Notices.....................................................................................................................523
This PDF is a reference of all the messages issued by the CICSPlex® SM element of CICS Transaction Server for z/OS.

For details of the terms and notation used in this book, see Conventions and terminology used in CICS documentation in IBM Documentation.

Date of this PDF

This PDF was created on 2024-07-17 (Year-Month-Date).
Chapter 1. CICSPlex SM messages

CICSPlex SM produces operator messages, web user interface messages, and batch report messages. These messages are sent to the console, job log, or can be displayed in the web user interface.

The CICSPlex SM messages are listed by component. Each message has an explanation, system response, and an action you can take to resolve the message if appropriate. You can also find out where the message is written, and the names of the modules that might issue the message.

All messages that are issued to the console are prefixed with the date, time, and application ID of the CMAS or MAS to which the message applies. Many of the messages are accompanied by trace records, which provide additional diagnostic information. CMAS and MAS trace records are written as CICS user trace records to the CICS trace data set. For more information about the CICSPlex SM trace facilities, see Using trace in CICSPlex SM.

Message identifiers

CICSPlex SM message identifiers are in the format of EYUccnnnnns, where cc is the two-letter component identifier, nnnn is a four-digit message number, and s is a one-letter severity indicator.

EYU is the identifier assigned by IBM for CICSPlex SM modules. The component identifier shows the component that issues the message. The following table lists the component identifiers and their associated components.

<table>
<thead>
<tr>

</table>
Severity codes

Message identifiers are followed by a severity code (for example, EYUCI0102W) that identifies the type of response that is required to the message.

The following severity codes are used:

A
Immediate action required.

D
Immediate decision required.

E
Error. Something has gone wrong; some action may be required by the user before CICSPlex SM processing can continue.

I
Information only; no action is required.

S
Severe error. Something serious has gone wrong; CICSPlex SM processing is suspended until corrective action has been taken.

U
Unrecoverable error; CICSPlex SM processing terminates.

W
Warning. Something may have gone wrong, but CICSPlex SM processing continues.

Format of message descriptions

The CICSPlex SM message descriptions have a standard format that explains why the message occurred, what action the system performed, and the corrective action that you can take if appropriate.

Each message description has the following sections:

Message identifier
The identifier has the form of EYUccnnnns, where cc is the component, nnnn is the message number and s is the one-letter severity indicator.

Message text
The message text uses words and variable inserts to make up the message.

Explanation
The explanation describes the events leading to or following the message.

System action
The system action describes how the system responds.

User response
The user response describes what actions, if any, are required to fix the problem. For information messages and some warning messages, no action is required.

Destination
The destination describes where the message is sent. Messages can go to one or more of the following destinations:

- Console (refers to a specific type of terminal attached to CICS)
- CICS terminal
- EYULOG
- Job log
- SYSOUT
**Module**

The name of one or more modules that caused the message to be sent. This module not necessarily the module that issued the macro to write the message.
Chapter 2. CICSPlex SM messages

CICSPlex SM produces operator messages, web user interface messages, and batch report messages. These messages are sent to the console, job log, or can be displayed in the web user interface.

The CICSPlex SM messages are listed by component. Each message has an explanation, system response, and an action you can take to resolve the message if appropriate. You can also find out where the message is written, and the names of the modules that might issue the message.

All messages that are issued to the console are prefixed with the date, time, and application ID of the CMAS or MAS to which the message applies. Many of the messages are accompanied by trace records, which provide additional diagnostic information. CMAS and MAS trace records are written as CICS user trace records to the CICS trace data set. For more information about the CICSPlex SM trace facilities, see Using trace in CICSPlex SM.

Message identifiers

CICSPlex SM message identifiers are in the format of EYUccnnnns, where cc is the two-letter component identifier, nnnn is a four-digit message number, and s is a one-letter severity indicator.

EYU is the identifier assigned by IBM for CICSPlex SM modules. The component identifier shows the component that issues the message. The following table lists the component identifiers and their associated components.

Table 2. EYU message identifiers and their components

Severity codes

Message identifiers are followed by a severity code (for example, EYUCI0102W) that identifies the type of response that is required to the message.

The following severity codes are used:

A
Immediate action required.

D
Immediate decision required.

E
Error. Something has gone wrong; some action may be required by the user before CICSPlex SM processing can continue.

I
Information only; no action is required.

S
Severe error. Something serious has gone wrong; CICSPlex SM processing is suspended until corrective action has been taken.

U
Unrecoverable error; CICSPlex SM processing terminates.

W
Warning. Something may have gone wrong, but CICSPlex SM processing continues.

Format of message descriptions

The CICSPlex SM message descriptions have a standard format that explains why the message occurred, what action the system performed, and the corrective action that you can take if appropriate.

Each message description has the following sections:

Message identifier
The identifier has the form of EYUccnnnns, where cc is the component, nnnn is the message number and s is the one-letter severity indicator.

Message text
The message text uses words and variable inserts to make up the message.

Explanation
The explanation describes the events leading to or following the message.

System action
The system action describes how the system responds.

User response
The user response describes what actions, if any, are required to fix the problem. For information messages and some warning messages, no action is required.

Destination
The destination describes where the message is sent. Messages can go to one or more of the following destinations:

- Console (refers to a specific type of terminal attached to CICS)
- CICS terminal
- EYULOG
- Job log
- SYSOUT
Module

The name of one or more modules that caused the message to be sent. This module not necessarily
the module that issued the macro to write the message.

EYUARnnnn messages

EYUARnnnn messages are issued by the REXX runtime interface of the API. The runtime interface makes
one pass through a REXX program to check the syntax of any CICSPlex SM API commands and a second
pass to evaluate the content of those commands.

None of the conditions described by these messages affect the REXX program as a whole. Depending on
how it deals with error conditions, the program might continue to run after an EYUARnnnn message is
issued.

EYUARnnnn messages are issued to the destination defined on your system for IRXSAY WRITEERR
output. By default, such output goes to one of the following places:
• In TSO foreground, the output goes to the terminal.
• In background, including batch, the output goes to the SYSTSPRT DD destination.

EYUAR0001E  Command (cmdname) invalid.

Explanation

The specified command is not a valid API command, where:

  cmdname  
is the command name that was specified.

System action

Processing of the current API command terminates.

User response

Review the syntax of available API commands in the CICS documentation manual. Then correct the error
and rerun the REXX program.

Module:

EYU0ARKL

Destination

EYUAR0002E  Keyword (parm) invalid for command.

Explanation

The specified keyword parameter is not valid for the current API command, where:

  parm  
is the keyword parameter that is invalid.

System action

The remainder of the current API command syntax is checked, if possible. However, processing of the
current command terminates.

User response

Review the syntax of the current command in the CICS documentation manual. Then add the required
parameter and rerun the REXX program.

Module:

EYU0ARRF

Chapter 2. CICSPlex SM messages 7
Destination

**EYUAR0005E**  Argument missing for keyword *(parm).*

**Explanation**

The specified keyword parameter requires an argument, but none was found, where:

*parm*  
is the keyword parameter that requires an argument.

**System action**

The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**

Review the syntax of the current command in the CICS documentation manual. Then add the required argument and rerun the REXX program.

**Module:**

EYU0ARCL, EYU0ARKL

Destination

**EYUAR0006E**  Command *(cmdname)* too long.

**Explanation**

The length of the specified API command is too long, where:

*cmdname*  
is the command name that is too long.

**System action**

Processing of the current API command terminates.

**User response**

Review the syntax of the specified API command in the CICS documentation manual. Then add the required argument and rerun the REXX program.

**Module:**

EYU0ARPR

Destination

**EYUAR0008E**  Unexpected end of command encountered.

**Explanation**

The API command that was being processed ended unexpectedly before an end-of-command delimiter was found. One reason for this error could be that a closing parenthesis is missing from the command syntax.

**System action**

Processing of the current API command terminates.

**User response**

Check the current API command for syntax errors. Correct any errors and rerun the REXX program.

**Module:**

EYU0ARPR, EYU0ARRF

Destination

**EYUAR0009E**  Duplicate keyword *(parm)* encountered.

**Explanation**

The specified keyword parameter was found more than once in the current API command, where:
**parm**
is the name of the keyword parameter that is a duplicate.

**System action**
The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**
Remove the duplicate parameter and rerun the REXX program.

**Module:**
EYU0ARFB

**Destination**

| EYUAR0010E | Argument not valid for keyword (parm). |

**Explanation**
The specified keyword parameter does not accept an argument, but one was found, where:

**parm**
is the name of the keyword parameter.

**System action**
The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**
Remove the argument from the specified parameter and rerun the REXX program.

**Module:**
EYU0ARCL, EYU0ARKL

**Destination**

| EYUAR0011E | Parameter data (data) too long for keyword (parm). |

**Explanation**
The data supplied with the specified keyword parameter is too long for the parameter's data type, where:

**data**
is the data that was specified.

**parm**
is the name of the keyword parameter.

**System action**
The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**
Review the description of the specified parameter in the CICSPlex SM commands manual. Then correct the error and rerun the REXX program.

