC4802	*date time applid* **A failure has been detected on auto journal *journal_name*. The associated file *file_name* has been closed.**

Explanation

The logger domain has detected an error on the automatic journal *journal_name*. As a result, the automatic journal is no longer reliable.

System action

The associated file *filename* has been set closed.

User response

The appropriate action depends on how you use the automatic journal, and on whether you can tolerate missing information.

If you require a complete automatic journal with no missing information, you need to take some action to establish a new start point for the automatic journal. You can then correct the error causing the log stream failure, delete and redefine the log stream, issue SET JOURNALNAME RESET, and reopen the file.

If you do not require a complete automatic journal, if the log stream is still writeable, you can issue SET JOURNALNAME RESET, open the file, and continue autojournalling to the same journal. A message preceding this one reports details of the log stream failure.

Module:

CSFL and Console

DFHFC5801A	*applid* **File OPEN has failed for VSAM data set. The BWO values in the ICF catalog indicate that**

data set needs to be restored and forward recovered. Data set '*dsname*'.

Explanation

CICS has rejected a file open for the VSAM base data set *dsname*. This base data set could not be opened because the integrated catalog facility (ICF) catalog backup while open (BWO) flags indicated a corrupted data set.

This message is accompanied by message DFHFC5806 which includes the name of the file involved in the OPEN failure.

System action

The file open for data set *dsname* fails. CICS continues processing but the file is closed and its state is set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User response

Carry out the following procedure:

1. If a BWO copy of this VSAM data set is available:

   a. Restore the BWO copy of this data set via DFHSM and/or DFDSS.

   b. Apply the CICS forward recovery logs via a log-apply utility, such as CICS VSAM Recovery (CICSVR), to bring the data set to a point of consistency.

2. If no BWO copy of this base data set exists but a normal quiesced copy does, apply the forward recovery logs to the data set in the normal way to bring the data set to a point of consistency.

3. Set the ICF catalog BWO flags to indicate that the data set has been recovered to the point of failure. This can be done by issuing a CEMT SET DSNAME RECOVERED or EXEC CICS SET DSNAME RECOVERED command.

4. Rename the data set to that of the original data set prior to the failure.

5. Make the data set available.

Note:

Some log-apply utilities, such as CICS VSAM Recovery MVS/ESA (CICSVR MVS/ESA) Version 2, set the ICF catalog BWO flags to a RECOVERED state after the CICS forward recovery logs have been applied.

Module:
DFHFCAT

Destination

Console

DFHFC5802A   *applid* **File OPEN has failed for VSAM data set. The BWO values in the ICF catalog indicate that data set needs to be forward recovered. Data set '*dsname*'.**

Explanation

CICS has rejected a file open for the VSAM base data set *dsname*. This base data set could not be opened because the ICF catalog backup while open (BWO) flags indicated that the data set was back-level and needed to be forward recovered. This failure occurs if a BWO of a VSAM base data set is restored but not forward recovered. This message is accompanied by DFHFC5806 which includes the name of the file involved in the OPEN failure.

System action

The file open for data set *dsname* fails. CICS continues processing but the file is closed and its state set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User response

Carry out the following procedure:

1. Apply the CICS forward recovery logs via a log-apply utility, such as CICS VSAM Recovery (CICSVR), to bring the data set to a point of consistency.

2. Set the ICF catalog BWO flags to indicate that the data set has been recovered to the point of failure. This can be done by issuing a CEMT SET DSNAME RECOVERED or EXEC CICS SET DSNAME RECOVERED command.

Note:

Some log-apply utilities, such as CICS VSAM Recovery (CICSVR), set the ICF catalog BWO flags to a RECOVERED state after the CICS forward recovery logs have been applied.

Module:

Console

DFHFC5803	*applid* **A severe error (code *X'code'*) has occurred while inquiring/ setting VSAM data set BWO attributes. Data set '*dsname*' Return Code *X'xxxxxxxx'* Reason Code *X'yyyyyyyy'* Prob Det *X'zzzzzzzzzzzzzzzz'*.**

Explanation

A severe error has been detected in DFHFCAT while inquiring or setting ICF catalog backup while open (BWO) attributes of base data set *dsname*. The error code is the exception trace point ID which uniquely identifies the call which has failed. The code X'*code*' can take the following values:

Value
   Meaning

X'0B57'

A call to Using DFSMSdfp Callable Services to inquire if a data set is known to a SMS sub-system has failed

X'0B59'

A call to Using DFSMSdfp Callable Services to update the BWO flags to a forward recovered state for a data set has failed

X'0B5A'

A call to Using DFSMSdfp Callable Services to update the recovery point for a data set has failed

X'0B5B'

A call to Using DFSMSdfp Callable Services to update the BWO flags to a BWO disabled state for a data set has failed

X'0B5C'

A call to Using DFSMSdfp Callable Services to inquire if the BWO flags for a data set were in a BWO enabled state has failed

X'0B5D'

A call to Using DFSMSdfp Callable Services to update the BWO flags to a BWO enabled state for a data set has failed.

For further information about CICS exception trace entries, see the Troubleshooting and support.

The values *xxxxxxxx*, *yyyyyyyy* and *zzzzzzzzzzzzzzzz* are the BWO return code, reason code and problem determination code from the Using DFSMSdfp Callable Services Interface call to update/inquire the ICF catalog BWO attributes.

This message is accompanied by message DFHFC5806 when a file open failure occurs or by message DFHFC5810 when a file close failure occurs.

System action

CICS makes an exception trace point entry and issues this message. No system dump is taken. The actions taken depend on the operation in progress at the time of the error.

If the error occurs while opening a file, the open request fails, the file is closed, and its state is set to UNENABLED.

If the error occurs while closing a file, the status of the file is unchanged.

If the error occurs during activity keypoint when updating the recovery point, CICS tries to update the recovery point on the next activity keypoint that creates a keypoint directory element (KPDE).

If the error occurs while setting the data set RECOVERED via CEMT or EXEC CICS commands, a non-OK response is returned.

User response

Use the return code, reason code and problem determination code to determine why the call to Using DFSMSdfp Callable Services has failed. For further information see Using DFSMSdfp Callable Services in the z/OS DFSMSdfp Advanced Services.

Ensure that the appropriate level of MVS/DFP is installed on the processor where CICS is running. Also ensure that the data set is SMS managed and known to the SMS subsystem.

DFHFC5804 *applid* **File CLOSE failed during CICS termination. File '***filename***'.**

Explanation

An attempt to close file *filename* during orderly CICS termination has failed. This message is produced only as a warning that this file could not be closed. Data integrity has been maintained.

System action

CICS termination continues.

If this file was open against a base data set open for update with BACKUPTYPE=DYNAMIC specified, one of the following messages is issued on the first open for update for this base data set in the next CICS run:

> DFHFC5807
> DFHFC5808
> DFHFC5809.

User response

In order to avoid repetition of this failure, try to determine why the file was not closed from any other DFHFCxxxx messages produced during termination.

Module:
DFHFCSD

XMEOUT parameters/Message inserts

1. *applid*
2. *filename*

Destination

Console

DFHFC5805 *applid* **File OPEN failed. RECOVERY attributes of VSAM data set are not valid. File '***filename***' data set '***dsname***'.**

Explanation

The file *filename* is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC). An attempt to open this file for update processing (SERVREQ=ADD, DELETE or UPDATE set), has failed because CICS has detected that the RECOVERY attributes have not been validated for the VSAM base data set *dsname*. A data set cannot be defined

with BACKUPTYPE=DYNAMIC without RECOVERY=ALL specified.

System action

The file open for data set *dsname* fails. Processing continues but the file is closed and its state set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User response

This is probably caused by a logic error in CICS. You should, however, check if there are any other DFHFCxxxx messages that indicate the cause of the error.

3. *dsname*

Destination

Console

DFHFC5806 *applid* **File OPEN failed. DFHFCAT returned an error response from a BWO action on a VSAM data set. File '***filename***' data set '***dsname***'.**

Explanation

An attempt to open file *filename* has failed due to the failure of a call to Using DFSMSdfp Callable Services or due to an invalid state returned from a call to Using DFSMSdfp Callable Services for the VSAM base data set *dsname*. This message is accompanied by one of the following messages depending on the type of error being reported:

> DFHFC0002
> DFHFC5801
> DFHFC5802
> DFHFC5803

System action

CICS fails the file open request for data set *dsname*. Processing continues but the file is closed and its state set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User response

See the accompanying message for the appropriate action to take in resolving this error.

Module:
DFHFCFS

XMEOUT parameters/Message inserts

1. *applid*
2. *filename*
3. *dsname*

Destination

Console

DFHFC5807   *applid* **File OPEN failed. BACKUPTYPE attributes conflict with those currently defined for the VSAM data set. File '*filename*' data set '*dsname*'.**

Explanation

An attempt to open file *filename* for update processing, (SERVREQ=ADD, DELETE or UPDATE set), against the VSAM base data set *dsname* has failed. This is because CICS has detected an attribute conflict between the opening CICS resource definition and the base data set's DSNB which was already opened for update. A FILE resource definition with a BACKUPTYPE=STATIC cannot be opened against a DSNB which already has or had a FILE resource definition opened against it with BACKUPTYPE=DYNAMIC. Similarly, a FILE resource definition with a BACKUPTYPE=DYNAMIC cannot be opened against a DSNB which already has or had a resource definition opened against it with BACKUPTYPE=STATIC.

Note:

A CICS base data set's DSNB cannot change BACKUPTYPE midway through a CICS run. In order to do this, you must destroy the DSNB and create a new one. There are three ways of doing this:

- CEMT SET DSNAME REMOVE
- EXEC CICS SET DSNAME REMOVE
- Terminate CICS and restart with a cold start.

If you respecify a DSNB with BACKUPTYPE=DYNAMIC, where previously it was specified with RECOVERY=NONE or BACKOUTONLY and BACKUPTYPE=STATIC, no forward recovery logging exists for the time that the DSNB had RECOVERY=NONE or BACKOUTONLY specified. Therefore you should take a backup copy of the data

set before the change. This ensures that the data set can be recovered to a consistent point should a failure occur.

System action

The file open for data set *dsname* fails. CICS continues processing but the file is closed and its state set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User response

Determine the correct values for the BACKUPTYPE and RECOVERY attributes, and if necessary, modify the resource definition for the file.

Alternatively, remove the old DSNB as already described and reattempt the open.

Module:
DFHFCFS

XMEOUT parameters/Message inserts

1. *applid*
2. *filename*
3. *dsname*

Destination

Console

DFHFC5808   *applid* **File OPEN warning. VSAM data set already set eligible for BWO on first open for update. File '*filename*' data set '*dsname*'.**

Explanation

The file *filename* is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC). While opening this file for update processing, (SERVREQ=ADD, DELETE or UPDATE set), against the VSAM base data set *dsname*, CICS detected that the ICF catalog has already defined this base data set as eligible for BWO.

If a batch job has updated this data set in a prior batch window and a DFHSM backup was scheduled for the same time, you should discard the backup produced in the batch window as it is not possible to forward recover it to a consistent point should a failure occur. This is because updates made to the data set in the batch window are not reflected in the CICS forward recovery logs. This situation is likely to arise if CICS fails to close a file defined with BACKUPTYPE=DYNAMIC during CICS termination.

System action

CICS updates the ICF catalog recovery point and open processing continues.

User response

To ensure complete data integrity, quiesce all files opened against this base data set and take a backup copy. This can now be forward recovered at a later date and reflects updates made to this data set during a prior batch window.

Module:
DFHFCFS

XMEOUT parameters/Message inserts

1. *applid*
2. *filename*
3. *dsname*

Destination

Console

DFHFC5809	*applid* **File OPEN warning. BACKUPTYPE attributes conflict with BWO values defined in ICF catalog. BWO values have been updated. File '***filename***' data set '***dsname***'.**

Explanation

The file *filename* is defined as not eligible for backup while open for update (BACKUPTYPE=STATIC). While opening this file for update processing (SERVREQ=ADD, DELETE or UPDATE set), against the VSAM base data set *dsname*, CICS detected that the BWO flags in the ICF catalog already defined this base data set as eligible for BWO. However, the CICS resource definition and the DSNB define the base data set as not eligible for BWO.

If a batch job has updated this data set in a prior batch window and a DFHSM backup was scheduled for the same time, you should discard the backup produced in the batch window as it is not possible to forward recover it to a consistent point should a failure occur. This is because updates made to the data set in the batch window are not reflected in the CICS forward recovery logs.

This situation is likely to arise if CICS fails to close a file that is defined with BACKUPTYPE=DYNAMIC, during CICS termination and the file is redefined with BACKUPTYPE=STATIC on a subsequent CICS run.

System action

CICS updates the ICF catalog to indicate that the data set is no longer eligible for BWO. File open processing continues.

User response

Determine the correct value for the BACKUPTYPE attribute, and if necessary, redefine it via CEDA.

Module:
DFHFCFS

XMEOUT parameters/Message inserts

1. *applid*
2. *filename*
3. *dsname*

Destination

Console

DFHFC5810	*applid* **File CLOSE failed. DFHFCAT returned an error response from a BWO action on a VSAM data set. File '***filename***' data set '***dsname***'.**

Explanation

An attempt to close file *filename* has failed because of the failure of a call to Using DFSMSdfp Callable Services for the VSAM base data set *dsname*. This file is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC), and is open for update processing, (SERVREQ=ADD, DELETE or UPDATE set). This message is accompanied by message DFHFC5803 or DFHFC0002, depending on the type of error reported.

System action

The file close request for data set *dsname* fails. Processing continues and the file remains open.

User response

See the accompanying message for the appropriate action to take in resolving this error.

Module:
DFHFCFS

XMEOUT parameters/Message inserts

1. *applid*
2. *filename*

3. *dsname*

Destination

Console

DFHFC5811   *applid* **File OPEN warning. BACKUPTYPE=DYNAMIC attribute has been ignored. File '*filename*' data set '*dsname*'.**

Explanation

The file *filename* is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC). During an attempt to open this file for update processing, (SERVREQ=ADD, DELETE or UPDATE set), against the VSAM base data set *dsname*, either:

- CICS has detected that the appropriate levels of software needed for VSAM backup while open (BWO) support have not been installed, or
- The appropriate Using DFSMSdfp Callable Services modules could not be loaded.

System action

CICS ignores the BACKUPTYPE=DYNAMIC parameter and continues as if STATIC were specified. File open processing continues.

User response

If BWO support is required, ensure that the appropriate level of Using DFSMSdfp Callable Services is installed.

If BWO support is not required, ensure that the file is defined with the BACKUPTYPE=STATIC attribute.

Module:
DFHFCFS

XMEOUT parameters/Message inserts

1. *applid*
2. *filename*
3. *dsname*

Destination

Console

DFHFC5812   *applid* **File OPEN warning. BACKUPTYPE=DYNAMIC has been ignored for VSAM AIX data set. STATIC has been defaulted. File *filename* data set *dsname*.**

Explanation

The file *filename* is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC). This file is opening against the data set *dsname* which is a VSAM AIX. BACKUPTYPE=DYNAMIC is not a valid option for a VSAM AIX. BACKUPTYPE=STATIC has been defaulted.

System action

File open processing continues.

User response

Redefine this file via CEDA, specifying BACKUPTYPE=STATIC.

Module:
DFHFCFS

XMEOUT parameters/Message inserts

1. *applid*
2. *filename*
3. *dsname*

Destination

Console

DFHFC5813   *applid* **File OPEN warning. Level of {*DFHSM | DFDSS | DFHSM and DFDSS*} does not support BWO.**

Explanation

You have opened a VSAM file for update and requested backup while open (BWO) support by specifying BACKUPTYPE=DYNAMIC in the resource definition. However, CICS has detected that the software release level of DFHSM and/or DFDSS required for BWO support has not been installed on the processor on which CICS is running.

This message is issued once for the first file to open for update and be defined as eligible for BWO after a cold or initial start.

System action

CICS file open processing continues. If the file open completes without error, the file is defined as eligible for BWO. However, no BWO backup facilities are available using DFHSM and/or DFDSS on the processor on which CICS is running.

User response

Ensure that DFHSM and/or DFDSS, both of version 2.5.0 or later, are installed on the processor on which the BWO backup is to be made.

Note:

DFSMS/MVS 1.1 (DFSMShsm and DFSMSdss) supersedes DFHSM 2.5 and DFDSS 2.5.

Module:
DFHFCAT

XMEOUT parameters/Message inserts

1. *applid*
2. Value chosen from the following options:

   1=DFHSM,

   2=DFDSS,

   3=DFHSM and DFDSS

Destination

Console

DFHFC5814	*applid* An error (code *X'code'*) has occurred while inquiring on VSAM data set attributes in the ICF catalog. *{SHOWCAT	LOCATE}* return code *X'rrrr'*. Data set *dsname*.

Explanation

While reading the ICF catalog to obtain attributes of data set *dsname*, CICS received return code *rrrr* from a VSAM SHOWCAT or LOCATE macro or detected an associated error. The error code *code* is the exception trace which uniquely identifies the error. It can take the following values:

Value
   Meaning

X'237A'

   SHOWCAT for the data set failed with return code *rrrr*.

X'237B'

   In the VSAM catalog entry for an AIX, either the data association or the base cluster association is missing.

X'237C'

   SHOWCAT for the AIX of a path failed with return code *rrrr*.

X'237D'

   The VSAM catalog entry for a path does not have a base cluster or an AIX as its first association.

X'237E'

   LOCATE for the data set failed with return code *rrrr*.

For further information about CICS exception trace entries, see the CICS Diagnostics reference.

System action

CICS processing continues after making an exception trace entry and taking a system dump with dumpcode FC5814.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Use the SHOWCAT or LOCATE return code if present to determine the cause of the problem. For the meaning of the SHOWCAT return code, see z/OS DFSMS Macro Instructions for Data Sets. For the meaning of the LOCATE return code, see z/OS DFSMSdfp Advanced Services. A VSAM LISTCAT listing for the data set may also be useful.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHFCAT

4. *X'rrrr'*
5. *dsname*

Destination

Console

DFHFC5815	*applid* An error has occurred while inquiring on VSAM data set attributes in the ICF catalog. VSAM RLS codes *X'rrrr'*,

X'cccc'. Problem determination: X'dddddddd'. Data set *dsname*.

Explanation

While reading the ICF catalog to obtain RLS attributes of data set *dsname*, CICS received reason code *cccc* from a VSAM IGWARLS macro. *rrrr* is the return code in register 15. *dddddddd* is any available VSAM problem determination information.

System action

CICS processing continues after making an exception trace entry and taking a system dump with dumpcode FC5815.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Use the IGWARLS reason code and problem determination information to determine the cause of the problem. For the meaning of the IGWARLS reason code, see z/OS DFSMSdfp Advanced Services.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

5. *dsname*

Destination

Console

DFHFC5820	*applid* Any files that are still open against the base data set may need to be closed. File *filename*, data set *dsname*.

Explanation

File *filename* was the first file to open a dynamically allocated data set *dsname*. This file is being closed leaving one or more files still open against the same base data set. However, if one of these files requires secondary extents, the request will fail with a CICS ILLOGIC error (EIBRCODE X'08BA0000').

System action

Close processing completes normally.

User response

To avoid this potential problem, you are advised to close and reopen the files that remain open against the base data set. If you are unsure of the data set associations, run a LISTCAT against the above base dataset to produce a list of all associated data sets. Use CEMT INQ FILE(*) to identify which files are affected. All of these should be closed and reopened, for example, using the CEMT SET FILE(file name) CLOSE and CEMT SET FILE(file name) OPEN.

7. *dsname*

Destination

CSFL and Console

DFHFC6005   *date time applid* **Attempt by {CICS | user} to quiesce a data set has failed. Quiesce was cancelled. Data set *dsname***

Explanation

A request to VSAM RLS to quiesce base data set *dsname* throughout the sysplex has been cancelled by a participating CICS region. The CICS region could be any CICS in the sysplex. The quiesce was cancelled for one of the following reasons.

- An end user issued an EXEC CICS SET DSNAME UNQUIESCED command
- User code at global exit XFCVSDS suppressed the quiesce
- User code at global exit XFCSREQ suppressed the close of a file that is open against the data set
- The quiesce would not complete and was timed out

A preceding console message in the sysplex indicates the reason. For XFCVSDS the message is DFHFC6023. For XFCSREQ the message is DFHFC6024. For timeout the message is DFHFC6020. If there is no preceding message, EXEC CICS SET DSNAME UNQUIESCED has been used.

System action

CICS processing continues. The quiesce state of the data set in the ICF catalog is set to unquiesced as a result of the cancel.

User response

The response depends on the reason for the cancellation. If a preceding message was issued, refer to the explanation for that message for background information.

If EXEC CICS SET DSNAME UNQUIESCED was the reason, determine what the desired quiesce state should really be. If it should be quiesced, issue an EXEC CICS SET DSNAME QUIESCED command or the CEMT equivalent.

If an exit suppressed the quiesce, the user code at XFCVSDS or XFCSREQ must be disabled on all CICS regions in the sysplex before the data set can be quiesced.

If the quiesce timed out, retry the quiesce using EXEC CICS SET DSNAME QUIESCED or the CEMT equivalent. If the timeout occurs again, consider using EXEC CICS SET DSNAME IMMQUIESCED or the CEMT equivalent. This force-purges transactions accessing the data set, thereby speeding up the closing of files. Alternatively, attempt to identify any long-running transactions that are using the data set, and terminate them.

DFHFC6020	*date time applid* **Timeout has occurred while quiescing a data set. Quiesce will be cancelled. Data set *dsname***

Explanation

The request made to VSAM RLS to quiesce base data set *dsname* throughout the sysplex has timed out. The timeout limit is given by the system initialization parameter QUIESTIM.

This is probably due to the presence of long-running transactions on a participating CICS region failing to reach syncpoint, and therefore preventing the close of files open against the data set.

System action

CICS cancels the quiesce throughout the sysplex by issuing an unquiesce for the data set. Depending upon the timing of the unquiesce request, one of two situations can result:

1. Normally the unquiesce is processed immediately and the quiesce request is canceled by VSAM. In this case, message DFHFC6020 is followed by messages DFHFC6000 and DFHFC6001 for the unquiesce completing.

2. Occasionally, depending on the timing of the unquiesce, the original quiesce request completes before the unquiesce request has been processed. Because the unquiesce cannot be canceled, it completes thereby canceling the original quiesce. In this case, message DFHFC6020 is followed by messages DFHFC6000, DFHFC6027, a DFHFC6001 for the quiesce completing, and another DFHFC6001 for the unquiesce completing.

User response

If timeouts occur regularly, the following action can be taken to resolve the problem

- Increase the QUIESTIM SIT value. This can be useful if the system is particularly busy when quiesces are likely to be issued.

- Change the long-running transaction which is holding up the request. Note that the transaction can be on any CICS in the sysplex.

The SET DSNAME IMMQUIESCED command can be used to force purge any transaction and quiesce the data set. This should not be used regularly because force purges can occasionally abend CICS. The messages issued as part of the force purge enable the system programmer to identify the long-running transaction if no other method is available.

See also the Explanation of message DFHFC6005 for guidance.

CSFL and Console

DFHFC6021	*date time applid* **An error has occurred while notifying VSAM RLS of the completion of CICS processing for a data set quiesce or backup. VSAM RLS codes** *X'rrrr'*, *X'cccc'*. **Data set** *dsname*

Explanation

An unexpected error occurred when CICS notified VSAM RLS that it had completed its processing for a data set quiesce, or for a BWO or non-BWO backup. The VSAM IDAQUIES macro failed with reason code *cccc*. *rrrr* is the return code in register 15.

System action

CICS processing continues after taking a system dump is taken with dumpcode FC6021. The failure of the IDAQUIES macro may cause the data set operation to timeout or fail.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Use the IDAQUIES reason code to determine the cause of the problem. For the meaning of the IDAQUIES reason code, see the z/OS DFSMSdfp Diagnosis.

If the data set operation has failed, retry the data set operation once the problem has been resolved,

If you cannot resolve the problem, or the problem reoccurs, a more severe error is indicated. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

6. *dsname*

Destination

CSFL and Console

DFHFC6022	**STORAGE OBTAIN macro failure in CICS RLS quiesce exit. MVS code** *X'rrrr'*

Explanation

The CICS RLS quiesce exit was driven by VSAM RLS to process a data set operation request. An attempt was made to get storage for the request but the STORAGE OBTAIN macro failed. *rrrr* is the return code in register 15.

System action

The CICS RLS quiesce exit writes a GTF trace entry. The request is **not** processed by CICS. The data set operation continues throughout the sysplex.

User response

Use the return code to determine the cause of the problem, then refer to the Explanation of message DFHFC6030 for guidance. For the meaning of the return code, refer to the z/OS MVS System Codes manual.

1. *date*
2. *time*
3. *applid*
4. *transid*

Destination

CSFL

DFHFC6029	*date time applid* **File Control RLS quiesce system transaction *transid* has failed. Reattach will be attempted.**

Explanation

CICS system transaction CFQS or CFQR has failed due to a serious error. An attempt will be made to reattach the transaction *transid*.

A preceding message should indicate the cause of the error.

CFQS and CFQR provide support for VSAM RLS data set quiesce and unquiesce operations, DFSMSdss-initiated BWO and non-BWO backups, and certain other data set related operations.

System action

The transaction is reattached and CICS processing continues.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Check Transient Data Queue CSFL for message DFHFC6028, indicating that the reattach of the transaction was successful. If the reattach fails, VSAM RLS data set quiesce support is lost. If this happens, CICS must be restarted.

If it is not possible to restore VSAM RLS quiesce support, a more severe error is indicated. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHFCQT

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *transid*

Destination

CSFL and Console

DFHFC6030   *date time applid* **The CICS RLS quiesce exit was unable to process data set operation request** *X'type'* **for** *{data set | cache} name*

Explanation

The CICS RLS quiesce exit was driven by VSAM RLS to process data set operation request *type* for data set or cache *name,* but encountered a severe error and was unable to process the request. The error is normally caused by a STORAGE OBTAIN macro failure

A preceding console message (normally DFHFC6022) gives more information about the error.

This message is issued by DFHFCQR on behalf of the CICS RLS quiesce exit DFHFCQX.

Note:

The CICS RLS quiesce exit is used by VSAM RLS to notify CICS that processing is required for the following data set related operations. The number corresponds to *type* in the message.

01

The quiesce of a data set

02

The unquiesce of a data set

03

The start of a DFSMSdss non-BWO backup

04

The end of a DFSMSdss non-BWO backup

05

The start of a DFSMSdss BWO backup

06

The end of a DFSMSdss BWO backup

07

The recovery of lost locks for a data set

08

The completion of forward recovery for a data set

09

The recovery of a coupling facility cache structure.

System action

CICS continues after taking a system dump with dumpcode FC6030. The data set operation request is **not** processed by CICS.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Referring to the preceding console message, attempt to determine the cause of the problem.

Because CICS could not process the request, this might invalidate later processing. For example, if the request was for the quiesce of a data set, open files against the data set must be closed manually, or

the quiesce retried using EXEC CICS SET DSNAME QUIESCED or the CEMT equivalent. If the request was in connection with a BWO or non-BWO backup, the backup may be invalid and should be discarded.

If you cannot resolve the problem, or the problem recurs, a more severe error is indicated. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

CSFL and Console

DFHFC6037 I	*DATE TIME APPLID* **Program *PROGRAM_NAME* has issued an RBA request against an extended addressing ESDS data set. File *filename*. Data set *dsname*.**

Explanation

A program has issued a request using a 32-bit RBA against an extended addressing ESDS data set, which would normally be accessed by a 64-bit XRBA. The name of the file used is *filename*. The data set is *dsname*.

This message is informational.

Use of 32-bit RBAs with an extended addressing ESDS is allowed to enable existing programs to be used with extended addressing data sets. There are some limitations to what can be done by such programs because the RBA supplied is actually the low 32-bits of the 64-bit XRBA and is potentially ambiguous.

Existing programs that write records, and then subsequently browse the data set either from the beginning or the end will work. This is the normal way of using ESDS data sets.

An attempt to read a record by RBA or an attempt to start a browse at anywhere other than the beginning (RBA 0) or end (RBA -1) of the data set is unsupported and will fail.

If you do issue an unsupported RBA request you will receive one instance of message DFHFC6038 for each file against which an unsupported request is issued.

In order to avoid flooding the system with messages, this message is only produced once per CICS run. It is possible that other programs are issuing RBA requests against other extended addressing ESDS files.

System action

CICS continues processing.

User response

None. However, you may wish to review the program to ensure that it does not use RBAs in an unsupported way. You may wish to check that you have not received any instances of message DFHFC6038.

Module:
DFHFCVS, DFHFCRS

XMEOUT parameters/Message inserts

1. *DATE*
2. *TIME*
3. *APPLID*
4. *PROGRAM_NAME*
5. *filename*
6. *dsname*

Destination

CSFL

DFHFC6038	*DATE TIME APPLID* **Program** ***PROGRAM_NAME*** **has issued an unsupported type of RBA request against an extended addressing ESDS. The request has failed. File name** *filename*. **Data set name** *dsname*.

Explanation

A program has issued a request using a 32-bit RBA against an extended addressing ESDS data set, which would normally be accessed by a 64-bit XRBA. The request failed. For extended addressing ESDS data sets, some types of file control commands are only supported with the XRBA keyword and are not supported with the RBA keyword.

The name of the file used is *filename.*. The data set is *dsname.*

Use of 32-bit RBAs with an extended addressing ESDS is allowed to enable existing programs to be used with extended addressing data sets. There are some limitations to what can be done by such programs because the RBA supplied is actually the low 32-bits of the 64-bit XRBA and is potentially ambiguous.

The normal way of using ESDS data sets is to write records sequentially and then subsequently read the records back by a browse. This method of using an extended addressing ESDS with RBAs is supported and it should be possible to use most existing programs with an extended addressing ESDS. Programs that write records to an ESDS will work.

Programs that browse the data set either from the beginning or the end will work.

However the following are not supported because they all rely on the value of the RBA.

- An attempt to read a record by RBA by a READ or READ UPDATE command.
- An attempt to start a browse (by STARTBR) at any position other than the beginning of the data set (RBA 0) or the end of the data set (RBA -1).
- An attempt to reposition a browse (by RESETBR) at any position other than the beginning of the data set (RBA 0) or the end of the data set (RBA -1).
- An attempt to change the position of the browse by changing the value of the RBA between successive READNEXT requests.
- An attempt to change the position of the browse by changing the value of the RBA between successive READPREV requests.
- An attempt to change the direction of a browse by following a READNEXT by a READPREV or by following a READPREV by a READNEXT.

In order to avoid flooding the system with messages, you will only receive one instance of message DFHFC6038 for each file against which an unsupported request is issued. It is possible that other programs are issuing unsupported RBA requests against the same file.

System action

CICS continues processing.

User response

If you do not need to store more than 4 gigabytes of data in the data set, you may be able to leave the program unchanged and convert the data set to one that does not use extended addressing. Otherwise you must change the program to use XRBA rather than RBA. When changing the program, you must change all 4-byte areas that hold RBAs into 8-byte areas to hold XRBAs, as well as changing the RBA keyword to XRBA.

DFHFC6040 I   *DATE TIME APPLID* **Timeout period has expired processing a generic delete against an RLS file. The task was waiting on a get for update request for a locked record that was beyond the range of the generic delete. Once the get for update request has timed out, the delete command completes and the task resumes normal execution. File name *filename*. Data set name *dsname*.**

Explanation

A program has issued a generic delete request against an RLS file. The request involves a series of get update and erase requests to VSAM to remove the records in the range of the delete. If a record with a key outside the range of the delete is encountered, the request completes. If a record that is locked to another request is encountered, the generic delete waits for the other request to complete or will eventually timeout. If the get update request times out, CICS treats this as a successful completion of the generic delete request and the task resumes normal execution.

The name of the file used is *filename*. The data set is *dsname*.

System action

This is an informational message that identifies when a generic delete request against an RLS file is delayed for this particular reason. CICS continues processing.

User response

Investigate the other users of the file if appropriate.

Destination

CSFL

DFHFC7000　　*applid* **The maximum records parameter(*rrrr*) specified on OPEN of coupling facility data table *dddd*, poolname *pppp*, for file *filename*, differs from the current maximum records parameter(*ssss*) for the table.**

Explanation

During OPEN of coupling facility data table *dddd* for file *filename* it has been found that the maximum records parameter *rrrr* specified in the file definition is different from that already specified for the table on a previous OPEN or server SET command.

System action

The open continues. This is a warning message. The maximum records parameter *ssss* already set is the one that applies. The different maximum records parameter is ignored.

User response

Ensure that the maximum records parameter that is in use is as expected. If not, delete the table and reopen it after correcting the maximum records parameter in the file definition. Alternatively, reopen

the table via another file definition that already has the correct maximum records parameter or use the coupling facility data table server SET command to change the maximum records parameter for the table.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

Console

DFHFC7002	*applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because access is not allowed.**

Explanation

The OPEN of coupling facility data table *dddd* for file *filename,* pool *poolname* has failed because access is not allowed. The security check for the table has failed.

A RACF message containing a return code indicating the reason for failure will have been issued prior to this message.

System action

The table cannot be opened.

User response

Set the correct table access using RACF.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7003	*applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the table is not currently available for access.**

Explanation

The OPEN of coupling facility data table *dddd* for file *filename,* pool *poolname*, has failed because the table is currently not available for access. The table has been set unavailable by an earlier server command. This prevents the opening of new files against this table.

System action

The table cannot be opened. CICS continues processing with the table closed and its state unenabled. Any transactions attempting to use the table will get a NOTOPEN condition.

User response

Ensure that the server command to set the table available is issued before attempting to open the file. The format of this command is MODIFY server-name,SET TABLE=name,AVAILABLE=YES|NO

Module:
DFHFCDO

XMEOUT parameters/Message inserts

3. *filename*
4. *poolname*

Destination

Console

DFHFC7004	*applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the table is not yet loaded.**

Explanation

The OPEN of coupling facility data table *dddd* for file *filename,* pool *poolname*, has failed because the table requires loading and is not already being loaded. The user has tried to open it for shared access. A shared

access open will only succeed if the table is already being loaded or has completed loading.

System action

The table cannot be opened.

User response

Investigate why the table has not already been loaded or started loading. Change the file definition to make this OPEN do the load if that is appropriate.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7005	***applid* OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because of a shared access conflict.**

Explanation

The OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because of a shared access conflict. CICS either requests an EXCLUSIVE open (for the purposes of loading) or a SHARED open (for all other cases).

For a shared open request, this error means that the open mode which CICS has specified for this data table conflicts with the shared access mode which has been specified by an existing exclusive open for the data table. For an exclusive open request, this means that the shared access mode which CICS has specified on the open conflicts with one or more existing shared opens for the data table. CICS should not normally specify conflicting open or shared access modes.

System action

The file cannot be opened.

User response

Investigate the access modes of other opens against the data table *dddd* in pool *poolname*, using a server query, to determine whether there is an error.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7006	***applid* OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because of an exclusive access conflict.**

Explanation

The OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname* has failed because of an exclusive access conflict. Exclusive access to the data table is not available. This error can occur when CICS has requested an exclusive open in order to load the data table from a source data set, if another open already has exclusive access. The error can also occur on a request to delete a data table if there are any opens against the data table. CICS should not normally specify access modes which could result in an exclusive access conflict.

System action

The table cannot be opened.

User response

Investigate any other opens against the data table *dddd* in pool *poolname*, for example using a server query, to determine whether it is expected that access is denied.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*

4. *poolname*

Destination

Console

DFHFC7007   *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because one or more attributes on the file definition are incompatible with those that were set for the table when it was created.**

Explanation

An OPEN request naming an existing table specifies one or more attributes for the table which are not compatible with those for the existing table. The coupling facility data table server has rejected the open.

The attributes that may be incorrect are:

- record length
- key length
- initial load option
- update model
- recovery status

This can also occur if the coupling facility data table server that is attempting to open the table is at a lower release level than the server which created the table, as the newer server may have set internal attributes when it created the table which are not supported by the older server.

System action

CICS fails the open.

User response

Use the coupling facility data table server DISPLAY command to view the attributes for the table and then determine whether :

- the file definition for the table just opened should have its attributes changed to match the server values
- the already created table is incorrect because the file definition whose open caused the creation of the table has incorrect attributes. In this case the table should be deleted and recreated either by correcting the file definition or via a file definition which already has the correct values.

Note that this problem could occur if there has been unintentional use of the same table name in different file definitions.

When the problem has been corrected, retry the open.

Console

DFHFC7013	***applid* OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the maximum number of tables has been reached.**

Explanation

A new table cannot be created because the maximum number of tables specified when the first server was started for the structure has been reached.

System action

The open fails.

User response

Investigate whether the number can be increased or whether there are any tables no longer required that could be deleted.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7014	***applid* OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because there are too many users.**

Explanation

The number of concurrent opens for table *dddd* has reached the maximum supported limit which is currently 1024. This means that there are already 1024 files open which all reference the same coupling facility data table in the same coupling facility data table pool.

System action

The open fails.

User response

Investigate reducing the number of concurrent users; that is, the number of files open against this coupling facility data table.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7015	***applid* OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the table has been destroyed.**

Explanation

Table *dddd* in pool *poolname* is no longer valid. The most likely cause is that a delete request overlapped with the current request.

System action

The open fails.

User response

Investigate whether the table was deleted. This is not an error if the table is no longer required. If the table is still required, it should be recreated by opening it again.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7018	*applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the table requires loading.**

Explanation

The OPEN of file *filename* has failed because it requires the associated coupling facility data table *dddd*, which resides in coupling facility data table pool *poolname*, to have been pre-loaded, but the table has not yet been loaded. Automatic loading of the data table could not be initiated because there is no source data set specified for this file, either in the file definition or in the CICS startup JCL.

System action

The file cannot be opened.

User response

There are a number of possible operational errors which might have resulted in this failure:

1. The application does not require the coupling facility data table *dddd* to be pre-loaded. The 'load required' parameter should be removed from the file definition for file *filename*.

2. The application does require the coupling facility data table *dddd* to be pre-loaded, but it should already have been loaded before file *filename* was opened.

   If this is the case, then there should be at least one file definition within the sysplex that names data table *dddd* in pool *poolname* and which specifies a source data set, or for which the source data set is supplied in the CICS startup JCL. You should issue an open for one of the files which specifies the source data set, after which an open of this file should succeed.

   You may also want to put operational procedures in place which will ensure that in future this file is only opened after the data table has been loaded. Use of the data tables load complete global user exit point, XDTLC, might be one way of achieving this.

3. The application does require the coupling facility data table *dddd* to be pre-loaded, and it is intended that the load should be automatically initiated by opening file *filename* (unless the table has already been loaded).

   A source data set name should have been specified, either in the file definition for file *filename* or in the CICS startup JCL as a DD card for file *filename*, depending on whether dynamic allocation or preallocation is required respectively.

Module:
DFHFCDO

3. *filename*
4. *poolname*

Destination

Console

DFHFC7019	*applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the table requires loading but the supplied data set is not KSDS.**

Explanation

The OPEN of file *filename* has failed because it requires the associated coupling facility data table *dddd*, which resides in coupling facility data table pool

poolname, to have been pre-loaded, but the table has not yet been loaded. Automatic loading of the data table could not be initiated because the source data set specified for this file, either in the file definition or in the CICS startup JCL, is not a KSDS. Coupling facility data tables can only be loaded from VSAM KSDS data sets.

System action

The file cannot be opened.

User response

Investigate whether the reason for this error is that the file should not have been defined as requiring loading, or that the data set name specified is incorrect, or that no data set name should have been specified (because the data table should be pre-loaded via some other file definition before this file is opened). Correct the file definition, re-install and retry the open.

Module:
DFHFCDO

DFHFC7032	*applid* CLOSE of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the table has been destroyed.

Explanation

The table is no longer valid in the pool. The most likely reason is that a delete request overlapped with the current request.

System action

The close fails.

User response

Investigate whether the table was deleted. This is not an error if the table is no longer required. If the table is still required, it should be recreated by opening it again.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7051	*applid* A request to inquire on which attributes of coupling facility data table *dddd*, file *filename*, pool *poolname*, are incompatible has failed because the table could not be found.

Explanation

Inquire for coupling facility data table *dddd* has failed because during the request it was found that the table could not be found. CICS File Control issued the inquire as the result of an open failure due to incompatible table attributes. The inquire was intended to provide which attributes were in error so that they could be given as part of the open failure diagnostics.

System action

The table open has failed due to incompatible attributes and the processing to provide more information on which attributes are incorrect has detected that the table can now not be found.

User response

Investigate why the table cannot be found.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7071   *applid* **The request to set shared access for coupling facility data table *dddd*, file *filename*, pool *poolname*, at the end of a successful table load, has failed because access is not allowed.**

Explanation

At the end of a coupling facility data table load, the source data set is closed and CICS File Control requests the server to change the table access from the exclusive access that was required for loading, to a shared access. The server has indicated that the table is not available for access. The security check for the table has failed.

A RACF message containing a return code indicating the reason for failure will have been issued prior to this message.

System action

Although the table successfully opened and loaded, the load is not considered complete because the request to the server to set the access to 'shared' has not occurred. The table is closed again ready for the next open attempt which will reattempt the load. The close will still get the security error, but the CICS side of close will complete.

User response

Investigate why the table is not available for access. Set the required table access, if possible, using RACF.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7072   *applid* **The request to set shared access for coupling facility data table *dddd*, file *filename*, pool *poolname*, at the end of a successful table load, has failed because the table cannot be found.**

Explanation

At the end of a coupling facility data table load the source data set is closed, and CICS File Control requests the server to change the table access from the exclusive access that was required for loading to shared access. The server has returned that the table cannot be found.

System action

Although the table was successfully opened and loaded, the load is not considered complete because the request to the server to set the access to shared has not occurred. The table is closed again ready for the next open attempt which will retry the load. The close will still get the error, but the CICS side of close will complete.

User response

Investigate why the table cannot be found. If it is still required open it again so that it will be recreated and reloaded.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7073   *applid* **The request to set shared access for coupling facility data table *dddd*, file *filename*, pool *poolname*, at the end of a successful table load, has failed because of a shared access conflict.**

Explanation

At the end of a coupling facility data table load the source data set is closed, and CICS File Control requests the server to change the table access from the exclusive access that was required for loading to shared access. The server has returned that it cannot process the request because of a shared access conflict.

System action

Although the table successfully opened and loaded, the load is not considered complete because the request to the server to set the access to shared has not occurred. The table is closed again ready for the next open attempt which will retry the load. The close will still get the error, but the CICS side of close will complete.

User response

Investigate the access mode of other table, and what other files are open against it, to determine if there is an error. The coupling facility data table server supports commands, such as DISPLAY TABLE, which will provide you with this information.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7079	*applid* **The request to set shared access for coupling facility data table *dddd*, file *filename*, pool *poolname*, at the end of a successful table load, has failed because the table has been destroyed.**

Explanation

At the end of a coupling facility data table load the source data set is closed, and CICS File Control requests the server to change the table access from the exclusive access that was required for loading to shared access. The server has returned that the request has failed because the table has been destroyed.

System action

All requests to use the table will return the same error.

User response

Investigate why the table has been destroyed. If it is still required open it again so that it will be recreated and reloaded.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7081	*applid* **OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the key length or record length parameter on the file definition is inconsistent with the equivalent for the source data set.**

Explanation

The OPEN of coupling facility data table *dddd* has failed because before the call to the server to perform the actual open, CICS has found that the record length and/or keylength specified by the user on the file definition does not match that returned by VSAM when the associated source data set was opened.

System action

The table cannot be opened.

User response

Check whether the file definition is in error or whether the wrong data set has been specified. It is not necessary to specify the parameters on the file definition if there is a source data set. Clear the parameters or make them the same as the source.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7082 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the key length or record length parameter for the source data set is inconsistent with the value already set for the table.**

Explanation

The OPEN of coupling facility data table *dddd* has failed because the values for record length and/or key length returned for the table on the open do not match those for the source data set specified in the file definition.

System action

The table cannot be opened.

User response

Check whether the wrong data set has been specified in the file definition. If the table is opened and loaded by another user, it is not necessary for this user to specify a source data set in the definition.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7083 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the key length or record length parameter specified on the file definition is inconsistent with that already set for the table.**

Explanation

The OPEN of coupling facility data table *dddd* has failed because the values for record length and/or key length returned for the table on the open do not match those specified in the file definition for the table.

System action

The table is closed again.

User response

Check whether the wrong data set has been specified in the file definition. If the table is opened and loaded by another user, it is not necessary for this user to specify record length and key length on the file definition. Attention is drawn to the mismatch rather than ignoring it in case there is an error.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7084 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the table cannot be found.**

Explanation

When a coupling facility data table server fails, all the files which were accessing tables in that pool are marked as requiring a re-open after connection to a new server instance. This is required so that a valid table token is obtained for the new instance. The re-open for coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the table has gone away (possibly due to a failure of the coupling facility) since it was last opened for this file.

System action

The table cannot be opened. CICS closes and enables the file so that a full open can be tried later. The full open will recreate the table (unless the file definition specifies that the table must already have been recreated, in which case another file definition which specifies it is capable of recreating and loading the table must be opened first).

User response

Retry when the table is available.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. *dddd*
3. *filename*
4. *poolname*

Destination

Console

DFHFC7085	*applid* On a request to process *{OPEN | CLOSE | EXTRACT STATISTICS}* for coupling facility data table *dddd* for file *filename*, it has been found that the server for coupling facility data table pool *poolname*, is down. The server should be restarted.

Explanation

CICS has issued a request to a file which is defined to use a coupling facility data table which resides in the pool *poolname*. CICS did not currently have a connection established to the pool, so an attempt to connect to the pool has to be made. Before the connect, a query is issued to check whether the server for the pool is available. The query has failed because the server is currently down.

A coupling facility data table server is a separate address space which handles all requests made to coupling facility data tables that reside in the pool which it serves.

System action

If the request is an open, CICS fails the request to the coupling facility data table.

If the request is a close, CICS can complete close processing as normal.

If the request is to extract statistics, issued while gathering file control statistics, the request to obtain the statistics will fail. If the request is to extract statistics, issued as part of INQUIRE FILE processing in order to return the current MAXNUMRECS limit, then the INQUIRE FILE request can complete as normal, but the MAXNUMRECS value returned may differ from the current actual value.

New requests to coupling facility data tables which reside in this pool will check whether the server is available, and will attempt another connect if it is.

User response

Determine the reason for the failure. Diagnostic messages issued by the coupling facility data table server address space should assist you in doing this. The most likely cause of this error is a problem with the coupling facility. The coupling facility data table server does not automatically restart itself, so after you have corrected the cause of the error, you should resubmit the job which starts the server.

Module:
DFHFCDO

XMEOUT parameters/Message inserts

1. *applid*
2. Value chosen from the following options:

   1=OPEN,

   2=CLOSE,

   3=EXTRACT STATISTICS

3. *dddd*
4. *filename*
5. *poolname*

Destination

Console

DFHFC7086	*applid* OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the *{keylength | recordsize}* of the source data set is greater than the supported maximum.

Explanation

The OPEN of file *filename*, associated with coupling facility data table *dddd* in coupling facility data table pool *poolname,* has failed because the key length and/or record size of the source data set specified for the file is greater than the value supported.

For a coupling facility data table, the key length must be less than or equal to 16 bytes, and the record size must be less than or equal to 32767 bytes.

The message indicates whether it was the key length or the record size which was found to be too large.

System action

The file is left closed.

User response

Check whether the wrong data set has been specified for this file (either in the file definition or in the CICS start-up JCL), and whether this data table really requires pre-loading from a source data set.

If the correct data set was specified, then this file may not be suitable for use as a coupling facility data table. If this was because the key length was beyond the range supported for coupling facility data tables, then consider redefining the file as a user-maintained data table or as an RLS file.

If the data table does not need to be pre-loaded, then specify LOAD(NO) on the file definition, and a key length and record size which are in the supported ranges.

Module:
DFHFCDO

3. *applid*
4. *dddd*
5. *filename*
6. *poolname*

Destination

CSFL and Console

DFHFC7093   *date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *dddd*, **file** *filename*, **pool** *poolname*, **reason code = X'xx'.**

Explanation

The CICS task that is loading coupling facility data table *dddd* has received a reason code X'*xx*', where X'*xx*' has one of the following values:

X'02'

ILLOGIC - A VSAM error which does not fall into one of the other categories.

X'0C'

NOTOPEN - The file is CLOSED and UNENABLED, or still open and in use, but a CLOSE request has been received.

X'0D'

DISABLED - The file is DISABLED.

X'0F'

ENDFILE - The file is CLOSED and UNENABLED, or still open and in use, but a CLOSE request has been received.

X'80'

IOERR - I/O error.

X'84'

TABLE_FULL - Maximum records exceeded.

X'85'

RLS_DISABLED - RLS access currently not available.

X'86'

RLS_FAILURE - The RLS server has failed.

X'87'

PREVIOUS_RLS_FAILURE - The RLS server has been recycled in this unit of work.

X'88'

CACHE_FAILURE - Cache connectivity failure.

X'89'

CFDT_POOL_FULL - No more space available in the coupling facility structure for the table pool.

X'8A'

DATASET_BEING_COPIED - DSS is performing a sharp copy

System action

The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. The user exit may ask for the file to be closed. No more records are loaded into the coupling facility data table.

If the user exit did not request the file to be closed (or if no user exit program was enabled at the XDTLC exit point), then API requests to access records within the range of keys which has already been loaded into the data table will succeed, but requests to access any record beyond the loaded range will receive the "LOADING" condition.

If the file has been closed, then API requests will receive a "NOTOPEN" condition.

CICS processing continues.

User response

Investigate the reason for the return code from CICS file control. For further information about the reason code, see the description of exception conditions for the STARTBR, READNEXT and WRITE commands in the CICS Application development reference.

You may be able to correct the cause of the failure, for example by explicitly enabling the file if the reason is DISABLED, or re-cycling the RLS server if it has failed. If the error is TABLE_FULL, meaning that the number of records to be loaded into the table exceeds the MAXNUMRECS parameter, then you can increase this parameter using the coupling facility data tables server command SET TABLE=tablename,MAXRECS=n. (Note that although altering the MAXNUMRECS parameter on the file definition within CICS, using SET FILE for example, will not have any effect on the current setting for the data table, you should consider resetting it to the new value in order to avoid getting a warning message about the mismatch.) If the error is CFDT_POOL_FULL, then you can increase the size of the coupling facility data table pool that this data table resides in.

If it is possible to correct the problem which caused the load to fail, then you can complete the load of the coupling facility data table by closing the file which attempted the load (if it has not already been closed) and re-opening it, or any other file which is capable of loading the table; that is, which has access to the source data set. This will cause the load to be restarted from the point at which it failed.

DFHFC7094	*date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *dddd***, file** *filename***, pool** *poolname***, reason code =** *X'xx'***.**

Explanation

The request to close the source data set at the end of load of coupling facility data table *dddd* has failed. The most likely cause of the failure is an error on the SET call to the coupling facility data table server to mark the table as loaded and to set the table access as shared, either because the server was down at the time of the SET or because of an error returned by file control during processing.

System action

The table and source are closed, leaving the table in a state such that a subsequent open may be able to complete the load.

CICS processing continues.

User response

Determine the cause of the failure using the diagnostic information provided by file control.

Module:
DFHFCDL

DFHFC7100 *date time applid* **CICS data table load has terminated abnormally for coupling facility data table *name*, file *filename*, pool *poolname*, a call to FCFR to BROWSE the source data set has failed for reason code = *n*.**

Explanation

The CICS task which is loading coupling facility data table *dddd* has failed while calling file control to browse the source data set. The value of the reason code *n* indicates the type of failure as follows:

1. Response from FCFR was INVALID.
2. Response from FCFR was DISASTER.
3. Response from FCFR was PURGED.
4. FCFR failed for some unexpected reason.

System action

The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. The user exit may ask for the file to be closed. No more records are loaded into the coupling facility data table, and CICS terminates the loading transaction with abend code ACFA.

If the user exit did not request that the file be closed (or if no user exit program was enabled at the XDTLC exit point), then API requests to access records within the range of keys which has already been loaded into the data table will succeed, but requests to access any record beyond the loaded range will receive the "LOADING" condition.

If the file has been closed, then API requests will receive a "NOTOPEN" condition.

CICS processing continues.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Determine the cause of the failure of the domain call using the diagnostic information provided by file control.

If it is possible to correct the problem which caused the browse to fail, then you can complete the load of the coupling facility data table by closing the file which attempted the load (if it has not already been closed) and re-opening it, or any other file which is capable of loading the table; that is, which has access to the source data set. This will cause the load to be restarted from the point at which it failed.

DFHFC7101	*date time applid* **CICS data table load has failed to close coupling facility data table** *dddd*, **file** *filename*, **pool** *poolname*, **a call to FCFS has failed for reason code =** *n*.

Explanation

The CICS task that is loading coupling facility data table *dddd* has failed while trying to close the file at the request of an exit program invoked at exit point XDTLC. The value of reason code *n* indicates the type of failure as follows:

1. Response from FCFS was INVALID.
2. Response from FCFS was DISASTER.
3. Response from FCFS was PURGED.
4. FCFS failed for some unexpected reason.

System action

CICS terminates the loading transaction with abend code ACFA.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

It is unlikely that the user exit invoked at the XDTLC exit point would request that the file should be closed unless a previous problem had occurred with the load. Determine the cause of any such previous problem by checking for earlier messages which may have been issued referring to data table *dddd*. Diagnostic information provided by file control may be used to investigate the failure of the close file call.

CICS processing continues.

Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module:
DFHFCDL

Destination

CSFL and Console

DFHFC7103   *date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *dddd*, **file** *filename*, **pool** *poolname*.

Explanation

The special CICS transaction that was loading coupling facility data table *dddd* has detected an abnormal termination.

System action

Depending on the cause of this abnormal termination, CICS may produce either a system dump or a transaction dump.

The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. The user exit may ask for the file to be closed. No more records are loaded into the coupling facility data table, and CICS terminates the loading transaction with abend code ACFA.

If the user exit did not request that the file be closed (or if no user exit program was enabled at the XDTLC exit point), then API requests to access records within the range of keys which has already been loaded into the data table will succeed, but requests to access any record beyond the loaded range will receive the "LOADING" condition.

If the file has been closed, then API requests will receive a "NOTOPEN" condition.

CICS processing continues.

User response

Look at the system log for related CICS messages to determine the original abend detected by the loading transaction. Refer to the description of abend code ACFA for further information about the cause of the original termination.

For more information on how to determine system problems, refer to the <u>Troubleshooting and support</u>.

If it is possible to correct the problem which caused the load to abend, then you can complete the load of the coupling facility data table by closing the file which attempted the load (if it has not already been closed) and re-opening it, or any other file which is capable of loading the table; that is, which has access to the source data set. This will cause the load to be restarted from the point at which it failed.

CSFL and Console

DFHFC7110	*applid* An attempt to connect to coupling facility data table pool *poolname*, issued by module *modulename*, has failed.

Explanation

CICS has issued a request to a file which is defined to use a coupling facility data table which resides in the pool *poolname*. CICS did not currently have a connection established to the pool, so an attempt to connect to the pool has been made. This attempt has failed. The connect attempt was issued from module *modulename*.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool which it serves. CICS must have a connection to the server before it can open and access coupling facility data tables in the pool.

System action

CICS fails the request to the coupling facility data table.

New requests to coupling facility data tables which reside in this pool will check whether the server is available and will attempt another connect if it is.

User response

Determine the reason for the failure to connect. Diagnostic messages issued by the coupling facility data table server address space should assist you in doing this. The most likely cause of this error is a problem with the coupling facility. The coupling facility data table server does not automatically restart itself, so after you have corrected the cause of the error, you should resubmit the job which starts the server.

Module:
DFHFCDR, DFHFCDO, DFHFCDU

Destination

Console

DFHFC7111	*applid* An attempt to disconnect from the coupling facility data table server for pool *poolname* for connection token *X'connecttoken'*, issued by module *modulename,* has failed.

Explanation

CICS has detected that an instance of the coupling facility data table server for pool *poolname* has failed. CICS has therefore attempted to disconnect from this pool server, but this attempt has failed. The disconnect has been issued by module *modulename,*

and *connecttoken* is the token which was associated with the connection to this pool server.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool which it serves.

System action

CICS continues. As soon as a new instance of the pool server is available (which it might already be) then CICS can re-establish a connection to the server and continue to process coupling facility data table requests.

In many cases, CICS will later be able to disconnect from the server automatically. If not, the only effect of this failure is that some storage allocated by the server to the connection will not be freed until CICS terminates, at which time a disconnect message will be issued by the pool server for each instance from which CICS failed to disconnect.

User response

Determine the reason for the failure to disconnect. Diagnostic messages issued by the coupling facility data table server address space should assist you in doing this.

Module:
DFHFCDR, DFHFCDO, DFHFCDU

Console

DFHFC7112   *applid* **Resynchronization of coupling facility data table pool** *poolname* **issued from module** *modulename* **has failed.**

Explanation

CICS has issued a request to a file which is defined to use a coupling facility data table which resides in the pool *poolname*. CICS did not currently have a connection established to the server for this pool, so an attempt to connect to and resynchronize the pool server has been made, but the resynchronization has

failed. The attempt to resynchronize was issued from module *modulename*.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool which it serves. When CICS re-establishes its connection to a coupling facility data table pool server, it must perform resynchronization in order to complete recovery processing for any unresolved units of work which had made recoverable updates to coupling facility data tables residing in the pool.

System action

CICS fails the request to the coupling facility data table.

Other requests to coupling facility data tables which reside in this pool will succeed if they do not require the pool to have been resynchronized, or might attempt another resynchronization if they do.

User response

Determine the reason for the failure to resynchronize. Diagnostic messages issued by CICS components involved in the resynchronization and by the coupling facility data table server address space should assist you in doing this.

Depending on the stage during resynchronization at which the failure occurred, any subsequent request to a recoverable file which uses a coupling facility data table in the pool might trigger an attempt to retry the resynchronization. If such requests do not trigger a retry, then you should recycle the server region for this pool (by stopping or cancelling the server region using a server command, and then restarting it).

Module:
DFHFCDR, DFHFCDO, DFHFCDU

XMEOUT parameters/Message inserts

1. *applid*
2. *poolname*
3. *modulename*

Destination

Console

DFHFC7113   *applid* **An attempt to retry resynchronization of coupling facility data table pool** *poolname* **issued from module** *modulename* **has failed.**

Explanation

CICS has issued a request to the coupling facility data table server for pool *poolname*. This request requires the pool to have been resynchronized.

Although CICS currently has a connection established to the pool server, an earlier attempt to resynchronize the pool failed, so the resynchronization has been retried. This retry has also failed. The attempt to retry resynchronization of the pool was issued from module *modulename*.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool which it serves. When CICS has re-established its connection to a coupling facility data table pool server, it must perform resynchronization in order to perform recovery processing for any unresolved units of work which had made recoverable updates to coupling facility data tables residing in the pool.

Certain requests require the coupling facility data table pool to have been resynchronized before they can succeed. Such requests include:

- Open requests for files which are defined to use recoverable coupling facility data tables (open requests against non-recoverable coupling facility data tables do not require the pool to have been resynchronized).
- Syncpoint requests for units of work which have made recoverable updates to coupling facility data tables such as commit or backout requests.

These requests do not require all the units of work to have been resolved, but they do require CICS to have successfully restarted its recoverable connection to the pool server.

System action

CICS fails the request to the coupling facility data table pool.

Other requests to this pool server will succeed if they do not require the pool to have been resynchronized, or will attempt another resynchronization if they do.

User response

Determine the reason for the failure to resynchronize. Diagnostic messages issued by CICS components involved in the resynchronization and by the coupling facility data table server address space should assist you in doing this.

Module:
DFHFCDO, DFHFCDU

3. *modulename*

Destination

Console

DFHFC7114	*applid* **Force purge of transaction** *trannum* **which made recoverable updates to coupling facility data table pool** *poolname* **has failed.**

Explanation

An attempt to force purge transaction *trannum* has failed. The system attempted to force purge the transaction because it had made recoverable updates to one or more coupling facility data tables residing in the coupling facility data table pool *poolname*, and the server for that coupling facility data table pool is undergoing resynchronization. The fact that this resynchronization is taking place is an indication that a failure has occurred which will have resulted in all recoverable updates made to the coupling facility data table pool *poolname*, which have not yet been committed, having been backed out. This transaction had therefore made updates which have since been backed out, so the transaction needs to be abended, in order to ensure that any updates which it made to other recoverable resources will also be backed out. However, it has not been possible to purge this transaction.

The effect of the failure to purge this transaction is that updates made to other recoverable resources may be committed, with the result that the overall unit of work will not be commit-consistent. It is also possible that the transaction will try to make subsequent updates to the coupling facility data table pool which will cause it to be abnormally terminated.

System action

Resynchronization of the coupling facility data table server pool continues.

User response

If the transaction is still active, then attempt to force purge the transaction using the CEMT main terminal command. However, as this should be a rare situation, consider performing an immediate shutdown of CICS followed by an emergency restart as an alternative solution. This causes all inflight transactions to be backed out.

Module:
DFHFCDY

XMEOUT parameters/Message inserts

1. *applid*
2. *trannum*
3. *poolname*

Destination

Console

DFHFC7115	*applid* **The coupling facility data table server for pool** *poolname* **has failed and restarted. One or more in-flight transactions which had made recoverable updates to coupling facility data tables residing in the pool will be abended.**

Explanation

The coupling facility data table server for data table pool *poolname* is undergoing resynchronization. The fact that this resynchronization is taking place is an indication that a failure has occurred which will mean that any recoverable updates made to the coupling facility data table pool *poolname* that had not yet been committed will have been backed out. Any in-flight transaction which had made recoverable updates to one or more coupling facility data tables residing in data table pool *poolname* therefore needs to be abended, in order to ensure that any updates which it made to other recoverable resources will also be backed out.

This message is issued to inform you that one or more such in-flight transactions has been found, and that CICS will attempt to abend the transactions and cause them to back out by force purging them. You should therefore expect that one or more transactions will be abnormally terminated with an ATCH transaction abend code (or possibly, in some instances, with an AKC3 abend code).

System action

Resynchronization of the coupling facility data table server pool will complete, and one or more in-flight transactions will be abnormally terminated.

User response

None.

This message is purely informational, to indicate that transactions will be abended in order to preserve data integrity.

Module:
DFHFCDY

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHFC7120	*applid* **The coupling facility data table pool** *poolname* **has an unresolved unit of work** *X'UOWid'* **for this CICS region of which CICS has no knowledge.**

Explanation

CICS is resynchronizing the coupling facility data table server for pool *poolname*.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool that it serves. When CICS has established its connection to a coupling facility data table pool server, it must perform resynchronization in order to perform recovery processing for any unresolved units of work which had made recoverable updates to coupling facility data tables residing in the pool. The resynchronization involves restarting the recoverable connection to the pool server, and completing any unresolved units of work known to the server for which the resolution is now known.

The server has an unresolved unit of work *UOWid*, but CICS has no knowledge of a link to the pool server for this unit of work. Knowledge of links will be lost when CICS performs an initial start, but in the case of unit of work *UOWid* there has not been a CICS initial start since the unit of work was created.

System action

CICS resolves the unit of work by backing out the updates that it made to coupling facility data tables within the pool, and completes resynchronization of the pool.

User response

Since CICS will have resolved the unit of work, you do not need to take any immediate action. This message

is issued to provide diagnostic information which you may want to use to understand why CICS had no knowledge of the link.

Module:

Destination

Console

DFHFC7130 *date time applid tranid trannum termid userid***. Unit of work** *X'uowid'* **running in region** *owner-applid* **in MVS system** *MVSid* **holds a lock on key** *X'keyid'* **in coupling facility data table** *tablename* **in pool** *CFDTpool***, which caused this request to wait.**

Explanation

This message is issued to aid problem determination when a transaction that has accessed, or attempted to access, a coupling facility data table is about to terminate abnormally with an AFCY abend code.

The message is issued when a request to a coupling facility data table times out waiting on a lock. A request that requires a lock on a coupling facility data table has been issued, but was forced to wait because the record was locked by another unit of work. The wait has been purged by one of the following actions:

- The timeout time for the transaction has been exceeded.
- CICS has purged transactions in an attempt to alleviate a short-on-storage (SOS) condition.
- The transaction has been purged by an operator request.

The name of the transaction that has failed is *tranid* and it is running under task number *trannum*, at terminal *termid*, for user *userid*.

The message inserts identify the owner of the lock that caused this transaction to timeout:

- *uowid* is the local UOW id of the unit of work running in the region that owns the lock.
- *owner-applid* is the applid of the region that owns the lock.
- *MVSid* is the name of the MVS system in which the region that owns the lock is running.
- *keyid* identifies the key that is locked. As it is not always possible to display keys in character form, the key is displayed in hexadecimal notation.

- *tablename* is the name of the coupling facility data table against which the lock is held.
- *CFDTpool* is the name of the coupling facility data table pool in which the CF data table *tablename* resides.

The locks held against coupling facility data tables are always exclusive locks, and can only have one holder. Therefore, this message uniquely identifies the owner of the required lock.

System action

The transaction is abended with an AFCY abend code.

User response

This message identifies the unit of work that is holding the required lock and the region in which it is running. Examine this unit of work to see why it is not releasing the lock; for example:

- The unit of work may be holding CF data table locks and waiting for terminal input.
- The unit of work may be trying to access both coupling facility data table resources and resources owned by another resource manager, creating an inter-resource manager deadlock.

DFHHCnnnn messages

DFHHC0101I	*applid* CICS has registered successfully to the z/OS Health Checker.

Explanation

CICS has registered successfully to z/OS Health Checker.

DFHHC0102I	*applid* CICS failed to register with the z/OS Health Checker: code(*X'code'*) reason(*X'reason'*) response(*X'response'*).

Explanation

CICS failed to register with the z/OS Health Checker: code(code) reason(reason) response(response).

System action

CICS continues.

User response

The code for the failure denotes the macro call that has failed. 1 = GETMAIN, 2 = IARV64, 3 = CSVDYNEX, 4 = HZSCHECK.Depending upon the failure code, refer to the following:

The GETMAIN macro is described in the z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG.

The IARV64 macro is described in the z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG.

The CSVDYNEX macro is described in the z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN.

The HZSCHECK macro is described in the IBM Health Checker for z/OS Users Guide.

If the z/OS Health Checker is not active, you will need to start the Health Checker inorder to collect CICS health checks.After restarting the Health Checker, you will need to restart this region, or start a new regionin this LPAR in order to register.

If the health checker is active, you will need assistance from IBM.Take a system dump of CICS and the z/OS Health Checker. See Working with IBM to solve your problem for guidance on how to proceed.

Module:

DFHICnnnn messages

DFHIC0002   *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where it was detected.

System action

An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you will need assistance. Bring CICS down in a controlled shutdown and collect the dumps and any relevant messages sent by the module identified in the message. See Working with IBM to solve your problem for guidance on how to proceed.

Module:

3. *modname*

Destination

Console

DFHIC0200 *DATE TIME APPLID* **Automatic transaction restart for transaction** *tranid* **has failed.**

Explanation

A STARTed nonterminal transaction is ending abnormally and automatic transaction restart was requested via the user replaceable module DFHREST. A severe error occurred when CICS attempted to restart the transaction.

System action

Message DFHAP0002 with a dump is issued for the severe error that caused the restart to fail. Abnormal termination of the transaction for which restart was requested continues. The transaction is not automatically restarted.

User response

Investigate the reason for the earlier severe error. See message DFHAP0002 for further guidance. Restart the transaction manually if necessary.

Module:
DFHICXM

3. *APPLID*
4. *tranid*

Destination

CSMT and Console

DFHIC0310 *date time applid* **Unable to attach transaction -** *tranid* **to terminal -** *termid*

Explanation

An attempt was made to start transaction *tranid* on terminal *termid* as a result of:

- a START command, or
- a DFHIC TYPE=PUT macro, or
- a DFHIC TYPE=INITIATE macro.

The attempt was rejected. The most likely cause is that, at the time the attempt was made, the terminal was unknown in the system.

This message is also issued when:

- A START command is issued in an application owning region (AOR) for a terminal that exists as a remote terminal entry in the AOR, but the destination system ID associated with the remote terminal has not been defined.
- A START command is issued against a pipeline device, or other device which is not eligible for ATI requests.

System action

The request is deleted from the system.

User response

Ensure that a valid terminal name is being specified. If the name is valid, examine the trace (if one is available) to determine why the attempt was rejected.

Module:
DFHICP

DFHIC0360 *date time applid* **An attempt to establish security for userid** *userid* **has failed. Transaction** *tranid* **cannot be started without a terminal. SAF codes are (***X'safresp'***,***X'safreas'***). ESM codes are (***X'esmresp'***,***X'esmreas'***).**

Explanation

An attempt was made to establish security for userid *userid* but it was rejected by the external security manager (ESM).

A time ordered request, such as an EXEC CICS START command, required security to be established for the userid in order to start the transaction *tranid* without a terminal.

System action

Security has not been established for the userid. The attempt to start the transaction has failed.

User response

The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the z/OS MVS Programming: Authorized Assembler Services Guide, and in z/OS Security Server RACROUTE Macro Reference (SC28-1366). See these manuals for an explanation of the codes.

There may be further messages produced by CICS or the external security manager (ESM) which provide more information.

CSCS

DFHIC0801   *applid* **CICS time altered from** *hh.mm.sss* **to** *hh.mm.sss* **- date** *dddddddd* **- relative day** *rrr*

Explanation

This console message is printed when the operating system-maintained time of day has been rolled back or rolled forwards (for example, when the operating system clock is reset to zero at midnight). Where:

- *hh.mm.sss* is the time in hours minutes and tenths of a second
- *dddddddd* is the current date in the format specified by the DATFORM parameter in the system initialization table
- *rrr* is the day number relative to the day CICS was started.

System action

CICS has recognized the condition and adjusted its own time of day to agree with that of the operating system.

User response

None

Module:
DFHTAJP

XMEOUT parameters/Message inserts

1. *applid*
2. *hh.mm.sss*
3. *hh.mm.sss*
4. *dddddddd*
5. *rrr*

Destination

Console

DFHIC0802   *applid* **S/370 clock inoperative ... external action required**

Explanation

CICS execution is dependent on the continued operation of the processor time-of-day clock. This warning message is sent to the console operator during the execution of the time adjustment program if the system detects a processor clock failure at that time. Immediate corrective action (if possible) must be taken by the console operator, if the clock has been disabled for any reason.

System action

CICS abnormally terminates itself after the condition is detected.

User response

The ability to enable or disable the time-of-day clock is under the control of the console operator. If the clock is disabled, it must be enabled immediately.

Module:
DFHTAJP

XMEOUT parameters/Message inserts

1. *applid*

DFHIEnnnn messages

| DFHIE0001 | *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.** |

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

2. *X'code'*
3. *modname*

Destination

Console

DFHIE0003   *applid* **Insufficient storage to satisfy Getmain (code *X'code'*) in module *modname*.**

Explanation

A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action

An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error.

If DFHIEDM issues this message, CICS terminates, even if you have specified in the dump table that CICS should not terminate.

If DFHIEXM issues this message, an exception trace and a system dump is taken and CICS continues.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. See the Configuring or the Improving performance for further information on CICS storage.

Module:
DFHIEXM

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHIE0004   *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction that was executing at the time the error was detected.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message

DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Because some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function that exceeds the runaway task time interval that you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that the module *modname* will be terminated and CICS will continue.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname,* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you may need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

CIEO

DFHIE1001	*date time applid client_ip_addr tcpipservice* **Data received from**

the client violated the bracket protocol.

Explanation

Data received from the client violated the bracket protocol used in communication between the client and CICS to delimit the start and end of conversations. One of the following situations has occurred.

- A flow without Begin Bracket arrived when there was no active conversation
- A flow with Begin Bracket arrived when there was an active conversation
- An FMH7 (conversation abend) flow without End Bracket was received.

This has probably happened because a separate error has caused CICS and the client to have a different view of the current state of conversations on the connection, or because the data has been corrupted at some point in the transmission.

System action

An exception trace is written. It contains the data received from the client, and the state of any relevant conversation in CICS. The data is then ignored.

User response

If there are any other errors preceding this one, then take action to correct them and retry the client transaction. If there are no other errors apparent, restart the client connection and retry the client transaction.

CIEO

DFHIE1011　　　*date time applid client_ip_addr tcpipservice* **Invalid data received from client.**

Explanation

CICS expected the data received from a client to contain an ECI request or a syncpoint flow but it was not recognizable as such.

This has probably happened because a separate error has caused CICS and the client to have a different view of the current state of conversations on the connection, or because the data has been corrupted at some point in the transmission.

System action

An exception trace is written. It contains the data received from the client, and the state of the relevant conversation in CICS. The data is then ignored.

User response

If there are any other errors preceding this one, then take action to correct them and retry the client transaction. If there are no other errors apparent, restart the client connection and retry the client transaction.

Module:
DFHIEIE

XMEOUT parameters/Message inserts

4. *client_ip_addr*
5. *tcpipservice*

Destination

CIEO

DFHIE1102   *date time applid client_ip_addr tcpipservice* **Invalid parameter list passed to IE domain.**

Explanation

A call was made to the IP ECI (IE) domain during the processing of a request but the parameter list was not valid. This is probably because of a storage overwrite or an internal error in the calling component.

System action

An exception trace is written by IE domain, a system dump is taken and the IP ECI listener task (CIEP) or the mirror task is abended.

User response

Use the dump to determine the fault in the calling component.

Module:
DFHIEIE

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *client_ip_addr*
5. *tcpipservice*

Destination

CIEO

DFHIE1103   *date time applid client_ip_addr tcpipservice* **Invalid request by mirror task.**

Explanation

A call was made to the IP ECI (IE) domain during the processing of a request by a mirror task. The call was a receive when the conversation was in send state, or the call was a send when the conversation was in receive state. This is probably because an

error on the TCP/IP connection has caused a loss of synchronization between the mirror task and the IE domain, but could be due to an internal error in IE domain.

System action

An exception trace is written by IE domain, a system dump is taken and the mirror task is abended.

User response

Use the dump to determine the fault in IE domain, or just retry the failing request if there were signs of other errors on the connection.

DFHIEIE

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *client_ip_addr*
5. *tcpipservice*
6. *transid*

Destination

CIEO

DFHIE1202   *date time applid client_ip_addr tcpipservice* **ECI request timed out. Abnormal termination initiated.**

Explanation

The conversation ping protocol was used because a current ECI conversation appeared to be inactive. The protocol confirmed that the client and CICS were both unable to continue so the decision was taken to abend the conversation. The most likely cause of this is that the user program specified in the ECI request has issued calls that have caused the mirror task to go into

a prolonged wait state, so preventing a reply to the ECI request being sent to the client.

System action

An exception trace is written by IE domain. An attempt is made to purge the mirror task that is responsible for processing the ECI request. If this fails, the task is marked so that it will abend when it next attempts to communicate with the client.

User response

Determine the reason for the mirror task going into a prolonged wait state.

Module:
DFHIEIE

Destination

CIEO

DFHIE1203   *date time applid client_ip_addr tcpipservice* **EPI request attempted by TCP/IP connected client.**

Explanation

The IP ECI (IE) domain received an attach request for the CTIN transaction, which is only used in the processing of EPI requests. EPI is not supported by CICS for TCP/IP connected clients.

System action

An exception trace is written by IE domain. A CTIN INSTALL error response is sent to the client to tell it that the install was cancelled.

User response

Do not attempt to use EPI from TCP/IP connected clients.

Module:
DFHIEIE

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *client_ip_addr*
5. *tcpipservice*

Destination

CIEO

DFHIE1204   *date time applid client_ip_addr tcpipservice* **Data lost during ECI request processing.**

Explanation

The conversation ping protocol was used because a current ECI conversation appeared to be inactive. The client returned NOT_ABENDED to the conversation ping request sent by CICS, indicating that it is in RECEIVE state having sent the data that CICS timed out waiting to receive. However, CICS has not received the data. This error is probably due to other errors that occurred during the lifetime of the conversation.

System action

An exception trace is written by IE domain. An error flow (FMH7) is sent to the client indicating that the conversation is to be abended. An attempt is made to purge the mirror task that is responsible for processing the ECI request. If this fails, the task is marked so that it will abend when it next attempts to communicate with the client.

User response

Determine the reason for the loss of data by analyzing the cause of the associated errors.

Module:
DFHIEIE

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *client_ip_addr*
5. *tcpipservice*

Destination

CIEO

DFHIE1205   *date time applid client_ip_addr tcpipservice* **Unrecognizable data received from a TCP/IP connected client.**

Explanation

CICS has received data from TCP/IP on a port number for which the TCPIPSERVICE specifies transaction id CIEP. This means that CICS expects it to be an ECI request or an ECI-related flow. The data was not recognizable as either of these. This error is probably due to an incorrect TCPIPSERVICE definition or to other errors related to the TCP/IP connection that have corrupted the flow sequence.

System action

An exception trace is written by IE domain. If the first part of the flow was recognizable as the header of an ECI flow then CICS may have matched it up with its state for an existing conversation. If so, an attempt is made to purge the mirror task that is responsible for processing the ECI request. If this fails, the task is marked so that it will abend when it next attempts to communicate with the client.

User response

Ensure that only ECI requests are sent in on the specified TCPIPSERVICE or determine the reason for the corrupted data by analyzing the cause of the associated errors.

Module:
DFHIEIE

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *client_ip_addr*
5. *tcpipservice*

Destination

CIEO

DFHIE1206   *date time applid client_ip_addr tcpipservice* **Mirror transaction id *transid* is disabled.**

Explanation

The IP ECI (IE) domain issued a transaction manager attach for a mirror task to process an ECI request

received from a client. The attach did not complete successfully because the specified transaction id for the mirror task has been disabled.

System action

An exception trace is written by IE domain. An error flow (FMH7) is sent to the client to inform it of the failure of the request.

User response

If the transaction id should not have been disabled then use CEMT or a similar control transaction to enable it. The ECI request can then be retried.

Module:
DFHIEIE

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *client_ip_addr*
5. *tcpipservice*
6. *transid*

Destination

CIEO

DFHIE1207	*date time applid client_ip_addr tcpipservice* **Mirror transaction id** *transid* **not found.**

Explanation

The IP ECI (IE) domain issued a transaction manager attach for a mirror task to process an ECI request received from a client. The attach did not complete successfully because the specified transaction id for the mirror task is not defined on this CICS system.

System action

An exception trace is written by IE domain. An error flow (FMH7) is sent to the client to inform it of the failure of the request.

User response

Install a definition for the specified transaction id or change the client to use the correct one. The ECI request can then be retried.

Module:
DFHIEIE

                   tcpipservice **Error assigning termid**
                   to mirror task.

Explanation

The IP ECI (IE) domain issued a call to allocate a
unique value to be placed in EIBTRMID for the mirror
task processing an ECI request. This call failed for
some internal reason or, much less likely, because all
46656 names are currently in use. This is probably
because of a storage overwrite or an internal error in
the DFHZGBM routine that allocates the names. This
message should be preceded by a failure message
from DFHZGBM.

System action

An exception trace is written by IE domain. The mirror
attach is rejected with an FMH7 flow.

User response

Determine the reason for the DFHZGBM failure.

Module:
DFHIEIE

XMEOUT parameters/Message inserts

1. *date*

                   tcpipservice **ECI request timed**
                   out. Client says conversation not
                   known.

Explanation

The conversation ping protocol was used because
a current ECI conversation appeared to be inactive.
The client indicated that it did not know about the
specified conversation so CICS will attempt to purge
the associated mirror task. The most likely cause of
this is that the client program encountered an error
and lost track of current requests.

System action

An exception trace is written by IE domain. An attempt
is made to purge the mirror task that is responsible
for processing the ECI request. If this fails, the task is
marked so that it will abend when it next attempts to
communicate with the client.

User response

Determine the reason for the client losing track of the
conversation.

Module:

                   tcpipservice **ECI request mirror**
                   task abended because of read
                   time out or earlier error.

Explanation

This ECI request mirror task was flagged for abend for
one of the following reasons.

- There was no response within the RTIMOUT period
  when CICS was waiting for data from the client on
  this conversation.
- There was an error on the conversation and the
  mirror task purge request could not be completed
  (probably because the mirror has the recommended
  setting of SPURGE(NO)).

System action

An exception trace is written by IE domain. The mirror
task issues a transaction abend.

User response

Determine why the client has not sent the next flow
in this conversation or see the user response for the
earlier IE domain message.

Terminal End User

DFHIN1007　　*date time applid termid userid*
Initiation of resynchronization for units of work awaiting coordinator DFHINDSP is now complete.

Explanation

A CIND RESYNC COMMIT or CIND RESYNC BACKOUT request was issued. The indoubt tool has successfully initiated resynchronization of all units of work (UOWs) currently awaiting resynchronization with coordinator DFHINDSP.

System action

Shunted UOWs awaiting the return of coordinator DFHINDSP are unshunted by the recovery manager (RM) domain. All participants in the UOW are notified of the outcome of the unit of work. The outcome of the unit of work is defined by the user of CIND, for example, CIND RESYNC COMMIT tells the RM domain to unshunt the UOWs and commit them. Likewise, CIND RESYNC BACKOUT tells the RM domain to backout the UOWs. Message DFHIN1012 is issued to transient data for each UOW resynchronized.

For UOWs awaiting the return of coordinator DFHINDSP which were not shunted, that is, they abended before syncpoint, or a unilateral decision was taken, a CIND RESYNC command merely results in message DFHIN1012 being issued to transient data. DFHIN1012 reports on whether this CICS system and DFHINDSP are synchronized.

User response

See the associated transient data DFHIN1012 messages.

CSMT

DFHIN1011　　*date time applid* **Coordinator DFHINDSP is not available, but UOW** *X'uowid'* **for transaction** *tranid* **task number** *taskno* **is not indoubt and has not been shunted.**

Explanation

UOW X'*uowid*' for transaction *tranid* was not shunted, and is not indoubt despite being monitored by the indoubt tool. One of the following has occurred:

- The unit of work abended before syncpoint.
- The unit of work was rolled back.
- The unit of work failed indoubt at syncpoint time but the recovery manager domain was forced to take a unilateral decision instead of shunting the UOW.
- The unit of work failed indoubt at syncpoint time but the recovery manager domain detected that the unit of work was read-only, that is, no recoverable resources were updated, and therefore no shunting was required.

System action

CICS processing continues.

User response

If the unit of work was abended, rolled back, or a unilateral decision was taken, recovery manager keeps the resolution of the unit of work pending the return of the coordinator DFHINDSP.

To synchronize the outcome of the UOW with coordinator DFHINDSP, issue a CIND RESYNC command.

DFHIN1012   *date time applid* **The indoubt tool is resynchronizing UOW** *X'uowid'* **for transaction** *tranid* **task number** *taskno*. **DFHINDSP coordinator UOW status is** *{commit. | backout.}* **Recovery manager UOW status is** *{commit. | backout. | heuristic commit. | heuristic backout.}*

Explanation

The unit of work X'*uowid*' for the named transaction and task has been resynchronized as a result of a CIND RESYNC command. The message reports the UOW status as defined by the coordinator DFHINDSP,

and the unit of work status held by the recovery manager domain. The recovery manager domain also issues messages reporting whether or not the UOW is synchronized.

System action

CICS processing continues.

User response

None.

Module:
DFHINDT

    4=heuristic backout.

Destination

CSMT

DFHIN1013   *date time applid termid userid* **No units of work awaiting resynchronization with coordinator DFHINDSP were found.**

Explanation

A CIND RESYNC COMMIT or CIND RESYNC BACKOUT request was issued. The indoubt tool did not find any units of work (UOWs) that were awaiting resynchronization with coordinator DFHINDSP.

System action

CICS processing continues.

User response

Before initiating resynchronization, the indoubt tool needs to be activated via command CIND ON, and transactions in tranclass DFHTCIND run to create indoubt units of work.

Module:
DFHINDT

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *termid*
5. *userid*

Destination

CSMT and Terminal End User

DFHIN1014	*date time applid* **The indoubt tool will not operate on transaction** *tranid* **task number** *taskno* **as it is an internal CICS system transaction.**

Explanation

The indoubt tool task related user exit DFHINTRU, invoked when a transaction is first started, has detected that the transaction is part of transaction class DFHTCIND. However it has also detected that the transaction is an internal CICS system transaction. CIND cannot be used on internal CICS system transactions.

System action

The named transaction and task continue processing and are not forced indoubt at syncpoint time.

User response

None.

Module:
DFHINTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*

3. *applid*
4. *tranid*
5. *taskno*

Destination

CSMT

DFHIN1015	*date time applid* **The Indoubt tool has already previously resynchronized UOW** *X'uowid'* **for transaction** *tranid* **task number** *taskno*. **DFHINDSP coordinator UOW status is** *{commit. | backout.}* **Recovery manager UOW status is** *{commit. | backout. | heuristic commit. | heuristic backout.}*

Explanation

The named unit of work (UOW) for the named transaction and task has already been resynchronized as a result of a previous CIND RESYNC command. The message documents the UOW status as defined by the coordinator DFHINDSP, and the unit of work status held by the recovery manager domain.

No messages are issued by the recovery manager domain in this case and no resynchronization takes place. Processing of a previous CIND RESYNC command did not complete fully before CICS failed. In particular, 'forget processing' whereby CICS removes DFHINDSP as a coordinator of the unit of work did not complete. This caused CICS to recover the unit of work on restart with DFHINDSP as coordinator, causing it to be processed by the subsequent CIND RESYNC command.

System action

CICS continues processing.

User response

None.

CSMT

DFHIR2321	*applid* **MRO/IRC Communication being Terminated. Session(s) with the following Netname(s) are still Active:**

Explanation

CICS is attempting to close MRO/IRC communication. This message is normally followed by the netname of each session that is still active, and additionally for EXCI sessions, the jobname, stepname, procname and MVS ID of the batch program communicating on that session.

For EXCI sessions, a netname of GENERIC indicates a generic pipe. For the batch job information to appear in the message, at least one DPL request must have been issued on that session.

Note:

In some circumstances the message is not followed by any netnames. This can occur if CICS is using the cross-system coupling facility (XCF) to communicate across CECs, and CICS is unable to deliver an earlier message to XCF because, for example, the XCF buffer is full.

System action

CICS issues IRC STOP IMMEDIATE to force close the remaining session(s). This message is reissued at 30 second intervals, or until the last session is closed.

User response

None, unless the delay in closedown appears abnormally long. If this is the case, investigate why the session(s) are still active. Take appropriate action to allow the session(s) to close. If no netnames are displayed, investigate why XCF is unable to accept a message from CICS.

Module:
DFHZDSP

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3747　　*APPLID* **CONNECTION** *connid* **with protocol(EXCI) has been connected to by a NON-BATCH system. Connection set out of service.**

Explanation

A CICS connection has been defined with the protocol EXCI and an attempt has been made to connect to it by a non-batch system.

There are two possible explanations for this message:

- The non-batch system is attempting to communicate with the wrong target connection definition.
- The target connection definition has incorrectly been defined as an EXCI connection.

System action

CICS sets the connection out of service.

User response

Investigate and correct the relevant connection definitions and set back in service.

Module:
DFHCRNP

XMEOUT parameters/Message inserts

1. *APPLID*
2. *connid*

Destination

Console

DFHIR3748　　*date time applid* **Initial start of connected system** *sysid*, **netname** *netname*, **protocol** *pppp* **was detected.**

Explanation

A new logname was received during the MRO bind process from the connected system. This indicates that the connected system has restarted with a start type of INITIAL, since it last communicated with this CICS. If the message-issuing system has any resynchronization data relating to units of work from a previous usage of the connection, this data is kept but cannot be used by the system for automatic resynchronization.

System action

New MRO work for the connection is not inhibited.

User response

Examine the resynchronization information kept by the system from the previous usage of the connection using the

```
EXEC CICS INQUIRE UOWLINK RESYNCSTATUS
```

command (or the equivalent CEMT command) for the named connection in order to locate UOWLINKs with a RESYNCSTATUS of COLDSTART. You can use this information to resolve manually any indoubt units of work that existed on this system or the connected system. When the information is no longer of use, issue the

```
EXEC CICS SET CONNECTION PENDSTATUS(NOTPENDING)
```

command (or the CEMT equivalent) for the named connection to discard the resynchronization data relating to the previous usage. Note that any new resynchronization data generated for the newly established connection is still kept.

DFHIR3751 *applid* **Unable to stop interregion communication session during shutdown.**

Explanation

A request has been received (by means of system termination, abnormal termination, or main terminal) to stop the interregion communication session during the shutdown process. This request has failed.

System action

The session remains active.

User response

If the session must be stopped, you may have to re-IPL. (To diagnose the underlying problem, contact your IBM Support Center.)

Module:
DFHSTP

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3760 *applid* **Unable to break lines with interregion communication. (Modname: *modname*)**

Explanation

A request has been made to shut down the interregion session. This has caused module DFHZCX to issue a request to the interregion communication program to terminate the association between CICS and the interregion communication program, but the request failed because of a system error.