**Module:**
EYU0ARFB

**Destination**

| EYUAR0012E | Parameter data (data) invalid for keyword (parm). |

**Explanation**
The data supplied with the specified keyword parameter is not the correct type for that parameter, where:

**data**
is the data that was specified.

**parm**
is the name of the keyword parameter.

**System action**
The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**
Review the description of the specified parameter in the CICSPlex SM commands manual. Then correct the error and rerun the REXX program.

**Module:**
EYU0ARFB

**Destination**

| EYUAR0013E | The variable parameter (var) for keyword (parm) is invalid. |

**Explanation**
REXX considers the variable identified with the specified keyword parameter to be invalid, where:
**var**
is the variable name that is invalid.

**parm**
is the name of the keyword parameter.

**System action**
The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**
Review the description of the specified parameter in the CICSPlex SM commands manual. Then correct the error and rerun the REXX program.

**Module:**
EYU0ARFB, EYU0ARRF

**Destination**

**EYUAR0014E**  The variable parameter (var) for keyword (parm) is too long.

**Explanation**
The length of the specified variable parameter is too long, where:

**var**
is the variable name that is too long.

**parm**
is the name of the keyword parameter.

**System action**
The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**
Review the description of the specified parameter in the CICSPlex SM commands manual. Then correct the error and rerun the REXX program.

**Module:**
EYU0ARFB, EYU0ARRF

**Destination**

**EYUAR0016E**  Conflicting keyword (parm) specified.

**Explanation**
The specified keyword parameter conflicts with another parameter in the same API command, where:

**parm**
is the name of the keyword parameter that is in conflict.

**System action**
The remainder of the current API command syntax is checked, if possible. Another EYUAR0016E message may be issued when the other conflicting parameter is identified. Processing of the current command terminates.

**User response**
Review the syntax of the current API command in the CICSPlex SM commands manual. Then remove the conflicting parameter and rerun the REXX program.

**Module:**
EYU0ARFB, EYU0ARRF

**Destination**

**EYUAR0015E**  The variable parameter (var) for keyword (parm) contains no data.
Keyword \( (parm) \) specified without required co-keyword

**Explanation**

The specified keyword parameter was found in the current API command without a related parameter, which is required, where:

- \( parm \) is the name of the keyword parameter that requires a related parameter.

**System action**

The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**

Review the syntax of the current API command in the CICSPlex SM commands manual. Then add the required parameter and rerun the REXX program.

**Module:**

EYU0ARFB

---

Data for variable \( (var) \) of keyword \( (parm) \) is too long.

**Explanation**

The variable identified with the specified keyword parameter contains data that is too long for that parameter, where:

- \( var \) is the variable that was specified.
- \( parm \) is the name of the keyword parameter.

**System action**

The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**

If the command being processed was TBUILD or TPARSE, the data being passed by your program may be invalid. Otherwise, contact your IBM Support Center with the name of the resource table being processed and a record of the data being passed when this message was issued.

**Module:**

EYU0ARFI, EYU0ARRB, EYU0ARRF

---

Required keyword \( (parm) \) missing.

**Explanation**

The indicated keyword is required and was not found. The specified keyword parameter is required for the current API command, but it was not supplied, where:

- \( parm \) is the name of the keyword parameter that is required.

**System action**

The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**

Add the required parameter and rerun the REXX program.

**Module:**

EYU0ARFB

---

Data for attribute \( (attr) \) is too long.

**Explanation**

The data supplied for the specified resource table attribute is too long for that attribute, where:

- \( attr \) is the name of the attribute.

**System action**

The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**

Review the description of the specified attribute in the appropriate resource table, as described in System programming reference and System programming reference. Then correct the error and rerun the REXX program.

**Module:**

...
**Destination**

| EYUAR0022E | Data for attribute \((attr)\) is invalid. |

**Explanation**
The data supplied for the specified resource table attribute is invalid for that attribute, where:

\(attr\)

is the name of the attribute.

**System action**
The remainder of the current API command syntax is checked, if possible. However, processing of the current command terminates.

**User response**
Review the description of the specified attributes in the appropriate resource table, as described in System programming reference and System programming reference. Then correct the error and rerun the REXX program.

**Module:**
EYU0ARRB

---

**Destination**

| EYUAR0024E | Argument is not permitted for function \(var\). |

**Explanation**
The specified function does not accept an argument, but one was found, where:

\(func\)

is the function that does not accept an argument.

**System action**
Function processing terminates with a return code of -1.

**User response**
For a list of the return codes and the syntax for the specified function, refer to the CICS documentation manual. Then remove the argument from the specified function and rerun the REXX program.

**Module:**
EYU0AREY

---

**Destination**

| EYUAR0025E | Argument \((arg)\) is invalid for function \(func\). |

**Explanation**
REXX considers the argument identified with the specified function to be invalid, where:

\(arg\)

is the argument that was specified.

\(func\)

is the name of the function.

**System action**
Function processing terminates with a return code of -1.

**User response**
For a list of the return codes and the syntax for the specified function, refer to the CICS documentation manual. Then correct the argument and rerun the REXX program.

**Module:**
EYU0AREY
Destination

EYUAR0026E  Object (name) is not found.

Explanation

A TBUILD or TPARSE command was issued, but the object specified on the OBJECT option could not be found, where name is the object name specified on the OBJECT option.

System action

The TBUILD or TPARSE command returns a STATUS value of FAILURE. Trace records are written to the EYUTRACE stem variable.

User response

Make sure the OBJECT option identifies a valid CICSPlex SM resource table.

The TBUILD and TPARSE commands cannot be used to process a user-defined view of a resource table. If you define a view with the same name as a supplied resource table and then issue a TBUILD or TPARSE command for that object, the API attempts to process the view and fails.

EYUMBnnnnn messages

The following variables are commonly used in the EYUMBnnnn messages:

- **event1**
  An event notification that is not recognized by Business Application Services.

- **event2**
  One of the following event notifications:
  - EDEFCHG
  - ECSYSCHG
  - EMASJOIN
  - EMASSTOP
  - EMASSTRT
  - EPLEXCHG
  - ESGRPCHG

- **resassgn**
  The name of a resource assignment. The absence of a resource assignment name indicates that the resource group was in a resource description.
resdesc
  The name of a resource description.

resgroup
  The name of the resource group.

resname
  The name of the resource.

restype
  The name of a resource type.

resvers
  The version of the definition record in the CMAS data repository.

scope
  The name of the target, related, or install scope, as indicated in the message text.

sysgroup
  The name of the CICS systems group. The absence of a system group name indicates that the system itself is the scope.

system
  The name of the CICS system.

usage
  Indicates how the resource will be used (locally, remotely, or as is).

**EYUBM0310W**
```
Error message: EYUBM0308E: date time applid Update of Resource Description (resdesc) with install scope (scope) would cause an inconsistent set.
```

**Explanation**
An attempt has been made to check the consistency of a candidate set of resources associated with the named Resource Assignment. During validation of that set, one or more of the resources named within it...
could not be located in the local CPSM data repository (EYUDREP).

**System action**
Additional, detailed EYUBM0311W messages are written to the EYULOG.

**User response**
See the additional messages for details of the resource definitions that could not be located. There may be an appropriate explanation for their absence. For example, there may be concurrent delete or update requests to the data repository executing at the time of this request.

If there is no appropriate explanation for their absence, then the data repository may be in a corrupted state. In that case, collect the following documentation and contact your IBM Support Center:
1. A copy of this CMAS's EYUDREP.
2. A copy of the EYUDREP of the CMAS which is the maintenance point for the associated CICSplex.
3. The complete job output for both CMASes.
4. Copies of the auxtrace datasets for both CMASes.

**EYUBM0311W**

```
  date  time  applid
Resource Definition
(restype,resname,resvers) is missing for candidate set for
Resource Assignment (resassgn)
```

**Explanation**

The named Resource Definition is part of a candidate set of definition records for consistency checking the named Resource Assignment. However, the Resource Definition could not be found in the local CPSM data repository.

**System action**

The current BAS action will continue to normal completion as if the missing resource name was successfully validated in the candidate set.

**User response**

There may be a valid explanation for the absence of the named resource definition. For example, there may have been a concurrent delete or update request to the data repository executing at the time as this request.

If there is no appropriate explanation for its absence then the data repository may be in a corrupted state, and recovery action should be considered. In that case, collect the following documentation and contact your IBM Support Center:
1. A copy of this CMAS's EYUDREP.
2. A copy of the EYUDREP of the CMAS which is the maintenance point for the associated CICSplex.
3. The complete job output for both CMASes.
4. Copies of the auxtrace datasets for both CMASes.

CICSplex(plexname) cannot be found in Data Repository.

**Explanation**
The CMAS reads the data repository to get the resource records to be installed on the connecting MAS. However, the resource definition is missing from the data repository.

**System action**
The CMAS will bypass the missing record and continue to install other resource definitions.

**User response**
Check for message EYUXD0002I in the EYULOG and see if the record has been deleted from the Data Repository.

Explaination
An unexpected platform has been found for Application appldef.

System action
The Application is not installed.

User response
Ensure that the Application and Application Binding Bundles have been exported correctly.

EYUBNnnnn messages
The following variables are commonly used in the EYUBNnnnn messages:

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cmdname</td>
<td>The EXEC CICS command name:</td>
</tr>
<tr>
<td>restype</td>
<td>The name of a resource type.</td>
</tr>
<tr>
<td>resname</td>
<td>The name of the resource.</td>
</tr>
<tr>
<td>version</td>
<td>The version of the definition record in the CMAS data repository. A value of N/A indicates that the resource type does not represent a definition record (for example, TERMINAL POOL).</td>
</tr>
<tr>
<td>resp</td>
<td>The RESP= value as returned by CICS.</td>
</tr>
<tr>
<td>resp2</td>
<td>The RESP2= value as returned by CICS.</td>
</tr>
<tr>
<td>resp2lo</td>
<td>The RESP2LO= value as returned by CICS.</td>
</tr>
<tr>
<td>resp2hi</td>
<td>The RESP2HI= value as returned by CICS.</td>
</tr>
</tbody>
</table>

For descriptions of the RESP, RESP2, RESP2LO, and RESP2HI values for a particular CICS command, see System commands.

Other less common variables are described in the messages in which they appear.

<table>
<thead>
<tr>
<th>Message</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EYUBN00001I</td>
<td>date time applid CICS release rel does not support resource creation.</td>
</tr>
</tbody>
</table>

Explanation
During resource installation, it was determined that the specified CICS release does not support the EXEC CICS CREATE command.
System action
BAS request processing terminates.

User response
None.

Module:
EYU0BNCC

XMEOUT parameters/Message inserts
1. date
2. time
3. applid
4. rel

Destination
COLG

EYUBN0002I  date time applid CICS release rel does not support {CONNECTION | DOCTEMP | DB2CONN | DB2ENTRY | DB2TRAN | EJCSE | EJDJAR | ENQMODEL | FEPINODE | FEPIPOOL | FEPIPROP | FEPIGRGT | FILE | JOURNAL | JOURNAL MODEL | LSRPOOL | MAPSET | PARTNER | PROCTYPE | PROFILE | PROGRAM | PARTITIONSET | RQMODEL | TCPIPS | TDQUEUE | TERMINAL | TRANSACTION | TRANCLASS | TSMODEL | TYPETERM | URIMAP | PIPELINE | WEBSERVICE | IPCONN | LIBRARY | ATOMSERVICE | BUNDLE | MQCONN | JVMSERVER | MQMONITOR} resource resname.

Explanation
During resource installation, it was determined that the specified CICS release does not support the function of the specified resource type, where function is one of the following:

creation
The CICS release does not support EXEC CICS CREATE for the specified resource.

discardng
The CICS release does not support EXEC CICS DISCARD for the specified resource.

This message is issued only once for each different resource type encountered.

System action
BAS processing for this resource is bypassed and the processing continues with the next request.

User response
None.

Console and COLG

**EYUBN0008W**  
*date*  
*time*  
*applid*  
*action*  

**Explanation**

Indicates the recovery action, as specified for the CICS system, to be taken after an error occurred, where:

**action**

Is one of the following:

- terminate the CICS
- prompt the operator
- terminate the CREATE processing

This message accompanies either EYUBN0005E or EYUBN0006E.

**System action**

The processing continues based on the failure action. If the action is to prompt the operator, message EYUBN0010E is issued.

**User response**

If the action is to prompt the operator, respond to message EYUBN0010E.

---

**Module:**

*applid*  

**Please specify failure action - 'CONTINUE', 'TERMINATE', 'NORMAL', or 'IMMEDIATE'.**
**Explanation**

A failure has occurred and the recovery action for the CICS system is to prompt the operator.

**System action**

The system waits for an operator response.

**User response**

Respond to the console message with one of the following:

- **CONTINUE**
  Continue processing the BAS requests.
- **TERMINATE**
  Terminate processing of the BAS requests.
- **NORMAL**
  Initiate a NORMAL shutdown of the target CICS.
- **IMMEDIATE**
  Initiate an IMMEDIATE shutdown of the target CICS.

**EYUBN0012W**

```plaintext
date time applid {CONNECTION | SESSION | TERMINAL | TERMINAL POOL} resname1 (version version1) 
is not available due to {a COMPLETE failure of | a successful DISCARD of | a DISCARD failure of | no sessions available for | an undefined or unavailable} 
{CONNECTION | TERMINAL POOL} resname2 (version version2).
```

**Explanation**

The specified resource is not available because processing is incomplete or has failed for another resource, where:

**reason**

Is one of the following:

- a COMPLETE failure of
- a DISCARD failure of
- a successful DISCARD of
- no sessions available for (The identified connection was discarded because there were no sessions defined for it.)
- an undefined or unavailable (The identified session was not created because it refers to a connection that was not processed; the connection processing failed; the connection does not exist; or the connection exists but is in use.)

See CICS documentation for a description of the other message variables.

**System action**

If the **reason** indicates that a COMPLETE or DISCARD failure occurred, the action taken is based on the recovery action specified for the CICS system. This message is accompanied by EYUBN0005E, which provides additional information.
If the reason does not indicate a failure, processing continues with the next BAS request.

User response
Note that the resource was not processed successfully and is not available.

EYUBN0020I date time applid CICS application
state recovery is in progress.

Explanation
The recovery of the ENABLED and AVAILABLE states
of CICS BUNDLE resources that are related to CICS
applications is in progress.

System action
CICS BUNDLE resources that are related to CICS
applications progress to the correct ENABLED
and AVAILABLE states. Message EYUBN0021I is
issued when the state recovery process completes.
If problems occur during this process, message
EYUBN0022W is issued.

User response
No action is necessary.

Module:
EYU0BNBE

XMEOUT parameters/Message inserts
1. date
2. time
3. applid

Destination
Console and COLG

EYUBN0021I date time applid CICS application
state recovery is complete.

Explanation
CICS application state recovery has completed.

System action
No action is necessary.

User response
No action is necessary.

Module:
EYU0BNBE

XMEOUT parameters/Message inserts
1. date
2. time
3. applid

Destination
Console and COLG

EYUBN0022W date time applid CICS BUNDLE
bundle failed to enable in time.
Related application state might
not be recovered.

Explanation
CICS application state recovery detected that a CICS
BUNDLE has not reached the ENABLED state. Only the
first CICS BUNDLE that is detected in each application
is reported.

System action
Recovery of the CICS application state continues for
other CICS BUNDLE resources but those in the same
CICS application are not set to an AVAILABLE state.
The CICS application is not accessible from this region
until the CICS BUNDLE resources enter the ENABLED
and AVAILABLE states.

User response
Refer to the related CICS messages for the specified
CICS BUNDLE to determine the appropriate action.
Refer to the DFHRL0128 message for the specified
CICS BUNDLE to determine the related platform name,
application name and version. This information can be
used in conjunction with either the CICS messages or
the CICS Explorer to establish the status of all CICS

50 CICS TS for z/OS: CICSPlex SM Messages and Codes
BUNDLE resources associated with the same version of the application.

For CICS BUNDLE resources that contain imports for resources that might not yet be enabled, refer to the DFHRL0120 message to identify the failure. During CICS region startup, dependencies that are declared by CICS BUNDLE imports might not reach an ENABLED state until after the recovery of CICS application state is complete. CICS BUNDLE resources containing these imports that initially failed to enable might progress to an ENABLED state when the import is satisfied. This is reported by either the DFHRL0127 or DFHRL0132 message. In this instance the application is not automatically made AVAILABLE after the import is satisfied. Remove the DISABLED import from the CICS BUNDLE or change it to an optional dependency.

EYUBUnnnn messages
EYUBUnnnn messages are issued by the EYU9BCSD CSD EXTRACT routine. They appear in the EYUOUT ddname.
**Field value longer than 30 characters - truncated**

**Explanation**
The object being extracted from the CSD has a description longer than 30 characters. This has been truncated to meet the CICSPlex SM description requirements.

**System action**
The DESCRIPTION card written to the EYUOUT data set only contains the first 30 characters of the DESCRIPTION field supplied by DFHCSDUP. Following the message a comment is written to EYUOUT containing the complete description. DFHCSDUP Extract processing continues.

**User response**
Before using the EYUOUT as input to BATCHREP, ensure the DESCRIPTION is appropriate.

**Invalid card type - ERROR condition set**

**Explanation**
An invalid EYUIN control statement has been found.

**System action**
The DFHCSDUP Extract command is not processed.

**Duplicate card - ERROR condition set**

**Explanation**
An EYUIN control statement has been found twice.

**System action**
The DFHCSDUP Extract command is not processed.

**Invalid or missing value - ERROR condition set**

**Explanation**
An invalid EYUIN control statement has been found.

**System action**
The DFHCSDUP Extract command is not processed.
User response
Correct the EYUIN input. Ensure that the syntax of the EYUIN control statement is correct. The invalid EYUIN control statement will precede the message. For more information, see the Creating input to the extract routine EYU9BCSD section of the CICS Knowledge Center.