System action

Any running batch (database sharing) programs are left in the wait state, and should be canceled. Any CICS tasks (in other CICS systems) that are in communication with this system are also left in the wait state. These other CICS systems should issue CEMT SET CONNECTION(*sysid*) OUTSERVICE PURGE, where *sysid* is the CONNECTION name of the system for which DFHIR3760 was issued. Also, any attempt to restart the interregion session (in the current or any subsequent CICS session) fails.

User response

To run further batch CICS interregion communication, you must re-IPL. You will need further assistance to resolve the underlying problem. See Working with IBM to solve your problem for guidance on how to proceed.

1. *applid*

Destination

Console

DFHIR3771　　*applid* **Unable to start interregion communication because (E)STAE macro failed.**

Explanation

CICS issued an ESTAE macro that did not execute successfully, probably because storage for a ESTAE control block (SCB) was not available. For more information about the SCB, refer to the Application Programming on z/OS.

System action

The IRC session is not started.

User response

Correct the cause of (E)STAE failure.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3772　　*applid* **Error while attempting to start interregion communication.**

Explanation

CICS has evidence that the IRC session has already started. This is probably because the previous session could not be stopped (see messages DFHIR3760 and DFHIR3765).

Note:

The session, although apparently started, is not in a usable state.

System action

The IRC session is not started.

User response

Perform another IPL.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3773	*applid* **Unable to start interregion communication because the APPLID option has a blank value.**

Explanation

Either the default value of *applid* (specified in the APPLID system initialization parameter) must be used, or a value which is not a null value must be used.

System action

The IRC session is not started.

User response

Correct the *applid* value.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3775	*applid* **Unable to start interregion communication because short on storage.**

Explanation

Main storage is required to start the IRC session, but the storage is not available.

System action

The IRC session is not started.

User response

Wait until the storage condition has eased, then issue CEMT SET IRC OPEN command at the main terminal.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3776	*applid* **Unable to start interregion communication because another CICS system of the same name is active.**

Explanation

A CICS system is named by its applid value. If two CICS systems have the same applid value, the interregion communication SVC cannot distinguish between the systems.

Note:

This situation may arise if a previous interregion communication (IRC) session could not be stopped; see message DFHIR3760. In this case, the IRC SVC would consider that the new session conflicted with the old (unstoppable) session.

System action

The IRC session is not started.

User response

Use a different generic applid for each CICS system.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3777	*applid* **The interregion communication table is full**

Explanation

The interregion communication SVC's user table is full.

System action

The IRC session is not started.

User response

When there are fewer batch-sharing programs running, issue CEMT SET IRC OPEN at the main terminal.

A common cause of this error is that MAXGROUP is set too low in an XCF Sysplex environment. Check the value of MAXGROUP and, if necessary, raise it to suit your environment. For further information, See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHSIJ1

Destination

Console

DFHIR3778　　　*applid* **Insufficient storage is available for interregion communication blocks.**

Explanation

There is insufficient key 0 storage for the IRC control blocks. Storage is required from the CICS region but from outside the CICS DSA.

System action

The IRC session is not started.

User response

Ensure that sufficient storage is available. See the Improving performance for further guidance on how to determine the CICS DSA size limits in relation to the REGION size.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3779　　　*applid* **Insufficient storage is available for interregion communication subsystem blocks.**

Explanation

There is insufficient storage for the control blocks required by IRC. Storage is required from the CICS region but from outside the CICS DSA.

System action

The IRC session is not started.

User response

Ensure that sufficient storage is available. See the Improving performance for further guidance on how to determine the CICS DSA size limits in relation to the REGION size.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3780　　　*applid* **Unable to start interregion communication. Return code=***X'retcode'***, Reason code=***X'rsncode'***.**

Explanation

CICS attempted to establish itself as a user of the interregion communication (IRC) services, but the attempt failed.

System action

The IRC session is not started.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

The return code and reason code (if any) correspond to a number of possible errors. The four byte return code field displays the following information starting with the high order byte:

- One byte error qualifier (if any)
- One byte MVS return code (if any)

- Two byte IRC return code

See Interregion control blocks in the CICS Data Areas manual for a complete list of return codes and error qualifiers. (The names of all the return codes and error qualifiers start with IRERR and IRERQ respectively.)

The return codes should be referenced from the documentation for the version of CICS that supplied the IRP program in use rather than the version of CICS that issued the message.

Check that the following requirements are satisfied:

- A copy of DFHIRP providing an adequate level of function is present in the link pack area (LPA).
- CICS has been defined as an operating system subsystem. The Installing CICS TS explains how to define CICS as a subsystem.
- The XCF couple data sets have been formatted with enough XCF groups and members per group to satisfy the requirements of your installation.
- The userid of the CICS job is authorized to log on to the CICS interregion program (DFHIRP) using the generic applid specified.
- The CICS region has a unique generic applid within the MVS sysplex.
- The CICS DB2 attachment has **not** been initialized before the first start of IRC in a CICS system that is using **both** of the following:
  - Multiregion operation (MRO) or CICS shared database, where any of the installed MRO or CICS shared database resource definitions specify ACCESSMETHOD(XM)
  - The DB2 CICS attachment to run DB2 applications.

If the message is issued when all of these conditions have been met, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

CSMT

DFHIR3784　　*applid* **A severe error (code *X'code'*) has occurred in module DFHCRR. Connection *conname* (if non-blank) has been set out of service.**

Explanation

An error has been detected in module DFHCRR. The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action

An exception entry is made in the trace table (X'*code*' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

The connection *conname* (if any) being processed at the time of error is set out of service, to prevent the error from recurring repeatedly.

CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Find and fix the source of the error before setting the connection back in service.

Notify the system administrator. This failure indicates a serious error in CICS. If you have not requested termination in the dump table, you may want to terminate CICS. For further information about CICS exception trace entries, see the Troubleshooting and support.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

2. *X'code'*
3. *conname*

Destination

Console

DFHIR3785　　*applid* **Interregion control task CSNC abend. Interregion activity will be abnormally terminated.**

Explanation

CSNC is abnormally terminated.

System action

CSNC is abnormally terminated with a system dump. All tasks using MRO links to other systems are abnormally terminated. CICS also abends all tasks in other CICS regions (including CICS shared data base batch regions) that are currently communicating with this system.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Following this abend it is not possible to use IRC within this CICS system. CICS must be restarted before IRC can be used.

Module:
DFHCRNP

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3786　　*applid* **Unable to start interregion communication because module DFHSCTE could not be found.**

Explanation

The IRC module DFHIRP attempted to load DFHSCTE, but the module was not in the LPA.

System action

The interregion communication session is not started.

User response

Ensure that DFHSCTE is available.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIR3788	*date time applid* **Unexpected failure (return code=X'retcode', reason code=X'rsncode') trying to establish connection to system sysid**

Explanation

CICS could not establish a link to system *sysid*, even though system *sysid* is available for communication.

The most common value of code X'*retcode*' returned by the interregion communication SVC is X'68'. This means that no connection to the requesting region has been defined in the target region.

Another possible value of code X'*retcode*' returned by the interregion communication SVC is X'138'. This means that although the requesting and the target region are both running in the same MVS image, and it is possible to connect via cross memory, the requesting and the target regions belong to different XCF Groups.

The four byte return code field displays the following information starting with the high order byte:

- One byte error qualifier (if any)
- One byte MVS return code (if any)
- Two byte IRC return code

See Interregion control blocks in the CICS Data Areas manual for a complete list of return codes and error qualifiers. (The names of all the return codes and error qualifiers start with IRERR and IRERQ respectively.)

A possible reason for this message is that the *applid* of the system on which the message appears does not match the NETNAME on any of the system entries defined in system *sysid*.

This error may also occur when connections are being created dynamically. In this case, the mismatch is transient and will eventually be resolved when the connection creation process running on the remote CICS region completes.

System action

If the mismatch is transient, the connection is established.

If there is a definition error, the connection is not established. Any existing connections are not affected.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If the mismatch is transient, a connection should be established. This can be verified by querying the connection status using CEMT.

If an *applid* or a NETNAME mismatch has occurred, correct the error and retry.

If an XCFGROUP mismatch has occurred, correct the error and retry.

If a mismatch is not the cause of the error, you may need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

DFHIR3795   **ABNORMAL TERMINATION - STATUS CODE DH*xx***

Explanation

The IMS high-level programming interface (HLPI) has found a condition caused by a programming error, or DL/I has returned a status code to HLPI that indicates an error. *xx* is the status code.

System action

The batch program abnormally terminates with abend code 3795.

User response

Correct the error and try again. See the IMS IMS messages and codes: DL/I status codes or the IMS messages and codes: Fast Path utility status and reason codes for an explanation of the IMS status code.

CSMT

DFHIR3798   *Applid* **IRC Not Started. Unable to load Interregion Communication Work Exit DFHIRW10.**

Explanation

As part of interregion communication initialization, an attempt is made to establish an internal work exit mechanism. This attempt has failed.

The most likely reason for the failure is that the interregion communication work exit module, DFHIRW10, cannot be loaded. This module should appear in an APF authorized library in the STEPLIB concatenation for the CICS region, in the linklist, or in the LPA.

System action

The attempt to initiate the interregion communication facility (via the IRCSTRT DFHSIT or override option or via the CEMT SET IRC OPEN command) fails. CICS continues.

User response

Ensure that the interregion communication work exit module, DFHIRW10, is available to be loaded.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *Applid*

Destination

Console

| **DFHIR3799** | ***applid* Unable to start interregion communication because DFHIRP services are down level.** |

DFHISnnnn messages

| **DFHIS0001** | ***applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.** |

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

Explanation

The version of DFHIRP being used is at a lower level than that of the caller wishing to make use of interregion communication.

System action

The interregion communication session is not started.

User response

If IRC is required, update the level of the DFHIRP module in the LPA such that it matches the level of the latest CICS version in use. If IRC is not required, run with system initialization override option IRCSTRT=NO.

Module:
DFHSIJ1, DFHDRPF

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHIS0002	*applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action

An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Destination

Console

DFHIS0100	*applid* **Unable to start IS domain because transaction CISC cannot be attached.**

Explanation

The IS domain failed to attach the CISC transaction to do IPCONN autoconnect processing.

System action

CICS is not started.

User response

Use the trace to investigate the reason for the failure to attach the CISC transaction. A probable reason for the failure is that there is no installed definition for CISC. Resource definition group DFHISCIP should be included in one of the lists specified in the startup GRPLIST.

Module:
DFHISDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHIS0998   *date time applid* **A transaction processing a request using IP Interconnectivity has abended with code** *abcode.*

Explanation

A transaction processing a request using IP interconnectivity has abended with the specified abend code. This is because of an error in the user program named in the request, or because of an error in CICS. The abend processing has invoked IS domain to inform the client of the failure.

System action

If the original problem was in IS domain, the appropriate error actions will already have been taken. If the problem was not in IS domain, this message will be attached as Error Log Data to an IS7 that is sent to the client to abend the conversation.

User response

Use the messages and dumps from the transaction abend to determine the root cause of the problem.

4. *modname*

Destination

CISO

DFHIS1002	*date time applid* **Unable to acquire or release IPCONN** *ipconn*. **IPCONN not found. Error code is (code** *X'errorcode'*)**.**

Explanation

A call was made to the IP interconnectivity (IS) domain to acquire or release IPCONN *ipconn* but, when it attempted to locate the IPCONN, a NOT_FOUND exception was returned. This is probably because another task has deleted the IPCONN before the task attached to acquire or release the IPCONN was started. The errorcode X'*errorcode*is the exception trace point ID that uniquely identifies what the error is and where the error was detected, for example:

- 0508 IPCONN not found by DFHISCO
- 1906 IPCONN not found by DFHISLQ

System action

An exception trace is written by IS domain and the task in progress is abended.

User response

Inspect the IS domain message log for concurrent activity on the IPCONN. Use CEDA or SPI commands to recreate the IPCONN. Ensure it is INSERVICE. Reissue SET IPCONN ACQUIRED if required.

Module:
DFHISCO, DFHISLQ

CISO

DFHIS1003	*date time applid* **Unable to {***acquire*	*release***} IPCONN** *ipconn*. **IPCONN state {***INSERVICE*	*OUTSERVICE***},**

{RELEASED | OBTAINING | ACQUIRED | FREEING} **is invalid.**

Explanation

An attempt was made to SET IPCONN(*ipconn*) ACQUIRED or RELEASED but by the time the call was made to module DFHISCO of the IP interconnectivity (IS) domain to action the state change, the IPCONN was not in a valid state. An IPCONN must be INSERVICE and RELEASED before it can be acquired. An IPCONN must be ACQUIRED or FREEING before it can be released. This is probably due to a race condition with another task that has been started to either acquire or release the IPCONN or set it out of service.

System action

An exception trace is written by IS domain and the task in progress continues processing.

User response

Inspect the IS domain message log for concurrent activity on the IPCONN. No action is required if the IPCONN is now in the correct state. If the IPCONN is not in the correct state, reissue the SET IPCONN ACQUIRED or RELEASED. If the IPCONN status is OBTAINING, it might be necessary to cancel a CISC or CISS transaction that is awaiting a response and thus preventing the IPCONN state change from completing.

CISO

DFHIS1007   *date time applid* **Unable to acquire IPCONN *ipconn*. Failure to open session to *hostname*, port *portnumber*.**

Explanation

During processing of an acquire for IPCONN *ipconn* module DFHISCO of the IP interconnectivity (IS) domain failed to open a Web session with host *hostname* on port *portnumber*. This is probably because there is no TCPIPSERVICE in a partner CICS open on port *portnumber* at host *hostname*

It might also be because the HOST is specified either as an explicit IPv6 address or a host name that will resolve to an IPv6 address, but the TCP/IP stack being used does not support IPv6.

For IP interconnectivity to be successful when using IPv6 addresses, the TCP/IP stack for both the local and remote regions must support IPv6.

If this is a connection to an IPIC HA cluster then the failure may result from a mismatch in the security attributes in the local IPCONN and the remote TCPIPSERVICE.

System action

An exception trace is written by IS domain and the task in progress is abended.

User response

Check that the hostname and port are correct and ensure that there is a partner CICS active at the given host with a TCPIPSERVICE with protocol IPIC open on the given port. Reissue SET IPCONN ACQUIRED if required.

If there is still a problem and IPv6 addresses are being used, check that the TCP/IP stack supports IPv6. See the z/OS Communications Server IP Diagnosis Guide

on using Netstat to find information about the stack. DFHISCO

For an IPIC HA client, check the SSL setting in the local IPCONN against that in one of the HA server regions' generic TCPIPSERVICE and correct if it does not match the server setting. All the server regions in an HA cluster must use the same generic TCPIPSERVICE settings.

CISO

DFHIS1008   *date time applid* **Unable to acquire IPCONN *ipconn*. Invalid HTTP response to capability exchange.**

Explanation

During processing of an acquire for IPCONN *ipconn* module DFHISCO of the IP interconnectivity (IS) domain received an invalid response to its capability exchange request to the partner CICS; it contains either an unexpected HTTP media type or status code. A possible error cause is that the port specified in the IPCONN does not reference a TCPIPSERVICE in a partner CICS system whose protocol is defined as IPIC.

System action

An exception trace is written by IS domain and the task in progress is abended.

User response

If no resource definition errors can be identified, examine the response message in the exception trace and check the message log in the partner CICS system. Correct the problem and reissue SET IPCONN ACQUIRED.

Module:
DFHISCO

3. *applid*
4. *ipconn*

Destination

CISO

DFHIS1009   *date time applid* **Unable to acquire IPCONN** *ipconn*. **Response to capability exchange timed out.**

Explanation

During processing of an acquire for IPCONN *ipconn* the receive for a capability exchange response from the partner CICS, by module DFHISCO of the IP interconnectivity (IS) domain, timed out. A response to the capability exchange request was not received within the RTIMOUT value set in the profile for the transaction attached to handle the IPCONN acquire. This might be due to an error preventing the response being sent by the partner CICS or the RTIMOUT value may be too low for acquire processing to complete and the response to be received. This problem may occur in the system initiating the IPCONN acquire, from a CISC transaction instance, or in the partner CICS, from an IPIC TCPIPSERVICE transaction, CISS by default. Note that the RTIMOUT for CISC needs to allow time for the partner to attach a transaction to establish a callback connection back to the initiating CICS system, and possibly to autoinstall an IPCONN, before sending its response. CISS, or its equivalent, may need to autoinstall an IPCONN and then needs to allow the partner time to attach a transaction to locate and update the initiating IPCONN before sending its response.

System action

An exception trace is written by IS domain and the task in progress is abended.

User response

Check the message log in the partner CICS system for errors that might have prevented the response being sent and correct any problem found. Adjust the transaction's RTIMOUT value if appropriate. Reissue SET IPCONN ACQUIRED.

DFHIS1011 *date time applid* **Unable to acquire IPCONN** *ipconn*. **An** *{EXCEPTION | DISASTER | INVALID | KERNERROR | PURGED}* **response to the capability exchange was received, reason=**{*AUTOINSTALL_FAILED | INVALID_IPCONN_STATE | INVALID_PARTNER_STATE | IPCONN_NOT_FOUND | ISCE_ERROR | ISCE_INVALID_APPLID | ISCE_TIMED_OUT | ISCE_BAD_RECOV | ISCER_BAD_RESPONSE | ISCER_ERROR | ISCER_HTTP_ERROR | ISCER_TIMED_OUT | SESSION_OPEN_FAILED | SHUTDOWN | TCPIP_CLOSED | TCPIPSERVICE_MISMATCH | TCPIPSERVICE_NOT_FOUND | TCPIPSERVICE_NOT_OPEN | NO_IPCONN | ONE_WAY_IPCONN | CAPEX_RACE | SECURITY_VIOLATION | SEC_SOCKET_ERROR | CLIENT_SOCKET_ERROR | INVALID_HA_TCPIPSERVICE | HA_RESOURCE_MISMATCH | NOT_IPIC_CLASSIFIED}.*

Explanation

During processing of an acquire for IPCONN *ipconn*, module DFHISCO of the IP interconnectivity (IS) domain received an error response to its capability exchange request to the partner CICS. The capability exchange request will have been processed by DFHISCO initialize_connection in the partner system; the reason string corresponds to the error detected by that DFHISCO function in the partner system.

Exception response reasons:

AUTOINSTALL_FAILED

No IPCONN was found to match an incoming IPIC connection and capability exchange and the subsequent autoinstall attempt was disallowed or failed.

INVALID_PARTNER_STATE

A capability exchange request was received for an IPCONN whose state is invalid. The IPCONN must be inservice and not already acquired.

INVALID_IPCONN_STATE

An ISCO ACQUIRE_CONNECTION has been issued for an IPCONN whose state is invalid. The IPCONN must be inservice and released.

IPCONN_NOT_FOUND

An ISCO ACQUIRE_CONNECTION has been issued for an IPCONN which no longer exists.

ISCE_ERROR

The capability exchange request was determined to be invalid and rejected by the partner CICS.

ISCE_INVALID_APPLID

The server_applid, or its high level qualifier, in the capability exchange message does not match the partner CICS's local applid and high level qualifier. If this message is issued by a CICS region in which the associated IPCONN has the attribute HA(YES), the attempt to acquire the IPCONN may have failed because the server region is a previous release that does not support the use of IPCONN attribute HA(YES) for IPIC high availability. In this case the applid is invalid because it cannot be used for an IPIC cluster of server regions which includes a CICS region that does not support IPIC high availablity.

ISCE_TIMED_OUT

The TCPIPSERVICE transaction (CISS by default) has been attached to initialize a connection for an ipconn but it has not received its initial data, the capability exchange request, within the timeout period defined in its transaction profile.

ISCE_BAD_RECOV

A capability exchange request has been received that contains an unsupported isce_preferred_recovery value and no matching isce_supported_protocols flags are set to fallback to.

ISCER_BAD_RESPONSE

The callback capability exchange response contains a bad isco response and reason from the partner CICS.

ISCER_ERROR

The callback capability exchange response was determined to be invalid.

ISCER_HTTP_ERROR

The callback capability exchange response contained a bad http status code.

ISCER_TIMED_OUT

DFHISCO acquire_connection has not received a response to its capability exchange request within the timeout period specified.

SESSION_OPEN_FAILED

While acquiring an ipconn, DFHISCO has failed to open a web session to the partner host defined in the ipconn.

SHUTDOWN

A call has been made to DFHISCO to acquire or initialize an ipconn but CICS has been shutdown before the function completed.

TCPIP_CLOSED

DFHISCO acquire_connection has been called for an ipconn but tcpip is closed.

TCPIPSERVICE_MISMATCH

A capability exchange request was received for an IPCONN which is defined as using a different tcpipservice from that used for the capability exchange.

TCPIPSERVICE_NOT_FOUND

Either acquire_connection has been called for an ipconn but the tcpipservice named in the ipconn is not installed or release_connection has been called for a tcpipservice that is no longer installed.

TCPIPSERVICE_NOT_OPEN

DFHISCO acquire_connection has been called for an ipconn but the tcpipservice named in the ipconn is not open.

NO_IPCONN

DFHISCO acquire or release_connection has been called for a tcpipservice that has no ipconn referencing it.

ONE_WAY_IPCONN

The caller requires a two-way connection but the partner IPCONN is defined as one-way.

CAPEX_RACE

Acquire has been initiated from both sides of an IPCONN connection simultaneously. The acquire from this system is abnormally terminated. The acquire from the partner system will proceed because the partner has an alphabetically lower fully qualified APPLID than this system.

SEC_SOCKET_ERROR

An error occurred while a secondary socket was being obtained.

SECURITY_VIOLATION

The security credentials of the caller are not acceptable to the partner system.

CLIENT_SOCKET_ERROR

A client socket error has occurred.

INVALID_HA_TCPIPSERVICE

During an attempt to acquire a connection for high availability, a TCPIPSERVICE was found to have an invalid value for an attribute. For more information refer to messages produced in the job output by the other CICS system.

HA_RESOURCE_MISMATCH

A resource definition in the server region was found to be incorrect during an attempt to acquire a connection for high availability. An example of this is an incorrect value of IPCONN attribute HA in the server region.

NOT_IPIC_CLASSIFIED

An error has been detected that is not an IPIC classified error.

System action

An exception trace is written by IS domain in both systems and the task in progress is abended.

User response

Examine the resource definitions, message log, and trace if necessary, in both CICS systems. Possible problem causes include:

- A mismatch between the definitions of the IPCONNs in the two CICS systems
- The IPCONN in the partner CICS is not in the correct state to process an incoming connection request
- A processing error in the partner CICS system
- A mismatch between a definition of an IPCONN in one system and a definition of a TCPIPSERVICE in its partner system

Correct the problem and reissue SET IPCONN ACQUIRED if necessary.

DFHIS1012 *date time applid* **Invalid capability exchange request received on TCPIPSERVICE** *tcpipservice*. **Error code is (code** *X'errorcode'*).

Explanation

During processing of a connection request for an IPIC web session on TCPIPSERVICE *tcpipservice*, module DFHISCO of the IP interconnectivity (IS) domain received an invalid capability exchange request from the partner CICS. This could be caused by a non-IPIC client opening a web session to a TCPIPSERVICE whose protocol is defined as IPIC. It could also be caused by a mismatch between the option specified for the SSL attribute in the TCPIPSERVICE and the SSL attribute for the IPCONN resource definition in the partner system. The errorcode X'*errorcode*' is the exception trace point ID that uniquely identifies what the error is and where the error was detected, for example:

- 0520 request no logname
- 0521 request header short
- 0522 request field type error
- 0523 request WB exception
- 0524 request media type error
- 0525 request conversation id error
- 0539 request number of sessions error

System action

An exception trace is written by IS domain, the TCPIPSERVICE task is abended and the session closed.

User response

Examine the CICS trace to determine the location of the client. Correct resource definitions as appropriate.

Module:
DFHISCO

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tcpipservice*
5. *X'errorcode'*

Destination

CISO

DFHIS1013　　*date time applid* **Invalid applid**
networkid.applid received in
capability exchange request on
TCPIPSERVICE tcpipservice from
applid clntnetid.clntappid.

Explanation

During processing of a connection request for an IPIC
web session on TCPIPSERVICE *tcpipservice*, module
DFHISCO of the IP interconnectivity (IS) domain
received a capability exchange request containing an
invalid fully qualified applid. Either the networkid,
networkid, applid, *applid*, or both are incorrect. The
applid (isce_server_applid) in the capability exchange
request created by the initiating system must match
the applid of this, the target, CICS system. The
network id qualifier (isce_server_networkid) must
match the VTAM NETID, or UOWNETQL SIT parameter
value in a system where VTAM=NO, in this, the target,
CICS system. If the partner is another CICS TS,
the applid and networkid values are taken from its
IPCONN definition for this target CICS.

System action

An exception trace is written by IS domain, the
TCPIPSERVICE task is abended and the session
closed.

User response

Correct the resource definition in the partner system.

7. *clntnetid*
8. *clntappid*

Destination

CISO

DFHIS1014　　*date time applid* **Capability**
exchange request not received on
TCPIPSERVICE tcpipservice.

Explanation

During processing of a connection request for an IPIC
web session on TCPIPSERVICE *tcpipservice*, module
DFHISCO of the IP interconnectivity (IS) domain
issued a receive for a capability exchange request
from the initiating system. The capability request did
not arrive within the RTIMOUT value specified in the
TCPIPSERVICE transaction's profile. This is probably
due to network problems or too low an RTIMOUT value
for the TCPIPSERVICE transaction. It is also possible
that a non-IPIC client has opened a web session to a
TCPIPSERVICE whose protocol is defined as IPIC but
has not sent any data.

System action

An exception trace is written by IS domain. The
TCPIPSERVICE task, CISS by default, is abended and
the session closed.

User response

Examine the CICS trace to determine the location of
the client. Correct resource definitions as appropriate.

Module:
DFHISCO

Destination

CISO

DFHIS1015　　*date time applid* **Unable to accept**
connection for IPCONN ipconn.
IPCONN client session state is
invalid. Error code is (code
X'errorcode').

Explanation

A capability exchange request was received for
IPCONN *ipconn* during initialization of a new IPIC
connection by module DFHISCO of the IPIC over
TCP/IP (IS) domain, but the IPCONN was not in a valid
state to be acquired. An IPCONN must be INSERVICE
and not FREEING, and its ipclient session must be

RELEASED, before it can accept incoming initialize requests. This is probably because the IPCONN is out of service but might be due to a race condition with another task that has been started to free the IPCONN. The errorcode X'*errorcode*' is the exception trace point ID that uniquely identifies what the error is and where the error was detected, for example:

- 0515 Invalid partner state
- 0539 Requested sessions error
- 0542 Partner is not in service
- 0543 Primary is not acquired
- 0544 No ISSS available
- 0545 No longer obtaining case 1
- 0546 No longer obtaining case 2

System action

An exception trace is written by IS domain and the IPIC TCPIPSERVICE task attached to handle the incoming connection, CISS by default, is abended.

User response

Inspect the IS domain message log for concurrent activity on the IPCONN. Ensure the local IPCONN is INSERVICE, RELEASED and reissue SET IPCONN ACQUIRED.

Module:
DFHISCO

CISO

DFHIS1017	*date time applid* **IS domain input queue error.**

Explanation

The IS domain request/response receiver module, DFHISRR, has detected an unrecoverable error in its input queue. This is probably due to a CICS internal processing error or storage overwrite.

System action

An exception trace is written by IS domain and the IS domain long running receiver task, CISR, is abended and a system dump taken. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inspect the trace, dump and IS domain message log to determine the cause of the error. CICS will have to be restarted to reinstate CICS IP interconnectivity processing.

Module:
DFHISRR

XMEOUT parameters/Message inserts

1. *date*
2. *time*

3. *applid*

Destination

CISO

DFHIS1018   *date time applid* **IS domain error queue error.**

Explanation

The IS domain error and message handler module, DFHISEM, has detected an unrecoverable error in its error queue. This is probably due to a CICS internal processing error or storage overwrite.

System action

An exception trace is written by IS domain, the IS domain long running error and message task, CISE, is abended and a system dump taken. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inspect the trace, dump and IS domain message log to determine the cause of the error. CICS will have to be restarted to reinstate CICS IP interconnectivity processing.

Module:
DFHISEM

CISO

DFHIS1022 *date time applid* **Protocol error (code** *X'errorcode'*) **occurred on** *sesstype* **IPIC session in IPCONN** *ipconn*.

Explanation

The IS domain request/response receiver module, DFHISRR, has been unable to continue processing IPIC messages on the *sesstype* web session associated with IPCONN *ipconn*. The errorcode X'*errorcode*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected, for example:

- 0507 An internal processing error occurred.
- 0611 The IPIC HTTP header is invalid.
- 0615 The IPCONN is not in the correct state to receive messages.

System action

An exception entry (code X'*errorcode*' in the message) is made in the trace table. The IPCONN session is added to the IS domain error queue for processing by the long running error and message task, CISE. All user and mirror tasks using the IPCONN are abended, either immediately or when they next try to communicate with the partner. An IS7 error response is sent for sessions in SEND state. The IPCONN is released.

User response

Inspect the trace, dump and CICS message log to determine the cause of the error.

CISO

DFHIS1023 *date time applid* **Conversation error (code** *X'errorcode'*) **occurred on IPIC session** *name* **in IPCONN** *ipconn*.

Explanation

The IS domain request/response receiver module, DFHISRR, has received data that it is unable to process for the conversation on session block (ISSB) *name* on IPCONN *ipconn*. The errorcode X'*errorcode*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected, for example:

- 0614 The ISSB task is not waiting for data.
- 061C The mirror or user task resume failed unexpectedly.

- 061D No ISSB available for new task attach request.
- 061E The ISSB is not in RECEIVE state; data is not expected.
- 0629 Chain state in the header does not match ISSB chain state.
- 062A Chain element received before pacing message sent.
- 062D Invalid message sequence number.
- 062E Invalid chain sequence number.
- 062F IS header contains unrecognised IBM CCSID.
- 0630 Data received for a task which is no longer active.
- 0632 Data received when the previous task is still active and not in a correct state to allow receipt of data for a new task.
- 0633 Invalid data received when the previous task is still active; chain state in the header does not match ISQA chain state.
- 0634 Invalid data received when the previous task is still active; more chain elements received than allowed before pacing.
- 0635 Invalid chain sequence number in data received when the previous task is still active.
- 0636 Invalid message sequence number in data received when the previous task is still active.

System action

An exception entry (code *errorcode* in the message) is made in the trace table. The IPCONN session is added to the IS domain error queue for processing by the long running error and message task, CISE. The user or mirror task using the ISSB in error is abended, either immediately or when it next tries to communicate with the partner. An IS7 error response is sent for sessions in SEND state.

User response

Inspect the trace, dump and CICS message log to determine the cause of the error.

CISO

DFHIS1025	*date time applid* **Failed to attach mirror transaction *tranid* on IPCONN *ipconn*. Error code is X'errorcode'.**

Explanation

The IS domain request/response receiver module, DFHISRR, has received data for a new mirror transaction *tranid* on IPCONN *ipconn* that it is unable to process. The errorcode X'*errorcode*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected, for example:

- 0618 The mirror transaction code was not found.
- 0619 The mirror transaction code was disabled.
- 061A The mirror transaction code was disabled for shutdown.
- 061B The mirror attach failed unexpectedly.

System action

An exception entry (code X'*errorcode*' in the message) is made in the trace table. An IS7 error response is sent to the caller by either the abnormal condition transaction, CSAC, or the IS domain long running error and message task, CISE.

User response

Ensure transaction definitions are correct and examine the CICS trace if necessary to determine the cause of the error.

DFHIS1026   *date time applid* **Incorrect TCPIPSERVICE** *tcpipservice* **used for inbound connection to IPCONN** *ipconn*, **which is defined to use TCPIPSERVICE** *ipconn_tcpipservice*.

Explanation

A capability exchange request was received from a partner system on TCPIPSERVICE *tcpipservice*, for IPCONN *ipconn*, during initialization of a new IPIC connection by module DFHISCO of the IP interconnectivity (IS) domain, but the IPCONN was defined as using a different tcpipservice, *ipconn_tcpipservice*. If the partner is another CICS system, this has occurred during processing of an IPCONN acquire from the partner CICS. The IPCONN acquire may have been issued explicitly in the partner CICS system, using CEMT or the CICS SPI. Alternatively, the IPCONN acquire may have been issued to establish a callback connection as a result of an IPCONN acquire issued locally, from this CICS.

System action

An exception trace is written by IS domain, an error response is sent to the client and the IPIC TCPIPSERVICE task attached to handle the incoming connection, CISS by default, is abended.

User response

Either change the value of the TCPIPSERVICE attribute in the IPCONN definition in this CICS system to *tcpipservice*

Or change the client to connect to the port defined in *ipconn_tcpipservice*. If the client is another CICS system, this can be done by changing the PORT attribute of the IPCONN in the client CICS.

CISO

DFHIS1027   *date time applid* **Security violation has been detected using IPCONN** *ipconn* **and transaction id** *transid* **by userid** *userid*

Explanation

A request to attach a remote transaction failed due to a security problem. The request used the named IPCONN, transaction ID and userid. An attempt was made to extract security fields from the attach request and to pass them to the user domain and security domain to signon the user, but this process failed.

System action

The request to attach the remote transaction is rejected.

User response

Verify that the IPCONN in use has been defined with the correct value of the USERAUTH attribute. Refer to previous security messages that are written to TD queue CSCS for further information and guidance. If no previous messages were issued, examine the trace to determine the reason for the failure. If security parameters were passed on the attach request such as userid or password, check whether they are valid. If and ICRX was passed then check to see that it is defined correctly.

Module:
DFHISXM

CISO

DFHIS1029	*date time applid* **One-way IPCONN** *ipconn* **not valid for connection from applid** *networkid.applid*. **A callback is expected on host** *ipaddr*, **port** *port*.

Explanation

During processing of a connection request for an IPIC web session, module DFHISCO of the IP interconnectivity (IS) domain received a capability exchange request whose fully qualified applid, *networkid.applid*, matched that of IPCONN *ipconn*, but the IPCONN is defined as 'one-way'; it has no port or send sessions defined for it, whereas the capability exchange requests a callback connection on host *ipaddr*, port *port*. IPCONNs used for CICS to CICS communication, using the CICS recovery protocol, must have both send and receive sessions. One-way IPCONNs are supported for JCA, which uses the XA recovery protocol.

System action

An exception trace is written by IS domain, the TCPIPSERVICE task is abended and the session closed.

User response

Add at least one send session, and host and port definitions, to the IPCONN and reinstall it before attempting to reacquire the connection.

Module:
DFHISCO

CISO

DFHIS1033	*date time applid* **BIS processing error (code** *X'errorcode'*) **occurred during release of** *sesstype* **IPIC session in IPCONN** *ipconn*.

Explanation

During release of IPCONN *ipconn*, an error occurred on the *sesstype* side when DFHISCO attempted to exchange a Bracket Initiation Stopped (BIS) request and response with the partner. The errorcode X'*errorcode*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected, for example:

- 0531 The BIS response has a mismatched conversation ID.
- 0532 The BIS response is not of the expected length.
- 0533 The BIS response is in error.
- 0534 The BIS request is not of the expected length.
- 0535 The BIS request is in error.
- 0536 The IPCONN state is invalid for BIS.
- 2400 Transmission of the BIS request failed.
- 2401 Transmission of the BIS response failed.

System action

An exception entry (code X'*errorcode*' in the message) is made in the trace table. Any indoubt units of work (UOWs) are shunted pending a reacquire of the IPCONN. IPCONN release processing continues.

User response

Inspect the trace, dump, and CICS message log to determine the cause of the error. If the errorcode indicates a transmission failure, also inspect the system log for network problems relating to the IPCONN, and the trace, dump, and CICS message log of the partner CICS system.

CISO

DFHIS1034	*date time applid* **Conversation** *convid* **no longer pending on IPCONN** *ipconn*.

Explanation

The IS domain request/response receiver module, DFHISRR, has received an input message for IPCONN *ipconn* with an IPIC HTTP header that contains a previous conversation ID for which there is no pending ISSB. The client state indicates that there is a unit of work (UOW) waiting for FORGET for conversation ID

convid, but the server has no corresponding ISSB left pending on the IPCONN's active chain. Alternatively, the client may have sent a message containing an invalid previous conversation ID.

System action

An exception trace is written by IS domain. DFHISRR allocates a system ISSB to add to the IS domain error queue for processing by the long running error and message task, CISE. CISE issues this message and, if the previous conversation ID is valid, sends an IS7 error response back to the client.

User response

Inspect the trace, dump and IS domain message log to determine the cause of the error.

Module:
DFHISEM

Destination

CISO

DFHIS1040   *date time applid* **Unable to schedule transaction CRSR for IPCONN** *ipconn*.

Explanation

An attempt was made to schedule transaction CRSR for IPCONN *ipconn* because a remote request to start a transaction failed. For more details see the error message on the terminal on which the request was requested to run.

System action

The request is deleted from the system.

User response

Examine the trace (if one is available) to determine why the attempt was rejected. Release and re-acquire the IPCONN to ensure ATI requests can still flow to the terminal.

Module:
DFHISRS

1. *date*
2. *time*
3. *applid*
4. *ipconn*

Destination

CISO

DFHIS1041   *date time applid* **Identity Propagation error has occurred while using IPCONN** *ipconn* **and transaction id** *transid*.

Explanation

An attempt to send a request across an IPIC connection has failed because the partner region has asked for an ICRX Identity Propagation token, and the ICRX token assigned to the current task is larger than the maximum token size that the IPIC message protocol supports.

System action

The request is not sent to the remote system.

User response

ICRX tokens are not provided by CICS. An ICRX token is passed into a region in a message from another product, and the token is inherited by the task that is attached to process the message. The IPIC message protocol supports ICRX tokens that are smaller than 2000 bytes. You must review the size of ICRX tokens that are passed to CICS to ensure that they do not exceed 2000 bytes.

CISO

DFHIS1044   *date time* **Unable to acquire IPCONN** *ipconn* **for a high availability connection due to a mismatch of resource definitions in CICS system with applid** *networkid.applid* **and this CICS system.**

Explanation

A message was received by module DFHISCO of the IP interconnectivity (IS) domain from a CICS system using the applid *networkid. applid* during processing to acquire IPCONN *ipconn* that indicates resource definitions in this CICS system and the other CICS system are not configured correctly for a high availability connection.

System action

An exception trace is written by IS domain and the task in progress is abended.

User response

Correct the TCPIPSERVICE and IPCONN resource definitions in both CICS systems to use IPIC high availability.

This error message can also be produced if there is an attempt to acquire an IPCONN for a high availability connection to a server region that is a release which does not support an IPIC high availability.

CISO

DFHIS1046   *date time applid* **Non-HA CAPEX request received by generic TCPIPSERVICE** *tcpipservice* **from applid** *clntnetid.clntappid*.

Explanation

During processing of a connection request for an IPIC web session on TCPIPSERVICE *tcpipservice*, CICS received a standard capability exchange request rather than one that was intended to be processed by a generic end point for this region. The local system is part of an IPIC HA cluster and this TCPIPSERVICE has been configured to act as its generic end point so the connection attempt has been rejected.

System action

An exception trace is written by IS domain, the TCPIPSERVICE task is abended and the socket it has been using to process this connection attempt with is closed.

User response

Correct the IPCONN resource definition in the partner system. For a V5.2 system you can either turn on the HA attribute, or set the HOST and PORT options to that of a non-HA end point. IPIC HA is not supported for previous versions of CICS TS and earlier systems should not attempt to connect to the generic end point of an HA cluster of systems.

CISO

DFHIS1051　　　*date time applid* **IPCONN** *ipconn* **cannot be found.**

Explanation:
The module DFHISPRP cannot find acquired IPIC connection in a CICS system. An IPCON_NOT_FOUND exception is returned. This exception is probably because the IPCONN has been released or discarded in a period of time.

System action:
An exception trace is written by IS domain.

User response:
Inspect the IS domain message log for concurrency activities on the IPCONN. Use CEMT or SPI commands to ensure the IPCONN INSERVICE and ACQUIRE the IPCONN if required.

Module:
DFHISPRP

Destination

CIS1

DFHIS1052　　　*date time applid* **Session error in IPCONN** *ipconn*.

Explanation

A CIS1 task failed to allocate a session from an IPIC connection in a CICS system. A SESSION ERROR exception is returned. This is typically because the IPIC connection is busy and there is no session available for the heartbeat function.

System action

An exception trace is written by the IS domain, and the CIS1 task is stopped.

User response

Examine the IPIC connection to determine if it is busy and consider if the IPCONN requires more send sessions assigned to it.

Module:
DFHISPH

2. *time*
3. *applid*
4. *ipconn*

Destination

CISO

DFHIS1053I   *applid* **IPCONN** *ipconn* **was not restored because its cipher list could not be installed.**

Explanation

The ciphers list that was specified on IPCONN *ipconn* was valid when the resource was installed, but invalid when CICS restarted.

System action

The IPCONN is not restored from the catalog.

User response

Investigate why the ciphers list has become invalid and replace it with a valid ciphers list. Then reinstall IPCONN *ipconn* manually.

Module:
DFHISDM

XMEOUT parameters/Message inserts

1. *applid*
2. *ipconn*

Destination

Console

DFHIS1054A   *applid* **IPCONN** *ipconn* **was not restored because certificate *certificate* {is expired | is not yet current | does not have a private key | is not trusted | is not found}**

Explanation

IPCONN *ipconn* was valid when the resource was installed, but invalid when CICS restarted because the certificate is unusable. An explanatory phrase in the message describes why:

is expired

    The date and time at which the certificate is no longer valid has already passed.

is not yet current

    The date and time at which the certificate is to become active has not yet been reached.

does not have a private key

    The specified certificate does not have a private key. SSL with client authentication is only possible if you possess the private key associated with the certificate.

    This error may occur if the user does not have access to the private key due to a lack of authority to access IRR.DIGTCERT.GENCERT.

is not trusted

    The certificate has been given the NOTRUST attribute by the security administrator. This indicates that the certificate is not to be used.

is not found

    The certificate is not found.

System action

The IPCONN is not restored from the catalog.

User response

Replace the certificate in the keyring with one that is usable, or specify a different certificate.

For a message insert of 'does not have a private key' check the system log for RACF messages that indicate a lack of authority to access IRR.DIGTCERT.GENCERT.

Module:
DFHISDM

Destination

CISO

DFHIS2002	*date time applid* **Number of SEND sessions for IPCONN** *ipconn* **set to** *usable*. **Number requested** *req*. **Partner limit** *max*.

Explanation

IPCONN *ipconn* was acquired successfully but the number of send sessions requested, the local IPCONN SENDCOUNT value *req*, is different from the number of receive sessions allowed, the partner IPCONN RECEIVECOUNT value *max*.

System action

The maximum number of send sessions is set to the lower of the two values, *usable*. Storage is wasted in the system with the higher value as sessions will be defined but never used.

User response

Update one or both of the IPCONNs so that the number of send sessions in one matches the number of receive sessions in the other.

Module:
DFHISCO

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *ipconn*
5. *usable*

6. *req*
7. *max*

Destination

CISO

DFHIS2003	*date time applid* **Number of RECEIVE sessions for IPCONN** *ipconn* **set to** *usable*. **Number requested** *req*. **Limit** *max*.

Explanation

IPCONN *ipconn* was initialized successfully but the number of send sessions requested by the partner, the partner IPCONN SENDCOUNT value *req*, is different from the RECEIVECOUNT value *max* specified for the IPCONN defined, or autoinstalled, locally in this CICS system.

System action

The maximum number of receive sessions is set to the RECEIVECOUNT value, *usable*. If the system with the higher value is a CICS system, storage may be wasted in it for sessions that are defined but never be used.

User response

If the partner is a CICS system, update one or both of the IPCONNs so that the number of send sessions in one matches the number of receive sessions in the other. This message may be expected for connections from non-CICS partners that have non-configurable IPIC connections.

Module:
DFHISCO

XMEOUT parameters/Message inserts

6. *req*
7. *max*

Destination

CISO

DFHIS2006	*date time applid* **Port** *ipconn_port* **for IPCONN** *ipconn* **different from partner port** *partner_port*.

Explanation

The INITIALIZE_CONNECTION function of DFHISCO of the IP interconnectivity (IS) domain has been called to handle an acquire for IPCONN *ipconn* initiated by its partner. It has detected that the port number defined for the local ipconn, *ipconn_port*, does not match the port number in the capability exchange received from the partner, *partner_port*. The partner port is that defined in the TCPIPSERVICE associated with the partner's IPCONN. This behaviour may be expected if TCP/IP address translation occurs between the CICS system and its partner or it may be the result of inconsistent CICS definitions.

System action

Processing continues using the port number from the local IPCONN; the partner port is ignored.

User response

Correct the port number definition in the local IPCONN or partner TCPIPSERVICE if the definitions are inconsistent.

Module:
DFHISCO

XMEOUT parameters/Message inserts

6. *partner_port*

Destination

CISO

DFHIS2008   *date time applid* **Receipt of** *msgtype* **for task** *taskno* **timed out on IPCONN** *ipconn*.

Explanation

During processing of an IP interconnectivity request, a WB domain read on behalf of task *taskno* for a *msgtype* message timed out. The task was using a session on IPCONN *ipconn*. This condition occurs when IS domain has been notified that data is available on the web session but insufficient data arrives within the task's rtimout period to satisfy the read. This is probably caused by a network error.

System action

The task is abnormally terminated.

User response

Inspect the CICS and system logs for network problems relating to the IPCONN. Changing the rtimout value is unlikely to resolve the problem as a partial message has already been received within the rtimout period.

Module:
DFHISSR

CISO

DFHIS2011	*date time applid {PURGE | FORCEPURGE | KILL}* **issued successfully for** *num_purged* **tasks using the** *sesstype* **sessions of IPCONN** *ipconn*. **There are currently** *num_active* **tasks active of which** *num_purging* **are currently being purged.**

Explanation

In response to a connection error or to the SPI command SET IPCONN, the IS domain has purged *num_purged* tasks that were using a *sesstype* session on IPCONN *ipconn* and, if the connection is still available for use, has sent an IS purge command message to the conversation partner of each task that it has successfully purged.

There were *num_active sesstype* sessions associated for the IPCONN of which *num_purging* are now being purged specifically by this operation. In total, there were found to be *num_purged* tasks using this session type that were being purged at that time: some that might have been purged because they had themselves detected an error with the connection.

System action

Those tasks that are waiting for a message to arrive over the connection are resumed and abended. An attempt is made to abend any other tasks that are using this connection.

If an SPI command was issued to perform the purge, then those IPCONN sessions belonging to tasks that were successfully purged can now be allocated by new tasks.

User response

If a normal PURGE was issued and the message shows that the number of active tasks was greater than the number being purged, some tasks might persist because they are purge protected. It might be necessary to issue a FORCEPURGE to remove them.

KILL can only be used after a FORCEPURGE has been attempted.

DFHIS3002   *date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIPSERVICE** *tcpipservice* **from host** *hostname***. Use of autoinstall user program** *aupname* **has caused error code** *code***.**

Explanation

A connect flow arriving on TCPIPSERVICE *tcpipservice* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIPSERVICE. The autoinstall failed with error *code*.

1

  The AUP set a non-zero response code in field isaic_response, indicating that the autoinstall should not be allowed.

2

  The link to the AUP failed because there is no installed definition for the program and it could not be autoinstalled.

3

  The link to the AUP failed because the program was not available. This could be because the program is not enabled, or is defined as remote.

4

  The AUP abended during its processing.

5

  The link to the AUP failed with an AMODE error.

System action

An exception trace of the AUP commarea is made. The connect flow is rejected.

User response

If autoinstall of the IPCONN is required, then change the URM attribute of the TCPIPSERVICE to the name of an appropriate autoinstall user program. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

An attempt to autoinstall an IPCONN failed due to a severe error in another component of CICS.

System action

The autoinstall is rejected. The failing component will have issued messages, trace and dump information relevant to the error.

User response

Proceed as directed by the diagnostics from the failing component.

Module:
DFHISIC

CISO

DFHIS3004	*date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIPSERVICE** *tcpipservice* **from host** *hostname***. The autoinstall user program** *aupname* **returned invalid value** *ipconn* **for use as the IPCONN name.**

Explanation

A connect flow arriving on TCPIPSERVICE *tcpipservice* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIPSERVICE. The autoinstall could not complete because the AUP returned an invalid value to be used as the IPCONN name in field isaic_ipconn. The special value -blanks- indicates that the field returned blanks (hexadecimal 40s).

System action

An exception trace of the AUP commarea is made. The connect flow is rejected.

User response

If autoinstall of the IPCONN is required, then change the AUP to return a valid IPCONN name. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Explanation

A connect flow arriving on TCPIPSERVICE *tcpipservice* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIPSERVICE. The autoinstall could not complete because the AUP returned *template* in field isaic_template to be used as the name of the IPCONN template for the autoinstall. No IPCONN with that name is currently installed in this CICS.

System action

An exception trace of the AUP commarea is made. The connect flow is rejected.

User response

If autoinstall of the IPCONN is required, then change the AUP to return a valid template name, or leave isaic_template blank so that default values are used. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Explanation

A connect flow arriving on TCPIPSERVICE *tcpipservice* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIPSERVICE. The autoinstall could not complete because the AUP returned *template* in field isaic_template to be used as the name of the IPCONN template for the autoinstall. This IPCONN is currently out of service, and so cannot be used as a template.

System action

An exception trace of the AUP commarea is made. The connect flow is rejected.

User response

If autoinstall of the IPCONN is required, then change the AUP to return a different template name, leave it blank, or put the template IPCONN in service and retry. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Explanation

A connect flow arriving on TCPIPSERVICE *tcpipservice* from host *hostname* contained a blank applid or an applid that did not match an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIPSERVICE. The autoinstall could not complete because the AUP set a value in isaic_applid that would cause the fully qualified applid of the IPCONN to be *applid*. This applid is already in use in the system.

System action

An exception trace of the AUP commarea is made. The connect flow is rejected.

User response

If autoinstall of the IPCONN is required, then change the AUP to return a unique applid. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

CISO

DFHIS3009	*date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIPSERVICE** *tcpipservice* **from host** *hostname*. **The autoinstall user program** *aupname* **returned** *sysid* **for use as the IPCONN name. This is already in use for a CONNECTION with a different applid.**

Explanation

A connect flow arriving on TCPIPSERVICE *tcpipservice* from host *hostname* contained a blank applid or an applid that did not match an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIPSERVICE. The autoinstall could not complete because the AUP set a value of *sysid* in isaic_ipconn for the IPCONN name. This is the same as a currently installed CONNECTION resource definition and that CONNECTION has a NETNAME value that is different to the APPLID of the IPCONN (in isaic_applid) and so must represent a different system.

System action

An exception trace of the AUP commarea is made. The connect flow is rejected.

User response

Change the AUP to return a name consistent with installed CONNECTION definitions. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Explanation

A connect flow arriving on TCPIPSERVICE *tcpipservice* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIPSERVICE. The autoinstall could not complete because the AUP returned an invalid value to be used as the port number in field isaic_port.

The AUP can set any value in the range 1 to 65535, unless the valued passed in was -1, in which case it cannot be modified.

System action

An exception trace of the AUP commarea is made. The connect flow is rejected.

User response

If autoinstall of the IPCONN is required, change the AUP to return a valid port number. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C), and DFHISPIP (PL/1).

DFHIS3031 E	*date time applid* **Transaction *tranid* failed to establish security for userid *userid* with IPCONN *ipconn*. SAF codes are (*X'safresp'*,*X'safreas'*), ESM codes are (*X'esmresp'*,*X'esmreas'*).**

Explanation

An attempt was made using the specified transaction identifier to establish security for the specified user ID and IPCONN but the attempt was rejected by the external security manager (ESM).

This occurred either when the IPCONN was installed or when a task was attached to use the IPCONN.

System action

According to the security attributes defined for the IPCONN either the IPCONN cannot be used for communication or use of the IPCONN continues but with security access set to that of the default user ID. There might be other security failure messages issued.

The external security manager (ESM) might also have issued messages which indicate the cause of the rejection.

User response

Ensure the resource definition for the specified IPCONN has correct security attributes.

Ask your security administrator to ensure there are correct external security manager (ESM) definitions to allow the user ID to be used with the IPCONN.

The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the z/OS Security Server RACROUTE Macro Reference.

There might be other messages produced by CICS or the external security manager (ESM) which provide more information. Refer to job output any for further diagnostic messages.

CISO

DFHIS5000I *APPLID* **Recovery action requested for IP connection** *name*.

Explanation

The XISQUE global user exit program has been invoked by CICS because of a potential problem with the IP connection. The global user exit has used return code UERCAKLL indicating that throughput on the connection is abnormally low and some exceptional action is required. The poor performance of the connection can be caused by:

- Poor response on the receiving end

- Increased load on the sending end.

The condition may be intermittent. Message DFHIS5001 may follow indicating that the connection has recovered.

This message may also occur when the XISQUE global user exit is disabled but the connection has been at the QUEUELIMIT for MAXQTIME where both parameters are specified in the connection definition.

System action

CICS cancels all transactions which have outstanding queued requests to use the connection.

User response

Investigate the cause of the poor performance of the IP connection. Check the availability and condition of the connected system.

Destination

CSMT

DFHIS6007 *date time applid* **IP Interconnectivity Recovery. Resynchronization not possible, because the corresponding unit of work could not be found by the partner region, or its outcome is currently indoubt, for the following local UOW *X'localuowid'* associated with IPCONN *ipconn*.**

Explanation

Resynchronization of the unit of work cannot be completed following the reacquiring of an IPCONN, or the propagation of an UNSHUNT request, because the corresponding unit of work could not be found

by the partner region, or because it is still waiting to be resynchronized with another region. The local unit of work has been retained until it can be resolved manually or via a subsequent resynchronization attempt.

System action

The unit of work remains shunted and the connection is placed into a PENDING state until this and any other units of work are resolved.

User response

Examine the records from the partner system to determine the outcome of the corresponding unit of work there. If the outcome there is unknown then this may be because the remote unit of work is itself waiting for a resynchronization attempt with another region, and when that takes place the local unit of work will be completed. If instead, the remote unit of work no longer exists then force the local unit of work to complete using the SET UOW command. Once all such local units of work have been resolved the connection can be set to NOTPENDING to place it in service.

Module:
DFHISRE, DFHISCU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *X'localuowid'*
5. *ipconn*

Destination

CSMT

DFHIS6010 *date time applid* **IP Interconnectivity Recovery. Resynchronization not possible for the following local UOW *X'localuowid'* IPCONN name *name* transaction *tranid* task number *trannum* terminal *termid* user *userid*.**

Explanation

Resynchronization of the unit of work cannot be completed following the re-acquiring of an IPCONN, because the partner region has carried out an initial start and lost the log data relating to the outcome

of this unit of work. The IPCONN resource specifies XLNACTION(KEEP), which means that this unit of work will be retained until it can be resolved.

System action

The unit of work remains shunted and the connection is placed into a PENDING state until this and any other units of work are resolved.

User response

Force the local unit of work to complete using the SET UOW command. Once all such local units of work have been resolved the connection can be set to NOTPENDING to place it in service.

DFHJC4522   **DDNAME** *ddname* **HAD A PERMANENT I/O ERROR.**

Explanation

An unrecoverable I/O error occurred while the CICS journal print utility was processing the data set defined in the DD statement *ddname*.

System action

If the error occurred on an output data set, and multiple output copies were specified, processing continues with the other copies. Otherwise, the journal print utility terminates abnormally.

User response

If the error occurred on an output data set, and you wish to rerun, change the DD statement to refer to a different volume, and resubmit the job. Take the original volume offline for recovery, if possible.

If the error occurred on an input data set, to be able to recover you must have a backup copy of the defective volume. You can change the DD statement to refer to the backup volume, and rerun the job. If you have a backup copy of a defective disk, you can use IBM utilities to recover the disk by flagging the defective track and pointing to an alternate track.

DFHJC4523   **PROCESSING IS BEING TERMINATED FOR THIS OPTION.**

Explanation

This is an informatory message issued by the CICS journal print utility, when it completes processing for an OPTION card. The card referred to is the last OPTION card before this message on SYSPRINT.

System action

The journal print utility continues processing with the next option.

User response

If no other messages appear between the OPTION card and this message, the termination is normal. If other messages have been issued, check them to see if the termination is normal or abnormal. If abnormal termination has occurred, correct the errors notified in other message(s), and resubmit the job.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4524   **INVALID CONTROL CARD FORMAT.**

Explanation

The CICS journal print utility detected an error in an input CONTROL card. The card is displayed on SYSPRINT on the line before this message.

System action

The journal print utility ignores the invalid card, and assumes standard defaults.

User response

If the output of the run is not what you want, correct the invalid card and resubmit the job.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4525   INVALID CARD TYPE.

Explanation

The CICS journal print utility read an input card that did not contain one of the following strings starting in column 1:

 'CONTROL', 'OPTION', '*', or 'END'.

The invalid card is displayed on SYSPRINT in the line before this message.

System action

The journal print utility ignores the invalid card and continues processing.

User response

If the job fails or the output is not what you want, correct the invalid card and resubmit the job.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4526   INVALID OPTION CARD OR PRIOR ERROR.

Explanation

The CICS journal print utility detected an error in an OPTION card or ignored it because of a previous error. The card is displayed in the line before this message.

System action

The journal print utility ignores the card and continues processing.

User response

If the job fails or the output is not what you want, correct the error and resubmit the job.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4527   END OF JOB.

Explanation

This is an end-of-job information message issued by the CICS journal print utility when it terminates normally. Errors may have been detected but none was sufficient to cause abnormal termination.

System action

The journal print utility terminates normally.

User response

Check that all options completed normally. If not, submit another job for the options that you still need.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4528   NO OPTION CARDS SUPPLIED.

Explanation

The CICS journal print utility detected that, for one CONTROL card:

1. No OPTION cards were supplied **OR**

2. All the OPTION cards contained errors (notified in previous messages).

System action

The journal print utility does no processing for the CONTROL card with no OPTION cards.

User response

Supply correct OPTION cards for the options you want and resubmit the job.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4529   UNABLE TO OPEN INPUT FILE.

Explanation

The CICS journal print utility was unable to open the input data set associated with the CONTROL card displayed before this message.

System action

The journal print utility continues processing with the next input card.

User response

Check the JCL. For a data set without a standard label, check that the data set control block (DCB) parameters are supplied. If you find a JCL error, correct it and resubmit the job.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4530   ELEMENT LIST ERROR.

Explanation

The CICS journal print utility detected an error while processing an input file.

System action

The journal print utility terminates processing with the MVS user abend code 0185.

User response

This is usually caused by a previous error, for which a message has been issued. If any previous error messages were displayed, make the necessary corrections and resubmit the job.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4531   END OF FILE ON INPUT.

Explanation

The CICS journal print utility has reached EOF on the current input file.

System action

The journal print utility completes processing for the CONTROL card preceding this message on SYSPRINT.

User response

None.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4532   OPTION COMPLETE.

Explanation

The CICS journal print utility has completed processing for the OPTION card preceding this message on SYSPRINT.

System action

The journal print utility continues processing with the next OPTION card or, if there are no further options before the END card, completes processing for the current control card.

User response

None.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4533   UNABLE TO OPEN OUTPUT FILE.

Explanation

The CICS journal print utility was unable to open the output data set associated with the last CONTROL card displayed on SYSPRINT before this message.

System action

The journal print utility terminates processing for this CONTROL card, and continues processing with the next CONTROL card.

User response

Check the JCL. For a data set without a standard label, check that the data set control block (DCB) parameters are supplied. If you find a JCL error, correct it and resubmit the job.

Module:
DFHJUP

Destination

SYSPRINT

DFHJC4534	NO ELEMENT LIST ADDRESS.

Explanation

During CICS journal print utility processing, an error occurred in building the element list.

System action

The journal print utility terminates processing for this element list, and terminates abnormally with the MVS user abend code, 0184.

DFHKCnnnn messages

DFHKC0102	*date time applid terminal userid tranid* **PFT entry for** *profname* **has been added.**

Explanation

This is an audit log message indicating that profile entry *profname* has been added to the PFT using the INSTALL command.

terminal is the netname or termid of the terminal at which the INSTALL command was entered.

userid is the user identifier of the operator performing the INSTALL command.

tranid is the transaction used to perform the INSTALL command.

User response

This is an internal error in the journal print utility, DFHJUP. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

DFHKC0301   *applid* **Program DFHKCRP cannot be found.**

Explanation

The transaction manager recovery program is not available. CICS cannot find DFHKCRP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action

CICS terminates abnormally with a dump.

User response

To correct this error, place DFHKCRP in a partitioned data set in the DFHRPL DD statement.

Module:
DFHKCQ

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHKC0302   *applid* **Transaction Manager restart failed. Reason - *rc*.**

Explanation

During transaction manager initialization, CICS executes the following steps in the order in which they are listed:-

1

Building the profile table (PFT) directory.

8

Purging profile definitions from the global catalog using the catalog domain.

10

Restoring profile definitions from the global catalog using the catalog domain.

The transaction manager restart has failed for reason *rc*, where *rc* indicates the job step that did not complete successfully. Subsequent steps have not been attempted.

System action

CICS terminates the task under which DFHKCRP is running with an AKCB abend code, and issues message DFHSI1521.

User response

Examine the trace in the CICS AKCB transaction dump to see the history of the task that DFHKCRP is running under for further information regarding the precise cause of the failure.

Module:
DFHKCRP

XMEOUT parameters/Message inserts

1. *applid*
2. *rc*

Destination

Console

DFHKC0308I   *applid* **ERROR OCCURRED IN SRB MODE.**

Explanation

An error such as a program check was detected by the operating system during the execution of a unit of work scheduled by means of a service request block (SRB). The SRB was scheduled, directly or indirectly, by CICS in order to issue a VTAM authorized path request.

A message could not be issued because the error was detected when running under an SRB.

Diagnostics: The error is handled by a functional recovery routine (FRR) in DFHKCSP. This FRR saves the system diagnostic work area (SDWA) if one was provided, and issues a CALLRTM to terminate the CICS TCB with user abend code 0308.

This, in turn, causes the ESTAE exit established by DFHKESTX to be taken, resulting in the storing of the CICS TCB status and provision of a dump as for abends occurring during execution under the CICS TCB.

The SDWA saved by DFHKCSP may be located in the dump by:

- Finding the module itself (look for characters 'DFHKCSP').
- Finding the save area (look for characters 'SRB SDWA SAVE AREA'); the SDWA follows this character string.

Analysis: The SDWA, located as described above, is a standard MVS SDWA. The principal contents of the SDWA are:

SDWAGRSV

General registers 0 through 15

SDWAEC1

Program status word (PSW) at the time of the interrupt.

In general, registers 12 and 13 will not address a TCA or the CSA.

The registers and PSW recorded in DFHKESTX represent the state of the CICS TCB when CICS was terminated by the FRR. Normally this information is not relevant to the cause of the failure, but may give clues to the environment in which the SRB was running.

System action

CICS is terminated with user abend code U0308. The system diagnostic work area (SDWA) presented at the time of error is copied into module DFHKCSP. DFHKCSP resides in protected storage and can be printed from an MVS region dump.

User response

Locate the SDWA, situated in DFHKCSP after the characters "SRB SDWA WORK AREA". This contains the PSW and registers at the time of the error.

If the address in SDWAEC1 is in CICS code, examine the code to determine the expected register contents at this point. If this does not suggest any obvious local problem, look for a pointer to the RPL associated with the SRB mode execution. This will indicate the location of the MVS save area.

If the address in SDWAEC1 is not in CICS code (that is in MVS), try using the contents of register 13 to trace back through the save areas to the one provided by CICS. The contents of this save area will show the point of call in CICS (in DFHZHPRX), and the arguments passed to the access method, in particular the address of the RPL (register 1). Failure in an access method may be due to an incorrect RPL. Therefore check the ACB address, entry point, and I/O area address.

Note:

When CICS is executing in SRB mode, it is not possible for the message to be issued. However, user abend code 308 is generated and should appear in message DFHSR0606.

Module:
DFHKCSP

Destination

Console

DFHKEnnnn messages

DFHKE0001	*applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in z/OS MVS System Codes.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHKEDD, DFHKEDS, DFHKEGD, DFHKETI

XMEOUT parameters/Message inserts

2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHKE0002   *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code *code* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

For further information about CICS exception trace entries, see the Troubleshooting and support.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

3. *version*

Destination

Console

DFHKE0004   *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in

module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:

3. *modname*

Destination

Console

DFHKE0005	*applid* A hardware error has occurred (module *modname*, code *X'code'*). The MVS store clock was found inoperative.

Explanation

A hardware error has occurred during the running of module *modname*. The MVS store clock facility is the timing mechanism for the operating system.

The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

User response

If CICS is still running, it is necessary to decide whether to terminate CICS. This is probably a hardware error and you should first investigate the MVS store clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHKETI

Console

DFHKE0006	*applid* Insufficient storage to satisfy Getmain (code *X'code'*) in module *modname*. MVS code *mvscode*.

Explanation

An MVS GETMAIN was issued by module *modname* but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

The code *mvscode* is the MVS GETMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS will terminate with a system dump. An exception entry is made in the trace table (code *code* in the message).

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book.

Try decreasing the overall size limit of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the Configuring or the Improving performance for further information on CICS storage.

1. *applid*

Destination

Console

| DFHKE0101 | *applid* **DFHSIP IS NOT APF-AUTHORIZED. CICS WILL TERMINATE.** |

Explanation

Part of CICS initialization must be done in an APF-authorized state. The kernel has detected that DFHSIP is not APF-authorized.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS will terminate. The CICS job step terminates with return code 12.

User response

All libraries concatenated in the STEPLIB concatenation should be APF-authorized, and DFHSIP should be link-edited with an authorization code of 1.

Module:
DFHKESIP

Destination

Console

| DFHKE0102 | *applid* **UNSUCCESSFUL PRE-INITIALIZATION OF** *domain* **DOMAIN. CICS WILL TERMINATE.** |

Explanation

A domain has failed to pre-initialize and as a result the system will terminate.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

Since this problem has occurred so early in CICS initialization, possible causes include a severe lack of storage or corruption of the local catalog.

System action

CICS terminates.

User response

Examine all earlier messages sent to the console to look for any obvious cause of the domain pre-initialization failure.

If you cannot find the cause of the failure from the messages, inform the system programmer. If a dump is taken, investigate this problem using the exception trace which is issued by the failing domain.

You may need further assistance to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHKETCB.

Destination

Console

DFHKE0103	*applid* IDENTIFY FAILED IN MODULE *modname*. MVS CODE *mvscode*. CICS WILL TERMINATE.

Explanation

The kernel has issued an MVS IDENTIFY which has failed.

The code *mvscode* is the MVS IDENTIFY return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS terminates. The CICS job step terminates with return code 12.

User response

Inform the system programmer.

To resolve the problem, use the MVS IDENTIFY return code *mvscode* and the z/OS MVS Programming: Assembler Services Reference IAR-XCT manual to determine why the IDENTIFY failed.

Module:
DFHKETCB.

Destination

Console

DFHKE0104	*applid* CICS HAS BEEN SUPPLIED WITH INCORRECT SVC NUMBER *svcno*.

Explanation

CICS has validated the SVC number *svcno*, but it does not correspond to the correct CICS Type 3 SVC for this release of CICS. CICS cannot function without the correct CICS SVC.

The SVC number *svcno* has been specified in the SIT, or as an override, by the CICSSVC= parameter.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

Control is returned to the parameter manager for interaction with the operator. Further action depends upon which PARMERR= parameter has been specified.

- If PARMERR=ABEND, CICS is terminated with a system dump.
- If PARMERR=IGNORE, CICS is terminated with a system dump.
- If PARMERR=INTERACT, the operator is prompted to enter another SVC number, or to bypass entry. If the operator bypasses entry, CICS is terminated with a system dump.

User response

The CICS Type 3 SVC is defined to MVS in SYS1.PARMLIB member IEASVCxx. SVC *svcno* must be defined as a Type 3 SVC with an entry point equal to the entry point name specified when the SVC module was installed into SYS1.LPALIB. Ensure that this is the case.

System action

The CICS DFHSTUP job step terminates with return code 12.

User response

Refer to the CICS TS Program Directories and install the pre-requisite operating system release level or higher. Check also that any listed pre-requisite maintenance for the operating system has been applied.

Module:
DFHKESIP

Destination

Console

DFHKE0108   *applid* **CICS INITIALIZATION IS NOT SUPPORTED ON THIS LEVEL OF HARDWARE.**

Explanation

The kernel has detected that the level of hardware is earlier than the pre-requisite required to run CICS.

System action

CICS will terminate. The CICS job step terminates with return code 12.

User response

Refer to the CICS TS Program Directories to see the pre-requisite hardware required.

Module:
DFHKESIP

Destination

Console

DFHKE0109   **CICS DFHSTUP IS NOT SUPPORTED ON THIS LEVEL OF HARDWARE.**

Explanation

It has been detected that the release level of hardware is earlier than the pre-requisite required to run CICS DFHSTUP.

System action

The CICS DFHSTUP job step terminates with return code 12.

User response

Refer to the CICS TS Program Directories to see the pre-requisite hardware required.

Module:
DFHKESIP

Destination

Console

DFHKE0201   *applid* **ABOUT TO TAKE SDUMP. DUMPCODE:** *dumpcode*, **DUMPID:** *dumpid*. **(MODULE** *modname*).

Explanation

An error during pre-initialization or termination, possibly signalled by a previous message, has caused the kernel domain to take a dump, which will issue this message immediately before calling the MVS SDUMP facility.

The dump code *dumpcode* is the 8-character dump code 'KERNDUMP'.

The dumpid *dumpid* is the string '0/0000'.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

When the dump is complete, message number DFHKE0202 is issued.

User response

Inform the system programmer. See the associated dump and error messages for further guidance.

Module:
DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination

Console

DFHKE0202   *applid* **SDUMP COMPLETE. (MODULE** *modname*).

Explanation

This message is issued on successful completion of an SDUMP.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS will terminate.

User response

Print off the system dump if required. A previous MVS message will identify in which SYS1.DUMP data set this dump can be found.

Module:
DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination

Console

DFHKE0208   *applid* **SDUMP BUSY - CICS WILL RETRY IN FIVE SECONDS. (MODULE** *modname*).

Explanation

At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This causes MVS to reject the new request. A nonzero value for the DURETRY parameter on the SIT means that CICS waits for five seconds before reissuing the SDUMP request.

System action

CICS issues an MVS STIMERM macro which causes CICS to stop for five seconds. The request is reissued when the delay interval has expired. CICS delays and retries every five seconds for a total time equal to the number of seconds specified on the DURETRY system initialization parameter.

User response

None.

Module:
DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination

Console

DFHKE0209   *applid* **RETRYING SDUMP. (MODULE** *modname***).**

Explanation

At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request. CICS has waited for five seconds (as indicated by message DFHKE0208) and is now reissuing the SDUMP request.

System action

CICS reissues the SDUMP request.

User response

None.

Module:
DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination

Console

DFHKE0210   *applid* **SDUMP REQUEST FAILED. (MODULE** *modname***) -** *reason***.**

Explanation

An MVS SDUMP request from CICS signalled by message DFHKE0201 has failed to complete successfully. The possible reasons *reason* for the failure are detailed below.

SDUMP RETURN CODE X'04' ONLY PARTIAL DUMP

The SYS1.DUMP data set to which the dump was written was not large enough to contain all of the dumped storage.

SDUMP RETURN CODE X'08' REASON X'02' SDUMP BUSY

At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request.

If a nonzero value has been specified for the DURETRY SIT parameter, CICS will have retried the SDUMP request every five seconds for the specified period. This message is issued if SDUMP is still busy after the final retry.

SDUMP RETURN CODE X'08' REASON X'03' SUPPRESSED BY INSTALLATION.

The dump was suppressed by a request by the installation (for example: DUMP=NO at IPL; or CHNGDUMP SET,NODUMP).

SDUMP RETURN CODE X'08' REASON X'04' SUPPRESSED BY SLIP.

The dump was suppressed by a SLIP NODUMP command.

SDUMP RETURN CODE X'08' REASON X'05' NO DATA SET AVAILABLE

No data set is available for the SDUMP request.

SDUMP RETURN CODE X'08' REASON X'0B' SUPPRESSED BY DAE.

The dump was suppressed by the Dump Analysis and Elimination feature (DAE).

SDUMP RETURN CODE X'08' REASON X'3E' MAXSPACE EXCEEDED.

SVC dump is already using the maximum amount of virtual storage (as determined by the installation, using the MAXSPACE parameter on the CHNGDUMP command) to process other dumps.

SDUMP RETURN CODE X'08' REASON X'46' INSUFFICIENT DISK SPACE.

SVC dump stopped the dump because the System Resources Manager (SRM) detected a critical shortage of auxiliary storage.

SDUMP RETURN CODE X'nn' REASON X'mm'

MVS rejected the SDUMP request for some other reason than those listed above. X'nn' gives the hexadecimal SDUMP return code and X'mm' gives the hexadecimal SDUMP reason.

NOT AUTHORIZED IN CICS

SDUMP is not authorized for this CICS run.

INSUFFICIENT STORAGE

CICS issued an MVS GETMAIN for Subpool 253 storage during the processing of the SDUMP request. The GETMAIN was rejected by MVS.

STIMERM FAILED

In order to delay for five seconds before retrying SDUMP after an SDUMP busy condition, CICS issues an MVS STIMERM macro request. MVS has indicated that the STIMERM request has failed.

DFHDUSVC FESTAE FAILED

CICS issued an MVS FESTAE request from DFHDUSVC during the processing of the SDUMP request. The FESTAE has been rejected by MVS.

DFHDUSVC FUNCTION INVALID

CICS called DFHDUSVC during the processing of the SDUMP request. The function passed to DFHDUSVC was invalid.

During initialization, CICS does not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS proceeds as if the dump had been successful.

User response

The user response depends on the reason for the failure. For:

SDUMP RETURN CODE X'04' ONLY PARTIAL DUMP

Examine the reason code that explains why the partial dump was taken. This code is contained in the MVS message IEA911E. See the z/OS MVS System Messages, Volume 1 (ABA-AOM) for a description of this reason code.

SDUMP RETURN CODE X'08' REASON X'02' SDUMP BUSY

Cause the SDUMP to be reissued by increasing the DURETRY value on the SIT.

SDUMP RETURN CODE X'08' REASON X'03' SUPPRESSED BY INSTALLATION

No action is required if the dump was suppressed deliberately.

SDUMP RETURN CODE X'08' REASON X'04' SUPPRESSED BY SLIP.

Delete the relevant SLIP trap with the SLIP DEL command and then cause the SDUMP request to be reissued.

SDUMP RETURN CODE X'08' REASON X'05' NO DATA SET AVAILABLE

Clear a SYS1.DUMP data set and then cause the SDUMP request to be reissued.

SDUMP RETURN CODE X'08' REASON X'0B' SUPPRESSED BY DAE.

Stop the Dump Analysis and Elimination service by issuing the command SET DAE=xx, where xx is the suffix of an ADYSETxx member of SYS1.PARMLIB that contains DAE=STOP. See the z/OS MVS Initialization and Tuning Reference for information about ADYSETxx. When DAE is stopped, cause the SDUMP request to be reissued.

SDUMP RETURN CODE X'08' REASON X'3E' MAXSPACE EXCEEDED.

Increase the amount of virtual storage that SVC dump can use to capture data by issuing the command CHNGDUMP SET,DUMP,MAXSPACE=xxxM, where xxxM specifies the number of megabytes of storage to be used. Then cause the SDUMP request to be reissued.

SDUMP RETURN CODE X'08' REASON X'46' INSUFFICIENT DISK SPACE.

Increase the amount of disk space available for recording system dumps. Then cause the SDUMP request to be reissued.

SDUMP RETURN CODE X'nn' REASON X'mm'

No action is required if the dump was suppressed deliberately. If the dump failed because of an error in the MVS SDUMP routine, use MVS problem determination methods to fix the error and then cause the SDUMP request to be reissued. See the z/OS MVS Programming: Authorized Assembler Services Reference (Volume 1) for an explanation of the SDUMP return code X'nn' and reason X'mm'.

NOT AUTHORIZED IN CICS

This reason should not appear, because an SDUMP is unconditionally authorized during CICS initialization, and should be authorized throughout the CICS run. If you do get this reason, the CICS AFCB (Authorized Function Control Block) has probably been accidentally overwritten.

INSUFFICIENT STORAGE

Ensure sufficient storage is available to MVS for subpool 253 requests.

STIMERM FAILED

Use MVS problem determination methods to fix the STIMERM failure and then cause the SDUMP request to be reissued.

DFHDUSVC FESTAE FAILED

Use MVS problem determination methods to fix the FESTAE failure and then cause the SDUMP to be reissued. See the z/OS MVS Programming: Authorized Assembler Services Reference (Volume 1) for an explanation of the FESTAE macro.

DFHDUSVC FUNCTION INVALID

The CICS DAFPB (dump authorized function parameter block) has probably been accidentally overwritten.

Notify the system programmer. If CICS is still running, it will be necessary to decide whether to terminate CICS.

You may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

To resolve the problem, collect any dumps and any relevant messages and contact your IBM Support Center.

Further guidance on how to prepare information for IBM support is given in the Troubleshooting and support If you are not familiar with this process, refer to the guide before contacting IBM support.

Module:
DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination

Console

DFHKE0217	*applid* SDUMPX request completed with a return code of X'04'. A complete or partial dump has been taken.

Explanation

An MVS SDUMPX request from CICS, signaled by message DFHKE0201, might have resulted in a complete or partial SVC dump. Even though the request completed with an SDUMPX return code of x'04', it is possible that sufficient information has been dumped to diagnose the problem that caused the dump to be taken.

System action

CICS proceeds as if the dump was successful.

User response

Use the accompanying IEA611E or IEA911E messages to determine if the dump is suitable for problem determination. See the z/OS z/OS MVS Programming: Authorized Assembler Services Reference (Volume 1) for an explanation of the SDUMPX return code X'04'.

Module:
DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination

Console

DFHKE0301	*applid* Insufficient storage to satisfy Getmain in module *modname*. MVS code *mvscode*.

Explanation

The kernel (KE) domain has issued an MVS GETMAIN for kernel stack storage, but there was insufficient storage available to satisfy the request.

The code *mvscode* is the MVS GETMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS terminates abnormally with a system dump. No exception entry is made in the trace table since a call to the trace (TR) domain would itself require kernel stack storage.

User response

Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book. Also look at the kernel domain section of the system dump to see how the kernel stack storage has been used up.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. See the Configuring or the Improving performance for further information on CICS storage.

Module:

DFHKESGM

Destination

Console

DFHKE0302 *applid* **Freemain of stack storage failed in module** *modname*. **MVS code** *mvscode*.

Explanation

The kernel (KE) domain has issued an MVS FREEMAIN for kernel stack storage, but a bad return code was returned.

The code *mvscode* is the MVS FREEMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS terminates abnormally with a system dump. No exception entry is made in the trace table since a call to the trace (TR) domain would itself require kernel linkage.

User response

Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the z/OS MVS System Codes manual.

Module:
DFHKEDS

Destination

Console

DFHKE0303 *applid* **A RECURSIVE ABEND HAS BEEN DETECTED BY THE KERNEL DOMAIN.**

Explanation

The kernel (KE) domain has detected that the current task is recursively abending while attempting to recover from an abend.

System action

CICS terminates abnormally with a system dump. No exception entry is written to the trace table because the trace (TR) domain may be the cause of the loop.

User response

Use the dump provided to investigate the kernel error table to diagnose the earlier abends for the failing task.

Module:
DFHKERRI

Destination

Console

DFHKE0401 *applid* **CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED (RETURN CODES** *X'resp'*, *X'reason'*).

Explanation

An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System action

A system dump is taken.

CICS continues, but cannot subsequently be restarted by ARM.

User response

It is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the z/OS MVS Programming: Sysplex Services Reference manual.

Further information about how to use ARM can also be found in MVS Setting Up a Sysplex.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHKEAR

Destination

Console

DFHKE0402 *applid* **CICS DEREGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED (RETURN CODES** *X'resp'*, *X'reason'*).

Explanation

An attempt to invoke a DEREGISTER request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System action

If the request failed during startup, a dump is taken and CICS continues.

If the request failed during shutdown, an exception entry is made in the trace table, and a system dump is taken unless you have specifically suppressed dumps in the dump table. CICS continues to shut down unless you have specified in the dump table that CICS should terminate. The DEREGISTER failed so a subsequent failure of CICS or an IMMEDIATE shutdown may result in ARM restarting CICS.

User response

For problem diagnosis look up the return codes from the IXCARM macro in the z/OS MVS Programming: Sysplex Services Reference manual.

Further information about how to use ARM can also be found in the z/OS MVS Setting Up a Sysplex manual.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

1. *applid*
2. *X'resp'*
3. *X'reason'*

Destination

Console

DFHKE0406I	*applid* **CICS is about to wait for predecessors defined in the MVS automatic restart management policy for this region.**

Explanation

CICS is about to invoke a WAITPRED request against the automatic restart manager. This may result in a delay before CICS processing continues.

System action

CICS continues.

User response

None.

Module:
DFHKEAR

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHKE0407	*applid* **XRF IS INCOMPATIBLE WITH AUTOMATIC RESTART MANAGER. CICS IS TERMINATING.**

Explanation

CICS has registered with the MVS automatic restart manager (ARM) after having been restarted but the restart JCL specifies XRF=YES. XRF is incompatible with ARM.

System action

CICS terminates.

User response

Ensure that the XRF=YES option in the restart JCL is correct.

Module:
DFHKEAR

Destination

Console

DFHKE0408D   *applid* **PLEASE SPECIFY START TYPE, 'ASIS' OR 'AUTO'.**

Explanation

An attempt to REGISTER with the MVS automatic restart manager (ARM) has failed when a cold or initial start has been specified in the SIT.

When the CICS region has been restarted with JCL that specifies START=COLD or START=INITIAL, CICS relies on ARM to determine whether to override the start type and change it to AUTO. As the REGISTER has failed, CICS cannot determine whether the region is being restarted by ARM, and so does not know whether to override the start type.

System action

CICS waits until the operator supplies the START type to be used by this region.

User response

If the region is being restarted by ARM, specify AUTO. If the startup type of COLD or INITIAL in the SIT should be preserved, specify ASIS.

See the previously issued message DFHKE0401 for guidance on dealing with the underlying REGISTER failure.

Module:
DFHKEAR

Destination

Console

DFHKE0410   *applid* **CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED BECAUSE THE JOB TYPE IS INVALID.**

Explanation

An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed because the job type is invalid to ARM. CICS can only register with ARM if it is being run as a started task or a batch job.

System action

CICS continues, but cannot subsequently be restarted by ARM.

User response

None.

Module:
DFHKEAR

Destination

Console

DFHKE0411   *applid* **CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED BECAUSE MAXIMUM NUMBER OF USERS WAS REACHED.**

Explanation

An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed because the maximum number of ARM users allowed for in the ARM couple data set has been reached. This response is never given by ARM if ARM is restarting CICS.

System action

CICS continues, but cannot subsequently be restarted by ARM.

User response

None.

Module:
DFHKEAR

Destination

Console

DFHKE0412I　　*applid* **CICS WAITPRED call to automatic restart manager has completed.**

Explanation

A WAITPRED request against the MVS automatic restart manager (ARM) has completed.

Further information about how to use ARM can also be found in the z/OS MVS Setting Up a Sysplex manual.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

System action:

Module:
DFHKEAR

XMEOUT parameters/Message inserts

　1. *applid*

Destination

Console

DFHKE0413　　*applid* **CICS REGISTER CALL FAILURE IN MODULE DFHKESVC (RETURN CODE *X'resp'*).**

Explanation

An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed in module DFHKESVC.

The code *resp* is the hexadecimal response from DFHKESVC and its meanings are:

- 08 - The requested function is not supported.
- 0C - The getmain for the dynamic storage failed.
- 10 - Unable to establish the recovery routine.
- 14 - The **DFHAUTH CHECK** failed.

System action

CICS continues, but cannot subsequently be restarted by ARM.

User response

It is necessary to decide whether to terminate CICS.

Further information about how to use ARM can also be found in MVS Setting Up a Sysplex.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHKEAR

Destination

Console

DFHKE0414　　**BAD RETURN FROM MVS SERVICE CSRL16J.**

Explanation

An attempt to invoke the MVS service CSRL16J (Load 16 and Jump) has returned to CICS with a non-zero return code. This service is called from the CICS Kernel 'Reset Address' function.

System action

CICS continues by deliberately executing a privileged instruction which causes a program exception with code 0C2 which leads to an ASRA abend. Register 4 has been loaded with the return code from the CSRL16J service.

User response

Inform the systems programmer.

Module:
DFHKERET

Destination

Console

DFHKE0500　　*applid* **MAXPROCUSER exceeded while executing '*service-routine*'.**

Explanation

The Kernel issued a call to the *service-routine* callable service, and received a response of EMVSINITIAL with a reason code of X'0012', indicating that the number of processes for the current CICS region userid has been exceeded.

System action

An error response is returned to the caller of this domain. Further error messages or abends may to issued by the caller of this domain.

User response

If this error occurs frequently, consider increasing the MAXPROCUSER value in the BPXPRMxx member of SYS1.PARMLIB.

Module:
DFHKETCB, DFHKEDS

XMEOUT parameters/Message inserts

1. *applid*
2. *service-routine*

Destination

Console

DFHKE0501   *applid* **The Kernel received a return value of *X'rvalue'*, a return code of *X'rcode'* and a return reason of *X'rreason'* from the *uss* service-routine.**

Explanation

Unix System Services has returned a non-zero return code/reason code to a service-routine call made by the Kernel during CICS initialization.

System action

CICS initialization continues since it is too early to tell whether Unix System Services will be required later in the CICS run. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Determine the reason for this response. The return code and reason code included in the message text should be described in the z/OS UNIX System Services Messages and Codes manual.

Module:
DFHKETCB

XMEOUT parameters/Message inserts

1. *applid*
2. *X'rvalue'*
3. *X'rcode'*
4. *X'rreason'*
5. *uss*

Destination

Console

DFHKE0996   *applid* **DFHKESTX DRIVEN FOR CANCEL WHILE PERFORMING RETRY. COMPLETION CODE *CODE* ON TCB *TCB*.**

Explanation

MVS has issued a cancel abend against this TCB while CICS was attempting to locate the retry point for an earlier, retryable abend.

System action

This TCB will be terminated.

User response

None.

Module:
DFHKESTX

Destination

Console

DFHKE0997   *applid* **DFHKESTX DRIVEN FOR CLEANUP ON AN ESSENTIAL TCB WITH COMPLETION CODE *CODE*. UNABLE TO RECOVER.**

Explanation

MVS has made a call to the CICS ESTAE-type recovery routine DFHKESTX, for cleanup on an essential TCB. Recovery from this situation is not possible.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

Module DFHKESTX produces a system dump, if one has not already been produced by DFHKESTX. Then CICS is abnormally terminated.

User response

The abend completion code is a four byte field. The first byte contains completion code flag bits, the next 12 bits contain the system completion code and the last 12 bits contain the user completion code.

Use this information to determine why the CICS ESTAE-type recovery routine was driven.

Look for any messages that may indicate the reason for the abend. The entry in the appropriate manual

for the abend code gives user guidance regarding the error, and may also give some guidance concerning the appropriate user response.

Module:
DFHKESTX

Destination

Console

DFHKE0998   *applid* **DFHKESTX ENTERED WITH INVALID KTCB.**

Explanation

When the kernel establishes its extended subtask abend exit (ESTAE), it sets the PARAM value in the ESTAE macro to the address of the KTCB. When the operating system drives the kernel ESTAE routine, the routine checks that the PARAM address points to a KTCB.

If the PARAM address does not point to a KTCB, this message is issued and CICS is terminated because the kernel ESTAE cannot handle the error if it cannot address the KTCB.

System action

CICS terminates.

User response

The KTCB eyecatcher might have been overwritten. Determine whether a storage overwrite has caused the problem, and if so, determine the source of the overwrite. Otherwise, you might need further assistance to resolve the problem.

If you need further assistance from IBM to resolve this problem. See Part 4 of the Troubleshooting and support for guidance on how to proceed.

Module:
DFHKESTX

Destination

Console

DFHKE0999   *applid* **MVS HAS CALLED DFHKESTX WITH NO SDWA. ABEND CODE X'*code*'.**

Explanation

MVS has made a call to the CICS ESTAE-type recovery routine DFHKESTX, but it supplied no system diagnostic work area (SDWA). DFHKESTX is unable to continue with the recovery.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

Module DFHKESTX produces a system dump and percolates the error to the next ESTAE routine. This is potentially a serious error. CICS continues processing pending the result of the error percolation.