Module:
EYU9BCSD

Destination

**EYUBU0113E** Call out of order from DFHCSDUP - ERROR condition set

Explanation
The extract routine EYU9BCSD has been called by DFHCSDUP with an unexpected parameter.

System action
The DFHCSDUP Extract processing stops.

User response
Use DFHCSDUP to VERIFY the CSD and resubmit the job. If the problem persists, collect the joblog and CSD and contact your IBM Support Center.

Module:
EYU9BCSD

Destination

**EYUBU0114E** Null object name from DFHCSDUP - ERROR condition set

Explanation
The extract routine EYU9BCSD has not been passed an object name by DFHCSDUP.

System action
The DFHCSDUP Extract processing stops.

User response
Use DFHCSDUP to VERIFY the CSD and resubmit the job. If the problem persists, collect the joblog and CSD and contact your IBM Support Center.

Module:
EYU9BCSD

Destination

**EYUBU0115E** INQUOTES not YES or NO - ERROR condition set

Explanation
The INQUOTES EYUIN control statement has an invalid value. Valid values are YES or NO.

System action
The DFHCSDUP Extract processing stops.

User response
Correct the EYUIN input and resubmit the job.

Module:
EYU9BCSD

Destination

**EYUBU0116E** Non-default value specified. Keyword suppressed.

Explanation
The extract routine EYU9BCSD has been passed a keyword, for an attribute which it does not support, with a non-default value.

Chapter 2. CICSPlex SM messages 53
System action
The DFHCSDUP Extract processing comments out the keyword in EYUOUT and continues processing. A condition code 8 is returned from DFHCSDUP. The default value for the attribute will be applied by CICS on installation.

User response
Review the EYUOUT file.

EYUCCnnnn messages

EYUCC0002E  
**date**  **time**  **applid**  Connecting CMAS **cmasename** reported {Method Failure | Repository Corrupt | MAS Active} during {Update | Create | Delete | Repository Read}.

Explanation
An attempt to notify a connecting CMAS of data repository changes has failed, where:

name
Identifies the CMAS that reported the error; this could be either the local CMAS, which is the maintenance point, or the CMAS that was being connected to.

error
Is one of the following:
• Method Failure
• Repository Corrupt

action
Is the type of change that was being reported, as one of the following:
• Create
• Delete
• Update

System action
This message is followed immediately by message EYUCC0003E. A user trace record is written to the CICS trace data set.

User response
Depending on the type of error that was reported, do one of the following:
• For Method Failure, collect the exception trace records and contact your IBM Support Center.

Module:  
EYU9BCSD

Destination

EYUCC0003E  
**date**  **time**  **applid**  Evaluation of Connecting CMAS **cmasename** terminated.

Explanation
The Evaluate CMAS routine terminated abnormally because of the error reported in message EYUCC0002E, where:

Module:  
EYU0CCPP

Destination
Console and COLG
name
Identifies the CMAS that reported the error; this could be either the local CMAS, which is the maintenance point, or the CMAS that was being connected to.

System action
The pending notification process is retried automatically the next time the connecting CMAS makes contact with the local CMAS.

User response
None.

EYUCIInnnn messages

**EYUCI0001I**

Destination
COLG

EYUCI0004I date time applid Data Repository does not contain Link Definitions, Communications Group cgrp is being deleted.

Explanation
During CMAS initialization, the data repository was scanned for CMAS-to-CMAS link records, but none were found. This either means that no links have been defined to CICSPlex SM (through the CMTCMDEF or CMTPMDEF views), or that the data repository has been reinitialized since links were defined.

To ensure that the CICS DFHCSD file coincides with the data repository, the specified CSD communications group, which contains the link definitions for the CMAS, is being deleted, where:

grpname
Is the name of the communications group in the form EYUCxxxx, where xxxx is the four-character CICS system ID of the CMAS.

System action
CICSPlex SM attempts to delete the communications group. This message is followed by another message that indicates whether the group could be deleted: EYUCI0005I indicates the group was deleted; EYUCI0006E indicates it was not.

User response
None.

Module:

2. time
3. applid
4. cgrp

**Destination**

COLG

**EYUCI0006E**  *date time applid* Delete of Communications Group cgrp failed, {CEDA failure / CSD in use}.

**Explanation**

This message follows message EYUCI0004I to indicate that the specified CSD communications group could not be deleted, where:

**grpname**

Is the name of the communications group in the form EYUCxxxx, where xxxx is the four-character CICS system ID of the CMAS.

**reason**

Identifies the reason for the failure as one of the following:

**CSD in use**

The DFHCSD file was in use by another user or transaction for more than two minutes. Deleting a group requires update access to the DFHCSD file.

**CEDA Failure**

A nonzero return code was received from the CEDA interface, which is used to delete a group from the DFHCSD file.

**System action**

Any CMAS -to-CMAS links defined to CICSPlex SM are not established. In the case of a CEDA failure, message EYUXS0003E is issued with details about the failure.

**User response**

Depending on the reason for the failure, do one of the following:

- For CSD in use, ensure that the DFHCSD file is available to the CMAS being initialized. Then stop and restart the CMAS.
- For CEDA Failure, review the text of message EYUXS0003E and the Developing system programs for CICS to determine the cause of the CEDA failure. Then stop and restart the CMAS.

Console and COLG
**Explanation**

During CMAS initialization, the data repository is scanned for CMAS-to-CMAS link records. Appropriate CONNECTION, SESSION, and PARTNER resources are dynamically created in the running CMAS, where:

- **addspace**
  Identifies the type of address space being linked to as either a CMAS or a MAS.

- **sysname**
  Is the name of the CMAS or MAS being linked to.

**System action**

CICSPlex SM attempts to create the required resources and to update the connection list. This message is followed by another message that indicates whether or not the list could be updated. EYUCI0011I indicates that the list was updated; EYUCI0012E indicates that it was not.

**User response**

None.

**Module:**

EYU0CSSR

**XMEOUT parameters/Message inserts**

1. **date**
2. **time**
3. **applid**
4. Value chosen from the following options:
   - 1=CMAS,
   - 2=MAS
5. **sysname**

**Destination**

COLG

**Explanation**

This message follows message EYUCI0010I to indicate that a link to the specified CICS system was successfully defined and installed, where:

- **addspace**
  Identifies the type of address space as either a CMAS or a MAS.

- **sysname**
  Is the name of the CMAS or MAS that was linked to.

**System action**

Initialization of the Communications component continues.

**User response**

None.

**Module:**

EYU0CSSR

**XMEOUT parameters/Message inserts**

1. **date**
2. **time**
3. **applid**
4. Value chosen from the following options:
   - 1=CMAS,
   - 2=MAS
5. **sysname**

**Destination**

COLG

**Explanation**

This message follows message EYUCI0010I to indicate that a link to the specified CICS system could not be defined and installed, where:

- **addspace**
  Identifies the type of address space as either a CMAS or a MAS.
**sysname**

Is the name of the CMAS or MAS.

**reason**

Identifies the reason for the failure as one of the following:

- **CSD in use**
  The DFHCSD file was in use by another user or transaction for more than two minutes. Updating a group requires update access to the DFHCSD file.

- **SYSID used in another link**
  This CMAS already has a connection to a CMAS or MAS with the same name.

- **APPLID used in another link**
  This CMAS already has a connection to a CMAS or MAS with the same VTAM APPLID.

- **CREATE Failure**
  An abnormal response was received while dynamically creating resources.

**System action**

The impact on system processing depends on the reason for the failure:

- **CSD in use**
  The definition is not processed.

- **SYSID used in another link**
  The definition is not processed.

- **APPLID used in another link**
  The definition is not processed.

- **CREATE Failure**
  If creation of CONNECTION or SESSION definitions failed, the incomplete set will be discarded. If creation of related PARTNER definitions failed, the connection is NOT discarded.

**User response**

- For CSD in use, make sure the DFHCSD file is available to the CMAS being initialized. Then attempt to define the link again.
- For SYSID used in another link, remove and recreate the CMTCMDEF or CMTPMDEF, insuring that the SYSID of the remote CMAS is not already in use.
- For APPLID used in another link, remove and recreate the CMTCMDEF or CMTPMDEF, insuring that the APPLID of the remote CMAS is not already in use.
- For CREATE Failure, examine the exception trace records to determine the cause of the problem. Correct any errors and restart the CMAS with a system initialization parameter of START=COLD.

**Module:**

EYU0CSSR

**XMEOUT parameters/Message inserts**

1. date

   3=APPLID used in another link,
   4=CREATE failure

**Destination**

Console and COLG

**EYUCI0013I**

(date time applid) Install of Communications Group cgrp bypassed, CICS was not started COLD.

**Explanation**

The CMAS that is being initialized was not started with a system initialization table (system initialization table) parameter of START=COLD. The link definitions in the specified communications group are not installed; CICS restores all link definitions from the DFHRSD file. Any recent changes or additions to the CICSPlex SM CMAS -to-CMAS link definitions (made using the CMTCMDEF or CMTPMDEF views) are not available to the CMAS, where:

- **grpname**
  Is the name of the communications group in the form EYUCxxxx, where xxxx is the four-character CICS system ID of the CMAS.

**System action**

The CMAS uses whatever link definitions existed in the DFHRSD file at the time of its last shutdown. If either
the CICSPlex SM data repository or the DFHCSD file was restored from backup or reinitialized since the last CMAS execution, the link definitions may not be up to date.

**User response**

To make use of the latest link definitions, stop the CMAS and then restart it with a system initialization table parameter of START=COLD.

**Module:**
EYU0CSSR

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid
4. cgrp

**Destination**

COLG

**Explanation**

This message follows message EYUCI0007I to indicate that the specified communications group could not be installed because it could not be found in the DFHCSD file. This problem could occur for one of two reasons:

- The DFHCSD file was either restored from backup or reinitialized.
- No communication links have been defined to CICSPlex SM through the CMTCMDEF or CMTPMDEF views.

Where:

**grpname**

Is the name of the communications group in the form EYUCxxxx, where xxxx is the four-character CICS system ID of the CMAS.

**System action**

If the DFHCSD file was restored from backup or reinitialized, this message is followed by one or more EYUCI0010I messages as CICSPlex SM attempts to synchronize the file with its data repository.

Otherwise, no CMAS -to-CMAS connections are established.

**User response**

None.

**Module:**
EYU0CSSR

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid
4. cgrp

**Destination**

Console and COLG

**Explanation**

During initialization of the Communications component, an error has been detected while trying to set the priority of the CICSPlex SM supplied transaction COIR.

**System action**

MAS initialization continues. However, evaluation definitions (EVALDEFs) that run in this MAS operate as if the CICSPlex SM system parameter COIRTASKPRI=0 is set. This means the MAS long-running task COIE is used for all EVALDEFs, even if the Separate Task field is set to Yes.

**User response**

Check that transaction COIR is installed in the MAS. Once COIR has been installed, the MAS agent will need to be restarted to pick up the change.

**Module:**
EYU0CIIN

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid

**Destination**

Console and COLG

**Explanation**

During initialization of the Communications component, an error has been detected while trying to set the priority of the CICSPlex SM supplied transaction COIR.

**System action**

MAS initialization continues. However, evaluation definitions (EVALDEFs) that run in this MAS operate as if the CICSPlex SM system parameter COIRTASKPRI=0 is set. This means the MAS long-running task COIE is used for all EVALDEFs, even if the Separate Task field is set to Yes.

**User response**

Check that transaction COIR is installed in the MAS. Once COIR has been installed, the MAS agent will need to be restarted to pick up the change.
**Explanation**
During initialization of the Communications component, an error has been detected while trying to set the priority of the CICSPlex SM supplied transaction COHT.

**System action**
MAS initialization continues. However, it will not be possible to obtain data for completed tasks (HTASK resource table) because the MAS COHT transaction is not available.

**User response**
Check that transaction COHT is installed in the MAS. Once COHT has been installed, the MAS agent will need to be restarted to pick up the change.

Identifies the communications protocol being used as one of the following:
CPI-C
  Common Programming Interface Communications

LU6.2
  CICS intersystem communication

MRO
  CICS multiregion operation

ESSS
  CICSPlex SM Environment Services System Services

task
  Identifies a specific communications task. One or more of the following tasks are initiated, depending on the communications node involved and the type of protocol in use:

  Receive Link Manager
    Initiated in a CMAS network node to manage a set of MAS CPI-C endpoint connections.

  Receive Link Task
    Initiated in a MAS endnode to form a controlled endpoint connection.

  Send Link Manager
    Initiated in a CMAS network node to manage CPI-C and MRO logical connections.

  Independent Receive Task
    Initiated in a CMAS network node to manage a single network connection.

  nodename
    Identifies a communications node by its CMAS or MAS name.

 EYUCL0001I  date time applid  Protocol Services initialization complete.

**EYUCL0022I**  
*date time applid* Communications buffer long-running task termination complete.

Explanation

The communications buffer long running task (LRT) has been terminated.

System action

If the LRT was terminated as the result of a normal shutdown, the CICSPlex SM shutdown continues.

If the LRT terminated because of an abnormal condition, a message preceding this one describes the condition that caused the termination. CICSPlex SM may continue running without the services of the LRT.

User response

If a normal CICSPlex SM shutdown is in progress, no action is required.

If the LRT terminated because of an abnormal condition (as indicated by message EYUCL0121E preceding this message), CICSPlex SM should be shut down and restarted.

Module:

EYU0CSGT

---

**EYUCL0023W**  
*date time applid* The MVS image is running in workload management goal mode but the CMAS is not defined to the service class, SYSSTC.

Explanation

The MVS image is running in workload management goal mode but the CMAS is not defined to the MVS service class, SYSSTC. For goal mode the CMASs should not be run as servers, but should be defined to SYSSTC as exempt from server transaction response time management. Started tasks in SYSSTC are assigned a high dispatching priority.

System action

The CMAS issues this warning message and continues processing. However, CICSPlex SM may experience severe performance problems.

User response

It is important that the CMAS have the ability to process data with a higher priority than the MAS it manages. Therefore, when the MVS image is running in workload management goal mode, the CMAS should be defined to the MVS service class, SYSSTC. See the Installing CICS TS Installing CICS TS

Module:

EYU0CLET
XMEOUT parameters/Message inserts

1. date
2. time
3. applid

Destination
Console and COLG

EYUCL0024W  date time applid The MVS image is running in workload management compatibility mode and the dispatching priority (X'priority1') of the connecting MAS (nodename) is higher than the dispatching priority (X'priority2') of the CMAS.

Explanation
When the MVS image is running in workload management compatibility mode, the dispatching priority of the CMAS should be greater than or equal to the dispatching priority of the connecting MAS to ensure optimal performance.
n is the hexadecimal dispatching priority.

System action
The CMAS issues this warning message and continues processing. However, CICSPlex SM may experience severe performance problems.

User response
It is important that the CMAS have the ability to process data with a higher priority than the MAS it manages. Therefore, when the MVS image is running in workload management compatibility mode, the CMAS's dispatching priority should be greater than or equal to the dispatching priority of the connecting MAS. See the Installing CICS TS Installing CICS TS.

Note:
The minimum required level of operating system for CICS Transaction Server for z/OS, Version 2 Release 3 is z/OS Version 1 Release 4. Beginning with z/OS V1 R3 WLM compatibility mode is no longer available. Therefore, this message will not be issued in CICS Transaction Server for z/OS Version 2 Release 3. The message remains in the documentation for reference purposes.

Console and COLG

EYUCL0101E  date time applid Protocol Services initialization failed.

Explanation
The protocol services subcomponent of the Communications component could not be initialized.

System action
The impact on system processing depends on what type of address space was being initialized:

CMAS
The CMAS is terminated. CICSPlex SM takes an SVC dump with a dump code of EYUXL001.

MAS
The MAS is terminated. CICSPlex SM takes a transaction dump with a dump code of EYUI and returns control to CICS.

User response
Examine the exception trace records, and any messages issued before this one, to determine the cause of the problem.

Module:
EYUOCLIN, EYU1CLIN

XMEOUT parameters/Message inserts

1. date
2. time
3. applid

Destination
Console and COLG

EYUCL0102E  date time applid {ESSS} Initial Contact Transient initiation failed, TaskID(taskid).
Explanation
An attempt to initialize the Initial Contact Transient (ICT) for the specified protocol in the CMAS has failed where protocol is as described in EYUCLnnnn messages.

System action
Communications initialization fails causing the CMAS to terminate. CICSPlex SM takes an SVC dump with a dump code of EYUXL001.

User response
Verify that the appropriate ICT transaction ID is defined for program EYU9XLOP. Examine the trace records generated by EYU0CLIN and, if the ICT transaction ID was not found, use kernel linkage to determine the cause of the problem.

Module:
EYU0CLIN

XMEOUT parameters/Message inserts

Destination
Console and COLG

EYUCL0103E  date time applid {ESSS} {Receive Link Manager / Receive Link Task} initiation failed, TaskID(taskid).

Explanation
An attempt to initiate a required task for the specified protocol has failed where protocol and task are as described in EYUCLnnnn messages.

System action
If the task was started from the Initial Contact Transient (ICT), the ICT terminates, which prevents links from being established with the current node.

If the task was started from protocol services initialization, the impact on system processing depends on what type of address space was being initialized:

CMAS
The CMAS is terminated. CICSPlex SM takes an SVC dump with a dump code of EYUXL001.

MAS
The MAS is terminated. CICSPlex SM takes a transaction dump with a dump code of EYUI and returns control to CICS.

User response
Verify that the appropriate transaction ID is defined for program EYU9XLOP. Examine the trace records generated by any of the issuing modules to determine the cause of the problem.