User response

The abend code X'*code*' is the reason the CICS ESTAE was called. You need to find out which product has produced the abend. Typically it is an MVS system completion code, for example D37. However the abend may have been issued by CICS, for example abend 1596, or another product such as IMS.

Since there is little further diagnostic information in this case, look for any messages that may indicate the reason for the abend. The entry in the appropriate manual for the abend code gives user guidance regarding the error, and may also give some guidance concerning the appropriate user response.

The reason why no SDWA was passed and subsequently no recovery was attempted is probably a shortage of storage. This storage shortage may also be an influencing factor in the abend itself.

Module:
DFHKESTX

Destination

Console

DFHKE1798   *applid* **FO TCB FORCED TO TERMINATE.**

Explanation

During an immediate shutdown of CICS the file owning TCB is detached before VSAM is able to close all data sets normally.

The detaching of this TCB can cause abends during shutdown. At CICS restart VSAM may need to perform a VERIFY for any data set that is open for update when the immediate shutdown is performed, and this can cause a long delay.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If this is the case CICS uses the default *applid* value DBDCCICS.

System action

The immediate shutdown of CICS continues.

User response

None.

If this message occurs frequently, you may wish to issue a CEMT SET FILE ALL CLOSED before immediate shutdown is performed.

Module:
DFHKESIP

Destination

Console

DFHKE1799   *applid* **TERMINATION OF CICS IS COMPLETE.**

Explanation

This message is issued when CICS has terminated.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

Control is given back to the operating system.

User response

None.

Module:
DFHKESIP

Destination

Console

DFHLDnnnn messages

DFHLD0001   *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation

An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset X'*offset*' in module *modname*. This

---

DFHKE1800   *applid* **ABNORMAL TERMINATION OF CICS IS COMPLETE.**

Explanation

CICS issues this message when it terminates abnormally.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

The abnormal termination of CICS continues. The kernel returns control to the operating system by issuing a user 1800 abend.

The original error which caused the abnormal termination may also have produced a dump.
No specific dump is produced to accompany this message.

User response

If a dump is produced, check the dump to determine the cause of the error. Use the Troubleshooting and support to assist you to determine the problem.

If no dump is produced, check for other CICS and MVS messages and abend codes to help you to determine the cause of the problem.

Module:
DFHKESIP

Destination

Console

---

may have been caused by corruption of CICS code or control blocks.

System action

A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

You may need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLDDM, DFHLDDMI, DFHLDLD, DFHLDLD1, DFHLDLD2, DFHLDLD3, DFHLDNT, DFHLDST, DFHLDLB, DFHLDLB2, DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHLD0002	*applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation

The loader has received an unexpected error response from some other part of CICS or an operating system service. The operation requested by the loader is described by code X'*code*'.

For further information about CICS exception trace entries, refer to the Troubleshooting and support.

System action

A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages output from some other part of CICS.
2. Examine the symptom string.
3. Examine the dump.

Module:

DFHLDDM, DFHLDDMI, DFHLDLD, DFHLDLD1, DFHLDLD2, DFHLDLD3, DFHLDNT, DFHLDST, DFHLDLB, DFHLDLB2, DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHLD0004	*applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation

CICS has detected what it believes to be a code execution loop. At the time execution was interrupted, the program status word (PSW) indicated the next instruction address would have been at offset X'*offset*' in module *modname*.

System action

CICS is terminated with a system dump unless dump table options specifically prevent this.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the existence of a previous error situation which may have led to corruption of CICS control blocks or to the non-completion of an expected event. If there is no evidence of a previous error, you will need further assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLDDM, DFHLDDMI, DFHLDLD, DFHLDLD1, DFHLDLD2, DFHLDLD3, DFHLDNT, DFHLDST, DFHLDLB, DFHLDLB2, DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*
2. *X'offset'*
3. *modname*

Destination

Console

DFHLD0101I *applid* **CICS nucleus module** *modname* **not found.**

Explanation

The CICS loader (LD) was unable to locate a copy of module *modname* in either the link pack area (LPA) or the DFHRPL library concatenation.

System action

A system dump is taken and CICS execution continues unless specifically inhibited by a dump table entry.

User response

This message is followed by one or more messages informing the user of reduced function availability due to the missing module *modname*.

Ensure that there is a copy of module *modname* in the LPA and/or in a library within the DFHRPL concatenation.

If module was expected to be in the LPA, ensure CICS is utilizing LPA resident modules by specifying LPA=YES as a start up override.

Module:
DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *modname*

Destination

Console

DFHLD0102 *applid* **Unable to declare gate** *ff* **for module** *modname***.**

Explanation

As part of its initialization, the CICS loader has attempted to define domain gate *ff* for module *modname,* but has received a bad response.

System action

A system dump is taken and CICS execution continues unless specifically inhibited by a dump table entry.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This message diagnoses an internal error within CICS. Investigate whether previous errors have left CICS in a damaged state. If there is no evidence of previous serious errors, you will need further assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *ff*
3. *modname*

Destination

Console

DFHLD0103I *applid* **Module Storage Compression OFF. All modules are USAGE=TRANSIENT.**

Explanation

This message is normally preceded by either message DFHLD0101 or DFHLD0102 and indicates that the loader (LD) domain was unable to initialize its dynamic program storage compression facility.

System action

CICS execution continues but all nonresident application programs are treated as if they had been defined with the USAGE=TRANSIENT option. Therefore they are removed from storage the moment their use count reaches zero.

For some functions, this can lead to a performance degradation as programs may be loaded many times during the life of a transaction instead of only once.

User response

Investigate the reasons for the previous problem concerning module DFHLDNT as diagnosed by either message DFHLD0101 or DFHLD0102.

Module:
DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHLD0104I　　*applid* **Module Statistics are not being collected.**

Explanation

This message is normally preceded by either message DFHLD0101 or DFHLD0102 and indicates that the loader (LD) domain was unable to initialize it's statistics collection module.

System action

CICS execution continues but no module statistics will be collected.

User response

Investigate the reasons for the previous problem concerning module DFHLDST as diagnosed by either message DFHLD0101 or DFHLD0102.

Module:
DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHLD0105　　*applid* **Restart of Loader Option Block (LOB) failed. System defaults in use.**

Explanation

The initialization of the CICS loader has detected one or more invalid parameters in the loader option block (LOB) recovered from the local catalog.

This may indicate that corruption of the local catalog has occurred.

System action

A system dump is taken and CICS execution continues unless specifically inhibited by a dump table option.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the possibility of corruption of the local catalog. If you suspect that the local catalog is corrupt, reinitialize it and resubmit the CICS job.

Module:
DFHLDDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHLD0106　　*applid* **Bad response *X'resp'* returned on an OPEN of DFHRPL.**

Explanation

The CICS loader has attempted to open the DFHRPL library concatenation during initialization and has received the response code *resp*.

System action

CICS execution continues although only link pack area (LPA) resident modules are accessible.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure the DFHRPL concatenation is correctly specified in the JCL and that the libraries specified in it are operational. The response code returned may be interpreted as for a BSAM open request.

Module:
DFHLDDM

XMEOUT parameters/Message inserts

1. *applid*
2. *X'resp'*

Destination

Console

DFHLD0107I　　*applid modname1* **is unable to locate module *modname2* in the LPA. DFHRPL version of module will be used.**

Explanation

The user has specified the system initialization parameter LPA=YES. Module *modname2* is either defined as USELPACOPY=YES via RDO or is a CICS PCLASS=SYSTEM module. CICS has been unable to find *module2* in the link pack area (LPA).

System action

CICS execution continues with an attempt to locate module *modname2* in the CICS program library DFHRPL.

User response

carry out one of the following:

- Load module *modname2* into the LPA, if this is required and the module is LPA eligible (refer to the Installing CICS TS for LPA eligibility of CICS modules).
- Code PRVMOD=*modname2* as a SIT option which ensures that CICS will not search the LPA for that module.
- Code LPA=NO as a system initialization parameter. This ensures that CICS does not search the LPA for any module.
- Inhibit this message from all or selected consoles using the MVS VARY command. For more information on how to do this, refer to the Installing CICS TS.

Module:
DFHLDDMI, DFHLDLD1

XMEOUT parameters/Message inserts

1. *applid*
2. *modname1*
3. *modname2*

Destination

Console

DFHLD0108I	*applid* **The maximum of 32767 entries that CICS allows on a BLDL has been exceeded.**

Explanation

During a warm or emergency restart, the loader domain has detected more than 32767 modules eligible for BLDL.

System action

A BLDL macro call is issued to locate the first 32767 modules and the rest are ignored. CICS initialization continues normally.

This is not a problem because CICS attempts to locate those modules not located during initialization when the module is first used.

User response

None.

Module:
DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHLD0109I	*applid modname1* **is unable to locate module *modname2* in the LPA. DFHRPL or dynamic LIBRARY version of module will be used.**

Explanation

The user has specified the system initialization parameter LPA=YES. Module *modname2* is either defined as USELPACOPY=YES via RDO or is a CICS system module. CICS has been unable to find *module2* in the link pack area (LPA).

System action

CICS execution continues with an attempt to locate module *modname2* in the CICS program library DFHRPL or a dynamic LIBRARY in the LIBRARY search order. The sequence of LIBRARY concatenations in which CICS will attempt to locate *module2* will depend on the LIBRARY search order that is currently active in the system.

User response

Carry out one of the following:

- Load module *modname2* into the LPA, if this is required and the module is LPA eligible (refer to the Installing CICS TS for LPA eligibility of CICS modules).
- Code PRVMOD=*modname2* as a SIT option which ensures that CICS will not search the LPA for that module.

- Code LPA=NO as a system initialization parameter. This ensures that CICS does not search the LPA for any module.
- Inhibit this message from all or selected consoles using the MVS VARY command. For more information on how to do this, refer to the Installing CICS TS.

Module:
DFHLDLD1, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *modname1*
3. *modname2*

Destination

Console

DFHLD0110I	*applid* A CICS *modver* version of nucleus module *modname* found when initializing CICS version *cicsver*.

Explanation

The CICS loader (LD) has loaded a version of CICS nucleus module *modname* from either the link pack area (LPA) or the DFHRPL library concatenation. The module is for CICS version *modver*.

System action

A system dump is taken and CICS initialization terminates.

User response

The user response depends on the named nucleus module:

- When *modname* is a CICS control table, e.g DFHSRT, DFHTCT, DFHTST, e.t.c then reassemble the table using the macro libraries for CICS version *cicsver*.
- Otherwise, check all the libraries in the DFHRPL concatenation and remove any libraries for CICS version *modver*.

2. *modver*
3. *modname*

4. *cicsver*

Destination

Console

DFHLD0201	*applid* Corrupt Loader *load* structure detected at *X'address'*. Module marked as unavailable.

Explanation

During the execution of a CICS loader request, the loader detected an invalid field in the control block type *tttt* at storage address *address*.

System action

A system dump is taken and execution continues unless specifically inhibited by a dump table option.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the possibility of corruption of CICS modules or control blocks or the local or global catalogs.

Module:
DFHLDLD1

XMEOUT parameters/Message inserts

1. *applid*
2. *load*
3. *X'address'*

Destination

Console

DFHLD0202	*applid* Loader SVC *svc* request failed due to shortage of free storage in the region.

Explanation

The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to a lack of free storage in the MVS region. The type of request is indicated by *svc*.

System action

A system dump will be taken unless specifically suppressed through a dump table entry and the system will continue execution. The task requesting

loader services will be abnormally terminated with abend code APCT, or a PGMIDERR condition will be raised.

User response

Ensure there is adequate free storage in the MVS region by balancing the overall size limits of the DSAs or EDSAs with the size of the MVS region specified by the REGION parameter on the job card of the CICS job JCL.

Module:
DFHLDLD1

XMEOUT parameters/Message inserts

1. *applid*
2. *svc*

Destination

Console

DFHLD0203	*applid* **Loader SVC** *svc* **request failed due to I/O errors on library DFHRPL.**

Explanation

The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to I/O errors on the relocatable library, DFHRPL. The type of request is indicated by *svc*.

System action

A system dump is taken unless specifically suppressed through a dump table entry and the system continues execution. The task requesting loader services is abnormally terminated with abend code APCT, or a PGMIDERR condition is raised.

User response

Investigate the possible causes of the I/O errors encountered. The MVS system console log may contain more information about the problem in the form of access method or I/O subsystem messages. The loader domain exception trace entries, from the full trace, in the system dump normally identify the module or modules for which the I/O error occurred.

A possible cause of this problem is the compression of a partition data set (PDS) within the DFHRPL concatenation.

Module:

DFHLDLD1

XMEOUT parameters/Message inserts

1. *applid*
2. *svc*

Destination

Console

DFHLD0204	*applid* **Bad Loader PDB for module** *modname* **recovered from the {Local	Global} catalog. Corruption suspected.**

Explanation

The loader definition record, PDB, for module *modname* has been read from either the local (DFHLCD) or the global (DFHGCD) catalog during startup and has been found to contain invalid data.

System action

System initialization terminates with a system dump, unless the dump is specifically suppressed. If the system dump is suppressed, the module definition is ignored.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure the specified catalog data set has not been corrupted and is available to the CICS job.

Module:
DFHLDDMI, DFHLDLD

XMEOUT parameters/Message inserts

1. *applid*
2. *modname*
3. Value chosen from the following options:

   1=Local,

   2=Global

Destination

Console

DFHLD0205	*applid* **Bad Loader PLDB for LIBRARY** *libname* **recovered from the Global catalog. Corruption suspected.**

Explanation

The loader program LIBRARY record, PLDB, for dynamic LIBRARY *modname* has been read from the global catalog during startup and has been found to contain invalid data.

System action

System initialization terminates with a system dump, unless the dump is specifically suppressed. If the system dump is suppressed, the dynamic LIBRARY resource is ignored.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure the specified catalog data set has not been corrupted and is available to the CICS job.

Module:
DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*

Destination

Console

DFHLD0206	*applid* **Loader SVC** *svc* **request failed due to I/O errors on LIBRARY** *libname***.**

Explanation

The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to I/O errors on the dynamic LIBRARY *libname*. The type of request is indicated by *svc*.

System action

The system action depends on the type of request in *svc*.

- When *svc* is BLDL, the problem has occurred while searching through the LIBRARY search order for the location of a program. The search will continue with the next LIBRARY in the LIBRARY search order, if any. The effect is as if LIBRARY *libname* was not included in the LIBRARY search order.
- When *svc* is LOAD, the problem has occurred while loading a program from a known location

in a dynamic LIBRARY. A system dump is taken unless specifically suppressed through a dump table entry and the system continues execution. The task requesting loader services is abnormally terminated with abend code APCT, or a PGMIDERR condition is raised.

User response

Investigate the possible causes of the I/O errors encountered. The MVS system console log may contain more information about the problem in the form of access method or I/O subsystem messages. The loader domain exception trace entries, from the full trace, in the system dump normally identify the module or modules for which the I/O error occurred.

A possible cause of this problem is the compression of a partitioned data set (PDS) within the LIBRARY concatenation. Another possible cause is that one or more data sets in the dynamic LIBRARY concatenation has not been correctly defined as a partitioned data set (PDS) or partitioned data set extended (PDSE).

Module:

DFHLD0510 I   *date time applid* **Details for LIBRARY** *libname* **for application** *applicationname***, version** *majorversion.minorversion.microversion* **of platform** *platformname***, ranking:** *ranking***, enablement status:** *{Enabled | Disabled}***.**

Explanation

This message gives details of the ranking and enablement status for LIBRARY *libname* for application *applicationname* version *majorversion.minorversion.microversion* on platform *platformname*. The ranking is given by *ranking*, and is a number which specifies how this LIBRARY should be positioned in the search order relative to other LIBRARY resources. The enablement status is either Enabled or Disabled, and indicates whether the LIBRARY is currently enabled. Only an enabled LIBRARY can participate in the search order.

System action

The system continues. This is one of a set of informational messages that give details for the LIBRARY resources. The associated messages give information about the data sets defined in this LIBRARY.

Explanation

Discard of the dynamic LIBRARY resource *libname* has failed to complete successfully.

System action

The system has attempted to process discard of the LIBRARY resource. If one of the steps required to complete successful discard of a dynamic LIBRARY resource has failed, the LIBRARY will remain in a disabled state and will not participate in the search order used when loading programs and program artifacts. This message can also occur because a LIBRARY of this name is not installed, or because it is enabled.

User response

Check that the LIBRARY to be discarded is installed and is in a disabled state. If that is not the cause of the error, examine the console log for one or more messages indicating the failure that occurred during discard processing for this LIBRARY.

Module:
DFHLDLB2

CSLB

DFHLD0514 W	*date time applid termid tranid* **Install of LIBRARY** *libname* **for application** *applicationname,* **version** *majorversion.minorversion.microversion* **on platform** *platformname,* **has failed to complete**

successfully, for reason: {library not found. | dynamic allocation of data set failed. | concatenation of data sets failed. | open of library concatenation failed. | close of library concatenation failed. | deconcatenation of data sets failed. | de-allocation of data set failed. | mvs abend condition. | incompatible bundle set. | library not disabled. | insufficient storage. | library lock error. | library chain error. | catalog write failed. | catalog_delete failed. | unknown.} Enablement status is Disabled.

Explanation

Install of the dynamic LIBRARY resource *libname* for application *applicationname* version *majorversion.minorversion.microversion* on platform *platformname* has completed but has not done so successfully. One of the steps required to complete successful install of a dynamic LIBRARY resource has failed. The LIBRARY has been installed, but with an enablement status of Disabled, which means that it will not participate in the search order used when loading programs and program artifacts.

System action

The system has attempted to process install of the LIBRARY resource. This message follows message DFHLD0508 which indicated the start of install processing for the LIBRARY resource. The LIBRARY will not be searched when program artifacts are loaded, meaning that program artifacts that reside in the data sets defined for the LIBRARY will not be loaded from this LIBRARY.

User response

Examine the console log for one or more messages indicating the failure which occurred during install processing for this LIBRARY.

**Critical status of library
libname changed from *{Critical
| Noncritical}* to *{Critical |
Noncritical}*.**

Explanation

The critical status of LIBRARY resource *libname* has
been changed, as indicated in the message. The
critical status of a LIBRARY can be:

- Critical, meaning that this LIBRARY is critical to CICS
  startup.
- Noncritical, meaning that this LIBRARY is not critical
  to CICS startup. CICS startup can continue if an error
  occurs while installing a noncritical LIBRARY.

System action

The system has changed the critical status of the LIBRARY resource. This will have no effect until the next CICS startup, when the critical status will determine the handling of errors if this LIBRARY is installed during startup.

User response

This is an informational message for audit trail purposes, no action is required.

DFHLD0556 I   *date time applid* **Position in search order:** *srchpos*, **LIBRARY:** *libname*.

Explanation

This message lists a position in the LIBRARY search order, *srchpos* and the name of the LIBRARY that is currently at that position, *libname*. The search order is a number which indicates the current absolute position of this LIBRARY in the overall search order through all LIBRARY resources, used to determine where a program artifact should be loaded from.

This is one of a set of informational messages that give the search positions of all installed and enabled LIBRARY resources in the CICS system. LIBRARY resources that are installed but disabled do not

participate in the search order, and are not included in the set of messages.

These messages are issued whenever a change occurs that can affect the LIBRARY search order, such as installing a LIBRARY, enabling or disabling a LIBRARY, or changing the LIBRARY ranking. The messages are not issued when such a change occurs during CICS startup, but the set of messages is issued at the completion of CICS start, to show the search order for all enabled LIBRARY resources that were installed or recovered during CICS startup.

CSLB

DFHLD0701	***applid* LIBRARY *libname* has a smaller ranking value than DFHRPL. Ranking value is *R*.**

Explanation

This message warns that dynamic LIBRARY *libname* has a ranking value that is smaller than that of the static LIBRARY, DFHRPL. Ranking is a number which specifies how this LIBRARY should be positioned in the search order relative to other LIBRARY resources. If a program artifact is located in the concatenations of two LIBRARY resources that are both installed and enabled, it will be loaded from the LIBRARY with the smaller ranking value. DFHRPL always has a ranking of 10, and *libname* has been given a ranking value of *R*, which is smaller than 10 and means that program artifacts that are in this LIBRARY and also in DFHRPL, will be loaded from this LIBRARY.

System action

The system continues. The CICS loader will search LIBRARY *library* when loading program artifacts before searching DFHRPL.

User response

Verify that it is intended for this LIBRARY to have a ranking value smaller than that of DFHRPL (so that program artifacts will be loaded from this LIBRARY rather than from DFHRPL). If this was not the intention, set the ranking for the LIBRARY to a value greater than 10.

Module:
DFHLDLB2, DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*

2. *libname*
3. *R*

Destination

Console

DFHLD0702D	***applid* Critical LIBRARY *libname* could not be installed. Reply *GO* or *CANCEL*.**

Explanation

LIBRARY *libname* is being installed during CICS startup, and an error has occurred during install of the LIBRARY. The definition for this LIBRARY indicates that it should be installed as Enabled, and that it is a Critical LIBRARY. A Critical LIBRARY is one that must be available at CICS startup, so this message is issued to allow you to decide whether CICS startup should be allowed to continue without the LIBRARY.

System action

The system waits for a response.

User response

If you do not want CICS to start when this LIBRARY is not available, reply 'CANCEL' to terminate this CICS execution.

If you want to allow CICS to continue without the LIBRARY; for example, because you plan to resolve the problem after CICS has started, reply 'GO' to allow CICS to continue. If you decide that this LIBRARY should not be defined as Critical, SET the LIBRARY to Noncritical, and update the definition.

In both cases, you should study other messages on the console log to determine the reason for the error that occurred while installing the LIBRARY, and take steps to resolve the problem. This message can be issued because a LIBRARY of the same name is already installed and enabled.

Module:
DFHLDLB2, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*
3. *GO*
4. *CANCEL*

Destination

Console

DFHLD0703	*applid* **Noncritical LIBRARY** *libname* **could not be installed as enabled. CICS startup continues.**

Explanation

LIBRARY *libname* is being installed during CICS startup, and an error has occurred during install of the LIBRARY. The definition for this LIBRARY indicates that it should be installed as Enabled, and that it is a Noncritical LIBRARY. A Noncritical LIBRARY is one that does not need to be available at CICS startup, so this message is issued to warn you that an error has occurred during install of the LIBRARY.

System action

CICS startup continues.

User response

If you want future CICS starts to give you the option to terminate CICS if this LIBRARY fails to install correctly, SET the LIBRARY to Critical, and update its definition.

Study other messages on the console log to determine the reason for the error that occurred while installing the LIBRARY, and take steps to resolve the problem.

Module:
DFHLDLB2, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*

Destination

Console

DFHLD0704	*applid* **Reply CANCEL was received.**

Explanation

A reply of 'CANCEL' was received in response to message DFHLD0702. This requests that CICS startup should be terminated.

System action

CICS terminates.

User response

None.

Module:
DFHLDLB2, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHLD0710	*applid* **Install of LIBRARY** *libname* **encountered an error. The LIBRARY is installed but disabled.**

Explanation

Install of the dynamic LIBRARY resource *libname* has completed but has not done so successfully. One of the steps required to complete successful install of a dynamic LIBRARY resource has failed. The LIBRARY definition indicates that the LIBRARY should be installed as Enabled. Due to the error, the LIBRARY has been installed, but with an enablement status of Disabled, which means that it will not participate in the search order used when loading programs and program artifacts.

System action

The LIBRARY will not be searched when program artifacts are loaded, meaning that program artifacts that reside in the data sets defined for the LIBRARY will not be loaded from this LIBRARY.

User response

Examine the console log for one or more messages indicating the failure that occurred during install processing for this LIBRARY. When the problem has been resolved, SET the LIBRARY to Enabled.

Module:
DFHLDLB2

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*

Destination

Console

DFHLD0711   *applid* **Install of LIBRARY** *libname*
encountered an error. The
LIBRARY is installed as disabled.

Explanation

Install of the dynamic LIBRARY resource *libname* has
completed but has not done so successfully. One
of the steps required to complete successful install
of a disabled LIBRARY resource has failed. Due to
the error, the LIBRARY has been installed with an
enablement status of Disabled, but this should not
be a problem as Disabled status was specified in the
LIBRARY definition.

System action

Disabled status means that the LIBRARY will not be
searched when program artifacts are loaded, so that
program artifacts that reside in the data sets defined
for the LIBRARY will not be loaded from this LIBRARY.

User response

Examine the console log for one or more messages
indicating the failure that occurred during install
processing for this LIBRARY. You should plan to
resolve the problem before attempting to SET the
LIBRARY to Enabled.

Module:
DFHLDLB2

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*

Destination

Console

DFHLD0712   *applid* **Attempt to install or enable**
LIBRARY *libname* **will be delayed**
because data set *dsname* **is being**
recalled.

Explanation

LIBRARY *libname* is taking longer than expected to
install or enable because one of the data sets in the
LIBRARY definition, *dsname*, has been migrated and
has to be recalled before the processing can complete.

System action

The install or enable of LIBRARY *libname* will be
delayed until data set *dsname* has been recalled.

User response

None.

Module:
DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*
3. *dsname*

Destination

Console

DFHLD0713   *applid* **Attempt to enable LIBRARY**
libname **encountered an error. The**
LIBRARY is disabled.

Explanation

An attempt to set the enablement status of the
dynamic LIBRARY resource *libname* to Enabled has
failed. One of the steps required to successfully enable
a dynamic LIBRARY resource has failed. Due to the
error, the LIBRARY remains Disabled, and will not
participate in the search order used when loading
programs and program artifacts. This error can occur
as a result of setting the enabled status of a LIBRARY,
or of an attempt to enable a LIBRARY which has been
restored from the catalog on a CICS warm or emergeny
restart.

System action

The LIBRARY will not be searched when program
artifacts are loaded, meaning that program artifacts
that reside in the data sets defined for the LIBRARY
will not be loaded from this LIBRARY.

User response

Examine the console log for one or more messages
indicating the failure that occurred when attempting
to enable this LIBRARY. When the problem has been
resolved, repeat the attempt to SET the LIBRARY to
Enabled.

Module:
DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*

Destination

Console

DFHLD0715   *applid* **Disable processing for LIBRARY** *libname* **encountered an error.**

Explanation

An attempt to set the enablement status of the dynamic LIBRARY resource *libname* to Disabled has encountered an error. One of the steps required to successfully complete disable processing for a dynamic LIBRARY resource has failed.

System action

The LIBRARY is set to Disabled status, and will not participate in the search order used when loading programs and program artifacts. However, maintenance operations on the LIBRARY, such as compression of a data set within the LIBRARY concatenation, might not be allowed.

User response

Examine the console log for one or more messages indicating the failure that occurred when attempting to disable this LIBRARY. When the problem has been resolved, repeat the attempt to SET the LIBRARY to Disabled.

Module:
DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*

Destination

Console

DFHLD0720   *applid* **Dynamic allocation of data set** *dsname* **for LIBRARY** *libname* **failed. DYNALLOC return codes: X'rrrr',X'cccc',X'dddd'.**

Explanation

While installing or enabling dynamic LIBRARY *libname*, an attempt to dynamically allocate data set *dsname* has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code, and *dddd* is the additional SVC 99 error information code.

System action

CICS continues with LIBRARY *libname* disabled. Programs will not be loaded from this LIBRARY.

User response

For the meaning of the DYNALLOC return codes, see the z/OS MVS Programming: Authorized Assembler Services Guide.

Module:
DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *dsname*
3. *libname*
4. *X'rrrr'*
5. *X'cccc'*
6. *X'dddd'*

Destination

Console

DFHLD0721   *applid* **Dynamic concatenation of data sets for LIBRARY** *libname* **failed. DYNALLOC return codes: X'rrrr',X'cccc',X'dddd'.**

Explanation

While installing or enabling dynamic LIBRARY *libname*, an attempt to dynamically concatenate data sets in the LIBRARY has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code, and *dddd* is the additional SVC 99 error information code.

System action

CICS continues with LIBRARY *libname* disabled. Programs will not be loaded from this LIBRARY.

User response

For the meaning of the DYNALLOC return codes, see the z/OS MVS Programming: Authorized Assembler Services Guide.

Module:
DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*

2. *libname*

3. *X'rrrr'*

4. *X'cccc'*

5. *X'dddd'*

Destination

Console

DFHLD0722	*applid* **Open of DD for LIBRARY** *libname* **failed.**

Explanation

An attempt to open dynamic LIBRARY *libname* has failed with a non-zero VSAM return code.

System action

CICS continues processing, but LIBRARY *libname* is disabled and programs will not be loaded from this LIBRARY.

User response

VSAM will have issued a console error message. Use the information in the VSAM error message to solve the problem.

Module:
DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*

2. *libname*

Destination

Console

DFHLD0723	*applid* **Dynamic unallocation of data set** *dsname* **for LIBRARY** *libname* **failed. DYNALLOC return codes: *X'cccc',X'rrrr',X'dddd'*.**

Explanation

An attempt to dynamically unallocate (deallocate) data set *dsname* for dynamic LIBRARY *libname* has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code, and *dddd* is the additional SVC 99 error information code. This error can occur while disabling the LIBRARY, either as a result of a specific SET LIBRARY DISABLED request, or while backing out an unsuccessful install or enable of the LIBRARY, or an unsuccessful restore of the LIBRARY at CICS warm or emergency restart. This

error can also occur while discarding the LIBRARY, if a previous attempt to disable the LIBRARY had encountered an error.

System action

CICS continues with LIBRARY *libname* still installed and disabled.

User response

For the meaning of the DYNALLOC return codes, see the z/OS MVS Programming: Authorized Assembler Services Guide.

Module:
DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*

2. *dsname*

3. *libname*

4. *X'cccc'*

5. *X'rrrr'*

6. *X'dddd'*

Destination

Console

DFHLD0724	*applid* **Dynamic deconcatenation of data sets for LIBRARY** *libname* **failed. DYNALLOC return codes: *X'rrrr',X'cccc',X'dddd'*.**

Explanation

An attempt to dynamically deconcatenate data sets from LIBRARY *libname* has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code, and *dddd* is the additional SVC 99 error information code. This error can occur while disabling the LIBRARY, either as a result of a specific SET LIBRARY DISABLED request, or while backing out an unsuccessful install or enable of the LIBRARY, or an unsuccessful restore of the LIBRARY at CICS warm or emergency restart. This error can also occur while discarding the LIBRARY, if a previous attempt to disable the LIBRARY had encountered an error.

System action

CICS continues and LIBRARY *libname* remains installed and disabled.

User response

For the meaning of the DYNALLOC return codes, see the z/OS MVS Programming: Authorized Assembler Services Guide.

Module:
DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*
3. *X'rrrr'*
4. *X'cccc'*
5. *X'dddd'*

Destination

Console

DFHLD0725	*applid* **Close of DD for LIBRARY** *libname* **failed.**

Explanation

An attempt to close the DD for dynamic LIBRARY *libname* has failed. This error can occur while disabling the LIBRARY, either as a result of a specific SET LIBRARY DISABLED request, or while backing out an unsuccessful install or enable of the LIBRARY, or an unsuccessful restore of the LIBRARY at CICS warm or emergency restart. This error can also occur while discarding the LIBRARY, if a previous attempt to disable the LIBRARY had encountered an error.

System action

CICS continues processing, and LIBRARY *libname* remains installed and disabled.

User response

VSAM will have issued a console error message. Use the information in the VSAM message to solve the problem.

Module:
DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT parameters/Message inserts

1. *applid*
2. *libname*

Destination

Console

DFHLD0730	*applid* **An MVS ABEND occurred during {Getmain of LIBRARY control area	Dynamic allocation	Dynamic concatenation	Open	Close	Dynamic deconcatenation	Dynamic unallocation	Freemain of LIBRARY control area} for LIBRARY** *libname***.**

Explanation

An attempt to perform an operation for dynamic LIBRARY *libname* caused an MVS abend condition. The message indicates the operation which resulted in the abend. This may indicate an error in the definition of the dynamic LIBRARY.

System action

CICS continues processing, but LIBRARY *libname* is either disabled or not installed, and programs will not be loaded from this LIBRARY.

User response

The operating system will have issued console error messages describing the abend condition. This can be accompanied by the CICS error message DFHLD0001. Use this information to solve the problem. Possible causes of this error include, but are not limited to:

- A data set has been specified in the LIBRARY definition which is not a valid PDS or PDSE data set.
- The system does not have read access to a data set in the LIBRARY. Look for a message from a security manager, such as RACF, which indicates the data set for which there is an access failure.
- In the LIBRARY concatenation the total number of PDSEs and PDS extents exceeded the limit of 255.
- An I/O error occurred while processing a LIBRARY data set.
- A system error occurred while processing an SVC. The abend code will be of the form Fnn for an SVC call nn.
- CICS internal error occurred; for example, a program check.

Module:
DFHLDLB2, DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*
2. Value chosen from the following options:

    1=Getmain of LIBRARY control area,

2=Dynamic allocation,

3=Dynamic concatenation,

4=Open,

5=Close,

6=Dynamic deconcatenation,

7=Dynamic unallocation,

8=Freemain of LIBRARY control area

3. *libname*

Destination

Console

DFHLD0731	*applid* **Data set** *dsname* **could not be allocated for LIBRARY** *libname* **because CICS could not determine that the data set is valid for a dynamic LIBRARY. Reason: {LOCATE error. LOCATE macro	OBTAIN error. OBTAIN macro	not enough working storage. Loader SVC	CICS internal error. Loader SVC }return code:** *X'rc'*

Explanation

While installing or enabling dynamic LIBRARY *libname*, CICS was unable to determine the validity of data set *dsname* for the reason shown in the message. Either the LOCATE macro, or the OBTAIN macro, failed with return code *rc*, or a CICS internal error was encountered.

System action

CICS continues with LIBRARY *libname* disabled. Programs will not be loaded from this LIBRARY.

User response

For the meaning of the LOCATE or OBTAIN return codes, see z/OS DFSMSdfp Advanced Services. In the case of an internal error, contact the IBM Support Center providing the CICS joblog output.

Module:
DFHLDLB2, DFHLDLB3, DFHLDDMI

| DFHLD0741 | *applid* **Dynamic unallocation of data set** *dsname* **for LIBRARY** *libname* **of application** *applicationname*, **version** *majorversion.minorversion.microversion* **on platform** *platformname* **failed. DYNALLOC return codes: X'cccc',X'rrrr',X'dddd'.** |

Explanation

An attempt to dynamically unallocate (deallocate) data set *dsname* for dynamic LIBRARY *libname* for application *applicationname* version *majorversion.minorversion.microversion* on platform *platformname* has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code, and *dddd* is the additional SVC 99 error information code. This error can occur while disabling the LIBRARY, either as a result of a specific SET LIBRARY DISABLED request, or while backing out an unsuccessful install or enable of the LIBRARY. This error can also occur while discarding the LIBRARY, if a previous attempt to disable the LIBRARY had encountered an error.

System action

CICS continues with LIBRARY *libname* still installed and disabled.

User response

For the meaning of the DYNALLOC return codes, see the z/OS MVS Programming: Authorized Assembler Services Guide.

Module:
DFHLDLB2, DFHLDLB3

XMEOUT parameters/Message inserts

Destination

Console

DFHLD0743	*applid* **Close of DD for LIBRARY** *libname* **of application** *applicationname*, **version** *majorversion.minorversion.microversion* **on platform** *platformname* **failed.**

Explanation

An attempt to close the DD for dynamic LIBRARY *libname* for application *applicationname* version *majorversion.minorversion.microversion* on platform *platformname* has failed. This error can occur while disabling the LIBRARY, either as a result of a specific SET LIBRARY DISABLED request, or while backing out an unsuccessful install or enable of the LIBRARY. This error can also occur while discarding the LIBRARY, if a previous attempt to disable the LIBRARY had encountered an error.

System action

CICS continues processing, and LIBRARY *libname* remains installed and disabled.

User response

VSAM will have issued a console error message. Use the information in the VSAM message to solve the problem.

Module:
DFHLDLB2, DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*

2. *libname*

3. *applicationname*

4. *majorversion*

5. *minorversion*

6. *microversion*

7. *platformname*

Destination

Console

DFHLD0744   ***applid* An MVS ABEND occurred during *{Getmain of LIBRARY control area | Dynamic allocation | Dynamic concatenation | Open | Close | Dynamic deconcatenation | Dynamic unallocation | Freemain of LIBRARY control area}* for LIBRARY *libname* of application *applicationname*, version *majorversion.minorversion.microversion* on platform *platformname*.**

Explanation

An attempt to perform an operation for dynamic LIBRARY *libname* for application *applicationname* version *majorversion.minorversion.microversion* on platform *platformname* caused an MVS abend condition. The message indicates the operation which resulted in the abend. This may indicate an error in the definition of the dynamic LIBRARY.

System action

CICS continues processing, but LIBRARY *libname* is either disabled or not installed, and programs will not be loaded from this LIBRARY.

User response

The operating system will have issued console error messages describing the abend condition. This can be accompanied by the CICS error message DFHLD0001. Use this information to solve the problem. Possible causes of this error include, but are not limited to:

- A data set has been specified in the LIBRARY definition which is not a valid PDS or PDSE data set.

- The system does not have read access to a data set in the LIBRARY. Look for a message from a security manager, such as RACF, which indicates the data set for which there is an access failure.

- In the LIBRARY concatenation the total number of PDSEs and PDS extents exceeded the limit of 255.

- An I/O error occurred while processing a LIBRARY data set.

- A system error occurred while processing an SVC. The abend code will be of the form Fnn for an SVC call nn.

- CICS internal error occurred; for example, a program check.

Module:
DFHLDLB2, DFHLDLB3

XMEOUT parameters/Message inserts

1. *applid*

2. Value chosen from the following options:

   1=Getmain of LIBRARY control area,

   2=Dynamic allocation,

   3=Dynamic concatenation,

   4=Open,

   5=Close,

   6=Dynamic deconcatenation,

   7=Dynamic unallocation,

   8=Freemain of LIBRARY control area

3. *libname*

4. *applicationname*

5. *majorversion*

6. *minorversion*

7. *microversion*

8. *platformname*

Destination

Console

DFHLD0745   ***applid* Data set *dsname* could not be allocated for LIBRARY *libname* of application *applicationname*, version *majorversion.minorversion.microversion* on platform *platformname* because CICS could not determine that the data set is valid for a dynamic LIBRARY. Reason: *{LOCATE error. LOCATE macro | OBTAIN error. OBTAIN macro | not enough working storage. Loader SVC | CICS internal error. Loader SVC }*return code: X'*rc*'**

Explanation

While installing or enabling dynamic LIBRARY *libname* for application *applicationname* version

majorversion.minorversion.microversion on platform *platformname*, CICS was unable to determine the validity of data set *dsname* for the reason shown in the message. Either the LOCATE macro, or the OBTAIN macro, failed with return code *rc*, or a CICS internal error was encountered.

System action

CICS continues with LIBRARY *libname* disabled. Programs will not be loaded from this LIBRARY.

User response

For the meaning of the LOCATE or OBTAIN return codes, see z/OS DFSMSdfp Advanced Services. In the case of an internal error, contact the IBM Support Center providing the CICS joblog output.

Module:
DFHLDLB2, DFHLDLB3

DFHLGnnnn messages

DFHLG0001	*applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname*.

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller

(for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If you cannot continue without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHLG0002	*applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action

An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot continue without the full use of module *modname,* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLGDM, DFHLGGL, DFHLGLD, DFHLGJN, DFHLGST

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHLG0004	*applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop,

you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname,* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently, but you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

DFHLG0104I   *applid* **System log (*journalname*) initialization has ended. Log stream *logstreamname* is connected to structure *structurename*.**

Explanation

This is an informational message indicating the end of system log initialization for the specified journal (either DFHLOG or DFHSHUNT).

The name shown as LOGSTREAMNAME(logstreamname) in the message is the name of the log stream associated with this journal. A value of '**************************' implies that it is a dummy log.

The name shown as STRUCTNAME(structname) in the message is the structure name of the log stream associated with this journal. A value of '****************' implies that it has no related structure, which means that either the log stream is a dummy log or of type DASDONLY(YES).

System action

Initialization continues.

User response

None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module:
DFHL2SLN

DFHLG0191	*subsys-name {CONVERTER | ALLOCATION} VERIFICATION HAS FAILED BECAUSE OF A {SEVERE ERROR | SYNTAX ERROR | MUTUAL EXCLUSION FAILURE}*

Explanation

A parse error was encountered while CICS was verifying the SUBSYS options of the application's JCL DD statement.

The message includes the following inserts:

- *subsys_name* - the installation defined subsystem name for the system logger.
- *CONVERTER* - the error was detected during MVS JCL conversion.

- *ALLOCATION* - the error was detected during MVS allocation processing.
- *SEVERE ERROR* - the parser encountered a severe error during its processing.
- *SYNTAX ERROR* - the statement failed the syntax check. MVS message ASA104I is issued specifying the keyword in error and acceptable keywords.
- *MUTUAL EXCLUSION FAILURE* - the parser encountered mutually exclusive keywords. MVS message ASA103I is issued specifying the keywords in error.

System action

If the error was detected during MVS JCL conversion, the job is not executed because of the JCL error.

If the error was detected during MVS allocation processing, the allocation request is rejected.

User response

Correct the SUBSYS= specification and resubmit the job.

Console and SYSPRINT

DFHLG0192	**ERROR IN MVS LOGGER MACRO** *macro_name* **FOR REQUEST** *request_type*. **MVS LOGGER CODES X'**X'**return-code" X'**X'**reason-code"**

Explanation

The CICS subsystem exit made a call to the MVS logger to access a log. This message gives the return code and reason code for that operation. Usually this message is issued only when the return code indicates an error in the MVS logger macro.

The message includes the following inserts:

- *macro_name* MVS logger macro
- *request_type* MVS logger macro REQUEST parameter
- *return-code* MVS logger macro return code
- *reason-code* MVS logger macro reason code.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

System action

The subsystem exit terminates the logstream read, and passes a return code back to the caller.

This message is followed by message DFHLG0193 which specifies the logstream. In some cases a dump is also produced.

User response

Use the MVS logger return and reason codes to diagnose the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLGSSI, DFHLGIGT

Destination

Console

DFHLG0193	*log-stream-name*

Explanation

This message gives the logstream referred to in the preceding DFHLG0192 message.

System action

See message DFHLG0192.

User response

See message DFHLG0192.

Module:
DFHLGSSI, DFHLGIGT

Destination

Console

DFHLG0194	ERROR DETECTED BY CICS SUBSYSTEM. *error-description* X'data1' X'data2' X'data3'

Explanation

The CICS subsystem exit detected an unexpected error. The error is described by the *error-description* and optional hex data fields.

In some cases a dump is also produced.

System action

The subsystem exit terminates the logstream read, and passes a return code back to the caller. If DELETE was specified as on option on the SUBSYS keyword then it will be ignored.

User response

Use the *error-description* to identify the cause of the error. A possible cause is an invalid logstream or invalid entries within a valid logstream; the CICS logger and DFHJUP work only with CICS logstreams containing CICS records for the appropriate release.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLGSSI, DFHLGIGT

Destination

Console

DFHLG0195	LOG GAP WARNING UP TO BLOCKID *X'data1'*

Explanation

The CICS subsystem exit made a call to the MVS logger to access a log stream using the IXGBRWSE macro but this received a return code of IXGRSNCODEWARNING (X'04') with a reason code of IxgRsnCodeWarningGap (X'0403'). The blockid is the ID of the next readable data in the log stream.

System action

The CICS subsystem exit continues to access the log. This message is followed by message DFHLG0196.

User response

For further guidance on the IxgRsnCodeWarningGap reason code see the z/OS MVS Programming: Assembler Services Reference ABE-HSP. Use the blockid and the timestamp reported in DFHLG0196 to investigate further if required. The warning may be the result of known activity that has deleted log data from the log.

Module:
DFHLGIGT

Destination

Console

DFHLG0196	STCK OF BLOCK AFTER GAP (*time format*): X'data1'

Explanation

This message is issued in association with message DFHLG0195. It provides the timestamp from the blockid header corresponding to the block read after the reported gap.

System action

See message DFHLG0195.

User response

See message DFHLG0195.

Module:
DFHLGIGT

Destination

Console

DFHLG0197	**The CICS LOGR subsystem has detected an error. This might be caused by incorrect JCL.**

Explanation

The CICS LOGR subsystem exit detected an unexpected error, which may be caused by incorrect JCL.

System action

The subsystem exit issues this message and continues processing.

User response

Check that DCB=BLKSIZE=32760 is coded against the logstream in the JCL for the failing batch job. More specifically, it must not be DCB=RECFM=VB. The following JCL fragment shows a valid specification: //LSN DD DSN=HGPRICE.IYK2Z9S1.DFHJ98, // DCB=BLKSIZE=32760, // SUBSYS=(LOGR,DFHLGCNV, // 'FROM=(2005/181,16:00:00),TO=(2008/181,16:30:00)')

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLGSSI, DFHLGIGT

Destination

Console

DFHLG0301	*date time applid* **An error has been detected for log stream** *stream* **for journal name** *journalname***. The journal status has been set to FAILED.**

Explanation

An error has been detected for log stream *stream* which is used by journal *journalname*.

System action

An exception entry is made in the trace table.

CICS marks the journal as failed and ends the associated connection with the log stream. Applications which attempt to use the journal receive an IOERROR response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

See the associated messages issued by CICS or the MVS system logger for more information and for guidance about appropriate recovery actions.

If journal *journalname* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of the journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces.

If you cannot continue without the full use of journal *journalname* you should bring CICS down in a controlled shutdown.

Destination

CRDI

DFHLG0501	*date time applid* **Log stream definition for** *stream* **suppressed by XLGSTRM user exit.**

Explanation

MVS log stream *stream* does not exist but could not be defined because the XLGSTRM user exit suppressed automatic installation.

System action

An exception entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications attempting to use the stream receive an error response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Define the log stream directly to the MVS system logger.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Module:

Destination

CRDI and Console

DFHLG0502	*date time applid* **Log stream** *stream* **defined to MVS using model stream** *model***.**

Explanation

MVS log stream *stream* did not exist and has been successfully defined to the MVS system logger using the attributes of model log stream *model*.

System action

An event entry is made in the trace table.

CICS connects and uses the newly defined log stream.

User response

None.

Module:

DFHLGST

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *stream*
5. *model*

Destination

CRDI

DFHLG0503　　*date time applid* **Log stream** ***stream*, using model stream *model*, not defined to MVS for reason X'rc'/X'reason'.**

Explanation

MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* for reason X'*rc*'/X'*reason*'.

X'*rc*' is the return code from the IXGINVNT macro and X'*reason*' is the reason code returned by the IXGINVNT macro. These are described in the z/OS MVS Programming: Assembler Services Reference ABE-HSP and in the IXGCON macro.

System action

An event entry is made in the trace table. The trace entry contains additional diagnostic information from the system logger answer area (IXGANSAA).

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream

is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

7. *X'reason'*

Destination

CSMT and Console

DFHLG0504　　*date time applid* **Log stream *stream* using model stream *model* not defined to MVS due to insufficient authority.**

Explanation

MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of insufficient authority.

To define a log stream CICS requires the following authority:

- ALTER authority to *stream* in the LOGSTRM class,
- UPDATE authority to *model* in the LOGSTRM class,
- UPDATE authority to resource IXLSTR.structure_name in the FACILITY class if the XLGSTRM exit supplies a structure name.

System action

An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

5. *model*

Destination

CSMT and Console

DFHLG0505　　*date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of an invalid HLQ parameter.**

Explanation

MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of an invalid high level qualifier (HLQ) parameter.

The HLQ parameter specifies the high level qualifier to be used for log stream data sets.

System action

An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the HLQ parameter in the *model* logger definition or the XLGSTRM exit, or both.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

5. *model*

Destination

CSMT and Console

DFHLG0506　　*date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of insufficient LOGR couple data set space.**

Explanation

MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of insufficient space in the MVS system logger's LOGR couple data set.

System action

An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Redefine the MVS system logger's LOGR couple data set to contain space for this log stream and for future requirements.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

5. *model*

Destination

CSMT and Console

DFHLG0507	*date time applid* **Log stream *stream* using model stream *model* not defined to MVS. Maximum number of streams reached.**

Explanation

MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because the maximum number of log streams for the coupling facility structure has been reached.

The maximum number of streams per structure is specified in the LOGSNUM parameter when defining a structure to the MVS system logger.

System action

An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Change the STRUCTNAME parameter in the *model* logger definition or the XLGSTRM exit to point to a structure that has room for more streams or delete unneeded streams from the current structure.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

5. *model*

Destination

CSMT and Console

DFHLG0511　　*date time applid* **Log stream** *stream* **using model stream** *model* **not defined to MVS because STRUCTNAME parameter missing in model.**

Explanation

MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because the model log stream definition does not contain the required STRUCTNAME parameter.

System action

An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Redefine the model log stream in the MVS system logger's LOGR couple data set using the IXCMIAPU utility ensuring the model stream definition contains the **STRUCTNAME(structure_name)** parameter to indicate which coupling facility structure is to be used for the log stream. Alternatively you can use the CICS exit, XLGSTRM, to supply the structure name to the MVS system logger.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Module:
DFHLGST

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *stream*
5. *model*

Destination

CSMT and Console

DFHLG0512	*date time applid* **Log stream *stream* cannot be used as both a system log and a general log.**

Explanation

MVS log stream *stream* cannot be used as both a system log and as a general log.

It is likely that a JOURNALMODEL resource definition has resulted in the same log stream name for a user journal as for the system log journal names (DFHLOG and DFHSHUNT).

Alternatively a system log stream name may have been specified in the ICF catalog as the forward recovery log stream for a VSAM data set.

System action

CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Review and correct your installed Journalmodels to ensure that the the same log stream is not used for system logs (DFHLOG and DFHSHUNT) as for other journals. Use the CEMT DISCARD JOURNALNAME() command to remove any journals that have been installed with the incorrect stream name.

Note:

If you change the Journalmodel definitions which apply to DFHLOG and DFHSHUNT, you will need to perform an initial start.

If the ICF catalog specifies the wrong stream name, use the IDCAMS ALTER command to correct it.

Module:
DFHLGST

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *stream*

Destination

CSMT

DFHLG0513	*date time applid* **Log stream *stream* has failed and new connections cannot be accepted.**

Explanation

MVS log stream *stream* has been marked as failed by a previous error. The stream cannot be used again until all current users of the stream have disconnected and the problem that caused the failure has been resolved.

System action

CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

CICS continues with attempting to quiesce usage of the log stream and will disconnect from the log stream.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

CICS should automatically quiesce usage of the log stream but if CEMT INQUIRE STREAM(*stream*) shows continued use of the log stream, you should investigate whether there are any long running transactions that are preventing the closure of files which use the log stream as a forward recovery log or autojournal.

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing the command SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

2. *time*
3. *applid*

4. *stream*

Destination

CSMT

DFHLG0514   *date time applid* **Log stream *stream* is in use by another CICS system.**

Explanation

MVS log stream *stream* is in use by another CICS region.

General log streams can be shared between CICS regions but each CICS region must have unique system log streams.

One of the following may have occurred:

- You are running two copies of the CICS region (same APPLID)
- A JOURNALMODEL resource definition has resulted in the same log stream name for a system log as for the system log journal names (DFHLOG and DFHSHUNT) for another CICS region.
- A JOURNALMODEL resource definition has resulted in the same log stream name for a user journal as for the system log journal names (DFHLOG and DFHSHUNT).
- A system log stream name may have been specified in the ICF catalog as the forward recovery log stream for a VSAM data set.

System action

CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Use the MVS console command DISPLAY GRS,RES=(DFHSTRM,*stream*) to find which other CICS region or regions are using the log stream,

Review and correct your installed Journalmodels to ensure that the the same log stream is not used for system logs (DFHLOG and DFHSHUNT as for other journals. Use the command CEMT DISCARD JOURNALNAME() to remove any journals that have been installed with the incorrect stream name.

Note:

If you change the Journalmodel definitions which apply to DFHLOG and DFHSHUNT, you will need to perform an initial start.

If the ICF catalog specifies the wrong stream name, use the IDCAMS ALTER command to correct it.

Destination

Console

DFHLG0742   *date time applid* **Log record too long for block. Record size *rsize* bytes. Block size *bsize* bytes. {MVS log stream | SMF journal} name.**

Explanation

The CICS log manager has detected an attempt to write a log record to an MVS logger log stream or SMF journal where the log record is too long to fit in the maximum block size allowed.

The message indicates the size of the log record and the maximum size of a block for that log stream. The size of the log record includes a CICS record header (up to 200 bytes for system log, 56 bytes otherwise) and any user prefix data. There must also be enough room in the block for a CICS block header (158 bytes for SMF, 52 bytes for system log, 40 bytes otherwise).

System action

An exception entry is made in the trace table. If the log stream is part of the CICS system log and the log record was not written by a user application or exit program then CICS is terminated. Otherwise an exception is passed back to the caller.

User response

First establish whether a log record of the indicated size is expected. If the log record was written by a user application or exit program using EXEC CICS WRITE JOURNALNAME or DFHJCJCX WRITE_JOURNAL_DATA, the program could be in error.

If the log record is correct, you should increase the block size for an MVS logger log stream by defining a larger block size for the structure that the log stream will use. For an SMF journal, the block size is fixed at 32756 bytes and cannot be changed.

System action

A system dump is taken. CICS continues processing but any tasks that enter dynamic backout are suspended indefinitely and remain inflight.

User response

Issue CEMT PERFORM SHUTDOWN to quiesce CICS via a normal shutdown. This lets as many transactions complete as possible. Refer to the explanations for messages DFHLG0736 and DFHLG0740.

Attempt to establish why transaction CSQC failed to quiesce CICS, and correct the problem. If the error condition persists, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLGQC

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHLG0760 *date time applid* **Log stream *lsn* not trimmed by keypoint processing. Number of keypoints since last trim occurred: *trimnum*. History point held by transaction: *transid*, task number: *trannum*.**

Explanation

The CICS log manager has been unable to trim the tail of MVS logger log stream *lsn*, during an activity keypoint.

CICS will attempt to trim the system log log streams during activity keypoint processing, to delete redundant data from the oldest end of the log stream (the tail).

Note that this message is only issued if the primary system log stream (DFHLOG) fails to be trimmed during a keypoint operation. It is not issued if a trim does not occur for the secondary system log stream (DFHSHUNT). This is since a trim of the primary system log stream is considerably more likely to occur per keypoint, and hence failures to trim the primary system log stream should be recognized, and investigated if required.

System action

CICS continues processing.

User response

This is an informational message, but should be treated as a warning of a potential problem if the number of keypoints that have been unable to trim the primary system log stream continues to increase. Occasional keypoints that fail to trim DFHLOG are not unexpected events. However, if the message is issued by a number of sequential keypoints then this warrants further investigation.

The keypoint operation was unable to trim the tail of DFHLOG because the oldest log records on the log stream belong to a Unit Of Work (UOW) that is still required. This may be a validly long-running UOW; alternatively, it may be part of a long-running task executing an application that generates log records but does not issue syncpoint requests regularly enough.

This may be a transient phenomenon due to an atypical long-running UOW. Review the number of keypoints that have been unable to trim the log. Check what message CICS issues for log stream *lsn* at the next activity keypoint. Message DFHLG0743 indicates the log stream is now successfully trimmed. Another DFHLG0760 message indicates a long-running UOW still exists on the system. If the log stream still cannot be trimmed, use the CEMT INQUIRE UOW command to review the oldest UOWs on the system.

The transaction identifier and the task number of the task whose UOW relates to the oldest data on DFHLOG are also provided in the DFHLG0760 message. The CEMT INQUIRE TASK command may be used to review them.

It is also worthwhile reviewing how often CICS is performing activity keypoints (as defined by the AKPFREQ system definition parameter).

Note - it may be possible that the task whose UOW relates to the oldest data on DFHLOG is no longer present in the system, typically if it was executing under an open TCB and happened to complete its syncpoint while the keypoint task was determining the history point for the log stream. If this is the case then the message inserts for the transid and trannum will show as question marks (????). The log data for this completed UOW will be eligible for deletion at the next keypoint.

Module:
DFHL2CHE

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *lsn*
5. *trimnum*
6. *transid*
7. *trannum*

Destination

CSMT

DFHLG0761　　*date time applid* **Task number *trannum* running transid *transid* has prevented *trimnum* activity keypoints from trimming the System Log.**

Explanation

The CICS log manager has been unable to trim the tail of the System Log log stream during *trimnum* activity keypoints.

Message DFHLG0760 has been issued for each keypoint which was prevented from performing the trim operation.

System action

CICS continues processing.

User response

This is an informational message, but should be treated as a strong warning of a potential problem as CICS only issues this message after 100 keypoints have failed to trim the log stream. CICS will issue this message again every 10 keypoints until a keypoint successfully trims the log stream.

The keypoint operation was unable to trim the tail of DFHLOG because the oldest log records on the log stream belong to a Unit Of Work (UOW) that is still required. This may be a validly long-running UOW; alternatively, it may be part of a long-running task executing an application that generates log records but does not issue syncpoint requests regularly enough.

As well as consuming excessive log stream resources the task may be consuming other system resources such as CICS or database locks and Coupling Facility storage. Excessive consumption of such resource may cause application or system-wide problems.

The transaction identifier and the task number of the task whose UOW relates to the oldest data on DFHLOG are also provided in the DFHLG0760 message. The CEMT INQUIRE TASK command may be used to review them.

It is also worthwhile reviewing how often CICS is performing activity keypoints (as defined by the AKPFREQ system definition parameter).

DFHLG0771	*date time applid* **A temporary error condition occurred during MVS logger operation** *{IXGCONN	IXGWRITE	IXGBRWSE	IXGDELET	IXGQUERY } {CONNECT	DISCONNECT		START	READCURSOR	READBLOCK	END	ALL	RANGE}* **for log stream** *lsn*. **MVS logger codes:** *X'ret'*, *X'rsn'*.

Explanation

The CICS log manager made a call to the MVS logger to access a log, which returned a temporary error condition. The MVS logger operation that returned the error condition is identified in the message. The return and reason codes shown are those returned by the MVS logger.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

System action

The log manager automatically retries the operation while the temporary error condition persists. This message is issued every thirty seconds following the first/previous issue.

User response

None. This is a temporary condition.

Module:
DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

    7=END,

    8=ALL,

    9=RANGE

6. *lsn*

7. *X'ret'*

8. *X'rsn'*

Destination

CSMT

DFHLG0772	*applid* **An error has occurred during z/OS logger operation *{IXGCONN	IXGWRITE	IXGBRWSE	IXGDELET	IXGQUERY } {CONNECT	DISCONNECT		START	READCURSOR	READBLOCK	END	ALL	RANGE	CHECKCONNSTATUS(YES)}* for log stream *lsn*. z/OS logger codes: *X'ret'*, *X'rsn'*. Log stream attributes: SYSTEMLOG(*{YES | NO}*), DASDONLY(*{YES | NO}*), STRUCTNAME(*structname*), RETPD(*X'retpd'*), AUTODELETE(*{YES | NO}*).**

Explanation

The CICS log manager made a call to the z/OS logger to access a log, which returned an error condition. The z/OS logger operation that returned the error condition is identified in the message, and the return and reason codes shown are those returned by the z/OS logger. This is followed by some of the attributes which define the log stream. A structure name of *****************" indicates that no structure is being used by this log stream.

If the error occurred during a log stream connection, these attributes may not have been updated to the correct values for the log stream and should be ignored. These attributes are only valid following a successful connection.

This message may be followed by other CICS messages, especially if the log stream is part of the CICS system log.

This situation can occur when CICS calls the z/OS logger using an obsolete log stream connection token, when the z/OS logger has been restarted following either a crash or a user request. A restart of the z/OS logger implicitly disconnects all connections to it.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

Note: a reason code of x'0000085D' means an IxgRsnCodeWowError has been returned from the z/OS Logger. The coupling facility structure space allocated for this log stream is full or the staging data set space is full. Attempts to offload the interim storage data to DASD failed because of severe errors. No further write requests can be processed until the offload error condition is cleared.

Note: a reason code of x'00000804' means an IxgRsnCodeNoBlock has been returned from the z/OS Logger. For an IXGDELET request against the CICS system log, CICS continues as normal despite this error. This is the best option, as unless there is the need to read the missing block(s) in the future for a dynamic transaction backout or system restart, the missing data is not required by CICS.

System action

An exception entry is made in the trace table, and in some circumstances, a system dump is taken.

The log manager returns an exception condition.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If the z/OS logger was recently restarted, AUTO start CICS. Otherwise use the MVS logger return and reason codes to diagnose the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Check the log for message IXG301I to determine the cause of the error. For general logstreams, you will most likely need to increase the size of the staging data set and then restart your CICS region or delete records from your general log streams.

DFHLG0773	*applid* **A severe error (code *X'code'*) has occurred while accessing (*{IXGCONN | IXGWRITE | IXGBRWSE | IXGDELET } {CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE}*) the log stream *lsn*.**

Explanation

The CICS log manager has detected a severe error while attempting to access a log. The code X'*code*' is the exception trace point ID which uniquely identifies where the error was detected. This message is preceded by DFHLG0001, and usually followed by other messages.

System action

An exception entry is made in the trace table. A system dump will have been taken by DFHLG0001. The log manager returns a disaster condition to the caller. If the log is the CICS system log, a forward recovery log or autojournal log, another message is issued. Otherwise a disaster condition is returned to the application program.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Refer to other messages following this message for more information and guidance.

If the error condition persists, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:

    7=END,

    8=ALL,

    9=RANGE

5. *lsn*

Destination

Console

DFHLG0774	*applid* **The MVS logger has returned an alert during operation *{IXGCONN CONNECT | IXGWRITE }*for logstream *lsn*. The log stream data set directory is full. MVS logger codes: *X'ret' X'rsn'*.**

Explanation

The CICS log manager has detected a warning while attempting to access a log stream. The log stream's data set directory is full.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

System action

An exception entry is made in the trace table.

CICS continues normal operation until the current data set of the log stream becomes full. When this happens message DFHLG0772 is issued.

User response

You should delete data from the log stream tail before the current data set fills up. You may wish to take a copy of the data before deleting it. Alternatively you could use a new log stream, but this may be too disruptive.

Module:
DFHL2HS2, DFHL2HSF

5. *X'rsn'*

Destination

Console

DFHLG0775	*applid* **The MVS logger has returned an alert during operation *{IXGCONN CONNECT | IXGWRITE }*for log stream *lsn*. The log stream writer offload task is failing. MVS logger codes: *X'ret' X'rsn'*.**

Explanation

The CICS log manager has detected a warning while attempting to access a log stream. The writer offload task for the log stream is failing.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

System action

An exception entry is made in the trace table.

CICS can continue normal operation until the log stream's structure becomes full. When this happens DFHLG0772 is issued.

User response

You should investigate and fix the failing log stream writer offload task, which is part of the MVS logger, before the log stream structure in the coupling facility fills up.

Module:
DFHL2HS2, DFHL2HSF

XMEOUT parameters/Message inserts

1. *applid*
2. Value chosen from the following options:

    1=IXGCONN CONNECT,

    2=IXGWRITE

4. *X'ret'*

5. *X'rsn'*

Destination

Console

DFHLG0776	*applid* **The MVS logger has returned an alert during operation IXGWRITE for log stream** *lsn*. **The log stream staging data set has failed. MVS logger codes:** *X'ret' X'rsn'*.

Explanation

The CICS log manager has detected an alert while attempting to access a log stream. The log stream staging data set has failed.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

System action

An exception entry is made in the trace table.

CICS continues normal operation, but the data written to the log stream structure is not being duplexed. Consequently, if the structure (or coupling facility) fails, the data cannot be recovered.

User response

You are recommended to shutdown CICS as soon as possible. You should investigate and fix the failing log stream, without losing the data.

If the failing log stream is the CICS system log and CICS was shutdown immediately, you should emergency restart CICS in order to recover the inflight transactions.

Module:
DFHL2HSF

6. *X'rsn'*

Destination

Console

DFHLG0778	*applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn*. **CICS does not have authority to perform this operation. MVS logger codes:** *X'ret' X'rsn'*.

Explanation

The CICS log manager has detected an error while attempting to access a log stream. CICS region userid has not been defined to the MVS logger with the authority to perform this operation.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

System action

An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response

Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Ensure that the CICS region userid has authority to access the log stream. For further guidance, see the CICS Security.

Module:
DFHL2HS2

XMEOUT parameters/Message inserts

4. *X'rsn'*

Destination

Console

DFHLG0779	*applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn*. **The log stream is being deleted by another program. MVS logger codes:** *X'ret' X'rsn'*.

Explanation

The CICS log manager has detected an error while attempting to access a log stream. The log stream is being deleted by a request from another program and CICS cannot connect to it until this program has finished.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

System action

An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log stream is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response

Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

You will need to understand why another program was deleting the log stream. Either prevent such a conflict from occurring in the future, or allocate a different log stream to CICS.

Module:
DFHL2HS2

XMEOUT parameters/Message inserts

1. *applid*

2. *lsn*

3. *X'ret'*

4. *X'rsn'*

Destination

Console

| DFHLG0780 | *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *lsn*. Some data previously written to this log stream has been lost. MVS logger codes: *X'ret' X'rsn'*.** |

Explanation

The CICS log manager has detected an error while attempting to access a log stream. Some of the data written to this log stream has been permanently lost.

This message is issued only if the log stream is a general log (not a CICS system log).

For more information about the IXGCONN macro, including return and reason codes, see IXGCONN - Connect/disconnect to log stream in z/OS MVS Programming: Assembler Services Reference .

System action

An exception entry is made in the trace table.

The log manager returns an exception condition to the caller.

User response

This log stream is a general log, therefore it must be deleted and redefined before it can be used by CICS again.

If the log stream is used as a forward recovery log, take a fresh backup of all data sets that use this log stream as soon as possible.

If the log stream is used as a user journal, the associated journal needs to be reenabled before it can be used again. To do this, issue the command

```
SET JOURNALNAME(...) RESET
```

Use the MVS logger return and reason codes to further diagnose the problem.

DFHLG0784	*applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *lsn*. You cannot connect to a DASDONLY log stream that is already connected to another MVS image. MVS logger codes: X'ret' X'rsn'.**

Explanation

The CICS log manager has detected an error while attempting to access a log stream. The MVS logger rejected the connect request because the log stream is of type DASDONLY and is already connected to another MVS image.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

System action

An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response

Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Log streams of type DASDONLY were designed to work within the scope of a single MVS image only (although the MVS image itself can still be part of a sysplex).

The possibilities are;-

- The connect request is using the wrong log stream name.
- The current connection is using the wrong log stream name.
- The log stream was wrongly defined as being of type DASDONLY.

Module:

Console

DFHLG0787	*applid* CICS is attempting to read a blockid that does not belong to the current chain. Read blockid: *X'blkid1'*; Chain History Point: *X'blkid2'*.

Explanation

The requested blockid is a lower relative number than the Chain History Point blockid, which means the CICS log manager has requested a block which was written earlier than the current logical start of the chain. This indicates an internal logic error within CICS.

The blockid of the requested block, and the blockid representing the Chain History Point for the log block chain in question, are shown in the message.

System action

An exception entry is made in the trace table and a system dump is taken, and the CICS log manager returns an exception condition.

If the failure occurred while CICS was reading from the system log, message DFHLG0736 will follow, and a quiesce of CICS will be initiated.

User response

The logstream should be printed before CICS is restarted, using the DFHJUP utility. For guidance in using this, refer to the Administering CICS.

Note:

If the failure occurred for the CICS system log, print both the primary and secondary CICS system log logstreams before restarting CICS.

Refer to any messages issued subsequently for further guidance.

If the error condition persists, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Destination

CSMT

DFHLG0800   *applid* **The MVS logger failed to locate a blockid requested by the CICS log manager. Missing blockid: X'blkid1'; Chain History Point: X'blkid2'.**

Explanation

The MVS logger has returned an IxgRsnCodeNoBlock (00000804) Reason Code to the CICS log manager. This means that the log block requested by CICS could not be located by the MVS logger.

The blockid of the requested block, and the blockid representing the Chain History Point for the log block chain in question, are shown.

System action

This is an informational message to provide the blockid of the missing block, and the blockid of the Chain History Point for the chain which should contain the requested block.

This message will have been preceded by message DFHLG0772. An exception trace was written and a system dump taken.

If the failure occurred while CICS was reading from the system log message DFHLG0736 will follow, and a quiesce of CICS will be initiated.

User response

Compare the requested blockid with the Chain History Point blockid. If the requested blockid is equal to, or a higher relative number than, the Chain History Point, the blockid represents a log block which CICS is still validly interested in and which should be available from the MVS logger.

If the requested blockid is a lower relative number than the Chain History Point blockid, then the CICS log manager has requested a block which was written earlier than the current logical start of the chain. This indicates an internal logic error within CICS.

The logstream should be printed before CICS is restarted, using the DFHJUP utility. For guidance in using this, refer to the Administering CICS. Note if the failure occurred for the CICS system log then print both the primary and secondary CICS system log logstreams before restarting CICS.

Refer to any messages issued subsequently for further guidance.

If the error condition persists, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Console

DFHLG0801	*applid* **The MVS logger has detected an expired stream token on a disconnect operation. CICS treats the disconnect as successful.**

Explanation

The MVS logger has returned an IxgRsnCodeExpiredStmToken (0000082D) Reason Code to the CICS log manager.

System action

This is an informational message. CICS treats the disconnect as successful.

User response

None.

Module:
DFHL2HS3

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHLG0802	*applid* **An error has occurred during z/OS Logger operation {IXGCONN | IXGWRITE | IXGBRWSE | IXGDELET | IXGQUERY } {CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE**

\| CHECKCONNSTATUS(YES)} for log stream *lsn*. z/OS Logger codes: *X'ret'*, *X'rsn'*. Log stream attributes: SYSTEMLOG({*YES \| NO*}), DASDONLY({*YES \| NO*}), STRUCTNAME(*structname*), RETPD(*X'retpd'*), AUTODELETE({*YES \| NO*}).

Explanation

The CICS log manager made a call to the z/OS Logger to access a log, which returned an error condition. The z/OS Logger operation that returned the error condition is identified in the message, and the return and reason codes shown are those returned by the z/OS Logger. This is followed by some of the attributes which define the log stream. A structure name of ****************" indicates that no structure is being used by this log stream.

If the error occurred during a log stream connection, these attributes may not have been updated to the correct values for the log stream and should be ignored. These attributes are only valid following a successful connection.

This message may be followed by other CICS messages, especially if the log stream is part of the CICS system log.

For further guidance, see the z/OS MVS Programming: Assembler Services Reference ABE-HSP.

Note: a reason code of x'00000404' means an IxgRsnCodeDisconnectInProgress has been returned from the z/OS Logger. CICS has been disconnected from the log stream and the stream token is no longer valid, however the disconnect request is being completed asynchronously by the z/OS Logger. This response can be returned if a coupling facility structure rebuild is taking place when the disconnect is issued.

System action

An exception entry is made in the trace table. No system dump is taken.

The log manager returns an exception condition.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

None.

DFHLMnnnn messages

DFHLM0001	*applid* **An abend (code *abcode*) has occurred at offset *X'offset'* in module *modname*.**

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

1=YES,

2=NO

Destination

Console

DFHLG0803	*applid* **The z/OS logger has detected an expired stream token on an operation against a CICS system log logstream.**

Explanation

The z/OS logger has returned an IxgRsnCodeExpiredStmToken (0000082D) Reason Code to the CICS log manager. The token invalidation may be the result of an IXGLOGR region failure, for example.

System action

CICS has to terminate and reconnect to the logstream during the next startup. An emergency restart will ensure any inflight work is backed out in a coordinated manner.

User response

This is an informational message. Refer to earlier message DFHLG0772 for further details of the z/OS logger operation and logstream which returned the IxgRsnCodeExpiredStmToken Reason Code.

Module:
DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ, DFHL2HB

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

The code *abcode* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If there is an MVS code, look it up in the relevant MVS codes manual which is detailed in the book list in the front of this manual. Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

Destination

Console

DFHLM0002   *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the Troubleshooting and support.

System action

An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHLM0004	*applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHLMDM, DFHLMDS, DFHLMIQ, DFHLMLM

XMEOUT parameters/Message inserts

1. *applid*
2. *X'offset'*
3. *modname*

Destination

Console

DFHLM0006	*applid* **Insufficient storage to satisfy Getmain (code *X'code'*) in module *modname*. MVS code *mvscode*.**

Explanation

An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request. The code X'*code*' is the exception trace point id which uniquely identifies the place where the error was detected.

This error has occurred above the 16M line.

The code *mvscode* is the MVS GETMAIN return code.

System action

An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS

down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try decreasing the overall size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the Configuring or the Improving performance for further information on CICS storage.

Module:

DFHMCnnnn messages

DFHMC4000	CICS SYNAD EXIT TAKEN FOR *dscname*, INPUT MSG TRUNCATED.

Explanation

This message is issued when the SYNAD exit is taken for an input queue. *dscname* represents the DSCNAME.

System action

The DCB is closed and then opened again. The data is truncated to the specified block size and passed to the user.

User response

Increase the block size or reduce the length of input.

Module:
MVS data management determines the problem. This message is issued from the CICS-provided SYNAD routine generated in the terminal control table (TCT).

Destination

Console

DFHMC4001I	*date time applid* Error purge delay inoperative, *{transid | invalid req | unexpected}* error

Explanation

An error return code has been received from the interval control program (ICP) during initiation of the purge delay transaction, CSPQ.

The return code is caused by one of the following.

- A TRANSID error.
- An INVALD REQ error.

- An UNEXPECTED error.

System action

Purge delay does not operate for this execution of CICS. A dump is taken.

User response

- For a TRANSID error, define transaction CSPQ.
- For an INVALD REQ, the ICP returned an INVALID REQUEST return code in response to the INITIATE request. Determine why this has occurred and correct the problem.
- For an UNEXPECTED error, the ICP returned an unrecognized error code in response to the INITIATE request. The error code can be found in the dump at label MCPINERR in program DFHMCP. Determine why this has occurred and correct the problem.

DFHME0001　　　　*applid* **An abend (code *xxx/yyyy*) has occurred at offset *X'offset'* in module *modname*.**

Explanation

An abnormal end or program check has occurred in module *modname*.

The code *xxx/yyyy* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code (for example AKEA) or a number referring to a CICS message (for example 1310 refers to CICS message DFHTS1310).

System action

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Since the abend affects the national language modules in the message (ME) domain, CICS is not automatically terminated. However, you may decide that your system should not be allowed to run without these modules, in which case you need to bring CICS down.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in this manual. Look up the CICS alphanumeric code in this manual. This code tells you, for example, whether the error was a program check, an abend, a runaway, or a recovery percolation.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

Console

DFHME0002　　　　*applid* **An error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point id which uniquely identifies the place where the error was detected.

System action

A bad return code is sent to the caller of the message (ME) domain. If the call is made by the domain manager, DFHDMDM, CICS is terminated by the domain manager, and a message is issued to this effect. However, if the message is issued by a message domain module, CICS is allowed to continue.

An exception entry is made in the trace table. For further information about CICS exception trace entries, refer to the Troubleshooting and support.

A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer as this message indicates a severe error in CICS code. Its impact may or may not be severe, depending on the circumstances. For example, if it only occurs once and CICS has not been terminated by the domain manager, you may decide to continue to run and bring CICS down at a convenient time. But if the message recurs or if you cannot run without the full use of all CICS messages, you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEDM, DFHMEME, DFHMESR, DFHMEWT

Destination

Console

DFHME0004　　　　*applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System action

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. This situation may not be an error, or if it is an error it may not be critical, so CICS is not terminated immediately, even if you have specified **terminate** in the dump table. CICS will purge the runaway task if you have specified this in the SIT.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This error affects message generation, and the message (ME) domain does not automatically terminate CICS. You should decide whether the problem is serious enough to bring CICS down.

Since some transactions can use a lot of CPU time, this message may have been caused by a long-running transaction. Usually, CICS terminates a task which it considers to be a runaway task. It does this termination when the task exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds).

If you have declared ICVR=0, you have to terminate the task yourself if you consider that it has gone into a loop. Purge the task using the CEMT transaction.

If CICS has purged the task and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time in order to do this.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEDM, DFHMESR, DFHMEME

Console

DFHME0006	*applid* **Insufficient storage to satisfy GETMAIN (code *X'code'*) in module *modname*. MVS code *mvscode*.**

Explanation

An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request. The code X'*code*' is the exception trace point ID which uniquely identifies the place in the code where the error occurred. The code *mvscode* is the MVS GETMAIN return code.

System action

An exception entry is made in the trace table with code X'*code*'. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated immediately, even if you have specified **terminate** in the dump table. However, if this error indicates a general problem with storage, CICS could be abnormally terminated by the CICS storage manager. A message will be issued to this effect.

If the GETMAIN fails for DFHMEDM, a return code is sent to the domain manager, DFHDMDM, and CICS is terminated by the domain manager. A message is issued to this effect.

If the GETMAIN fails for the message domain DFHMEME, it could occur in one of four places. The code X'*code*' indicates which GETMAIN has failed as follows:

Code
    Meaning

X'0340' -

    During formatting of TD message

    The message is not issued.

X'0341' -

    During build of message

    The message is not issued.

X'0342' -

    While building user exit parameters

    The message is issued to its original destination.

X'0343' -

    During rebuild of message in English

    The rebuilt English message is not issued.

X'0344' -

    While building the symptom record.

X'0345' -

    During the build of a system event parmater list.

X'0346' -

> During the build of message inserts for a system event.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If CICS is terminated, look out for the relevant termination messages from the storage manager or the domain manager and the user response suggested.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. You will need to bring CICS down to do this, if it has not already been terminated.

The problem may be a temporary one which rights itself if more storage becomes available. If CICS is still running, and you can manage without the full set of CICS messages, you may decide to continue and bring CICS down at a convenient time.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual.

Module:
DFHMEDM, DFHMEME

Destination

Console

DFHME0101	*applid* **An error (code *X'code'*) occurred while writing message *msgno* to transient data queue *queue*.**

Explanation

CICS has tried to write message *msgno* to the transient data queue *queue*. This has failed for one of the following reasons:

1. Queue *queue* does not have an installed resource definition.
2. Queue *queue* is currently disabled.
3. The transient data queue *queue* is full.
4. An I/O error has occurred writing to queue *queue*.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action

An exception entry is made in the trace table and CICS continues.

User response

Check that *queuq* is defined to CICS and that the resource definition is installed.

If (1), create and install a TDQUEUE resource definition for queue *queue*. Alternatively, if *msgno* is a DFHDB2xxx message, change any of the msgqueue1, msgqueue2 and msgqueue3 parameters of the installed DB2CONN resource definition that specify queue *queue* so that they name a valid transient data queue.

If (2), use CEMT to reset the status of the queue to 'enabled'.

If (3), allocate more space for the queue, or reset the trigger level (if messages are being issued to a terminal or printer).

If (4), investigate and fix the cause of the I/O error.

Module:
DFHMEME

Destination

Console

DFHME0102	*applid* **An error (code *X'code'*) has occurred in module *modname* while producing message *msgno*.**

Explanation

A severe error has been detected and the message (ME) domain has been unable to produce message *msgno*. The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action

A return code is sent to the caller of the message (ME) domain, but since the call was made by a message domain module, CICS is allowed to continue.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer as this indicates a severe error in CICS code. However, its impact may not be serious. For example, if the error only occurs once and you can run without message *msgno*, you may

continue to run and bring CICS down at a convenient time.

However, if the message recurs (and on each recurrence there is a different message number *msgno*), or if you cannot run without the full use of all CICS messages, you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEBU, DFHMEIN, DFHMEWT, DFHMEME

Console

DFHME0103   *applid* **Insufficient 64-bit storage to load module** *modname.*

Explanation

The message language module *modname* cannot load as there was insufficient 64-bit storage available. The language module is defined in the SIT for messages in a particular language, or is the default language module.

The default language is always used for messages sent to transient data queues and to consoles (unless it is a double-byte language when the message is sent to the console in English). If the default language module cannot load, no messages can be delivered. Terminals can have messages in the default language or in another chosen language. If the chosen language module cannot load, terminal messages use the default language instead.

System action

An exception entry is made in the trace table and a dump is taken, unless you specifically suppressed dumps in the dump table. This situation might not be critical, so CICS is not terminated unless the default language module cannot load, (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages to terminals. If the default language module cannot load, a return code is sent to the domain manager which terminates CICS.

User response

If the default language is in use and this is acceptable, you do not need to bring CICS down, or you can bring CICS down at a more convenient time.

If the default language is in use but this is not acceptable, or if the default language module itself is missing, bring CICS down amd increase the z/OS MEMLIMIT parameter.

Alternatively, remove unwanted language modules from storage to obtain more storage space. To do this, bring CICS down and either remove the language codes you do not need from the SIT, or respecify the list of language modules as an override parameter. Then restart CICS.

Note:

You should not remove the default language module from the SIT.

Module:

Destination

Console

DFHME0105   *applid* **Insufficient storage to load module** *modname.*

Explanation

An MVS load has failed. The message language module *modname* could load as there was insufficient storage available. The language module is defined in the SIT for messages in a particular language, or is the default language module.

The default language is always used for messages sent to transient data queues and to consoles (unless it is not a double-byte language, when the message is sent to the console in English). If the default language module cannot load, no messages can be delivered. Terminals can have messages in the default language or in another chosen language. If the chosen language module cannot load, terminal messages use the default language instead.

System action

An exception entry is made in the trace table and a dump is taken, unless you specfically suppressed dumps in the dump table. This situation might not be critical, so CICS is not terminated unless the default language module cannot load (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages to terminals. If the default language module cannot load, a return code is sent to the domain manager, which terminates CICS.

User response

If the default language is in use and this is acceptable, you do not need to bring CICS down, or you can bring CICS down at a more convenient time.

If the default language is in use but this is not acceptable, or if the default language module itself is missing, try decreasing the size limits of the DSAs or EDSAs. Or you could try increasing the size of the whole region, if it is not already at maximum size.

Alternatively, remove unwanted language modules from storage to obtain more storage space. To do this, bring CICS down, remove the language codes you do not need from the SIT or respecify the list of language modules as an override parameter, and restart CICS.

Note:

You should not remove the default language module from the SIT.

Console

| DFHME0106 | *applid* **Module** *modname* **could not be loaded. REGISTER 1 = X'nnnnnnnn' and REGISTER 15 = X'nnnnnnnn'** |

Explanation

The message language module *modname* could not be loaded. The reason that it could not be loaded is given by the contents of registers 1 and 15, which are returned by MVS.

System action

If the missing module is not the default language module, CICS uses the default language for messages.

If the default language module is missing, a return code is sent to the domain manager and CICS is terminated.

An exception entry is made in the trace table and a dump is taken, unless you have specifically suppressed dumps in the dump table. As this may not be a critical problem, CICS is not terminated unless the default language module cannot be loaded (even if you have specified **terminate** in the dump table).

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If the default language is in operation and this is acceptable, you need not bring CICS down, or you may do so at some convenient time.

If the default language is in operation and this is not acceptable, or if the default language module itself is missing, consult the MVS messages and codes manual to check the return codes displayed in the message. The return codes indicate why the module could not be loaded.

Module:
DFHMEDM

Destination

Console

| DFHME0107 | *applid* **Module** *modname* **cannot be found in the library.** |

Explanation

The message load module *modname* was not found in the library defined in the JCL for the CICS job. This load module is a language module for messages. It is either a module which has been defined in the SIT for messages in a particular language, or it is the default language module.

The default language is always used for messages sent to transient data queues and to consoles (providing that it is not a double-byte language, in which case the message is sent to the console in English). If the default language module is missing no messages can be delivered.

Terminals can have messages in the default language or in another chosen language. If the chosen language module is missing, terminal messages use the default language instead.

System action

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this may not be a critical error, CICS is not terminated immediately, even if you have specified this in the dump table, unless the default language module is missing, (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages. If the default language module is missing, a return code is sent to the domain manager and CICS is terminated.

User response

This error could have occurred because of a problem in a library or in the SIT. If the default language is in operation and this is acceptable, you need not bring CICS down, or you may do so at some convenient time.

The missing module may have been placed in the wrong library, or the wrong or misspelled module name may have been used in the right library.

If the default language is in operation and this is NOT acceptable, link the missing module into the library defined in the JCL for your CICS job by correcting whichever of the problems has occurred. You have to bring CICS down to do this.

It is also possible that an incorrect or misspelled language code has been used in the SIT. In this case, you have to bring CICS down, reinstall your chosen language code as a system initialization parameter, and restart CICS.

If you no longer need this language module, you should remove it from the SIT at the next convenient opportunity.

If the default language module is missing, CICS is terminated by the domain manager. You need to discover whether the fault is in the library or the SIT and follow the appropriate procedure above.

If the missing module is called CJDMCT1x (where x is 'E', 'K' or 'C') then the SEYUAUTH dataset must be added to the CICS region's STEPLIB concatenation.

Module:
DFHMEDM

Destination

Console

DFHME0108	*applid* **Message** *msgno* **cannot be found in module** *modname*.

Explanation

Message *msgno* should have been delivered, but was not found in message language module *modname*.

This module is the national language module specified in the SIT by the user which gives messages in a chosen language.

System action

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue to run without message number *msgno*.

Note that this message will appear after maintenance has been applied to the CICS message domain if there are older, pre-maintenance, versions of the DFHMETxl message modules elsewhere in the STEPLIB concatenation.

If you have just applied maintenance and are encountering this message, check for, and remove, older versions of the message modules in the STEPLIB concatenation.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEIN

Destination

Console

DFHME0109	*applid* **Message set** *setname* **could not be found in module** *modname* **while producing message** *msgno*.

Explanation

Message set *setname* was not found in the message language module *modname*.

The *setname* is the first two characters after the DFH in CICS messages (for example, LD or 21), which is followed by the message number.

System action

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This indicates an error in CICS code. However, its impact may not be severe. For example, the error

may only occur once, or you may decide to continue without message number *msgno*.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEIN

Destination

Console

DFHME0110	*applid* **Optional value *nn* is missing from insert *ii* for message *msgno*.**

Explanation

Optional insert value *nn* was requested for insert *ii* on a call to the message domain but could not be found in the definition template for message *msgno*.

System action

CICS delivers the message with *???* in place of the insert *ii* as it cannot resolve which optional value has been requested for the insert.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEBU

Destination

Console

DFHME0111	*applid* **Insert *ii* is missing for message *msgno*.**

Explanation

Insert *ii* is required for message *msgno*. The insert was not found.

System action

CICS delivers the message with *???* in place of the missing insert *ii*.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEBU

Destination

Console

DFHME0112	*applid* **Insert number *ii* is invalid for message *msgno* (code *X'code'*).**

Explanation

Insert *ii*, supplied on the call to the message (ME) domain, was invalid. For example, it may have been a decimal insert with a length greater than 4 bytes.

The code X'*code*' uniquely identifies the occurrence of the invalid insert.

System action

CICS delivers the message with *???* in place of the invalid insert *ii*.

An exception entry with code X'*code*' is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates an error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno* being produced.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:

Console

DFHME0113	*applid* **Incorrect parameters used in call to DFHMEME for message *msgno*.**

Explanation

A call to the message (ME) domain for message *msgno* was made with a combination of parameters that is not valid.

System action

An exception entry is made in the trace table. A dump is taken, unless you specifically suppressed dumps in the dump table.

CICS is not terminated, even if you specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure that you load the correct message language module. That is, ensure that you specify the

correct language in the NATLANG system initialization parameter and that the library concatenation that your CICS job accesses contains the correct message language module.

This message indicates a severe error in CICS code, but its impact may not be serious. For example, the error might occur only once, or you might decide to continue without message *msgno*.

If the problem persists, contact your IBM Support Center. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEME

Destination

Console

DFHME0114	*applid* **There are no destinations specified for message *msgno***

Explanation

There was no destination *destid* specified in the message language module for message *msgno*. This error could occur if the message language module has been corrupted or is not at the correct release level.

System action

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated even if you have specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno* being produced. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEIN

Destination

Console

DFHME0115   *applid modname* **Message module for language** *language* **not found. The default module** *modnameb* **is used.**

Explanation

Cannot find essage language module *modname* for the national language *language* in the list of available modules. A CICS program has called for a message in a particular language from the message domain, but the message domain cannot locate the message in that language.

The message language module might be unavailable because the LOAD for the appropriate message language module failed at initialization. In this situation, there will be an earlier message about the failed LOAD. Alternatively, the module might be unavailable because the language specified on the terminal or userid definition was not specified in the SIT or was specified incorrectly.

System action

An exception entry is made in the trace table. A dump is taken, unless you specifically suppressed dumps in the dump table. This situation might not be critical, so CICS is not terminated, even if you specified **terminate** in the dump table.

All messages that should appear in language *language* in module *modname* appear in the system default language *modnameb* instead.

User response

Your action depends on whether it is acceptable to use the default language for messages. If it is acceptable, CICS can continue to run and you can resolve the problem at a convenient time. You might need to change a terminal or userid definition if that is the cause of the problem.