Explanation

The Initial Contact Transient (ICT) Attach request made by the MAS to establish a communications link has failed where protocol and nodename are as described in EYUCLnnnn messages, and where reason indicates the cause of the failure.

System action

The ICT Attach request is denied. Initialization of the local MAS terminates. A user trace record is written to the CICS trace data set.

User response

Response depends on the reason given for the failure as follows:

MAS already exists

No action is required. However, some invalid records may remain in the data repository. If you want to clean up the data repository, you should stop and restart the CMAS to which the MAS was trying to connect.

MAS name is invalid

Check the MAS startup job to make sure the CICS system and CICSplex names are correctly specified. If the MAS startup job is correct, then use the CICSSYS and CMSPLEx views to make sure the CICS system and CICSplex have been defined to the data repository.

query parameters

Collect the exception trace records and contact your IBM Support Center.

Link Conversation Block shortages

Collect the exception trace records and CMAS or MAS job logs and contact your IBM Support Center.

add capability failed

Collect the exception trace records, CMAS and MAS job logs and contact your IBM Support Center.

check capability failed

Collect the exception trace records, CMAS and MAS job logs and contact your IBM Support Center.

CICS release not supported

Upgrade the MAS to a supported version of CICS.

EYUCL0113E date time applid {Receive Link Task | Send Link Task} terminated abnormally for {CPI-C | MRO | CPI-C Network | MRO Network | LU6.2} connection with {CMAS | RMAS} nodename, TaskID(taskid).

Explanation
An abnormal condition caused the link between the current node and the specified node to be terminated where task, protocol, and nodename are as described in EYUCLnnnn messages, and where:

<table>
<thead>
<tr>
<th>type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CPI-C</td>
</tr>
<tr>
<td>2</td>
<td>MRO</td>
</tr>
</tbody>
</table>

System action
Protocol services is notified that the link is no longer available. A user trace record is written to the CICS trace data set.

User response
If the specified node terminated abnormally, this message is to be expected. Determine why the node terminated and then reestablish the communication link, if possible.

If the node appears to be active and available, collect the exception trace records, and any messages issued before this one, and contact your IBM Support Center.

EYUCL0118E date time applid Inconsistent CMAS-CMAS definition. Expected {target | source} {CMAS | SYSID} id1, found {target | source} {CMAS | SYSID} id2.

Explanation
While two CMAS s were attempting to connect to each other, one of the CMAS s determined that their connection definitions are inconsistent, where:

cmastype
Identifies the CMAS that has the inconsistency as either the TARGET or SOURCE of the connection attempt. Either CMAS in the connection attempt can identify and report an inconsistency.

idtype
Indicates whether the inconsistency was in the CICS system ID (SYSID) or the CMAS name (CMAS).

id1
Is the system ID or CMAS name that was expected.

id2
Is the system ID or CMAS name that was found.

System action
The attempt to connect the two CMAS s fails. No communication is possible between the CMAS s.

User response
Use the CMTCMDEF view to correct the inconsistencies in the definitions of the specified CMAS s.

EYUCL0119E date time applid A failure occurred while attempting to connect to CMAS cmasname.

Explanation
While attempting to activate a CICSPlex SM connection between this CMAS and another CMAS, a failure has occurred, where:

cmasname
Is the name of the other CMAS.
System action
The connection is not completed.

User response
Collect all job output and AUXTRACE datasets from both CMASs. After a timeout period in the other CMAS, the connection attempt should automatically be retried. If the problem persists, contact your IBM Support Center.

EYUCL0120E date time applid Unable to start Communications buffer long-running task.

Explanation
The protocol services subcomponent of the communications component was not able to start the communications buffer long running task (LRT) for a CICSPlex SM address space (CMAS).

System action
CICSPlex SM terminates abnormally. A user trace record is written to the CICS trace data set.

User response
Examine the CICS CSD to verify that transaction LSGT and program EYU9XLOP are defined. If the definitions are correct, collect the exception trace records and the job log and contact your IBM support center.

EYUCL0121E date time applid Communications buffer long-running task terminating due to nonrecoverable error.

Explanation
The communications buffer long running task (LRT) encountered an error from which it could not recover.

System action
The LRT terminates. CICSPlex SM may continue running without the services of the LRT.

User response
Examine any messages issued before this one to determine the cause of the problem. Collect any exception trace records, the job log, and CICS or MVS/ESA dump output, if available, and contact your IBM support center.

Module:
EYU0CSGT

EYUCL0122E date time applid MAS communications buffer shortage has been detected.

Explanation
A shortage of MAS communication buffers has been detected by a CMAS or one of its local MASes. This message is issued the first time a shortage occurs during the execution of the CMAS.

System action
The CMAS or MAS will issue this message, request an SVCdump, and then issue an exception trace. Execution of the CMAS or MAS then continues.
User response
Collect the CICS auxtrace data sets, the SVC dump, and the job output from the CMAS or MAS. If the requesting system is a MAS, also collect the CICS auxtrace data sets and job output from the CMAS to which the MAS connects. Contact your IBM Support Center with the documentation collected.

Console and COLG

---

**EYUCL0126E**

*date* *time* *applid* ESSS ICT attach to *nodename* failed, MAS is already connected to CMAS(*cmasname*).

**Explanation**

A MAS attempted to connect to a CMAS, but it is already connected to another CMAS, where *cmasname* is the name of the CMAS the MAS is already connected to. Both the MAS and the CMAS it is attempting to connect to will issue this message, but the variable, *name*, will have different meanings:

- When this message is issued by the CMAS, *name* is the name of the MAS.
- When this message is issued by the MAS, *name* is the name of the CMAS that the MAS is attempting to connect to.

**System action**

After issuing the message, the CMAS will continue normal processing, while the MAS will process as follows:

- Issue new prompt message EYUCL0127A.
- Issue a delay for five seconds.
- Retry the connect to the CMAS until the attach completes successfully or until the MAS agent is terminated.

**User response**

While it is possible that the EYUCL0126E error is valid, and that a duplicate MAS was started, or a MAS was started with an incorrect NAME EYUPARM, it is also possible that because of the asynchronous nature of CMAS-MAS connect and disconnect processing, the CMAS might still be in the process of disconnecting a previous connection of the MAS when it receives, and fails, a subsequent connection of the MAS.

- If the connect request is not valid, then one of the following actions can be performed to terminate the MAS agent and stop the connect retry processing:
  - Reply to prompt message EYUCL0127A.
  - Issue the COSH transaction.
  - Use the CEMT transaction to terminate the region.
  - Cancel the region.

**Note:** If the MASPLTWAIT(YES) EYUPARM is in affect for the MAS, then the region will not be able to respond to COSH or CEMT requests.

---

Module: EYU0CLET

**EYUCL0127E**

ESSS ICT attach will be retried. Reply "T" to terminate the MAS agent.

**Explanation**

The MAS connect will be retried until the attach completes successfully or until the MAS agent is terminated. This message is preceded by message EYUCL0126E.

**System action**

After issuing this message, the MAS will delay and then retry the connection process.

**User response**

Reply "T" to stop the connection retry process and terminate the MAS agent. Please refer to message EYUCL0126E for more information about user actions for this message.

**EYUCL0130E** date time applid Capability of MAS nodename is not lower or equal.

**Explanation**

A request by MAS nodename to establish a communications link has failed because MAS nodename is running at a later version than the CMAS where:

- nodename
  - is the MAS name of a communications node.

The capability of a CMAS or MAS is determined by its service level or CICSPlex SM release and version.

This message might be followed by mesage EYUCL0131E which can give more information.

**System action**

The request to establish a communications link is denied. Initialization of the MAS terminates.

**User response**

Correct the startup JCL for MAS nodename so that its service level or CICSPlex SM release and version is not later than that of the CMAS that issued this message.

**Module:**

**EYUCP0001E** \textit{date time applid} Duplicate Maintenance Points for CICSpex

**plexname**, MPs on \textit{cmasid1} and \textit{cmasid2}.

Chapter 2. CICSpex SM messages 83
Explanation
In attempting to connect the specified CMAS s to each other, CICSPlex SM determined that both CMAS s were considered the maintenance point for the specified CICSPlex. This occurs when the same CICSPlex is manually created under two different CMAS s. The CMAS under which a CICSPlex is created becomes its maintenance point, and each CICSPlex can have only one.

System action
The communications link between the two CMAS s is terminated.

User response
If you want the CMAS s to communicate with each other, the CICSPlex must be defined to only one of them. Use the CPLEXDEF view to remove the CICSPlex definition from one of the CMAS s and then restart that CMAS.

EYUCP0003E date time applid Duplicate MAS masid, in CICSPlex plexname, systems on cmasid1 and cmasid2. MASes being shut down.

Explanation
In attempting to connect the specified CMAS s to each other, CICSPlex SM determined that a MAS of the same name was active for each CMAS. The names of CICS system s to be managed by CICSPlex SM must be unique within a CICSPlex. Because both CMAS s are participating in the management of the specified CICSPlex, duplicate MAS names are not allowed.