If it is not acceptable to use the default language, and if module *modname* failed to load at initialization, refer to the earlier message about the failed LOAD for the action to take.

Otherwise, bring CICS down and specify module *modname* in the SIT or respecify the list of language modules as an override parameter. Then restart CICS.

Module:
DFHMEIN

Destination

Console

DFHME0116   *applid* **(Module:***modname***) CICS symptom string for message** *msgno* **is** *symstring*

Explanation

Message *msgno* has been issued as the result of a possible CICS error.

Symptom string *symstring* has been produced to provide additional diagnostic information for IBM support.

System action

This message accompanies message *msgno* and has no effect on the system action. The system action is that stated in message *msgno*.

User response

Refer to the user response of message *msgno* which provides the necessary information to determine if the error is serious enough to be reported to IBM Support.

Module:
DFHMEME

XMEOUT parameters/Message inserts

1. *applid*
2. *modname*
3. *msgno*
4. *symstring*

Destination

Console

DFHME0117   *applid* **The Message User Exit point XMEOUT is unavailable for message** *msgno*

Explanation

The message (ME) domain cannot use the message user exit point 'XMEOUT' when processing message *msgno*. The exit point was probably invoked too early

in CICS initialization. The user exit service mdouel, DFHAPEX, returns a response of KERNERROR to the message (ME) domain.

System action

This error is not severe, so te message (ME) domain continues processing. severe. The message user exit does not suppress or reroute the message *msgno*. It is issued to the original destination defined for message *msgno*.

User response

No action required. You cannot suppress message *msgno* because the error has occurred too early in initialization.

Module:
DFHMEME

Destination

Console

DFHME0118	*applid* **An error has occurred when calling the Message User Exit for message *msgno***

Explanation

The message (ME) domain has received an incorrect response from DFHAPEX, the program that invoked the message user exit.

System action

The error is not severe, so the message (ME) domain will continues processing. The message *msgno* which the message (ME) domain attempted to produce is not suppressed or rerouted but is issued to its original destination.

User response

This message indicates a probable error in the message user exit. Ensure that your message user exit program is working properly.

However, it is possible that the user exit service module, DFHAPEX, has been corrupted. DFHAPEX issues an exception trace entry to indicate that there is an error, but does not issue its own error message via the message (ME) domain because this action would cause CICS to loop. In this situation, contact your IBM Support Center. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEME

Destination

Console

DFHME0119	*applid* **Message *msgno* has an invalid *{Destination	User Exit	Message Identification}* component**

Explanation

The message (ME) domain has encountered an invalid component in the definition of message *msgno* in the message language module. The message language module may have been corrupted or be at the wrong release level.

System action

The ME domain produces an exception trace entry and continues processing. No dump is taken.

User response

Ensure that you are using the correct level of the message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*. If you feel it is not important, you can continue to run your system without this message until a convenient time comes to resolve the problem.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEIN

Destination

Console

DFHME0120I	*applid* **Message *msgno* has been rerouted to its original destination.**

Explanation

The message domain user exit point XMEOUT attempted to route message *msgno* to a transient data (TD) queue while CICS is quiescing or terminating. After CICS shutdown has started, a message can be rerouted to a TD queue only if its original destination was a TD queue.

System action

The message is rerouted to its original destination.

User response

No action required. For programming information about the XMEOUT user exit, see the Developing system programs for CICS.

Module:
DFHMEME

XMEOUT parameters/Message inserts

1. *applid*
2. *msgno*

Destination

Console

DFHME0121	*applid* **The {first	second} attempt at formatting message *msgno*, TD queue *queuename* has failed - {Invalid DBCS format	Unknown error}**

Explanation

The message (ME) domain was trying to produce message *msgno* (destined for transient data queue *queuename*). However, an invalid response has been returned from the message formatting routine, DFHMEFO. This error is probably due to invalid DBCS characters being found in either the message inserts or the message text. The message text is checked at definition time for mismatched shift-out and shift-in characters. However, adjacent shift-in and shift-out characters could appear in a message, for instance, if a double byte message insert has not been supplied correctly.

The message (ME) domain first tries to format the message into 128-byte segments. However, if the transient data queue has been defined with a different queue length, formatting is performed a second time using the new queue length. (Hence the reason for *first* or *second* attempts at formatting the message.)

System action

A dump is taken. The message domain does not issue the message being formatted. An exception trace entry is made by the formatting routine DFHMEFO.

User response

This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without the message *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEME

Destination

Console

DFHME0122	*applid* **The Message User Exit has returned invalid route code information for message number *msgno***

Explanation

The message user exit program has set an invalid route code as the destination of message *msgno*. Valid route codes are numbers 1 to 28 inclusive.

System action

The message (ME) domain ignores the invalid route code and defaults to the original destination that is defined for message *msgno* in the message language module.

User response

Check that your message user exit program sets valid route code information for message *msgno*.

Module:
DFHMEME

Destination

Console

DFHME0123	*applid* **The Message User Exit has returned invalid TD queue information for message number *msgno***

Explanation

The message user exit program has set an invalid queue name as the destination of the message

msgno. Valid queue names consist of 4 alphanumeric characters.

System action

The message (ME) domain ignores the invalid queue name and defaults to the original destination that is defined for message *msgno* in the message language module.

User response

Check that your message user exit program sets valid queue name information for message *msgno*.

Module:
DFHMEME

Destination

Console

DFHME0124	*applid* **TD is unavailable for writing message *msgno* to TD queue *queuename***

Explanation

The message (ME) domain has tried to output message *msgno* to transient data queue *queuename*. However, transient data (TD) is not yet available. This situation may occur early in CICS initialization.

System action

If the message destination is CDBC, the message is rerouted to the console instead. If the message destination is any other TD queue, it is lost.

User response

The impact of this error may not be severe. For example, the error may only occur once, or you may decide to continue without message *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEME

Destination

Console

DFHME0125	*applid* **The Message User Exit has returned an invalid return code *rc* for message *msgno***

Explanation

The message user exit program has returned a return code *rc*. that is not 0 or 4 when it processed message *msgno*. (A return code of 4 indicates that the message should be suppressed.)

System action

The message (ME) domain continues processing and does not suppress or reroute the message. Instead, it issues the message as it was originally defined in the message language module.

User response

Check that your message user exit program is working properly, and that it passes the correct return code back to the message (ME) domain.

Module:
DFHMEME

Destination

Console

DFHME0126	*applid* **Error in SYMREC invocation. Return code in R15 = X'*mmmm*', Reason code in R0 = X'*nnnn*'.**

Explanation

While handling an error, CICS tried to write a symptom record to SYS1.LOGREC.

However, a further problem was detected while attempting to invoke the SYMREC service.

Return code X'*mmmm*' in register 15 and reason code X'*nnnn*' in register 0 indicate the reason for the error. This may be one of the following.

- CICS has been prevented from writing the symptom record to SYS1.LOGREC by the ASREXIT MVS installation exit. In this case a system dump is not produced.
- There is an error in the SYMRBLD macro. (This is the macro CICS uses to build its symptom records.)
- CICS has supplied invalid data to be added to the symptom record.
- There is an error in the SYMREC service. Examples of possible problems include a storage error, or insufficient space in the LOGREC buffer.
- The SYMREC service is currently inoperative.

System action

Processing continues and a system dump may be produced.

An exception trace entry (pointid=X'0806') is made in the trace table which contains the symptom record which CICS attempted to write.

User response

Determine whether the error was caused by a problem in the format of the symptom record produced by CICS, or by a problem in the SYMREC service.

The meanings of the return and reason codes, together with additional information about the SYMREC service can be found in the z/OS MVS Programming: Assembler Services Reference ABE-HSP manual.

Return codes 0010 or 0014 indicate a problem in the SYMREC service which must be reported to the MVS System Administrator.

A return code of 000C and a reason code of 0F1C indicates that the ASREXIT installation exit has prevented CICS from writing the symptom record. This could be caused by an installation error. Report the problem to your MVS system administrator.

Any other return code indicates that the symptom record is invalid to the SYMREC service.

The impact of this error need not be severe, if for example, the problem occurs only as an isolated incident or on the production of a particular message. In these cases, this message can be ignored.

However, if the problem is persistent, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEWS

Destination

Console

DFHME0127	*applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action

An exception entry is made in the trace table. For further information about CICS exception trace entries, refer to the Troubleshooting and support.

A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this error may not be critical, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

No symptom string is produced for this message because the error has occurred in a module concerned with symptom strings.

User response

Inform the system programmer. This message indicates a severe error in CICS code. However, the impact of this error should not be severe because the module DFHMEWS is not crucial to CICS functioning.

If the problem recurs, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEWS

Destination

Console

DFHME0128	*applid* Message *msgno* has an invalid route code.

Explanation

The routine which issues the console message was unable to do so as it encountered an invalid route code associated with message *msgno*. Valid route codes are numbers from 1 through 28.

This error could only happen if the route codes have become corrupted as they are being passed to the routine which issues the console message, DFHSUWT.

System action

The message (ME) domain issues an exception trace entry. Message *msgno* is not issued.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEME

Destination

Console

DFHME0129	*applid* **Unable to format console message** *msgno* **as it contains invalid DBCS characters.**

Explanation

The routine which attempted to format console message *msgno* was unable to do so as it was found to contain invalid double byte (DBCS) characters. For example, adjacent or unmatched pairs of shift-in and shift-out characters are invalid in a string of DBCS text.

This situation could occur if there are inserts in the message which contain, for example, a shift-out and a shift-in character with no double byte characters entered in between.

System action

The message (ME) domain continues processing but message *msgno* is not issued as it cannot be formatted. The message formatting routine, DFHMEFO, issues an exception trace entry. The routine which issues console messages, DFHSUWT, also issues an exception trace entry.

User response

Ensure that any double-byte information entered from a terminal which may be used as a message insert is entered correctly.

Module:
DFHMEME

Destination

Console

DFHME0130	*applid* **Message** *msgno* **has an invalid descriptor code.**

Explanation

The routine which issues the console message was unable to do so as it encountered an invalid descriptor code associated with message *msgno*. Valid descriptor codes are numbers 1 through 16.

This error could only happen if the descriptor codes have become corrupted as they are being passed to the routine which issues the console message, DFHSUWT.

System action

The message (ME) domain issues an exception trace entry. Message *msgno* is not issued.

User response

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEME

Destination

Console

DFHME0131	*applid* **Unable to calculate length of message** *msgno* **due to message table corruption, code(***code***)**

Explanation

The message (ME) domain could not calculate the length of the message *msgno* due to possible corruption of the message language module.

System action

A return code is sent to the caller of the message (ME) domain. The message *msgno* is not issued.

User response

Ensure that you are using the correct level of the message data module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

You may need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEME

Destination

Console

DFHME0132   *applid* **The User's Message Exit program has failed while processing message** *msgno*

Explanation

The user's message exit program is looping or has failed with a program check.

System action

The message (ME) domain continues processing and issues message *msgno* to its original destination. The user exit service module DFHAPEX issues an exception trace entry to indicate that the user's message exit program has failed. It does not issue its own error message via the message (ME) domain because this action would cause CICS to loop.

User response

Disable your message exit program and ensure that it works correclty.

Module:
DFHMEME

Destination

Console

DFHME0133   *applid* **Message** *msgno* **could not be found in module DFHMEMGT**

Explanation

The message domain was trying to issue one of its own error messages to indicate that an error had occurred in the message domain. However, the message domain was unable to find the message it was attempting to issue in its own internal message table DFHMEMGT.

System action

An exception entry is made in the trace table by the message domain. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

User response

This message indicates an error in CICS code. However, its impact may not be severe.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHSUME

Destination

Console

DFHME0134   *applid* **Message** *msgno* **has been truncated because it was too long.**

Explanation

The message (ME) domain was trying to output message *msgno*, but truncated the message because it was too long. Message *msgno* is a conversational message to an operator which has exceeded the maximum size of 119 characters.

System action

The ME domain truncates the message to 119 bytes before issuing it. An exception trace entry is made and a dump taken, but processing continues.

User response

This message indicates that *msgno* has been incorrectly defined in the message table, or that the inserts supplied to the message have caused it to exceed the size limit imposed on conversational messages. If enough information can be obtained from the truncated message, the impact of this error may not be severe. If necessary, you can continue to run your system without this message until a convenient time comes to resolve the problem.

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEME

Destination

Console

DFHME0135   *applid* **The default language** *language* **specified in the SIT NATLANG parameter is invalid. It has been defaulted to E.**

Explanation

The default language is the first character in the NATLANG system initialization parameter. The default language *language* is not in the list of valid CICS language suffixes.

System action

CICS continues with a default language of E (US English).

User response

If you do not want a default language of E, change the first character in the NATLANG system initialization parameter to another valid CICS language suffix. See the Configuring for a list of valid CICS language suffixes.

Module:
DFHMESR

Destination

Console

DFHME0136   *applid* **Message** *msgno* **is missing from national language module** *modname*. **Searching the English message table for the message text.**

Explanation

Message *msgno* cannot be issued in the specified language because the message was not found in the national language module *modname*.

This could be the result of a PTF containing message *msgno* not being applied to the module *modname*. In this case, the text of the missing message could be present in the English language message table DFHMET1E.

System action

An exception entry is made in the trace table. The message domain tries to find the message in the English language message table. If the message is not found in the English table either, message DFHME0108 is issued followed by a system dump.

User response

Run the MEU PTF update process to ensure that any new messages have been applied to your language table *modname*, and rebuild this table. See the CICS documentation for guidance on this.

If message DFHME0108 follows this message, there is an error in CICS code and you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMEIN

Destination

Console

DFHME0137   *applid* **Message** *msgno* **cannot be rerouted to a transient data destination by the message user exit XMEOUT.**

Explanation

The message *msgno* cannot be rerouted to a transient data destination by using the message user exit point XMEOUT because this might cause CICS to loop.

System action

An exception entry is made in the trace table. The message (ME) domain ignores the queue destination returned by the message exit and defaults to the original destination that is defined for message *msgno* in the message language module.

User response

Alter your message user exit program so that the message *msgno* is not rerouted to a transient data destination. The message domain passes the noreroute indicator to the exit so that the exit program can check whether it is valid to reroute a particular message.

Module:
DFHMEME

Destination

Console

DFHME0138   **Message** *msgno* **not issued by** *module* **because MVS WTO is short on storage**

Explanation

The message *msgno* cannot be written to the console because MVS is short on storage and the MVS WTO has abended with either abend code 878, 80A or 804 while trying to issue the message. The message domain module which was attempting to issue the message is *module*.

System action

An exception trace entry is written by the message domain and a dump is taken for dumpcode ME0138. Message DFHME0138 is written out in message text part of the dump summary instead of being sent to the console in order to avoid causing another abend.

User response

Ensure you have enough storage for MVS or reduce the storage requirements of your CICS system below 16MB. Try decreasing the limits of the CICS dynamic storage areas (DSAs), or increasing the MVS region size. To increase the MVS region size you must terminate CICS and change the MVS JCL REGION parameter. For more information about how to do this, see the Improving performance.

Module:
DFHMEME, DFHSUME

Destination

SYSPRINT

DFHME0139	*applid* **(Module:***modname***) Message** *msgno* **has been suppressed by KILL processing.**

Explanation

Message *msgno* has been suppressed for a task that is being killed.

The message and system dump request have been suppressed because the error has been caused by the attempt to kill the task.

System action

The attempt to kill the task continues.

User response

None

Module:
DFHMEME

XMEOUT parameters/Message inserts

1. *applid*
2. *modname*
3. *msgno*

Destination

Console

DFHME0140	*applid* **CICSPlex SM messages cannot be issued because the English message table** *modname* **cannot be found.**

Explanation

The message load module *modname* was not found in STEPLIB for the CICS job. This load module is required for CICSPlex SM messages.

System action

An exception entry is made in the CICS trace table. Message domain stops processing this message and returns a disaster response to CICSPlex SM which in turn cannot continue to issue messages because its message module has not been loaded.

User response

This error could have occurred because the CICSPlex SM authorized library, which contains the default message load module, is not in the JCL for the CICS job. Ensure that the correct library is included in the STEPLIB concatenation of the CICS JCL and restart your CICS.

Module:
DFHMEME

Destination

Console

DFHME0141	**Message** *msgno* **not issued by** *module* **because MVS WTOR is short on storage.**

Explanation

The message *msgno* cannot be written to the console because MVS is short on storage and the MVS WTOR has abended with abend code D23 while trying to issue the message. The message domain module which was attempting to issue the message is *module*.

System action

An exception trace entry is written by the message domain and a dump is taken for dumpcode ME0141. Message DFHME0141 is written out in message text part of the dump summary instead of being sent to the console in order to avoid causing another abend.

User response

Ensure you have enough storage for MVS or reduce the storage requirements of your CICS system below 16MB. Try decreasing the limits of the CICS dynamic storage areas (DSAs), DSALIM, or increasing the MVS region size. To increase the MVS region size you must terminate CICS and change the MVS JCL REGION

parameter. For more information about how to do this, see the Improving performance.

Module:
DFHMEME

Destination

SYSPRINT

DFHME0213   *applid* **Incorrect parameters used in call to DFHME64 for message *msgno*.**

Explanation

A call to the message (ME) domain for message *msgno* was made with a combination of parameters that is not valid.

System action

An exception entry is made in the trace table. A dump is taken, unless you specifically suppressed dumps in the dump table.

CICS is not terminated, even if you specified **terminate** in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure that you load the correct message language module. That is, ensure that you specify the correct language in the NATLANG system initialization parameter and that the library concatenation that your CICS job accesses contains the correct message language module.

This message indicates a severe error in CICS code, but its impact might not be serious. For example, the error might occur only once, or you might decide to continue without message *msgno*.

If the problem persists, contact your IBM Support Center. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHME64

Destination

Console

DFHME0215   *applid modname* **Message module for language *language* not found. The default module *modnameb* is used.**

Explanation

Cannot find the message language module *modname* for the national language *language* in the list of available modules. A CICS program has called for a message in a particular language from the message domain, but the message domain cannot locate the message in that language.

The message language module might be unavailable because the LOAD for the appropriate message language module failed at initialization. In this situation, there will be an earlier message about the failed LOAD. Alternatively, the module might be unavailable because the language specified on the terminal or userid definition was not specified in the SIT or was specified incorrectly.

System action

An exception entry is made in the trace table. A dump is taken, unless you specifically suppressed dumps in the dump table. This situation might not be critical, so CICS is not terminated, even if you specified **terminate** in the dump table.

All messages that should appear in language *language* in module *modname* appear in the system default language *modnameb* instead.

User response

Your action depends on whether it is acceptable to use the default language for messages. If it is acceptable, CICS can continue to run and you can resolve the problem at a convenient time. You might need to change a terminal or userid definition.

If it is not acceptable to use the default language, and if module *modname* failed to load at initialization, refer to the earlier message about the failed LOAD for the action to take.

Otherwise, bring CICS down and specify module *modname* in the SIT or respecify the list of language modules as an override parameter. Then restart CICS.

Module:
DFHME64

Destination

Console

DFHME0217   *applid* **The Message User Exit point XMEOUT is unavailable for message *msgno*.**

Explanation

The message (ME) domain cannot use the message user exit point 'XMEOUT' when processing message *msgno*. The exit point was probably invoked too early in CICS initialization. The user exit service module, DFHAPEX, returns a response of KERNERROR to the message (ME) domain.

System action

This error is not severe, so the message (ME) domain continues processing. The message user exit does not suppress or reroute the message *msgno* It is issued to the original destination defined for message *msgno*.

User response

No action required. You cannot suppress message *msgno* because the error has occurred too early in initialization.

Module:
DFHME64

Destination

Console

DFHME0218	*applid* An error has occurred when calling the Message User Exit for message *msgno*.

Explanation

The message (ME) domain has received an incorrect response from DFHAPEX, the program that invoked the message user exit.

System action

The error is not severe, so the message (ME) domain continues processing. The message *msgno* which the message (ME) domain attempted to produce is not suppressed or rerouted but is issued to its original destination.

User response

This message indicates a probable error in the message user exit. Ensure that your message user exit program is working properly.

Alternatively, the user exit service module, DFHAPEX, might be corrupted. DFHAPEX issues an exception trace entry to indicate that there is an error, but does not issue its own error message via the message (ME) domain because this action would cause CICS to loop. In this situation, contact your IBM Support Center. See

Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHME64

Destination

Console

DFHME0220I	*applid* Message *msgno* has been rerouted to its original destination.

Explanation

The message domain user exit point XMEOUT attempted to route message *msgno* to a transient data (TD) queue while CICS is quiescing or terminating. After CICS shutdown has started, a message can be rerouted to a TD queue only if its original destination was a TD queue.

System action

The message is rerouted to its original destination.

User response

No action required. For programming information about the XMEOUT user exit, see the Developing system programs for CICS.

Module:
DFHME64

XMEOUT parameters/Message inserts

1. *applid*
2. *msgno*

Destination

Console

DFHME0222	*applid* The Message User Exit has returned invalid route code information for message number *msgno*.

Explanation

The message user exit program has set an invalid route code as the destination of message *msgno*. Valid route codes are numbers 1 to 28 inclusive.

System action

The message (ME) domain ignores the invalid route code and defaults to the original destination that is

defined for message *msgno* in the message language module.

User response

Check that your message user exit program sets valid route code information for message *msgno*.

Module:
DFHME64

Destination

Console

DFHME0223   *applid* **The Message User Exit has returned invalid TD queue information for message number *msgno*.**

Explanation

The message user exit program has set an invalid queue name as the destination of the message *msgno*. Valid queue names consist of 4 alphanumeric characters.

System action

The message (ME) domain ignores the invalid queue name and defaults to the original destination that is defined for message *msgno* in the message language module.

User response

Check that your message user exit program sets valid queue name information for message *msgno*.

Module:
DFHME64

Destination

Console

DFHME0225   *applid* **The Message User Exit has returned an invalid return code *rc* for message *msgno*.**

Explanation

The message user exit program has returned a return code *rc*. that is not 0 or 4 when it processed message *msgno*. (A return code of 4 indicates that the message should be suppressed.)

System action

The message (ME) domain continues processing and does not suppress or reroute the message. Instead, it issues the message as it was originally defined in the message language module.

User response

Check that your message user exit program is working properly, and that it passes the correct return code back to the message (ME) domain.

Module:
DFHME64

Destination

Console

DFHME0232   *applid* **The User's Message Exit program has failed while processing message *msgno*.**

Explanation

The user's message exit program is looping or has failed with a program check.

System action

The message (ME) domain continues processing and issues message *msgno* to its original destination. The user exit service module DFHAPEX issues an exception trace entry to indicate that the user's message exit program has failed. It does not issue its own error message through the message (ME) domain because this action would cause CICS to loop.

User response

Disable your message exit program and ensure that it works correctly.

Module:
DFHME64

Destination

Console

DFHME0237   *applid* **Message *msgno* cannot be rerouted to a transient data destination by the message user exit XMEOUT.**

Explanation

The message *msgno* cannot be rerouted to a transient data destination by using the user exit point XMEOUT because this might cause CICS to loop.

System action

An exception entry is made in the trace table. The message (ME) domain ignores the queue destination returned by the message exit and defaults to the original destination that is defined for message *msgno* in the message language module.

User response

Alter your message user exit program so that the message *msgno* is not rerouted to a transient data destination. The message domain passes the noreroute indicator to the exit so that the exit program can check whether it is valid to reroute a particular message.

Module:
DFHME64

Destination

Console

DFHME0240	*applid* CICSPlex SM messages cannot be issued because the English message table *modname* cannot be found.

Explanation

The message load module *modname* was not found in STEPLIB for the CICS job. This load module is required for CICSPlex SM messages.

System action

An exception entry is made in the CICS trace table. Message domain stops processing this message and returns a disaster response to CICSPlex SM which in turn cannot continue to issue messages because its message module has not been loaded.

User response

This error could have occurred because the CICSPlex SM authorized library, which contains the default message load module, is not in the JCL for the CICS job. Ensure that the correct library is included in the STEPLIB concatenation of the CICS JCL and restart your CICS.

Module:
DFHME64

Destination

Console

DFHME0500	PLEASE ENTER A MESSAGE NUMBER.

Explanation

No search of the messages and codes file has been made because both the component ID and message number fields were blank when you pressed the ENTER key.

System action

The transaction redisplays the main menu with this message.

User response

Enter a valid message number or abend code.

Module:
DFHCMAC

Destination

Terminal End User

DFHME0501	AN INVALID OPTION HAS BEEN ENTERED.

Explanation

A key other than F3 or ENTER has been pressed.

System action

The transaction redisplays the main menu with this message.

User response

Enter a valid message number or abend code and press ENTER, or press a valid function key.

Module:
DFHCMAC

Destination

Terminal End User

DFHME0502	THE CMAC FILE IS DISABLED.

Explanation

The CMAC file is disabled for one of these reasons:

- The file was initially defined as disabled and has not been enabled
- The file has been disabled by an EXEC CICS SET command or by the CEMT transaction.

System action

The transaction redisplays the main menu with this message.

User response

If the CMAC file was defined as disabled, use the CEMT transaction to enable the file.

If the CMAC file has been disabled, determine the reason. It might have been disabled for maintenance or update.

Module:
DFHCMAC

Destination

Terminal End User

DFHME0503	THE CMAC FILE IS NOT DEFINED TO CICS.

Explanation

The CMAC file is not defined to CICS.

System action

The transaction redisplays the main menu with this message.

User response

Check that the CMAC file has been defined and installed. See the Installing CICS TS for guidance.

Module:
DFHCMAC

Destination

Terminal End User

DFHME0504	RESOURCE SECURITY CHECK FAILED ON CMAC FILE.

Explanation

The resource security check has failed.

System action

The transaction redisplays the main menu with this message.

User response

Ensure that the resource security class is correct.

Module:
DFHCMAC

Destination

Terminal End User

DFHME0505	THE CMAC FILE IS CLOSED OR UNENABLED.

Explanation

One of the following has occurred:

- The requested file is CLOSED and UNENABLED. The CLOSED, UNENABLED state is reached after a close request has been received against an OPEN ENABLED file and the file is no longer in use. This state can be specified as the initial state by defining a file using the RDO options STATUS = UNENABLED and OPENTIME = FIRSTREF.
- The requested file is OPEN and UNENABLED and in use by other transactions, but a close request against the file has been received.

System action

The transaction redisplays the main menu with this message.

User response

Use the CEMT transaction to ensure that the CMAC file is in the OPEN ENABLED state.

Module:
DFHCMAC

Destination

Terminal End User

DFHME0506	REQUESTED MESSAGE NUMBER/ ABEND CODE NOT FOUND

Explanation

The attempt to retrieve the specified message number or abend code has been unsuccessful.

System action

The transaction redisplays the main menu with this message.

User response

Ensure that the correct message number or abend code has been entered.

If no message numbers or abend codes appear to be valid, check that the correct DSName has been specified on the CMAC file definition.

Module:
DFHCMAC

Destination

Terminal End User

DFHME0507	CHECK THAT THE CORRECT DSNAME IS BEING USED.

Explanation

An attempt to retrieve a record from the CMAC data set has been unsuccessful because the CMAC DSName is incorrectly specified.

System action

The transaction redisplays the main menu with this message.

User response

Ensure that the correct DSName has been specified on the CMAC file definition.

Module:
DFHCMAC

Destination

Terminal End User

DFHME0508	THE CMAC TRANSACTION IS INVALID FOR THE CONSOLE.

Explanation

You have tried to invoke the CMAC transaction from a CONSOLE. This is not permitted.

System action

The CMAC transaction ends with this message.

User response

Ensure that CMAC is invoked from a terminal that is not being used as a CONSOLE.

Module:
DFHCMAC

Destination

Terminal End User

DFHME9993I	UNABLE TO DETERMINE LENGTH OF MESSAGE *msgno - response reason*

Explanation

The message DFH*msgno* could not be found by the message (ME) domain in the message tables.

System action

CICS continues.

User response

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMGPME

Destination

Terminal End User

DFHME9994I	UNABLE TO RETRIEVE MESSAGE *msgno - response reason*

Explanation

The message DFH*msgno* could not be retrieved by the message (ME) domain from the message tables.

System action

CICS continues.

User response

If the problem persists, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMGPME

Destination

Terminal End User

DFHME9996I   **MESSAGE PARAMETER LIST ERROR - CHECK PLIST**

Explanation

The parameter list for the message generation process is not valid.

System action

CICS continues but the message in error cannot be issued.

User response

Ensure that the DFHMGT entry for the message has been built correctly.

Module:
DFHMGP00

Destination

Terminal End User

DFHME9997I   **MESSAGE FIND ERROR - CHECK THE MESSAGE MODULE**

Explanation

The message being issued could not be found by the message generation process in the DFHMGT table entry for this message set.

System action

CICS continues but the message in error cannot be issued.

User response

Ensure that an entry exists for the message number in the appropriate DFHMGT tables.

Module:
DFHMGP00

Destination

Terminal End User

DFHME9998I   **MESSAGE NUMBERS GREATER THAN 9999 ARE INVALID**

Explanation

The message being issued has a message number greater than 9999. Message numbers should be in the range 1 through 9999.

System action

CICS continues but the message in error cannot be issued.

User response

Redefine the message number.

Module:
DFHMGP00

Destination

Terminal End User

DFHME9999I   **THE MESSAGE INDEX MODULE 'DFHMGT' IS MISSING**

Explanation

The message generation process cannot find an index module in the DFHMGT table for the message it is trying to issue. This can occur where a message defined as being destined for either a console or a TDQ is being issued as a terminal end user message.

System action

CICS continues but the message in error cannot be issued.

User response

Ensure that the destination is correct for the message being issued.

Module:
DFHMGP00

Destination

Terminal End User

DFHMLnnnn messages

DFHML0001   *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHML1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If you cannot continue without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMLDC, DFHMLPC, DFHMLTF, DFHMLXT

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHML0002   *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the Troubleshooting and support.

System action

An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you

may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname,* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

DFHML0100	*date time applid tranid* **Call to z/OS XML System Services parser for function** *function* **failed with return code** *X'return_code'* **and reason code** *X'reason_code'*.

Explanation

A call has been made to the z/OS System Services parser for the function indicated in the message. The call has failed with the parser responding with the return code and reason code given in the message.

System action

The attempt by CICS to parse a block of XML data has failed. An exception trace will have been issued. If this message is issued when a SOAP message is processed then a SOAP fault is returned to the client.

User response

Refer to the XML System Services User's Guide and Reference manual in the z/OS documentation to determine what the return and reason codes returned by the parser mean.

For example, if the return code is set to '4' and the reason code is set to '1301' then this imples a 'warning' because 'the end of the input buffer has been reached'. This in turn may indicate that then end of the XML block has been reached before an expected closing tag was found.

The application or process that generated the XML may have introduced an error. The z/OS System

Services parser ensures that the input XML is well formed. If the XML is not well formed then that may cause this message to be issued. Review the XML to discover why it has been rejected.

DFHML0503	*date time applid userid tranid* **XMLTRANSFORM** *xmltransform_name* **for {BUNDLE	ATOMSERVICE} owner_name cannot be installed as a duplicate XMLTRANSFORM resource with the same name already exists.**

Explanation

XMLTRANSFORM *xmltransform_name* was not created as another XMLTRANSFORM resource with the same name already exists in the CICS region.

System action

The XMLTRANSFORM is not created and the associated BUNDLE is placed in the DISABLED state.

User response

Rename the XMLTRANSFORM resource and try again.

Module:
DFHMLXT

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *userid*
5. *tranid*
6. *xmltransform_name*
7. Value chosen from the following options:

    1=BUNDLE,

    2=ATOMSERVICE

8. *owner_name*

Destination

CMLO

DFHML0504	*date time applid userid tranid* **XMLTRANSFORM** *xmltransform_name* **for {BUNDLE	ATOMSERVICE} owner_name cannot be {ENABLED	DISABLED	DISCARDED} because it is in the {ENABLING	ENABLED	DISABLING	DISABLED	DISCARDING	PERMANENTLY DISABLED	UNKNOWN} state.**

Explanation

XMLTRANSFORM *xmltransform_name* cannot change states because it is not in an appropriate state. region.

System action

The system continues normally.

User response

An XMLTRANSFORM resource is placed in the PERMANENTLY_DISABLED state if there was a problem parsing its XSDBind file when the resource was first installed. It may be necessary to fix the

problem with the XSDBind file and then reinstall the BUNDLE before the resource can be enabled.

Module:
DFHMLXT

XMEOUT parameters/Message inserts

1. *date*

   2=there is a problem with the resource definition,

   3=the program cannot be loaded,

   4=an unspecified problem occurred

Destination

CMLO

DFHML0507	*date time applid trannum* **Validation of XML data for XMLTRANSFORM** *xmltransform_name* **failed. The validation process returned the following message: '***message***'.**

Explanation

Validation was requested for XMLTRANSFORM *xmltransform_name*. The validation has been attempted and failed. Either the parsed XML does not match the XML schema, or the generated XML does not match the XML schema.

System action

An INVREQ is returned to the caller.

User response

Consider the detailed *message*. It will indicate the nature of the problem. Usually this will include a message from the XML parser used to do the validation and will indicate a rule that has been broken in the XML. If the problem is with XML parsed by CICS then change the originator of the XML to correct the problem. If the problem is with XML generated by CICS then determine if the problem can be fixed by changing the CICS application. If the problem is caused by CICS then contact your IBM support representative for further assistance.

If the *message* indicates that the XML schema document cannot be found then this may be because the XMLTRANSFORM resource does not indicate the 'XMLSCHEMA' to use.

Module:

CMLO

Explanation

An abend or program check has occurred in module *modname*. This implies an error in CICS code. Alternatively, it is possible that unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the z/OS MVS System Codes manual.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning a user response.

If module *modname* is not crucial to the running of your CICS system, you have the option to continue to run and to bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMNAD, DFHMNDM, DFHMNHS, DFHMNMN, DFHMNNT, DFHMNOD, DFHMNSM, DFHMNSR, DFHMNST, DFHMNSU, DFHMNSY, DFHMNTD, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHMN0002	*applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation

An error has been detected in module *modname*. The code X'*code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the Troubleshooting and support.

System action

An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *module* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMNAD, DFHMNDM, DFHMNHS, DFHMNMN, DFHMNNT, DFHMNOD, DFHMNSM, DFHMNSR, DFHMNST, DFHMNSU, DFHMNSY, DFHMNTD, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHMN0003   *applid* **Insufficient storage to satisfy Getmain (code *X'code'*) in module *modname*.**

Explanation

A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action

An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error.

If DFHMNDM issues this message, CICS terminates, even if you have specified in the dump table that CICS should not terminate.

If DFHMNMN, DFHMNST or DFHMNXM issues this message, an exception trace and a system dump is taken and CICS continues.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. See the Configuring or the Improving performance for further information on CICS storage.

Module:
DFHMNDM, DFHMNMN, DFHMNST, DFHMNXM

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHMN0004   *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You

will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMNDM, DFHMNMN, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT parameters/Message inserts

1. *applid*
2. *X'offset'*
3. *modname*

Destination

Console

DFHMN0005	*applid* A hardware error has occurred (module *modname*, code *X'code'*). The Time-of-Day clock is invalid.

Explanation

A hardware error has occurred during the running of module *modname*. The MVS Store Clock facility is the timing mechanism for the operating system. The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action

An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. This is in all probability a hardware error and you should in the first instance investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should

take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

| DFHMN0101 | *applid* **SMF error - SMF return code X'rc'.** |

Explanation

The monitoring domain authorized services routine issued a SMFEWTM macro to write a record to the MVS system management facilities (SMF) data set and encountered a non-zero return code.

System action

The request is ignored and the SMF record is lost. An exception entry is made in the trace table. CICS operation continues.

If the same error condition occurs continuously, the error messages are suppressed but tracing continues. The message is reissued if a different error condition occurs or if a zero return code has been received since the message was last issued.

User response

Consult the z/OS MVS System Management Facilities (SMF) manual for a detailed explanation of the return codes.

Module:
DFHMNSU

XMEOUT parameters/Message inserts

1. *applid*
2. *X'rc'*

Destination

Console

| DFHMN0103I | *applid* **Monitoring control table for suffix 'xx' not found.** |

Explanation

The monitoring control table for suffix *xx* could not be found in the library described by the DFHRPL DD statement. This suffix is specified as a system initialization parameter.

System action

Control is returned to the parameter manager for interaction with the operator. Further action depends upon which PARMERR= parameter is specified. The operator may enter another suffix or continue with system initialization.

If initialization continues without an override, monitoring domain uses the default monitoring control table.

User response

There are three likely causes of this error:

- The monitoring control table is not in the library.
- The monitoring control table name has been misspelled.
- An incorrect suffix has been used at startup.

Ensure that the suffix specified is correct and that a library described in the DFHRPL DD statement contains a copy of the named monitoring control table.

If the suffix is incorrect and PARMERR=INTERACT is specified, the operator is prompted to enter an alternative suffix.

If the suffix is incorrect and PARMERR=IGNORE is specified, the monitoring domain uses the default monitoring control table.

If the monitoring control table is missing or misspelled and you want to reinstall it, CICS has to be terminated. Reassemble the monitoring control table into the relevant library.

Module:
DFHMNSR

XMEOUT parameters/Message inserts

1. *applid*
2. *xx*

Destination

Console

DFHMN0104	*applid* **Monitoring Control Table with suffix '*xx*' required for restart not found.**

Explanation

The monitoring domain has determined the monitoring control table suffix *xx* from the last CICS execution, but was unable to locate the monitoring control table in the library described by the DFHRPL DD statement and no override suffix has been specified.

Subsequent executions of CICS will continue to use the suffix specified in the message until it is changed in the SIT.

System action

Initialization continues with the monitoring domain using the default monitoring control table.

User response

Ensure that a library described in the DFHRPL DD statement contains a copy of the named monitoring control table. If the monitoring control table is missing, it must have been deleted. If you want to reinstall the table, CICS must be terminated. Reassemble the monitoring control table into the relevant library.

Module:
DFHMNDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHMN0106	*applid* **Unable to read the catalog record for the Monitoring Domain.**

Explanation

The monitoring domain has attempted to re-establish the status of the monitoring classes and the monitoring control table suffix under which it was running during the last execution of CICS. But it was unable to successfully read the record from the global catalog.

System action

An exception entry is made in the trace table.

System initialization continues with the supplied system initialization parameters.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the cause of the error using any dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, there will be an earlier CICS message from the catalog. Follow the user response for this message.

If the problem has been caused by an invalid data length, there will be an exception trace entry in the trace table.

Module:
DFHMNDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHMN0107   *applid* **Unable to update the catalog record for the Monitoring Domain.**

Explanation

The monitoring domain has attempted to update either the status of the monitoring classes or the monitoring control table suffix in the CICS global catalog, but was unable to successfully complete the request.

System action

An exception entry is made in the trace table, and CICS operation continues with the updated values. Since the updates are not saved across a restart, the subsequent execution of CICS will restart with values recorded before the updates were applied.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the cause of the error using any dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, there will be an earlier CICS message from the catalog. Follow the user response for this message.

If the problem has been caused by an invalid data length, there is an exception trace entry in the trace table.

CSMT

DFHMN0115I   *applid* **CICS Server z/OS WLM Health percentage is now *n*.**

Explanation

This message indicates a new health factor has been reported to z/OS MVS workload manager for this server.

CICS utilises the z/OS WLM health API (IWM4HLTH) as a means of controlling the flow of work into a CICS region, especially during the period immediately after CICS initialization completes. It is controlled via the WLMHEALTH SIT parameter and the SET WLMHEALTH SPI which provides a means of providing a warm up period during which time work can be throttled back until such time as the region is fully ready to go. TCP/IP configuration options allow the throttling back of new connections, CPSM workload manager can throttle work being sent to the region and MQ trigger monitors can throttle how many messages they read and hence the number of tasks they initiate.

System action

Processing continues.

User response

None.

Module:
DFHMNDM

XMEOUT parameters/Message inserts

1. *applid*
2. *n*

Destination

Console

DFHMN0116I   *applid* **CICS WIC data generation is active.**

3. *X'rc'*

Destination

Console

DFHMN0121I   *applid* **CICS WIC registration detected a pre-z14 hardware level.**

Explanation

This is an informational message to report that CICS cannot exploit the IBM z/OS Workload Interaction Correlator data collection as it is being started on a pre-z14 hardware level.

System action

CICS operation continues.

User response

None.

Module:
DFHMNSU

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHMN0122I   *applid* **CICS WIC registration detected that WIC is not enabled.**

Explanation

This is an informational message to report that CICS cannot exploit data collection by the IBM z/OS Workload Interaction Correlator as it is not enabled at the z/OS level (SETSMF NOWIC).

System action

CICS operation continues.

User response

None.

Module:
DFHMNSU

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHMN0201 S   **Invalid parameter. The equals sign is missing.**

Explanation

A SYSIN parameter has been encountered that does not contain an equals sign. Equals signs are mandatory for every keyword supported by the monitoring dictionary utility.

System action

The job step is terminated with a return code of 12.

User response

Correct the SYSIN keyword that does not have an equals sign and resubmit the job. For further guidance on the syntax of DFHMNDUP keywords, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0202 S   **Invalid parameter. MCT incorrectly specified**

Explanation

Following the equals sign of the MCT= keyword there must be a 2-character operand or a delimiter. Neither has been found. The 2-character operand is treated as the suffix for an MCT to load.

System action

The job step is terminated with a return code of 12.

User response

Correct the MCT= keyword with a valid operand or delimiter.

If you do not wish to have a dictionary record constructed from a particular MCT, you can use a default MCT image by specifying a blank or a comma after the equals sign, or by specifying MCT=NO. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0203 S   **Invalid parameter. SYSID must be four characters or less.**

Explanation

A SYSID of greater than 4 characters, or a SYSID keyword without an operand has been specified.

System action

The job step is terminated with a return code of 12.

User response

Specify a valid SYSID of up to 4 characters. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0204 S   **Invalid parameter. GAPPLID must be eight characters or less.**

Explanation

A generic APPLID (GAPPLID) of greater than 8 characters, or a GAPPLID keyword without an operand has been specified.

System action

The job step is terminated with a return code of 12.

User response

Specify a valid GAPPLID of up to 8 characters. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0205 S   **Invalid parameter. SAPPLID must be eight characters or less.**

Explanation

A specific APPLID (SAPPLID) of greater than 8 characters has been specified.

System action

The job step is terminated with a return code of 12.

User response

Specify a valid SAPPLID of up to 8 characters or allow the SAPPLID to default to the GAPPLID by not specifying SAPPLID. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0206 S   **Invalid parameter. DATE must be of format yyddd or yyyyddd.**

Explanation

The date has been specified incorrectly. There are three possible reasons for this:

- The date specified is not in the correct format of yyddd or yyyyddd
- The date contains nonnumeric characters
- 'ddd' is not in the range 1 through 366.

System action

The job step is terminated with a return code of 12.

User response

Ensure that the date is in the format 'yyddd' or 'yyyyddd' and that the values are valid.

If you want DATE to default to the current date, do not specify this parameter. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0207 S   **Invalid parameter. TIME must be of format hhmmss.**

Explanation

The time has been specified incorrectly. There are three possible reasons for this:

- More than 6 characters have been specified
- The value specified contains nonnumeric characters
- The hours (hh), minutes (mm), or seconds (ss) are outside of the valid range.

System action

The job step is terminated with a return code of 12.

User response

Ensure that the time specified is in the format 'hhmmss' and that the values are valid.

If you want TIME to default to the current time, do not specify this parameter. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0208 S   **Invalid parameter. Keyword is unknown.**

Explanation

A SYSIN parameter has been processed and found to contain an unrecognized keyword.

System action

The job step is terminated with a return code of 12.

User response

Rename the unrecognized keyword. See the CICS documentation. for a complete list of supported keywords. Also, ensure that there are no blanks preceding any of the keywords in the SYSIN data set.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0209 S   **No SYSIN parameters have been specified.**

Explanation

There are no SYSIN parameters specified in the JCL.

System action

The job step is terminated with a return code of 12.

User response

Check the JCL for the existence of SYSIN parameters. If SYSIN does not exist or has no parameters, see the CICS documentation for guidance on coding DFHMNDUP parameters.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0210 S   *APPLID* **Load for MCT has failed. MCT cannot be found. A dump will be provided.**

Explanation

DFHMNDUP attempted to load 'DFHMCTxx' from STEPLIB, where 'xx' is the suffix provided via the MCT= keyword. This MCT was not found in the STEPLIB concatenation.

System action

The job step is abended with a dump.

User response

Ensure that the MCT suffix is correct and that the library that contains it is in the STEPLIB concatenation for the job step.

Module:

DFHMNDUP

Destination

Console

DFHMN0211 S **Getmain storage for control blocks has failed.**

Explanation

An MVS GETMAIN for the utilities global storage has failed. There is not enough MVS storage below the line available in the region.

System action

The job step is terminated with a return code of 12.

User response

Increase the REGION= parameter of your JCL and try again. If this fails, consult your MVS system programmer.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0212 S **Getmain storage for output record has failed.**

Explanation

An MVS GETMAIN for the 32KB record buffer storage has failed. There is not enough MVS storage below the line available in the region.

System action

The job step is terminated with a return code of 12.

User response

Increase the REGION= parameter of your JCL and try again. If this fails, consult your MVS system programmer.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0213 S **The MVS TIME macro has failed. There is a clock error.**

Explanation

Because DATE and/or TIME have not been specified, DFHMNDUP has attempted to retrieve the current DATE and/or TIME from MVS using the TIME macro. The TIME macro has reported that the MVS clocks are damaged.

System action

The job step is terminated with a return code of 12.

User response

Inform your MVS system programmer of the failure.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0214 S **Invalid parameter. Missing delimiter detected.**

Explanation

DFHMNDUP parameter syntax requires keyword/operand pairs to be separated by a delimiter in the form of a comma or a blank space. A delimiter has been found missing from a keyword/operand.

System action

The job step is terminated with a return code of 12.

User response

If the SYSIN data set has been coded such that there are multiple parameters on one line, then ensure that there is one blank or one comma between each parameter. If the SYSIN data set has been coded such that there is only one parameter on a line, ensure that it is terminated with a blank or a comma. For further guidance on the syntax of DFHMNDUP parameters, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0215 S **Mandatory SYSIN parameter(s) missing.**

Explanation

The two mandatory parameters are for the generic APPLID (GAPPLID) and the MVS system identifier (SYSID). These two parameters have not been specified and there are no defaults.

System action

The job step is terminated with a return code of 12.

User response

Specify the following:

- the generic APPLID of the CICS system that DFHMNDUP is going to produce a dictionary record for
- the MVS system identifier for the MVS system that produced the monitoring performance class records you are going to process.

For further guidance on the syntax of DFHMNDUP parameters, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

| **DFHMN0216 S** | **Invalid parameter. JOBNAME must be eight characters or less.** |

Explanation

A JOBNAME has been specified with more than eight characters.

System action

The job step is terminated with a return code of 12.

User response

Specify a valid JOBNAME of up to eight characters. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

| **DFHMN0217 S** | **Invalid parameter. JOBDATE must be of format yyddd or yyyyddd.** |

Explanation

The JOBDATE parameter has been specified incorrectly. There are three possible reasons for this:

- The date specified is not in the correct format of yyddd or yyyyddd
- Nonnumeric characters have been specified
- The number of days 'ddd' is not in the range 1 through 366.

System action

The job step is terminated with a return code of 12.

User response

Ensure that JOBDATE consists of valid characters in the format 'yyddd' or 'yyyyddd'.

If you want JOBDATE to default to the current date, do not specify this parameter. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

| **DFHMN0218 S** | **Invalid parameter. JOBTIME must be of format hhmmss.** |

Explanation

The JOBTIME parameter has been specified incorrectly. There are three possible reasons for this:

- More than six characters have been specified
- Nonnumeric characters have been specified
- The hours (hh), minutes (mm), or seconds (ss) are outside of the valid range.

System action

The job step is terminated with a return code of 12.

User response

Ensure that JOBTIME consists of valid characters in the format 'hhmmss'.

If you want JOBTIME to default to the current time, do not specify this parameter. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0219 S **Invalid parameter. USERID must be eight characters or less.**

Explanation

A USERID has been specified with more than eight characters.

System action

The job step is terminated with a return code of 12.

User response

Specify a valid USERID of up to eight characters. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

SYSPRINT

DFHMN0220 **DFHMNDUP CANNOT OPEN THE SYSPRINT FILE.**

Explanation

The SYSPRINT file cannot be opened because the SYSPRINT DD statement is missing or incorrectly defined.

System action

The job step is terminated with a return code of 12.

User response

Ensure that the SYSPRINT DD statement has been correctly defined. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

Console

DFHMN0221 **DFHMNDUP CANNOT OPEN THE SYSIN FILE.**

Explanation

The SYSIN file cannot be opened because the SYSIN DD statement is missing or incorrectly defined.

System action

The job step is terminated with a return code of 12.

User response

Ensure that the SYSIN DD statement has been correctly defined. For further guidance, see the CICS documentation.

Module:
DFHMNDUP

Destination

Console

DFHMPnnnn messages

DFHMP0001 ***applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation

An abnormal end (abend) or program check occurred in module *modname*. This abend or program check implies that there might be an error in the CICS code. Alternatively, unexpected data was input, or storage was overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, the first three characters in the code are filled with three hyphens. The CICS code is an abend code or a number that refers to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you suppressed dumps in the dump table.

CICS continues unless you specify in the dump table that CICS must terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the systems programmer. If CICS is still running, you must decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This code shows, for example, whether the error was a program check, an abend, or a runaway, and might give some guidance to the correct user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue, and terminate CICS at a convenient time to resolve the problem.

If you cannot continue without the full use of module *modname* you must terminate CICS in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHMPAC, DFHMPDD, DFHMPDM, DFHMPIB, DFHMPRL, DFHMPMO

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHMP0002   *applid* **A severe error (code *X'code'*) occurred in module *modname*.**

Explanation

An error occurred in module *modname*. The code X'*code*' is the exception trace point ID that uniquely identifies what the error is and where the error was detected. For more information about CICS exception trace entries, see Troubleshooting and support.

System action

An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you suppressed dumps in the dump table.

CICS continues unless you specified in the dump table that CICS must terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the systems programmer. This exception entry indicates a possible error in CICS code. The severity of its impact depends on the importance of the function that was running at the time of the error.

CICS might not terminate.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you might decide to continue to run and terminate CICS at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you must terminate CICS in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

{the length of policy name is invalid. | the policy name contains invalid characters. | the XML data for the policy could not be parsed.}

Explanation

An error has occurred creating policy *policyname* in BUNDLE resource *bundle*. Possible reasons include:

Length of policy name is invalid

A policy name is not between 1 and 64 characters long

Policy name contains invalid characters

The policy name specified contains invalid characters. Valid characters are: A-Z, a-z, 0-9 and _. A policy name is 1 - 64 characters long. Leading and embedded blank characters are not permitted. The name must not begin with 0-9, _, or the characters xml (lowercase or uppercase).

XML data for the policy could not be parsed

The preceding DFHPI*nnnn* message gives further information about the cause of the problem.

System action

An exception entry is made in the trace table.

An exception response is returned to the caller of this domain and the policy create is terminated.

User response

Inspect the CICS trace and MP domain message log for any related trace entries or messages. Validate the XML against the MP Policy schema for the CICS system into which the bundle is being installed. Correct the policy XML, discard the bundle, and reinstall it.

Module:
DFHMPRL

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *policyname*
5. *bundle*

CMPO

DFHMP2004   *date time applid* **The CICS managed platform domain failed to create policy** *policyname* **in BUNDLE resource** *bundle* **because the** *{policy schema level is not supported | USERTAG contains invalid characters | policySchemaVersion is invalid | policySchemaRelease is invalid}***:** *error_data.*

Explanation

An error occurred creating policy *policyname* in BUNDLE resource *bundle*. Possible reasons include:

Policy schema level *error_data* **is not supported**

The policySchemaVersion and policySchemaRelease of policy *policyname* must not be higher than the schema level supported by this release of CICS.

USERTAG *error_data* **contains invalid characters**

The acceptable 1-8 characters of a usertag are A-Z a-z 0-9 and _. The name must begin with an alphabetic character.

policySchemaVersion *error_data* **is invalid**

The specified 1-2 character string must consist of numeric characters only, i.e. 0-9, and be in the range 1-99.

policySchemaRelease *error_data* **is invalid**

The specified 1-2 character string must consist of numeric characters only, i.e. 0-9, and be in the range 0-99.

System action

An exception entry is made in the trace table.

An exception response is returned to the caller of this domain and the policy create is terminated.

User response

The probable cause is an error or inconsistency in the policy XML. Inspect the CICS trace and MP domain message log for any related trace entries or messages. Validate the policy against the MP Policy schema for the CICS system into which the BUNDLE resource is being installed. Correct the policy XML, discard the bundle, and reinstall it.

Explanation

An error occurred creating policy *policyname* in bundle *bundle* because of a problem with rule *rulename*. Possible reasons include:

Rule is a duplicate of another rule in the same policy

The policy has another rule of the same name.

Rule contains invalid characters

The acceptable 1-64 characters of a rule name are: A-Z, a-z, 0-9, . _ - @ and #. The name must begin with an alphabetic character.

Has an event action but no EP adapter or adapter set name is specified

The policy rule has an event action, but no EP adapter or adapter set name is specified.

System action

An exception entry is made in the trace table.

An exception response is returned to the caller of this domain and the policy create is terminated.

User response

The probable cause is an error or inconsistency in the policy XML. Inspect the CICS trace and MP domain message log for any related trace entries or messages. Validate the policy against the policy schema for the CICS system into which the bundle is being installed. Correct the policy, discard the bundle and reinstall it.

7. Value chosen from the following options:

   1= is a duplicate of another rule in the same policy.,

   2= contains invalid characters in its name.,

   3= has an event action but no EP adapter or adapter set name is specified.

Destination

CMPO

DFHMP2006　　*date time applid* **The CICS managed platform domain failed to create the policy *policyname* in BUNDLE resource *bundle* because the rule *rulename* { has an invalid rule type | has an invalid condition name for rule type | has an invalid item name | has an invalid operator value | has an invalid storage unit | has an invalid count unit | has an invalid time unit | has an invalid abend code | has an invalid EP adapter name | has an invalid EP adapter set name | has a missing XML element | has an invalid rule group name | has an invalid event name}: 'error_data'.**

Explanation

An error occurred creating policy *policyname* in BUNDLE resource *bundle* because of a problem with rule *rulename*. Possible reasons include:

Rule type is invalid

The rule type *error_data* is not supported by this release of CICS. This message can occur instead of DFHMP2004 when task and system rules are defined in the same policy and the task rule is not supported by this release of CICS.

Condition name is invalid for rule type

The condition name *error_data* is not valid for the specified rule type.

Item name is invalid for rule type

The item *error_data* is not supported by this release of CICS for the specified rule type.

Operator is invalid

The operator *error_data* is invalid. Recognized operators are:

- GT - Greater Than

Storage unit is invalid

The storage unit *error_data* is invalid. Recognized units are:

- B - bytes
- K - Kb
- M - Mb
- G - Gb

Count unit is invalid

The count unit *error_data* is invalid. Recognized units are:

- "" - no unit
- K - thousands

Time unit is invalid

The time unit *error_data* is invalid. Recognized units are:

- S - seconds
- M - milliseconds
- O - microseconds

Abend code is invalid

The action abend code *error_data* contains invalid characters. Valid characters are: A-Z a-z 0-9 . _ - @ and #.

Invalid EP adapter name

The EP adapter name *error_data* contains invalid characters. Valid characters are: A-Z a-z 0-9 and _. Leading and embedded blank characters are not valid. The name must not begin with 0-9, _, or the characters xml (lowercase or uppercase).

Invalid EP adapter set name

The EP adapter set name *error_data* contains invalid characters. Valid characters are: A-Z a-z 0-9 and _. Leading and embedded blank characters are not valid. The name must not begin with 0-9, _ or the characters xml (lowercase or uppercase).

Missing XML element

All policy rules are made up of a number of mandatory elements. The XML element *error_data* is missing.

Invalid rule group name

The rule group *error_data* is invalid. Recognized values are:

- TASK
- SYSTEM

Invalid event name

The name of the event data item*error_data*contains invalid characters. The acceptable 1 - 32 characters for an event name are: A-Z a-z 0-9 _. The name must not begin with 0-9, _ or the characters xml (lowercase or uppercase).

System action

An exception entry is made in the trace table.

An exception response is returned to the caller of this domain and the policy create is terminated.

User response

The probable cause is an error or inconsistency in the policy XML. Inspect the CICS trace and MP domain message log for any related trace entries or messages. Validate the policy against the policy schema for the CICS system into which the bundle is being installed. Correct the policy, discard the bundle, and reinstall it.

DFHMP2009	*date time applid* **The CICS managed platform domain failed to create the policy** *policyname* **in BUNDLE resource** *bundle* **because the rule** *rulename* **specifies an invalid threshold value of** *threshold***.**

Explanation

An error occurred creating policy *policyname* in bundle *bundle* because policy *policyname* defines a rule *rulename* with an invalid threshold value *threshold*. The maximum value for a threshold depends on the rule type and item specified, as follows:

- storage: The maximum value for each item is as follows:
  - task24 or shared24: 16777215 bytes (16MB -1)
  - task31 or shared31: 2147483647 bytes (2GB -1)
  - task64 or shared64: 4294967295 gigabytes
- databaserequest, filerequest, programrequest, and storagerequest: All items have a maximum value of 4294967295 requests.
- time: The maximum value for the threshold is 86400 seconds.

System action

An exception entry is made in the trace table.

An exception response is returned to the caller of this domain and the policy create is terminated.

User response

The probable cause is an error or inconsistency in the policy XML. Inspect the CICS trace and MP domain message log for any related trace entries or messages. Validate the policy against the policy schema for the CICS system into which the bundle is being installed. Correct the policy, discard the bundle, and reinstall it.

Explanation

An error occurred creating policy *policyname* in BUNDLE resource *bundle* because of a problem with rule *rulename*. Possible reasons include:

Static data item name is invalid

The name of the static data item *staticname* contains invalid characters. The acceptable 1 - 32 characters for a static item name are: A-Z a-z 0-9 and _. Leading and embedded blank characters are not permitted. The name must not begin with 0-9, _ or the characters xml (lowercase or uppercase).

Static data item value is invalid

The value of the static data item *staticname* contains invalid characters. The acceptable 1 - 255 characters for the value of a

static data item are: A-Z a-z 0-9 ` ¬ ¦ ! " £ $ % ^ & * ( ) _ + - = { } : @ ~ ; ' # < > ? , . / |. Embedded blank characters are also permitted.

Duplicate static name

The static data item*staticname*has same name as another static data item defined for the same rule.

System action

An exception entry is made in the trace table.

An exception response is returned to the caller of this domain and the policy create is terminated.

User response

The probable cause is an error or inconsistency in the policy XML. Inspect the CICS trace and MP domain message log for any related trace entries or messages. Validate the policy against the policy schema for the CICS system into which the bundle is being installed. Correct the policy, discard the bundle, and reinstall it.

DFHMP3002   *date time applid* **Task *trannum*(*tranid*) exceeded a policy threshold and is abended with abend code**

abcode. **BundleId=***bundleid*,
PolicyName=*policyname*,
RuleName=*rulename*,
RuleType=*ruletype*,
Category=*category*,
Threshold=*threshold*
(Value=*value*, **Unit=***unit*),
CurrentCount=*currentcount*.

Explanation

A threshold specified on rule *rulename* defined by policy *policyname* defined in bundle *bundleid* was exceeded and the task *tranum* has been abended with an abend code of *abcode*. The rule of type *ruletype* and category *category* specifies a threshold value of *threshold*. The threshold was specified in the policy with a value of *value* and unit *unit*. The current value of the count for this rule is *currentcount*.

System action

The task is abended with abend code *abcode*.

User response

Use the information in the message to determine whether the identified task is using excessive CICS resources. If this message occurs too frequently consider increasing the threshold in the named policy.

DFHMP3003	*date time applid* **Task** *trannum*(*tranid*) **Event emission failed because the EPADAPTER resource** *adaptername { is unavailable	specifies transactional events which are not supported	specifies synchronous event emission which is not supported}*. **BundleId=***bundleid*, **BundleName=***bundlename*, **PolicyName=***policyname*, **RuleName=***rulename*.

Explanation

Event emission for policy *policyname* in rule *rulename* is not possible. Possible reasons include:

EP adapter is unavailable

The specified EP adapter is disabled or not installed.

Transactional events which are not supported

The EP adapter specifies transactional events, which are not supported.

Synchronous event emission is not supported

The EP adapter specifies synchronous event emission, which is not supported.

System action

Processing continues, but policy events for this rule are discarded.

User response

Install and enable the EPADAPTER resource *epadapter*, remove the transactional option from the definition of the EP adapter, or specify the asynchronous events.

DFHMP3009	*date time applid* **Task *trannum* (*tranid*) has triggered a *ruletype* system rule *rulename* (*ruledetails*) defined by policy *policyname* in bundle *bundleid*.**

Explanation

A transaction *tranid* has triggered the evaluation of *ruletype* system rules and the rule *rulename* defined by policy *policyname* in bundle *bundleid* has evaluated true.

The insert *ruledetails* includes rule specific information which is composed of between one and three name-value pairs and has the following format *{resourcetype=resourcename,} {FROM=fromstate, TO=tostate}*.

This message is produced when a system rule requests that a message is issued when:

- a resource state change occurs, e.g. when a FILE is opened
- a threshold is crossed, e.g. when the active tasks in a TRANCLASS exceeds 90% of MAXACTIVE value
- an unusual system state or action is detected, e.g. when a MESSAGE is issued

The transaction *tranid* named in the message is the name of the transaction that triggered evaluation of the *ruletype* system rule, which in some cases may be CICS system task. For example, when the initiation of a transaction at a terminal triggers a taskThreshold rule the transaction named will be the CSTP system task.

DFHMQ0116D	*date time applid* **Cannot open the queue manager. MQCC=***mqcc* **MQRC=***mqrc***.**

Explanation

An MQOPEN call to the queue manager is unsuccessful.

System action

CKTI ends.

User response

Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc* to determine the cause of the problem.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqcc*
5. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0117D	*date time applid* **Cannot query the queue manager. MQCC=***mqcc* **MQRC=***mqrc***.**

Explanation

An MQINQ call to the queue manager is unsuccessful.

System action

CKTI ends.

User response

Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc* to determine the cause of the problem.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqcc*

5. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0118 I   *date time applid* **MsgID=***X'msg-id'*.

Explanation

This message follows message DFHMQ0113, indicating the hexadecimal identifier of the message that could not be processed.

System action

Processing continues.

User response

Refer to earlier DFHMQ0113 message.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *X'msg-id'*

Destination

CMQM, Console and Terminal End User

DFHMQ0119D   *date time applid* **CICS detected an IRC failure. Cannot start transaction** *tran-id***.**

Explanation

A trigger message is retrieved from the initiation queue which defines a CICS transaction to be started, and the transaction is defined to run in a remote CICS region. The EXEC CICS START request for this transaction ends abnormally because of a failure in the IRC connection between the local and remote CICS regions.

System action

The trigger message is sent to the dead-letter queue, and CKTI continues processing the next message.

User response

Investigate the reason for the IRC failure.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tran-id*

Destination

CMQM, Console and Terminal End User

DFHMQ0120D   *date time applid* **MQPUT failed. MQCC=***mqcc* **MQRC=***mqrc***.**

Explanation

An attempt is made to put a message on a queue with a MQPUT call, but the attempt is unsuccessful. This message is followed by message DFHMQ0110 indicating the name of the queue.

System action

CKTI ends.

User response

Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc* to determine why a MQPUT call could not be made for the queue.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqcc*
5. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0121D   *date time applid* **No dead-letter queue defined for queue manager.**

Explanation

A dead-letter queue has not been defined for the queue manager.

System action

The trigger message is discarded, and the process cannot be started.

User response

Define a dead-letter queue if one is required.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0122D   *date time applid* **Cannot close the queue manager. MQCC=***mqcc* **MQRC=***mqrc***.**

Explanation

CKTI is unable to close the queue manager after inquiring about the dead-letter queue.

System action

CKTI ends.

User response

Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc* to determine the cause of the problem.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqcc*
5. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0123D   *date time applid* **The dead-letter queue is not of type local.**

Explanation

The dead-letter queue defined is not of type local. This message is followed by message DFHMQ0110, indicating the name of the queue.

System action

The message is not put to the dead-letter queue.

User response

Define the dead-letter queue as a local queue.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0124D   *date time applid* **The dead-letter queue is not of usage normal.**

Explanation

The dead-letter queue defined is not of usage type normal. This message is followed by message DFHMQ0110I indicating the name of the queue.

System action

The message is not put to the dead-letter queue.

User response

Define the dead-letter queue to have usage type normal.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0125 E   *date time applid* **Unable to set mqmonitor** *mqmonitor* **started. EIBFN=***X'eibfn'* **EIBRESP=***eibresp* **EIBRESP2=***eibresp2*.

Explanation

CKTI has attempted to set the associated MQMONITOR started, but the command is unsuccessful.

System action

CKTI ends.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values. Use the data contained in these fields to resolve the problem, and retry.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqmonitor*
5. *X'eibfn'*
6. *eibresp*
7. *eibresp2*

Destination

CMQM, Console and Terminal End User

DFHMQ0126 I   *date time applid* **Cannot open the initiation queue. CKTI will retry in one minute. MQCC=***mqcc* **MQRC=***mqrc*.

Explanation

CKTI has attempted to open an initiation queue, but the attempt is unsuccessful.

System action

This may be a temporary problem so CKTI will retry in one minute. CKTI will continue to retry every minute for one hour.

User response

Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc*.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqcc*
5. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0127 I   *date time applid* **MQGET failure. CKTI will retry in one minute. MQCC=***mqcc* **MQRC=***mqrc*.

Explanation

An attempt to issue an MQGET call on the initiation queue has been unsuccessful.

System action

This may be a temporary problem so CKTI will retry in one minute. CKTI will continue to retry every minute for one hour.

User response

Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc*.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqcc*
5. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0128 I   *date time applid* **CKTI processing resumed for queue name = *q-name*.**

Explanation

Following a temporary communication problem CKTI processing of the named initiation queue has resumed.

System action

None.

User response

None.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *q-name*

Destination

CMQM, Console and Terminal End User

DFHMQ0129 E   *date time applid* **The CKTI transaction has detected an unrecoverable abend *abcode*.**

Explanation

The CKTI transaction has detected an unrecoverable abend and will terminate.

System action

The CKTI transaction terminates.

User response

Notify the system programmer.

Identify and correct the cause of the abend.

Manually restart the CKTI transaction.

Module:
DFHMQTSK

XMEOUT parameters/Message inserts

1. *date*
2. *time*

3. *applid*
4. *abcode*

Destination

CMQM, Console and Terminal End User

DFHMQ0209 E   *date time applid* **Unable to INQUIRE on MQCONN. EIBFN=*X'eibfn'* EIBRESP=*eibresp* EIBRESP2=*eibresp2* EIBRCODE=*X'eibrcode'*.**

Explanation

An attempt to inquire on the MQCONN definition is unsuccessful.

System action

The connection process is terminated, and control returns to CICS.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values. Determine the reason for the problem, and use the CICS-MQ adapter control panels (the CKQC transaction) to retry the connection process.

Module:
DFHMQPUL

XMEOUT parameters/Message inserts

Destination

CMQM, Console and Terminal End User

DFHMQ0218 W	*date time applid* **Obsolete INITPARM for program DFHMQPRM detected. All DFHMQPRM INITPARM values are ignored.**

Explanation

DFHMQQCN attempts to connect to WebSphere MQ, but has detected an obsolete INITPARM for program DFHMQPRM in the system initialization table (SIT) (or the SIT override INITPARM statement).

System action

The connection process continues. The INITPARM settings are ignored and values are taken instead from the installed MQCONN definition.

User response

Remove the DFHMQPRM keyword and its values from the INITPARM statement in the SIT or the SIT override.

Module:
DFHMQQCN, DFHMQPUL

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0220 E   *date time applid* **Unable to LINK to program DFHMQCON. EIBFN=***X'eibfn'* **EIBRESP=***eibresp* **EIBRESP2=***eibresp2* **EIBRCODE=***X'eibrcode'***.**

Explanation

An attempt to link to DFHMQCON is unsuccessful.

System action

The connection process is terminated and control returns to CICS.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values. Use the CICS-MQ adapter control panels (the CKQC transaction) to retry the connection process.

Module:
DFHMQQCN

XMEOUT parameters/Message inserts

1. *date*

6. *eibresp2*
7. *X'eibrcode'*

Destination

CMQM, Console and Terminal End User

DFHMQ0307 I   *date time applid* **Successful connection to queue manager** *qmgr-name* **release** *vvrr { | group } qsg-name*

Explanation

The connection to queue manager *qmgr-name* is successful. The release of WebSphere MQ is *vvrr*. If this was a group attach then *qsg-name* is shown.

System action

Processing continues normally.

User response

None.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *qmgr-name*
5. *vvrr*
6. Value chosen from the following options:

   1= ,

   2= group

7. *qsg-name*

Destination

CMQM, Console and Terminal End User

DFHMQ0308 I   *date time applid* **MQNAME** *id* **is stopped. Connect request deferred.**

Explanation

An attempt to connect to MQNAME *id* is unsuccessful. If *id* is the name of a queue manager, the queue manager is not active. If RESYNCMEMBER(GROUPRESYNC) is specified, the *id* is the name of a queue-sharing group. All the queue managers in the queue-sharing group are inactive.

System action

CICS automatically connects when the queue manager becomes active, or a queue manager in the queue-sharing group becomes active.

User response

Check that you entered the correct name. You can either start the queue manager to connect automatically or disconnect and reconnect to another active queue manager.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *id*

Destination

CMQM, Console and Terminal End User

DFHMQ0309 E   *date time applid* **Unable to connect using MQNAME** *id*. **MQCC=***mqcc* **MQRC=***mqrc*.

Explanation

An attempt to connect to WebSphere MQ using MQNAME *id* is unsuccessful. The *id* should be the name of a queue manager or the name of a queue sharing group defined to this system.

System action

The connection process terminates and control returns to CICS.

User response

Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc*, and take the appropriate action. For reason code 2298, MQRC_FUNCTION_NOT_SUPPORTED, a probable cause is that the RESYNCMEMBER attribute of the MQCONN resource definition specifies GROUPRESYNC but the WebSphere MQ queue manager does not support the GROUP UR function.

Module:
DFHMQCON, DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *id*
5. *mqcc*
6. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0310 I   *date time applid* **Duplicate connect to queue manager** *qmgr-name*. **Connect rejected.**

Explanation

An attempt to connect to a queue manager is unsuccessful because the queue manager is already connected.

System action

The connection process terminates and control returns to CICS.

User response

None.

Module:
DFHMQQCN

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *qmgr-name*

Destination

CMQM, Console and Terminal End User

DFHMQ0311 E   *date time applid* **Unable to start alert monitor CKAM. EIBFN=***X'eibfn'* **EIBRESP=***eibresp* **EIBRESP2=***eibresp2* **EIBRCODE=***X'eibrcode'*.

Explanation

During the connection process, the CICS-MQ adapter is unable to start the alert monitor CKAM.

System action

The queue manager is connected, but CKAM is not started so the function of the CICS-MQ adapter is restricted.

User response

Without the alert monitor, the CICS-MQ adapter is unable to perform the following functions:

- It cannot handle a deferred connection
- It cannot respond to a queue manager failure
- It cannot perform a warm or immediate shutdown if it needs to wait (that is, the last task carries out shutdown)

It is recommended that you use CKQC to terminate the connection using a forced shutdown of the CICS adapter.

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values, and take the appropriate action.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *X'eibfn'*
5. *eibresp*
6. *eibresp2*
7. *X'eibrcode'*

Destination

CMQM, Console and Terminal End User

DFHMQ0312 E   *date time applid* **Unable to GETMAIN DFHMQLOC storage. EIBFN=***X'eibfn'* **EIBRESP=***eibresp* **EIBRESP2=***eibresp2* **EIBRCODE=***X'eibrcode'*.

Explanation

The CICS-MQ adapter is unable to obtain storage for the DFHMQLOC control block.

System action

The connection process terminates and control returns to CICS.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values. This is probably a CICS 'short on storage' problem. Use the procedure followed at your installation to resolve the problem.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *X'eibfn'*
5. *eibresp*
6. *eibresp2*
7. *X'eibrcode'*

Destination

CMQM, Console and Terminal End User

DFHMQ0313 I   *date time applid* ***UOWID=***conn-name.X'uow-id'* **is in doubt.**

Explanation

This message is issued at connection time. The unit of work shown is in doubt. An asterisk character preceding the unit-of-work identifier indicates that the unit of work will not be resolved automatically.

System action

The units of work will be resolved by the distributed queuing component when remote queuing starts.

User response

See the Administering WebSphere MQ for z/OS for information about resolving the WebSphere MQ unit of recovery associated with the in-doubt CICS unit of work.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *conn-name*

5. *X'uow-id'*

Destination

CMQM, Console and Terminal End User

DFHMQ0314 I   *date time applid* **UOWIDs highlighted with * will not be automatically resolved.**

Explanation

This message appears when there are unresolved in-doubt units of work. Refer to message DFHMQ0313I.

System action

None.

User response

None.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0315 E   *date time applid* **Unable to LOAD API exit CSQCAPX. EIBFN=***X'eibfn'* **EIBRESP=***eibresp* **EIBRESP2=***eibresp2* **EIBRCODE=***X'eibrcode'.*

Explanation

The CICS-MQ adapter is unable to use the API-crossing exit program CSQCAPX. This can be a normal situation if you do not intend to use the API-crossing exit, and have disabled the program CSQCAPX.

System action

The API-crossing exit is not used.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values.

If you are trying to use the API-crossing exit, use the data contained in these fields to resolve the problem.

Module:
DFHMQCON, DFHMQRS

CMQM, Console and Terminal End User

DFHMQ0319 E   *date time applid* **Unable to INQUIRE SYSTEM RELEASE. EIBFN=***X'eibfn'* **EIBRESP=***eibresp* **EIBRESP2=***eibresp2* **EIBRCODE=***X'eibrcode'***.**

Explanation

An attempt to issue an EXEC CICS INQUIRE SYSTEM RELEASE command is unsuccessful.

System action

The connection process terminates and control returns to CICS.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values, and take the appropriate action.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

4. *X'eibfn'*

5. *eibresp*

6. *eibresp2*

7. *X'eibrcode'*

Destination

CMQM, Console and Terminal End User

DFHMQ0320I   *date time applid* **The CICS-MQ Adapter cannot find MQNAME** *id***.**

Explanation

The CICS-MQ adapter failed to connect because the MQNAME *id* was not found. The *id* is not the name of a queue manager nor the name of a queue sharing group defined to this system.

System action

The CICS-MQ attachment facility is inactive.

User response

Change the MQNAME parameter on the MQCONN definition to specify a valid queue manager name or name of a queue sharing group. None.

Module:

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

4. *id*

Destination

CMQM, Console and Terminal End User

DFHMQ0321 I   *date time applid* **There is no active connection. Stop connection rejected.**

Explanation

An attempt is made to shut down a connection but there is no connection active. This could be caused by one of the following:

- A connection had not been made
- The connection had already been shut down
- The connection is still being made (that is, it is pending)

System action

The request is ignored, and control returns to CICS.

User response

None.

Module:
DFHMQDSC

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0322D   *date time applid* **Invalid input. Stop connection rejected.**

Explanation

A request to shut down the CICS-MQ adapter is made, but it is rejected because the syntax of the shutdown request is not valid.

System action

The request is ignored.

User response

Issue the request again. See the Administering the CICS-MQ adapter for details of the correct syntax.

Module:
DFHMQDSC

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0323 I   *date time applid command* **received from TERMID=***termid* **TRANID=***tranid* **USERID=***userid*.

Explanation

The request to connect or disconnect is received from terminal *termid*. The originating transaction is *tranid* (this could be CKAM). *userid* is the user ID of the operator who used the terminal to initiate the operation. This message is also issued on the console for audit trail purposes.

System action

Processing continues normally.

User response

None.

Module:
DFHMQQCN, DFHMQDSC

XMEOUT parameters/Message inserts

1. *date*

2. *time*
3. *applid*
4. *command*
5. *termid*
6. *tranid*
7. *userid*

Destination

CMQM, Console and Terminal End User

DFHMQ0324 I   *date time applid* **All queue managers in queue sharing group** *qsg-name* **are inactive.**

Explanation

An CICS-MQ group attach request to a queue manager in queue sharing group *qsg-name* failed because all queue managers in the group are inactive.

System action

The CICS-MQ Adapter proceeds to attempt connection to each queue manager in turn and connection will be made when a queue manager in the group becomes active on this system.

User response

Check that you entered the correct group name for the MQNAME parameter in the MQCONN definition or on the CKQC command. Start a queue manager and the connection will then be made automatically.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *qsg-name*

Destination

CMQM, Console and Terminal End User

DFHMQ0325 I   *date time applid* **Call to CICS SVC for CICS-MQ function failed.**

Explanation

The CICS-MQ adapter issued a call to the CICS SVC during CICS-MQ group attach processing. The call to the CICS SVC failed.

System action

The CICS-MQ connection fails. The CICS-MQ adapter will issue an exception trace and take a system dump.

User response

Ensure the correct level of CICS SVC DFHCSVC is in use. Changing the SVC requires an MVS IPL to activate it.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

7=Inactive,

8=Unknown

5. *command*

Destination

CMQM, Console and Terminal End User

DFHMQ0331 I	*date time applid* **Adapter shutdown completed. Unable to disconnect from queue manager** *qmgr-name* **release** *vvrr {	group } qsg-name*

Explanation

The CICS-MQ adapter is shut down. However, it is not able to disconnect from *qmgr-name* (for example, because the queue manager has already shut down).The release of WebSphere MQ is *vvrr*. If the connection had used group attach then *qsg-name* is shown.

System action

Processing continues normally.

User response

Look for other messages explaining why the CICS-MQ adapter could not disconnect from WebSphere MQ.

Module:
DFHMQDSC

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *qmgr-name*
5. *vvrr*
6. Value chosen from the following options:

    1= ,

    2= group

7. *qsg-name*

Destination

CMQM, Console and Terminal End User

DFHMQ0332 I	*date time applid* **Queue manager** ***qmgr-name* is already stopped. MQCC=*mqcc* MQRC=*mqrc*.**

Explanation

A request is made to shut down the CICS-MQ adapter, but the queue manager is already shut down. For example, the operator shuts down both the queue manager and the CICS-MQ adapter simultaneously. If the queue manager stops first, it cannot receive the disconnect request from the CICS adapter.

System action

The adapter shutdown process continues.

User response

If the queue manager is already shut down, you can ignore this message. Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc*, and take the appropriate action.

Module:
DFHMQDSC

XMEOUT parameters/Message inserts

1. *date*
2. *time*

5. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0350 I   *date time applid* **Unable to LOAD API exit CSQCAPX. Program not found.**

Explanation

The CICS-MQ adapter is unable to use the API-crossing exit program CSQCAPX because it cannot be found. This is a normal situation if you do not intend to use the API-crossing exit.

System action

Processing continues normally.

User response

None.

Module:
DFHMQCON, DFHMQRS

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0351 I   *date time applid* **Unable to LOAD API exit CSQCAPX. Program is disabled.**

Explanation

The connection to queue manager *ssnm* is successful. The CICS-MQ adapter is unable to use the API-crossing exit program CSQCAPX because it is disabled. This is a normal situation if you do not intend to use the API-crossing exit, and have therefore disabled the program CSQCAPX.

System action

The API-crossing exit is not used.

User response

If you wish to use the API-crossing exit:

- Ensure that CSQCAPX is in the DFHRPL concatenation

- Issue the CICS command CEMT SET PROGRAM(CSQCAPX) NEWCOPY ENABLE
- Activate the exit using the Modify Connection option of the CKQC transaction

Destination

CMQM, Console and Terminal End User

DFHMQ0365 E   *date time applid* **Unable to LINK to program DFHMQQCN. EIBFN=***X'eibfn'* **EIBRESP=***eibresp* **EIBRESP2=***eibresp2* **EIBRCODE=***X'eibrcode'.*

Explanation

The alert monitor has detected that a deferred connection has been activated, but it cannot link to DFHMQQCN.

System action

The connection process is terminated, and control returns to CICS.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values. Use the CICS-MQ adapter control panels (the CKQC transaction) to make the connection.

Module:
DFHMQMON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *X'eibfn'*
5. *eibresp*
6. *eibresp2*
7. *X'eibrcode'*

Destination

CMQM, Console and Terminal End User

DFHMQ0366 E   *date time applid* **Unable to LINK to program DFHMQDSC. EIBFN=***X'eibfn'* **EIBRESP=***eibresp* **EIBRESP2=***eibresp2* **EIBRCODE=***X'eibrcode'.*

Explanation

The alert monitor has detected that the CICS-MQ adapter is ready to shut down but cannot link to DFHMQDSC.

System action

The disconnection process continues and control returns to CICS.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values. Use the CICS-MQ adapter control panels (the CKQC transaction) to disconnect from WebSphere MQ.

Module:
DFHMQMON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *X'eibfn'*
5. *eibresp*
6. *eibresp2*
7. *X'eibrcode'*

Destination

CMQM, Console and Terminal End User

DFHMQ0368 E   *date time applid* **Invalid PEB type**
X'type' at location X'location'. PEB
ignored.

Explanation

A pending event is not of the type expected by the alert monitor.

System action

The pending event is discarded.

User response

If this problem occurs frequently, collect the following diagnostic items, and contact your IBM support center:

- A note of the values returned in the message
- Any trace information collected

Module:
DFHMQMON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *X'type'*
5. *X'location'*

Destination

CMQM, Console and Terminal End User

DFHMQ0369 E   *date time applid* **More than 99**
notify messages outstanding. This
message is postponed temporarily.

Explanation

More than 99 pending events have been established. (For example, attempts have been made to connect to more than 99 systems that are not running.)

System action

The event is not processed until one of the other 99 events has expired.

User response

If you want to clean up the system, shut down and restart CICS.

Module:
DFHMQMON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0370 I   *date time applid* **MQMONITORs**
are currently restricted to *type*
MQGETs per second.

Explanation

The number of MQGETs an MQMONITOR task can issue per second is currently restricted as the current z/OS WLM server health indicator for the CICS address space is not 100%.

System action

Processing continues.

User response

None.

Module:
DFHMQMON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *type*

Destination

CMQM, Console and Terminal End User

DFHMQ0371 I   *date time applid* **MQMONITORs**
do not have a restriction on the
number of MQGETs that can be
issued per second.

Explanation

MQMONITORs do not have a restricition on the number of MQGETs an MQMONITOR task can issue per second.

System action

Processing continues.

User response

None.

Module:
DFHMQMON

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0380 E   *date time applid* **No active connection. *{STARTCKTI | STOPCKTI | RESET | DISPLAY}* rejected.**

Explanation

An attempt to start or stop CKTI or to use the DISPLAY/RESET function, is unsuccessful because there is no active connection between CICS and WebSphere MQ.

System action

The request is ignored.

User response

Establish a connection and reissue the request.

Module:
DFHMQDIS, DFHMQDSL, DFHMQRS, DFHMQSSQ

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. Value chosen from the following options:

    1=STARTCKTI,

    2=STOPCKTI,

    3=RESET,

    4=DISPLAY

Destination

CMQM, Console and Terminal End User

DFHMQ0381D   *date time applid* **No initiation queue name specified at connect time. *{STARTCKTI | STOPCKTI}* rejected.**

Explanation

An attempt is made to start or stop CKTI using the default queue name, but the default queue name is not found. This is because the current connection does not have an initiation queue name associated with it.

System action

The request is ignored.

User response

Specify the queue name explicitly. If you require a default queue name, specify one when you perform the connection process.

Module:
DFHMQSSQ

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. Value chosen from the following options:

    1=STARTCKTI,

    2=STOPCKTI

Destination

CMQM, Console and Terminal End User

DFHMQ0382D   *date time applid* **CKTI with the same initiation queue name is being started. *{STARTCKTI | STOPCKTI}* rejected.**

Explanation

An attempt is made to start CKTI specifying the name of an initiation queue that is used by another CKTI being started.

System action

The request is ignored.

User response

Review the console for messages in the range DFHMQ0100 through DFHMQ0109 for further information, or use CICS operator commands (for example CEMT INQ TASK) to determine why the CKTI started earlier is not running. If the review indicates the earlier CKTI has terminated then issue STOP CKTI specifying the same Initiation Queue Name. This will resolve the pending start and allow the re-issue of START CKTI for the same Initiation Queue Name.

Module:
DFHMQSSQ

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

4. Value chosen from the following options:

   1=STARTCKTI,

   2=STOPCKTI

Destination

CMQM, Console and Terminal End User

DFHMQ0383D	*date time applid* **Another CKTI with the same initiation queue name is still running.** *{STARTCKTI | STOPCKTI}* **rejected.**

Explanation

An attempt is made to start CKTI specifying the name of an initiation queue that is already used by a CKTI which is still running.

System action

The request is ignored.

User response

If required, use the CICS-MQ adapter control panels (the CKQC transaction) to stop the existing CKTI, and restart.

Module:
DFHMQSSQ

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

4. Value chosen from the following options:

   1=STARTCKTI,

   2=STOPCKTI

Destination

CMQM, Console and Terminal End User

DFHMQ0384D	*date time applid* **Another CKTI with the same initiation queue name is being stopped.** *{STARTCKTI | STOPCKTI}* **rejected.**

Explanation

Either:

- An attempt is made to start CKTI with an initiation queue name the same as the one that is currently being stopped, or
- An attempt was made to stop an initiation queue that is already in the process of stopping.

System action

The request is ignored.

User response

Wait until the initiation queue has stopped, and then reissue the start request if required.

Module:
DFHMQSSQ

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

4. Value chosen from the following options:

   1=STARTCKTI,

   2=STOPCKTI

Destination

CMQM, Console and Terminal End User

DFHMQ0385D	*date time applid* **CKTI not found.** *{STARTCKTI | STOPCKTI}* **rejected.**

Explanation

An attempt to stop CKTI is unsuccessful because the queue name specified is not found. This is because either:

- The name of the initiation queue is specified incorrectly, or
- The CKTI has already stopped

System action

The request is ignored.

User response

Verify the name of the initiation queue, and reissue the request if necessary.

Module:
DFHMQSSQ

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. Value chosen from the following options:

    1=STARTCKTI,

    2=STOPCKTI

Destination

CMQM, Console and Terminal End User

DFHMQ0386 I   *date time applid {STARTCKTI | STOPCKTI | RESET}* **initiated from TERMID=***termid* **TRANID=***tranid* **USERID=***userid* **and is accepted.**

Explanation

The CICS-MQ adapter has processed the *command* request. However, the CICS task might not have completed its processing yet (for example, CKTI could be waiting for a certain event to occur before it can be stopped). *command* can be STARTCKTI, STOPCKTI, or RESET.

System action

Processing continues.

User response

None.

Module:
DFHMQRS, DFHMQSSQ

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. Value chosen from the following options:

    1=STARTCKTI,

    2=STOPCKTI,

    3=RESET

5. *termid*
6. *tranid*
7. *userid*

Destination

CMQM, Console and Terminal End User

DFHMQ0389 I   *date time applid* **Invalid input. Start/Stop CKTI rejected.**

Explanation

The syntax of the CICS adapter request entered is incorrect.

System action

The request is rejected.

User response

See the Administering the CICS-MQ adapter for details of the correct syntax, or use the CICS-MQ adapter control panels (the CKQC transaction) to request the function.

Module:
DFHMQSSQ

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM, Console and Terminal End User

DFHMQ0390 E   *date time applid* **Unable to START transaction** *tranid* **associated**

with MQMONITOR *mqmonitor*.
EIBFN=*X'eibfn'* **EIBRESP=***eibresp*
EIBRESP2=*eibresp2*
EIBRCODE=*X'eibrcode'*.

Explanation

During the connection process, the CICS-MQ adapter is unable to start the transaction associated with the specified MQMONITOR.

System action

The queue manager is connected, but the MQMONITOR is not started.

User response

After the cause of the problem has been corrected, attempt to restart the MOMONITOR using the CEMT SET MQMONITOR transaction or EXEC CICS START commands.

The EIB fields contain information about which command is being issued and the cause of the problem. See the CICS Knowledge Center for an explanation of these values, and take the appropriate action.

Module:
DFHMQCON, DFHMQMNS

9. *X'eibrcode'*

Destination

CMQM, Console and Terminal End User

DFHMQ0391 I   *date time applid* **Start requested for mqmonitor** *mqmonitor*, **transaction** *tranid*.

Explanation

This message is issued when a request to start the specified mqmonitor has been successfully processed.

System action

Processing continues.

User response

None.

Module:
DFHMQMNS

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqmonitor*
5. *tranid*

Destination

CMQM, Console and Terminal End User

DFHMQ0392 I   *date time applid* **Stop requested for mqmonitor** *mqmonitor*, **transaction** *tranid*.

Explanation

This message is issued when a request to stop the specified mqmonitor has been successfully processed.

System action

Processing continues.

User response

None.

Module:
DFHMQTM

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqmonitor*
5. *tranid*

Destination

CMQM, Console and Terminal End User

DFHMQ0400 I   *date time applid* **UOWID=***conn-name.X'uow-id'*

Explanation

This message gives the connection name and the identifier of a unit of work and appears with one of the following messages:

- DFHMQ0402
- DFHMQ0403
- DFHMQ0404
- DFHMQ0405
- DFHMQ0406
- DFHMQ0407

You can use the connection name when using WebSphere MQ commands (for example, RESOLVE INDOUBT).

System action

Processing continues.

User response

See associated messages.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *conn-name*
5. *X'uow-id'*

Destination

CMQM and Console

DFHMQ0402 I	*date time applid* **Resolved with COMMIT.**

Explanation

The syncpoint coordinator has informed WebSphere MQ that the unit of work indicated by the accompanying DFHMQ0400 message has been committed.

System action

Processing continues.

User response

None.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0403 I	*date time applid* **Resolved with BACKOUT.**

Explanation

The syncpoint coordinator has informed WebSphere MQ that the unit of work indicated by the accompanying DFHMQ0400 message has been backed out.

System action

Processing continues.

User response

None.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0404 E	*date time applid* **Resolve failed. MQCC=***mqcc* **MQRC=***mqrc***.**

Explanation

The syncpoint coordinator requested that the unit of work indicated by the accompanying DFHMQ0400 message be committed or backed out. However, WebSphere MQ is unable to do this. *mqrc* gives the reason for the problem.

System action

The unit of work remains in doubt.

User response

If you want to resolve the unit of work:

- Diagnose the cause of the problem and correct it (refer to the IBM MQ messages manual for information about *mqcc* and *mqrc*, and use the CICS-MQ adapter control panels (the CKQC transaction) to reconnect WebSphere MQ.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqcc*
5. *mqrc*

Destination

CMQM and Console

DFHMQ0405 E	*date time applid* **Execute resolve failed. MQCC=***mqcc* **MQRC=***mqrc***.**

Explanation

The syncpoint coordinator requested that resolution of the units of work be executed. However, WebSphere MQ was unable to do this.

System action

The unit of work remains in doubt.

User response

Refer to the IBM MQ messages manual for information about *mqcc* and *mqrc*, to determine the cause of the problem. See the Administering the CICS-MQ adapter for information about resolving the WebSphere MQ unit of recovery associated with the CICS unit of work.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *mqcc*
5. *mqrc*

Destination

CMQM and Console

DFHMQ0406 E	*date time applid* **Cannot resolve, syncpoint disposition lost.**

Explanation

The syncpoint coordinator has been subjected to an initial start, and information regarding units of work has been lost (syncpoint state UERTDGCS). The coordinator cannot inform the CICS-MQ adapter whether to commit or back out the unit of work indicated by the accompanying DFHMQ0400 message. For information about UERTDGCS, see the Developing system programs for CICS.

System action

The unit of work remains in doubt.

User response

Determine how to resolve the in-doubt unit of work. See the Administering the CICS-MQ adapter for information about resolving the WebSphere MQ unit of recovery associated with the CICS unit of work.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0407 E	*date time applid* **Cannot resolve, syncpoint disposition unknown.**

Explanation

The syncpoint coordinator cannot find a decision about resolving the unit of work indicated by the accompanying DFHMQ0400 message (syncpoint state UERTDGNK). The coordinator cannot inform the CICS-MQ adapter whether to commit or back out the unit of work. For information about UERTDGNK, see the Developing system programs for CICS.

System action

The unit of work remains in doubt.

User response

Determine how to resolve the in-doubt unit of work. See the Administering the CICS-MQ adapter for information about resolving the WebSphere MQ unit of recovery associated with the CICS unit of work.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0408 I   *date time applid* **Only partial resynchronization achieved. Check previous messages.**

Explanation

Total resynchronization is not achieved; some units of work remain in doubt.

System action

Processing continues.

User response

Action any messages received before this one which indicate units of work that have not been resolved. When there are no more in-doubt units of work message DFHMQ0409 is issued.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0409 I   *date time applid* **Resynchronization completed successfully.**

Explanation

Resynchronization has completed successfully; all units of work have been resolved.

System action

Processing continues.

User response

None.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0410 I   *date time applid* **CICS immediate shutdown detected. Adapter terminated.**

Explanation

CICS has notified the CICS-MQ adapter that it is shutting down immediately.

System action

The CICS-MQ adapter initiates an immediate shutdown. Any in-flight tasks using WebSphere MQ are backed out when the connection is broken by CICS.

User response

See the Administering the CICS-MQ adapter for more information about CICS-MQ adapter shutdown.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0411 I   *date time applid* **CICS warm shutdown detected. Adapter is quiescing.**

Explanation

CICS has notified the CICS-MQ adapter that it has initiated a warm shutdown.

System action

The CICS-MQ adapter initiates a quiesced shutdown.

User response

See the Administering the CICS-MQ adapter for more information about CICS-MQ adapter shutdown.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0412 I   *date time applid* **CICS abend detected. Adapter terminated.**

Explanation

The CICS-MQ adapter detected a CICS abend.

System action

The CICS-MQ adapter is terminated.

User response

None.

Module:
DFHMQTRU

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CMQM and Console

DFHMQ0414 I   *date time applid* **Abending task ID** *task-id* **Abend Code** *abend-code*.

Explanation

The referenced task is force purged by the operator and abends with shown abend code.

System action

The outstanding task has been completed and, because it is not in a must-commit state, the CICS-MQ adapter ends the task abnormally. For more information about the CICS abend code, see the Diagnostics reference manual.

User response

None.

Module:
DFHMQTRU

DFHMQ0432 E *applid* **Invalid task number. Re-enter.**

Explanation

The task number specified is out of the range requested.

System action

The request is ignored.

User response

Specify a task number in the range displayed.

Module:
DFHMQPUL

Destination

Terminal End User

DFHMQ0433 E *date time applid* **Invalid option. Must be 1, 2, or 3.**

Explanation

The value entered was not 1, 2, or 3.

System action

The value is rejected.

User response

Enter a value of 1, 2, or 3 on the pop-up screen.

Module:
DFHMQPOP

Destination

Terminal End User

DFHMQ0434 E *date time applid* **Queue manager name missing. Must be entered.**

Explanation

The queue manager name is not specified on the connection parameter panel.

System action

The connection request is rejected.

User response

Enter the name of the required queue manager or Queue sharing group on the panel.

Module:
DFHMQPOP

Destination

Terminal End User

DFHMQ0439 E *date time applid* **Invalid Stop option. Must be 1 or 2.**

Explanation

The shutdown option number is not a valid value.

System action

The request is ignored.

User response

Specify either 1 or 2.

Module:
DFHMQPOP

Destination

Terminal End User

DFHMQ0440 E *date time applid* **Unable to send map *map-id* mapset DFHMQHx. EIBFN=*X'eibfn'* EIBRESP=*eibresp* EIBRESP2=*eibresp2* EIBRCODE=*X'eibrcode'*.**

Explanation

The program is unable to send map *map-id* from the map set DFHMQHx to the screen.

System action

The task is terminated.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values, and take the appropriate action.

Module:
DFHMQBAS, DFHMQPOP, DFHMQPUL, DFHMQRET

XMEOUT parameters/Message inserts

1. *date*

DFHMQ0715 E   *date time applid tranid trannum*
Invalid COMMAREA length *length*
in message.

Explanation

The COMMAREA length calculated by the CICS-MQ
bridge is not valid. It probably exceeds the maximum
of 32767. This error can also occur if a negative length
was calculated.

System action

The CICS-MQ bridge task terminates abnormally.

User response

If OutputDataLength is set within the MQCIH, check
it does not exceed 32759 (allowing 8 bytes for the
program name). If it is not set, check the total request
message length (also allowing 8 bytes for the program
name). The length of any MQCIH must not exceed
32767. Note that the length of the MQCIH is taken
from the MQCIH length field.

DFHMQ0731 I   *date time applid tranid trannum*
Unable to inquire on dead-letter queue, MQRC=*mqrc*.

Explanation

An MQINQ call on the dead-letter queue failed. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action

Processing continues.

User response

Refer to the IBM MQ messages manual for information about *mqcc*.

Module:
DFHMQBR2

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*
6. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0732 I	*date time applid tranid trannum* **Unable to put message to dead-letter queue. MQRC=***mqrc***.**

Explanation

An MQPUT to the dead-letter queue failed.

System action

If this error occurs in a CICS-MQ bridge task, the unit of work is backed out. If this error occurs in the CICS-MQ bridge monitor, it will be abnormally terminated. The response message will be sent to the dead-letter queue.

User response

Refer to the IBM MQ messages manual for information about *mqcc*.

Module:
DFHMQBP2, DFHMQBR2

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*
6. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0733 I	*date time applid tranid trannum* **Dead-letter queue not defined with USAGE(NORMAL).**

Explanation

The dead-letter queue is not defined correctly. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action

Processing continues.

User response

Refer to the IBM MQ messages manual for information about *mqcc*.

Module:
DFHMQBR2

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0734 I	*date time applid tranid trannum* **Dead-letter queue max message length** *length* **is too small.**

Explanation

The maximum message length allowed for the dead-letter queue is less than the size of the dead-letter header, MQDLH. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action

Processing continues.

User response

Increase the MAXMSGL of the dead-letter queue to at least the size of the MQDLH but, to be effective, make it large enough to hold the largest request message expected plus the MQDLH.

Module:
DFHMQBR2

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*
6. *length*

Destination

CMQM, Console and Terminal End User

DFHMQ0735 I   *date time applid tranid trannum*
**CICS or queue manager quiesced
before bridge task started.**

Explanation

The CICS-MQ bridge task received a quiescing return
code from an MQOPEN call for the request queue or an
MQGET call for the first message within a unit of work.

System action

The request will be processed when CICS, the queue
manager, or the CICS-MQ bridge monitor are restarted.

User response

Restart CICS, the queue manager or the CICS-MQ
bridge monitor.

Module:
DFHMQBP0, DFHMQBP3

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0736 I   *date time applid tranid trannum*
**bridge quiesced before task
started.**

Explanation

The CICS-MQ bridge quiesced before a CICS-MQ
bridge task could get the first message within a unit
of work.

System action

The request will be processed when the CICS-MQ
bridge monitor is restarted.

User response

Restart the CICS-MQ bridge monitor.

Module:

DFHMQBP0

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0737 E   *date time applid tranid trannum*
**CICS or queue manager quiesced,
bridge task backed out.**

Explanation

The CICS-MQ bridge task received a quiescing return
code from an MQGET for a second or subsequent
message within a unit of work.

System action

The unit of work is backed out and the CICS-MQ bridge
task terminated.

User response

Retry when one or both CICS and the queue manager
are restarted

Module:
DFHMQBP0, DFHMQBP3

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0738 E   *date time applid tranid trannum*
**CICS-MQ bridge quiesced, task
backed out.**

Explanation

The CICS-MQ bridge task quiesced while a CICS-MQ
bridge task was waiting to get a second or subsequent

message within a unit of work because the queue was not enabled for getting messages.

System action

The unit of work is backed out and the CICS-MQ bridge task terminated.

User response

Retry when one or both CICS and the queue manager are restarted.

Module:
DFHMQBP0

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0739 E	*date time applid tranid trannum* **bridge terminated, timeout interval expired before middle or lastUOW message received.**

Explanation

The CICS-MQ bridge task did not receive a second or subsequent message for a unit of work within the wait interval specified (or as overridden on the first request for the unit of work) at CICS-MQ bridge monitor startup.

System action

The CICS-MQ bridge task terminates.

User response

Perform one of the following:

- Increase the WAIT parameter on CICS-MQ bridge monitor startup.
- Correct the program that failed to send a subsequent request for a unit of work.
- Set the UOWControl field correctly for the previous request.

Module:
DFHMQBP0, DFHMQBP3

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0740 E	*date time applid tranid trannum* **Client application requested backout.**

Explanation

An MQCUOWC_BACKOUT request was received from the client.

System action

The CICS-MQ bridge task backed out a unit of work.

User response

None.

Module:
DFHMQBP0, DFHMQBP3

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

8. *program-name*

Destination

CMQM, Console and Terminal End User

DFHMQ0753 E *date time applid tranid trannum* **Message has been processed previously and returned to the queue using backout.**

Explanation

The CICS-MQ bridge already attempted to process this request but the request failed and was backed out. This could be because backout processing failed for a CICS-MQ bridge task that ended abnormally or because there was a CICS failure while this request was in progress. No attempt is made to process the request a second time.

System action

Processing continues.

User response

Look at previous error messages for this message on the CSMT log to determine the cause for the previous failure.

Module:
DFHMQBR0

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

4. *tranid*

5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0754 E *date time applid tranid trannum* **bridge task abend *abend-code* in program *program-name*.**

Explanation

A CICS-MQ bridge task ended abnormally.

System action

The task is terminated.

User response

The associated transaction dump can be used to assist problem determination. If the program name begins with DFHMQB and the problem persists, contact your IBM support center.

Module:
DFHMQBP1

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

4. *tranid*

5. *trannum*

6. *abend-code*

7. *program-name*

Destination

CMQM, Console and Terminal End User

DFHMQ0755 E *date time applid tranid trannum* **bridge queue is not shareable.**

Explanation

The CICS-MQ bridge request queue does not have the SHARE attribute.

System action

The CICS-MQ bridge monitor terminates.

User response

Alter the queue definition and restart the CICS-MQ bridge monitor.

Module:
DFHMQBR0

XMEOUT parameters/Message inserts

1. *date*

2. *time*

3. *applid*

4. *tranid*

5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0756 E   *date time applid tranid trannum* **Dead-letter queue not defined as local.**

Explanation

The dead-letter queue is not defined as a local queue. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action

Processing continues.

User response

Redefine the dead-letter queue as a local queue.

Module:
DFHMQBR2

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0757 E   *date time applid tranid trannum* **Unable to open reply-to queue. MQRC=*mqrc*.**

Explanation

The reply-to queue specified is not known to the queue manager.

System action

The response message will be sent to the dead-letter queue.

User response

Refer to the IBM MQ messages manual for information about *mqcc*.

Module:
DFHMQBP0, DFHMQBP3

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*
6. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0758 E   *date time applid tranid trannum* **Unable to START bridge task. EIBRESP=*eibresp* EIBRESP2=*eibresp2*. Userid *userid* is not authorized.**

Explanation

The CICS-MQ bridge monitor is being run with the IDENTIFY or VERIFY authorization option. An EXEC CICS START command for the CICS-MQ bridge task failed with NOTAUTH or USERIDERR because the user ID is not authorized to start CICS-MQ bridge transactions or has been revoked.

System action

The task is terminated abnormally.

User response

The EIB fields contain information about the cause of the problem. See the CICS Application development reference manual for an explanation of these values. Correct the security definitions if this userid should be authorized to run requests using the CICS-MQ bridge.

Module:
DFHMQBP0, DFHMQBR0

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*

4. *tranid*
5. *trannum*
6. *mqrc*

Destination

CMQM, Console and Terminal End User

DFHMQ0772 E *date time applid tranid trannum* **Invalid FacilityLike value *xxx* in message.**

Explanation

The CICS Link3270 program DFHL3270 returned code BRIHRC_FACILITYLIKE_INVALID, because the FacilityLike field of the MQCIH header in the input message was invalid. It must correspond to an installed terminal that is to be used as a model for the CICS-MQ bridge facility.

System action

The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response

Correct the FacilityLike field to specify the name of a terminal installed on the CICS system or install a terminal with the required name.

Module:
DFHMQBP0

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*
6. *xxx*

Destination

CMQM, Console and Terminal End User

DFHMQ0773 E *date time applid tranid trannum* **Invalid or expired Facility token in message.**

Explanation

The CICS Link3270 program DFHL3270 returned code BRIHRC_INVALID_FACILITYTOKEN

or BRIHRC_FACILITYTOKEN_IN_USE, because the Facility field of the MQCIH header in the input message was invalid. The value must be zero on the first request of a sequence of 3270 CICS-MQ bridge messages, and the value that is returned in the reply message must then be used in subsequent messages. The token expires after the time specified in the FacilityKeepTime field of the first message. The token cannot be used by more than one sequence of CICS-MQ bridge messages.

System action

The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response

Check the application to ensure that the correct Facility token is being used and that it has not expired. If necessary, increase the FacilityKeepTime so that the token does not expire before the sequence of messages has been processed.

Module:
DFHMQBP0

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0774 E	*date time applid tranid trannum* **Unable to start transaction on CICS system *sys-name*.**

Explanation

The RemoteSysId field of the MQCIH message header is non-blank, but the specified name sys-name is not known to CICS or there is no active CICS connection to that remote system.

System action

The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response

Ensure that the specified CICS system is running and that there is an active CICS Intersystem communication connection to it from the system running the CICS-MQ bridge monitor.

Module:
DFHMQBR0

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *trannum*
6. *sys-name*

Destination

CMQM, Console and Terminal End User

DFHMQ0775 I	*date time applid tranid trannum* **Unable to start transaction on this CICS system.**

Explanation

The RemoteSysId field of the MQCIH message header is blank, but the specified Facility token is not known to CICS.

System action

The CICS-MQ bridge monitor does not know which CICS system allocated the token and so leaves the message on the queue for another CICS-MQ bridge monitor to process. If the token is invalid or expired this may result in the message never being processed. Processing continues.

User response

Ensure that the RemoteSysId field of all messages except the first of a sequence contains the RemoteSysId returned in the previous reply message. This will ensure messages are routed directly to the correct CICS region improve performance, and prevent the possibility of unprocessed messages.

Module:
DFHMQBR0

XMEOUT parameters/Message inserts

1. *date*
2. *time*

3. *applid*

4. *tranid*

5. *trannum*

Destination

CMQM, Console and Terminal End User

DFHMQ0776 E   *date time applid tranid trannum*
Invalid FacilityKeepTime value *xxx*
in message.

Explanation

The CICS Link3270 program DFHL3270 returned
code BRIHRC_INVALID_KEEPTIME, because the
FacilityKeepTime field of the MQCIH message header
was zero or greater than the maximum allowed keep
time (as controlled by the BRMAXKEEPTIME CICS
system initialization parameter).

System action

The input messages are backed out to the backout-
requeue queue or dead-letter queue.

User response

Ensure that the FacilityKeepTime field of the first
message in a 3270 transaction sequence contains a
value within the valid range.

Module:

Link3270 error. RC=*code*.

Explanation

The CICS Link3270 program DFHL3270 returned an
unexpected return code.

System action

The input messages are backed out to the backout-
requeue queue or dead-letter queue.

User response

Use the CICS COBOL copybook DFHBRIHO to find the
symbolic name of the return code from the numeric
value *code* reported in the message. Refer to 'BRIH-
RETURNCODE values' in the CICS documentation
to determine the meaning of the return code from
DFHL3270. Correct the input message accordingly.

DFHMQ0781 E   *date time applid tranid trannum*
Invalid bridge vector.

Explanation

The CICS-MQ bridge input vector was invalid. Possible errors are:

- The vector length is greater than the message length
- The vector type is not recognized
- A field length is greater than its defined length
- A field input data length is greater than the defined length of the field

The ErrorOffset field of the MQCIH header indicates the position within the message where the error was detected (although the actual error may have been caused by a problem earlier in the message).

System action

The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response

Ensure the CICS-MQ bridge input vector is defined correctly.

DFHMQ2064   *date time applid*
Resynchronization outstanding for queue manager *qmgr1* after CICS-MQ group attach has connected to queue manager *qmgr2*.

Explanation

CICS indicates that resynchronization is outstanding for queue manager *qmgr1* after CICS-MQ group attach has connected to queue manager *qmgr2*.

System action

The CICS is connected to WebSphere MQ queue manager *qmgr2* but UOWs remain outstanding for WebSphere MQ queue manager *qmgr1*.

User response

The MQCONN definition either has RESYNCMEMBER(NO) specified, or RESYNCMEMBER(YES) is specified but CICS detected that all the UOWs outstanding are shunted indoubt meaning that resynchronization with WebSphere MQ cannot take place immediately. Both these situations allow group attach to proceed, and the result is CICS has connected to a different WebSphere MQ queue manager than previously. The user must manually reconnect to the original WebSphere MQ queue manager, which automatically resynchronizes the outstanding (non shunted) units of work. Shunted units of work wait to be unshunted at which point resynchronization takes place if CICS is connected to the original WebSphere MQ queue manager.

Module:
DFHMQCON

XMEOUT parameters/Message inserts

Destination

CMQM and Console

DFHMQ2065   *date time applid*
Resynchronization outstanding for queue manager *qmgr* after CICS-

MQ group attach has connected to queue-sharing group *qsg*.

Explanation

CICS indicates that resynchronization is outstanding for queue manager *qmgr* after CICS-MQ group attach has connected to queue-sharing group *qsg*.

System action

The CICS is connected to WebSphere MQ queue-sharing group *gsq* but UOWs remain outstanding for WebSphere MQ queue manager *qmgr*.

User response

The MQCONN definition has RESYNCMEMBER(GROUPRESYNC) specified but previously specified RESYNCMEMBER(NO) or RESYNCMEMBER(YES) and CICS has outstanding UOWs for that previous connection.

To resolve the outstanding UOWs, disconnect CICS from WebSphere MQ, change the setting of RESYNCMEMBER to YES or NO and change the MQNAME to specify *qmgr*. Now connect CICS to WebSphere MQ and the outstanding UOWs will be resolved. Having done this you can now revert to the previous settings for RESYNCMEMBER and MQNAME.

To avoid this problem in future, do not change the setting of RESYNCMEMBER whilst there are indoubts outstanding in WebSphere MQ.

Note: Shunted UOWs are not affected. These cannot be resolved until resolution is received by CICS. They wait to be unshunted at which point resynchronization takes place if CICS is connected to the original WebSphere MQ queue manager.

The Scanner was asked to deal with PDS *PDS*, but was
unable to open the PDS for access.

System action

None.

User response

Check the accessibility of datasets specified in the
JCL.

Module:
DFHEISUP

Destination

SYSPRINT

DFHMS0109 S   PDS, FAILED TO READ PDS.

Explanation

The Scanner was asked to deal with a PDS, but was
unable to retrieve data from the PDS.

System action

None.

User response

Ensure the Scanner has access to datasets specified in
the JCL.

Module:

DFHEISUP

Destination

SYSPRINT

DFHMS0110 S   **UNABLE TO OPEN THE FILTER INPUT DATASET: *FILTER*.**

Explanation

The Scanner was instructed to use dataset *FILTER* as its filter input table, but was unable to open the dataset for processing.

System action

None.

User response

Ensure the Scanner has access to DD DFHFLTR specified in the JCL.

Module:
DFHEISUP

Destination

SYSPRINT

DFHMS0111 S   **FILTER VALIDATION HAS WARNINGS ABOUT *FILTERLINE*. THE FOLLOWING WARNINGS APPLY: *WARNINGS*.**

Explanation

The Scanner found problems during validation of the specified filter. The filter line *FILTERLINE* was found to have the following warnings. *WARNINGS*

System action

None.

User response

Correct the errors in the offending filter lines, and rerun the Scanner. Refer to the documentation for assistance with specifying filters.

Module:
DFHEISUP

Destination

SYSPRINT

DFHMS0112 S   **FILTER VALIDATION HAS FAILED TO VALIDATE *FILTERLINE*. THE FOLLOWING PROBLEMS WERE FOUND: *PROBLEMS*.**

Explanation

The Scanner found problems during validation of the specified filter. The filter line *FILTERLINE* was found to have the following problems. *PROBLEMS*

System action

None.

User response

Correct the errors in the offending filter lines, and rerun the Scanner. Refer to the documentation for assistance with specifying filters.

Module:
DFHEISUP

Destination

SYSPRINT

DFHMS0113 S   **UNEXPECTED VERB *VERB* WITH NO PARAMETERS FOUND.**

Explanation

The Scanner has encountered an internal error with Verb *VERB*.

System action

None.

User response

You may need further assistance from IBM to resolve this problem.

Module:
DFHEISUP

Destination

SYSPRINT

DFHMS0114 S   **INSUFFICIENT STORAGE SCANNING *MODULE*, *NUMBER* SCANNED.**

Explanation

The Scanner was unable to allocate sufficient storage to complete the scan and stopped whilst scanning *MODULE*.

System action

None.

User response

Increase the region size for the Scanner job, or decrease the number of modules to be scanned.

DFHNCnnnn messages

DFHNC0101I   Named counter server initialization is in progress.

Explanation

The named counter sequence number server program has started execution.

System action

Initialization continues.

User response

None.

Module:
DFHNCMN

Destination

Console and SYSPRINT

DFHNC0102I   Named counter server for pool *poolname* is now active.

Explanation

The named counter sequence number server for the named pool has completed initialization and is now ready to accept connections.

System action

The server waits for connection requests or operator commands.

User response

None.

Module:

Module:
DFHEISUP

Destination

SYSPRINT

DFHNCMN

Destination

Console and SYSPRINT

DFHNC0103   Named counter server initialization failed because the POOLNAME parameter was not specified.

Explanation

The named counter sequence number server program needs to know the name of the associated named counter pool in order to complete initialization, but no pool name was specified in the SYSIN or PARM field parameters.

System action

The server is terminated.

User response

Ensure that the parameter **POOLNAME=** *name* is specified either in the SYSIN parameters or in the PARM field of the JCL for the server.

Module:
DFHNCMN

Destination

Console and SYSPRINT

DFHNC0104   Named counter server initialization failed because program DFHNCMN is not APF authorized.

Explanation

The named counter sequence number server main program DFHNCMN cannot complete initialization because it is not running with APF authorization.

System action

The server is terminated.

User response

Ensure that the named counter sequence number server program DFHNCMN is loaded from an APF authorized library and has been link-edited with the option AC(1).

Module:
DFHNCMN

Destination

Console and SYSPRINT

DFHNC0105   **Named counter server initialization failed because program DFHNCMN is not licensed for use.**

Explanation

The named counter sequence number server main program DFHNCMN cannot complete initialization because the validate license check failed.

System action

The server is terminated.

User response

Ensure that the named counter sequence number server program DFHNCMN is licensed for use by adding the required licensing dataset to the STEPLIB DD statement.

Module:
DFHNCVL

Destination

Console and SYSPRINT

DFHNC0111I   **Named counter server for pool *poolname* is terminating.**

Explanation

The named counter sequence number server has started termination processing, so no further requests will be processed.

System action

Termination continues.

User response

None.

Module:
DFHNCMN

Destination

Console and SYSPRINT

DFHNC0112I   **Named counter server has terminated, return code *retcode*, reason code *rsncode*.**

Explanation

The named counter sequence number server has completed termination processing. For normal termination, the return code and reason code are both zero. If the termination was caused by an error, the return code will be 8 and the reason code will be the number of the previous DFHNCnnnn message giving the reason for termination.

System action

The named counter sequence number server program returns control (via the AXM termination routines) to MVS for job step termination.

User response

None.

Module:
DFHNCMN

Destination

Console and SYSPRINT

DFHNC0113   **Named counter server completion code is *cmpcode*, reason code *rsncode*.**

Explanation

The named counter sequence number server has terminated after intercepting an abnormal termination

(ABEND) request. If the completion code is a system completion code, it is shown as three hexadecimal digits, otherwise it is shown as four decimal digits for a user completion code. Any associated reason code is shown as a four byte hexadecimal value, which will be zero if no reason code was provided.

System action

The named counter sequence number server program returns control (via the AXM termination routines) to MVS for job step termination.

User response

None.

Module:
DFHNCMN

Destination

Console and SYSPRINT

DFHNC0121I	Automatic restart support is not available because &SYSCLONE may not be unique within the sysplex.

Explanation

The server attempted to generate a default ARM element identifier to use for automatic restart registration, using the one or two character &SYSCLONE value to identify the MVS system. Normally, MVS verifies during start-up that &SYSCLONE is unique within the sysplex. However, the server is running on a level of MVS where this check is optional and has not been performed, so the server is unable to generate a unique element identifier.

System action

The server is terminated.

User response

Servers should not normally be run on a level of MVS which does not enforce unique &SYSCLONE values. However, the problem can be bypassed by specifying an ARM element name explicitly on the server ARMELEMENT parameter.

Module:
DFHNCRS

Destination

Console and SYSPRINT

DFHNC0122	IXCARM REQUEST=*reqtype* failed, return code *retcode*, reason code *rsncode*.

Explanation

A request to the MVS automatic restart manager (ARM) gave an unexpected return code. The return code and reason code are shown in hexadecimal notation.

System action

The server is terminated.

User response

See the IXCARM macro in z/OS MVS Programming: Sysplex Services Reference (GC28-1772) for the explanation of the return and reason code.

Module:
DFHNCRS

Destination

Console and SYSPRINT

DFHNC0123	IXCARM REQUEST=*reqtype* failed, return code *retcode*, reason code *rsncode*.

Explanation

Automatic restart support is not available. The MVS automatic restart manager (ARM) gave a return code and reason code which indicates that ARM services are not available, but the reason could possibly be intentional or unavoidable, so the server is being allowed to continue execution without automatic restart support. The return code and reason code are shown in hexadecimal notation.

System action

The server continues initialisation without automatic restart support.

User response

See the IXCARM macro in z/OS MVS Programming: Sysplex Services Reference (GC28-1772) for the explanation of the return and reason code.

Module:
DFHNCRS

Destination

Console and SYSPRINT

DFHNC0201I   Processing *type parameters*

Explanation

The named counter sequence number server parameter processing routine is interpreting the specified parameter string. The first word gives the type of parameter (SYSIN/PARM/SET/DISPLAY/PRINT) and the rest is the specified parameters optionally followed by descriptive comment text after one or more spaces. If the parameters start with an asterisk or a space, the whole line is taken as descriptive comments.

System action

Any specified parameters will be processed.

User response

None.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0202   Unknown parameter keyword: *keyword*

Explanation

This parameter keyword did not match any of the defined parameter keywords for the named counter sequence number server.

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

Correct the parameter keyword (or remove the incorrect parameter) and reenter the command or restart the server.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0203   Value *value* for parameter *keyword* is incorrect. It must be a name of up to *maxlength* characters.

Explanation

The value of this named counter sequence number server parameter should have been specified as a name containing not more than the indicated number of characters.

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

Correct the parameter value and reenter the command or restart the server.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0204   Value *value* for parameter *keyword* is incorrect. It must be a decimal number.

Explanation

The value of this named counter sequence number server parameter should have been specified as a decimal number but was not in a valid format. (Numeric parameters can optionally be followed by the letter K, M, G or T to denote the appropriate powers of 1024).

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

Correct the parameter value and reenter the command or restart the server.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0205 **Value *value* for parameter *keyword* is greater than the maximum allowed value *maximum*.**

Explanation

The value of this named counter sequence number server parameter exceeded the maximum allowed value, given in the message. This message also occurs if the numeric part of a decimal value exceeds the maximum unsigned 32-bit integer (4294967295) even if a larger value is allowed to be specified by using a suffix "K", "M", "G" or "T".

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

Correct the parameter value and reenter the command or restart the server.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0206 **Value *value* for parameter *keyword* is less than the minimum allowed value *minimum*.**

Explanation

The value of this named counter sequence number server parameter was less than the minimum allowed value, given in the message.

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which

will cause the server to terminate when initialization parameter processing is complete.

User response

Correct the parameter value and reenter the command or restart the server.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0207 **Value *value* for parameter *keyword* is incorrect. It should be a time hh:mm:ss or hh:mm or a number of seconds.**

Explanation

The value of this named counter sequence number server parameter did not conform to the correct syntax for a time interval.

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

Correct the parameter value and reenter the command or restart the server.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0208 **Parameter keyword *keyword* is not supported for *command*.**

Explanation

A named counter sequence number server parameter keyword was specified in a context where it is not valid, such as an attempt to **SET** a parameter which can only be specified at initialization time, or to specify at initialization time a parameter which is only valid on **DISPLAY**.

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

If the error occurred at initialization, remove the incorrect parameter and restart the server. If it occurred on a server command, check that the command and parameter were correctly entered.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0209   **Parameter text contains invalid character: *text***

Explanation

The named counter sequence number server parameter processing routine found some unexpected text when attempting to process parameters.

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

Correct the parameters (or remove the incorrect parameter) and reenter the command or restart the server.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0210   **Parameter keyword *keyword* should not have a value for *command*.**

Explanation

A named counter sequence number server parameter keyword was specified in the form *keyword=value* in a context where it was not expected, for example on a **DISPLAY** command.

System action

Processing of the current line of parameters is terminated.

User response

Reenter the command without specifying a value for the parameter to be displayed.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0211I   **Parameter value: *keyword=value***

Explanation

This message is issued to show the current value of a named counter sequence number server parameter setting in response to a **DISPLAY** or **PRINT** command.

System action

Processing continues normally.

User response

None.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0212   **Value *value* for parameter *keyword* is incorrect. It must be one of *validlist*.**

Explanation

The value of this named counter sequence number server parameter was not recognized. It should have been specified as one of the indicated list of values.

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

Correct the parameter value and reenter the command or restart the server.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0213	**Value for parameter *keyword* is missing. The correct form is keyword=value.**

Explanation

A parameter keyword was specified without an associated parameter value on a named counter sequence number server **SET** command or in a SYSIN or PARM parameter string. Note that the only character which should appear between the parameter keyword and its intended value is the equals sign, without any extra spaces.

System action

Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response

Reenter the parameter specification in the correct form *keyword=value*.

Module:
DFHNCPR

Destination

Console and SYSPRINT

DFHNC0301I	**Console operator *consname* issued command: *command***

Explanation

A named counter sequence number server operator command has been issued via the MVS **MODIFY** or **STOP** command. This message identifies the console name (or TSO userid) from which the command was issued and the text of the command.

System action

Processing continues.

User response

None.

Module:
DFHNCOP

Destination

SYSPRINT

DFHNC0302I	***command* command ignored because no valid parameters were given.**

Explanation

A named counter sequence number server command was issued which had no valid parameters on it but was otherwise syntactically valid. The command has had no effect.

System action

Processing continues normally.

User response

Ensure that the command was entered correctly.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0303I	***command* command has been processed.**

Explanation

A named counter sequence number server command has been processed successfully.

System action

Processing continues.

User response

None.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0304I **STOP command is waiting for connections to be closed. Number of active connections = *connections*.**

Explanation

A named counter sequence number server **STOP** command has been issued (either via an MVS **STOP** command or via an MVS **MODIFY** command with the text **STOP**) but there are still active connections to the server, so the **STOP** command has not yet taken effect.

System action

The server rejects any further attempts to establish new connections, but continues processing requests for existing connections. Each time a connection is terminated, this message will be repeated as long as there are more active connections.

User response

Further information about the connections which are still active may be obtained using the command **DISPLAY CONNECTIONS**.

If the server needs to be shut down without waiting for connections to be closed, issue the server **CANCEL** command. Note that this will immediately terminate any active connections, causing any further requests for that server to be given a SYSIDERR indication. (The MVS **CANCEL** command can also be used, but should preferably be avoided because it will prevent the server from producing its normal closedown statistics and reports).

Note that if a CICS region is abnormally terminated while server connect or disconnect processing is in progress, or is terminated without going through end of task processing (for example using the **FORCE** command) there is a slight chance that the server will not be notified that the connection has been terminated. In this case the server will not be able to be closed down with the server **STOP** command, but only with the server **CANCEL** command.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0305I **STOP command has been processed.**

Explanation

Processing of a named counter sequence number server **STOP** command has now been successfully completed. This means that there are no longer any active connections and the server is ready to close down.

System action

The named counter sequence number server starts termination processing.

User response

None.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0306 **Named counter server does not support this command: *command***

Explanation

An operator command was addressed to the named counter sequence number server using the MVS **MODIFY** command, but the first word of the **MODIFY** parameter text is not a recognized server command (**SET**, **DISPLAY**, **PRINT**, **STOP**, **CANCEL** or an accepted abbreviation for one of these).

System action

The command is ignored.

User response

Correct and reenter the command.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0307I   **CANCEL** *parm* **command has been processed. Number of active connections =** *connections*.

Explanation

A named counter sequence number server **CANCEL** command has been issued, either from an operator console or internally by the server in response to a severe error such as coupling facility failure. This message includes any restart parameter specified on the command and the number of active connections which may be affected by this command.

System action

The server terminates immediately, without waiting to close connections.

User response

None.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0308   **Named counter server does not support CICS commands. To close it down, you can use the STOP command.**

Explanation

An operator command which appears to be a CICS command (a four-character transaction code of the form 'CExx') was addressed to the named counter sequence number server using the MVS **MODIFY** command.

System action

The command is ignored.

User response

Correct and reenter the command. If the intention is to close down the server, use the server **STOP** or **CANCEL** command.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0309   **Parameter** *parm* **on CANCEL command is incorrect. The only valid parameters are RESTART=YES or RESTART=NO.**

Explanation

A named counter sequence number server **CANCEL** command was issued with a parameter which did not match the valid parameter keywords.

System action

The command is ignored.

User response

Correct and reenter the command.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0310   **Parameter** *parm* **on STOP command is incorrect. No parameters should be specified.**

Explanation

A named counter sequence number server **STOP** command was issued with parameters, but the **STOP** command does not support any parameters.

System action

The command is ignored.

User response

Correct and reenter the command.

Module:
DFHNCOP

Destination

Console and SYSPRINT

DFHNC0351I   **Connection: Job** *jobname* **Applid** *applid* **Idle** *idletime*

Explanation

This describes a single connection from a CICS region to the named counter sequence number server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**.

The information shows the job name, the generic APPLID and the time in hours, minutes and seconds since the most recent request was issued using the connection.

System action

A message in this form is issued for each active connection to the current server, then message DFHNC0352I is issued to show the total number of active connections.

User response

None.

Module:
DFHNCCN

Destination

Console and SYSPRINT

DFHNC0352I	Total connections to this server: *connections*.

Explanation

This describes the total number of active connections from CICS regions to the named counter sequence number server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**.

System action

Processing continues.

User response

None.

Module:
DFHNCCN

Destination

Console and SYSPRINT

DFHNC0361I	Counter names: *counter1 counter2*

Explanation

This message lists one or two counter names in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS**.

System action

This message is issued as many times as is necessary to list all current counter names, then message DFHNC0362I is issued to show the total number of counters.

User response

None.

Module:
DFHNCRQ

Destination

Console and SYSPRINT

DFHNC0362I	The total number of named counters in the pool is *counters*.

Explanation

This describes the total number of counters within the the pool, in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS**.

System action

Processing continues.

User response

None.

Module:
DFHNCRQ

Destination

Console and SYSPRINT

DFHNC0363I	Details for named counter *counter*:

Explanation

This message shows counter details in response to the named counter sequence number server command **DISPLAY COUNTER=** *name* or **PRINT COUNTER=** *name*.

The detailed message layout is as follows:

```
Current value  Minimum value  Maximum value
          n              n              n
Options: x y
```

System action

Processing continues.

User response

The output shows the current counter value, the minimum counter value that can be assigned and the maximum counter that can be assigned. If the maximum value has just been assigned, the counter will be at its limit value, which is one greater than the maximum value that can be assigned.

Module:
DFHNCRQ

Destination

Console and SYSPRINT

DFHNC0364	No named counter was found matching *counter*.

Explanation

A counter name specified on the named counter sequence number server command **DISPLAY COUNTER=** *name* or **PRINT COUNTER=** *name* did not match any existing counter in the pool.

System action

The command is ignored.

User response

Ensure that the counter name was entered correctly, and that the command was addressed to the correct pool server.

Module:
DFHNCRQ

Destination

Console and SYSPRINT

DFHNC0365I	The number of named counters in the pool matching *counter* is *counters*.

Explanation

This indicates the number of matching named counters within the pool for which details were displayed in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS** where the counter name contained one or more wild card characters.

System action

Processing continues.

User response

None.

Module:
DFHNCRQ

Destination

Console and SYSPRINT

DFHNC0401I	Connected to CF structure *strname*.

Explanation

The named counter sequence number server has successfully established a connection to the coupling facility list structure for the named counter pool, using the IXLCONN macro.

System action

Processing continues.

User response

None.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0402I	CF structure *strname* was allocated by this connection.

Explanation

The named counter pool list structure did not previously exist and was allocated as part of the connection process.

System action

List structure initialization will be performed if necessary.

User response

None.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0403   **Connection to CF structure *strname* failed, IXLCONN return code *retcode*, reason code *rsncode*.**

Explanation

The IXLCONN macro to connect the named counter sequence number server to its pool list structure failed.

System action

The named counter sequence number server is terminated.

User response

See the documentation of the IXLCONN macro in z/OS MVS Programming: Sysplex Services Reference (GC28-1772) for the explanation of the return and reason code. If the reason code is of the form xxxx0C08, indicating structure allocation failure, this message will be followed by message DFHNC0409 giving the facility reason code for each coupling facility in which allocation was attempted.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0404   **CF structure *strname* cannot be used because it has been allocated with attribute *attribute*.**

Explanation

The named counter sequence number server has successfully connected to its pool list structure but has found that the structure has been allocated using an IXLCONN structure attribute keyword which is not supported by the server.

System action

The server is terminated.

User response

This probably indicates that the structure has been allocated or modified by some program other than the named counter sequence number server program. In this case, the incorrect structure should be deleted

(using the MVS **SETXCF FORCE** command) so that it will be reallocated correctly when the server is restarted.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0406   **Initialization failed for CF structure *strname* with response *response*.**

Explanation

The named counter sequence number server processing to initialize the pool list structure failed with an abnormal internal response code.

System action

The server is terminated.

User response

If the response code is 6 (I/O error), it indicates that an IXLLIST macro gave an abnormal return code, in which case a previous DFHNC0441 message will have been issued giving the IXLLIST return code and reason code. If this response code is any other value, this indicates that the list structure is in a state which should not occur, probably indicating that it was allocated or modified by a program other than the named counter sequence number server. In this case the structure may need to be deleted (using the MVS **SETXCF FORCE** command) so that it will be reallocated when the server is restarted.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0407   **CF structure *strname* is not available for shared use.**

Explanation

The named counter sequence number pool is currently locked for exclusive use by some other job such as a pool unload or reload job. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHNCLS_poolname').

System action

The server is terminated.

User response

Check whether a pool maintenance job is currently running. If it is, wait until it has finished before trying to start the server again. You can find out what jobs are currently using the pool using this MVS command:

```
DISPLAY GRS,RES=(SYSZDFH,'DFHNCLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0408	CF structure *strname* is not available for exclusive use.

Explanation

The current named counter sequence number unload or reload job requires exclusive use of the pool, but some other job is running which already has shared or exclusive use of the pool. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHNCLS_poolname').

System action

The server is terminated.

User response

Check whether a named counter sequence number server or maintenance job is currently running. If it is, wait until it has finished before trying to run the current job again. You can find out what jobs are currently using the pool using this MVS command:

```
DISPLAY GRS,RES=(SYSZDFH,'DFHNCLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0409	CF structure *strname* could not be allocated in facility *cfname*, reason code *rsncode*.

Explanation

If a previous named counter sequence number server message DFHNC0403 indicated an IXLCONN failure because the structure could not be allocated, this message is issued for each coupling facility in which allocation was attempted to show the facility reason code indicating why structure allocation failed. If the reason code is known to the server, the name of the reason code is given (as defined in the MVS macro IXLYCONA, but without the 'ConaRsn' prefix), otherwise its decimal value is shown.

If the response indicates InvalidStructureSize, this means that the initial list structure size (specified on the server **POOLSIZE** parameter or in the CFRM policy **INITSIZE** parameter) is not large enough to contain the required structure control information. The size of the control information is affected by the maximum structure size specified in the CFRM policy.

System action

The server is terminated.

User response

If further details are required, see the descriptions of the reason codes in the source of the MVS macro IXLYCONA which maps the connect answer area.

If the response was InvalidStructureSize, increase the initial structure size specification in the server **POOLSIZE** parameter or the CFRM policy **INITSIZE** parameter to ensure that there is enough space for data in addition to the structure control information. Also, check that the maximum structure size specified in the CFRM policy is not unnecessarily large. See the Configuring for more information on how to estimate pool sizes.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0411I	CF structure *strname* now has *percentage*% of entries in use.

Explanation

This message is issued by the named counter sequence number server when the percentage of list entries in use within the list structure increases past certain set threshold levels, or when it decreases past a threshold level after previously being at a higher level. This message is also issued immediately after a structure alter request has completed in order to show how the percentage has been affected by changes in the structure size. The percentage is calculated using information that is returned by successful coupling facility access requests, so if the message was triggered by structure alter completion and the current server has not processed any successful requests recently, the information may not be accurate.

System action

The warning threshold is increased to the next higher level (normally 5% higher if less than 95%, otherwise 1% higher), or decreased to the previous lower level depending on whether the usage is increasing or decreasing.

User response

Note that the structure may soon become full, preventing new counters from being created. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0417I	Alter request completed normally for CF structure *strname*.

Explanation

The named counter sequence number server has been notified by the system that a structure alter request has completed normally.

System action

New values for the structure size and number of entries are stored. This message is followed by message DFHNC0411 to indicate the new usage percentage.

User response

None.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0418I	Alter request ended abnormally for CF structure *strname* with status *status*.

Explanation

The named counter sequence number server has been notified by the system that a structure alter request has ended abnormally. The two bytes of status information in this message are taken from EEPLALTERENDSTATEFLAGS in the event exit parameter list (defined in the MVS macro IXLYEEPL).

System action

No action is taken as a result of this notification, but any problem which caused the alter request to fail may result in other related problems.

User response

If further information is required, look for MVS messages on the system log indicating the reason for the structure alter request failure. For further information about the status flags, see the source of the MVS macro IXLYEEPL.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0419I	Alter request ended normally for CF structure *strname* but target was not attained.

Explanation

The named counter sequence number server has been notified by the system that a structure alter request has ended normally but the target size was not attained.

System action

New values for the structure size and number of entries are stored. This message is followed by

message DFHNC0411 to indicate the new usage percentage.

User response

None.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0424	**Connectivity has been lost to CF structure *strname*. The named counter server cannot continue.**

Explanation

The named counter sequence number server has been notified by the system that connectivity has been lost to the coupling facility containing the pool list structure.

System action

The server issues an internal **CANCEL** command to terminate itself immediately.

User response

Restart the server when connectivity to the coupling facility from the current system has been reestablished. If connectivity is still available from other systems, CICS transactions which require access to the affected pool should be diverted to those systems if possible.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0425	**CF structure *strname* has failed. The named counter server cannot continue.**

Explanation

The named counter sequence number server has been notified by the system that the named counter pool list structure has been lost due to coupling facility structure failure. All named counters in the pool have been lost.

System action

Each server for the affected pool issues an internal **CANCEL** command to terminate itself immediately.

User response

If another coupling facility is available and is included in the CFRM preference list for the failed structure, restart the servers to cause a fresh copy of the list structure to be allocated on the alternate coupling facility. If no other coupling facility is available, wait until the original coupling facility has been made available again before restarting the servers.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0431I	**Access statistics for CF structure *strname*:**

Explanation

This message gives a summary of coupling facility access statistics. It is issued in response to a named counter sequence number server **DISPLAY** or **PRINT** command which includes the **CFSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Requests: Create Get Set Delete Inquire
Browse
              n   n   n      n
n      n
Responses: Asynch Unavail
              n       n
Normal Not fnd Vers chk List chk Str Full
I/O err
     n        n          n          n
n       n
```

System action

Processing continues.

User response

The statistics are described in detail in the DFHNCS4D data area. The individual fields have the following meanings:

- Response counts:

Asynch

Number of requests for which completion was asynchronous.

Unavail

Number of times requests were deferred because the structure was temporarily unavailable, for example because system-managed rebuild was in progress.

Normal

Number of normal responses.

Not fnd

The specified entry (table or item) was not found.

Vers chk

A version check failed for an entry being updated. This occurs when a duplicate name is found while creating a new entry, or when an assign request finds the counter has reached its limit, or when a compare and swap type request (assign with increment, rewind or update) finds that the counter changed before the attempt to set the new value, in which case the request is retried until successful.

List chk

A list authority comparison failed. This should only be possible during server initialization.

Str full

The list structure became full.

I/O err

Some other error code was returned by IXLLIST.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0432I	Pool statistics for CF structure *strname*:

Explanation

This message gives a summary of the usage statistics for the named counter pool list structure. It is issued in response to a named counter sequence number server **DISPLAY** or **PRINT** command which includes the **POOLSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Structure: Size  Max size
           nK        nK
Entries: Total  In use  Max used  Free
Min free
           n       n         n
n          n
         100%     n%        n%
n%         n%
```

System action

Processing continues.

User response

The statistics are described in detail in the DFHNCS6D data area. Pool usage statistics are calculated from information returned by recent coupling facility requests, and are not always very accurate, especially if the pool has not been accessed recently by the current server.

The individual fields have the following meanings:

- Structure:

Size

Current allocated size of the list structure.

Max size

Maximum size to which this structure could be altered.

- Entries:

Total

Total entries in the currently allocated structure (initially set at structure connection time and updated on completion of any structure alter request).

In Use

Number of entries currently in use.

Max Used

Maximum number in use (since last reset).

Free

Number of entries currently free (total minus used).

Min Free

Minimum number of free entries (since last reset).

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0441	CF structure *strname* request failed, IXLLIST return code *retcode*, reason code *rsncode*.

Explanation

A coupling facility access request issued by the named counter sequence number server using the IXLLIST macro gave an abnormal return code.

System action

The failing request is given a return code indicating a coupling facility access error.

User response

See the documentation of the IXLLIST macro in z/OS MVS Programming: Sysplex Services Reference (GC28-1772) for the explanation of the return and reason code.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0442	CF structure *strname* request failed, structure is full.

Explanation

A coupling facility access request issued by the named counter sequence number server using the IXLLIST macro failed because there is no free entry to create a new named counter.

System action

The failing request is given a return code indicating that there is no space available in the pool. This message will not be issued for further failures until the the number of entries in use has fallen well below the warning threshold.

User response

Any named counters which are no longer in use should be deleted so that the space can be reused. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the

START,ALTER option, and any active servers will be able to use the increased space immediately. However, if this action is possible it should normally have been taken in response to earlier warning message before the structure became full.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0451	Purge for CF structure *strname* failed, IXLPURGE return code *retcode*, reason code *rsncode*.

Explanation

A named counter sequence number access request was terminated abnormally and the server issued an IXLPURGE macro to ensure any active IXLLIST request was purged before releasing the I/O buffer, but the IXLPURGE macro gave a non-zero return code.

System action

The error is ignored because this only occurs when a request is already being terminated abnormally.

User response

See the documentation of the IXLPURGE macro in z/OS MVS Programming: Sysplex Services Reference (GC28-1772) for the explanation of the return and reason code.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0461I	Disconnected from CF structure *strname*.

Explanation

The named counter sequence number server has successfully disconnected from the pool list structure (using the IXLDISC macro) during termination.

System action

Processing continues.

User response

None.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0462 **Disconnect from CF structure**
strname failed, IXLDISC return
code _retcode_, reason code _rsncode_.

Explanation

The IXLDISC macro to disconnect the named counter sequence number server from its pool list structure failed.

System action

The error is ignored, as disconnection only occurs when the server is already terminating.

User response

See the documentation of the IXLDISC macro in z/OS MVS Programming: Sysplex Services Reference (GC28-1772) for the explanation of the return and reason code.

Module:
DFHNCCF

Destination

Console and SYSPRINT

DFHNC0481I **Waiting for structure _strname_ to**
become available.

Explanation

The named counter sequence number server was unable to connect to its coupling facility structure because of an environmental error, such as the structure being unavailable, as described in a previous DFHNC0403 message. The server is now waiting for this problem to be fixed, and will retry the connection request when it is notified via the ENF facility that the specific structure may now be available or that some change has occurred in the status of general coupling facility resources.

System action

The server waits to be notified of a relevant event.

User response

No action is required, but the waiting server can optionally be terminated using the MVS **CANCEL** command if it is no longer required.

Module:
DFHNCEN

Destination

Console and SYSPRINT

DFHNC0482I **Retrying connection to structure**
strname.

Explanation

The named counter sequence number server has been notified via ENF that its list structure may now be available or that a change has occurred in the status of some general coupling facility resources, so it is about to make another attempt to connect to the structure.

System action

The original IXLCONN request is retried.

User response

None.

Module:
DFHNCEN

Destination

Console and SYSPRINT

DFHNC0491 **ENFREQ ACTION=_action_ failed,**
return code _retcode_.

Explanation

An ENF request issued by the named counter sequence number server gave an unexpected return code.

System action

If this occurs on the ENFREQ ACTION=LISTEN request and the server is subsequently unable to connect to the list structure, the server will be terminated instead of waiting for the structure to become available.

User response

See the documentation of the ENFREQ macro in z/OS MVS Programming: Authorized Assembler

Services Reference (Volume 1) (GC28-1765) for the explanation of the return and reason code.

Module:
DFHNCEN

Destination

Console and SYSPRINT

| DFHNC0601I | Starting statistics collection for interval since *lasttime*. |

Explanation

The named counter sequence number server is about to collect interval, end of day or closedown statistics. This message identifies the start of the time interval to which the statistics apply, which is either the time that the server was started up or the time of the last reset, which occurs whenever interval or end of day statistics are produced. The format of the timestamp is yyyy-mm-dd hh:mm:ss.

System action

The server proceeds with statistics collection.

User response

None.

Module:
DFHNCST

Destination

SYSPRINT

| DFHNC0602I | Statistics collection completed, reset performed. |

Explanation

Named counter sequence number server statistics have been collected and counters have been reset. This occurs for interval or end of day statistics.

System action

Processing continues.

User response

None.

Module:
DFHNCST

Destination

SYSPRINT

| DFHNC0603I | Statistics collection completed. |

Explanation

Named counter sequence number server statistics have been collected but counters have not been reset. This normally occurs at server closedown.

System action

Processing continues.

User response

None.

Module:
DFHNCST

Destination

Console and SYSPRINT

| DFHNC0604 | Timer SET failed, return code *retcode*, reason code *rsncode*. |

Explanation

The statistics subtask in the named counter sequence number server tried to set up a timer wait interval but failed.

System action

The interval statistics function is terminated with message DFHNC0606.

User response

Check the return code and reason code. A return code of 4 indicates an attempt to set up more than one concurrent timer interval, which indicates a logic error in the server. The reason code in this case is the MVS STIMERM identifier for the existing timer interval. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM SET.

Module:
DFHNCST

Destination

Console and SYSPRINT

DFHNC0605   Timer CANCEL failed, return code *retcode*, reason code *rsncode*.

Explanation

The statistics subtask in the named counter sequence number server tried to cancel a timer wait interval but failed.

System action

The interval statistics function is terminated with message DFHNC0606.

User response

Check the return code and reason code. A return code of 4 indicates an attempt to cancel a nonexistent timer interval, which indicates a logic error in the server. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM CANCEL.

Module:
DFHNCST

Destination

Console and SYSPRINT

DFHNC0606   Statistics collection function is no longer available.

Explanation

The statistics collection subtask in the named counter sequence number server was unable to continue processing and has terminated. The reason will have been indicated by an earlier message.

System action

The interval statistics subtask terminates and no further interval statistics or end of day statistics will be produced for this run of the server.

User response

See the earlier message indicating the reason for the termination of the subtask.

Module:
DFHNCST

Destination

Console and SYSPRINT

DFHNC0610I   Statistics written to SMF, return code was *retcode*.

Explanation

Named counter sequence number server statistics have been sent to SMF. The return code from the SMFEWTM macro is indicated in this message. A non-zero return code usually indicates that SMF recording was suppressed because of current SMF options or an installation exit.

System action

Processing continues.

User response

If the return code is non-zero but SMF statistics were expected to be successfully written, see the documentation of the SMFEWTM macro in z/OS MVS System Management Facilities (SMF) (GC28-1783) for more information about return codes.

Module:
DFHNCST

Destination

SYSPRINT

DFHNC0701I   Named counter pool *poolname* is to be unloaded.

Explanation

The named counter sequence number server program has been started with the **UNLOAD** option requesting that the named counter pool is unloaded to a sequential data set.

System action

The server starts to process the unload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User response

None.

Module:
DFHNCUL

Destination

Console and SYSPRINT

DFHNC0702I   Named counter pool *poolname* has been successfully unloaded.

Explanation

The named counter pool has been unloaded successfully.

System action

The server closes down normally.

User response

None.

Module:
DFHNCUL

Destination

Console and SYSPRINT

DFHNC0703I **Number of unloaded counters: *counters*. Blocks written: *blocks*.**

Explanation

This message provides additional information about the results of the named counter pool unload process, giving the number of named counters which were unloaded and the number of 4K data blocks written to the unloaded named counter pool data set.

System action

Server termination continues.

User response

None.

Module:
DFHNCUL

Destination

Console and SYSPRINT

DFHNC0704 **DFHNCUL data set for unload could not be opened.**

Explanation

The data set to contain the unloaded named counter pool could not be opened.

System action

Unload processing is terminated and the server is closed down with message DFHNC0706.

User response

Check that the DFHNCUL DD statement is present in the JCL for the unload job.

Module:
DFHNCUL

Destination

Console and SYSPRINT

DFHNC0705 **Unload access to CF structure *strname* failed with response *response*.**

Explanation

The named counter pool unload process failed because of a problem with coupling facility access.

System action

Unload processing is terminated and the server is closed down with message DFHNC0706.

User response

If the response code is 6, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHNC0441 will have been issued. Any other response code indicates an internal logic error.

Module:
DFHNCUL

Destination

Console and SYSPRINT

DFHNC0706 **Unload for named counter pool *poolname* was unsuccessful.**

Explanation

The named counter pool unload process failed. The reason will have been described in a previous message.

System action

The server is terminated.

User response

See the previous message giving the reason for the unload failure. Note that any unload data set produced in this case will be incomplete and will not be valid for reload purposes.

Module:
DFHNCUL

Destination

Console and SYSPRINT

DFHNC0801I   **Named counter pool *poolname* is to be reloaded.**

Explanation

The named counter sequence number server program has been started with the **RELOAD** option requesting that the named counter pool is to be reloaded from a sequential data set produced using the **UNLOAD** option.

System action

The server starts to process the reload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User response

None.

Module:
DFHNCRL

Destination

Console and SYSPRINT

DFHNC0802I   **Named counter pool *poolname* has been successfully reloaded.**

Explanation

The named counter pool has been reloaded successfully.

System action

The server closes down normally.

User response

None.

Module:
DFHNCRL

Destination

Console and SYSPRINT

DFHNC0803I   **Counters reloaded: *counters*. Counters bypassed: *duplicates*. Blocks read: *blocks*.**

Explanation

This message provides additional information about the results of the named counter pool reload process. Named counters on the unloaded data set are bypassed during reload processing if they already exist in the pool (for example as a result of a previous reload which could not be completed due to lack of space).

System action

Server termination processing continues.

User response

None.

Module:
DFHNCRL

Destination

Console and SYSPRINT

DFHNC0804   **DFHNCRL data set for reload could not be opened.**

Explanation

The data set containing the named counter pool to be reloaded could not be opened.

System action

Reload processing is terminated and the server is closed down with message DFHNC0808.

User response

Check that the DFHNCRL DD statement is present in the JCL for the reload job.

Module:
DFHNCRL

Destination

Console and SYSPRINT

DFHNC0805   **Reload access to CF structure *strname* failed with response *response*.**

Explanation

The named counter pool reload process failed because of a problem with coupling facility access.

System action

Reload processing is terminated and the server is closed down with message DFHNC0808.

User response

If the response code is 6, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHNC0441 will have been issued. Any other response code indicates an internal logic error.

Module:
DFHNCRL

Destination

Console and SYSPRINT

DFHNC0806	Unexpected end of file encountered on reload data set.

Explanation

End of file was encountered on the data set containing the unloaded named counter pool before the logical end of the unloaded data was encountered.

System action

Reload processing is terminated and the server is closed down with message DFHNC0808.

User response

This indicates that the unloaded data set is incomplete, perhaps because the unload process was abnormally terminated.

Module:
DFHNCRL

Destination

Console and SYSPRINT

DFHNC0807	Reload data set contains incorrect data near block *block*, offset *offset*.

Explanation

The named counter pool reload process failed because the unloaded pool data set is not in the correct format.

System action

Reload processing is terminated and the server is closed down with message DFHNC0808.

User response

Check that the correct data set is being used and that the unload process completed normally.

Module:
DFHNCRL

Destination

Console and SYSPRINT

DFHNC0808	Reload for named counter pool *poolname* was unsuccessful.

Explanation

The named counter pool reload process could not be completed. The reason will have been described in a previous message.

System action

The program is terminated.

User response

See the previous message giving the reason for the reload failure.

Module:
DFHNCRL

Destination

Console and SYSPRINT

DFHNC0809	Reload for CF structure *strname* failed, structure is full.

Explanation

Named counter pool reload processing failed because there are insufficient free entries or elements to store the new data in the structure.

System action

Reload processing is terminated and the server is closed down with message DFHNC0808.

User response

If the structure is currently allocated at less than its maximum size and the coupling facility has enough

free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and the reload job can then be run again as soon as the alter request completes, in which case it will skip over duplicate information which has already been successfully reloaded. If the structure is at its maximum size, use the MVS **SETXCF FORCE** command to delete the structure, then increase the **SIZE** and **INITSIZE** parameters in the current CFRM policy and activate the updated policy, and rerun the reload job. The approximate amount of information which could not be reloaded can be estimated by comparing the numbers of blocks read and named counters reloaded, as described by following message DFHNC0803, with the corresponding numbers from message DFHNC0703 in the unload job.

DFHNQ0001   *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The

CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual. for further guidance.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHNQ0004	*applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which happened to be executing at the time when the error was detected.

System action

An exception entry is made in the trace table.

A system dump is taken unless you have specifically suppressed the dump (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that execution of module *modname* is terminated and CICS continues.

If you have specified ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If the runaway has occurred in module DFHNQIB, it is probably the result of a long-running UOWENQ browse. If there are many enqueues in the system (particularly if many are owned by the same task), CICS can take a long time to process the browse. This can be resolved by increasing the runaway interval associated with the task performing the browse. To do this change the RUNAWAY attribute of the associated transaction definition.

If CICS has terminated module *modname,* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online using the CEMT transaction.

If raising the ICVR time does not solve the problem, you may need further assistance from IBM to resolve the problem. See Working with IBM to solve your problem for guidance on how to proceed.

DFHOTnnnn messages

DFHOT0001   *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname*.

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively:

- Unexpected data has been input,
- Storage has been overwritten, or
- There has been a program check within a user program.

The code *aaa* is, if applicable, a 3-digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

If X'*offset*' contains the value X'FFFF', then module *modname* was in control at the time of the abend, but the program status word (PSW) was not addressing this module.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer.

Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If the *modname* insert contains the value *????*, then CICS was unable to determine which module has abnormally terminated. In this case, examine the system dump to determine which area of code has caused the program check.

The user should examine other messages to determine what the module which issued this message was doing at the time the abend occurred. From these messages they can deduce which product has produced the abend code *bbbb*. If *bbbb* is identified as a CICS code, it may be either alphameric or numeric.

- If the CICS code is alphameric (for example AKEA) then it is a CICS transaction abend code.
- If the CICS code is numeric (for example 1310), it refers to a CICS message (DFHTS1310 in our example).

If the user abend code is from another product (for example, IMS), refer to the appropriate messages and codes manual to determine the cause of the abend.

The entries in the appropriate manuals will give the user guidance regarding the nature of the error, and may also give some guidance concerning the appropriate user response.

Note:

The program check may have occurred in a user program. If this is the case, the program check is usually followed by an ASRA or an ASRB transaction abend and a transaction dump.

If you want to suppress system dumps that precede ASRA and ASRB abends, you must specify this on an entry in the dump table, using either CEMT or an EXEC CICS command. Further guidance on suppressing system dumps can be found in the Configuring.

You may need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

DFHPAIO

Destination

Console

DFHPA1104   *applid* **SPECIFY ALTERNATIVE SIT PARAMETERS, IF ANY, AND THEN TYPE '.END'.**

Explanation

If the word "CONSOLE" or "CN" was detected in either the parameter input stream on the EXEC statement of the CICS JCL, or in the SYSIN data set, then this prompt message will be displayed when the parameter (PA) manager is ready to accept console overrides.

System action

The system initialization program waits for a response from the operator.

User response

Enter the required parameter changes, separated by commas. Terminate your reply by entering '.END'.

Module:
DFHPAIO

Destination

Console

DFHPA1105	*applid* **CONTINUE SPECIFYING SIT PARAMETERS AND THEN TYPE '.END'.**

Explanation

While SIT overrides are being entered on the console, this prompt message will be displayed to request more overrides if the previous line did not end with ".END".

System action

The system initialization program waits for more override parameters to be entered by the operator.

User response

Continue entering the required parameter changes, separated by commas. Terminate your reply by entering '.END'.

Module:
DFHPAIO

Destination

Console

DFHPA1106	*applid* **MODULE** *DFHSITxx* **COULD NOT BE LOADED. SPECIFY NEW SUFFIX, 'NONE'(UNSUFFIXED) OR 'CANCEL'.**

Explanation

During PA domain initialization, a SIT with a suffix of *xx* could not be loaded.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

The PA domain initialization routines wait for the operator to enter an alternative 1- or 2-character suffix, or YES to request the unsuffixed SIT, or CANCEL. If CANCEL is entered, CICS is abnormally terminated.

User response

Determine whether the suffix is correct. If it is not, enter the correct suffix or enter 'YES' for the unsuffixed version. Otherwise enter 'CANCEL', correct the error (by adding the module to the appropriate library) and restart CICS.

DFHPA1107	*applid* **A** *level* **VERSION OF MODULE** *DFHSITxx* **WAS LOADED. CICS CAN ONLY INITIALIZE WITH THE CURRENT LEVEL SIT.**

Explanation

During PA domain initialization, a SIT with a suffix of *xx* and a release level of *level* was loaded. Since this version is not compatible with current CICS code, CICS is abnormally terminated.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS terminates abnormally.

User response

To correct the error, reassemble the SIT at the current CICS level. Refer to the Upgrading CICS TS for z/OS. for guidance on changes to the SIT that may be required for the new release. CICS should then be restarted.

Alternatively, the system may have been pointing to the wrong SIT. To correct this second case, check the bring up JCL to make sure that the 'SIT=' override is correct. Refer to the Configuring for guidance on coding system initialization parameters. Furthermore, check the library search order to make sure that stray SITs, which may be unknowingly present, are removed or renamed.

Module:
DFHPADM

Destination

Console

DFHPA1108 *applid* **DFHSIT*xx* HAS BEEN LOADED. (GENERATED AT MM/DD= *mm/dd* HH/MM= *hh/mm*).**

Explanation

This is an informational message displayed during CICS initialization. It displays the date and time that the loaded system initialization table was generated.

- *xx* is the suffix of the SIT being used.
- *mm/dd* is the date (month and day) that the SIT was generated.
- *hh/mm* is the time (hours and minutes of the 24 hour clock) that the SIT was generated.

System action

CICS Initialization continues.

User response

None.

Module:
DFHPADM

Destination

Console

DFHPA1901 *applid modname* **COULD NOT BE FOUND OR IS IN A NON-APF LIBRARY/CONCATENATION. CICS IS TERMINATED.**

Explanation

An error has occurred while attempting to load either DFHPASYL or DFHPAIO.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS ends abnormally.

User response

Correct the problem with the module that failed to load.

For example, check that a module *modname* actually exists in the program libraries used by CICS. Check the JCL and that the correct name, the correct library, and the correct member in the library are used.

Module:
DFHPADM

Destination

Console

DFHPA1902 *applid* **UNABLE TO OPEN SYSIN DATA SET. CICS IS TERMINATED.**

Explanation

An error has occurred while attempting to open the SYSIN data set. This occurs if the SYSIN data set does not exist.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS terminates abnormally.

User response

Ensure that the SYSIN data set exists and is correct.

Module:
DFHPAIO

Destination

Console

DFHPA1903 *applid* **ERROR WHILE READING FROM SYSIN DATA SET. CICS IS TERMINATED.**

Explanation

An error has occurred while attempting to read a record from the SYSIN data set. This can occur if the SYSIN data set has been corrupted, or has been incorrectly defined (for example, has not been defined with a logical record length, LRECL, of 80).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this

message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS terminates abnormally.

User response

Correct the problem in the SYSIN data set.

Module:
DFHPAIO

Destination

Console

DFHPA1907	*applid* **DATA** *data* **IS INVALID FOR KEYWORD** *keyword*. **KEYWORD IS IGNORED.**

Explanation

This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, AND the PARMERR=IGNORE option is specified in the SIT or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action

The keyword is ignored. CICS will attempt to initialize without the keyword in error.

User response

Correct the error by specifying a valid value for the keyword wherever it has been specified, either in the SIT or in the CICS input JCL, prior to restarting CICS. Refer to the Configuring for information on how to do this.

Module:
DFHPAGP

Destination

Console

DFHPA1908	*applid* **DATA** *data* **IS INVALID FOR KEYWORD** *keyword*. **CICS IS TERMINATED.**

Explanation

This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, and the PARMERR=ABEND option is specified in the SIT or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

This message is issued only if the data for keyword MCT is in error.

System action

CICS terminates abnormally.

User response

Correct the error by specifying a valid value for the keyword wherever it has been specified, either in the SIT or in the CICS input JCL, prior to restarting CICS. Refer to the Configuring. for information on how to do this.

Module:
DFHPAGP

Destination

Console

DFHPA1909	*applid* **DATA INVALID FOR '***keyword***'. RESPECIFY KEYWORD AND DATA OR BYPASS WITH '.END': '***data***'.**

Explanation

This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, and the PARMERR=INTERACT option is specified in the SIT or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data. This value may be truncated if it is too long to be displayed.

Note:

PARMERR=INTERACT is the default action for invalid keyword data.

System action

CICS waits for the corrected keyword and data to be entered as an override on the console by the operator, and analyzes this override.

User response

Enter the corrected SIT keyword and data on the console. To enter lowercase data, start the System Command Extension function by typing a / by itself on the SDSF command line, or by adding a trailing + to a / command, then enter the override enclosing both the keyword and data in apostrophes, remembering that the keyword itself must be in uppercase. The command is still echoed in uppercase in the job log, but SDSF processes the value in mixed case.

To bypass type '.END', or supply a blank line. Alternatively enter 'CANCEL' to terminate CICS.

Module:
DFHPAGP

Destination

Console

DFHPA1910	*applid* SIT OVERRIDE *keyword* IS NOT RECOGNIZED. OVERRIDE IS IGNORED. (MODULE *modname*).

Explanation

This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=IGNORE option is specified in the SIT, or as an override. The insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

The keyword is ignored, and CICS attempts to initialize without the keyword in error.

User response

Ensure the keyword specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Module:
DFHPADM, DFHPAGP

Destination

Console

DFHPA1911	*applid* SIT OVERRIDE *keyword* IS NOT RECOGNIZED. CICS IS TERMINATED.

Explanation

This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=ABEND option is specified in the SIT, or as an override. the insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS terminates abnormally.

User response

Correct the error by specifying a valid keyword in the SIT overrides, then restart CICS. Refer to the Configuring. for information on how to do this.

Module:
DFHPADM

Destination

Console

DFHPA1912	*applid* SIT OVERRIDE *keyword* IS NOT RECOGNIZED. SPECIFY CORRECT SIT OVERRIDE.

Explanation

This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=INTERACT option is specified in the SIT, or as an override. The insert *keyword* is the invalid keyword. Note that PARMERR=INTERACT is the default action for invalid SIT overrides.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS waits for the corrected override to be entered on the console by the operator, and analyzes this override.

User response

On the console enter the corrected SIT override, bypass the override in error and all overrides that follow by typing '.END', or supply a blank line to bypass only the override in error.

To enter lowercase data, start the System Command Extension function by typing a / by itself on the SDSF command line, or by adding a trailing + to a / command, then enter the override enclosing both the keyword and data in apostrophes, remembering that the keyword itself must be in uppercase. The command is still echoed in uppercase in the job log, but SDSF processes the value in mixed case.

Module:
DFHPADM

Destination

Console

DFHPA1913 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE** *keyword* **BY MODULE** *modname*. **OVERRIDE IS IGNORED.**

Explanation

This message can be issued in the following situations:

- If the data supplied for a SIT override is syntactically invalid, and the PARMERR=IGNORE system initialization parameter is specified. The insert *keyword* is the keyword for which the value is in error.

- In response to invalid data when PARMERR=INTERACT is specified but the user has been attempting to correct a previous invalid SIT keyword or value. In this case, message DFHPA1912 or DFHPA1915 follows this message to prompt for the correction to the original error.

- When PARMERR=INTERACT is specified if invalid data has been passed in PARM or SYSIN for a keyword that cannot be entered from the console (and therefore cannot be corrected by interaction with the console). This typically applies to security keywords.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

The keyword is ignored, and CICS attempts to initialize without the keyword in error.

User response

Ensure the value specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Module:
DFHPADM, DFHPAGP

Destination

Console

DFHPA1914 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE** *keyword*. **CICS IS TERMINATED.**

Explanation

This message is displayed if the data specified for a SIT override is syntactically invalid, and the PARMERR=ABEND option is specified in the SIT, or as an override.

The insert *keyword* is the keyword for which the value is in error.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS terminates abnormally.

User response

Correct the error by specifying a valid value for the keyword in the SIT overrides, then restart CICS.

Refer to the Configuring for information on how to do this.

Module:
DFHPADM

Destination

Console

DFHPA1915 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE** *keyword*. **RESPECIFY THE OVERRIDE.**

Explanation

This message is displayed if the data specified for a SIT override is syntactically invalid or is a numeric value of 2 gigabytes or greater. It is only displayed

if the PARMERR=INTERACT option is specified in the SIT, or as an override.

The insert *keyword* is the keyword for which the value is in error.

Note:

PARMERR=INTERACT is the default action for invalid SIT overrides.

System action

CICS waits for the corrected override to be entered on the console by the operator, and then analyzes this override.

User response

Enter the corrected SIT override on the console, or bypass by typing '.END', or just supply a blank line.

To enter lowercase data, start the System Command Extension function by typing a / by itself on the SDSF command line, or by adding a trailing + to a / command, then enter the override enclosing both the keyword and data in apostrophes, remembering that the keyword itself must be in uppercase. The command is still echoed in uppercase in the job log, but SDSF processes the value in mixed case.

Module:
DFHPADM

Destination

Console

DFHPA1916	*applid* **SIT OVERRIDE DATA** *data* **IS OUT OF RANGE FOR KEYWORD** *keyword*. **OVERRIDE IS IGNORED.**

Explanation

This message is displayed if the data supplied for a SIT override is out of range, and the PARMERR=IGNORE option is specified in the SIT, or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action

The keyword is ignored. CICS will attempt to initialize without the keyword in error.

User response

Ensure the value specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Module:
DFHPAGP

Destination

Console

DFHPA1917	*applid* **SIT OVERRIDE DATA** *data* **IS OUT OF RANGE FOR KEYWORD** *keyword*. **CICS IS TERMINATED.**

Explanation

This message is displayed if the data specified for a SIT override is out of range, and the PARMERR=ABEND option is specified in the SIT, or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action

CICS terminates abnormally.

User response

Correct the error by specifying a valid value for the keyword in the SIT overrides, and restart CICS.

Refer to the Configuring for information on how to do this.

Module:
DFHPAGP

Destination

Console

DFHPA1918	*applid* **SIT OVERRIDE DATA** *data* **IS OUT OF RANGE FOR KEYWORD** *keyword*. **RESPECIFY THE OVERRIDE.**

Explanation

This message is displayed if the data specified for a SIT override is out of range, and the PARMERR=INTERACT option is specified in the SIT, or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.

- *data* is the invalid data.

Note: PARMERR=INTERACT is the default action for invalid SIT overrides.

System action

CICS waits for the corrected override to be entered on the console by the operator, and analyzes this override.

User response

Enter the corrected SIT override on the console, or bypass by typing '.END', or just supply a blank line.

To enter lowercase data, start the System Command Extension function by typing a / by itself on the SDSF command line, or by adding a trailing + to a / command, then enter the override enclosing both the keyword and data in apostrophes, remembering that the keyword itself must be in uppercase. The command is still echoed in uppercase in the job log, but SDSF processes the value in mixed case.

Module:
DFHPAGP

Destination

Console

DFHPA1919I	*applid* SPECIFIED DATA IS INCORRECT. ALL SUBSEQUENT OVERRIDES ON THIS LINE IGNORED.

Explanation

An invalid value for a keyword has been entered after message DFHPA1912 or DFHPA1915 has been issued. CICS has been unable to analyze the overrides following the invalid one.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS continues to prompt for the corrected override using either message DFHPA1912 or message DFHPA1915.

User response

Enter the corrected SIT override, ensuring that the data is in the valid range for that keyword.

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Module:
DFHPADM

Destination

Console

DFHPA1920I	*applid* SIT KEYWORD *keyword* AND ALL SUBSEQUENT OVERRIDES ON THIS LINE IGNORED.

Explanation

An invalid keyword has been entered in response to message DFHPA1912 or DFHPA1915. CICS has been unable to analyze the overrides following the invalid one.

The insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS continues to prompt for the corrected keyword using message DFHPA1912 or message DFHPA1915.

User response

Enter the corrected SIT override, ensuring that the keyword is valid.

Refer to the Configuring for information on how to do this.

You cannot suppress this message with the SIT parameter, MSGLVL=0.

Module:
DFHPADM

Destination

Console

DFHPA1921	*applid* PLEASE SPECIFY THE REQUIRED SIT SUFFIX, OR SPECIFY 'NONE'(UNSUFFIXED).

Explanation

The System Initialization Table (SIT) holds information needed for CICS to initialize. This is loaded during preinitialization. The user specifies a 1- or 2-character

suffix to identify which SIT to load. To use the unsuffixed default SIT, reply with 'SIT=NO'.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

The system loads and uses the specified SIT if it can be found. Otherwise the user is prompted to enter a valid suffix.

User response

Type 'SIT=*xx*' in response to the message, where *xx* represents the SIT suffix to be used. (A suffix of 'NO' causes the system to load an unsuffixed SIT).

Module:
DFHPADM.

Destination

Console

DFHPA1922I	*applid* SPECIAL KEYWORD *keyword* HAS BEEN REPEATED AND IS IGNORED.

Explanation

There are 2 special keywords, each with an abbreviation. The first is SYSIN, which has the abbreviation SI. The second is CONSOLE, which has the abbreviation CN. These keywords direct CICS to read SIT overrides from the SYSIN data stream and from the console respectively.

The system has found a duplication of one of these keywords. The JCL should be amended.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

System initialization continues.

User response

Correct the JCL by removing the second occurrence of the special keyword specified. (Refer to the CICS documentation for more information on coding CICS system initialization parameters).

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Module:
DFHPADM

Destination

Console

DFHPA1923I	*applid* SPECIAL KEYWORD *keyword* HAS BEEN DEFINED OUT OF CONTEXT.

Explanation

There are 2 special keywords, each with an abbreviation. The first is SYSIN, which has the abbreviation SI. The second is CONSOLE, which has the abbreviation CN. These keywords direct CICS to read SIT overrides from the SYSIN data stream and from the console respectively.

SYSIN cannot be specified from either the SYSIN data stream, or from the console. CONSOLE cannot be specified from the console.

The system has found the specified keyword *keyword* in one of the situations described above, and so the JCL should be amended.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

System initialization continues.

User response

Correct the JCL by removing the special keyword specified (Refer to the CICS documentation for more information on coding CICS system initialization parameters).

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Module:
DFHPADM

Destination

Console

DFHPA1924I	*applid* Initialization parameter *parm1* exceeds *parm2*. Both are defaulted. (module *modname*).

Explanation

One of two situations may have occurred:

- In the first, parameter *parm1* has been set as greater than parameter *parm2* by override.
- In the second, parameter *parm1* may have been set to a certain level in the SIT macro, but parameter *parm2* has been changed by override so that it is now less than parameter *parm1*.

In either case, the condition is invalid, and so default values are applied to both parameters.

System action

Both parameters are set to their default values and system initialization continues.

User response

The system initialization parameters should be altered so that *parm2* is greater than *parm1* for the next bring up of CICS. (Refer to the Configuring for more information about system initialization parameters.)

CICS initialization continues with the default values. The user can then change the defaulted values using the CICS supplied transaction.

You cannot suppress this message with the system initialization parameter, MSGLVL=0, unless it has been issued from DFHPAGP via the message domain.

Module:
DFHPADM, DFHPAGP

XMEOUT parameters/Message inserts

1. *applid*
2. *parm1*
3. *parm2*
4. *modname*

Destination

Console

DFHPA1926   *applid* **A MISSING DELIMITER HAS BEEN DETECTED FOR OVERRIDE** *keyword* **(MODULE** *modname*).

Explanation

The data supplied for a SIT override *keyword* has not been delimited correctly.

System action

CICS terminates abnormally.

Correct the specified override in the SYSIN data set by entering the opening or the closing delimiter on its data.

Restart CICS.

Refer to the Configuring for the required delimiter for keyword *keyword*.

Module:
DFHPADM

Destination

Console

DFHPA1927   *applid text*

Explanation

This message is displayed during CICS initialization to show parameters that will override the system initialization parameters coded on the DFHSIT macro. If it is preceded by message DFHPA1100, *text* shows the contents of the PARM parameter from the JCL EXEC statement. If it is preceded by message DFHPA1102, *text* shows the contents of a record read from the SYSIN data set.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

System initialization continues.

User response

None.

Module:
DFHPAIO

Destination

Console

DFHPA1928   *applid* **IF XRF=YES, THE GENERIC AND SPECIFIC APPLIDS MUST BE DIFFERENT. CICS IS TERMINATED.**

Explanation

In an XRF CICS system, a generic and a specific *applid* must be defined. They must also be unique.

This message is displayed and CICS is terminated if both these *applid*s, which are defined as SIT overrides, are found to be identical in an XRF environment.

This message is also displayed if only the generic *applid* is defined.

System action

CICS terminates abnormally.

User response

Correct the error by defining both the generic and the specific *applid*s as SIT overrides. Ensure that they are unique. Refer to the Configuring for further information on how to do this.

Module:
DFHPADM

Destination

Console

DFHPA1929	*applid* CSDBKUP=DYNAMIC REQUIRES CSDRECOV=ALL. CSDBKUP HAS BEEN DEFAULTED TO STATIC.

Explanation

When the value DYNAMIC is specified for the CSDBKUP keyword the CSDRECOV keyword must have the value ALL. However, the override parameter stream has overridden the SIT values and this requirement has not been fulfilled.

System action

To enable initialization to continue, CSDBKUP is set to the default value STATIC. Because CSDBKUP is set to STATIC, the CICS CSD as defined in the input JCL, or by dynamic allocation, is not eligible for backup while open for update.

User response

Update CICS input JCL with the correct values for CSDBKUP and CSDRECOV keywords prior to the next initialization of CICS.

Module:
DFHPADM

Destination

Console

DFHPA1930	*applid* CSDFRLOG=*nn* HAS BEEN IGNORED AS CSDRECOV=ALL HAS NOT BEEN SPECIFIED.

Explanation

When a forward recovery log value is specified for the CSDFRLOG keyword, the CSDRECOV keyword must have the value ALL. However, the override parameter stream has overridden the SIT values and this requirement has not been fulfilled.

System action

To enable initialization to continue, the CSDFRLOG value has been ignored. Because CSDFRLOG is ignored, the CICS CSD as defined in the input JCL, or by dynamic allocation, is not eligible for forward recovery logging.

User response

Update CICS input JCL with the correct values for the CSDFRLOG and CSDRECOV keywords prior to the next initialization of CICS.

Module:
DFHPADM

Destination

Console

DFHPA1931	*applid keyword* IS A SECURITY KEYWORD AND CANNOT BE ENTERED AT THE CONSOLE. THE KEYWORD IS IGNORED.

Explanation

A SIT override has been entered at the console which is deemed to be a member of the set of security system initialization parameters. Security system initialization parameters cannot be entered at the console.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS ignores the security SIT override, and initialization continues.

User response

Update CICS input JCL so that security keywords are included in the SIT, SYSIN or PARM prior to the next initialization of CICS.

Module:
DFHPADM

Destination

Console

DFHPA1932	*applid* **A PSDINT VALUE GREATER THAN ZERO WAS SPECIFIED WITH XRF=YES. PSDINT HAS BEEN RESET TO 0.**

Explanation

A conflict of options has been detected. You have requested Persistent Session Support by specifying a nonzero value for the PSDINT system initialization parameter. This parameter is used to set the Persistent Sessions delay interval. However, you have also requested XRF support by specifying XRF=YES. Persistent Sessions Support and XRF are mutually exclusive.

System action

The PSDINT value defaults to 0. CICS attempts to continue with XRF support.

User response

Before you next initialize CICS, alter the system initialization parameters so that either PSDINT=0 or XRF=NO. See the Configuring for further information.

Module:
DFHPADM

Destination

Console

DFHPA1934I	*applid* **START TYPE CHANGED TO** *type*.

Explanation

The start type specified in the SIT has been changed to that shown in the message.

System action

Initialization continues with the new start type.

User response

None.

Module:
DFHPAGP

Destination

Console

DFHPA1935	*applid keyword* **IS A SECURITY KEYWORD. THIS KEYWORD AND ALL SUBSEQUENT KEYWORDS ON THIS LINE ARE IGNORED.**

Explanation

A SIT override has been entered at the console which is deemed to be a member of the set of security system initialization parameters. Security system initialization parameters cannot be entered at the console. CICS has been unable to analyze the overrides following the security keyword.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action

CICS ignores the security SIT override and all subsequent overrides entered on this line. Initialization continues.

User response

Update CICS input JCL so that security keywords are included in the SIT, SYSIN or PARM prior to the next initialization of CICS.

Module:
DFHPADM

Destination

Console

DFHPA1936	*applid* **A VALUE WAS SPECIFIED FOR GRNAME WITH XRF=YES. GRNAME HAS BEEN RESET TO BLANKS.**

Explanation

A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM

generic resource. However, you have also requested XRF support by specifying XRF=YES. Generic resource support and XRF are mutually exclusive.

System action

The GRNAME value is reset to blanks. CICS attempts to continue with XRF support but without generic resource support.

User response

Before you next initialize CICS, alter the system initialization parameters so that either GRNAME is not specified or XRF=NO. See the Configuring for further information.

Module:
DFHPADM

Destination

Console

DFHPA1937	*applid* GRNAME SPECIFIED WITH SPECIFIC AND GENERIC APPLIDS. THE GENERIC APPLID HAS BEEN SET EQUAL TO THE SPECIFIC.

Explanation

A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM generic resource. However, you have also specified different values for the generic and specific applids. Generic resource support requires that only one value should be specified for the APPLID parameter.

System action

The generic applid is set to the value of the specific. CICS continues and attempts to register as a VTAM generic resource.

User response

If you intended that CICS should register as a VTAM generic resource, take no action. If you did not, remove the GRNAME parameter before you next initialize the system.

Module:
DFHPADM

Destination

Console

DFHPA1938	*applid* GRNAME AND APPLID ARE THE SAME. GRNAME RESET TO BLANKS.

Explanation

A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM generic resource. However, the value specified for GRNAME is the same as the CICS applid. VTAM requires that the generic resource name must be different from the CICS applid.

System action

The generic resource name is set to blanks. CICS will not attempt to register as a VTAM generic resource.

User response

If you intended that CICS should register as a VTAM generic resource, specify the correct GRNAME when you next initialize the system.

Module:
DFHPADM

Destination

Console

DFHPA1940	*applid* CSDINTEG=CONSISTENT AND CSDINTEG=REPEATABLE REQUIRE CSDRLS=YES. CSDINTEG HAS BEEN SET TO UNCOMMITTED.

Explanation

Read integrity on the CICS system definition (CSD) file has been requested by specifying either CSDINTEG=CONSISTENT or CSDINTEG=REPEATABLE. However, these read integrity options are not available because the CSD has been defined to be opened in non-RLS mode. Read integrity is only available to files defined in RLS mode.

System action

CICS startup continues. The CSD is read without read integrity.

User response

Do one of the following to correct the error:

- Specify CSDRLS=YES to make the CSD eligible to be opened in RLS mode.
- Remove the CSDINTEG keyword if you do not wish to open the CSD in RLS mode.

Module:
DFHPADM

Explanation

VTAM=NO has been specified as a system initialization parameter but the UOWNETQL system initialization parameter is missing.

On a non-VTAM system, CICS requires the UOWNETQL parameter in order to construct a default qualified LUNAME to be passed to the recovery manager domain. On a VTAM system, the name is obtained at OPEN ACB time. Recovery manager uses the default qualified LUNAME when constructing unit of work (UOW) identifiers.

System action

If this is an initial start, CICS continues processing using a dummy default UOWNETQL of '9UNKNOWN'. This dummy UOWNETQL is invalid because the first character is a number. UOWNETQL is given this invalid name to highlight the problem.