System action
The duplicate MAS s are terminated. The CICS system s continue to run normally, but they are not known to CICSPlex SM. The connection between the CMAS s is completed.

User response
Change one of the MAS names in the appropriate CICS system startup JCL. Then stop and restart both CICS system s.

Console and COLG

EYUCP0010E  date time applid Synchronization for CICSp lex plexname on CMAS cmasname failed. That CMAS is being isolated.

Explanation
An attempt to perform repository synchronization for the specified CICSp lex and CMAS failed, where:

plexname
Is the name of the CICSp lex for which the synchronization was attempted.

cmasname
Is the name of the CMAS that could not be synchronized.

System action
This CMAS will issue an exception trace, request an SVCdump, and issue this message. The CMAS which could not be synchronized is then removed from the CMAS network.
User response

Collect the CICS auxtrace data sets, the SVCdump, the job output from this CMAS, and a backup copy of this CMAS's data repository. Note that message EYUCP0011E is issued in the CMAS that was isolated. Refer to the description of that message for additional documentation to collect.

To recover from the problem, the isolated CMAS and all MASs connected to it should be terminated. Then restart the isolated CMAS. After it successfully performs repository synchronization with the other CMASs in the network (EYULOG messages EYUCP0203I and EYUCP0204I), its MASs can be restarted.

To determine the cause of the problem, contact your IBM Support Center with the documentation collected.

Module:
EYUC0CPLT

XMEOUT parameters/Message inserts

1. date
2. time
3. applid
4. plexname
5. cmasname

Explanation

The data repository of the CMAS that issued this message could not be synchronized for one or more CICSpleses, where:

**cmasname**

Is the name of the CMAS that requested the isolation.

System action

This CMAS issues an exception trace, request an SVC dump, and issues this message. This CMAS is then removed from the CMAS network.

All the connections to the CMAS are terminated.
cmasid2

Is the name of a CMAS that was found to be running a later release of CICSPlex SM than the maintenance point.

The maintenance point CMAS must always be running the most current release of any CMAS actively involved in managing the CICSplex.

System action

The CMAS running the later release of CICSPlex SM is removed from active management of the CICSplex. All definitions related to the CICSplex are deleted from the later level CMAS’s data repository.

User response

Upgrade the maintenance point CMAS to the most current release of CICSPlex SM. Bring up both CMASs. When both CMASs have connected, re-add the non-maintenance point CMAS to the CICSplex.

For details on upgrading from one release of CICSPlex SM to another, see the Upgrading documentation for this CICS release.

In a complex CICSplex environment, repeated instances of message EYUCP0012E and message EYUTS0012E might be issued by a newly upgraded CMAS. This can be relieved by recycling the affected CMAS.

Console and COLG

EYUCP0013E  date time applid CMAS cmasid1 at version renum is not supported by cmasid2. CMAS cmasid3 will terminate.

Explanation

In attempting to connect the CMASs in a network, CICSPlex SM determined that the specified CMASs are running incompatible releases of the product, where:

cmasid1

Is the name of the CMAS that is running an earlier release of CICSPlex SM.

renum

Identifies the release of CICSPlex SM that is no longer supported by a later release.

cmasid2

Is the name of the CMAS that is running a later release of CICSPlex SM.

System action

The CMAS running the later release of CICSPlex SM shuts down.

User response

If you want to include the CMAS identified as cmasid1 in a network with more current CMASs, you must upgrade that CMAS to a supported release of CICSPlex SM.

For a list of supported releases and details on upgrading from one release to another, see the Upgrading documentation for this CICS release.

*date time applid* Maintenance Point for CICSplex plexname on CMAS cmasid1 has a lower capability than CMAS cmasid2. CMAS cmasid3 will be isolated from the CICSplex.
Explanation

In attempting to connect the specified CMASs, CICSPlex SM determined that the maintenance point is at an earlier service level of CICSPlex SM than the connecting CMAS where:

plexname

is the name of the affected CICSPlex.

cmasid1

is the name of the maintenance point for the CMAS.

cmasid2

is the name of the connecting CMAS.

The maintenance point CMAS must run at the same or a later service level of CICSPlex SM than a connecting CMAS for a particular CICSPlex. The capability of a CMAS is determined by service level.

System action

The connecting CMAS, which is running a later service level of CICSPlex SM is isolated from the CICSPlex.

User response

If you want to include the CMAS identified as cmasid1 in a network with more current CMASs you must upgrade that CMAS to the same or a later service level of CICSPlex SM.

Module: EYU0CCPA, EYU0CPAI, EYU0CPLT, EYU0CPSI

<table>
<thead>
<tr>
<th>EYUCP0023E</th>
<th>date time applid A communications failure has occurred while performing Repository Synchronization with CMAS (cmasname). That CMAS is being isolated.</th>
</tr>
</thead>
</table>

Explanation

A communications error has occurred while this CMAS was performing repository synchronization with another CMAS, resulting in the isolation from the CMAS network of this CMAS, where:

cmasname

is the name of the CMAS being isolated.

System action

This CMAS issues an exception trace, request an SVCdump, and issue this message. The CMAS which could not be synchronized is then removed from the CMAS network.

User response

Collect the CICS auxtrace data sets, the SVCdump, and the job output from this CMAS. Note that message EYUCP0024E is issued in the CMAS that was isolated. Refer to the description of that message for additional documentation to collect.

To recover from the problem restart the isolated CMAS.

To determine the cause of the problem, contact your IBM Support Center with the documentation collected.

<table>
<thead>
<tr>
<th>EYUCP0024E</th>
<th>date time applid A communications failure has occurred while performing Repository Synchronization. This CMAS is being isolated at the request of CMAS (cmasname).</th>
</tr>
</thead>
</table>

Explanation

A communications error has occurred while this CMAS was performing repository synchronization with another CMAS, resulting in the isolation from the CMAS network of this CMAS, where:
**cmasname**

Is the name of the CMAS that requested the isolation.

**System action**

This CMAS issues an exception trace, request an SVC dump, and issue this message. This CMAS is then removed from the CMAS network.

**User response**

Collect the CICS auxtrace data sets, the SVC dump, and the job output from this CMAS. Note that message EYUCP0023E is issued in the CMAS that requested the isolation. Refer to the description of that message for additional documentation to collect.

To recover from the problem restart this CMAS.

If you recently backed out of an upgrade the isolation could have occurred because you reverted to a previous copy of your Data Repository rather than downgrading the recently upgraded version.

To determine the cause of the problem, contact your IBM Support Center with the documentation collected.

**Explanation**
The local CMAS no longer has a connection, where:

- **cmasname**
  - Is the name of the CMAS to which the local CMAS is no longer connected.

- **reason**
  - Is the reason why the local CMAS is requesting the disconnect. Values may be:
    - **Method failure**
      - A method call has failed.
    - **Method ABEND**
      - An abend has occurred.
    - **CMAS isolated**
      - The CMAS is being isolated, so all CMAS communications will stop.
    - **Duplicate MP**
      - The CMAS to CMAS link is being stopped because a duplicate maintenance point CMAS for a CICSpex has been detected.
    - **CMTCMLNK discard**
      - The CMTCMLNK is being discarded by a WUI or API discard action.

**System action**
The CMAS to CMAS send link task for the identified CMAS will be stopped. The CMAS must be restarted if communications to the partner system is to be retried.

**User response**
Depending on the reason indicated in the message, take action as follows:
Method failure or Method ABEND
Refer to other messages for both the local and the partner CMASes. If no relevant messages can be found, collect the CICS auxtrace datasets, any SVC dumps and the complete job output from the local and partner CMASes identified in the message. To determine the cause of the problem, contact your IBM Support Center with the documentation collected.

CMAS isolated
Refer to message EYUCP0011E.

Duplicate MP
Refer to message EYUCP0001E.

CMTCMLNK discard
None. The CMAS to CMAS link was discarded based on a user request.

EYUCP0101W  date time applid CICSpex
plexname has number type regions
managed. This is percentage% of
the total Managed Region features
assigned to the CICSpex.

Explanation
You are approaching the maximum number of Managed Region features allowed for the specified type. This message appears when you have exceeded 90 percent active, where:

plexname
Is the name of the CICSpex

count1
Indicates the current number of active managed regions of the indicated type.

type
Identifies the managed region type as MVS or VSE.

percentage
Is percentage of the maximum allowed that is currently active.

count2
Indicates the maximum number of active managed regions allowed.

System action
None.

User response
Check your IBM license agreement or a current billing statement for the number of copies of the Managed Region feature licensed by your enterprise. The number of CICS systems you intend to manage concurrently cannot exceed the number of Managed Region features you have licensed.

If the number of Managed Region features you have licensed appears to be sufficient, then make sure that their distribution among your CICSplexes matches your actual CICSplex configurations. Use the CPLEXDEF view (described in the Administering CICSpex SM manual) to review the number of managed regions assigned to each CICSpex.