If this is a cold, warm or emergency start, the name used on the previous run is restored and used.

User response

Specify a valid UOWNETQL system initialization parameter.

Module:
DFHPADM

Destination

Console

DFHPA1942 *applid* **CSDRLS=YES BUT RLS=NO. CSDRLS=NO WILL BE USED.**

Explanation

The system initialization parameter CSDRLS=YES has been specified but RLS=YES has not been specified. This means that if initialization were to continue with these parameter settings the open of the CSD in record level sharing (RLS) mode would fail because RLS is not available in the system.

CICS requires that if you specify CSDRLS=YES, RLS must be enabled by specifying RLS=YES.

System action

CICS continues processing but forces CSDRLS=NO.

User response

If CSDRLS is required, bring CICS up with RLS=YES.

Module:
DFHPADM

Destination

Console

DFHPA1943 *applid* **START=COLD OR START=INITIAL MAY NOT BE SPECIFIED WITH OFFSITE=YES. CICS IS TERMINATED.**

Explanation

The system initialization override OFFSITE=YES has been specified but START=COLD or START=INITIAL has also been specified. OFFSITE=YES means that CICS is being restarted in offsite recovery mode, but recovery is not possible on a cold or initial start, so this combination of system initialization parameters is incompatible.

System action

CICS initialization is terminated.

User response

You should specify START=AUTO when restarting CICS in OFFSITE recovery mode.

If you intended to perform a cold or initial start, and specified OFFSITE=YES in error, either change the

OFFSITE override to NO, or remove it and allow it to default to NO.

Module:
DFHPADM

Destination

Console

DFHPA1944   *applid* **CSDRECOV=ALL CANNOT BE SPECIFIED WITHOUT A CSDFRLOG IF CSDRLS=NO. CICS IS TERMINATED.**

Explanation

The system initialization parameter CSDRECOV=ALL has been specified together with CSDRLS=NO, but CSDFRLOG has either not been specified, or has been specified as NO.

If the CSD is to be accessed in non-RLS mode (CSDRLS=NO) and forward recovery is specified (CSDRECOV=ALL), a forward recovery log must also be specified using the CSDFRLOG system initialization parameter.

If the CSD is to be accessed in RLS mode (CSDRLS=YES), the recovery attributes are obtained from the VSAM catalog and CSDRECOV and CSDFRLOG are ignored. For this reason, the check for CSDFRLOG when CSDRECOV=ALL is not carried out when CSDRLS=YES.

System action

CICS initialization is terminated.

User response

You should specify CSDFRLOG=*nn* when you specify CSDRECOV=ALL together with CSDRLS=NO, where *nn* is a number between 1 and 99.

If you want to access the CSD in non-RLS mode, but also choose to specify the recovery attributes for the CSD in the VSAM catalog, the system initialization parameters relating to CSD recovery attributes are not used. However, you are still required to have a consistent set of these parameters.

Module:
DFHPADM

Destination

Console

DFHPA1945   *applid sitname* **MUST BE LINKEDITED WITH THE NORENT OPTION. CICS IS TERMINATED.**

Explanation

The system initialization table *sitname* has been link-edited with the RENT option, which means CICS will not have write access to it.

System action

CICS initialization is terminated.

User response

You should re-link the system initialization table with the NORENT option.

Module:
DFHPADM

Destination

Console

DFHPA1946   *APPLID* **APPLID is already in use by another CICS in the sysplex. CICS is terminated.**

Explanation

The specific *applid* specified in the SIT or the SIT overrides is already in use by another CICS system in the sysplex. The specific applids for different CICS systems in the sysplex must be distinct.

System action

CICS initialization is terminated.

User response

You should ensure that a unique applid is provided for each CICS system within the sysplex.

Module:
DFHPADM

DFHPD0102   **Pointer to *xxxxxxxx* at offset *X'offset'* is zero.**

Explanation

A pointer to a block of type *xxxxxxxx*, whose address is at offset *offset* in the block just formatted, is zero.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

The area may have been corrupted or not set up correctly. It is also possible that the zero value is valid. This depends on the circumstances or timing of the dumps collection; for example, a zero value is valid before the block is initialized.

Module:
DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination

SYSPRINT

DFHPD0103   ***xxxxxxxx* address *X'address'* is invalid.**

Explanation

The address *address* of a block of type *xxxxxxxx* is invalid.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

Either the pointer to the required area was corrupted, the pointer has not been initialized, or the address was valid but the area was not present in the dump. In the latter case, if the area is essential for diagnosing the problem, a fresh dump which includes the missing area has to be obtained.

Module:
DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination

SYSPRINT

DFHPD0104   **Address of *xxxxxxxx* is zero.**

Explanation

The address of a block of type *xxxxxxxx* is zero.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

The area may have been corrupted or not set up correctly. It is also possible that the zero value is valid. This depends on the circumstances or timing of the dumps collection; for example, a zero value is valid before the block is initialized.

Module:
DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination

SYSPRINT

DFHPD0105   **A loop has been detected. *xxxxxxxx* at address *X'address'* already encountered.**

Explanation

The formatting program avoids loops resulting from corrupted control block chains by checking for duplicate addresses. The block *xxxxxxxx* at address *address* has already been encountered and may already have been formatted.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

Check the chain fields in control blocks of the same type which have already been processed. Otherwise the problem may be caused by the timing of the dumps collection, if for example this occurs before the block is initialized.

Module:
DFHDUFFT, DFHDUFUT

Destination

SYSPRINT

| DFHPD0106 | **An error has occurred while formatting** *xxxxxxxx***.** |

Explanation

An error has occurred during the formatting of a block of type *xxxxxxxx*.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

If no data has been formatted for the block then the block address was probably invalid. In this case see message DFHPD0101.

If part of the block has been successfully formatted then it is possible that the length of the control block is incorrect. The length may have been overwritten which may provide a clue to the problem.

Module:
DFHDUFUT, DFHDUFFT

Destination

SYSPRINT

| DFHPD0107 | **Eyecatcher for** *xxxxxxxx* **at** *X'address'* **is invalid.** |

Explanation

The eyecatcher field of a control block of type *xxxxxxxx* at address *address* has an incorrect value.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

Investigate why the eyecatcher has been overwritten or why the control block has not been set up correctly. For more information on how to solve storage overwrite problems, see the Troubleshooting and support.

Module:

Destination

SYSPRINT

| DFHPD0108 | **Unable to start browse of** *xxxxxxxx***.** |

Explanation

An error has occurred when attempting to start browsing a table of type *xxxxxxxx*.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

This error may be due to the Table Manager Program (TMP) control blocks being invalid. Check the TMP control blocks for the table in question.

Module:
DFHDUFUT

Destination

SYSPRINT

| DFHPD0109 | **Unable to get next entry in** *xxxxxxxx* **table.** |

Explanation

An error has occurred when attempting to access the next entry in a table of type *xxxxxxxx*.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

This error may be due to the Table Manager Program (TMP) control blocks being invalid. Check the TMP control blocks for the table in question.

Module:
DFHDUFUT

Destination

SYSPRINT

| DFHPD0110 | **Unable to access data for** *xxxxxxxx* |

Explanation

The Interactive Problem Control System (IPCS) service routine ADPLMEMA was unable to find the requested data for control block *xxxxxxxx* in the dump.

System action

Dump formatting continues after skipping any sections impacted by the lack of data.

User response

Either the pointer to the required area was corrupted, which may in itself be a clue to the problem, or the address was valid but the area was not present in the dump. In the latter case, if the area is essential for diagnosing the problem obtain a fresh dump which includes the missing area.

Module:
DFHPDX1

Destination

SYSPRINT

DFHPD0111I   **Pointer to *xxxxxxxx* at offset *X'offset'* is zero.**

Explanation

A pointer to a block of type *xxxxxxxx*, whose address is at offset *offset* in the block just formatted, is zero.

System action

Dump formatting continues after skipping any sections affected by the zero pointer.

User response

The message is informatory, indicating that the area was zero at the time the dump was taken.

Module:
DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination

SYSPRINT

DFHPD0112I   **Address of *xxxxxxxx* is zero.**

Explanation

The address of a block of type *xxxxxxxx* is zero.

System action

Dump formatting continues after skipping any sections affected by the block.

User response

The message is informatory, indicating that the area did not contain an address at the time the dump was taken.

Module:
DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination

SYSPRINT

DFHPD0113   **This block has already been processed.**

Explanation

The block whose heading line has just been printed has already been formatted in this section of the dump.

System action

The block is formatted again then any sections which may be impacted by the probable control block chain loop are skipped.

User response

Check the chain fields in the control blocks processed so far. This may provide a clue to the problem.

Module:
DFHPD720

Destination

SYSPRINT

DFHPD0114   **Invalid keyword *keyword***

Explanation

The keyword *keyword* is not valid for the cics720 verb.

System action

The keyword is ignored.

User response

Correct the keyword and retry.

Module:
DFHPDKW

Destination

SYSPRINT

DFHPD0115 **CICS job not found during ASCB scan.**

Explanation

The dump formatting program searched the dump for CICS jobs satisfying the specified JOB criterion (if any), but found none.

System action

There is only a severe problem when this message is followed by message DFHPD0120.

User response

If this is a severe error, ensure that the dump is the correct one, that the JOB keyword is correctly specified, and that the dump contains the necessary MVS and CICS data areas.

Module:
DFHPDX1

Destination

SYSPRINT

DFHPD0116 **Cannot access the AFCB.**

Explanation

The formatting program was unable to access data for the AFCB.

System action

No formatting is performed.

User response

Ensure that the dump is the correct one, and that the dump contains the necessary MVS data areas.

Module:
DFHPDX1

Destination

SYSPRINT

DFHPD0117 **An error has occurred while formatting *xxxxxxxx*.**

Explanation

An error has occurred during the formatting of a block of type *xxxxxxxx*.

Either the user has performed a GETMAIN for the storage, but the storage has not been referenced. Unreferenced storage may not be present in the dump.

Or the block address is invalid,

Or the length of the control block is incorrect.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

If no data has been formatted for the block then either the storage has not been referenced, or the block address was invalid. If the block address was invalid, refer to message DFHPD0101.

If part of the block has been successfully formatted then it is possible that the length of the control block is incorrect. The length may have been overwritten which may provide a clue to the problem.

Module:
DFHDUFFT, DFHDUFUT

Destination

SYSPRINT

DFHPD0118 **Invalid argument for JOB=, CURRENT assumed**

Explanation

The argument for the JOB operand of the cics720 verb is invalid.

DFHPD0125   **Storage violation detected at X'address'. Trailing SAA is invalid.**

Explanation

The Storage Accounting Area (SAA) in the first eight bytes of the user storage element at address X'*address*' has been found to be invalid. However, the leading SAA is valid.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the Troubleshooting and support.

Module:
DFHDUFUT

Destination

SYSPRINT

DFHPD0126   **Storage violation detected at X'address'. Leading and trailing SAAs are invalid.**

Explanation

The Storage Accounting Areas (SAAs) in the first and last eight bytes of the user storage element at address X'*address*' are invalid.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the Troubleshooting and support.

Module:
DFHDUFUT

Destination

SYSPRINT

DFHPD0127   **Storage violation detected at X'address'. Leading and trailing SAAs differ.**

Explanation

Although the Storage Accounting Areas (SAAs) in the first and last eight bytes of the user storage element at address X'*address*' are valid, they do not match.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the Troubleshooting and support.

Module:
DFHDUFUT

Destination

SYSPRINT

DFHPD0128 **Invalid data length *X'length'* specified for address *X'address'*.**

Explanation

The offline utility DFHPD720 has detected a request for a block of data of invalid length X'*length*' while formatting a system dump.

System action

Dump formatting usually continues after skipping any sections affected by this error.

User response

This message indicates a probable error in CICS code. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDUFUT, DFHDUFFT

Destination

SYSPRINT

DFHPD0129 **CICS Domain Anchor Blocks not found for AFCB. Scan will continue.**

Explanation

The dump formatter has attempted to find a CICS dump in a TCB chain but has failed. The scan will continue. This is because DFHPD720 could not find the addresses of the CICS domain anchor blocks in the kernel global storage. Possible causes for this are:

- Scanning the wrong TCB on the TCB chain. The scan will continue.
- The kernel global storage being overwritten or freemained.
- The dump being taken so early on in CICS initialization that the kernel global storage has not yet been set up.

System action

There is only a severe problem when this message is followed by message DFHPD0120.

User response

If this is a severe error. Try to recreate the original error and produce a valid system dump against which the dump formatter can be rerun.

If the problem recurs, you will need further assistance from IBM. Collect the sysprint output from the dump formatter and note any relevant messages. See Working with IBM to solve your problem for guidance on how to proceed.

SYSPRINT

DFHPD0131 **CICS job *jobname* is for CICS version *version1*. CICS IPCS exit is for CICS version *version2*.**

Explanation

The CICS job *jobname* being processed by the dump formatting program was executing under CICS version *version1*, but the dump formatting program was the one distributed with CICS version *version2*.

System action

Dump formatting continues for the CICS job.

User response

Unless formatting MRO control blocks, retry dump formatting for the CICS job using the dump formatting program for CICS version *version1*.

Destination

SYSPRINT

DFHPD0133 **Specified task not found.**

Explanation

No transaction could be found for the task identifier specified in the taskid keyword parameter.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

Correct the invalid taskid and retry.

Module:
DFHPD720

Destination

SYSPRINT

DFHPD0134 **Link to module CEEERRIP has failed.**

Explanation

While formatting dump data an attempt was made to link to the Language Environment IPCS Verbexit program CEEERRIP. The link failed.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

CEEERRIP is supplied on SYS1.MIGLIB. Ensure that SYS1.MIGLIB is in the concatenation for the MVS linklist or LPA.

Module:
DFHPD720

Destination

SYSPRINT

DFHPD0135 **Program check occurred with CEEERRIP in control.**

Explanation

While formatting dump data a program check occurred in the Language Environment IPCS verbexit module CEEERRIP.

System action

Dump formatting continues after skipping any sections affected by the error.

User response

A dump should accompany this message. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

DFHPGnnnn messages

DFHPG0001   *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname,* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGHM, DFHPGIS, DFHPGLD, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRP, DFHPGST, DFHPGXM.

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHPG0002   *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action

An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGHM, DFHPGIS, DFHPGLD, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRP, DFHPGST, DFHPGXM.

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHPG0004   *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you need to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

CSPL and Console

DFHPG0203	*date time applid terminal userid tranid* **Program autoinstall exit** *urmname* **failed, reason:** *reason*. **The program autoinstall function has been disabled.**

Explanation

An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing but the program autoinstall exit program is incorrectly defined or cannot be found on the load libraries. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.
- *reason* is one of the following:
  - Program not defined
  - Program not enabled
  - Program not loadable
  - Remote program
  - AMODE error

– Invalid COMMAREA

– Recursion in autoinstall exit.

System action

Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error. The autoinstall function is disabled.

User response

Continue processing without program autoinstall or correct the problem and reenable the autoinstall function using CEMT or the SPI. Take the appropriate action to correct the problem:

Program not defined

Install the autoinstall exit program.

Program not enabled

Reset the status of the autoinstall exit program.

Program not loadable

Ensure that the autoinstall exit program is in the load libraries.

Remote program

Ensure that the autoinstall exit program is defined as a local program.

AMODE error

Ensure that the autoinstall exit program is AMODE 31.

Invalid COMMAREA

Ensure that if the program autoinstall exit program passes the COMMAREA to another program, the COMMAREA is correctly passed.

Recursion in autoinstall exit

The autoinstall user-replaceable module has attempted to link to XCTL or to load another program which is not defined. Autoinstall cannot be attempted with the autoinstall exit. Ensure that the program being referred to is defined using RDO.

DFHPG0501	*date time applid* **The public version of the application entry point program** *programname* **for operation** *operationname* **of application** *applicationname* **on platform** *platformname* **has changed from version** *majorversion.minorversion.microversion* **to version** *majorversion.minorversion.microversion*.

Explanation

Either a new version of the application *applicationname* has been made available or an existing version of the application has been made unavailable. As a result the public version of the application entry point program *programname* for operation *operationname* of application *applicationname* on platform *platformname* has changed from version *majorversion.minorversion.microversion* to version *majorversion.minorversion.microversion*. The public version of a program application entry point defines the version of the program that will be invoked when that program is named on either an EXEC CICS LINK or EXEC CICS XCTL command, or named as the initial program for a TRANSACTION.

System action

The system continues normally.

User response

None.

DFHPInnnn messages

DFHPI0001	*applid* **An abend (code** *aaa/bbbb*) **has occurred at offset** *X'offset'* **in module** *modname*.

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to

a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If you cannot continue without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPICA, DFHPIDM, DFHPIWT

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHPI0002   *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the Troubleshooting and support.

System action

An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain.

In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHPICA, DFHPIDM, DFHPIST, DFHPIWT

XMEOUT parameters/Message inserts

1. *applid*
2. *X'code'*
3. *modname*

Destination

Console

DFHPI0004   *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation

A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

This may not be an error as some CICS functions can use a lot of processor time, and this message may have been caused by a long-running function.

Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR parameter, which is measured in milliseconds). This means that the module *modname* will be terminated and CICS will continue.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway function, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. You can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you need further assistance from IBM to resolve this problem.

Module:
DFHPIRM

Console

DFHPI0110	*date time applid* **An attempt to start program DFHPIDSH by something other than an attach request from web domain has been made. This is not allowed.**

Explanation

An attempt has been made to start program DFHPIDSH by some method other than a transaction attach from web domain. This program is usually started from transaction CPIH. Transaction CPIH is a system task and cannot be entered from a terminal.

System action

The transaction has not been started.

User response

Do not attempt to enter CPIH (or any other transaction that specifies program DFHPIDSH) from a terminal, or from any other device. CICS will start the transaction if a PIPELINE request is made via a TCP/IP attached client. No user action is required.

Module:
DFHPIDSH

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CPIO

DFHPI0111	*date time applid tranid* **Call to WebSphere MQ function *function* returned with reason code *reason_code*. Transaction abended.**

Explanation

A WebSphere MQ function call issued by transaction CPIL was unsuccessful and has set a non-zero reason code. The transaction CPIL is used to start a PIPELINE for a message received from WebSphere MQ.

System action

The transaction is abended with abend code APIJ.

User response

Check the WebSphere MQ reason code in the MQ Messages and codes manual, and examine the trace to determine why the MQ function call failed. You may need help from IBM to resolve this problem.

6. *reason_code*

Destination

CPIO

DFHPI0115	*date time applid tranid* **The service provider pipeline has returned a response message to the MQ transport, but the inbound request did not expect a response. The response message is ignored.**

Explanation

The WebSphere MQ transport module has been called by a provider pipeline to return a response. However, the inbound request did not expect a response, and was sent as a one-way request. There is no reply-to queue on which to place the response. There is probably a mismatch between the service requester and the service provider definitions of the service, as the service requester specified that the request was a one-way request.

System action

The response is ignored by the WebSphere MQ transport module. The transport module returns control to the pipeline manager with no error indication, and pipeline processing will complete normally.

User response

Check the definitions of the web service in the service requester and service provider and ensure that both indicate one-way request, or both indicate a reply is expected.

Module:
DFHPITQ1

XMEOUT parameters/Message inserts

Destination

CPIO

DFHPI0116	*date time applid* **A one-way request has been received as a WebSphere MQ persistent message, but the provider pipeline has abended or backed out changes to recoverable resources. The BTS process** *processname* **of processtype** *processtype* **has completed with status ABENDED and this process can be re-tried or used to provide information for reporting the failure.**

Explanation

A one way SOAP message has been received as a persistent WebSphere MQ message, but the provider pipeline has abended or forced a backout of changes to recoverable resources. As there is no reply to queue, there is no way of informing the requester of the failure. A BTS process "processname" in completion state ABENDED contains information about the original WebSphere MQ message, and this process and its containers can be used to retry the failing provider pipeline, or to report the failure appropriately.

System action

CICS has kept the information necessary to retry the failing provider pipeline in the named process. CICS takes no further action for the process.

User response

A user written transaction can ACQUIRE the process named in the message and take appropriate installation defined action. This could include one or more of the following.

- retry the failing process by issuing RESET ACQPROCESS followed by RUN ACQPROCESS ASYNC. Of course, the process could fail again in exactly the same way, and so an installation might wish to limit the number of retries. This can be done by using a container to contain a retry count, which would be incremented on each attempt, and taking a different action when the count exceeds an installation defined threshold.

- recover information about the original WebSphere MQ message received and record this on an installation defined log file. There are a number of containers associated with the process, DFHMQORIGINALMSG contains the message as received from WebSphere MQ, DFHMQMSG contains the inbound message with RFH2 header removed, that is, the SOAP message. DFHMQCONT contains the MQMD control block with data relating to the MQGET that was issued by CICS pipeline processing WebSphere MQ transport. After recovering any necessary information for reporting or logging the failure, the process can be cancelled (CANCEL ACQPROCESS).

Module:
DFHPIDSQ

5. *processtype*

Destination

CPIO

DFHPI0117	*date time applid* **BTS Process** *processname* **of processtype** *processtype*, **which has completed with status ABENDED, has been cancelled. A provider pipeline started with a persistent WebSphere MQ message has abended or backed out, but a response has been sent to the requester.**

Explanation

A provider pipeline was started by a persistent WebSphere MQ message, and so a BTS process was created to ensure the information was not lost on a system failure. The provider pipeline abended or backed out changes to recoverable resources, and the BTS process completed with status ABENDED. As a response message has been returned to the requester (a WebSphere MQ message on the reply-to queue) the requester will be aware of the failure and can take appropriate action. The BTS process in the provider system has been cancelled as there is no longer any need to retain it. An earlier message DFHBA0104 reported the ABENDED state of the process.

System action

CICS cancels the process that had completed with status ABENDED. All the data associated with the process is removed.

User response

None. This is an informative message, indicating that the process which completed with status ABENDED has been cancelled. CICS has sent a response to the requester indicating the failure.

Module:
DFHPIDSQ

XMEOUT parameters/Message inserts

1. *date*
2. *time*

4. *processname*
5. *processtype*

Destination

CPIO

DFHPI0118	*applid* **CICS has attempted to use BTS processes to support pipelines started with WebSphere MQ persistent messages. This attempt failed. CICS will continue, using channel based containers for the pipeline, but there is a risk of data loss in the event**

of a system failure. Ensure that BTS processtype, repository and local request queue are correctly defined and installed.

Explanation

A persistent WebSphere MQ message has been received to start a CICS provider pipeline, and CICS has attempted to create a BTS process to reliably hold the message data until the provider pipeline completes. However an error occurred when attempting to create the BTS process. CICS will continue processing persistent WebSphere MQ messages to start provider pipelines, using channel based containers, but there is a risk that data from the persistent message may be lost in the event of a system failure.

System action

CICS continues to process inbound WebSphere MQ persistent messages to drive provider pipelines, but in the event of a system failure, data originating in the persistent messages may be lost. This message is issued once on the first occurrence of a failure to create a BTS process. It is not issued for every occurrence of such a failure.

User response

Check that the steps stated in the section "Configuring your CICS system for Web Services" in the *CICS Web Services Guide* manual have been taken.

***there was a socket error
(SOCKET_IN_USE) | there was
a socket error (STATE_ERROR)
| there was a socket error
(TASK_CANCELLED) | there was a
socket error (TCP_NOT_ACTIVE)}.**
Problem occurred for URI *URI* .*

Explanation

The CICS pipeline HTTP transport mechanism was
unable to successfully handle the outbound request
because of one of the following reasons:

- The transport mechanism encountered a socket
  error (error reason code).
- The connection that the request was trying to use
  was closed.
- A socket request timed out.
- A write request failed because an invalid codepage
  was used.
- The URL being parsed was invalid because an
  invalid escape character was encountered on the
  URI specified as input.
- There was a problem communicating with the HTTP
  proxy.
- There was an HTTP protocol error.
- An invalid media type was encountered.
- The current user is not authorized to submit the
  request.
- There was a problem with the client SSL certificate.
- The URIMAP that was used cannot be found or is
  invalid.
- SSL has not been enabled for CICS.
- There was a problem with global user exit
  XWBAUTH.
- The URIMAP that was used is disabled.
- The connection was refused.

System action

The request is not sent. Error processing will continue.

User response

Depending on the error indicated in the message,
ensure the host codepage you are using is correct or
check for any socket errors indicated by examining
any exception trace entries issued from sockets (SO)
domain, or check that the URI specified as input does
not contain any invalid characters or null delimiters,
or check the XWBAUTH user global exit program for
problems handling this request.

DFHPI0401	*date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to send a response or receive a request because *{the codepage was not found	there was a socket error	the connection was closed	the client codepage was invalid	an HTTP chunking error occurred}*.**

Explanation

The CICS pipeline HTTP transport mechanism was unable to successfully handle the inbound request due to one of four reasons as indicated in the message. For instance, the transport may be unable to send a response due to the connection being closed or a sockets error. Also, the error could be caused by the request specifying a codepage which was either invalid or not found.

System action

The response is not sent. Error processing will continue.

User response

Depending on the error indicated in the message, ensure that the codepage you are using is correct, the connection being used is open, or check for any socket errors indicated by examining any exception trace entries issued from sockets (SO) domain.

Module:
DFHPITH

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. Value chosen from the following options:

1=the codepage was not found,

Destination

CPIO

DFHPI0402	*date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to send a request because the URI specified an unknown host: *hostname*.**

Explanation

The CICS pipeline HTTP transport mechanism was unable to successfully handle the outbound request because the host *hostname* from the URI is unknown.

System action

The request is not sent. Error processing will continue.

User response

Ensure that the URI specifies a host which is known and available.

Module:
DFHPITH

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *hostname*

Destination

CPIO

DFHPI0403	*date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to receive a response because *{the socket receive was timed out	the task was purged}*. Problem occurred for URI *URI*.**

Explanation

The CICS pipeline HTTP transport mechanism did not successfully receive a response to the outbound request due to the reason indicated in the message.

- The socket receive was timed out.
- The task was purged.

System action

The request is abandoned. Error processing will continue.

User response

For a timeout error: Investigate why the remote server failed to respond in a timely manner. Consider changing the RESPWAIT value for the pipeline which processes these web service requests. For a task purged error: Use the transaction dump from the AEXY abend to establish why the task was purged.

Module:
DFHPITH

Destination

CPIO

DFHPI0517   *date time applid tranid* **The CICS Pipeline Manager DFHPIPM encountered an error while trying to link to program** *program_name*. **Abend,** *abend_code*, **has been issued.**

Explanation

The CICS Pipeline Manager, DFHPIPM, was unable to link to the target program, or the target program abended.

System action

The link is abandoned. Error processing will continue.

User response

Ensure that the target program definition is correct. Use the abend code to determine corrective action.

Module:
DFHPIRI

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *program_name*
6. *abend_code*

Destination

CPIO

DFHPI0600   *date time applid* **The CICS SOAP handler has been passed a container that is not DATATYPE(CHAR).**

Explanation

The CICS soap handler DFHPISN was unable to convert the container to UTF-8 as the container does not have a datatype of CHAR.

System action

The soap handler is unable to process the input and returns a SOAP fault to the client/sender.

User response

Ensure that the DFHREQUEST and DFHWS-BODY containers use the DATATYPE(CHAR) option on the EXEC CICS PUT CONTAINER call.

Module:
DFHPISN

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CPIO

DFHPI0601   *date time applid* **The CICS SOAP handler has been passed data that does not begin with a '<' character.**

Explanation

The CICS soap handler DFHPISN has detected that the data in container DFHWS-BODY passed to it does not begin with a '<' character.

System action

The soap handler attempts to continue processing using the contents of the DFHWS-BODY container.

User response

If the contents of the DFHWS-BODY container is not expected to begin with a '<' character no further action is required. If the contents of the DFHWS-BODY

container is expected to begin with a '<' character then check the data being put into it is correct and that the fromccsid parameter is set correctly.

Module:
DFHPISN

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*

Destination

CPIO

DFHPI0602	*date time applid tranid trannum* **The CICS SOAP handler failed to parse a message. The parser error code is** *errcode***. The error was found at offset** *offset* **into the message. Further information:** *{a GETMAIN failure has occurred	an unspecified error has been detected in DFHPIEP	a non-SOAP tag has been found in the SOAP envelope	an in-line DTD has been found in the SOAP envelope	an unspecified error has occurred	the namespace of the SOAP envelope is not recognized	an XML processing instruction has been found	the SOAP envelope is not well formed	an unqualified attribute has been found on a SOAP tag	the PL/I XML parser returned a fatal error code	an unspecified error has occurred	a problem occurred processing a tag in DFHPIEP	a problem occurred processing an attribute in DFHPIEP}.*

Explanation

The CICS SOAP handler, DFHPISN, has failed to parse a message.

System action

The SOAP handler stops processing the SOAP message and creates a SOAP fault to return to the requester.

User response

Look up the parser error code *errcode* in the Enterprise PL/I Programming Guide to determine the type of parsing failure. If the parser error code is 0, the XML

is valid but the SOAP is not. Use the offset *offset* into the SOAP message to determine the precise location of the failure. In some scenarios the contents of the container that held the problematic SOAP message may have been replaced with a SOAP Fault message. If this occurs you may need to take a trace in order to see the SOAP messages as they arrived in CICS.

the pipeline. The element *element* must be specified.

Explanation

During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. Based on your current configuration values, CICS has determined that the indicated element is not present.

System action

The pipeline is set to a DISABLED state and normal processing continues.

User response

Correct the configuration file. Ensure that the corrected file is validated before discarding the pipeline (*pipeline*) and re-installing it. Check the documentation for supported algorithms.

Module:
DFHPIPL

1. *date*
2. *time*
3. *applid*
4. *userid*
5. *pipeline*
6. *filename*
7. *element*

Destination

CPIO

DFHPI0727 E	*date time applid userid* **PIPELINE** *pipeline* **cannot be installed as it requires support for ICRX based identity tokens and these are not supported by the platform.**

Explanation

The pipeline requires support for ICRX based identity tokens. This in turn requires z/OS 1.11 or higher. CICS has determined that the version of z/OS in use is not adequate for installing the pipeline.

System action

The pipeline is set to a DISABLED state and normal processing continues.

User response

Switch to a different form of identity token in the pipeline configuration file, or upgrade to a newer version of z/OS.

Module:
DFHPIPL

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *userid*
5. *pipeline*

Destination

CPIO

DFHPI0728 E	*date time applid userid* **PIPELINE** *pipeline* **encountered an error in the configuration file** *filename* **for the pipeline. The repository Axis2 configuration file** *element* **cannot be accessed by CICS.**

Explanation

During the pipeline resolution process, CICS parsed the pipeline configuration file and encountered an error. CICS cannot find the file that is specified for the Java SOAP pipeline repository.

System action

The PIPELINE resource is set to a DISABLED state and processing continues.

User response

Check that the pipeline configuration file points to a valid location for the repository. If no repository location is specified in the pipeline configuration file, CICS uses the USSHOME system initialization parameter to locate the repository. Check the specified file exists in the repository and that CICS has read permission for it. When you have fixed the problem, discard and reinstall the PIPELINE resource.

Module:
DFHPIPL

Destination

CPIO

DFHPI0729 E   *date time applid userid* **PIPELINE** *pipeline* **encountered an error in the pipeline configuration file** *filename* **at offset** *X'offset'***. The CICS Java SOAP handler cannot be an intermediate message handler.**

Explanation

During the pipeline resolution process, CICS parsed the pipeline configuration file and encountered an error. The CICS Java SOAP handler cannot be specified as an intermediate message handler.

System action

The PIPELINE resource is set to a DISABLED state and processing continues.

User response

If required, the CICS Java SOAP handler is specified in the pipeline configuration file by the use of the <cics_soap_1.1_handler_java> or the <cics_soap_1.2_handler_java> element. In a provider pipeline this element must be specified as the terminal handler. In a requester pipeline this element must be specified as the first message handler in the <service_handler_list> element. Correct the pipeline configuration file and reinstall the PIPELINE resource.

Destination

CPIO

DFHPI0730   *date time applid* **An attempt to register a remote Web service as a participant in unit of work -** *X'uowid'* **has failed.**

Explanation

An error has been encountered while attempting to register a remote webservice as a participant in an atomic transaction, under the coordination of a local unit of work.

System action

The local unit of work, is not updated with a link for the remote webservice and a registration response is not sent to the remote webservice's registration end point. The remote webservice then times out and backs out any recoverable updates it has made.

User response

The problem may be the result of the coordinating unit of work timing out before the registration message is delivered to the region where it ran. If this is the case then consider extending the coordinating transaction's DTIMOUT value if set, or the coordinating region's FTIMOUT setting if DTIMOUT is set to NO. If the problem persists then you need further assistance from IBM to resolve this problem.

Module:
DFHPIRS

XMEOUT parameters/Message inserts

4. *X'uowid'*

Destination

CPIO and Console

DFHPI0731   *date time applid* **An attempt to register unit of work -** *X'uowid'* **with a remote WSAT coordinating transaction has failed.**

Explanation

An error has been encountered while attempting to register a local webservice as a participant in an atomic transaction, under the coordination of a remote unit of recovery.

System action

The local unit of work is not updated with a link for the remote coordinating transaction, and the local webservice is not invoked. Instead a SOAP fault is returned to the coordinating transaction.

User response

The problem may be the result of a configuration error for one of the pipeline resources that the local region uses. The DFHWSATR pipeline is used to send the registration request and the DFHWSATP pipeline is used to receive a registration response. If either of these are not installed, disabled or incorrectly configured then the message processing that they are intended for may not take place. Alternatively, the error may be caused by the participant transaction timing out before a registration response is received. This interval is controlled by the value of the wscoor:Expires element in the coordination context that resulted in the registration attempt. Consider extending this time to allow registration to complete successfully. If the problem persists then you need further assistance from IBM to resolve this problem.

WEBSERVICE *WebService* **within**
PIPELINE *Pipeline* **cannot**
generate URIMAP for WSDL
discovery because URI *Uri* **is too**
long.

Explanation

CICS cannot generate the URIMAP resource that
discovers WSDL for WEBSERVICE *WebService*. The
path for the generated URIMAP resource is based on
the URI appending query string '?wsdl'. The generated
path is longer than the maximum length of 255
characters.

System action

The WEBSERVICE resource installation continues but
the URIMAP for WSDL discovery is not generated.

User response

Use a shorter URI or manually create a URIMAP that
uses a suitable path to discover the WSDL.

CPIO

DFHPI0914 E	*date time applid userid* **WEBSERVICE** *WebService* **is UNUSABLE because: {the WSBind file was not found	CICS is not authorized to read the WSBind file	there is insufficient storage to load the WSBind file	the zFS read for the WSBind file failed	writing the WSBind file to the shelf failed	the PIPELINE is incompatible with this WEBSERVICE	the CPIR resolution transaction could not be attached	the direction of the PIPELINE can't be determined	the WSBind file is corrupt	the WSBind file has an invalid version number	the WSBind file has an out of date version number	the WSBind file product number was not recognized	the PIPELINE is not a SOAP PIPELINE	the PIPELINE does not support SOAP version 1.2	the PIPELINE is not configured for SOAP version 1.1	the WSBind file is incompatible with the LOCALCCSID	it is incompatible with a Bundle defined PIPELINE	the associated JVMSERVER does**

not support CICS z/OS Connect | the WSBind file defines too many operations for JSON | the WSBind file could not be configured for JSON | the WSBind file specifies an unsupported CCSID | the WSBind file specifies RESTful. This is not supported in non-Java JSON processing}.

Explanation

The WEBSERVICE failed to complete initialization.

System action

The WEBSERVICE has been put into the UNUSABLE state.

User response

Check that the CICS region id has permission to write to the PIPELINE resource's shelf directory structure. Check that the WSBind file exists and that CICS has read permission for it. Check that the WSDL file, if specified, exists and that CICS has read permission for it.

Check that the PIPELINE resource into which the WEBSERVICE is being installed is enabled and valid. Ensure that the correct definitions exist in the CICS CSD for the Language Environment version currently in use.

Consider how the WSBind file has been produced. It must be recognized as a valid WSBind file. If it is transferred between systems then this must be done in binary mode in order to avoid corruption of the file.

If there is an invalid version number, the WSBind file is not compatible with this version of CICS. Regenerate the WSBind file using an appropriate Runtime Level for this version of CICS.

If a problem is reported with the LOCALCCSID then regenerate the WSBind file using the Web services Assistants and add the CCSID parameter. By default WSBind files are built to be compatible with US EBCDIC. CICS has detected that the LOCALCCSID is not compatible with US EBCDIC, so the WSBind file will have to be regenerated.

If an unsupported CCSID is reported for the WSBind file, regenerate the WSBind file using the Web services Assistants and specify a supported CCSID value.

Check that if the WEBSERVICE represents an application in CICS that is going to implement a WebService then the PIPELINE is also configured in provider mode. Conversely, if the WEBSERVICE represents a WebService running on a remote server

then the PIPELINE is configured in requester mode. Check that the PIPELINE has been installed without errors.

A provider mode WEBSERVICE is one for which a PROGRAM has been specified. A requester mode WEBSERVICE is one for which no PROGRAM has been specified. The PROGRAM name (if needed) must be specified at the time that the WSBind file is generated.

If the PIPELINE is Bundle defined, ensure the WEBSERVICE is compatible, either create by BUNDLE or PIPELINE SCAN.

Check that you are using the correct WSBind file - for example, ensure that you are not trying to use a WSBind file that was generated for a SOAP web service in a JSON web service.

Discard and reinstall the WEBSERVICE.

If the problem persists you may need to use the trace facility to determine the cause of the problem.

DFHPI0997 date time applid tranid **PIPELINE** pipeline **WEBSERVICE** webservice **The CICS pipeline manager has encountered an error:** {PIPELINE not found | PIPELINE not active | PIPELINE mode mismatch | unhandled node failure | context switch failed | request stream creation failure | request stream transport error | target program unavailable or abended | channel error | channel not found | URI not found | invalid URI | authorization failure | program abend | unidentified problem | timeout occurred | no request message | there was a problem with file PIDIR | attempt to register

a WS-AT context twice | empty DFHREQUEST container returned from a handler | req and resp containers both returned from a handler | empty DFHRESPONSE container returned from a handler | chunking request from non-terminal node | chunking request is incompatible with MTOM/XOP | chunking request not supported for this transport | transport function failed | bad mime type | failure to receive request | failure to send response to WS-Addressing endpoint}.

Explanation

The Pipeline Manager encountered a problem whilst attempting to process a message. This might be due to one of the following:

- A configuration error or an unexpected event.
- An abandoned connection attempt due to an exceeded DTIMEOUT. This causes message DFHPI0400 to be issued.
- An exceeded RESPWAIT timeout while waiting for a response.
- An unexpected response from a handler program on the pipeline.

System action

None.

User response

Examine the trace and any prior messages to determine why the Pipeline Manager failed.

Explanation

The pipeline manager encountered a problem attempting to open file DFHPIDIR. This might be due to one of the following:

- The file might not exist.
- The file definition might not have been installed.
- The file key length is too small.
- The file record length is too small.
- The file is full.
- The file control record is full.
- The file recovery mode was not specified as backout.
- The file could not be connected to or opened.
- An internal error occurred.

System action

Processing is aborted. A SOAP fault is returned to the client.

User response

Examine the trace to determine why the pipeline manager failed.

CPIO

DFHPI1001	*date time applid* **Validation of a {*request	response*} message for WEBSERVICE *webservicename* and operation *operationname* failed. The failure response contains the following message: '*message*'.**

Explanation

Validation was requested for operation *operationname* of WEBSERVICE *webservicename*. The validation has been attempted and failed. Either the incoming SOAP message does not match the WSDL specified or there was a problem reading the WSDL.

System action

None.

User response

Consider the detailed *message*. It will indicate the nature of the problem. Usually this will include a @QKC message from the XML parser used to do the validation and will indicate a rule that has been broken by the SOAP message. If the problem is with a SOAP message sent to CICS then change the partner system

to correct the SOAP message. If the problem is with a SOAP message generated by CICS then determine if the problem can be fixed by changing the CICS application. If the problem is caused by CICS then contact your IBM support representative for further assistance.

If the *message* indicates that the WSDL document cannot be found then this may be because the WEBSERVICE resource does not indicate the 'Wsdlfile' to use. The WSDL document must be specified when the WEBSERVICE resource is created. If you use the PIPELINE scan mechanism to create WEBSERVICE resources then you should ensure that a copy of the WSDL is included in the PIPELINE's 'Wsdir' directory along with the WSBind file.

transformation failed because of incorrect input ({*XML_FORMAT_ERROR | UNEXPECTED_CONTENT | HEADER_FORMAT_ERROR | UNDEFINED_ELEMENT | UNDEFINED_NAME_SPACE | ARRAY_OVERFLOW | NAME_TOO_LONG | PREFIX_TOO_LONG | NAME_SPACE_TOO_LONG | UNEXPECTED_XOP_INCLUDE | XOP_INCLUDE_ERROR | DUPLICATE_CHOICE | MISSING_XSI_TYPE | UNKNOWN_XSI_TYPE | MISSING_ATTRIBUTE | MIXED_CONTENT | MISSING_EQUALS_ATTR | MISSING_CLOSE_TAG_CHAR | MISSING_QUOTE_OR_APOSTROPHE | MISSING_END_QUOTE | DUPLICATE_ATTRIBUTE | MISMATCHED_TAGS | UNSUPPORTED_ENTITY | INVALID_UNICODE_DATA}* error_qualifier) for {*WEBSERVICE | XMLTRANSFORM | BUNDLE | EVENTBINDING | SCACOMPOSITE | JVMSERVER pipeline handler program | EPADAPTER | OSGIBUNDLE | PROGRAM | POLICY | EPADAPTERSET | APPLDEF | TRANSACTION | URIMAP | PLATDEF | LIBRARY | WARBUNDLE | EBABUNDLE | TCPIPSERVICE | JVMSERVER | FILE | PIPELINE | JSONTRANSFRM | EARBUNDLE | PACKAGESET | NODEJSAPP | TYPE UNKNOWN}* resource_name.

Explanation

CICS has failed to convert some XML or JSON data into application data. In the case of XML, this may be the body of a SOAP message received from a partner process. The reason for the failure is due to a problem with the content of the *XML*. The *XML* is either not well formed, invalid with respect to the XML schema or does not conform to one of the internal constraints of the CICS XML or JSON transformation service. An *error_qualifier* may be provided to help identify the source of the problem. In some cases the *error_qualifier* will be empty.

The possible error codes and qualifiers associated with this message are:

XML_FORMAT_ERROR error_type

The XML or JSON is not well formed. See the trace for further details.

UNEXPECTED_CONTENT

Character data has been found between two XML tags at a place where such text was not expected.

HEADER_FORMAT_ERROR

There is a problem reading the namespace attributes from the XML namespaces container.

UNDEFINED_ELEMENT element_name

The XML includes an unexpected XML tag, or the JSON includes an unexpected JSON object.

UNDEFINED_NAME_SPACE name_space

The XML includes an XML namespace prefix that has not been defined.

ARRAY_OVERFLOW array_name

Too many instances of an array or list of tags has been found in the *XML*.

NAME_TOO_LONG

An XML tag name longer than 255 characters has been found.

PREFIX_TOO_LONG

An XML namespace prefix longer than 255 characters has been found.

NAME_SPACE_TOO_LONG

An XML namespace name longer than 255 characters has been found.

UNEXPECTED_XOP_INCLUDE

An xop:Include element should only appear in place of the data for a base64binary field, but was found in some other context.

XOP_INCLUDE_ERROR

An xop:include element was found in a valid context, but the referenced attachment could not be found.

DUPLICATE_CHOICE element_name

A second entry has been found from a mutually exclusive group of options. Only the first option that was found was expected.

MISSING_XSI_TYPE element_name

An xsi:type attribute was expected for the XML tag but could not be found.

UNKNOWN_XSI_TYPE type_name

An xsi:type attribute was found for a data type that is not supported. Data types are supported only if they were present in the original XML schema.

MISSING_ATTRIBUTE attribute_name element_name namespace

A required attribute with the specified name and namespace was expected but is missing from the specified XML tag. No default value is known for the attribute. If the namespace is not specified, the XML attribute must not be qualified with a namespace.

MIXED_CONTENT element_name

The identified element included character data that is not marked up with XML tags. These characters are only tolerated if the XML schema specified mixed="true" for the element.

MISSING_EQUALS_ATTR attribute_name element_name

The identified element has an attribute that is missing an equals character prior to its value; for example, <tag attribute"value"> instead of <tag attribute="value">.

MISSING_CLOSE_TAG_CHAR element_name

The identified element is missing a '>' character. The tag might be a self closing tag that would normally take the following form: <tag/> .

MISSING_QUOTE_OR_APOSTROPHE attribute_name element_name

The identified element has an an attribute that is missing a delimiter for its value; for example, <tag attribute=value"> instead of <tag attribute="value">.

MISSING_END_QUOTE attribute_name element_name

The identified element has an an attribute that is missing its terminating value delimiter; for example, <tag attribute="value> instead of <tag attribute="value">.

DUPLICATE_ATTRIBUTE attribute_name element_name

The identified element has an two attributes with the same name.

MISMATCHED_TAGS start_tag_name end_tag_name

A pair of opening and closing XML tags do not match; for example, <open></close> rather than <open></open>.

UNSUPPORTED_ENTITY entity_name

An unsupported entity has been found in the XML.

INVALID_UNICODE_DATA element_name

An XML tag contains invalid Unicode data.

System action

The XML or JSON conversion process halts.

If CICS is acting as a Web service provider, a SOAP Fault message (in the case of SOAP) or an error message (in the case of JSON) is returned to the requester. If CICS is acting as a Web service requester, a response code of INVREQ is returned to the calling application program with a RESP2 code of 14. If CICS is processing a TRANSFORM command, an INVREQ is returned with a RESP2 code of 3.

An exception entry is written to the trace table.

User response

Examine the exception trace entry for further information. Consider using the WEBSERVICE or XMLTRANSFORM validation option to test that the XML is valid for the schema.

XML is case sensitive. Ensure that the XML element, attribute, and namespace names used within the XML are correct with respect to the schemas that describe the XML.

Correct or change the partner process to ensure that the *XML* sent to CICS is appropriate to be consumed by CICS.

If a SOAP or JSON message is changed by a handler program as part of the CICS Pipeline processing then ensure that the handler has not introduced this problem. Confirm that the Pipeline is suitable for the request data; for example, JSON data should not be processed by a SOAP pipeline, or that an Application handler program such as DFHPITP isn't used as a Terminal handler.

JSONTRANSFRM | EARBUNDLE | PACKAGESET | NODEJSAPP | TYPE UNKNOWN} resource_name.

Explanation

CICS has failed to generate XML or JSON due to a problem with the data received from the CICS application. An *error_qualifier* may be provided to help identify the source of the problem. In some cases the *error_qualifier* will be empty.

The possible error codes and qualifiers associated with this message are:

ARRAY_CONTAINER_TOO_SMALL array_name

A CICS container does not hold sufficient data given the number of instances of the data expected and the length of one instance of the data.

DATA_STRUCTURE_TOO_SMALL expected_length

The container passed to CICS does not hold the expected quantity of data. There are several possible causes for this problem including:

- The binding file and the application are out of step. For example, CICS may be expecting data consistent with version 1 of an application, but the application has been updated to version 2. In which case, the binding file needs updating and redeploying.
- A provider mode Web service may have failed to populate the data container prior to exiting. CICS may be receiving the same data as output that it originally passed to the Web service as input.
- The application may be deliberately truncating the data it passes to CICS.

ARRAY_TOO_LARGE array_name

Too many instances of a structure have been supplied in a container given the maximum value specified in the XML schema.

ARRAY_TOO_SMALL array_name

Too few instances of a structure have been supplied in a container given the minimum value specified in the XML schema.

CONTAINER_NOT_FOUND container_name

A container named in the input structure cannot be found.

CONTAINER_NOT_BIT container_name

A container named in the input structure exists but is of the wrong type. The container must be created in BIT mode rather than CHAR mode.

CONTAINER_NOT_CHAR container_name

A container named in the input structure exists but is of the wrong type. The container must be created in CHAR mode rather than BIT mode.

BAD_CHOICE_ENUM enum_name

An enumerated value in the input structure has been set to an invalid value.

LENGTH_TOO_LONG field_name

The length value specified for this field is longer than the maximum length permitted for the field. For example, the maximum length of the field may be 255 characters, but the length may have been initialized to x'4040' which indicates 16448 characters of data.

LITTLE_ENDIAN_BOM field_name

The Byte Order Marker for a UTF-16 field contains an unexpected Little Endian BOM. If a BOM character is used then it must be Big Endian.

INVALID_UNICODE_DATA field_name

A UTF-16 field contained an invalid code point.

System action

The XML or JSON conversion process halts.

If CICS is acting as a Web service provider, a SOAP Fault message (in the case of SOAP) or an error message (in the case of JSON) is returned to the requester. If CICS is acting as a Web service requester, a response code of INVREQ is returned to the calling application program with, in most cases, a RESP2 code of 14. If CICS is processing a TRANSFORM command, an INVREQ is returned with a RESP2 code of 5.

An exception entry is written to the trace table.

User response

Examine the exception trace entry for further information.

Correct the CICS application to ensure that the data presented to CICS is appropriate to be converted into XML or JSON.

Explanation

CICS has failed to convert some XML or JSON data into application data. In the case of XML, this may be the body of a SOAP message received from a partner process. The reason for the failure is due to a problem converting a value within the XML or JSON.

The possible error codes associated with this message are:

INPUT_TOO_LONG

The value of an XML tag that was declared as numeric contains more than 31 digits.

OUTPUT_OVERFLOW

An XML tag or JSON property contains a value that is too long to fit in the associated field of the commarea, or it contains a numeric value which is outside the permitted range for the associated field in the commarea.

NEGATIVE_UNSIGNED

A negative number has been found in an XML tag or JSON property that was declared as unsigned.

FRACTION_TOO_LONG

An XML tag contains a number with more non-zero fractional digits than the XML schema allows.

INVALID_CHARACTER

An XML tag or JSON property contains a character that is inconsistent with the declared type of that tag. For example, a tag declared as hexBinary contains a value that is not in the range 0-9 + a-f + A-F.

ODD_HEX_DIGITS

An XML tag that was declared as hexBinary contains an odd number of hexadecimal characters.

INVALID_BASE64

An XML tag that was declared as base64Binary contains a value that is not consistent with the base64 encoding.

NOT_PURE_DBCS

An XML tag that maps to a pure DBCS language structure field contains a value that cannot be represented in pure DBCS.

INVALID_FIELD_SIZE

A floating point type with an unsupported precision level has been discovered.

EXPONENT_OVERFLOW

An overflow condition has been encountered whilst transforming a floating point value.

EXPONENT_UNDERFLOW

An underflow condition has been encountered whilst transforming a floating point value.

ABSTIME_INVALID

An attempt to convert an xsd:dateTime into a CICS ABSTIME value failed. This may be because the value in the XML does not conform to RFC3339, or the value represented may not be representable as a CICS ABSTIME value.

ADDITIONAL_PROPERTIES

Extra JSON properties were found for a WEBSERVICE that is configured to expect them, but this capability is disabled in the JSON parser. If the com.ibm.cics.json.enableAxis2Handlers property is set in the JVM Profile, consider removing it.

UNKNOWN_CONVERSION

An unrecognized conversion type has been requested.

System action

The XML or JSON conversion process halts.

If CICS is acting as a Web service provider, a SOAP Fault message (in the case of SOAP) or an error message (in the case of JSON) is returned to the requester. If CICS is acting as a Web service requester, a response code of INVREQ is returned to the calling application program with a RESP2 code of 14. If CICS is processing a TRANSFORM command, an INVREQ is returned with a RESP2 code of 4.

An exception entry is written to the trace table.

User response

Examine the exception trace entry for further information. Consider using the WEBSERVICE or XMLTRANSFORM validation option to test that the XML is valid for the schema.

Correct or change the partner process to ensure that the XML sent to CICS is appropriate to be consumed by CICS.

If a SOAPmessage is changed by a handler program as part of the CICS PIPELINE processing then ensure that the handler has not introduced this problem.

CPIO

DFHPI1010	*DATE TIME APPLID TRANID TRANNUM {XML | JSON} generation failed. A conversion error ({UNKNOWN_CONVERSION | NEGATIVE_UNSIGNED | INVALID_CHARACTER | INVALID_PACKED_DEC | INVALID_ZONED_DEC | INCOMPLETE_DBCS | ODD_DBCS_BYTES | INVALID_FIELD_SIZE | EXPONENT_OVERFLOW | EXPONENT_UNDERFLOW | ABSTIME_INVALID}) occurred when converting field fieldname for {WEBSERVICE | XMLTRANSFORM | BUNDLE | EVENTBINDING | SCACOMPOSITE | JVMSERVER pipeline handler program | EPADAPTER | OSGIBUNDLE | PROGRAM | POLICY | EPADAPTERSET | APPLDEF | TRANSACTION | URIMAP | PLATDEF | LIBRARY | WARBUNDLE | EBABUNDLE | TCPIPSERVICE | JVMSERVER | FILE | PIPELINE | JSONTRANSFRM | EARBUNDLE | PACKAGESET | NODEJSAPP | TYPE UNKNOWN} resource_name.*

Explanation

CICS has failed to generate XML or JSON using application supplied data. The reason for the failure is due to a problem converting a value from the application data.

The possible error codes associated with this message are:

NEGATIVE_UNSIGNED

A negative number has been found in the application data that was declared as unsigned.

INVALID_CHARACTER

An XML tag or JSON property contains a character that is inconsistent with its declared type. For example, a tag declared as hexBinary contains a value that is not in the range 0-9 + a-f + A-F.

INVALID_PACKED_DEC

A packed decimal field in the application data contains an illegal value that cannot be converted to XML.

INVALID_ZONED_DEC

A zoned decimal field in the application data contains an illegal value that cannot be converted to XML.

INCOMPLETE_DBCS

A DBCS sequence in the application data is missing a shift in (SI) character.

ODD_DBCS_BYTES

A DBCS sequence in the application data is an odd number of bytes in length.

INVALID_FIELD_SIZE

A floating point type with an unsupported precision level has been discovered.

EXPONENT_OVERFLOW

An overflow condition has been encountered when transforming a floating point value.

EXPONENT_UNDERFLOW

An underflow condition has been encountered when transforming a floating point value.

ABSTIME_INVALID

A problem was encountered when transforming an ABSTIME value into an RFC3339 value.

UNKNOWN_CONVERSION

An unrecognized conversion type has been requested.

System action

The XML or JSON conversion process halts.

If CICS is acting as a Web service provider, a SOAP Fault message (in the case of SOAP) or an error message (in the case of JSON) is returned to the requester. If CICS is acting as a Web service requester, a response code of INVREQ is returned to the calling application program with a RESP2 code of 14. If CICS is processing a TRANSFORM command then an INVREQ is returned with a RESP2 code of 6.

An exception entry is written to the trace table.

User response

Examine the exception trace entry for further information.

Correct the CICS application to ensure that the data presented to CICS is appropriate to be converted into XML or JSON.

CRLO

DFHPI1100 E	*date time applid userid* **PIPELINE** *pipeline* **encountered an error while processing an inbound MIME message. The problem with the MIME message is:** *{it contained an invalid character	it had an invalid header	it had an invalid MIME header	it had a boundary error	it did not contain a root part	it used an unsupported encoding	it caused an unexpected response}*.

Explanation

During HTTP processing of an inbound MIME request, CICS detected an error in the format or content of the MIME message. Possible reasons for this could be:

- It contained an invalid character
- It had an invalid header
- It had an invalid MIME header
- It had a boundary error
- It did not contain a root part
- It used an unsupported encoding
- It caused an unexpected response

The specific cause of the error is indicated in the message.

System action

The PIPELINE returns in error. For a provider PIPELINE the HTTP connection is closed. An exception trace point is issued with the details of the error.

User response

Check the trace for details of the MIME error. This error will need to be corrected in the MIME generation of the sender.

mode. Generation of the MIME message failed because: *{it contained a body that could not be parsed | a container had an invalid ccsid | a container had the wrong type}.*

Explanation

During HTTP processing of an outbound MIME request, in compatibility mode, CICS detected an error in the content of the MIME message or pipeline channel. Possible reasons for this failure include the message contained a body that could not be parsed, the channel had a MIME container with an invalid ccsid or the channel had a container with the wrong type. The cause of the error will be indicated in the issued message.

System action

The pipeline returns in error. For a provider pipeline the HTTP connection is closed. An exception trace point will have been issued with the details of the error.

User response

Trace can be checked to obtain the details of the MIME error. This error will need to be corrected in the MIME generation of the sending party.

DFHPI1103 E   *date time applid userid* **PIPELINE** *pipeline* **encountered an error while processing an outbound message in MIME compatibility**

mode. The problem with the MIME message was: *{it contained a body that could not be parsed | it had an include for which there was no attachment | it caused an unexpected exception}.*

Explanation

During WebSphere MQ processing of an outbound MIME request, in compatibility mode, CICS detected an error in the content of the MIME message. This could be because it contained a body that could not be parsed or it had an include for which there was no attachment. Other internal MIME syntax and processing problems could also be the cause. The message identifies which of these caused it to be issued.

System action

The PIPELINE returns in error. An exception trace point will have been issued with the details of the error.

User response

Trace can be checked to obtain the details of the MIME error. This error will need to be corrected in the MIME generation of the sender.

DFHPI2015 E   *date time applid tranid* **A attempt to directly invoke a service** *service_name* **failed. {The service is internal. | The service cannot be invoked directly. | The composite that defines the service is disabled. | The service uses the web services binding.}**

Explanation

An attempt to use INVOKE SERVICE to target an SCA deployed service *service_name* could not establish a binding. Although a matching service name was found that service was not suitable for direction invocation. This could be because: The target service is internal to a composite. The target service uses a bind file for mapping. The target service is in a disabled composite. The target service uses a Web Services binding and must be called as a Web Service.

System action

The INVOKE SERVICE returns NOTFOUND.

User response

There are a number of possible solutions. Check the SCDL and correct and issues. Change the application to target a service that can be called in this way. Change the application to use a request type (Web Services) that can target the service.

SYSPRINT

DFHPI9010 E　　**Simple data type *type* is not atomic. List and union data types are not supported.**

Explanation

DFHWS2LS and DFHSC2LS support simple primitive XML data types at mapping level 1.0. Type *type* is either a list or a union data type.

System action

The Web services or XML assistant continues processing.

User response

Consider specifying a MAPPING-LEVEL of at least 1.1.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9011 E **Unsupported super type**
super_type **found for type**
base_type.

Explanation

XML data type *base_type* is derived from XML data type *super_type*. The super type is not supported by the assistants.

System action

The Web services or XML assistant continues processing.

User response

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML

capable application that uses the DFHPIRT channel linkable SOAP interface.

Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9012 E **Schema wild cards (<any> tags)**
are only supported at mapping
level 2.1 and later.

Explanation

A XML schema referenced within the input document contains an 'any' tag. The 'any' tag is supported, but only at mapping level 2.1 or later. A mapping level prior to 2.1 is currently in use.

System action

The Web services or XML assistant continues processing.

User response

Consider specifying the use of mapping level 2.1 or later.

At mapping level 2.1 CICS will allocate a container into which the XML data associated with the 'any' tag will be stored at runtime. If this behavior is not acceptable then consider changing the XML @QKC schema to specify a 'choice' construct that lists all of the possible options that may be used at runtime.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9013 E **Schema model groups with**
maxOccurs or minOccurs not equal
to 1 are not supported. Problem
found for type: *value*.

Explanation

An XML model group has been found within the XML schema referenced from the WSDL document which specifies occurrence information. The term 'model

group' refers to one of the following XML tags: 'all', 'sequence' or 'choice'. DFHWS2LS supports these tags if they do not specify minOccurs or maxOccurs values. This problem has been identified within data type *value*.

At mapping level 2.1 minOccurs="0" is supported for model groups.

System action

The Web services assistant continues processing.

User response

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. DFHPI9020 W   **Schema attribute *attribute* has been found and ignored for type *type*.**

Explanation

An XML schema contains an XML type definition with an attribute. XML attributes are not supported at mapping level 1.0, though they are tolerated. XML attributes are fully supported at mapping level 1.1.

System action

The Web services or XML assistant continues processing. If the attribute is present in a SOAP message sent to CICS at runtime then it will be ignored.

User response

Consider specifying a MAPPING-LEVEL of at least 1.1.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9021 E   **A schema type with unrecognized content has been found: *value*.**

Explanation

There is an error in an XML schema. An XML type *value* has been found with unrecognized content.

System action

The Web services or XML assistant continues processing.

User response

Correct the XML schema and then resubmit the DFHWS2LS or DFHSC2LS job to re-process the input document.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9022 W   **Schema type *type* is being restricted to a total of *value* digits in the response message of operation *operation*.**

Explanation

An XML schema contains type definition *type*. This type specifies a total number of digits which is too large for the target programming language to support. DFHWS2LS is restricting the type definition to a total of *value* digits. This type appears in the response message for operation *operation*.

System action

The Web services assistant continues processing. If at runtime a SOAP message is received with a value which is too large for the target field in the language structure then a conversion error will be indicated.

User response

Consider whether you need to be able to support numbers which require more digits than are allowed. If it is acceptable for CICS to impose this maximum length then you may safely ignore this message.

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9023 W **Schema type *type* is being restricted to a total of *value* digits for operation *operation*.**

Explanation

An XML schema referenced from the WSDL document contains type definition *type*. This type specifies a total number of digits which is too large for the target programming language to support. DFHWS2LS is restricting the type definition to a total of *value* digits. This type appears in the request message for operation *operation*.

System action

The Web services assistant continues processing. If at runtime a SOAP message is received with a value which is too large for the target field in the language structure then a conversion error will be indicated.

User response

Consider whether you need to be able to support numbers which require more digits than are allowed in the DFHWS2LS mappings. If it is acceptable for CICS to impose this maximum length then you may safely ignore this message.

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9025 E   **Required schema type *type* cannot be found.**

Explanation

There is an error in an XML schema. A schema type definition cannot be found. The missing type is *type*.

System action

The Web services or XML assistant continues processing.

User response

Correct the XML schema or the WSDL document and then resubmit the DFHWS2LS or DFHSC2LS job to reprocess the input document.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9026 E   **URI *uri* cannot be resolved. Consider checking that the HTTP Proxy is correct.**

Explanation

A namespace reference cannot be resolved. DFHWS2LS or DFHSC2LS has attempted to use the URI from the namespace to resolve the reference but has not been able to do so. This may be because a HTTP proxy service has not been specified or because there is no content available at the location implied by the URI. The URI is *uri*.

System action

The Web services or XML assistant continues processing.

User response

Specify the location of the HTTP proxy to use via the HTTPPROXY parameter. If the correct proxy has already been specified or if there is genuinely no content available at the location implied by the URI then add a schemaLocation XML attribute to the WSDL

or schema in order to allow the namespace to be resolved.

Module:

SYSPRINT

DFHPI9029 E	Implicit padding (slack bytes) are not supported for PL/I. Please change the language structure to ensure that all slack bytes are explicitly referenced and that top level structures start on a double-word boundary. Slack bytes are needed near or around field *field*.

Explanation

DFHLS2WS, DFHLS2SC and DFHLS2JS are unable to determine the location of where slack bytes (also known as filler bytes) should be placed when PL/I is used to define a language structure. It has been determined that one or more slack bytes are needed

somewhere near to field *field*, though the precise location is not known.

System action

The Web services or XML assistant continues processing.

User response

Change the language structure to ensure that every byte is explicitly referenced and so that the first entry in the language structure starts on a double word boundary. If you are unable to predict precisely where filler fields must be placed to meet these requirements you could consider marking the fields as UNALIGNED and recompiling the application.

Any sub-structures within the language structure must begin on the same alignment as the most aligned item within the structure.

If you are using DFHLS2WS then an alternative solution is to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

SYSPRINT

DFHPI9031 E	A structure or array is unexpectedly empty.

Explanation

DFHLS2WS or DFHLS2SC has encountered a problem whilst parsing a language structure. It has reached the end of the language structure and has found insufficient closing statements to match the number of opening statements, or has found an empty sub-structure, or has found a COBOL language structure that consists entirely of FILLER fields. This message can imply an internal processing error has occurred that requires a fix from IBM.

DFHLS2WS or DFHLS2SC is unable to determine which line in the language structure starts the sub-structure that is empty, FILLER filled or unclosed. This message is generated as a back-stop condition to prevent an erroneous WSBind file being deployed to CICS.

The conditions under which this message may be issued are:

- A field in a PL/I language structure has been defined without specifying the data type. In this scenario the

Assistants may assume that the field is the start of an empty sub-structure.

- A sub-structure exists in the language structure, but each entry within the sub-structure is unsupported.
- A sub-structure in COBOL consists entirely of FILLER fields.
- DFHLS2WS or DFHLS2SC has failed to understand an entry in the language structure. This may be due to a spelling mistake in the language structure, or the presence of an unsupported keyword.

System action

The Web services or XML assistant continues processing.

User response

Change the language structure to correct any other reported problems. Supply explicit definitions for any fields which have been defined with default characteristics.

Ensure that the language structure is well formed. Check that the compiler is able to understand the language structure.

Replace the entire COBOL sub-structure with a single FILLER of the same total length.

If these changes do not resolve the problem then contact your IBM support representative for further assistance.

The Web services or XML assistant continues processing.

User response

Review any other messages that have been issued by the assistant. If those messages suggest remedies to the problem then act on them.

If after resolving any other problems this message is still being issued, you should contact your IBM support representative for further assistance. You are likely to be asked to supply the LOGFILE that was generated by the assistants.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9501 E	The HTTPPROXY parameter is invalid. The correct format is proxy.hostname.com:8080 or similar.

Explanation

The value of the HTTPPROXY parameter is invalid.

System action

The Web services or XML assistant continues processing.

User response

Correct or remove the HTTPPROXY parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9502 E	One or more incorrect parameters have been specified.

Explanation

The Web services or XML assistant cannot continue as one or more errors have been detected in the input parameters.

System action

The Web services or XML assistant fails with a return code of 8.

User response

Correct the errors in the input parameters details of which can be found in the previous messages issued.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9503 E	Required parameter *parameter* is missing.

Explanation

A required parameter is missing from the input parameters. The missing parameter is *parameter*.

System action

The Web services or XML assistant continues processing.

User response

Provide a value for the missing parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9504 E   **Parameter *parameter* has been specified but is not valid for program *program*.**

Explanation

A parameter has been specified that was not expected. For example, a value may have been provided for the BINDING parameter in DFHLS2WS. A BINDING is only valid as input to DFHWS2LS. The unexpected parameter is *parameter*.

System action

The Web services or XML assistant continues processing.

User response

Remove the unexpected parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9505 E   **Invalid value specified for the LANG parameter. Valid values are: COBOL, PLI-ENTERPRISE, PLI-OTHER, C or CPP.**

Explanation

An invalid value has been specified for the LANG parameter.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the LANG parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9506 E   **Parameter *parameter* exceeds the maximum valid length of *max* characters. The supplied value is *value*.**

Explanation

The value of parameter *parameter* is too long.

System action

The Web services or XML assistant continues processing.

User response

Change value *value* to be no longer than *max* characters long.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9507 W   **Parameter *parameter* is not set therefore parameter *parameter2* is ignored.**

Explanation

Parameter *parameter2* has been ignored because parameter *parameter* is not set. For example, a PGMINT value only makes sense if a PROGRAM value has also been supplied.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unexpected parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9509 E   **Parameter *parameter* contains invalid characters.**

Explanation

One or more invalid characters have been found in parameter *parameter*.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9510 W   **Invalid value specified for the PGMINT parameter. Valid values are: CHANNEL or COMMAREA. The default value of CHANNEL is assumed.**

Explanation

An invalid value has been specified for the PGMINT parameter.

System action

The Web services assistant continues processing.

User response

Correct the value of the PGMINT parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9511 W   **Parameter PGMINT is set to CHANNEL but parameter CONTID is not set. The default value of *value* is assumed.**

Explanation

The program interface has been defined as 'Channel' but a container name has not been provided to indicate the name of the container that CICS should populate at runtime. A default value of *value* has been assumed.

System action

The Web services assistant continues processing.

User response

Consider whether the default container name is acceptable. If you are enabling an existing channel based application as a Web service then it is likely that the default container name is incorrect. If the default container name is acceptable then you can safely ignore this message.

Module:
DFHWS2LS, DFHLS2WS, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9512 W   **Parameter CONTID is set but not needed for PGMINT=COMMAREA. Parameter CONTID is ignored.**

Explanation

The CONTID input parameter has been specified but is ignored as the program interface has been defined to be a commarea.

System action

The Web services assistant continues processing.

User response

Consider either removing the CONTID parameter or changing the PGMINT to CHANNEL.

Module:
DFHWS2LS, DFHLS2WS, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9513 W   **The value of parameter *parameter* is missing a file extension, *extension* is assumed.**

Explanation

A file extension has not been provided for the Binding file. If you wish to use the PIPELINE scan mechanism for automatically creating WEBSERVICE resources from WSBind files then you must use an extension of '.wsbind'. This extension is assumed for WSBind files. An extension of '.xsdbind' is assumed for XSDBind files.

System action

The Web services assistant or XML assistant continues processing.

User response

Consider adding '.wsbind' to the end of your WSBIND parameter or '.xsdbind' to the end of your XSDBIND parameter value.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9514 W	The value of parameter *parameter* specified a file extension other than *extension*.

Explanation

A file extension other than the default one has been used for the Binding file. If you wish to use the PIPELINE scan mechanism for automatically creating WEBSERVICE resources from WSBind files then you must use an extension of '.wsbind'. The default extension for XSDBind files is '.xsdbind'.

System action

The Web services assistant or XML assistant continues processing.

User response

Consider changing the extension of the WSBIND parameter to '.wsbind', or the value of the XSDBIND parameter to '.xsdbind'.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9515 E	PDS library *library* cannot be found.

Explanation

The PDS library specified in the PDSLIB input parameter cannot be found.

System action

The Web services or XML assistant continues processing.

User response

Correct the PDSLIB input parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9516 E	PDS library *library* exists but cannot be read.

Explanation

The PDS library specified in the PDSLIB input parameter exists but cannot be read. This may be because the userid under which the Web services or XML assistant is executing does not have permission to to view the PDS or because an exclusive lock is being held by another process.

System action

The Web services or XML assistant continues processing.

User response

Ensure that permission is assigned to allow the assistant to read from the PDSLIB. Ensure that no other process has a lock on the PDSLIB.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9517 E	PDS library *library* exists but cannot be written to.

Explanation

The PDS library specified in the PDSLIB input parameter exists but cannot be written to. This may be because the userid under which the Web services or XML assistant is executing does not have permission to alter the PDS or because an exclusive lock is being held by another process.

System action

The Web services or XML assistant continues processing.

User response

Ensure that permission is assigned to allow the assistant to alter the PDSLIB. Ensure that no other process has a lock on the PDSLIB.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9518 W   **PDS library *library* specifies a record length less than 80 characters, output may be truncated.**

Explanation

The PDS library specified in the PDSLIB input parameter specifies a record length less than 80 characters. DFHWS2LS and DFHSC2LS requires 80 characters for the creation of language structures, it is therefore likely that truncation will occur.

System action

The Web services or XML assistant continues processing.

User response

Consider changing the PDSLIB to a fixed record data set with a logical record length of 80 characters.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9519 E   **Codepage *codepage* is not recognized.**

Explanation

The codepage indicated in the PDSCP input parameter is not recognized. The Web services or XML assistant uses the codepage support built in to Java, Java does not recognize the named code page.

System action

The Web services or XML assistant continues processing.

User response

Remove or correct the PDSCP parameter. If the PDSCP parameter is not set then the same codepage is used when reading from and writing to the PDS library as is used when reading from and writing to zFS. This codepage is determined according to the default codepage configured for Unix System Services.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9520 E   **Parameter RESPMEM and parameter REQMEM must supply different values.**

Explanation

The same language structure name has been used for both the request and the response messages. DFHWS2LS requires that these names be unique even if it is likely that the generated language structures will be identical.

System action

The Web services assistant continues processing.

User response

Change one of the REQMEM and RESPMEM input parameters in order to make them unique.

Module:
DFHWS2LS, DFHJS2LS

Destination

SYSPRINT

DFHPI9521 E   **The record format of PDS member *member* must be FB and have a record length of 80.**

Explanation

The location at which the language structures are to be written to or read from is not a fixed block PDS member.

System action

The Web services or XML assistant continues processing.

User response

Change the location of the PDSLIB input parameter to indicate a FB data set.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9522 E	File *file* cannot be read.

Explanation

File *file* exists but cannot be read. This may be because the userid under which the assistants are executing does not have access permission to the specified resource.

System action

The Web services or XML assistant continues processing.

User response

Correct the problem.

Module:
DFHLS2WS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9523 E	An unexpected error occurred whilst processing file *file*. The problem is: *value*.

Explanation

An exception was caught whilst attempting to process file *file*. The exception included a message to identify the problem which is indicated in *value*. Some error messages will just repeat the file name.

DFHJS2LS, DFHWS2LS, and DFHSC2LS require an exclusive lock on the partitioned data set to which they are writing language structures. This message might be issued if an exclusive lock is not currently available or access permissions for the file are incorrect.

System action

The web services, JSON, or XML assistant continues processing.

User response

Check the access permissions for the file to ensure that the user ID running the assistant has write access. Check that no other applications or users are accessing the PDS. Correct the identified problem.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9524 E	File *file* cannot be written to.

Explanation

File *file* exists but cannot be written to. This may be because the userid under which DFHWS2LS or DFHSC2LS is executing does not have write permission to the specified resource.

System action

The Web services or XML assistant continues processing.

User response

Correct the problem.

Module:
DFHWS2LS, DFHSC2LS, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9525 E	Cannot write a file because directory *directory* does not exist.

Explanation

Directory *directory* does not exist. Therefore the Web services or XML assistant is unable to create an output file that should be written to that directory.

System action

The Web services or XML assistant continues processing.

User response

Either create the directory or change the input parameters to indicate a different output location.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9526 E   **Cannot write a file because directory *directory* is not writable.**

Explanation

Directory *directory* exists but the userid under which the Web services or XML assistant is executing does not have write permission to create a new file within it.

System action

The Web services or XML assistant continues processing.

User response

Either change the permissions for the directory or change the input parameters to indicate a different output location.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9527 E   **Cannot write to the log file, *file,* is not writable.**

Explanation

File *file* exists but the userid under which the Web services or XML assistant is executing does not have write permission to change it.

System action

The Web services or XML assistant continues processing.

User response

Either change the permissions for the file or change the input parameters to indicate a different output location.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9528 E   **Cannot find or read file *file*.**

Explanation

File *file* either does not exist or the userid under which the Web services or XML assistant is executing does not have permission to read it.

System action

The Web services or XML assistant continues processing.

User response

Either change the permissions for the file or correct the input parameters to indicate a different input file.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9529 W   **Characters beyond column *column* have been truncated for line *line*.**

Explanation

The input parameters extend beyond character 72. The problematic line identified is *line*.

System action

The Web services or XML assistant continues processing.

User response

Either change the indicated line to use less than 72 characters of data or use the '*' line continuation character and continue on the next line.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9530 I   **Parameter *parameter* is not recognized and has been ignored.**

Explanation

An unrecognized parameter has been found amongst the input parameters.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the named parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9531 E   **Parameter STRUCTURE must only contain (or) characters in the first or last position.**

Explanation

The STRUCTURE input parameter is not well formed. It may only contain bracket characters at the start and end of the value.

System action

The Web services assistant continues processing.

User response

Correct the value of the STRUCTURE input parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9532 E   **Parameter STRUCTURE must be of the form STRUCTURE=(request_structure_name, response_structure_name).**

Explanation

The STRUCTURE input parameter is not well formed. It should contain two structure names separated by a

comma and entirely enclosed within rounded brackets as in the following example:

STRUCTURE=(request_structure_name,response_structure_name).

System action

The Web services assistant continues processing.

User response

Correct the value of the STRUCTURE input parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9533 E   **Parameter *parameter* contains an invalid character *character* at position *position* in value *value*.**

Explanation

An invalid character has been found in parameter *character*.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the named input parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9534 E   **Non-unique operation signature found: *value*.**

Explanation

The wire signature for two or more WSDL operations is identical. CICS needs the wire signatures to be different in order to determine which operation is being invoked.

The wire signature is determined by the immediate child elements of the SOAP body tag. If RPC style SOAP messages are used then the name of the WSDL Operation is included in the SOAP message and CICS

can therefore determine the operation that is being invoked at runtime. If document style WSDL is used then the operation name is only included in the SOAP message if the WSDL conforms to the 'wrapped' pattern - in which case the first tag within the body of the SOAP envelope is the name of the operation.

If the operation name is not included in the SOAP message then CICS requires that each of the operations in the WSDL have unique signatures. If the request message for an operation is empty then the signature is reported as 'null'. If two or more operations share the same signature then this message is issued. This requirement is also present in the WSi Basic Profile specification which defines the rules to follow if you wish your WSDL to work with most Web services implementations.

System action

The Web services assistant continues processing.

User response

Either remove or exclude one of the WSDL operations, or change the WSDL to specify RPC encoding or to conform to the 'wrapped document' style of encoding.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9535 E   **WSDL operation *operation* has an operation signature greater than *value* characters long and therefore is not supported by CICS.**

Explanation

Operation *operation* in the WSDL document has a wire signature that is longer than *value* characters. DFHWS2LS cannot process this operation. The wire signature is used to determine the operation that is being invoked based on the sequence of XML child elements found within the SOAP:body element at runtime. If there are a large number of such child elements or the child elements have unusually long names then the generated signature may be too large.

System action

The Web services assistant continues processing.

User response

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.

- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.

- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9536 E   **User Defined Type *type* cannot be found.**

Explanation

DFHLS2WS or DFHLS2SC is unable to locate a required user defined type with the C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Change the C header file to include the required user defined type.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9537 W   Compiler directive *directive* has been ignored.

Explanation

DFHLS2WS or DFHLS2SC has found a compiler directive within the C or C++ header file. Compiler directives are not supported.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the compiler directive from the header file. If the compiler directive is important to how the compiler processes the structures within the header file then it may be necessary to change those structures in order to ensure that DFHLS2WS or DFHLS2SC interprets them correctly.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9538 E   The required struct entry cannot be found.

Explanation

DFHLS2WS or DFHLS2SC is unable to locate a required structure which is referenced in the C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Change the C header file to include the required structure.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9539 E   An invalid character *character* has been found.

Explanation

An invalid character has been found in the C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Correct the header file.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9540 E   Unsupported keyword *keyword* has been found.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a keyword *keyword* that is not currently supported.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported keyword from the input file.

If you are using DFHLS2WS and the keyword is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9541 E   Fixed point decimal types are not supported.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an unsupported data type in a C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported data type from the input file.

If you are using DFHLS2WS and the data type is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9542 E   Unsupported macro *macro* has been found.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has found a macro within the C or C++ header file. Macros are not supported.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported macro from the input file.

If you are using DFHLS2WS and the macro is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9543 E   Constant *constant* is not supported in array dimension.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has found a constant within an array declaration. This is not supported.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported constant from the input file.

If you are using DFHLS2WS and the constant is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9544 W   Unsupported keyword *keyword* has been found and ignored.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a keyword *keyword* that is not currently supported, it has been ignored.

System action

The Web services or XML assistant continues processing.

User response

Consider whether it is acceptable that this keyword has been ignored. If it is acceptable then you can safely ignore this message.

If you are using DFHLS2WS and this restriction is not acceptable then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9545 W   **Assignment operator detected and ignored.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected and ignored an assignment operator within a C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the assignment operator from the header file.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9546 W   **Initialization operator detected and ignored.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected and ignored an initialization operator within a C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the initialization operator from the header file.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9547 E   **Top level variables are not supported: *value*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has encountered a variable *value* within a C or C++ header file that is not part of a structure or part of a type definition. This is not supported.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the named variable from the header file.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9548 E   **Top-level *structure* structure for C and C++ must be named *value* or must be specified using the 'STRUCTURE' parameter.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has been unable to locate a requested structure within a C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Correct or supply a value for the STRUCTURE input parameter.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9549 E	A type definition has been found with no instance and no label.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a type definition in the C or C++ header file that is either missing a label or is missing an instance name.

System action

The Web services or XML assistant continues processing.

User response

Correct the header file.

Module:
DFHLS2WS, DFHLS2SC DFHLS2JS

Destination

SYSPRINT

DFHPI9550 E	Duplicate type name *name* found.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a duplicate type definition in the C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Correct the header file.

Module:
DFHLS2WS, DFHLS2SC DFHLS2JS

Destination

SYSPRINT

DFHPI9551 E	Structure *structure* cannot be found.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has been unable to locate the main structure within the C or C++ header file.

System action

The Web services or XML assistant continues processing.

User response

Correct or supply a value for the STRUCTURE input parameter.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9552 E	Value *value* is not a valid integer in file '*fileName*'.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has encountered a value that should be numeric but does not appear to be a valid integer. The problematic value is *value*.

System action

The Web services or XML assistant continues processing.

User response

Correct the language structure.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9553 E   **PICTURE** *picture* **is not supported for BINARY fields, or DISPLAY fields before mapping level 1.2.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a PICTURE clause that it does not currently support for BINARY or DISPLAY data types.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported PICTURE from the input file.

Consider switching to a more recent mapping level.

If you are using DFHLS2WS and the PICTURE is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9554 E   **PICTURE** *picture* **is not supported.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a PICTURE clause that it does not currently support.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported PICTURE from the input file.

If you are using DFHLS2WS and the PICTURE is important to the shape of the language structure in memory then it may be necessary to create a wrapper

program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9555 E   **Top level structure found within the main structure.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an error in one of the language structures. 01 level identifiers should not be present within the main language structure.

System action

The Web services or XML assistant continues processing.

User response

Remove the 01 level identifier from within the language structure.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9556 E   **An unexpected error occurred whilst writing to file** *file*. **The problem is:** *value*.

Explanation

An exception was caught whilst attempting to write to file *file*. The exception included a message to identify the problem which is indicated in *value*.

System action

The Web services or XML assistant continues processing.

User response

Correct the identified problem.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC,
DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9557 E　　**ERRORS and WARNINGS have been generated processing file *file*.**

Explanation

One or more error messages and one or more warning messages have been issued by the Web services or XML assistant.

System action

The web services or XML assistant fails with return code 12.

User response

Resolve the previously issued error messages and consider addressing the warning messages.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC,
DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9558 E　　**ERRORS have been generated processing file *file*.**

Explanation

One or more error messages have been issued by the Web services or XML assistant.

System action

The web services or XML assistant fails with return code 12.

User response

Resolve the previously issued error messages.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC,
DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9559 W　　**Illegal character *character* has been found at the start of a name and replaced with X.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has found a character at the start of a field name in the language structure that is not valid in XML. It has been replaced with a substitute character.

System action

The Web services or XML assistant continues processing.

User response

Consider whether the new name is appropriate to expose in the XML. If you are unhappy with the name chosen you can either change the language structure and re-run the job, or change the XML and run DFHWS2LS or DFHSC2LS against it.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9560 W　　**Illegal character *character* has been found in a name and replaced with X.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has found a character in a field name in the language structure that is not valid in XML. It has been replaced with a substitute character.

System action

The Web services or XML assistant continues processing.

User response

Consider whether the new name is appropriate to expose in the XML. If you are unhappy with the name chosen you can either change the language structure and re-run the job, or change the XML and run DFHWS2LS or DFHSC2LS against it. @QKC

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9561 I **Identifier *identifier* has generated a name-clash for operation *operation*. Subsequent declarations have been renamed to ensure their uniqueness.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a field name in the language structure which will clash with another name when converted to XML. The name has been changed to ensure that this does not happen.

System action

The Web services or XML assistant continues processing.

User response

Consider whether the new name is appropriate to expose in the XML. If you are unhappy with the name chosen you can either change the language structure and re-run the job, or change the XML and run DFHWS2LS or DFHSC2LS against it.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9562 E **Parameter PGMINT is specified with value COMMAREA but there is too much data required for a COMMAREA.**

Explanation

DFHLS2WS or DFHLS2JS has been asked to process language structures for a commarea based PROGRAM. The language structures processed require more than 32K of data and therefore are too large for use with a commarea.

System action

The Web services assistant continues processing.

User response

Consider changing the PGMINT input parameter to CHANNEL rather than COMMAREA.

Module:

DFHLS2WS, DFHLS2JS

Destination

SYSPRINT

DFHPI9563 E **Unsupported PL/I source code detected in line *line*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has spotted a line of PL/I based code that it does not support at line *line*.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported line from the input file.

If you are using DFHLS2WS and the line is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9564 W **A terminating ; is missing, it is assumed to be at the end of the file.**

Explanation

The termination character for a language structure is missing. It is assumed that the end of file indicates the end of the language structure.

System action

The Web services or XML assistant continues processing.

User response

Correct the language structure.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9565 E	**ALIGNED and UNALIGNED keywords are not supported for an entire structure.**

Explanation

An ALIGNED keyword or an UNALIGNED keyword has been applied to a structure in a PL/I language structure. This is not supported in DFHLS2WS or DFHLS2SC.

System action

The Web services or XML assistant continues processing.

User response

Change each entry within the language structure to specify ALIGNED or UNALIGNED individually.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9566 E	**The FIXED and FLOAT attributes are both missing:** *value.*

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has determined that a DECIMAL or BINARY field in a PL/I language structure does not declare whether it is of type FIXED or type FLOAT. DFHLS2WS and DFHLS2SC require that the language structure explicitly states the data type.

System action

The Web services or XML assistant continues processing.

User response

Change the field to explicitly specify either FIXED or FLOAT. FLOAT data types are only supported if a mapping level of at least 1.2 is specified.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9567 E	**Too many digits have been specified for a packed decimal field:** *value.*

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has spotted an error in a PL/I language structure. A packed decimal field has specified a greater number of digits than can be supported for that language.

System action

The Web services or XML assistant continues processing.

User response

Correct the language structure.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9568 E	**The UNSIGNED attribute is not supported unless PLI-ENTERPRISE is specified:** *value.*

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has spotted an error in a PL/I language structure. The UNSIGNED keyword has been used even though it is not available before Enterprise level PL/I.

System action

The Web services or XML assistant continues processing.

User response

Either correct the language structure or change the LANG input parameter to specify PLI-ENTERPRISE.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9569 E   Unsupported PL/I source code detected after line *line*.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has spotted a line of PL/I based code that it does not support after line *line*.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported line from the input file.

If you are using DFHLS2WS and the line is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9570 E   FIXED BINARY types with length greater than 31 are not supported unless PLI-ENTERPRISE is specified: *value*.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an error in a PL/I language structure. A FIXED BINARY length greater than 31 has been specified. This is not allowed for versions of PL/I prior to Enterprise PL/I.

System action

The Web services or XML assistant continues processing.

User response

Either correct the language structure or change the LANG input parameter to specify PLI-ENTERPRISE.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9571 W   ORDINAL references are always treated as SIGNED FIXED BINARY (7) data types. If this is incorrect then please replace the ordinal reference with an equivalent FIXED BINARY variable: *value*.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an Ordinal data type in a PL/I language structure. These are always treated as though they are SIGNED FIXED BINARY (7) data types.

System action

The Web services or XML assistant continues processing.

User response

Consider whether or not this assumption is appropriate. If it is not then you should either change the language structure to replace the ordinal data type with an equivalent data type.

If you are using DFHLS2WS then you could write a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9572 E   ORDINAL types are only supported if PLI-ENTERPRISE is specified: *value*.

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an error in a PL/I language structure. An ordinal data type has been specified. This is not allowed for versions of PL/I prior to Enterprise PL/I.

System action

The Web services or XML assistant continues processing.

User response

Either correct the language structure or change the LANG input parameter to specify PLI-ENTERPRISE.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9573 E	**BIT fields are only supported if they are in multiples of 8: *value*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a BIT field in a PL/I language structure which specifies a number of bits that are not exactly divisible by 8. This is not supported by DFHLS2WS.

System action

The Web services or XML assistant continues processing.

User response

Consider changing the language structure to remove this field or to change its length to a multiple of 8.

If you are using DFHLS2WS then consider writing a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9574 E	**Lengths less that one are not supported for array data types: *dataType*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a problem in a language structure. A data type specifies an array with a length less than one byte or character.

System action

The Web services or XML assistant continues processing.

User response

Correct the problem.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9575 E	**The length of a PICTURE cannot be found: *value*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a problem in a PL/I language structure. The length of a PICTURE clause cannot be determined.

System action

The Web services or XML assistant continues processing.

User response

Correct the problem.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9576 E	**FIXED BINARY data types with a scaling factor of the form (p,q) with q not equal to 0 are not supported: *value*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an unsupported data type in a PL/I language structure. FIXED BINARY scaling factors are not supported.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported data type from the input file.

If you are using DFHLS2WS and the data type is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9577 E	**Precision factor *factor* is out of supported range: *value*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an error in a PL/I language structure. A precision factor is either too large or too small to be supported.

System action

The Web services or XML assistant continues processing.

User response

Correct the problem.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9578 E	**FIXED DECIMAL data types with a scaling factor of the form (p,q) with q greater than p are not supported: *value*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an unsupported data type in a PL/I language structure. CICS is unable to support scaling factors in the form (p,q) where q is greater than p.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported data type from the input file.

If you are using DFHLS2WS and the data type is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9579 E	**FIXED DECIMAL data types with a scaling factor of the form (p,q) with q less than 0 are not supported: *value*.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected an unsupported data type in a PL/I language structure. CICS is unable to support scaling factors in the form (p,q) where q is less than 0.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unsupported data type from the input file.

If you are using DFHLS2WS and the data type is important to the shape of the language structure in memory then it may be necessary to create a wrapper

program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9580 I   **PDS member *member* has been replaced.**

Explanation

The Web services or XML assistant has replaced existing PDS member *member*.

System action

The Web services or XML assistant continues processing.

User response

No user action is required. You may safely ignore this message.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9581 E   **An unexpected exception occurred when writing to the PDS.**

Explanation

The Web services or XML assistant has been unable to write to the PDS library. This may be because another process has a lock on the PDS.

System action

The Web services or XML assistant continues processing.

User response

Ensure that all other processes which have locks on the PDS release those locks.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9582 I   **File *file* has been replaced.**

Explanation

The Web services or XML assistant has replaced existing file *file*.

System action

The Web services or XML assistant continues processing.

User response

No user action is required. You may safely ignore this message.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9583 E   **The supplied WSDL contains an element with different minOccurs and maxOccurs values. This is only supported when PGMINT is set to CHANNEL or when 'INLINE-MAXOCCURS-LIMIT' is set to a higher value than maxOccurs.**

Explanation

DFHWS2LS has detected an XML element which will occur in a SOAP message an unknown number of times. This is supported at mapping level 2.1 if the INLINE-MAXOCCURS-LIMIT parameter is set to a value greater than the maxOccurs value.

If maxOccurs is set to 'unbounded', or if the mapping level is less than 2.1, or if INLINE-MAXOCCURS-LIMIT is less than maxOccurs then DFHWS2LS will cause the runtime data to be stored in a separate container. This in turn requires the use of PGMINT=CHANNEL.

System action

The Web services assistant continues processing.

User response

Consider changing the value of INLINE-MAXOCCURS-LIMIT.

If that is not an appropriate action then change the value of the PGMINT input parameter to CHANNEL.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9584 E   **The WSDL file contains at least one request message but the REQMEM parameter has not been set.**

Explanation

DFHWS2LS needs to generate one or more language structures for request messages but the REQMEM input parameter has not been set.

System action

The Web services assistant continues processing.

User response

Specify a value for the REQMEM input parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9585 E   **The WSDL file contains at least one response message but the RESPMEM parameter has not been set.**

Explanation

DFHWS2LS needs to generate one or more language structures for response messages but the RESPMEM input parameter has not been set.

System action

The Web services assistant continues processing.

User response

Specify a value for the RESPMEM input parameter.

Module:

DFHWS2LS

Destination

SYSPRINT

DFHPI9586 W   **A reserved word *word* has been detected in the input document, it has been changed to *value*.**

Explanation

An element name has been detected in the WSDL, XML schema or JSON schema document that is not valid as a keyword in the target programming language. It has been renamed as indicated.

System action

The Web services or XML assistant continues processing.

User response

You may safely ignore this message.

Module:
DFHWS2LS, DFHSC2LS, DFHJS2LS

Destination

SYSPRINT

DFHPI9587 I   **Program *program* has completed SUCCESSFULLY.**

Explanation

The Web services or XML assistant has completed processing. No error or warning messages have been issued.

System action

The Web services or XML assistant ends with return code 0.

User response

You may safely ignore this message.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9588 E **WSDL binding *binding* has no operation elements in the WSDL.**

Explanation

DFHWS2LS has not found any WSDL operations associated with WSDL binding *binding*.

System action

The Web services assistant continues processing.

User response

Either correct the WSDL document or supply a different value for the BINDING input parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9589 E **The supplied WSDL requires too much data for a CICS Commarea. The PGMINT parameter must be set to CHANNEL.**

Explanation

The Assistants have been asked to generate language structures for a commarea based PROGRAM. The language structures generated require more than 32K of data and therefore are too large for use with a commarea.

System action

The Web services assistant continues processing.

User response

Consider changing the PGMINT input parameter to CHANNEL rather than COMMAREA.

Module:
DFHWS2LS, DFHJS2LS

Destination

SYSPRINT

DFHPI9590 E **A style attribute has not been specified for WSDL operation *operation*.**

Explanation

DFHWS2LS has detected an error in the WSDL document. The binding for WSDL operation *operation* must have a 'style' specified. The style may be either 'rpc' or 'document'.

System action

The Web services assistant continues processing.

User response

Correct the WSDL.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9591 E **No input message has been found for WSDL operation *operation*.**

Explanation

DFHWS2LS has encountered a problem with the WSDL document. Operation *operation* is missing a WSDL input message. DFHWS2LS does not support response only Web services.

System action

The Web services assistant continues processing.

User response

Either correct the WSDL document or specify a different BINDING input parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9592 W **An expected soapAction attribute is missing for WSDL operation *operation*.**

Explanation

DFHWS2LS has detected an error in the WSDL document. The WSDL binding is missing a soapAction attribute for operation *operation*. In WSDL 2.0 the soapAction is specified using an attribute called 'action'.

System action

The Web services assistant continues processing.

User response

Consider whether the absence of the soapAction is a problem. If your application does not require the soapAction attribute then you can safely ignore this message.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9593 W	An unexpected soapAction attribute has been found for WSDL operation *operation*. This can only be used with SOAP version 1.1.

Explanation

DFHWS2LS has detected an error in the WSDL document. The WSDL binding specifies a soapAction attribute for use with SOAP 1.2.

System action

The Web services assistant continues processing.

User response

Consider removing the soapAction attribute or changing the WSDL to indicate the use of SOAP 1.1.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9594 E	An unexpected soapAction attribute has been found for WSDL operation *operation*. This can only be used with SOAP version 1.1.

Explanation

DFHWS2LS has detected an error in the WSDL document. The WSDL binding specifies a soapAction attribute, a concept that only applies to SOAP version 1.1. However, the WSDL binding requests the use of SOAP version 1.2.

System action

The Web services assistant continues processing.

User response

Remove the soapAction attribute from the WSDL document.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9595 E	The WSDL binding contains a mixture of rpc and document style attributes. This is not supported.

Explanation

DFHWS2LS has encountered a problem processing the WSDL document. The WSDL binding specifies a mixture of 'rpc' style messages and 'document' style messages. DFHWS2LS does not support mixed styles within a binding.

System action

The Web services assistant continues processing.

User response

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML

capable application that uses the DFHPIRT channel linkable SOAP interface.

Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9596 E   **The WSDL Binding for operation *operation* is missing an input message.**

Explanation

DFHWS2LS has encountered a problem with the WSDL document. Binding *binding* for operation *operation* is missing a WSDL input binding. DFHWS2LS does not support response only Web services.

System action

The Web services assistant continues processing.

User response

Either correct the WSDL document or specify a different BINDING input parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9597 E   **The WSDL file specifies a 'use' attribute value of *value*. Only literal WSDL is supported.**

Explanation

DFHWS2LS has encountered a problem with the WSDL document. The WSDL binding specifies a 'use' attribute value of *value*. DFHWS2LS only supports a value of 'literal'.

System action

The Web services assistant continues processing.

User response

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9598 E   **WSDL binding *binding* references more than one transport protocol. Only one protocol is supported.**

Explanation

DFHWS2LS has encountered a problem with the WSDL document. The WSDL binding specifies more than one transport protocol. DFHWS2LS only supports one transport protocol per binding.

System action

The Web services assistant continues processing.

User response

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9599 E	**WSDL binding *binding* is not associated with a transport protocol.**

Explanation

DFHWS2LS has encountered a problem with the WSDL document. The WSDL binding specifies no transport protocols. DFHWS2LS requires one transport protocol per binding.

System action

The Web services assistant continues processing.

DFHPI9600 E	**The WSDL file contains multiple binding elements. The BINDING parameter must be set to specify which one to use.**

Explanation

The WSDL document contains more than one binding element. The BINDING input parameter was not set therefore DFHWS2LS cannot determine which WSDL binding to process.

System action

The Web services assistant continues processing.

User response

Specify a value for the BINDING input parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9601 E **Binding element *element* cannot be found in the WSDL file. Only one of the following values may be specified: *value*.**

Explanation

The value of the BINDING input parameter does not identify a binding element in the WSDL document.

System action

The Web services assistant continues processing.

User response

Correct the value of the BINDING input parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9602 E **WSDL binding *binding* is not a SOAP binding.**

Explanation

DFHWS2LS has detected that the WSDL binding does not indicate the use of SOAP. DFHWS2LS only supports Web services that use SOAP.

System action

The Web services assistant continues processing.

User response

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that

are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9603 E **Multiple WSDL service elements exist for a single binding element. Only one is supported unless the 'WSDL-SERVICE' parameter is set.**

Explanation

DFHWS2LS has encountered a problem processing the WSDL document. The WSDL specifies more than one WSDL service element for use with the WSDL binding. DFHWS2LS only supports a single WSDL service per binding.

System action

The Web services assistant continues processing.

User response

Specify the specific WSDL service element to be used. Do this by setting an appropriate value for the WSDL-SERVICE parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9604 E   **File *file* does not contain valid XML.**

Explanation

The WSDL or schema document does not appear to contain XML. It may have been corrupted in transit or the wrong file may have been specified.

System action

The Web services or XML assistant continues processing.

User response

Ensure that the value of the WSDL or SCHEMA input parameter identifies the correct file. Ensure that this file has been stored in the correct codepage.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9605 E   **The value of the XML encoding attribute must match that of the underlying file system. For example, the value UTF-8 may be appropriate.**

Explanation

The XML encoding pseudo-attribute in the prolog of the WSDL or XML schema document appears to be incorrect. The value of this attribute must match the encoding in which the WSDL document is stored in the file system.

System action

The Web services or XML assistant continues processing.

User response

Either correct or remove the encoding attribute. It is likely that the correct value should be UTF-8.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9606 E   **The value of the XML encoding attribute must match that of the underlying file system. For example, the value EBCDIC-CP-US may be appropriate.**

Explanation

The XML encoding pseudo-attribute in the prolog of the WSDL or XML schema document appears to be incorrect. The value of this attribute must match the encoding in which the WSDL document is stored in the file system.

System action

The Web services or XML assistant continues processing.

User response

Either correct or remove the encoding attribute. It is likely that the correct value should be EBCDIC-CP-US; for example, <?xml version="1.0" encoding="EBCDIC-CP-US"?>. If you transfer WSDL and XML schema documents between platforms using FTP then consider doing so in Binary mode, this will ensure that the files arrive in the same encoding as was used on the source platform, the encoding attribute within the document will therefore remain correct. Similar care is required over any additional WSDL or XML schema documents imported or included within the initial document.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9607 E   **An unexpected error occurred whilst processing WSDL operation *operation*. The problem is: *value*.**

Explanation

The Assistants have encountered a problem whilst processing the WSDL or XML schema document. An exception has been caught which includes a message details of which are available in *value*.

System action

The Web services or XML assistant continues processing.

User response

Correct the identified problem.

Module:
DFHWS2LS, DFHSC2LS, DFHSJ2LS

Destination

SYSPRINT

DFHPI9608 W   **WARNINGS have been generated processing file *file*.**

Explanation

The Web services or XML assistant has completed and has issued one or more warning messages.

System action

The Web services or XML assistant ends with return code 4.

User response

Read the previously issued warning messages and decide on what if any actions must be taken.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9609 I   **Parameter *parameter* has value *value*.**

Explanation

The value of parameter *parameter* is *value*.

System action

The Web services or XML assistant continues processing.

User response

You may safely ignore this message.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9610 W   **Platform *platform* is not a supported platform for this API.**

Explanation

The Web services or XML assistant has detected that it is executing on a platform that is not currently supported. If you experience any problems whilst executing the Web services assistant on this platform you may receive a reduced level of support from IBM.

System action

The Web services assistant continues processing.

User response

Consider hosting the Web services or XML assistant on a platform that is supported such as z/OS.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9611 W   **All content after the first ';' for line *line* is ignored.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has spotted a line termination character part way through what appears to be a line of PL/I code. The rest of that line is not processed.

System action

The Web services or XML assistant continues processing.

User response

Consider whether it is correct to ignore the end of the line. If there is significant data still to be processed then edit the input file in order to supply the data in a format that DFHLS2WS or DFHLS2SC can understand.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9612 E   **Provider mode Web services with more than one operation must specify 'PGMINT=CHANNEL'.**

Explanation

DFHWS2LS has determined that there is more than one operation associated with the binding in the WSDL document. If there is more than one operation supported by a provider mode WEBSERVICE then the CICS application which implements the Web service will have to determine the operation invoked using the contents of the DFHWS-OPERATION container.

This container is only available if the CICS application is linked to with a channel rather than a commarea.

System action

The Web services assistant continues processing.

User response

Consider changing the PGMINT input parameter to CHANNEL rather than COMMAREA.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9613 E   **Mapping level *level* is not recognized.**

Explanation

An invalid value has been specified for the MAPPING-LEVEL parameter.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the MAPPING-LEVEL parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9614 I   **Mapping level *old* has been requested. The most current mapping level available is *new*.**

Explanation

An old mapping level has been requested. More recent mapping levels have enhanced support for XML and language structures that may not be available at the mapping level requested.

System action

The Web services or XML assistant continues processing.

User response

Consider switching to the most current mapping level.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9615 E   **The version of Java in use is *current*. The minimum version of Java required is *required*.**

Explanation

The Web services or XML assistants require a more recent version of Java in order to execute.

System action

The Web services or XML assistant continues processing.

User response

Ensure you have the correct minimum version of Java installed. The 'JAVADIR' option of the JCL procedure used to launch the Web services assistant may be used to specify a version of Java other than the default.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9616 W   **National characters in COBOL are assumed to be DBCS characters: *line*.**

Explanation

A language structure processed by the Assistants contains fields which are declared to contain National characters. National characters are only partially supported. The assistants assume that all fields defined to contain National values do so using DBCS.

System action

The Web services or XML assistant continues processing.

User response

Consider whether you intend these fields to contain pure DBCS data. If this is expected then you can safely ignore this message. If you intend the field to contain UTF-16 data then you cannot make use of the Web services or XML assistants to expose your application as a Web service. You could instead consider writing your own XML capable SOAP 'apphandler'.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9617 E   **The input data contains an element with unknown length content which should be stored in a separate CONTAINER. This is only supported when PGMINT is set to CHANNEL.**

Explanation

DFHWS2LS has detected a schema element with content that must be mapped to a container. This is only supported if the PGMINT input parameter is set to CHANNEL.

System action

The Web services assistant continues processing.

User response

Change the value of the PGMINT input parameter to CHANNEL.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9618 E   **The *keyword* keyword has been specified. This requires the use of LANG=PLI-ENTERPRISE.**

Explanation

DFHLS2WS, DFHLS2SC or DFHLS2JS has detected a PL/I data type which is invalid in versions of PL/I prior to Enterprise PL/I. The LANG input parameter was set to PLI-OTHER.

System action

The Web services or XML assistant continues processing.

User response

Change the value of the LANG input parameter to PLI-ENTERPRISE.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9619 E   **Parameter *parameter* has been specified. It is not supported at mapping level *level*.**

Explanation

A parameter has been specified that is not supported at the requested mapping level.

System action

The Web services or XML assistant continues processing.

User response

Either change the mapping level to one where the parameter is supported, or remove the parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9620 E   **CCSID *CCSID* is not recognized.**

Explanation

The value of the CCSID parameter is not recognized as a valid CCSID. The Web services or XML assistant attempts to determine the codepage name associated with the CCSID by pre-pending 'Cp' to the front of the CCSID. If the resultant codepage name is not supported by Java then this message will be issued.

System action

The Web services or XML assistant continues processing.

User response

Change the value of the CCSID parameter to one supported by Java.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9621 W	CCSID *CCSID* is not recognized as an EBCDIC CCSID. Use of this CCSID may cause problems when the Web service is executed.

Explanation

The value of the CCSID parameter is not recognized as one of the family of EBCDIC code pages. The CICS XML transformation service only supports EBCDIC code pages.

Use of the requested CCSID may lead to incorrect behavior in CICS and in some cases may result in internal error messages being issued by the Web services or XML assistant.

System action

The Web services or XML assistant continues processing.

User response

Consider changing the value of the CCSID parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9622 E	Invalid value specified for the *parameter* parameter. The length specified must be a positive integer between *min* and *max*.

Explanation

An invalid value has been specified for a parameter. The value must be a number between the specified minimum and maximum values.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9623 E	Invalid value specified for the CHAR-VARYING parameter. Valid values are: NULL, NO or YES.

Explanation

An invalid value has been specified for the CHAR-VARYING parameter.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the CHAR-VARYING parameter.

Module:
DFHWS2LS, DFHSC2LS, DFHJS2LS

Destination

SYSPRINT

DFHPI9624 E	Invalid value specified for the FLOAT parameter. Valid values are: IEEE, HEX or HEXADEC.

Explanation

An invalid value has been specified for the FLOAT parameter.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the FLOAT parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9625 E	Invalid value specified for the CHAR-VARYING parameter. Valid values are: NULL, NO, COLLAPSE or BINARY.

Explanation

An invalid value has been specified for the CHAR-VARYING parameter.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the CHAR-VARYING parameter.

Module:
DFHLS2WS, DFHLS2SC, DFHJS2LS

Destination

SYSPRINT

DFHPI9626 W	Parameter *parameter* has been specified but is not valid when parameter *parameter2* is set. The parameter is ignored.

Explanation

Parameter *parameter* has been ignored because parameter *parameter2* is set. For example, a CHAR-VARYING value is not allowed if the value of the LANG parameter is PLI-ENTERPRISE.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the unexpected parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9627 E	Minimum runtime level *level* is not recognized.

Explanation

The value of the MINIMUM-RUNTIME-LEVEL parameter is invalid.

System action

The Web services or XML assistant continues processing.

User response

Correct the value of the MINIMUM-RUNTIME-LEVEL parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9628 E	Parameter *parameter* has been specified but it is not compatible with the specified minimum runtime level.

Explanation

Parameter *parameter* is not allowed to be used at the specified minimum runtime level.

System action

The Web services or XML assistant continues processing.

User response

Either remove the unexpected parameter or specify a different value for the MINIMUM-RUNTIME-LEVEL parameter.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9629 I   **The minimum runtime level required for this Web service is *level*.**

Explanation

The Web service or XML binding file created by the Web services or XML assistant requires a particular minimum level of runtime capability from CICS. This minimum level of capability is called the 'minimum runtime level'. Any attempt to install the binding file into a version of CICS that does not support the *level* runtime level will result in error messages being issued.

System action

The Web services or XML assistant continues processing.

User response

No action is required.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9630 W   **The minimum runtime level required for this Web service is greater than the mapping level due to the use of the *parameter* parameter.**

Explanation

The Web service or XML binding file created by the Web services or XML assistant requires a particular minimum level of runtime capability from CICS. This level of runtime capability is higher than might be assumed based on the value of the MAPPING-LEVEL

parameter. For example, the MAPPING-LEVEL may be set to 1.0 but the required runtime level may be 1.2.

The reason for this discrepancy is due to the value of the *parameter* input parameter.

System action

The Web services or XML assistant continues processing.

User response

Consider whether the selected runtime level is appropriate. If you wish to suppress this message then set a value for the MINIMUM-RUNTIME-LEVEL parameter. If the selected minimum runtime level is unacceptable then remove the *parameter* parameter from the input parameters.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9631 E   **Field *field* requires a character array length of *length* but the largest length that can be used in *language* is *maxlength*.**

Explanation

There is a maximum length for an array of characters in the target programming language. A character array is required that exceeds this length.

System action

The Web services or XML assistant continues processing.

User response

Several options exist for addressing this problem. Consider changing the value of the LANG parameter to a language that does support this length of character array. Consider changing the MAPPING-LEVEL if a higher level is available. Consider changing the XML schema for the field that triggered this message to indicate a shorter *length* or *maxLength*.

Module:
DFHWS2LS, DFHSC2LS, DFHJS2LS

Destination

SYSPRINT

DFHPI9632 E   **URI *uri* is invalid. The reported problem is: *problem*.**

Explanation

An invalid URI has been specified. This may be the value of the URI parameter or a URI within a WSDL document or XML schema.

System action

The Web services or XML assistant continues processing.

User response

The value of the URI must be corrected.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9633 E   **Invalid value specified for the SOAPVER parameter. Valid values are: 1.1, 1.2 or ALL.**

Explanation

An invalid value has been specified for the SOAPVER parameter.

System action

The Web services assistant continues processing.

User response

Correct the value of the SOAPVER parameter.

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9634 E   **WSDL service element *service* cannot be found in the WSDL document.**

Explanation

Either the WSDL service element defined by the SERVICE parameter cannot be found in the WSDL document or it is not associated with the requested BINDING.

System action

The Web services assistant continues processing.

User response

Correct the value of the SERVICE parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9635 E   **WSDL reusable binding *binding* may only be used if the WSDL-SERVICE parameter is specified.**

Explanation

The BINDING that has been specified is not associated with a specific WSDL interface. The WSDL-SERVICE parameter must also be set in order to indicate which interface the BINDING is used with.

System action

The Web services assistant continues processing.

User response

Specify a value for the WSDL-SERVICE parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9636 E   **WSDL operation *operation* cannot be found.**

Explanation

An operation specified using the OPERATIONS parameter cannot @QKC be located within the WSDL document.

System action

The Web services assistant continues processing.

User response

Correct the value of the OPERATIONS parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9637 W	**One or more WSDL operations have not been processed for a provider mode Web service.**

Explanation

A WSDL service with multiple operations has been processed by DFHWS2LS. One or more WSDL operations described within that WSDL document have been ignored due to the value of the OPERATIONS parameter.

System action

The Web services assistant continues processing.

User response

Consider whether it is acceptable or possible that a request may be sent to CICS for one of the ignored operations. If this happens then CICS will be unable to process that request.

If this is unacceptable then consider removing the OPERATIONS parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9638 W	**The minimum runtime level required for this Web service is greater than the mapping level due to the use of WSDL 2.0**

Explanation

DFHWS2LS has been executed against a WSDL 2.0 document. The generated WSBind file can only be installed into a CICS region at runtime level 2.0 or above. A mapping level prior to 2.0 has been requested which implies that backwards compatibility with a prior version of CICS is required.

System action

The Web services assistant continues processing.

User response

Consider whether it is acceptable for the Web service to require runtime level 2.0. Consider using a mapping

level that exploits the capabilities of a runtime 2.0 environment.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9639 E	**WSDL 2.0 has been used but it is not compatible with the specified minimum runtime level.**

Explanation

DFHWS2LS has been executed against a WSDL 2.0 document. The generated WSBind file can only be installed into a CICS region at runtime level 2.0 or above. A minimum runtime level prior to 2.0 has been requested.

System action

The Web services assistant continues processing.

User response

Change the minimum runtime level to allow the use of runtime level 2.0 capabilities.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9640 I	**This Web service should be installed into a PIPELINE that uses SOAP version *soapver*.**

Explanation

The WSDL for this this Web service specifies a specific version of SOAP is required. In order to satisfy this requirement the WSBind file produced must be installed into an appropriately configured PIPELINE.

CICS may enforce this requirement at the time that the WSBind file is installed into CICS.

If DFHLS2WS was used with a SOAPVER value of ALL then the WSBind file must be installed into a SOAP 1.2 PIPELINE. This is because a provider mode PIPELINE for SOAP 1.2 is able to support both SOAP 1.2 and SOAP 1.1 concurrently.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should be aware of the requirement for a specific SOAP version at the time that the Web service is deployed.

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9641 E	Unsupported message content model *contentModel* found whilst processing operation *operation*.

Explanation

A WSDL operation processed by DFHWS2LS specifies a content model that is not supported by CICS. CICS only supports content models of 'ELEMENT' and 'NONE'. Any other value implies that a content model other than XML Schema is used.

System action

The Web services assistant continues processing.

User response

The CICS Web services assistants cannot be used to process this WSDL document.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9642 E	WSDL Message Exchange Pattern *mep* is unsupported. This pattern is specified for operation *operation*.

Explanation

A WSDL operation processed by DFHWS2LS specifies a message exchange pattern that is not supported by CICS. CICS only supports MEPs of 'In-Only', 'Robust-In-Only', 'In-Optional-Out' and 'In-Out'.

System action

The Web services assistant continues processing.

User response

Consider removing the unsupportable operation from the WSDL document.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9643 I	This Web service requires a capability implied by URI *uri*. It must be installed into an appropriate PIPELINE.

Explanation

A WSDL service processed by DFHWS2LS indicates that a particular runtime capability is required for the service. This capability is identified with a URI. This capability is mandatory.

An example of a capability that may be identified in the @QKC WSDL is the use of MTOM/XOP.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and ensure that the WSBind file is installed into an appropriately configured PIPELINE.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9644 I	This Web service supports a capability implied by URI *uri*.

Explanation

A WSDL service processed by DFHWS2LS indicates that a particular runtime capability is supported for the service. This capability is identified with a URI. This capability is optional.

An example of a capability that may be identified in the @QKC WSDL is the use of MTOM/XOP.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and consider deploying the WSBind file into a PIPELINE that is configured to implement this capability.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9645 I　**Operation** *operation* **requires a capability implied by URI** *uri*. **It must be installed into an appropriate PIPELINE.**

Explanation

A WSDL operation processed by DFHWS2LS indicates that a particular runtime capability is required for the operation. This capability is identified with a URI. This capability is mandatory.

An example of a capability that may be identified in the @QKC WSDL is the use of MTOM/XOP.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and ensure that the WSBind file is installed into an appropriately configured PIPELINE.

SYSPRINT

DFHPI9646 I　**Operation** *operation* **supports a capability implied by URI** *uri*.

Explanation

A WSDL operation processed by DFHWS2LS indicates that a particular runtime capability is supported for the operation. This capability is identified with a URI. This capability is optional.

An example of a capability that may be identified in the @QKC WSDL is the use of MTOM/XOP.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and consider deploying the WSBind file into a PIPELINE that is configured to implement this capability.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9647 I　**The request message for operation** *operation* **requires a capability implied by URI** *uri*. **It must be installed into an appropriate PIPELINE.**

Explanation

A WSDL message processed by DFHWS2LS indicates that a particular runtime capability is required for the message. This capability is identified with a URI. This capability is mandatory.

An example of a capability that may be identified in the @QKC WSDL is the use of MTOM/XOP.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and ensure that the WSBind file is installed into an appropriately configured PIPELINE.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9648 I　**The request message for operation** *operation* **supports a capability implied by URI** *uri*.

Explanation

A WSDL message processed by DFHWS2LS indicates that a particular runtime capability is supported for the message. This capability is identified with a URI. This capability is optional.

An example of a capability that may be identified in the @QKC WSDL is the use of MTOM/XOP.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and consider deploying the WSBind file into a PIPELINE that is configured to implement this capability.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9649 I	The response message for operation *operation* requires a capability implied by URI *uri*. It must be installed into an appropriate PIPELINE.

Explanation

A WSDL message processed by DFHWS2LS indicates that a particular runtime capability is required for the message. This capability is identified with a URI. This capability is mandatory.

An example of a capability that may be identified in the @QKC WSDL is the use of MTOM/XOP.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and ensure that the WSBind file is installed into an appropriately configured PIPELINE.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9650 I	The response message for operation *operation* supports a capability implied by URI *uri*.

Explanation

A WSDL message processed by DFHWS2LS indicates that a particular runtime capability is supported for the message. This capability is identified with a URI. This capability is optional.

An example of a capability that may be identified in the @QKC WSDL is the use of MTOM/XOP.

System action

The Web services assistant continues processing.

User response

This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and consider deploying the WSBind file into a PIPELINE that is configured to implement this capability.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9651 E	The value of parameter *parameter1* is incompatible with the value of parameter *parameter2*.

Explanation

Two conflicting parameter values have been specified in the input parameters for the Web services or XML assistant. At least one of these values must be changed before processing can continue.

For example, the WSDL_1_1 and WSDL_2_0 parameters cannot both indicate the same file name.

System action

The Web services or XML assistant continues processing.

User response

Correct the specified input parameters and retry the operation.

Module:
DFHWS2LS DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9652 W   **A required but unsupported WSDL extensibility element has been detected. The element is of type *type*.**

Explanation

DFHWS2LS has processed a WSDL document that includes unrecognized extensions. These extensions demand that they must be understood.

DFHWS2LS is unaware of what these WSDL extensions mean. They could potentially affect the runtime behavior of the Web service. For example, they could indicate that some form of extra processing is required.

System action

The Web services assistant continues processing.

User response

Consider whether the required extensions indicated in the WSDL are important. If they are then it may be necessary to perform further configuration to the PIPELINE in which the WSBind file is deployed.

It may be necessary to implement handler programs on the PIPELINE to perform the processing that the WSDL document indicates is required.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9653 W   **An unresolved PolicyReference element has been found and ignored. The URI associated with this PolicyReference is *uri*.**

Explanation

DFHWS2LS has processed a WSDL document that includes WS-Policy PolicyReference elements. One

of these references includes a URI that points to a location DFHWS2LS is unable to resolve.

DFHWS2LS only supports PolicyReference URIs that resolve to a Policy in the current WSDL document. This element must be a child of the root XML element.

System action

The Web services assistant continues processing. The unresolved policy reference is not included in the CICS WS-Policy file.

User response

Consider whether the target Policy is important. If it is then you can either change the WSDL document so that the target policy does resolve locally, or you can edit the appropriate CICS WS-Policy file manually to include the relevant WS-Policy statement.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9654 W   **An unsupported Policy element has been found. The element is of type *type* in namespace *namespace*.**

Explanation

DFHWS2LS has processed a WSDL document that includes WS-Policy Policy elements. One of these Policy elements is of a type which is not directly supported by CICS.

CICS only implements support for WS-Security policies.

System action

The Web services assistant continues processing. The unsupported Policy elements are included in the CICS WS-Policy file.

User response

It may be necessary to configure the PIPELINE into which the WSBind file is deployed in order to ensure that the requirements of the Policy statement are enforced. This may require the creation of new handler programs for the PIPELINE.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9655 E　　**The supplied WSDL file contains a message exchange pattern of in-opt-out. This is only supported when PGMINT is set to CHANNEL.**

Explanation

DFHWS2LS has processed a WSDL document that includes an operation defined as having an optional response. This form of WSDL operation requires the use of a CICS Channel.

System action

The Web services assistant continues processing.

User response

Change the value of the PGMINT parameter to specify a value of CHANNEL.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9656 E　　**The WSDL file does not contain any binding elements. There must be at least one WSDL binding.**

Explanation

DFHWS2LS has processed a WSDL document that does not include any binding elements. DFHWS2LS requires that there is at least one SOAP binding in the WSDL document.

System action

The Web services assistant continues processing.

User response

Alter the WSDL document so that it does include a WSDL binding.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9657 W　　**The WSDL file contains *elementType* elements but the *parameter* parameter has not been specified. These elements are ignored.**

Explanation

DFHWS2LS or DFHSC2LS has processed a WSDL or XML schema document that includes a type of content that is only supported when a specific input parameter is set. For example, WS-Policy content is only supported if a WSPOLICY-DIRECTORY is set.

System action

The Web services or XML assistant continues processing. The unsupported content is ignored.

User response

Consider using the specified parameter in order to ensure that the WSDL or XML schema document is fully processed.

Module:
DFHWS2LS, DFHSC2LS

Destination

SYSPRINT

DFHPI9658 E　　**Directory *directory* cannot be read.**

Explanation

A directory in the Unix file system cannot be accessed. This is probably because the userid the Web services or XML assistant is executing under does not have read permission for the directory (or one of its parent directories).

System action

The Web services or XML assistant continues processing.

User response

Ensure that the userid used is granted permission to read the directory indicated.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9659 E   **Directory** *directory* **is not a valid directory.**

Explanation

A directory in the Unix file system is invalid. This is probably because the name specified indicates a specific file rather than a directory.

System action

The Web services or XML assistant continues processing.

User response

Ensure that the directory used is valid.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9660 I   **WS-Policy file** *file* **has been processed.**

Explanation

A WS-Policy file from the WSPOLICY-DIRECTORY has been processed by DFHLS2WS.

System action

The Web services assistant continues processing.

User response

This informational message can be safely ignored.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9661 E   **File** *file* **is not a CICS WS-Policy file.**

Explanation

The content of the specified file is not recognized as being a CICS WS-Policy file.

System action

The Web services assistant continues processing.

User response

The files within the WSPOLICY-DIRECTORY should all be CICS WS-Policy files. Consider correcting the file or removing it from the directory.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9662 E   **An exception was thrown whilst processing WS-Policy file** *file*. **The exception message is:** *exception*.

Explanation

A problem occurred during the processing of a CICS WS-Policy @QKC file. The nature of the problem is indicated in the exception.

System action

The Web services assistant continues processing.

User response

Consider the message from the exception. It probably indicates a problem within the WS-Policy file that requires correction.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9663 E   **Operation** *Operation* **specified a SOAP MEP of** *specified_MEP*. **The only SOAP MEP supported is** *supported_MEP*.

Explanation

A WSDL 2.0 document contained an Operation that specified a SOAP Message Exchange Pattern (MEP) that is not supported.

System action

The Web services assistant continues processing.

User response

Consider changing the WSDL document to use a supported SOAP Message Exchange Pattern.

Module:

DFHWS2LS

Destination

SYSPRINT

DFHPI9664 E **The value specified for parameter *parameter* is invalid. Valid values are: *values*.**

Explanation

A value has been specified for one of the parameters of the Web services or XML assistants that is invalid.

System action

The Web Services or XML assistant continues processing.

User response

Correct the parameter value passed to the CICS Web Services or XML assistant before retrying. More information on the permissible values for this parameter can be found in the CICS Web Services or XML assistant's log file and the CICS Web Services manual.

Module:
DFHWS2LS, DFHLS2WS, DFHSC2LS, DFHLS2SC, DFHJS2LS, DFHLS2JS

Destination

SYSPRINT

DFHPI9665 E **The WSDL Binding for operation *Operation* specifies an invalid message. *MessageFound* was found, but *MessageExpected* was expected.**

Explanation

A WSDL document contained a Binding for an Operation. There is a mismatch between the Messages specified in the BindingOperation and the Messages specified in the Operation. The WSDL document is invalid.

System action

The Web services assistant continues processing.

User response

Correct the error in the WSDL document and reprocess it using DFHWS2LS.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9666 E **A complexType can not contain more than one 'any' type. Problem found in type: '*"typeName"*'.**

Explanation

An XML 'any' has been defined twice within the same construct in an XML schema. This is not supported by DFHWS2LS or DFHSC2LS except through the use of minOccurs and maxOccurs attributes.

This message may be issued if two xsd:any constructs appear in the same xsd:sequence. It may also be issued if a construct that is processed as though it were an xsd:any appears in that sequence. For example, if an abstract xsd:element with no substitution group appeared in the same sequence with an xsd:any then this message is issued.

System action

The Web services or XML assistant continues processing.

User response

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document. If changing or simplifying the XML schema or WSDL is not acceptable then other options exist:

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.

- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.

- If you are implementing a Web service requester application then you could consider writing an XML

capable application that uses the DFHPIRT channel linkable SOAP interface.

Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module:
DFHWS2LS, DFHSC2LS, DFHJS2LS

Destination

SYSPRINT

DFHPI9667 E	The supplied WSDL contains an 'any' or 'anyType' element. This is only supported when 'PGMINT' is set to 'CHANNEL'.

Explanation

DFHWS2LS or DFHSC2LS has processed an XML schema that includes an xsd:any element or an xsd:anyType element. These constructs are supported but they result in the XML content being stored in a separate container at runtime. This in turn requires the use of PGMINT=CHANNEL.

System action

The Web services assistant continues processing.

User response

Change the value of the PGMINT parameter to specify a value of CHANNEL.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9668 E	Invalid value specified for the XML-ONLY parameter. Valid values are: TRUE or FALSE.

Explanation

An invalid value has been specified for the XML-ONLY parameter.

System action

The Web services assistant continues processing.

User response

Correct the value of the XML-ONLY parameter.

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9669 E	Global XML Element *element* not found.

Explanation

The named global element cannot be found in the input WSDL or XML schema document.

System action

The XML assistant continues processing.

User response

Correct the value of the ELEMENTS input parameter.

Module:
DFHSC2LS

Destination

SYSPRINT

DFHPI9670 E	No Global XML Elements or Types have been processed.

Explanation

The input WSDL document or XML schema did not contain any XML elements or types to be processed. An XSDBind file could not be built.

System action

The XML assistant continues processing.

User response

Supply a new input document that contains either Elements or types.

Module:
DFHSC2LS

Destination

SYSPRINT

DFHPI9671 E   **Mismatch between WS-Addressing Action and SOAP Action for operation *operation*.**

Explanation

The WS-Addressing Action supplied on the named operation does not match the value of the SOAP Action element.

System action

The Web Services assistant continues processing.

User response

Correct the mismatch between the operations WS-Addressing Action and the SOAP Action, or remove the SOAP Action.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9672 E   **Mismatch between WS-Addressing Endpoint Reference address and port address.**

Explanation

The WS-Addressing Endpoint Reference address does not match the port address.

System action

The Web Services assistant continues processing.

User response

Correct the mismatch between the WS-Addressing Endpoint Reference address and the port address.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9673 E   **Mismatch between WS-Addressing Endpoint Reference address and endpoint address.**

Explanation

The WS-Addressing Endpoint Reference address does not match the endpoint address.

System action

The Web Services assistant continues processing.

User response

Correct the mismatch between the WS-Addressing Endpoint Reference address and the endpoint address.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9674 E   **Non-Abstract global XML Type *type* not found.**

Explanation

The named global type cannot be found in the input WSDL or XML schema document. DFHSC2LS is expecting to find an xsd:simpleType or an xsd:complexType named *type*. This XML type must not be defined as abstract.

System action

The XML assistant continues processing.

User response

Correct the value of the TYPES input parameter.

Module:
DFHSC2LS

Destination

SYSPRINT

DFHPI9675 E   **Multiple WS-Addressing Endpoint References exist.**

Explanation

Multiple WS-Addressing Endpoint References have been detected in the selected services binding where only one is allowed.

System action

The Web Services assistant continues processing.

User response

Remove extraneous WS-Addressing Endpoint References from the services endpoint or port.

Module:

DFHWS2LS

Destination

SYSPRINT

DFHPI9676 E	The input data contains constructs that are only supported when 'PGMINT' is set to 'CHANNEL'.

Explanation

DFHWS2LS has processed an XML schema that includes a construct that results in CICS containers being used. This in turn requires the use of PGMINT=CHANNEL.

System action

The Web services assistant continues processing.

User response

Change the value of the PGMINT parameter to specify a value of CHANNEL.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9677 E	Invalid WS-Addressing Endpoint Reference element *element*.

Explanation

The WS-Addressing Endpoint Reference in the service binding is not in the correct form to be an Endpoint Reference.

System action

The Web Services assistant stops processing.

User response

Correct the format of the WS-Addressing Endpoint Reference.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9679 E	Invalid WS-Addressing Endpoint Reference element, 'address' element not found.

Explanation

The WS-Addressing Endpoint Reference in the service binding does not contain the mandatory 'address' element.

System action

The Web Services assistant stops processing.

User response

Correct the format of the WS-Addressing Endpoint Reference.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9680 W	The MINIMUM-RUNTIME-LEVEL is less than 3.0, the WS-Addressing content in the WSDL is ignored.

Explanation

The WSDL contains WS-Addressing elements, but the MINIMUM-RUNTIME-LEVEL is less than 3.0. Runtime level 3.0 or greater is required to process WS-Addressing extentions. The generated WSBind file will not contain the WS-Addressing information.

System action

The Web Services assistant continues processing.

User response

If WS-Addressing information is required then set the MINIMUM-RUNTIME-LEVEL to 3.0.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9681 E	Invalid value specified for the 'WSADDR-EPR-ANY' parameter. Valid values are: 'TRUE' or 'FALSE'.

Explanation

An invalid value has been supplied for the WSADDR-EPR-ANY parameter. Valid values are TRUE or FALSE.

A value of TRUE causes any WS-Addressing Endpoint References to be treated as an xsd:Any type. A value of FALSE causes any Endpoint References to be broken down into language structure elements.

System action

The Web services assistant stops processing.

User response

Correct the value of the WSADDR-EPR-ANY parameter.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9682 W **Container names beginning 'DFH' should not be used in channel description documents. The problem is for container '*containerName*'.**

Explanation

A channel description document has been processed which includes a container name that begins 'DFH'. This prefix is reserved for use by CICS and may result in unpredictable problems if used in an application.

System action

The Web services or XML assistant continues processing. The unsupported content is ignored.

User response

Consider whether it is appropriate for a 'DFH' container to be exposed as part of your application interface.

Module:
DFHLS2WS, DFHLS2SC

Destination

SYSPRINT

DFHPI9683 W **Bundle directory *dirName* already exists and may contain files that are inconsistent with the new Bundle manifest file.**

Explanation

A bundle directory is being created on top of a directory that already exists in the file system. If this directory contains any files then they will still exist within the output bundle. The manifest file for the bundle will not reference these files.

System action

The Web services or XML assistant continues processing. The unsupported content is ignored.

User response

Consider removing any unwanted files from the bundle directory.

Module:
DFHLS2SC, DFHSC2LS

Destination

SYSPRINT

DFHPI9684 W **The value of the XSDBIND parameter indicates a directory name of *dirName*. This is ignored as the XSDBind file is being generated into a Bundle.**

Explanation

An XSDBind file is being added to a Bundle. The name of the XSDBind file is specified in the XSDBIND input parameter, a path has also been specified for the XSDBind file.

If the XML assistant is used without specifying a value for BUNDLE then the file is stored in the path specified. If a value is specified for BUNDLE then the XSDBind file is stored within that BUNDLE rather than in the named directory.

System action

The Web services or XML assistant continues processing.

User response

Consider removing the path from the value of the XSDBIND parameter.

Module:
DFHLS2SC, DFHSC2LS

Destination

SYSPRINT

DFHPI9685 E **A language structure cannot be parsed. Please ensure that the statement terminator characters are correct and that any brackets are matched.**

Explanation

A problem has been found which results in looping within the DFHLS2WS. The problem is probably caused by mismatching brackets within a source file.

System action

The Web services assistant stops processing.

User response

Validate the language structure using the compiler. Fix any error messages that are reported.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9686 W **Structure *structureName* is ignored for container *containerName* as the container is defined as type 'char'.**

Explanation

A channel description document has been processed which includes a character based container with structured content. Structured content is only supported for bit mode containers.

System action

The Web services assistant continues processing, but the language structure is ignored.

User response

Consider changing the container to be bit mode.

Module:
DFHLS2WS, DFHLS2JS

Destination

SYSPRINT

DFHPI9687 W **Unexpected text *text* found in columns *start_column* to *end_column*. Text is ignored.**

Explanation

A language structure has been parsed which contains unexpected data in columns that should not be used. This data is ignored.

System action

The Web services or XML assistant continues processing.

User response

Consider formatting the language structure so that it conforms to the normal rules for the associated programming language.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9688 E **Unexpected End of Line condition encountered for line '*line*' of file *filename*.**

Explanation

A line of input data from file *filename* has terminated unexpectedly. This might imply an error in the language structure.

System action

The Web Services assistant stops processing.

User response

Correct the input data.

One possible cause for this error is where a period character is used in a COBOL PICTURE clause. This is not currently supported and can cause subsequent processing to be incorrect. That in turn can result in this message being issued.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9689 E **Bundle directory*dirName* already exists and will not be replaced because OVERWRITE-OUTPUT=NO is specified.**

Explanation

The XML assistant has detected that a CICS bundle already exists at the location specified by the BUNDLE parameter. OVERWRITE-OUTPUT=NO was specified, or allowed to default. This prevents the new bundle from being created.

System action

The XML assistant terminates.

User response

If you want the bundle to be replaced then rerun the XML assistant with OVERWRITE-OUTPUT=YES specified. If the existing bundle is not to be replaced then rerun with a different location specified for the BUNDLE parameter.

Module:
DFHLS2SC, DFHSC2LS

Destination

SYSPRINT

DFHPI9690 E	File '*filename*' does not contain valid JSON. The problem is: '*exception*'.

Explanation

The JSON schema assistant detected that the content of the file*filename* is not valid JSON. The exception message*exception* should identify the issue.

System action

The JSON schema assistant ends.

User response

Correct the file, or the change the filename in the relevant JSON_SCHEMA_xxx parameter.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9691 E	Unsupported JSON schema. The JSON schema must describe a JSON object or JSON Array.

Explanation

The JSON schema assistant detected an unsupported JSON schema. The root of the JSON schema must be a JSON object or an array of JSON objects, not a simple data type or an array of simple data types.

System action

The JSON schema assistant ends.

User response

Consider changing the JSON schema.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9692 E	Unsupported JSON schema. A JSON schema requires a "type" keyword with a single string value for object '*name*'.

Explanation

The JSON schema assistant detected that JSON schema contains an unsupported feature. A JSON schema requires a "type" keyword with a single string value.

System action

The JSON schema assistant ends.

User response

Correct the file. Ensure each JSON subschema contains a "type" keyword with a single supported JSON "type".

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9693 E	Invalid JSON schema. It contains an undefined JSON schema "type" of '*typevalue*'.

Explanation

The JSON schema assistant detected an invalid JSON schema. The JSON schema "type" of*typevalue*

is undefined. Expected values are: "object", "array", "string", "boolean", "integer" and "number".

System action

The JSON schema assistant ends.

User response

Correct the file. Replace the JSON schema "type" of*typevalue* with a valid one.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9694 E	Unsupported JSON schema. JSON schema "type" of '*typevalue*' is not supported.

Explanation

The JSON schema assistant detected that JSON schema contains an unsupported feature. JSON schema "type" of*typevalue* is not supported.

System action

The JSON schema assistant ends.

User response

Correct the file. Replace the JSON schema "type" of*typevalue* with a supported one.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9695 E	Unsupported JSON schema. A JSON schema "type" of "object" without a "properties" keyword is not supported.

Explanation

The JSON schema assistant detected that JSON schema contains an unsupported feature. A JSON schema "type" of "object" is only supported along with a "properties" keyword.

System action

The JSON schema assistant ends.

User response

Correct the file. Add a valid "properties" keyword to the JSON subschema for the "object".

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9696 E	Invalid JSON schema. The value of "properties" keyword must be an object.

Explanation

The JSON schema assistant detected an invalid JSON schema. The value of "properties" keyword must be an object. Each value of this object must be an object, and each object must be a valid JSON schema.

System action

The JSON schema assistant ends.

User response

Correct the file. Ensure that the value of all "properties" keywords are correct.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9697 E	Invalid JSON schema. The value of "required" keyword must be an array.

Explanation

The JSON schema assistant detected an invalid JSON schema. The value of "required" keyword must be an array. This array must have at least one element.Elements of this array must be strings, and must be unique.

System action

The JSON schema assistant ends.

User response

Correct the file. Ensure that the value of all "required" keywords are correct.

Module:

DFHJS2LS

Destination

SYSPRINT

DFHPI9698 E **Unsupported JSON schema. A JSON schema "type" of "array" without an "items" keyword is not supported for array "*arrayName*".**

Explanation

The JSON schema assistant detected that the JSON schema contains an unsupported feature. A JSON schema with a "type" of "array", but without an "items" keyword containing a single JSON subschema is not supported.

System action

The JSON schema assistant ends.

User response

Correct the file. Add a valid "items" keyword to the JSON subschema for the "array".

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9699 E **PICTURE strings are not supported for COMP-1 and COMP-2 fields. Problem found for field "*fieldName*".**

Explanation

A COBOL field was detected that is either of type COMPUTATIONAL-1 or COMPUTATIONAL-2 and includes a PICTURE string. This combination is not supported.

System action

The Assistant ends.

User response

Correct the COBOL field.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9700 E **Unsupported JSON schema. A JSON schema "type" of "object" with an "additionalProperties" keyword is only supported with value false.**

Explanation

The JSON schema assistant detected that JSON schema contains an unsupported feature. A JSON schema "type" of "object" only supports the keyword "additionalProperties" with a value of false.

System action

The JSON schema assistant ends.

User response

Correct the file. Change the "additionalProperties" keyword to a value of false.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9701 E **Unsupported JSON schema. The JSON schema keyword '*keyword*' is not supported.**

Explanation

The JSON schema assistant detected that JSON schema contains an unsupported keyword. The JSON schema keyword :mv.keyword:emv. is not supported.

System action

The JSON schema assistant ends.

User response

Correct the file. remove the :mv.keyword:emv. keyword.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9702 E   Unsupported JSON schema. A JSON schema "type" of "array" with an "additionalItems" keyword is only supported with value false.

Explanation

The JSON schema assistant detected that JSON schema contains an unsupported feature. A JSON schema "type" of "array" only supports the keyword "additionalItems" with a value of false.

System action

The JSON schema assistant ends.

User response

Correct the file. Change the "additionalItems" keyword to a value of false.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9703 E   Invalid JSON schema. The JSON schema keyword '*keyword*' requires the keyword '*required*' to be present.

Explanation

The JSON schema assistant detected that JSON schema contains the keyword :mv.keyword:emv., but is missing the required keyword :mv.required:emv..

System action

The JSON schema assistant ends.

User response

Correct the file. Either remove the :mv.keyword:emv. keyword, or add the required keyword :mv.required:emv..

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9704 W   The JSON schema keyword '*keyword*' is not recognized and will be ignored.

Explanation

The JSON schema assistant detected that JSON schema contains an unrecognized keyword :mv.keyword:emv..

System action

The JSON schema assistant continues and ignores the keyword.

User response

If the :mv.keyword:emv. keyword is not expected to be handled by the assistant then this message can be ignored. Otherwise, check that the keyword is spelled correctly with the correct capitalization.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9705 E   Invalid JSON schema. The JSON schema keyword "required" includes elements '*missing*' that are not in the "properties" keyword.

Explanation

The JSON schema assistant detected that JSON schema contains elements in the "required" keyword that are missing from the "properties".

System action

The JSON schema assistant ends.

User response

Correct the file. Either remove the :mv.missing:emv. elements from the "reuired" keyword, or add them to the "porpoerties" keyword.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9706 E   Invalid JSON schema. The JSON schema keyword '*keyword*' for an array has a bad value.

Explanation

The JSON schema assistant detected that JSON schema contains a bad value for keyword :mv.keyword:emv.. To limit the size of arrays the value of keyword "maxItems", if present, must be strictly greater than 0. If absent it implies the array is unbounded. The value of keyword "minItems", if present, must be greater than or equal to 0 and less then or equal to the value of "maxItems". If absent it implies the array is optional and can have no elements.

System action

The JSON schema assistant ends.

User response

Correct, or remove the value of the :mv.keyword:emv. keyword or the related keyword to ensure that the values are valid.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9707 E	Invalid JSON schema. The JSON schema keywords "maximum" or "minimum" for an integer have a bad value.

Explanation

The JSON schema assistant detected that JSON schema contains a bad value for either the "maximum" or "minimum" keywords. To limit the value of integers if the "minimum" keyword is absent or negative, the value of keyword "maximum" must be less than or equal to 9223372036854775807 and the value of keyword "minimum" must be greater than or equal to -9223372036854775808. If the value of the "minimum" keyword is positive, the value of keyword "maximum" must be less than or equal to 18446744073709551615. When both "maximum" and "minimum" keywords are present, then the value of "maximum" keyword, must be greater than or equal to the value of "minimum" keyword.

System action

The JSON schema assistant ends.

User response

Correct, or remove the value of the :mv.keyword:emv. keyword or the related keyword to ensure that the values are valid.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9708 W	The JSON schema format '*format*' for object '*name*' of type '*type*' has not been recognized and will be ignored.

Explanation

The JSON schema assistant detected that JSON schema contains an unrecognized value of :mv.format:emv. for the "format" keyword while processing an element with "type" of :mv.type:emv..

System action

The JSON schema assistant continues and ignores the keyword.

User response

If the :mv.keyword:emv. keyword is not expected to be handled by the assistant then this message can be ignored. Otherwise, check that the keyword is spelled correctly with the correct capitalization.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9709 E	Invalid JSON schema. The JSON schema keywords "maxLength" or "minLength" for a string have a bad value.

Explanation

The JSON schema assistant detected that JSON schema contains a bad value for either the "maxLength" or "minLength" keywords. To limit the length of strings, the value of the "minLength" keyword, if present, must be greater than or equal to 0. The value of the keyword "maximum", if present, must be strictly greater than 0. When both "maxLength" and "minLength" keywords are present, then the value of "maxLength" keyword, must be

greater than or equal to the value of "minLength" keyword.

System action

The JSON schema assistant ends.

User response

Correct, or remove the value of the :mv.keyword:emv. keyword or the related keyword to ensure that the values are valid.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9710 E	Invalid JSON schema. The JSON schema keywords '*keywords*' are not compatible with JSON schema "format" '*format*'.

Explanation

The JSON schema assistant detected that JSON schema contains keywords :mv.keywords:emv. which are incompatible with the "format" value of :mv.format:emv..

System action

The JSON schema assistant ends.

User response

Remove the keywords :mv.keywords:emv..

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9711 W	Possible bad integer read. The numeric value '*number*' is rounded to integer '*integer*'.

Explanation

The JSON schema assistant found a number :mv.number:emv. where it expects the JSON schema to have an integer. It rounded that value to the integer :mv.integer:emv..

System action

The JSON schema assistant continues.

User response

Check that the value :mv.integer:emv. is the same as the original value used in the JSON schema. If this is not the same and the original absolute value is very large then try wrapping the number in double-quote characters.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9712 W	For JSON schema "type" of "number" with "decimal" format, display is limited to 18 digits.

Explanation

The JSON schema assistant found an element with a "type" of "number" and "format" of "decimal" with "maximum" and "minimum" value that cannot be expressed to the same number of decimal digits and only use a total of 18 digits.

System action

The JSON schema assistant reduced the number of decimal digits to keep to the maximum total of 18 digits.

User response

Check that the "maximum" and "minimum" values used for "decimal" format number types are written to the same precision.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9713 E	For JSON schema "type" of "number" with "decimal" format, absolute values are limited to 1.0E19.

Explanation

The JSON schema assistant found an element with a "type" of "number" and "format" of "decimal" with "maximum" or "minimum" value that cannot be

expressed in 18 digits. This is a limitation on the absolute size of decimal numbers.

System action

The JSON schema assistant ends.

User response

Check that the "maximum" and "minimum" values used for "decimal" format number types are less than 1.0E19, that is no more than 18 digits.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9714 E	JSON schema element '*element*' defines a multi-dimensional array, this requires at least mapping level 4.3 to be enabled.

Explanation

The JSON schema assistant detected that element :mv.element:emv. with a 'type' of 'array' is defined with a subschema with a 'type' of 'array'. This is not supported at mapping levels lower than 4.3.

System action

The JSON schema assistant ends.

User response

Consider specifying MAPPING-LEVEL=4.3.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9715 E	Expected keyword '*keyword*' missing in line '*line*'.

Explanation

An expected keyword is missing in a language structure.

System action

The Assistant ends.

User response

Correct the language structure.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9716 E	Field '*name*' not found for array '*array*'.

Explanation

The target field for an OCCURS DEPENDING ON clause in a COBOL language structure cannot be found.

System action

The Assistant ends.

User response

Correct the language structure.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9717 E	Unsupported content found after OCCURS DEPENDING ON field '*name*'.

Explanation

The CICS Assistants only support non-complex OCCURS DEPENDING ON clauses. This restrictions means that OCCURS DEPENDING ON fields must not appear within an array, and must not be followed by further fields.

System action

The Assistant ends.

User response

Simplify the COBOL language structure to remove the complex OCCURS DEPENDING ON clauses.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9718 E   **Use of OCCURS DEPENDING ON requires use of DATA-TRUNCATION=ENABLED.**

Explanation

Use of OCCURS DEPENDING ON fields in COBOL requires the DATA-TRUNCATION parameter to be set to ENABLED.

System action

The Assistant ends.

User response

Specify DATA-TRUNCATION=ENABLED and rerun the Assistants.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9719 E   **Unsupported content found after group item '*name*' with OCCURS DEPENDING ON clause.**

Explanation

The CICS Assistants only support non-complex OCCURS DEPENDING ON clauses. This restriction means that a structure with an OCCURS DEPENDING ON clause must not appear within an array, and must not be followed by further fields.

System action

The Assistant ends.

User response

Simplify the COBOL language structure to remove the complex OCCURS DEPENDING ON clauses.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9720 E   **Unsupported keyword "UNBOUNDED" found in an OCCURS clause.**

Explanation

The CICS Assistants do not support the 'UNBOUNDED' keyword in an 'OCCURS' clause.

System action

The Assistant ends.

User response

Replace the 'UNBOUNDED' keyword with an integer value giving the largest size of the table expected by the application.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9721 W   **The parameter CCSID=1200 is not supported when *assistant* is used.**

Explanation

The parameter CCSID=1200 (UTF-16BE) is only supported when DFHJS2LS, DFHSC2LS, or DFHWS2LS is used.

System action

The assistant continues, ignoring the parameter and setting CCSID to the default value.

User response

To use UTF-16 strings with DFHLS2JS, DFHLS2SC, or DFHLS2WS, set CCSID to an EBCDIC code page, and use appropriate field definitions in the language structure.

Module:
DFHLS2WS, DFHLS2SC, DFHLS2JS

Destination

SYSPRINT

DFHPI9722 E   **The parameter CHAR-MULTIPLIER=*value* is not supported in combination with CCSID=1200.**

Explanation

The value of the CHAR-MULTIPLIER parameter must be either 2 or 4 if CCSID=1200 (UTF-16BE) is specified.

System action

The assistant ends.

User response

Correct the value of the CHAR-MULTIPLIER parameter and run the assistant again.

Module:
DFHJS2LS, DFHSC2LS, DFHWS2LS

Destination

SYSPRINT

DFHPI9723 E	**UTF-16 is not supported when parameter LANG=PLI-OTHER is used.**

Explanation

CCSID=1200 is specified. However, UTF-16 is not supported when parameter LANG=PLI-OTHER used.

System action

The assistant ends.

User response

Correct the value of either the LANG parameter or the CCSID parameter and run the assistant again.

Module:
DFHJS2LS, DFHSC2LS, DFHWS2LS

Destination

SYSPRINT

DFHPI9724 E	**Type \"*type*\" requires a minimum mapping level of \"*required-mapping-level*\", but mapping level \"*actual-mapping-level*\" was specified.**

Explanation

A data type was used in a language structure that is not supported with the specified mapping level.

System action

The assistant ends.

User response

Either increase the mapping level, or remove the unsupported data type.

Module:
DFHLS2JS, DFHLS2SC, DFHLS2WS

Destination

SYSPRINT

DFHPI9725 W	**A CICS abstime data type has been used. This data type can experience time-zone related data conversion errors.**

Explanation

A CICS abstime data type has been used. This data type can be problematic as the time zone and daylight savings characteristics of the CICS region need to be considered during data conversion. If data conversion occurs in an environment with a different time zone configuration, data values might be corrupted. For example, if data conversion takes place in a CICS JVMSERVER, the JVM must be configured to use the same time zone as CICS.

System action

The assistant continues processing.

User response

Consider specifying DATETIME=UNUSED (for DFHLS2JS) or DATETIME=STRING (for DFHJS2LS).

Module:
DFHLS2JS, DFHJS2LS

Destination

SYSPRINT

DFHPI9726 E	**Minimum bound "*minimum*" is greater than maximum bound "*maximum*".**

Explanation

A COBOL language structure has been processed which contains an invalid TO field in which the minimum bound is greater than the maximum bound.

System action

The assistant continues processing.

User response

Correct the problem with the COBOL language structure.

Module:

DFHLS2JS, DFHLS2SC, DFHLS2WS

Destination

SYSPRINT

DFHPI9727 E   **Minimum bound "*minimum*" is less than zero.**

Explanation

A COBOL language structure has been processed which contains an invalid TO field in which the minimum bound is less than zero.

System action

The assistant continues processing.

User response

Correct the problem with the COBOL language structure.

Module:
DFHLS2JS, DFHLS2SC, DFHLS2WS

Destination

SYSPRINT

DFHPI9728 E   **JSON Pointers are only supported if they resolve to a local reference: \"*pointer*\".**

Explanation

A JSON pointer was encountered within a Schema that resolves to an external document.

System action

The assistant ends.

User response

Remove the unsupported pointer.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9729 E   **JSON Pointer could not be resolved: \"*pointer*\".**

Explanation

A JSON pointer was encountered that could not be resolved.

System action

The assistant ends.

User response

Correct the unresolved pointer.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9730 E   **Use of CICS Containers has been prohibited, therefore the input Schema cannot be processed using the selected input parameters.**

Explanation

The processing of a JSON Schema has resulted in the need to use CICS Containers within the generated language structures. This has been expressly prohibited by the user agent.

System action

The assistant ends.

User response

It might be possible to avoid the use of Containers either by modifying the JSON Schemas that are being processed, or by using other input parameters to customize the processing. Consider using the DEFAULT-ARRAY-MAXITEMS and INLINE-MAXOCCURS-LIMIT parameters to avoid Containers being used for JSON arrays. Consider using the DEFAULT-CHAR-MAXLENGTH and CHAR-VARYING-LIMIT parameters to avoid Containers being used for long data values.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9731 E   **Empty enum lists are not supported for object \"*name*\".**

Explanation

The JSON Schema contains an enumeration with no valid members. This constraint cannot be supported.

System action

The assistant ends.

User response

Review the JSON Schema and correct the problematic enumeration.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9732 E   **Unsupported enum content type of \"*type*\" for object \"*name*\".**

Explanation

The JSON Schema contains an enumeration with an unsupported type of content such as a JSON Object or JSON Array.

System action

The assistant ends.

User response

Review the JSON Schema and consider changing the content of the problematic enumeration.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9733 E   **Enum for object \"*name*\" contains conflicting data types.**

Explanation

The JSON Schema contains an enumeration with varying content types. Enumerations are only supported if their contents are of the same data type (for example, each of the values is a String).

System action

The assistant ends.

User response

Review the JSON Schema and consider changing the content of the problematic enumeration.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9734 E   **Unexpected problem processing enum for object \"*name*\": \"*exception*\".**

Explanation

An unexpected problem was experienced while processing an enumeration in the JSON Schema.

System action

The assistant ends.

User response

Consider contacting IBM support for further assistance.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9735 E   **Mismatching values found for key \"*key*\" within \"*object*\", values \"*value1*\" and \"*value2*\" are not compatible.**

Explanation

Two conflicting values have been found for the same attribute of a JSON Object, DFHJS2LS does not support both values being set.

System action

The assistant ends.

User response

Consider simplifying the JSON Schema to avoid the problematic values.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9736 E	**Unexpected problem processing properties for object \"*object*\": \"*exception*\".**

Explanation

An Exception was caught while processing a JSON Object.

System action

The assistant ends.

User response

Consider contacting IBM support for further assistance.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9737 W	**Multiple property sets have been found for object \"*child*\" within object \"*parent*\". Merging may result in an imperfect mapping.**

Explanation

A complex definition has been encountered for a JSON Object. DFHJS2LS will attempt to merge the associated Schema characteristics into a compound form.

System action

The assistant continues processing.

User response

Consider simplifying the JSON Schema to avoid the problematic values.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9738 W	**Multiple values have been found for keyword \"*key*\" within object**

\"*object*\". Merging may result in an imperfect mapping.

Explanation

A complex definition has been encountered for a JSON Object. DFHJS2LS will attempt to merge the associated Schema characteristics into a compound form.

System action

The assistant continues processing.

User response

Consider simplifying the JSON Schema to avoid the problematic values.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9739 E	**Using a level increment of \"*levelInc*\" gives an invalid COBOL level-number of \"*levelNumber*\".**

Explanation

When creating a COBOL data structure a field was detected that has a general purpose level-number greater than the limit of 49 allowed by COBOL.

System action

The assistant ends.

User response

If the level increment is greater than 1 use the SERVICE="LEVELINC=n" parameter to reduce it to the value specified as nand re-run the assistant.

Module:
DFHJS2LS, DFHSC2LS, DFHWS2LS

Destination

SYSPRINT

DFHPI9740 E	**Unsupported JSON schema. A recursive JSON pointer \"*pointer*\" was found.**

Explanation

A JSON pointer was encountered within a schema that would result in a recursive structure. Recursive pointers are not supported.

System action

The assistant ends.

User response

Remove the unsupported pointer.

Module:
DFHJS2LS

Destination

SYSPRINT

DFHPI9800 E   **The Service Registry Client has not been initialized.**

Explanation

The WSRR client has not been initialized, so no WSRR Web service requests can be sent.

System action

The interaction with WSRR was not performed.

User response

Contact IBM support.

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9801 E   **A document with a matching name, namespace and version already exists within the registry. The publish step was not run.**

Explanation

When attempting to publish the generated WSDL document another WSDL document with the same name, namespace, and version has been found.

System action

The WSDL document is not published to WSRR.

User response

Run the tooling using a different WSRR-VERSION parameter value or if the WSDL document stored in WSRR is incorrect remove it and run the tooling again.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9802 E   **The setting of the registry endpoint was not successful.**

Explanation

The setting of the endpoint was not successful.

System action

The interaction with WSRR was not performed. No processing occurred for DFHWS2LS. The Web service binding file and generated WSDL document are present on the file system.

User response

Check that the WSRR-SERVER parameter value is set to the correct host and port.

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9803 W   **Greater than 250 custom properties have been defined; the first 250 are used.**

Explanation

More than 250 custom properties were specified on the tooling input. A maximum of 250 properties are supported.

System action

Publishing continues using the first 250 custom properties.

User response

Reduce the number of custom properties specified on the tooling input.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9804 E   **When retrieving a document from a registry a fault was returned with message *faultMessage*.**

Explanation

A SOAP fault was returned by WSRR.

System action

The interaction with WSRR was not performed. No processing occured for DFHWS2LS.

User response

Check that the WSRR-SERVER parameter value is set to the correct host and port. Review the message returned in the SOAP fault.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9805 E   **An attempt to retrieve a document from a registry failed with reason *failReason*.**

Explanation

The Web service request to WSRR failed.

System action

The interaction with WSRR was not performed. No processing occurred for DFHWS2LS.

User response

Ensure that the server specified by the WSRR-SERVER parameter is running. Check that the WSRR-SERVER parameter value is set to the correct host and port. If you are using security, invalid credentials can cause this error to occur. Check that WSRR-USERNAME and WSRR-PASSWORD are set correctly.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9806 E   **The WSDL file was not found at the specified location.**

Explanation

The generated WSDL document could not be found.

System action

The WSDL document is not published to WSRR.

User response

Contact IBM support.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9807 E   **The WSDL file can not be read in the ccsid specified.**

Explanation

The generated WSDL document could not be read.

System action

The WSDL document is not published to WSRR.

User response

Set the CCSID parameter value to a CCSID that is supported.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9808 E   **The WSDL file could not be used due to an IOException.**

Explanation

The generated WSDL document could not be read.

System action

The WSDL document is not published to WSRR.

User response

Ensure that the permissions are correct for the directory that the generated WSDL is written to.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9809 E   **When querying a registry a fault was returned with message *faultMessage*.**

Explanation

A SOAP fault was returned by WSRR.

System action

The interaction with WSRR was not performed. No processing occurred for DFHWS2LS. For DFHLS2WS the Web service binding file and generated WSDL document are present on the file system.

User response

Check that the WSRR-SERVER has been set to the correct host and port. Review the message returned in the SOAP fault.

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9810 E   **An attempt to query a registry failed with reason *failReason*.**

Explanation

The Web service request to WSRR failed.

System action

The interaction with WSRR was not performed. No processing occurred for DFHWS2LS. For DFHLS2WS the Web service binding file and generated WSDL document are present on the file system.

User response

Ensure that the server specified by the WSRR-SERVER parameter value is running. Check that the WSRR-SERVER parameter value is set to the correct host and port. If you are using security, invalid credentials can cause this error to occur. Check that the parameter values for WSRR-USERNAME and WSRR-PASSWORD are set correctly.

Module:

DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9811 I   **The document *docName* has been found in the registry with unique identifier *docURI*.**

Explanation

The named document was found in the registry.

System action

Processing continues as normal.

User response

None

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9812 W   **Multiple documents matching the query have been found. The first will be used.**

Explanation

Multiple documents that matched the name, namespace, and version were found when querying the registry. The first document is used.

System action

Processing continues using the first document returned by WSRR.

User response

Check that the correct WSDL document has been used to create the language structures. If the WSDL document used is incorrect use the WSRR-NAMESPACE and WSRR-VERSION parameters to reduce the number of WSDL documents found when querying the registry.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9813 E   **When publishing to a registry a fault was returned with message *faultMessage*.**

Explanation

A SOAP fault was returned by WSRR.

System action

The interaction with WSRR cannot be performed. The Web service binding file and generated WSDL document have been created.

User response

Check that the WSRR-SERVER parameter has been set to the correct host and port. Review the message returned in the SOAP fault.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9814 E   **An attempt to publish to a registry failed with reason *failReason*.**

Explanation

The Web service request to WSRR failed.

System action

The interaction with WSRR cannot be performed. The Web service binding file and generated WSDL document have been created.

User response

Ensure that server specified in the the WSRR-SERVER parameter is running. Check that the WSRR-SERVER parameter has been set to the correct host and port. If you are using security, invalid credentials can cause this error to occur. Check that the values for parameter WSRR-USERNAME and WSRR-PASSWORD are set correctly.

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9815 I   **Starting *requesttype* Web service request.**

Explanation

A message is written to the log to indicate a Web service request is about to be sent.

System action

Processing continues.

User response

None

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9816 I   **Response received for *requesttype* Web service request.**

Explanation

A message is written to the log to indicate a Web service request has successfully received a response.

System action

Processing continues.

User response

None

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9817 I   **The WSRR-SERVER location is *wsrrserver*.**

Explanation

A message is written to the log to indicate what value the WSRR-SERVER parameter has been set to.

System action

Processing continues.

User response

None

Module:
DFHWS2LS, DFHLS2WS

Destination

SYSPRINT

DFHPI9818 I   **Custom property set with name *propertyname* and value *propertyvalue*.**

Explanation

A message is written to the log to indicate the name and value of a custom property.

System action

Processing continues.

User response

None

Module:
DFHLS2WS

Destination

SYSPRINT

DFHPI9819 I   **Starting write of file *filename*.**

Explanation

The named file, retrieved from WSRR, is about to be written to the file system.

System action

Processing continues.

User response

None

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9820 E   **An IOException occurred when attempting to write file *filename*.**

Explanation

The file retrieved from WSRR has not been written to the location specified in the message.

System action

Processing terminates.

User response

Change the permissions for the directories specified in the message to allow the tooling write access.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9821 E   **No document matched name *filename*, namespace *xmlns*, and version *version*.**

Explanation

No WSDL document was found in WSRR that matched the values specified for parameters WSRR-NAME, WSRR-NAMESPACE, and WSRR-VERSION.

System action

There is no WSDL document to process. Processing terminates.

User response

Change the parameters WSRR-NAME, WSRR-NAMESPACE, and WSRR-VERSION to values that match a WSDL document in WSRR.

Module:
DFHWS2LS

Destination

SYSPRINT

DFHPI9822 E   **The parameter *parameterName* has an invalid value of *value*.**

Explanation

The named parameter is set to an invalid value.

System action

Processing ends.

User response

Change the parameter to use a valid value. The format for WSRR-SERVER is "protocol://hostname:port".

Module:
DFHWS2LS, DFHLS2WS

DFHPR0105I   *applid* **Partner resource manager initialization has ended.**

Explanation

This is an informational message indicating that partner resource manager initialization has completed successfully.

System action

Initialization continues.

User response

None. You can suppress this message with SIT parameter, MSGLVL=0.

Module:
DFHPRIN1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHPR0106I   *applid* **Partner resource manager initialization has failed.**

Explanation

The partner resource manager has failed to initialize successfully.

System action

Message DFHSI1522 is issued following this message. CICS terminates or continues initialization depending upon the operator's response to message DFHSI1522. An exception trace entry is written at the time the failure is detected. Other CICS components called by partner resource manager initialization may also issue messages or write trace entries.

User response

Decide whether CICS can continue execution without the partner resource manager, and respond accordingly to message DFHSI1522. You should also investigate why the partner resource manager failed to initialize, starting from the data contained in the exception trace entry.

Destination

Console

DFHPSnnnn messages

DFHPS5366   *applid* **The system spooling interface initialization program DFHPSIP is not present.**

Explanation

CICS attempted to link to DFHPSIP but the attempt failed because DFHPSIP was not in the CICS program library.

System action

CICS terminates system spooler initialization.

User response

Place DFHPSIP in the CICS program library.

Module:
DFHSIJ1

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHPS5393   *date time applid* **Transaction *tranid* ended without closing data set on system spool.**

Explanation

The transaction *tranid* did not close a JES interface data set. Since only one transaction at a time can use the JES input interface, other transactions may be unnecessarily delayed.

System action

CICS executes a default CLOSE with the KEEP option for an INPUT data set or the DELETE option for an output data set.

User response

Change the program so that the transaction issues a SPOOLCLOSE before it terminates, and preferably immediately after the ENDFILE condition occurs on an input data set.

CSMT

DFHPS5394   *date time applid* **A storage error has occurred in JES interface subtask, the JES interface has been disabled.**

Explanation

An MVS FREEMAIN macro, issued by the CICS JES interface subtask, has failed. To keep dynamic storage area (DSA) storage usable, CICS has terminated the JES interface subtask with MVS user abend 0170.

System action

CICS rejects subsequent SPOOL commands with the NOSPOOL response.

User response

CICS will continue running normally (apart from the rejection of SPOOL commands), and you can let it continue unless your spooling requirements are critical. To reinitiate the JES interface, shut down CICS and perform a warm restart (START=AUTO in the SIT or as an initialization override). Use the MVS dump to find the source of the problem. In the dump, register 6 addresses the instruction before the ABEND. Normally, register 2 contains the address and register 0 the length of the area to be released.

CSMT

DFHPTnnnn messages

DFHPT0001   *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively:

- Unexpected data has been input,
- Storage has been overwritten, or
- There has been a program check within a user program.

The code *aaa* is, if applicable, a 3-digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

If X'*offset*' contains the value X'FFFF', then module *modname* was in control at the time of the abend, but the program status word (PSW) was not addressing this module.

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer.

Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If the *modname* insert contains the value *????*, then CICS was unable to determine which module has abnormally terminated. In this case, examine the system dump to determine which area of code has caused the program check.

The user should examine other messages to determine what the module which issued this message was doing at the time the abend occurred. From these messages they can deduce which product has produced the abend code *bbbb*. If *bbbb* is identified as a CICS code, it may be either alphameric or numeric.

- If the CICS code is alphameric (for example AKEA) then it is a CICS transaction abend code.
- If the CICS code is numeric (for example 1310), it refers to a CICS message (DFHTS1310 in our example).

If the user abend code is from another product (for example, IMS), refer to the appropriate messages and codes manual to determine the cause of the abend.

The entries in the appropriate manuals will give the user guidance regarding the nature of the error, and may also give some guidance concerning the appropriate user response.

Note:

The program check may have occurred in a user program. If this is the case, the program check is usually followed by an ASRA or an ASRB transaction abend and a transaction dump.

If you want to suppress system dumps that precede ASRA and ASRB abends, you must specify this on an entry in the dump table, using either CEMT or an EXEC CICS command. Further guidance on suppressing system dumps can be found in the Configuring.

You may need further assistance from IBM to resolve this problem. See Working with IBM to solve your problem for guidance on how to proceed.

2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHPT0002   *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action

An exception entry is made in the trace table (X'*code*' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system administrator. This failure indicates a serious error in CICS. If you have not requested termination in the dump table, you may want to terminate CICS. For further information about CICS exception trace entries, see the Troubleshooting and support.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

MQMONITOR *mqmonitor-name* has been installed into CICS by user ID *userid* at terminal *terminal* using transaction *tranid*.

DFHRLnnnn messages

DFHRL0001	*applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an

System action

Processing continues.

User response

None.

6. *tranid*
7. *mqmonitor-name*

Destination

CRDI

error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If you cannot continue without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRLBR, DFHRLDM, DFHRLPK, DFHRLRG, DFHRLRS, DFHRLVP

XMEOUT parameters/Message inserts

1. *applid*
2. *aaa/bbbb*
3. *X'offset'*
4. *modname*

Destination

Console

DFHRL0002	*applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation

An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the Troubleshooting and support.

System action

An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

3. *applid*
4. *tranid*
5. *bundle_name*
6. *state*

Destination

CRLO

DFHRL0109 I	*date time applid tranid* **The CICS resource lifecycle manager has created the BUNDLE resource** *bundle_name* **and the BUNDLE is in the** *state* **state.**

Explanation

The CICS resource lifecycle resource class, DFHRLPK, has created the BUNDLE resource *bundle_name* and the BUNDLE is in the *state* state.

If the Bundle installed in the ENABLED state then it is ready for use.

There are several reasons why the Bundle may be installed in the DISABLED state.

- The BUNDLE resource may be defined as STATUS(DISABLED).
- There may have been a problem with the contents of the Bundle.
- There may have been a problem creating a resource defined within the Bundle.
- There may have been a problem with a dependency referenced by the Bundle.

If the BUNDLE resource failed to install in an enabled state because a dependency is not satisfied, the state of the BUNDLE resource may change automatically after the missing dependency is satisfied. If the BUNDLE resource state changes for this reason, message DFHRL0127 is issued.

System action

The creation process is finished. CICS continues normally.

User response

If the BUNDLE resource is ENABLED then no further actions are required.

If the BUNDLE resource is DISABLED CICS will have issued other messages to document the problem. Look for those messages, and correct any problems.

If a dependency on an imported resource has not been satisfied, this message can be avoided by ensuring that the imported resource is installed into CICS before the BUNDLE resource that references it.

If the missing imported resources are subsequently installed and ENABLED, the state of the BUNDLE resource changes to ENABLED when it is next refreshed. You can trigger a refresh of the state by browsing or inquiring on the BUNDLE resource.

CRLO

DFHRL0114 W   *date time applid tranid* **The CICS resource lifecycle manager detected a missing import for BUNDLE *resource_name*. Import name: *import_name* type: *import_type* .**

Explanation

The CICS resource lifecycle class, DFHRLRS, has detected that BUNDLE *resource_name* contains a dependency on an imported resource that is not currently available and enabled. The dependency is defined with warning messages active. The imported dependency name is *import_name* and its type is *import_type*.

System action

If the imported dependency is defined as mandatory, the BUNDLE will be in a disabled state until the import is available and enabled.

User response

To avoid this problem, ensure that imported resources are installed into CICS before a BUNDLE resource that references them is installed.

Ensure that the name and type of the imported resource are correctly specified in the BUNDLE manifest file.

If the missing imported resource is subsequently installed and ENABLED, the state of the BUNDLE resource can change to ENABLED when it is next refreshed. You can trigger a refresh of the state by browsing or inquiring on the BUNDLE resource. If this happens, message DFHRL0126 is issued.

1. *applid*
2. *bundle_name*

Destination

Console

DFHRL0119 E	*applid* **The CICS resource lifecycle bundle class failed to re-create the BUNDLE resource *bundle_name* because of failed consistency checks with the manifest *manifest_file*.**

Explanation

CICS failed to re-create the BUNDLE resource *bundle_name* because of a failed consistency check for manifest file *manifest_file*. The consistency check is used to verify that the same version of the BUNDLE is reinstalled as was previously in use by CICS, this message indicates that CICS is unable to recover the previously installed version.

This message can be issued because a new version of a Bundle has been copied to zFS, but had not been installed prior to the restart of CICS. The updated Bundle contents have replaced the older zFS files, CICS can not recover to the version previously in use. Such problems can usually be avoided through use of a version numbering scheme for Bundles; if the updated

Bundle had a new version number then it would typically be deployed to a different zFS directory, and CICS could recover the older version across the restart.

Overwriting an installed Bundle's zFS directory structure can result in system integrity risks. Some System Programmer actions can cause CICS to re-read a configuration file from zFS, if the zFS structure has been overwritten then CICS may read a newer version of a file than was expected. There are two safe mechanisms to make updates to an installed Bundle: 1) Discarding and then reinstalling the BUNDLE resource, and 2) using the BUNDLE PHASEIN mechanism. These mechanisms will cause a Bundle to be refreshed in a fashion that will not risk DFHRL0119 messages being issued on CICS restart and system integrity is maintained.

If these mechanisms are not used, and if the zFS directory for an already installed Bundle is updated, it is possible for configuration files from the updated zFS structure to be pulled into CICS as a side effect of System Programmer actions. For example, Disabling and Enabling the BUNDLE may result in some of the files being reread; Disabling and Enabling a JVMSERVER may cause OSGIBUNDLE and related parts to be reloaded. This can result in a scenario where some parts of CICS are using the updated Bundle content, and other parts of CICS are using the older Bundle content. This scenario could go undetected until the DFHRL0119 message is issued on a subsequent restart of CICS.

System action

The BUNDLE is created in the DISABLED state.

User response

Discard and reinstall the BUNDLE. Consider changing the process used for developing new versions of Bundles, for example by updating the bundle version number. Consider changing the process for deploying new versions of Bundles, for example by discarding the BUNDLE in CICS before the new version is copied to zFS.

DFHRL0126 I	*date time applid tranid* **The *{import	modifier}* of resource *resource_name* of type *type_name* for BUNDLE resource *bundle_name* has changed to *{enabled	disabled}* state.**

Explanation

The CICS resource lifecycle class, DFHRLRS, found that resource *resource_name* of type *type_name* has changed state.

The resource may have been installed, enabled, disabled or discarded. CICS refreshes the state of the BUNDLE resource intermittently, usually during an INQUIRE or BROWSE action against the BUNDLE. This message indicates that a state change has been detected. The change may have occurred at any point prior to this message being issued, and since the last time the BUNDLE state was refreshed.

System action

The state of the BUNDLE resource changes if the change to the bundle part resource affects the overall state of the Bundle. If this happens, message DFHRL0127 is issued.

For example, if the imported resource has been disabled, the BUNDLE resource will also be disabled. However, if the imported resource has been enabled, the BUNDLE resource will only become enabled if there are no other outstanding problems with the BUNDLE.

User response

None.

Module:
DFHRLRS

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. Value chosen from the following options:

   1=import,

   2=modifier

6. *resource_name*
7. *type_name*
8. *bundle_name*
9. Value chosen from the following options:

   1=enabled,

   2=disabled

Destination

CRLO

DFHRL0127 I	*date time applid tranid* **The state of BUNDLE** *bundle_name* **has changed to** *{enabled	disabled}* **state.**

Explanation

The CICS resource lifecycle bundle class, DFHRLPK, found that BUNDLE resource *bundle_name* has changed state.

CICS refreshes the state of the BUNDLE resource intermittently, usually during an INQUIRE or BROWSE action against the BUNDLE. The change may have occurred at any point prior to this message being issued, and since the last time the Bundle state was refreshed.

System action

CICS continues normally.

User response

Refer to any other messages that have been issued to understand why the state of the Bundle changed. Ths message will often be accompanied by message DFHRL0126, that can provide further information.

Module:

DFHRLRS

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*
5. *bundle_name*
6. Value chosen from the following options:

   1=enabled,

DFHRL0135 E *date time applid tranid* **The CICS resource lifecycle manager failed to associate** *{an entry point | a policy scope}* **for** *resource_type* **resource** *resource_name* **in BUNDLE** *bundle_name* **because**

CICS does not support platform *{entry points. | policy scopes.}*

Explanation

The CICS resource lifecycle manager failed to associate the resource *resource_name* in BUNDLE *bundle_name* because CICS does not support entry points or policy scopes deployed as part of a platform. This error could be caused by a user attempting to enable a platform definition (PLATDEF), where the platform includes a bundle containing either an entry point or a policy scope definition.

System action

The enable process ends and the resource is set to a failed state. Error processing continues.

User response

Consider removing the associated <modify> statement for the entry point or policy scope from the bundle manifest file. Alternatively, if the bundle has been included in a platform, consider removing the bundle from the platform. If the policy scope or entry point relates to an application, add the bundle to the application and then install the application into the platform.

DFHDPLOY

Destination

SYSPRINT

DFHRL2054 I   Setting bundle state to *targetstate*.

Explanation

The bundle is being set to the specified state.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2055 I   **Errors have occurred. Processing terminated.**

Explanation

DFHDPLOY is about to stop processing due to an earlier error.

System action

The DFHDPLOY batch utility stops processing.

User response

Examine the earlier messages in the DFHDPLOY log to determine the reason processing has been terminated.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2056 I   **CICS application definition for application *applicationname* has been removed.**

Explanation

The specified application definition has been removed successfully.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2057 S   **DFHDPLOY is unable to connect to CICSplex *CICSplexname*.**

Explanation

DFHDPLOY could not establish a connection to the specified CICSplex.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Check the maintenance point CMAS log to establish whether the specified CICSplex is valid and there are no reported errors. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2060 E   **The *commandname* command cannot complete because the version number for application *applicationname* contains non-numeric characters.**

Explanation

An invalid value has been specified for an application version. The version number for an application must be a numeric value in the form majorversion.minorversion.microversion.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the version number and run the command again.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2061 I   **Quiesce of tasks for application *applicationname* version *versionnumber* completed successfully.**

Explanation

DFHDPLOY queries the TASKASSC resource and waits for any tasks associated with the specified application to complete using the application context data.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2062 S   **Commands cannot be processed because a SET CICSPLEX command has not been issued.**

Explanation

The command cannot be processed because a SET CICSPLEX command has not been issued. The SET CICSPLEX command must be the first command in a DFHDPLOY script.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 12.

User response

Correct the DFHDPLOY script to ensure SET CICSPLEX is the first command issued.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2063 I   **No processing was completed. The application state is *currentstate*.**

Explanation

The application state cannot be changed because it is currently in DISCARDING or FAILED state.

System action

The DFHDPLOY batch utility continues to run.

User response

Examine the DFHDPLOY log, the CMAS log, and the CICS system log to determine why the application has reached the current state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2064 I   **The state of application *applicationname* version *versionnumber* is *currentstate* and availability is *currentavailability*.**

Explanation

This message shows the current state and availability of the application.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2066 E   **The *command name* command cannot complete because the bundle *bundle name* in scope *targetscope* cannot be found.**

Explanation

The requested command cannot complete because the specified bundle cannot be found. The bundle name may be incorrect or the bundle may have been removed by another process or user.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Specify the correct bundle name or examine the CICS system log to determine why the bundle was removed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2067 W   **Bundle *bundlename* did not reach *targetstate* state. The current state is *currentstate*.**

Explanation

The bundle could not reach the requested state.

System action

The DFHDPLOY batch utility continues to run.

User response

Check the DFHDPLOY log and the CICS system log to determine why the bundle did not reach the desired state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2068 I   **Waiting for *taskcount* tasks to complete for application *applicationname* version *versionnumber*.**

Explanation

This message gives the number of active tasks still being processed.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2069 W   **The bundle *bundlename* cannot be set to AVAILABLE because it contains no entry points.**

Explanation

The specified bundle could not be put into an AVAILABLE state because it does not have any entry points.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2070 E   **Unable to connect to CICSplex *CICSplexname* at version *versionnumber*. The CICSPlex SM API stub program does not support this.**

Explanation

The CMAS that DFHDPLOY has connected to does not support the specified version. This may be because DFHDPLOY is connecting using a higher CICS version than the CMAS.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2071 I   **Unable to connect to CICSplex *CICSplexname* at version *versionnumber*.**

Explanation

DFHDPLOY could not connect to the CICSplex because there was not a CMAS at the specified version available.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2072 E   **A security exception occurred while attempting to connect to CICSplex *CICSplexname*. Refer to message in the JOBLOG for further details.**

Explanation

The user ID running the DFHDPLOY job does not have the required authority to connect to the CICSplex.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2073 E   **Bundle definition *bundledefinitionname* cannot be created. Error code is *errorcode*.**

Explanation

DFHDPLOY has encountered an unexpected bundle creation error.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Look up the error code in the BUNDDEF table in the CICSPlex SM resource tables reference to determine the cause of the failure.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2074 W   **Application *application name* version *versionnumber* is unable to transition to *targetstate*.**

Explanation

The application was not able to transition to the specified state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Examine the CICS system log to determine why the application was not able to transition to the required state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2075 I   **CICS application definition for application *applicationname* version *versionnumber* does not exist.**

Explanation

During an UNDEPLOY command the application definition could not be found.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2076 I   **Bundle definition for bundle *bundlename* in resource group *resourcegroupname* does not exist in system *targetsystem*.**

Explanation

During an UNDEPLOY command the bundle could not be found in the specified system.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2077 I	Bundle *bundle name* has been discarded from scope *targetscope*.

Explanation

The specified bundle has been successfully discarded from the scope.

System action

The DFHDPLOY batch utility continues to run. Note: The script may hang if CSDGROUP has been specified and DFHDPLOY is waiting for a locked CSD to be released.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2078 I	Application *application name* version *version number* has been discarded from platform *targetplatform*.

Explanation

The specified application has been successfully discarded from the platform.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2079 E	Transition to state *targetstate* cannot complete because application *applicationname* version *versionnumber* on platform *targetplatform* cannot be found.

Explanation

The application could not be set to the specified state because it could not be found in the platform. It may have been removed by another process or user.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correctly specify an existing application or examine the CICS system log to determine the reason for the removal of the application.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2080 E	CSDGROUP and RESGROUP parameters are mutually exclusive.

Explanation

The CSDGROUP and RESGROUP parameters cannot be specified on a command at the same time.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 12.

User response

Remove either the CSDGROUP or RESGROUP parameter from the command.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2081 I   **Application *application name* version *version number* in platform *targetplatform* does not exist.**

Explanation

During an UNDEPLOY command the application could not be found in the specified platform.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2082 I   **Bundle *bundle name* in scope *targetscope* does not exist.**

Explanation

During an UNDEPLOY command the bundle could not be found in the specified scope.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2083 E   **Transition to state *target state* cannot complete because bundle *bundle name* in scope *targetscope* cannot be found.**

Explanation

The bundle could not be set to the specified state because it could not be found in the scope. It may have been removed by another process or user.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correctly specify an existing bundle or examine the CICS system log to determine the reason for the removal of the bundle.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2085 I   **DEPLOY command completed with warnings.**

Explanation

The DEPLOY command has completed but warning messages have been issued.

System action

The DFHDPLOY batch utility continues to run.

User response

Examine the DFHDPLOY log for further information on the warnings that were issued.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2086 I   **SET command completed with warnings.**

Explanation

The SET command has completed but warning messages have been issued.

System action

The DFHDPLOY batch utility continues to run.

User response

Examine the DFHDPLOY log for further information on the warnings that were issued.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2087 I   UNDEPLOY command completed with warnings.

Explanation

The UNDEPLOY command has completed but warning messages have been issued.

System action

The DFHDPLOY batch utility continues to run.

User response

Examine the DFHDPLOY log for further information on the warnings that were issued.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2088 E   Scope cannot be a CICSplex.

Explanation

The SCOPE parameter specified on the command cannot have a value of the same name as a CICSplex.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 12.

User response

Specify a value for SCOPE that relates to a specific region, or group of regions, within the CICSplex.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2089 E   Unable to connect to CICSplex*CICSplexname* at version*versionnumber*. The version is not supported in the CICSplex.

Explanation

The SET CICSPLEX command cannot complete because an active CMAS at the specified version is not participating in the management of the CICSplex.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2090 W   Application*applicationname* cannot be set to*targetstate* because it contains no entry points.

Explanation

The application could not be set to the given state because the application does not have any entry points.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2091 I   No active tasks found for application*applicationname* version*versionnumber*.

Explanation

All active tasks belonging to the specified application have now completed.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2092 I	Application*application name* version*version number* found on platform*targetplatform*.

Explanation

The application specified on the UNDEPLOY command was successfully found on the given platform.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2093 I	Bundle*bundle name* found in scope*targetscope*.

Explanation

The bundle specified on the UNDEPLOY command was successfully found within the given scope.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2094 I	Application operation*applicationoperationname* has*taskcount* tasks still to complete for application*applicationname* version*versionnumber*.

Explanation

The application still has active tasks to complete.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2095 E	Bundle*bundle name* in scope*targetscope* does not exist.

Explanation

The command cannot complete because the bundle could not be found in the scope specified on the command.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2096 E	Processing of application*applicationname* cannot continue because the

CICSPlex SM API has timed out the request.

Explanation

The time taken to process the request has exceeded the time specified by the TOBATCHREQ parameter on the CMAS processing the request.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2097 E   Processing of bundle*bundlename* cannot continue because the CICSPlex SM API has timed out the request.

Explanation

The time taken to process the request has exceeded the time specified by the TOBATCHREQ parameter on the CMAS processing the request.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2098 E   Unable to perform*commandname* command due to security restriction for the current userid.

Explanation

The command could not be processed because the user ID that is running DFHDPLOY does not have the correct level of authority.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2099 S   Unable to contact CMAS running this command. No further processing is possible.

Explanation

The CMAS that was processing the commands from DFHDPLOY is no longer active.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2100 S   An internal error has occurred. No further processing is possible.

Explanation

An internal CICSPlex SM API error has occurred.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact IBM support.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2101 E	**Bundle** *bundlename* **already has a definition on the CSD in CSD group** *CSDgroup*.

Explanation

A bundle of the same name as the BUNDLE parameter is currently defined to the CSD.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Either use a different name for the bundle or remove the existing bundle from the CSD.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2102 E	**Bundle** *bundlename* **cannot be deployed because the resource group name contains invalid characters.**

Explanation

The deployment cannot continue because the value specified by the RESGROUP parameter contains invalid characters.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the RESGROUP parameter value.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2105 E	**Bundle(***bundlename***) cannot be deployed to SCOPE(***scope***) as the bundle ID(***bundleID***) is already used by installed Bundle(***bundlename***).**

Explanation

The deployment cannot continue because the bundle ID specified is already in use.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the existing bundles installed in the scope or update the bundleID of the bundle being deployed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2106 E	**Bundle** *bundlename* **cannot be deployed because bundle directory** *bundledir* **does not exist.**

Explanation

The deployment cannot continue because the bundle directory specified by the BUNDDIR parameter does not exist.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Specify the correct bundle directory in the BUNDDIR parameter.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2107 E **Bundle** *bundle name* **cannot be deployed to scope** *targetscope* **because a bundle of the same name has already been installed.**

Explanation

The deployment cannot continue because a bundle of the same name is currently installed in the specified scope.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Either specify a new scope or remove the existing bundles from the currently specified scope.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2108 W **Bundle** *bundle name* **has been partially deployed to scope** *targetscope***. The first system where the bundle is already installed is** *systemname***.**

Explanation

The deploy cannot continue because the bundle could only be deployed to part of the specified scope as it is already installed in one or more systems.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Either specify a new scope or remove the existing bundle definitions from the current scope.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2109 I **Bundle** *bundlename* **in resource group** *resourcegroupname* **could not be found.**

Explanation

The bundle definition could not be removed because it does not exist.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2111 E **Unable to install the bundle** *bundle name* **to scope** *targetscope***. Response code:** *responsecode***. Reason code:** *reasoncode***.**

Explanation

An unexpected error has occurred when trying to install a bundle definition.

System action

The DFHDPLOY batch utility continues to run.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2112 I **Bundle definition for bundle** *bundlename* **in CSD group** *CSDgroupname* **does not exist in system** *targetsystem***.**

Explanation

The bundle definition could not be removed because it does not exist.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2113 I	BUNDLE definition *bundledefinitionname* version *versionnumber* in resource group *resourcegroupname* has been removed.

Explanation

The bundle definition has been removed successfully.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2114 I	Bundle definition for bundle *bundlename* in CSD group *CSDgroupname* has been removed from system *targetsystem*.

Explanation

The bundle definition has been removed.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2115 E	Bundle *bundlename* cannot be made AVAILABLE because it is currently DISABLED.

Explanation

The bundle cannot be made AVAILABLE because it is currently in a DISABLED state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Set the bundle to ENABLED before attempting to make it AVAILABLE.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2116 E	Bundle *bundle name* could not be installed into scope *targetscope*. There are no systems available in the scope.

Explanation

The bundle could not be installed into the scope specified by the SCOPE parameter because it does not contain any active CICS systems.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator or specify a different scope.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2117 W   Application *applicationname* cannot be set to *targetstate* because it contains no bundles.

Explanation

The state of the application cannot be changed because it does not contain any bundles.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2118 E   Bundle *bundlename* cannot be set to *targetstate* on one or more CICS regions because it contains UNUSABLE parts.

Explanation

The state of the bundle cannot be changed because there are parts of the bundle that are in an UNUSABLE state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

The bundle should be disabled and discarded.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2119 I   Connection to CMAS *CMASname* successful.

Explanation

DFHDPLOY has successfully connected to the CMAS specified by the CMAS parameter on the SET CICSPLEX command.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2120 S   DFHDPLOY is unable to connect to CMAS *CMASname* because an active CMAS at version *versionnumber* cannot be found.

Explanation

An active CMAS running at the specified CICS version could not be found.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 12.

User response

Contact your system administrator or specify a different CMAS.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2121 S   CMAS *CMASname* is a CICSplex and not a valid CMAS name.

Explanation

The value of the CMAS parameter on the SET CICSPLEX command is a CICSplex name and is not a valid CMAS name.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 12.

User response

Correct the value of the CMAS parameter.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2122 I   **Waiting for tasks associated with application *applicationname* version *versionnumber* to complete.**

Explanation

Waiting for tasks associated with the application to complete.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2123 E   **Bundle *bundlename* could not be defined on the CSD. There are no systems available in the scope.**

Explanation

The scope specified by the SCOPE parameter on the DEPLOY BUNDLE command does not contain any active CICS systems.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator or specify a different scope.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2124 W   **BUNDLE(*bundlename*) contains UNUSABLE parts.**

Explanation

Some resources defined in the bundle could not be created.

System action

Processing continues.

User response

Examine the bundle parts for the bundle and the CICS system logs to determine why some of the bundle is unusable.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2125 E   **SYSIN could not be read from the USS file at*filename*.**

Explanation

A valid DFHDPLOY script could not be found in USS at the location specified in the message.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 12.

User response

Specify a location on USS that contains a valid deploy script.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2126 E   **BUNDLE PHASEIN is not supported in CICSplex(*CICSplexname*).**

Explanation

A bundle PHASEIN was attempted at a CICS TS version of 5.2 or below. PHASEIN is only supported at CICS TS version 5.3

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Modify the DFHDPLOY script so that it does not attempt a PHASEIN at CICS TS 5.2 or below.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2127 I	**DFHDPLOY starting PHASEIN of BUNDLE(*bundlename*) in regions where bundle is ENABLED in SCOPE(*targetscope*).**

Explanation

A PHASEIN action is being performed on all enabled bundles in the scope.

System action

Processing continues.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2128 E	**DFHDPLOY cannot PHASEIN BUNDLE(*bundlename*) in SCOPE(*targetscope*), it is not enabled.**

Explanation

A PHASEIN could not be performed as the bundle is not enabled in any systems in the scope.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine why the bundle is not enabled and run the command again.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2129 I	**Bundle *bundlename* state is*state*on *count*CICS regions in SCOPE(*targetscope*).**

Explanation

This shows the number of bundles within a scope that are in a given state.

System action

Processing continues.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2130 I	**BUNDLE(*bundlename*) installed in *installcount*of*regioncount*in SCOPE(*targetscope*).**

Explanation

This shows the current number of systems in the scope that have installed the bundle.

System action

Processing continues.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2131 I   **Waiting for BUNDLE(*bundlename*) to be installed in active regions in SCOPE(*targetscope*).**

Explanation

DFHDPLOY is waiting for the bundle install action to complete.

System action

Processing continues.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2132 I   **Analyzing CICS regions and CSD attributes.**

Explanation

When the CSDGROUP parameter is specified in a DEPLOY BUNDLE script, DFHDPLOY analyzes all CICS regions specified by the SCOPE option and determines the minimum set of CSD groups which require a bundle definition added to them.

System action

Processing continues.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2136 S   **Internal API Error has occurred. Please contact IBM Support.**

Explanation

DFHDPLOY issued a CICSPlex SM API command which failed internally.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2137 E   **Action*actionname* is invalid for a*resource*.**

Explanation

The action specified on the command is not supported for the current resource.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the failing command with a valid resource and/or action.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2138 E   **Unable to perform*actionname* as*resource* is not available.**

Explanation

The resource is not in a state to allow the valid action to take place.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the state of the resource and resubmit the DFHDPLOY command.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2139 E **The SCOPE parameter has been specified on the command and it is not required.**

Explanation

The command entered specifies the SCOPE parameter and it is not required for this command.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Remove the STATE parameter from the command in the script and resubmit the DFHDPLOY job.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2140 I **PERFORM command completed successfully.**

Explanation

The PERFORM command has completed successfully.

System action

The DFHDPLOY batch utility continues to run.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2144 E **Unable to open USS file***filename* **. ERRNO=***errno* **ERRNOJR=***errnojr* **.**

Explanation

DFHDPLOY failed when attempting to access the named file. The returned error number and reason identify the type of failure.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine why DFHDPLOY failed using information from the zOS Knowledge Center. Resolve the issue, then resubmit the DFHDPLOY script.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2148 E **Unable to find** *resource* **(***resourcename* **) in SCOPE (***scope* **).**

Explanation

DFHDPLOY could not find the named resource of the specified type in any active region within the scope.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine if the resource name, type, and scope are correct and resubmit the DFHDPLOY job.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2149 E *command resource* **(***resourcename* **)***actionname* **failed in region (***region* **) . CICS returned RESP(***resp* **) RESP2(***resp2* **).**

Explanation

DFHDPLOY attempted to perform the named action against the resource in the region specified and it failed. The RESP and RESP2 values returned are shown.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the Knowledge Centre and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2150 S   **The CICSPlex SM API sub task is not active.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2151 S   **The connected CMAS is not available for API processing.**

Explanation

DFHDPLOY connected to the CMAS and failed to complete API processing as expected.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the joblog of the connecting CMAS for more error information and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2152 S   **The CMAS is not available for API connect processing.**

Explanation

DFHDPLOY attempted to connect to the CMAS and it was not available.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the joblog of the connecting CMAS for more error information and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2153 S   **No CICSPlex SM systems are available to connect to.**

Explanation

DFHDPLOY attempted to connect to CICSPlex SM and no systems are available.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICSPlex SM systems availability on the LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2154 S   **The CONNECT process failed with reason of *reas*.**

Explanation

DFHDPLOY attempted to connect to the CMAS and an unknown error reason has been returned.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your IBM support center..

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2155 S   **Unable to CONNECT at Version** *version* **.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2156 S   **The API control subtask is not active, unable to continue processing.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2157 S   **The CMAS is not available for API processing.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2158 S   **The CMAS to which the processing thread is currently connected does not participate in managing the specified CICSplex and no other CMAS is available that does manage the CICSplex.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2159 S   **Unable to CONNECT, the API stub program could not load the API service module.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2160 S   **Unable to CONNECT, the API stub program could not obtain storage.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2161 S   **Unable to CONNECT, a required resource that is owned by the CMAS is not available.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2162 S   **Unable to CONNECT, command processing abended.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2163 S   **Unable to CONNECT, command processing encountered an exceptional condition.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2164 S	**Unable to CONNECT, an invalid parameter was detected. The parameter that is invalid is** *parameter* **.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2165 S	**Unable to CONNECT, the connected CMAS is no longer active.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2166 S	**Unable to CONNECT, the version of the API stub program is not supported.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2167 S	**Unable to CONNECT, the version of the API stub program has changed.**

Explanation

DFHDPLOY attempted to connect to the CICSPlex SM API and it failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the error condition from the CMAS joblog on the same LPAR and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2168 E   **SET PROGRAM(*programname*) PHASEIN failed in region(*region*). Program not foundor Program autoinstall is not active.**

Explanation

DFHDPLOY attempted to PHASEIN a program which is not found in the region.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine why the program was not found and take appropriate action before resubmitting the DFHDPLOY JCL.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2169 I   **SET*resource* (*resourcename*)*action* was skipped in region(*region*). PROGRAM autoinstall is active.**

Explanation

DFHDPLOY attempted to perform the action against the resource specified and it was skipped due to program autoinstall being enabled in the region.

System action

The DFHDPLOY batch utility continues processing and issues a return code of 4.

User response

Determine that the action is expected for the resource identified.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2170 I   **SET*resource* (*resourcename*)*action* was successful in region(*region*).**

Explanation

DFHDPLOY successfully performed the identified action against the specified resource in the region.

System action

The DFHDPLOY batch utility continues.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2171 I   **SET PROGRAM (*programname*) PHASEIN failed in region(*region*). Program is REMOTE.**

Explanation

DFHDPLOY attempted to PHASEIN a program which is installed as REMOTE.

System action

The DFHDPLOY batch utility continues processing and issues a return code of 4.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2200 E   **An internal error has occurred. No further processing is possible.**

Explanation

An internal CICSPlex SM API error has occurred during Application definition FEEDBACK processing.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact IBM support.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2201 E	**Unable to install Application** *applicationname*. **It is already installed.**

Explanation

An application with the same name as the value specified by the APPLICATION parameter is currently installed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Either remove the existing application, or specify a different value for the APPLICATION parameter, and run the command again.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2202 E	**Invalid resource type.**

Explanation

The resource type associated with the Application definition is invalid.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the CICS Knowledge Center. If you are unable to solve the problem, contact your IBM support center.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2203 E	**Unable to install Application** *applicationname*. **CICS application definition not found.**

Explanation

Another user or process has removed the application definition being used by the current command.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Check the CICS system log to determine the reason for the removal and if necessary run the command again.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2204 E	**Unable to install Application** *applicationname*. **Attribute data invalid.**

Explanation

An attribute in either the command, application bundle, or application binding contains an invalid value.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the DFHDPLOY and CICS system logs to determine which value is invalid and correct it.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2205 E   **Unable to install Application** *applicationname*. **CICSplex not found.**

Explanation

The CICSplex which manages the platform on which the application is being installed is not available.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2206 E   **Unable to install Application** *applicationname*. **Invalid application record.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2207 E   **Unable to install Application** *applicationname*. **Invalid application action.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2208 E   **Unable to install Application** *applicationname*. **Invalid CICS application definition name.**

Explanation

The value specified in the APPLICATION parameter is invalid.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the value specified in the APPLICATION parameter.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2209 E   **Unable to install Application** *applicationname*. **CICS bundles were not installed in some regions.**

Explanation

The command cannot complete because some of the bundles in the application could not be installed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why some of the bundles have not been installed.

Module:
DFHDPLOY

Destination

SYSPRINT

**DFHRL2210 E   Unable to install Application
applicationname. CICS Bundles
were not installed in any regions.**

Explanation

The command cannot complete because the bundles in the application could not be installed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why the bundles have not been installed.

Module:
DFHDPLOY

Destination

SYSPRINT

**DFHRL2211 E   Unable to install Application
applicationname. User ID not
authorized to access zFS file.**

Explanation

The user ID running DFHDPLOY does not have the correct authority to access a file specified by either the APPLDIR or BINDDIR parameter.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

**DFHRL2212 E   Application or binding bundle file
not found.**

Explanation

A valid file could not be found in the directory specified by the APPLDIR or BINDDIR parameter.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Ensure the APPLDIR and BINDDIR parameters are pointing at valid application and application bindings.

Module:
DFHDPLOY

Destination

SYSPRINT

**DFHRL2213 E   Unable to install Application
applicationname. Invalid XML in
application or binding bundle.**

Explanation

The application bundle specified by the APPLDIR parameter or the application binding specified by the BINDDIR parameter is invalid.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Ensure the APPLDIR and BINDDIR parameters are pointing at valid application and application bindings.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2214 E　　**Platform *targetplatform* not found.**

Explanation

The platform specified in the application binding is not currently installed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Ensure the platform is installed or correct the platform name in the application binding.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2215 E　　**Unable to install Application *applicationname*. Invalid resource type.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2216 E　　**Unable to install Application *applicationname*. Invalid platform definition name.**

Explanation

The value of the PLATFORM parameter of the command contains an invalid value.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the value of the PLATFORM parameter.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2217 E　　**Unable to install Application *applicationname*. Invalid major version.**

Explanation

The major version specified in the application bundle or VERSION parameter contains an invalid value.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the major version number in the application bundle or VERSION parameter.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2218 E　　**Unable to install Application *applicationname*. Invalid minor version.**

Explanation

The minor version specified in the application bundle or VERSION parameter contains an invalid value.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the minor version number in the application bundle or VERSION parameter.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2219 E	Unable to install Application *applicationname*. Invalid micro version.

Explanation

The micro version specified in the application bundle or VERSION parameter contains an invalid value.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the micro version number in the application bundle or VERSION parameter.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2220 E	Unable to install Application *applicationname*. CICS application definition and application versions differ.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2221 E	CICS application definition *applicationdefinitionname* already exists. Command cannot continue.

Explanation

The command cannot complete because an application of the same name already exists.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Run the command again using a different application name or remove the existing application definition.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2222 E	Unable to install Application *applicationname*. A region type in the binding could not be found.

Explanation

A region type could not be found in the application binding.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the error in the application bundle or the application binding and run the command again.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2223 E	Unable to install Application *applicationname*. Resource definition already changed.

Explanation

Another user has modified the application definition before the current changes to the definition have been committed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the changes to the application definition and, if appropriate, run the command again.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2224 E	Unable to install Application *applicationname*. Install failed.

Explanation

The command cannot complete because the application could not be installed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine the reason the application install failed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2225 E	Unable to install Application *applicationname*. The application is busy for another action.

Explanation

The command cannot complete because the application is currently processing another action.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Run the command again once the application finishes processing the current action.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2250 E	An internal error has occurred. No further processing is possible.

Explanation

An internal CICSPlex SM API error has occurred during Application FEEDBACK processing.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact IBM support.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2251 E	Application *applicationname* not found.

Explanation

The command cannot complete because another process has removed the application before the command completed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine the reason the application was removed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2252 E   Unable to disable Application *applicationname*. CICS bundles were not disabled in some regions.

Explanation

The command cannot complete because some bundles in the application are not in a disabled state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why some bundles are not in a disabled state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2253 E   Unable to discard Application *applicationname*. CICS bundles were not discarded in some regions.

Explanation

The command cannot complete because some bundles in the application were not discarded.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why some bundles were not discarded.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2254 E   Unable to discard Application *applicationname*. CICS bundles were not discarded in any regions.

Explanation

The command cannot complete because no bundles in the application could be discarded.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why no bundles were discarded.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2255 E   Unable to enable Application *applicationname*. CICS bundles were not enabled in some regions.

Explanation

The command cannot complete because some bundles in the application are not in an enabled state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why some bundles are not in an enabled state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2256 E   **Unable to enable Application**
applicationname. **CICS bundles**
were not enabled in any regions.

Explanation

The command cannot complete because no bundles in
the application are in an enabled state.

System action

The DFHDPLOY batch utility stops processing and
issues a return code of 8.

User response

Review the CICS system log to determine why no
bundles are in an enabled state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2257 E   **Unable to disable Application**
applicationname. **CICS bundles**
were not disabled in any regions.

Explanation

The command cannot complete because no bundles in
the application are in a disabled state.

System action

The DFHDPLOY batch utility stops processing and
issues a return code of 8.

User response

Review the CICS system log to determine why no
bundles are in a disabled state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2258 E   **Application** *application name*
cannot change state to
applicationstate. **The application**

status is changing due to another
action or event.

Explanation

The application is currently changing its state due to
the actions of another action or event.

System action

The DFHDPLOY batch utility stops processing and
issues a return code of 8.

User response

Run the command again once the application has
finished changing state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2259 E   **Performing action** *action* **on**
Application *applicationname* **has**
encountered an error. The
application is not in a DISABLED
state.

Explanation

The command cannot complete because the
application is not currently in a disabled state.

System action

The DFHDPLOY batch utility stops processing and
issues a return code of 8.

User response

Review the DFHDPLOY and CICS system logs to
determine why the application is not in a disabled
state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2260 E   **Performing action** *action* **on**
Application *applicationname* **has**
encountered an error. Application
is busy processing another action.

Explanation

The command cannot complete because the application is currently processing another action.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Run the command again once the application finishes processing the current action.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2261 E	**Performing action *action* on Application *applicationname* has encountered an error. CICS bundles were not made available in any regions.**

Explanation

The command cannot complete because no bundles in the application are in an available state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why no bundles are in an available state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2262 E	**Performing action *action* on Application *applicationname* has encountered an error. CICS bundles were not made available in some regions.**

Explanation

The command cannot complete because some bundles in the application are not in an available state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why some bundles are not in an available state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2263 E	**Performing action *action* on Application *applicationname* has encountered an error. CICS bundles were not made unavailable in any regions.**

Explanation

The command cannot complete because no bundles in the application are in an unavailable state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why no bundles are in an unavailable state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2264 E	**Performing action *action* on Application *applicationname* has encountered an error. CICS bundles were not made unavailable in some regions.**

Explanation

The command cannot complete because some bundles in the application are not in an unavailable state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system log to determine why some bundles are not in an unavailable state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2265 E   **Performing action *action* on Application *applicationname* has encountered an error. The application is still available.**

Explanation

The command cannot complete because the application is not currently in an unavailable state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the DFHDPLOY and CICS system logs to determine why the application is not in an unavailable state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2266 E   **Performing action *action* on Application *applicationname* has encountered an error. The application is not in an ENABLED state.**

Explanation

The command cannot complete because the application is not currently in an enabled state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the DFHDPLOY and CICS system logs to determine why the application is not in an enabled state.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2300 E   **Bundle *bundlename* cannot be deployed. The reason for the failure could not be determined.**

Explanation

The bundle could not be deployed, but at the time of failure it was not possible to determine the cause of the failure.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the CICS system logs to determine the cause of the failure.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2301 E   **Bundle *bundlename* cannot be deployed because the following attributes contain invalid characters: *invalidattributes*.**

Explanation

One or more parameters specified on the command contain invalid characters.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the parameters that contain invalid characters and run the command again.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2302 E   **Unable to install Bundle** *bundlename*. **The bundle definition was not found.**

Explanation

Another user or process has deleted the bundle before the command has finished.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the cause of the bundle removal and run the command again.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2304 E   **Unable to install Bundle** *bundlename*. **A bundle with the same name already exists.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2305 E   **Unable to install Bundle** *bundlename*. **The definition has been changed by another process.**

Explanation

Another user has modified the bundle definition before the current changes to the definition have been committed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the changes to the bundle definition and, if appropriate, run the command again.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2306 E   **Unable to install Bundle** *bundlename*. **Invalid resource type.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2307 E   **Unable to install Bundle** *bundlename*. **The definition version limit has been reached.**

Explanation

A maximum of 15 bundle definitions of the same name can be defined. This limit has been reached and further bundle definitions of the same name cannot be created.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine why there is more than one bundle of the same name defined. Either delete existing bundles or use a different name for the bundle you wish to deploy.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2308 E　　**Unable to install Bundle**
　　　　　　　　bundlename. The bundle name
　　　　　　　　contains invalid characters.

Explanation

The bundle name contains one or more invalid characters.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the bundle name and run the command again.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2311 E　　**Unable to install Bundle**
　　　　　　　　bundlename. The Maintenance
　　　　　　　　point CMAS is not available.

Explanation

The maintenance point CMAS responsible for managing the CICSplex is not active or cannot be contacted.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your System Administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2312 E　　**Unable to install Bundle**
　　　　　　　　bundlename. Context not found.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2313 E　　**Unable to install Bundle**
　　　　　　　　bundlename. Inconsistent set
　　　　　　　　condition.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance

from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2314 E   Unable to install Bundle *bundlename*. **Resource group not found.**

Explanation

The resource group specified in the RESGROUP parameter has been deleted before DFHDPLOY can add the Bundle definition to it..

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Resubmit the DFHDPLOY script to recreate the resource group.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2321 E   Unable to install Bundle *bundlename*. **Invalid action.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2322 E   Unable to install Bundle *bundlename*. **Invalid record address.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2323 E   Unable to install Bundle *bundlename*. **Invalid record length.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2324 E   **Deployment of bundle *bundlename* cannot continue because a bundle of the same name is already associated with resource group *resourcegroupname*.**

Explanation

The resource group specified on the DEPLOY BUNDLE command already contains a bundle with a name that matches the one specified on the command.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the reason why a bundle with a matching name already exists in the resource group. Either remove the existing bundle, specify a different resource group, or change the name of the bundle specified on the command.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2325 E   **Unable to install Bundle *bundlename*. Early name list end.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2326 E   **Unable to install Bundle *bundlename*. Invalid name list.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2327 E   **Unable to install Bundle *bundlename*. Invalid bundle name.**

Explanation

The command has failed because the bundle name contains invalid characters.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review and correct the bundle name.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2328 E   **Unable to install Bundle *bundlename*. Invalid minor name.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2329 E	**Unable to install Bundle** *bundlename*. **Notify.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2330 E	**Bundle** *bundlename* **is only partially installed.**

Explanation

Some of the resources contained in the bundle could not be installed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the DFHDPLOY and CICS system logs to determine the cause of the failure.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2331 E	**Bundle** *bundlename* **did not install any resources.**

Explanation

None of the resources contained in the bundle could be installed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the DFHDPLOY and CICS system logs to determine the cause of the failure.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2332 E	**Unable to install Bundle** *bundlename*. **No targets.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2333 E   **Unable to install Bundle**
                    ***bundlename*. No related systems.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2334 E   **The SCOPE *scopename* is
                    invalid or cannot be found in
                    CICSPLEX(*CICSplexname*).**

Explanation

The specified scope is either invalid or cannot be found.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Correct the scope and rerun the DFHDPLOY script. If the problem persists, refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2335 E   **Unable to install Bundle**
                    ***bundlename*. Invalid related
                    scope.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2336 E   **Unable to install Bundle**
                    ***bundlename*. Invalid usage.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2337 E   **Unable to install Bundle**
                    ***bundlename*. Invalid mode.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2338 E   **Unable to install Bundle**
bundlename. Invalid state check.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2339 E   **Unable to install Bundle**
bundlename. Invalid force install.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2340 E   **Unable to install Bundle**
bundlename. Invalid notify.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2341 E   **Unable to install Bundle**
bundlename. Invalid over type.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2342 E   **Unable to install Bundle** *bundlename*. **Invalid override block.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2343 E   **Unable to install Bundle** *bundlename*. **Invalid override string.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance

from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2344 E   **Unable to install Bundle** *bundlename*. **Invalid string term.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2345 E   **Unable to install Bundle** *bundlename*. **Invalid embedded terminator.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2346 E   **Unable to install Bundle**
                    ***bundlename*. Invalid attribute.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2347 E   **Unable to install Bundle**
                    ***bundlename*. Invalid literal.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2348 E   **Unable to install Bundle**
                    ***bundlename*. Invalid override**
                    string.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2349 E   **Unable to install Bundle**
                    ***bundlename*. Scope required.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2350 E   **Unable to install Bundle**
                    ***bundlename*. Usage conflict.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2351 E	Unable to install Bundle *bundlename*. No definitions selected.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2352 E	Unable to install Bundle *bundlename*. More than one related system.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2353 E	Unable to install Bundle *bundlename*. Missing related system identifier.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2354 E	Unable to install Bundle *bundlename*. Scope conflict.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2355 E   **Unable to install Bundle** *bundlename*. **Bundle name is invalid, the bundle already exists, or the CSD is read only.**

Explanation

The command has failed because either the bundle name contains invalid characters, a bundle of the same name already exists, or the CSD has been set to read only.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Review the bundle name and the CICS system to determine the cause of the failure.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2356 E   **Bundle** *bundlename* **cannot be deployed because the CSDGROUP name contains invalid characters.**

Explanation

The value specified in the CSDGROUP parameter contains invalid characters.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Specify a value for the CSDGROUP parameter that does not contain invalid characters.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2357 E   **Processing of Bundle** *bundlename***cannot continue. The bundle definition could not be removed.**

Explanation

The bundle definition record could not be removed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Check the CICS system log to determine the cause of the failure. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2358 E   **Unable to install Bundle** *bundlename*. **Invalid resource.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2359 E   **Unable to install Bundle**
bundlename. Invalid CICS restype.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2360 E   **Unable to install Bundle**
bundlename. Partial action.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2361 E   **Unable to install Bundle**
bundlename. Nothing actioned.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2362 E   **Unable to install Bundle**
bundlename. TO_CSDGROUP and
AS_RESOURCE are mutually
exclusive.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2363 E   **Unable to install Bundle**
bundlename. Either TO_CSDGROUP
or AS_RESOURCE is required.

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2364 E	**Bundle *bundlename* cannot be deployed because an error has occurred when trying to access the CSD.**

Explanation

DFHDPLOY was attempting to create a bundle definition on the CSD when it encountered an error.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Examine the CICS system log to determine the reason CSD access has failed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2400 E	**Processing did not occur. The reason for the failure could not be determined.**

Explanation

An internal CICSPlex SM API error has occurred during Bundle FEEDBACK processing.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact IBM support.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2404 E	**Processing of Bundle *bundlename* cannot continue. An invalid CVDA value was specified for ENABLESTATUS.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2406 E	**Performing action *action* on Bundle *bundle name* has encountered an error. The bundle is in an invalid state.**

Explanation

The bundle cannot be set to ENABLED or DISABLED because it is in an invalid state. This may be because the bundle does not contain any resources.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Check the current state of the bundle and the CICS system log to determine the cause of the failure. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2407 E	Processing of Bundle *bundlename* cannot continue. CICS failed to link to the registered bundle callback program.

Explanation

The bundle uses a callback program to manage the creation of a user-defined resource type. The bundle SET process failed to link to the program registered in the bundle.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the state of the callback program or correct the registered program in the bundle.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2409 E	Processing of Bundle *bundlename* cannot continue. The bundle resource cannot be enabled.

Explanation

The status of the bundle could not be set to ENABLED.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Check the CICS system log for additional diagnostic information. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2410 E	>Performing action *action* on Bundle *bundle name* has encountered an error. The bundle contains no entry points.

Explanation

The availability status of a bundle can only be set when the bundle contains an entry point. A bundle that does not have an entry point will have an availability status of NONE.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2411 E	Bundle *bundlename* could not be made available because the bundle is not enabled.

Explanation

If a bundle does not have a status of ENABLED it cannot be made available. The bundle must first be set to ENABLED before it can be made available.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Ensure the bundle has been ENABLED before attempting to make it available.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2412 E   **Processing of Bundle *bundlename* cannot continue. The availability of the bundle cannot be set..**

Explanation

The availability status of the bundle could not be set.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Check the CICS system log for additional diagnostic information. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2413 E   **Bundle *bundlename* could not be disabled as the bundle is currently available.**

Explanation

If a bundle does not have an availability status of UNAVAILABLE or NONE it cannot be disabled. The bundle must first be made UNAVAILABLE before it can be disabled.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Ensure the bundle has been made UNAVAILABLE before attempting to disable it.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2414 E   **Processing of Bundle *bundlename* cannot continue. An invalid CVDA value was specified for AVAILSTATUS.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2415 E   **Processing of Bundle *bundlename* cannot continue. Both ENABLESTATUS and AVAILSTATUS were specified on the command.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2416 E   **DFHDPLOY cannot PHASEIN Bundle *bundlename* in all requested regions. It is not enabled in all active regions of SCOPE *scope*.**

Explanation

An attempt was made to PHASEIN a bundle, but the bundle was not enabled in all regions that were part of the specified scope. The bundle must be in an ENABLED state, or PHASEIN fails.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8. The PHASEIN command has been issued to all regions in the requested SCOPE, but no further commands will be issued.

User response

Make sure the bundle has been installed into active CICS region in the scope before attempting the PHASEIN.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2417 E   **Processing of Bundle *bundlename* cannot continue. Both COPY and AVAILSTATUS or ENABLESTATUS specified on the same command.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

DFHDPLOY

Destination

SYSPRINT

DFHRL2418 E   **Processing of Bundle *bundlename* cannot continue. An invalid CVDA value was specified for COPY.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2419 E   **Processing of Bundle *bundlename* cannot continue. The COPY option is not allowed as the bundle is part of an installed platform or application.**

Explanation

An internal error has occured in DFHDPLOY.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2420 E   **The PHASEIN of Bundle *bundlename* cannot continue. The CICS bundle contains no OSGi bundle references.**

Explanation

A PHASEIN command has been issued against a bundle that does not contain any OSGi bundle references. PHASEIN can only be issued against OSGi bundles.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2421 E   **The PHASEIN of Bundle *bundlename* has failed.**

Explanation

A PHASEIN command has been issued against a bundle and has failed.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2430 E   **Processing did not occur. The reason for the failure could not be determined.**

Explanation

An internal CICSPlex SM API error has occurred during DISCARD Bundle FEEDBACK processing.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact IBM support.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2435 E   **Unable to discard Bundle *bundlename*. The bundle is not disabled.**

Explanation

Bundles can only be discarded if they are in a DISABLED state. The bundle is not currently in a disabled state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Ensure the bundle is in a DISABLED state before attempting to discard it.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2436 E   **Unable to discard Bundle *bundlename*. The bundle is not disabled.**

Explanation

Bundles can only be discarded if they are in a DISABLED state. The bundle is not currently in a DISABLED state.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Ensure the bundle is in a disabled state before attemnpting to discard it.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2437 E   **Processing of Bundle *bundlename* cannot continue. CICS failed to link to the registered bundle callback program.**

Explanation

The bundle uses a callback program to manage the creation of a user-defined resource type. The bundle install process failed to link to the program registered in the bundle.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Determine the state of the callback program or correct the registered program in the bundle.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2438 E   **Unable to discard Bundle *bundlename*. The bundle is part of an installed platform or application.**

Explanation

The bundle specified on the UNDEPLOY or SET command cannot be discarded because it was installed as part of a platform or application. Bundles that are installed as part of a platform or application can only be discarded by discarding the platform or application they belong to.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

None.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2450 E   **Unable to install Bundle *bundlename*. A bundle of the same name already exists.**

Explanation

The bundle could not be installed because a bundle of the same name currenly exists in the CICS system.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Select a different resource name which is not known to the system. Or, if you want to use the same resource name, you must discard the resource first. The resource may need to be disabled before it can be discarded or updated.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2451 E   **The resources in Bundle *bundlename* cannot be installed. The bundle manifest is invalid.**

Explanation

During the installation of the bundle CICS has detected that the manifest file in the META-INF directory of the bundle is not valid.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Provide a valid bundle in the path specified by the BUNDLEDIR parameter.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2452 E   **The resources in Bundle *bundlename* cannot be installed. The bundle has no manifest.**

Explanation

During the installation of the bundle CICS has detected that it does not contain a manifest file. The META-INF directory of the bundle should contain a valid cics.xml file.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Provide a valid bundle in the path specified by the BUNDLEDIR parameter.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2453 E   **Unable to install Bundle *bundlename*. An unexpected resource error occurred.**

Explanation

The installation of the bundle has failed and CICS has not been able to determine the cause.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Examine the CICS system log for the CICS system to try and determine the cause of the failure. If you need further assistance from IBM to resolve this problem,

see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2454 E   **Bundle *bundlename* could not install a resource, as a resource of the same name already exists.**

Explanation

The bundle specified on the DEPLOY BUNDLE command could not be installed because a bundle of the same name has already been installed on the system.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Select a different resource name which is not known to the system. Or, if you want to use the same resource name, you must discard the resource first. The resource may need to be disabled before it can be discarded or updated.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2455 E   **Processing of Bundle *bundlename* cannot continue. Unknown response code received**

Explanation

The DFHDPLOY batch utility has received an unknown response from CICS.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Refer to the DFHDPLOY troubleshooting page in the IBM Knowledge Center. If you need further assistance from IBM to resolve this problem, see Working with

IBM to solve your problem for guidance on how to proceed.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2456 E   **Processing of Bundle *bundlename* cannot continue. The CSD cannot be read.**

Explanation

You do not have the authority to read from the CSD.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2457 E   **Processing of Bundle *bundlename* cannot continue. The CSD is read only.**

Explanation

The CSD has been defined to allow read only access. It is not possible to create bundle resources on the CSD.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

COntact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2458 E   **Processing of Bundle *bundlename* cannot continue. The CSD is full.**

Explanation

The CSD data set cannot store additional bundle resources because it has reached its storage allocation limit.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2459 E   **Processing of Bundle *bundlename* cannot continue. The CSD is being used by another CICS system and is not configured for sharing.**

Explanation

The CSD is currently in use by another CICS system and the CSD has not been configured to allow access from multiple systems.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2460 E   **Processing of Bundle *bundlename* cannot continue. Insufficient VSAM strings (CSDSTRNO system initialization parameter value) are available to run the EXEC CICS CSD command.**

Explanation

The limit for the number of concurrent processes that can access the CSD has been reached.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Contact your system administrator.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2461 E   **BUNDLE** *bundlename* **cannot be deployed to SCOPE** *scope* **as a bundle of the same name already exists in CSDGROUP** *csdgroup* **on System** *systemname***.**

Explanation

A bundle with the same name as specified on the DEPLOY BUNDLE command already exists in the group specified by the CSDGROUP parameter.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Use a different bundle name or group name.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2462 E   **Processing of Bundle** *bundlename* **cannot continue. The specified group did not exist but because a list of the same name is already present in the CSD, the group could not be created.**

DFHRMnnnn messages

DFHRM0001   *applid* **An abend (code** *code***) has occurred at offset** *X'offset'* **in module** *module***.**

Explanation

The CSDGROUP value specified on the DEPLOY BUNDLE command is the same as the name of a LIST on the CSD. A CSD GROUP cannot have the same name as a CSD LIST.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Use a CSDGROUP name that is not the same as an existing list name.

Module:
DFHDPLOY

Destination

SYSPRINT

DFHRL2463 E   **Processing of Bundle** *bundlename* **cannot continue. The GROUP option contains one or more characters that are not valid.**

Explanation

The RESGROUP or CSDGROUP attribute specified on the DEPLOY BUNDLE or UNDEPLOY BUNDLE command contains an invalid value.

System action

The DFHDPLOY batch utility stops processing and issues a return code of 8.

User response

Update the GROUP value to use valid characters only.

Module:
DFHDPLOY

Destination

SYSPRINT

Explanation

An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was

executing at offset X'*offset*' in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System action

A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

If you cannot resolve the problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

XMEOUT parameters/Message inserts

1. *applid*
2. *code*
3. *X'offset'*
4. *module*

Destination

Console

DFHRM0002　　　*APPLID* **A severe error (code X'code') has occurred in module module.**

Explanation

The recovery manager domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code X'*code*'.

For further information about CICS exception trace entries, refer to the Troubleshooting and support.

System action

A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed.

DFHRM0104	*date time applid* **Intersystem communication failure. Resource updates are being committed. Local resources may be out of sync with those on the remote system. Failure date** *mm/dd/yy* **failure time** *hh:mm:ss* **remote system** *name* **transaction** *tranid* **task number** *trannum* **terminal** *termid* **user** *userid* **network UOW** *netuowid* **local UOW** *X'localuowid'.*

Explanation

Communication with the remote system has been interrupted. The remote system contains the coordinator of this unit of work and the notification of the outcome of the distributed unit of work has not been received.

The unit of work is unilaterally committing the local resource updates rather than waiting for the return of the coordinator system. The unit of work may not shunt for one of the following reasons:

- The transaction definition specifies WAIT(NO).

- The unit of work includes an MRO session to a back-level CICS system which does not support the WAIT(YES) option, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work includes an LU6.1 session, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work involves a task related user exit which is not enabled with the INDOUBTWAIT option.
- The unit of work has updated a recoverable transient data destination, which is defined with WAIT(NO).
- The unit of work involves the installation of CICS resource definitions from the CSD (CICS system definition) file.

Even if the unit of work was shunted, one of the following reasons will cause it to take unilateral action:

- The WAITTIME specified in the transaction definition has expired.
- Resynchronization has been preempted by either:
  - Setting the connection with the remote system NOTPENDING.
  - Setting the connection with the remote system NORECOVDATA.
  - The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
  - Forcing the unit of work.

The local resource updates are being committed since either

- The unit of work has been explicitly forced to commit.
- The ACTION attribute of the definition of the locally executing transaction specified COMMIT.

One system may have committed its resource updates and the other backed out, leaving updates out of synchronization. This is checked for when communication is re-established, and one of the following messages is issued:

```
DFHRM0110
DFHRM0111
DFHRM0112
DFHRM0113
DFHRM0114
DFHRM0115
DFHRM0116
DFHRM0117
DFHRM0118
DFHRM0119
DFHRM0120
DFHRM0121
```

DFHRM0122
DFHRM0123

The original failure information provides correlation between this message and its follow-up.

System action

The system commits the local resource updates and releases the locks associated with those updates.

User response

Take user-defined action, if any, to protect data integrity until the remote and the local data can be synchronized.

Explanation

Communication with the remote system has been interrupted. The remote system contains the coordinator of this unit of work and the notification of the outcome of the distributed unit of work has not been received.

The unit of work is unilaterally backing out the local resource updates rather than waiting for the return of the coordinator system. The unit of work may not shunt for one of the following reasons:

- The transaction definition specifies WAIT(NO).
- The unit of work includes an MRO session to a back-level CICS system which does not support the WAIT(YES) option, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work includes an LU6.1 session, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work involves a task related user exit which is not enabled with the INDOUBTWAIT option.
- The unit of work has updated a recoverable transient data destination, which is defined with WAIT(NO).
- The unit of work involves the installation of CICS resource definitions from the CSD (CICS system definition) file.

Even if the unit of work was shunted, one of the following reasons will cause it to take unilateral action:

- The WAITTIME specified in the transaction definition has expired.
- Resynchronization has been preempted by either:
  - Setting the connection with the remote system NOTPENDING.
  - Setting the connection with the remote system NORECOVDATA.
  - The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
  - Forcing the unit of work.

The local resource updates are being backed out since either

- The unit of work has been explicitly forced to backout.
- The ACTION attribute of the definition of the locally executing transaction specified BACKOUT.

One system might have committed its resource updates and the other backed out, leaving updates out of synchronization. This is checked for when communication is re-established, and one of the following messages is issued:

DFHRM0110
DFHRM0111
DFHRM0112

DFHRM0113

5. *hh:mm:ss*
6. *name*
7. *tranid*
8. *trannum*
9. *termid*
10. *userid*
11. *netuowid*
12. *X'localuowid'*

Destination

CSMT

DFHRM0106   *date time applid* **Intersystem communication failure. Resource updates will not be committed or backed out until session recovery. Failure date *mm/dd/yy* failure time *hh:mm:ss* remote system**

name **transaction** *tranid* **task number** *trannum* **terminal** *termid* **user** *userid* **network UOW** *netuowid* **local UOW** *X'localuowid'*.

Explanation

Communication with the remote system has been interrupted. The remote system that contains the coordinator of this unit of work failed and the notification of the outcome of the distributed unit of work has not been received. The definition of the locally executing transaction specifies WAIT(YES) so the local resource updates are being held locked. When communication with the remote system is re-established, the resource updates will be committed or backed out, according to the actions of the other system, and one of the following messages is issued:

DFHRM0108
DFHRM0109
DFHRM0112
DFHRM0113
DFHRM0115
DFHRM0116
DFHRM0118
DFHRM0119
DFHRM0121
DFHRM0122

If the time specified by the WAITTIME in the transaction definition of the locally executing transaction expires before communication is re-established then the resource updates are committed or backed out in accordance with the ACTION attribute and one of the following messages is issued:

DFHRM0104
DFHRM0105

If a decision to preempt resynchronization activity is taken at the local system by either:

- Setting the connection with the remote system NOTPENDING.
- Setting the connection with the remote system NORECOVDATA.
- The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
- Forcing the unit of work.

then again the resource updates are committed or backed out accordingly and one of the following messages is issued:

DFHRM0125
DFHRM0126

System action

Processing continues. Locks associated with the resource updates are preserved.

User response

Re-establish communication with the remote system as soon as possible.

Module:
DFHRMLSS

CSMT

DFHRM0107   *date time applid* **Intersystem communication failure. Resource updates may be out of sync. Failure date** *mm/dd/yy* **failure time** *hh:mm:ss* **remote system** *name* **transaction** *tranid* **task number** *trannum* **terminal** *termid* **user** *userid* **network UOW** *netuowid* **local UOW** *X'localuowid'.*

Explanation

Communication with a remote system has been interrupted. This may be due to the failure of a session to a remote system or the failure of a CFDT server system. The resource updates in the local system are committing or backing out. The notification of the outcome of the distributed unit of work might not reach the remote system or server. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. This is checked for at session or server recovery, and one of the following messages is issued:

DFHRM0110
DFHRM0111
DFHRM0114
DFHRM0117
DFHRM0120
DFHRM0123
DFHRM0135

If a decision to preempt resynchronization activity is taken at the local system by either:

- Setting the connection with the remote system NOTPENDING.
- Setting the connection with the remote system NORECOVDATA.
- The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
- Forcing the unit of work.

then again the resource updates are committed or backed out accordingly and DFHRM0127 is issued.

System action

The system commits or backs out the local resource updates and releases the locks associated with those updates. Information is retained to enable resynchronization with the remote system.

User response

Re-establish communication with the remote system as soon as possible.

Explanation

This is an informatory message issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system did not complete the synchronization point. The local resource updates are being backed out accordingly.

System action

The system backs out the local resource updates and releases the locks associated with those updates.

User response

If required, restart the interrupted transaction.

DFHRM0126   *DATE TIME APPLID* **Clear pending issued. The connection to the**

remote system has been set NOTPENDING. Resource updates will be backed out. Original failure date *mm/dd/yy* **failure time** *hh:mm:ss* **remote system** *name* **transaction** *tranid* **task number** *trannum* **terminal** *termid* **user** *userid* **network UOW** *netuowid* **local UOW** *X'localuowid'*.

Explanation

The connection with the remote system has been set NOTPENDING or NORECOVDATA, or the connection is defined with XLNACTION(FORCE). The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Setting the connection with the remote system NOTPENDING or NORECOVDATA preempts the notification of the outcome from the remote system. The definition of the locally executing transaction is used to decide whether to commit or back out the local resource updates. The local resource updates are backed out in accordance with the ACTION attribute in the transaction definition.

System action

The system backs out the local resource updates and releases the locks associated with those updates.

User response

Take user-defined action to resynchronize the resources in the local and remote systems.

Module:
DFHRMLN,DFHRMLK4,DFHRMLSO,DFHRMLSS

XMEOUT parameters/Message inserts

9. *termid*
10. *userid*
11. *netuowid*
12. *X'localuowid'*

Destination

CSMT

DFHRM0127	*DATE TIME APPLID* **Clear pending issued. The connection to the remote system has been set NOTPENDING. Original failure date** *mm/dd/yy* **failure time** *hh:mm:ss* **remote system** *name* **transaction** *tranid* **task number** *trannum* **terminal** *termid* **user** *userid* **network UOW** *netuowid* **local UOW** *X'localuowid'*.

Explanation

Communication between the systems had previously failed during a syncpoint. Resynchronization between the systems has been preempted. The connection with the remote system has been:

- Set NOTPENDING,
- Set NORECOVDATA,
- Reestablished and is defined with XLNACTION(FORCE).

If the unit of work in the local system was in-doubt about the outcome of the distributed unit of work, local resource updates are committed or backed out in accordance with the ACTION attribute in the transaction definition.

Since no resynchronization with the remote system is attempted, the resource updates in the local and remote systems might be out of synchronization.

System action

Processing continues.

User response

Take user-defined action to resynchronize the resources in the local and remote systems.

Module:
DFHRMLN,DFHRMLK4,DFHRMLSO,DFHRMLSS

XMEOUT parameters/Message inserts

1. *DATE*
2. *TIME*
3. *APPLID*
4. *mm/dd/yy*
5. *hh:mm:ss*
6. *name*
7. *tranid*
8. *trannum*
9. *termid*
10. *userid*
11. *netuowid*
12. *X'localuowid'*

Destination

CSMT

DFHRM0128	*date time applid* **Intersystem communication failure. Resource updates are being committed. Local resources may be out of sync with those on the remote system. Failure date** *mm/dd/yy* **failure time** *hh:mm:ss* **remote system** *name* **transaction** *tranid* **task number** *trannum* **terminal** *termid* **user** *userid* **network UOW** *netuowid* **local UOW** *X'localuowid'*.

Explanation

Communication with the remote system has failed. The resource updates in the local system are committing. The notification of the outcome of the distributed unit of work might not reach the remote system. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. There will be no resolution message when the local and remote systems resynchronize, because the remote system does not provide the local system with resynchronization information.

System action

The system commits the local resource updates and releases the locks associated with those updates. Information is retained to enable resynchronization with the remote system.

User response

Reestablish communication with the remote system as soon as possible. The local system is the coordinator, and will provide indoubt resolution information for the remote system when communication is reestablished. If the remote system has taken a heuristic decision regarding the unit of work, then it should have provided diagnostic information to indicate this.

Module:
DFHRMLSO

CSMT

DFHRM0129	*date time applid* **Intersystem communication failure. Resource updates are being backed out. Local resources may be out of sync with those on the remote system. Failure date** *mm/dd/yy* **failure time** *hh:mm:ss* **remote system** *name* **transaction** *tranid* **task number** *trannum* **terminal** *termid* **user** *userid* **network UOW** *netuowid* **local UOW** *X'localuowid'***.**

Explanation

Communication with the remote system has failed. The remote system in this case could be another CICS system or an external resource manager. This error can occur with external resource managers connected to CICS through the resource manager interface (RMI) as well as CICS systems connected through LU 6.2, MRO and IPIC.

The resource updates in the local system are backing out. The notification of the outcome of the distributed unit of work might not reach the remote system. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. There will be no resolution message when the local and remote systems resynchronize, because the remote system does not provide the local system with resynchronization information.

System action

The system backs out the local resource updates and releases the locks associated with those updates.

Information is retained to enable resynchronization with the remote system.

User response

Reestablish communication with the remote system as soon as possible. The local system is the coordinator, and will provide indoubt resolution information for the remote system when communication is reestablished. If the remote system has taken a heuristic decision regarding the unit of work, then it should have provided diagnostic information to indicate this.

Destination

CSMT

DFHRM0130	*applid* **Recovery manager has successfully quiesced.**

Explanation

The recovery manager has quiesced.

The warm keypoint has been taken.

System action

Shutdown continues.

User response

None.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHRM0131   *applid* **Resynchronization required with *protocol* resources.**

Explanation

This system contained unquiesed state when shutdown was performed. The state may consist of units of work or lognames (lognames can exist for communications protocols IPIC (ISCU), IRC (IRC), and APPC (LU62) only). This system may need to perform resynchronization with other systems to resolve the outcome of any distributed units of work. This can be done as part of the work of a subsequent CICS system.

The systems with which resynchronization is necessary are reported in messages DFHRM0132 or DFHRM0133.

A subsequent CICS start which reinitializes the catalog and system log data would discard the units of work and/or lognames and cause a possible loss of data integrity.

System action

Shutdown continues.

User response

To maintain data integrity, perform an AUTO start and enable resynchronization with the appropriate systems.

Module:
DFHRMNS2

XMEOUT parameters/Message inserts

1. *applid*
2. *protocol*

Destination

Console

DFHRM0132   *date time applid* **Resynchronization is required with *protocol* system *system*.**

Explanation

A unit of work active in the system at shutdown requires resynchronization with the named system. The unit of work was part of a distributed unit of work and resynchronization is necessary to resolve the outcome.

Resynchronization occurs after a subsequent start unless catalog and system log information is reinitialized.

System action

Shutdown continues.

User response

If necessary, take user-defined action to protect data integrity until the remote and the local data can be synchronized.

Module:
DFHRMLKQ, DFHRMNS2

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *protocol*
5. *system*

Destination

CSMT

DFHRM0133   *date time applid* **Resynchronization may be required with *protocol* system *system*.**

Explanation

This system exchanged lognames with the remote system and so may require resynchronization with that system.

Resynchronization occurs after a subsequent CICS start unless catalog or system log information is reinitialized.

System action

Shutdown continues.

User response

If necessary, take user-defined action to protect data integrity until resynchronization takes place.

Module:
DFHRMNS2

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *protocol*
5. *system*

Destination

CSMT

DFHRM0134	*applid* **Recovery manager domain failed reading the global catalog, or did not find its control record.**

Explanation

The recovery manager domain has failed while reading the global catalog. Either it was trying to establish the status of the system at the termination of the last execution of CICS and the control record was missing or invalid, or else it could not read the catalog successfully.

System action

CICS terminates abnormally with a dump.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Investigate the cause of the error using the dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, see the description of the CICS message already issued from the catalog for guidance.

If the problem has been caused by an invalid data length, see the exception trace entry in the trace table.

If the problem has been caused by a missing control record, the catalog is not suitable for a recoverable start and you should perform an initial start.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHRM0135	*date time applid* **Intersystem communication recovery. Resource updates found to be synchronized. Original failure date *mm/dd/yy* failure time *hh:mm:ss* remote system *name* transaction *tranid* task number *trannum* terminal *termid* user *userid* network UOW *netuowid* local UOW *X'localuowid'*.**

Explanation

Resynchronization with the remote system which is a subordinate in the unit of work has occurred following the resumption of communication, or the unshunting of the unit of work on the local system. Either the remote system had already taken a decision for its local resource updates in the distributed unit of work, or the remote system was waiting for the decision from this system. In either case, it has now been established that the resource updates in the local and remote systems are synchronized.

System action

Processing continues.

User response

None

11. *netuowid*

12. *X'localuowid'*

Destination

CSMT

DFHRM0136　　*applid* **The applid has changed from** *old_applid* **to** *new_applid***. Recovery cannot continue.**

Explanation

Recovery is requested, but the applid recovered by the recovery manager domain from the CICS catalog is different from that specified for the system. This implies that the identity of the system on the network has changed. The system must maintain the same identity on the network for resynchronization to be performed with other systems.

System action

The system is terminated.

User response

If recovery and resynchronization is required, correct the applid in the SIT and restart the system. Do not reinitialize catalog or system log information unless you wish to change the identity of the CICS system.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *applid*
2. *old_applid*
3. *new_applid*

Destination

Console

DFHRM0137　　*applid* **Recovery of local logname failed. Recovery cannot continue.**

Explanation

Recovery is requested, but the local logname could not be recovered by the Recovery Manager domain from the CICS catalog.

System action

The system is terminated.

User response

Investigate the possible causes of the failure to read the required data from the CICS catalog. Was the correct Catalog dataset being used? Could the Catalog dataset have been corrupted?

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHRM0139　　*date time applid* **UOWLINK deleted by user action. Destination

CSMT

DFHRM0140   *APPLID* **Recovery manager autostart override found with value: '*autofield*'.**

Explanation

Recovery manager has located an autostart override record in the global catalog data set which has one of the values AUTOINIT, AUTOCOLD, or AUTOASIS.

System action

The system continues. If this is an AUTO start, the autostart override value in the message is used to determine the type of start to be performed.

User response

No action is necessary.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *APPLID*

2. *autofield*

Destination

Console

DFHRM0141   *APPLID* **Recovery manager autostart override record is not present. Normal processing continues.**

Explanation

There is no autostart override record in the global catalog data set. If you have not used the utility DFHRMUTL this message is normal for an AUTO start and does not represent a problem.

System action

The default auto start processing continues. This is equivalent to an AUTOASIS value in an autostart override record.

User response

No action is necessary.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *APPLID*

Destination

Console

DFHRM0142   *APPLID* **Recovery manager autostart override record found to be: '*autofield*', and this is not a valid value. AUTOASIS is assumed instead.**

Explanation

Recovery manager has located an autostart override record in the global catalog data set which does not have one of the values: AUTOINIT, AUTOCOLD, or AUTOASIS.

System action

AUTOASIS is assumed, a dump is taken, and the system continues. The override record will be removed at startup as usual.

User response

No action is necessary. To correctly set the autostart override record the utility DFHRMUTL should be used prior to starting CICS.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *APPLID*

2. *autofield*

Destination

Console

DFHRM0143   *APPLID* **Recovery manager autostart override record is invalid. 'AUTOASIS' is assumed.**

Explanation

Recovery manager has found an autostart override record in the global catalog data set, but it has an invalid length or is in the wrong format.

System action

A dump is taken and the system continues. The autostart override value is assumed to be AUTOASIS. The autostart override record is removed from the catalog at startup as usual.

User response

Investigate why the global catalog data set should have been incorrectly modified. The DFHRMUTL utility is used to correctly set the autostart override record prior to starting CICS.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *APPLID*

Destination

Console

DFHRM0144	*applid* **Recovery manager catalog record indicates that no recovery is possible. An initial start is required.**

Explanation

Recovery manager has read its catalog record from the global catalog data set and this indicates that no recovery is possible. The most likely reason is that CICS detected a corrupted log before the last CICS shutdown. Startup cannot continue with these start parameters.

System action

CICS terminates abnormally with a dump.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Determine whether the CICS startup job correctly identifies the global catalog data set. If it does, the system log may be unusable and you must perform an initial start of CICS.

If the global catalog data set was incorrectly identified, retry the job with the correct global catalog data set.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHRM0145	*applid* **Recovery manager does not recognize the form of start requested by SIT parameters and overrides.**

Explanation

Recovery manager cannot determine what sort of CICS start to perform. The parameters on the SIT and any settings read from the catalog data set are inconsistent with a valid start type.

System action

CICS terminates abnormally with a dump.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

This failure is caused by an internal CICS inconsistency. If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHRM0146D	*applid* **Global catalog data set recovery data not found. System log data will be lost. Reply *GO* or *CANCEL*.**

Explanation

A cold start has been requested, and no recovery control record information was found in the global

catalog data set. Either this is the first execution of CICS with this global catalog data set, the wrong global catalog data set is being used, or the global catalog data set has been initialized without information necessary for recovery.

System action

The system waits for a response.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

If this is the first time CICS has been run with this global catalog data set, or if it is intended to delete all recovery information from the system log, reply 'GO'. This forces an initial start with no system log information retained from previous CICS executions. In particular, information used to resynchronize with remote CICS systems is cleared as well as all local recovery information.

If this is not the first time, or if you wish to retain system log information and try with another global catalog data set, reply 'CANCEL' to terminate this CICS execution. Nothing is discarded in this case. Check the global catalog data set and try again.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *applid*
2. *GO*
3. *CANCEL*

Destination

Console

DFHRM0147	*applid* **Reply CANCEL was received.**

Explanation

A reply of 'CANCEL' was received in response to message DFHRM0146.

System action

CICS terminates.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

None.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHRM0148	*date time applid* **Intersystem communication recovery. Resource updates are in sync. network UOW id** *netuowid* **remote system** *name*.

Explanation

Intersystem communication recovery is in progress. The remote system has attempted to resynchronize a unit of work and the local system no longer has any knowledge of that unit of work. This is because the local system was the coordinator, and the last agent or presumed abort protocols were being used. Any local resource updates associated with the unit of work were backed out. The remote system has sent notification that the resource updates in the remote system are still indoubt (and will be backed out following resynchronization) or have already been backed out.

System action

Processing continues.

User response

Destination

Console

DFHRM0152 *APPLID* **Recovery manager autostart override record is set to AUTODIAG.**

Explanation

The recovery manager auto override record on the global catalog has been set to AUTODIAG to allow a diagnostic run before the next initial start.

System action

Processing continues.

User response

No action is necessary. See the Troubleshooting and support for information about how to perform a diagnostic run.

Module:
DFHRMDM

XMEOUT parameters/Message inserts

1. *APPLID*

Destination

Console

DFHRM0154   *applid* **Uncommitted local resource updates found on the System Log. COLD start is NOT preserving data integrity.**

Explanation

A cold start has been requested, but units of work containing uncommitted local resource updates have been found on the system log. The cold start will ignore this information and so data integrity will not be preserved for the affected resources.

System action

The cold start continues.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response:

Module:
DFHRMU1E

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHRM0156   *applid* **This COLD start will NOT cause any damage to local resources.**

Explanation

The recovery manager established that there were no uncommitted resource updates recorded on the system log from a previous execution of CICS. Thus there is no local recovery necessary.

System action

System initialization continues.

User response

None.

Module:
DFHRMU1E

XMEOUT parameters/Message inserts

1. *applid*

Destination

Console

DFHRM0200   *applid indoubt_uows* **indoubt UOWs were reconstructed.**

Explanation

This message displays the number of indoubt units of work (UOWs), *indoubt_uows*, which were reconstructed on a warm or emergency restart.

It is issued only if there is at least one UOW which is indoubt. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action

The system has performed the backwards scan of the system log and is about to start unshunting UOWs which need further processing.

The system commits or backs out UOWs which were indoubt and for which either of the following conditions apply:

- The transaction is defined with WAIT(NO)
- The transaction is defined with WAIT(YES) and the WAITTIME has expired.

  Note: A WAITTIME of zero implies an indefinite wait.

Where communications with the coordinator systems is possible, UOWs are unshunted and updates are committed or backed out on the local system. These updates are synchronized with the updates made on the coordinator system.

Where communications with the coordinator systems is not immediately possible, UOWs are preserved until resynchronization with the coordinator system is possible or until the WAITTIME expires. The suspension of these indoubt UOWs causes updated recoverable resources to remain locked against subsequent updates.

User response

None.

If further investigation is required, use the CEMT
INQUIRE UOW INDOUBT and CEMT INQUIRE
UOWENQ RETAINED commands once CICS has
initialized. These commands detail the indoubt UOWs
and the associated retained enqueues.

Module:
DFHRMU1E.

XMEOUT parameters/Message inserts

1. *applid*
2. *indoubt_uows*

Destination

Console

DFHRM0201	***date time applid bfail_uows*** **backout-failed and *cfail_uows* commit-failed UOWs were reconstructed. The number of UOWs reconstructed to await a forget flow for resolution with a remote system was *forget_uows*.**

Explanation

This message displays the number of backout-failed
units of work (UOWs), *bfail_uows*, and the number
of commit-failed UOWs, *cfail_uows*, which were
reconstructed on a warm or emergency restart. It also
displays the number of UOWs awaiting a forget or
resolution with a remote system, *forget_uows*.

This message is issued only if there is at least one
such UOW. It is issued before any of the reconstructed
UOWs are unshunted and processed in parallel.

Note:

This message is issued before the commit-failed
and backout-failed UOWs are processed. Many of
these UOWs are likely to be resolved during CICS
initialization. Any true commit-failed or backout-failed
UOWs are highlighted by further messages issued
during CICS initialization. Also, once CICS is fully
initialized, the main terminal transaction (CEMT)
can be used to determine whether there are any
outstanding commit-failed or backout-failed UOWs.

Any UOWs that had locally committed or backed out
and which were still awaiting a forget confirmation
from a remote system, are reported for reference.

System action

The system has performed the backwards scan of the
system log and is about to start unshunting UOWs
which need further processing.

UOWs which have failed to back out locally or commit
locally are retried.

User response

None.

Console

DFHRM0204 *applid* **There are no indoubt, commit-failed or backout-failed UOWs. The number of UOWs awaiting a forget flow for resolution with a remote system was** *forget_uows***.**

Explanation

There are no indoubt, commit-failed, or backout-failed units of work (UOWs) in the CICS system at the time of the normal shutdown.

If there are any such units of work, message DFHRM0203 is issued.

Any UOWs that had locally committed or backed out and which were still awaiting a forget confirmation from a remote system, are also reported for reference.

This message indicates that it safe to do a cold (but not initial) start of CICS without losing resynchronization information.

System action

Shutdown processing continues.

User response

None.

Destination

CSMT

DFHRM0206	*applid* **Any recovered units of work are resolved.**

Explanation

Any units of work requiring resolution that were found on the system log during recovery are resolved.

This message might also be issued during system restart when no such units of work are found on the system log during recovery.

Be aware that reconstructed units of work that are locally committed or backed out, and awaiting a forget confirmation from a remote system, do not influence when this message is issued.

System action

Processing continues.

User response

None.

Module:

Original failure date *mm/dd/yy* failure time *hh:mm:ss* remote system *name* transaction *tranid* task number *trannum* terminal *termid* user *userid* network UOW *netuowid* local UOW *X'localuowid'*.**

Explanation

This message is issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system completed the synchronization point. Since this unit of work was recovered as part of a cold start, no local resources were locked pending this resynchronization and local resources are not synchronized with this decision.

System action

The system allows the unit of work to commit for the purposes of resynchronization with remote systems. No local resources are changed.

User response

None.

transaction *tranid* **task number**
trannum **terminal** *termid* **user**
userid **network UOW** *netuowid*
local UOW ***X'localuowid'.***

Explanation

Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that the remote system has restarted and has no knowledge of the unit of work. The distributed unit of work in the remote system might have committed or backed out.

The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. This will never be received.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending this decision and local resources are not synchronized with the distributed unit of work. The unit of work is treated as committed in accordance with the ACTION attribute in the transaction definition.

If communication was via an MRO session to a pre-CICS Transaction Server system, this message may be issued even if the remote system was not restarted. This can only occur if the session failed during its first unit of work since connection.

System action

The system continues. Further remote resynchronization treats this unit of work as committed.

User response

Take user-defined action to resynchronize the resources in the local and remote systems if necessary.

DFHRM0228   *applid indoubt_uows* **indoubt UOWs have been recovered for the purpose of remote resynchronization. Local resources are not synchronized with these UOWs.**

Explanation

This message displays the number of indoubt units of work (UOWs), *indoubt_uows*, which have been recovered for resynchronization with remote systems. This message is only issued on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

It is issued only if there is at least one UOW which is indoubt. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action

The system has performed the backwards scan of the system log and is about to start unshunting UOWs where resynchronization is possible.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response

Local resources are not synchronized with these UOWs. The number of UOWs reconstructed to await a forget flow for resolution with a remote system was** *forget_uows*.

Explanation

This message displays the number of backout-failed units of work (UOWs), *bfail_uows*, and the number of commit-failed UOWs, *cfail_uows*, which have been recovered for resynchronization with remote systems. These UOWs may now be in backout-waiting or commit-waiting states after cold start recovery processing. This message is only issued on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

Any UOWs that had locally committed or backed out and which were still awaiting a forget confirmation from a remote system, are reported for reference. The number of such UOWs is *forget_uows*.

This message is issued only if there is at least one such UOW. It is issued before any of the reconstructed UOWs are processed.

System action

The system has performed the backwards scan of the system log and is about to start resynchronization for UOWs that require this.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response

None.

CSMT

DFHRM0230	*date time applid inflight_uows* **inflight UOWs have been recovered for the purpose of remote resynchronization. Local resources are not synchronized with these UOWs.**

Explanation

This message displays the number of inflight units of work (UOWs), *inflight_uows*, which have been recovered for resynchronization with remote systems. This message is issued only on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

It is issued only if there is at least one UOW which is inflight. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action

The system has performed the backwards scan of the system log and is about to start unshunting UOWs where resynchronization is possible.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response

DFHRM0300   **KEYWORD '***keyword***' IS INVALID OR MISUSED.**

Explanation

The SYSIN data set for DFHRMUTL contains an unrecognized keyword or a keyword which is used incorrectly.

System action

The DFHRMUTL job terminates.

User response

Correct the invalid keyword and retry.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0301   *APPLID* **Force purge of transaction ID** *tranid* **task number** *taskno* **has been deferred because unit of work** *X'uowid'* **is in post commit syncpoint processing.**

Explanation

CICS has received a request to force purge task *taskno*. The unit of work, *uowid*, associated with the target of the force purge request is in a critical phase of syncpoint processing. The target task cannot be purged while it is in this state.

System action

CICS attempts to defer the purge until the target task is no longer protected against purge.

If the syncpoint occurs at the end of the task, the task is permanently protected against purge.

User response

Normally the task should remain in this critical phase of syncpoint for only a short time. If the target task still has not ended, investigate why unit of work *uowid* has still to complete syncpoint processing.

See the Troubleshooting and support for guidance about diagnosing task waits.

Note:

Because of the circumstances under which this message is issued, it can only be issued to the console. It should not be rerouted to a transient data queue.

Module:
DFHRMU1N

XMEOUT parameters/Message inserts

Console

DFHRM0302 **ERROR** *{OPENING | READING | WRITING | CLOSING}* **THE** *{DFHGCD | NEWGCD}* **DATA SET RETURN CODE:** *X'vsam_retcode'*, **REASON:** *X'vsam_reason'*.

Explanation

An error occurred when processing a VSAM data set. The VSAM return and reason codes are X'*vsam_retcode*' and X'*vsam_reason*'.

System action

The DFHRMUTL job terminates.

User response

See the z/OS DFSMS Macro Instructions for Data Sets manual for the meaning of the return and reason codes. Check the syslog for associated data services messages.

If the error is in opening the NEWGCD data set, ensure that the VSAM cluster:

- Has the REUSE attribute
- Has a DD card in the JCL
- Does not name the same data set as the DFHGCD DD card
- Is not currently open to another job.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0303 **ERROR** *{OPENING | READING | WRITING}* **THE** *{SYSIN | SYSPRINT}* **DATA SET.**

Explanation

An error occurred when processing a QSAM data set.

System action

The DFHRMUTL job terminates.

User response

Ensure that the data set DD card is properly defined. Look for associated syslog messages to identify the source of the problem.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0304 **INVALID OR MISSING SET_AUTO_START PARAMETER.**

Explanation

The SET_AUTO_START parameter in the SYSIN data set for DFHRMUTL is missing or incorrectly specified.

System action

The DFHRMUTL job terminates.

User response

Ensure that the parameter is in the *first* line of SYSIN, and the keywords are separated by commas without intervening blanks.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0305 **SYSIN DATA SET CAN HAVE AT MOST ONE RECORD.**

Explanation

The SYSIN data set should contain either no records or else a single record specifying the parameters for DFHRMUTL.

System action

The DFHRMUTL job terminates.

User response

Correct the records in the SYSIN data set and retry.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0306   **CANNOT COPY A GCD WITH NO CONTROL INFORMATION.**

Explanation

The COLD_COPY keyword has been specified for a global catalog data set which has no recovery manager control information in it. It is not possible to create a reduced new catalog from an empty catalog.

System action

The DFHRMUTL job terminates.

User response

You should use COLD_COPY only to copy a catalog that has been used by CICS. To initialize a catalog for an initial start, use DFHRMUTL with the SET_AUTO_START=AUTOINIT parameter without attempting to copy it with COLD_COPY.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0307   **KEYWORD '*keyword*' IS REPEATED IN THE SYSIN DATA SET.**

Explanation

Keyword *keyword* has been repeated in the first line of the SYSIN data set for DFHRMUTL.

System action

The DFHRMUTL job terminates.

User response

Remove the duplicate keyword and retry.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0308   **SET_AUTO_START=AUTOASIS INVALID. GCD IS A COLD_COPY AND HAS NOT BEEN USED BY CICS.**

Explanation

The keyword SET_AUTO_START specified AUTOASIS, but the global catalog supplied in data set DFHGCD has been copied with the DFHRMUTL COLD_COPY function and has not yet been used by CICS. This change is not allowed because the catalog no longer has the necessary records to allow an emergency or warm start.

System action

The DFHRMUTL job terminates.

User response

If you need to perform an emergency or warm start, use a restored copy of the global catalog taken before the run of DFHRMUTL which performed the COLD_COPY. If you do not need an emergency or warm start, change the parameter to AUTOINIT or AUTOCOLD and retry.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0309   **GCD HAS NOT BEEN USED BY CICS. YOU MUST SPECIFY SET_AUTO_START=AUTOINIT**

Explanation

The keyword SET_AUTO_START specified AUTOCOLD or AUTOINIT, but the global catalog supplied in data set DFHGCD has never been used by CICS.

System action

The DFHRMUTL job terminates.

User response

Change the SET_AUTO_START parameter to AUTOINIT and retry.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0311   **COLD_COPY KEYWORD INVALID WITH SET_AUTO_START=AUTOASIS.**

Explanation

The input parameters specified keyword COLD_COPY, but also contained SET_AUTO_START=AUTOASIS. This combination is not supported because CICS can only perform a COLD or INITIAL start using a catalog data set that has been cold-copied, because all definitional records have been removed.

System action

The DFHRMUTL job terminates.

User response

Either specify AUTOCOLD or AUTOINIT as the SET_AUTO_START value, or remove the COLD_COPY keyword and retry.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0312   AUTODIAG WITH COLD_COPY NOT ALLOWED.

Explanation

In the parameters for the DFHRMUTL job the option COLD_COPY was specified with SET_AUTO_START=AUTODIAG. This is not allowed.

System action

The DFHRMUTL job terminates.

User response

Resubmit the job with the correct parameters.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0313   AUTODIAG CANNOT BE USED.

Explanation

The keyword SET_AUTO_START specified AUTODIAG, but the global catalog supplied in data set DFHGCD has been copied with the DFHRMUTL COLD_COPY function and has not yet been used by CICS. This change is not allowed because the catalog no longer has the necessary records to allow a diagnostic run.

System action

The DFHRMUTL job terminates.

User response

If you need to perform a diagnostic run, use a restored copy of the global catalog taken before the run of DFHRMUTL which performed the COLD_COPY. If you do not need a diagnostic run then change the parameter to AUTOINIT or AUTOCOLD and retry.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0315I   AUTOCOLD OR AUTOINIT SHOULD NOT BE USED.

Explanation

This is an informational message.

The global catalog indicates that the previous shutdown of CICS was not controlled (i.e. not a Warm shutdown), or that log information that pertains to shunted Units Of Work (UOWs) is present on the system log. In either case, CICS should not be restarted Cold or Initial, since to do so would threaten data integrity. As such, AUTOCOLD or AUTOINIT should not be specified by the use of the SET_AUTO_START keyword.

System action

The DFHRMUTL job continues.

User response

None.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0316   DFHRMUTL NOT SUPPORTED ON THIS LEVEL OF OPERATING SYSTEM.

Explanation

It has been detected that the release level of the operating system is earlier than the pre-requisite release level required to run CICS DFHRMUTL, or the

required maintenance for the operating system has not been applied.

System action

The CICS DFHRMUTL job step terminates with return code 16.

User response

Refer to the CICS TS Program Directories and install the pre-requisite operating system release level or higher. Check also that any listed pre-requisite maintenance for the operating system has been applied.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0317	**CICS DFHRMUTL IS NOT SUPPORTED ON THIS LEVEL OF HARDWARE.**

Explanation

It has been detected that the release level of hardware is earlier than the pre-requisite required to run CICS DFHRMUTL.

System action

The CICS DFHRMUTL job step terminates with return code 16.

User response

Refer to the CICS TS Program Directories to see the pre-requisite hardware required.

Module:
DFHRMUTL

Destination

SYSPRINT

DFHRM0400	*applid* **A unit of work was incompletely reconstructed from the system log.**

Explanation

A unit of work has been only partially reconstructed from the log records on the system log.

The first log record that the unit of work wrote to the system log was not browsed during CICS restart although processing of the unit of work has not completed its syncpoint processing.

The probable cause is that the primary system log stream has been truncated incorrectly or that the secondary system log stream has been truncated or deleted incorrectly. Alternatively, the data on either log stream may have been corrupted so that the chain representing the unit of work was not completely processed during CICS restart.

These effects may be due to the log stream being modified between CICS runs, problems in the MVS logger, or problems in CICS itself. The most likely cause is that the logstream was deleted or modified between CICS runs. If it was deleted, the CICS logger will have issued a message during the CICS restart reporting that it was creating the logstream.

System action

CICS makes an exception trace entry including the unit of work in which the problem was detected, issues this message, takes a dump, and then terminates abnormally.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure that the primary and secondary system logstreams are valid. If a problem can be rectified, auto-start CICS again.

If the problem cannot be rectified, you should perform an initial start of CICS.

If you are certain that the system log streams have not been deleted or modified between CICS runs, there may be an error in the MVS logger or in CICS. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed. It would be helpful to keep the failing logstream or a report of its contents.

Module:
DFHRMU1E.

XMEOUT parameters/Message inserts

 1. *applid*

Destination

Console

DFHRM0401 *applid* **There is no system log or an empty system log has been detected.**

Explanation

An empty system log has been detected on a CICS restart which requires the log for recovery processing. This is unexpected because there should always be one or more log records on the system log when CICS has started previously. Alternatively, there is no CICS system log because DUMMY has been specified in the definition of the log stream, and a start that requires a valid system log has been requested.

The probable cause is that the primary system log stream has been destroyed or cleared incorrectly. The data on the primary log stream may have been corrupted so that the CICS logger could not find any valid records on it. Alternatively, the system log has been defined as a DUMMY log inappropriately.

These effects may be due to the log stream being modified between CICS runs, problems in the MVS logger, or problems in CICS itself. The most likely cause is that the logstream was deleted or emptied between CICS runs. If it was deleted, the CICS logger will have issued a message during the CICS restart reporting that it was creating the logstream.

System action

CICS makes an exception trace entry including the unit of work in which the problem was detected, issues this message, takes a dump, and then terminates abnormally.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure that the primary system logstream is valid, and that it is not defined as DUMMY. If the problem can be rectified, start CICS again in the same way.

If the problem cannot be rectified, perform an initial start of CICS.

If you are certain that the system log streams have not been deleted or modified between CICS runs, there may be an error in the MVS logger or in CICS. In this case, you will need assistance from IBM. See Working with IBM to solve your problem for guidance on how to proceed. It would be helpful to keep the failing logstream or a report of its contents.

DFHRPnnnn messages

| DFHRP0001 | *applid* **An abend (code** *aaa/bbbb*)** **has occurred at offset** *X'offset'* **in module** *modname*. |

Explanation

An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action

An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If you need further assistance from IBM to resolve this problem, see Working with IBM to solve your problem for guidance on how to proceed.

Module:

4. *tranid*

Destination

CRPO

DFHRP0106   *date time applid tranid* **A CICS ONC RPC alias has received an**

incorrect response on a call made to CICS during alias initialization.

Explanation

The alias cannot find its initialization information in CICS temporary storage. This is probably due to the retrieval of data from temporary storage by another application.

System action

The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPF.

User response

Check that no other application is using the same temporary storage queue as the alias.

Module:
DFHRPAS

1. *date*
2. *time*
3. *applid*
4. *tranid*

Destination

CRPO

DFHRP0113   *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing because the corresponding alias list entry has been deleted. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure:**

X'procnum' **Protocol:** *protocol* **Port:** *X'port'* **Socket:** *X'socket'.*

Explanation

The alias has attempted to update its alias list entry to indicate that it has successfully started. The alias list component has returned a NOT FOUND response.

System action

An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPF.

User response

This situation is almost certainly due to an alias starting after immediate disable of CICS ONC RPC or after its alias list entry has been explicitly deleted by the connection manager.

Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket.*

Explanation

The alias has detected that CICS ONC RPC may have been disabled since this client request was scheduled by the server controller. This is indicated by

an incorrect reference to the GWA used by CICS ONC RPC.

System action

The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPH.

User response

Check that CICS ONC RPC has not been disabled since this client request was first scheduled. This problem may arise when long-running CICS programs are being used. It may also occur if CICS ONC RPC is disabled and immediately re-enabled.

Explanation

The alias has received a response while trying to link to the resource checker that indicates that it is not authorized to do so. This error has occurred because either the local alias transaction has been defined with RESSEC=YES, or the resource checker is in a remote CICS region and the mirror transaction in the remote region is defined with RESSEC=YES.

System action

An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response

If the alias or mirror transaction must run with RESSEC=YES, add a profile to the external security manager that allows users to access the resource checker. If you do not require resource level security in the CICS program, set RESSEC=NO in the alias or mirror transaction definition.

DFHRP0136	*date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'*

Explanation

The alias has detected a temporary error in the remote CICS region while communicating with the CICS program.

System action

An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response

Investigate the problem in the remote CICS region.

Module:
DFHRPAS

Explanation

The alias has encountered an internal error while trying to link to the CICS program.

System action

An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

You need further assistance from IBM to resolve this problem. See External Interfaces Guide and Working with IBM to solve your problem for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module:
DFHRPAS

Explanation

The alias has received a response while trying to link to the CICS program *program* that indicates that the program is not defined to CICS.

System action

An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response

Check that the CICS program is defined to CICS.

CRPO

DFHRP0139	*date time applid tranid* **A CICS ONC RPC alias is unable to continue processing as it cannot link to the CICS program** *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation

The alias has received a response while trying to link to the CICS program *program* that indicates that the remote system in which the program resides is not defined or is not available to CICS.

System action

An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response

Ensure that the remote CICS region in which the server program resides is defined to CICS. If it is, ensure that the connection is available for use by CICS.

Explanation

The alias has received a response while trying to link to the CICS program *program* that indicates that it is not authorized to do so.

System action

An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response

If the CICS program must run with resource level security, add a profile to the external security manager that grants access to the CICS program to its clients. If you do not require resource level security in the CICS program, set RESSEC=NO in the alias or mirror transaction definition.

DFHRP0193	*date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program** *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation

The alias has received a NOTAUTH response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates that it is not authorized to access this program. This error may have occurred because the local alias transaction has been defined with RESSEC=YES.

System action

An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response

If the alias transaction must run with RESSEC=YES, add a profile to the external security manager that allows users to access the program. If you do not require resource level security, set RESSEC=NO in the alias transaction definition.

Destination

CRPO

DFHRP0528	*date time applid tranid* **The CICS ONC RPC server controller detected an initialization error.**

Explanation

This is an internal error.

System action

A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

You need further assistance from IBM to resolve this problem. See External Interfaces Guide and Working with IBM to solve your problem for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module:
DFHRPMS

XMEOUT parameters/Message inserts

1. *date*
2. *time*
3. *applid*
4. *tranid*

Destination

CRPO

DFHRP0540	*date time applid* **The CICS ONC RPC server controller received an**

error response from TCP/IP for MVS after an svc_freeargs call issued for XDR routine: *xdrname* **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'progname'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation

The server controller cannot free storage allocated by the inbound XDR routine. An **svc_freeargs** returned an error response. This may be because the client associated with the call has timed out and the storage has already been freed by TCP/IP for MVS.

System action

The server controller continues to process this client request. If the message is not a result of client time-out, MVS storage associated with the request will not be freed; if errors of this kind occur frequently, they may lead to storage problems.

User response

Examine the diagnostics to determine the reason for the error. If a user-written XDR routine is being used, there may be an error in the code associated with the FREE function. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

DFHRP0620	*date time applid tranid* **The CICS ONC RPC server controller received an unexpected response from CICS when attempting to access converter** *converter_program_name*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation

A client request has failed because of an error in CICS.

System action

A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116, which contains the symptom string for this problem, is produced.

User response

See the associated diagnostics issued by CICS for problem determination.

DFHRP0621	*date time applid tranid* **The CICS ONC RPC server controller is not authorized to link to converter** *converter_program_name*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation

The server controller cannot access the converter. This error can arise only if the supplied definitions for the server controller have been changed.

System action

A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message

DFHME0116, which contains the symptom string for this problem, is produced.

User response

Ensure that the supplied definitions for the server controller are used, and reenable CICS ONC RPC.

Explanation

Decode returned an unexpected response.

System action

An **svcerr_systemerr** call is used to send a reply to the client.

User response

Correct and replace the converter program in question.

Module:
DFHRPMS

Explanation

Decode returned URP_EXCEPTION with a reason of URP_CORRUPT_CLIENT_DATA.

System action

An **svcerr_decode** call is used to send a reply to the client.

User response

Compare the client program and the converter program and change one or the other to make the data formats consistent.

Explanation

Decode returned URP_EXCEPTION with a reason of URP_AUTH_BADCRED.

System action

An **svcerr_auth** call with a why-value of AUTH_BADCRED is used to send a reply to the client.

User response

If the client should be authorized to make this request, compare the client program and the converter, and change one or the other so that authentication requirements match.

Explanation

Decode returned URP_EXCEPTION with a reason of URP_AUTH_TOOWEAK.

System action

An **svcerr_auth** call with a why-value of AUTH_TOOWEAK is used to send a reply to the client.

User response

If the client should be authorized to make this request, compare the client program and the converter, and change one or the other so that authentication requirements match.

DFHRP0631 *date time applid tranid* **The CICS ONC RPC server controller encountered an error in Decode processing in converter** *converter_program_name*. **The response was URP_EXCEPTION, but the reason** *decode_reason* **was not recognized. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation

Decode returned URP_EXCEPTION with an unrecognized reason code.

System action

An **svcerr_systemerr** call is used to send a reply to the client.

User response

If the reason code returned has a user-defined meaning act accordingly. If the reason code does not have a user-defined meaning, fix the problem with the converter and replace it.

Explanation

Decode returned URP_INVALID.

System action

An **svcerr_systemerr** call is used to send a reply to the client.

User response

The **Decode** parameter area will have been traced. If the values passed were correct, and the error is in the converter, correct and replace the converter. If the values passed were incorrect, you need further assistance from IBM to resolve this problem. See External Interfaces Guide and Working with IBM to solve your problem for guidance on how to proceed.

Explanation

An incoming client request could not be processed because there was insufficient storage available.

System action

An **svcerr_systemerr** call is used to send a reply to the client.

User response

If this error occurs persistently, you may need to customize your CICS system to cure the lack of storage.

Explanation

An internal error has forced CICS ONC RPC to abandon a client request.

System action

An **svcerr_systemerr** call is used to send a reply to the client.

User response

You need further assistance from IBM to resolve this problem.