If you have not licensed a sufficient number of Managed Region features to support your enterprise, then do one of the following:

• Contact your IBM representative to license additional copies of the Managed Region feature.
• Remove the excess CICS systems from the CICSpex SM management environment.

EYUCP0204I date time applid Repository Synchronization successfully ended with CMAS cmasname.

Explanation
The data repository for the specified CMAS has been successfully synchronized with the data repository of the CMAS that issued this message.

System action
None.

User response
None.

Module: EYU0CPLT
**EYUCP0205S**  
*date time applid* Repository Synchronization with CMAS *cmasname* failed.

**Explanation**
The Connection Services long running task (LRT) encountered an error while trying to synchronize the repository of the CMAS that issued the message with the CMAS (*cmasname*).

**System action**
The CMAS which issues the message continues processing. However the CMAS (*cmasname*) may no longer be able to accept Topology Joins or WLM requests.

**User response**
If you shut down more than one CMAS at the same time, you might receive message EYUCP0205S. In this situation, the message does not indicate a problem, and CICSPlex SM does not produce a diagnostic SVC dump as it normally would when this message is issued. You can avoid the message by staggering your CMAS shutdowns.

For all other situations, stop and restart CMAS (*cmasname*). This causes the synchronization process to be retried on the restart. If the problem persists, collect any exception trace records and the job logs of both CMASs, and contact your IBM Support Center.

**Module:**  
EYU0CPLT

---

**EYUCP0206E**  
*date time applid* Data repository definitions for CICSplex *plexname* are incomplete. Repository Synchronization will bypass this CICSplex.

**Explanation**
During repository synchronization processing between the current CMAS and another CMAS, the current CMAS determined that the data repository (EYUDREP) records were incomplete for a CICSplex for which it is the maintenance point (MP) CMAS, where:

*plexname*

is the name of the CICSplex.

**System action**
This message and a trace record are issued. Repository synchronization continues without processing the CICSplex that is in error.

**User response**
An error occurred when the CICSplex was either added or removed, resulting in incomplete EYUDREP records for the CICSplex. Check the current and previous job logs for this CMAS to determine if any error messages were issued. If any error messages are found, collect the messages, the unformatted auxtrace data sets from that run of the CMAS (if available), and a backup copy of the CMAS's EYUDREP, then contact your IBM support center.

To resolve the error message, from the CPLEXDEF view of the web user interface (WUI) remove the CICSplex. If the CICSplex is required, recreate it after removing it. If this does not resolve the problem, collect the job output, unformatted CICS auxtrace data sets from the current execution of the CMAS, and a backup copy of the CMAS's EYUDREP, then contact your IBM support center.

**Module:**  
EYU0CPLT

---

**XMEOUT parameters/Message inserts**

1. date  
2. time  
3. applid  
4. cmasname

**Destination**
Console and COLG
**Explanation**

The CMAS that issues this message is the maintenance point (MP) CMAS for CICSplex `plexname`.

During a data repository synchronization for CICSplex `plexname` with CMAS `cmasname` the maintenance point CMAS has determined that the CICSplex definition in CMAS `cmasname` must be deleted. The CICSplex delete was not possible as MASes within CICSplex `plexname` were directly connected (or were in the process of connecting) to CMAS `cmasname` at the time of the data repository synchronization attempt.

`action` may be 'deleted' or redefined:

- If `action` is 'deleted' the delete of the CICSplex is due to a 'FORce' action on the CPLXCMAS view or because the non-MP CMAS is using a later level of CICSPlex SM than the MP CMAS for the CICSPlex.
- If `action` is 'redefined' the CICSPlex is being deleted as the CICSPlex is being redefined on CMAS `cmasname` as the definitions for CICSplex `plexname` are out of date.

**System action**

Message EYUCP0010E will be issued and CMAS `cmasname` will be isolated.

**User response**

The MAS agents that connect directly to CMAS `cmasname` need to be stopped and CMAS `cmasname` will need to be restarted in order for the data repository synchronization to complete.

To identify the MAS agents that were connected (or trying to connect), review the CMAS `cmasname` EYULOG for the following messages:

- EYUTI0001I (with 'Topology Connect') identifies MASs directly connected to the CMAS
- EYUTI0009I identifies MASes trying to connect to the CMAS

To stop the CICSPlex SM MAS agent in these MASs either use the COSH transaction in each MAS or if the MASs are connected to the non-MP CMAS, the MAS view STOp action (or WUI/API equivalent). Alternatively, shut down the MAS.

Once the MAS agents have been stopped, restart CMAS `cmasname` to retry the data repository synchronization.

When the data repository synchronization has completed, restart the previously stopped MAS agents with the COLM transaction, or restart the MASs.

**Module:**

EYU0CPLT

**XMEOUT parameters/Message inserts**

1. `date`
2. `time`
3. `applid`
4. `plexname`
5. `cmasname`1
6. Value chosen from the following options:
   - 1=deleted,
   - 2=redefined
7. `cmasname`2

**Destination**

Console and COLG

**XMEOUT** parameters/Message inserts

- `date`
- `time`
- `applid`
- `plexname`
- `cmasname`1
- Value chosen from the following options:
  - 1=deleted,
  - 2=redefined
- `cmasname`2

**Explanation**

CICSPlex SM determined that CMAS `cmasname` needed to be deleted from CICSPlex `plexname`, and then added back into the CICSPlex. A problem occurred and the ADD process could not complete. The CMAS was previously either the Primary or Secondary Analysis Point CMAS for Analysis Point Specification `apspec`. This relationship may have been lost, and may need to be recreated manually.

**System action**

CMAS `cmasname` will be isolated.

**User response**

Verify whether `cmasname` is assigned to the CICSPlex, and if necessary re-create the relationship as either Primary or Secondary CMAS on the Analysis Point Specification.
For information on configuring primary or secondary CMAS analysis points refer to RTA analysis point monitoring.

Console and SYSPRINT

EYUCR0009I date time applid Security check: Userid=userid, Class=classname, Access={Read | Update | Control | Alter | Unknown}, Resource=resname, ESMResponse=esmresp, ESMReason=esmreason.

Explanation

A security check has occurred, where:

userid
Is the user ID of the user requesting access to the resource.

classname
Is the name of the class being checked.

access
Is the access level being attempted. It may be Read, Update, Control, Alter or Unknown.

resource
Is the name of the resource being accessed.

esmresp
Is the response code from the ESM.

esmreason
Is the reason code from the ESM.

The CICSPlex SM CMAS system parameter SECLOGMSG must be set to YES or ALL for this message to be issued.
**System action**

If access to the resource is not permitted by the External Security Manager, the request will fail. Typically the response from an API or WUI request would be NOTPERMIT with a reason of USRID.

**User response**

None if access is being correctly disallowed. If access is being incorrectly disallowed, use the information in the message to determine what resource is being checked, and why the ESM is not allowing access.

- **mode**
  Identifies the communications mode that is used on the communications connection as either Standard or Enhanced. The communications mode is determined automatically by the link set services subcomponent and cannot be controlled by the user.

- **text**
  A message received from a partner system. Consult the Messages and Codes manual for a description of this message.
type
Identifies the type of communications connection that has been assigned as one of the following:

**CPI-C network**
CMAS-to-CMAS connection using CPI-C (LU6.2) transmission protocol

**MRO network**
CMAS-to-CMAS connection using MRO transmission protocol

**Netview endpoint**
CMAS-to-Netview connection using the Netview PPI link

name
The name of the communications partner.

**EYUCS0001I**

**date**
**time**
**applid**

*Link Set Services initialization complete.*

**Explanation**
The link set services subcomponent of the Communications component has been successfully initialized.

3. **applid**
Communications long-running task termination has started.

Explanation
The Communications long running task (LRT) is being terminated.

System action
Termination of the Communications LRT continues.

User response
None

Module: EYU0CSLT

XMEOUT parameters/Message inserts
1. date
2. time
3. applid

Communications long-running task termination complete.

Explanation
The Communications long running task (LRT) has been terminated.

System action
If the LRT was terminated as the result of a normal shutdown, the CICSPlex SM shutdown continues.
If the LRT terminated because of an abnormal condition, a message preceding this one describes the condition that caused the termination. CICSPlex SM may continue running without the services of the LRT.

User response
If a normal CICSPlex SM shutdown is in progress, no action is required. If the LRT terminated because of an abnormal condition (as indicated by message EYUCS0104E preceding this message), CICSPlex SM should be shut down and restarted.
**Explanation**

The specified communications connection has been successfully unassigned from a CICSPlex SM link set. Link sets are the means by which CICSPlex SM optimizes processing to be performed for connections with similar attributes where type and name are as described in EYUCSnnnn messages. Once a connection has been unassigned from a link set, CICSPlex SM can no longer transmit data to, or receive data from, its communications partner.

**System action**

The connection is no longer available to other CICSPlex SM communications processes.

**User response**

None.

Destination
COLG

EYUCS0011W  date time applid The value of EYUPARM parmname was specified less than 10 seconds. This value has been set to 10 seconds for this execution of the CMAS.

Explanation
The indicated EYUPARM was set to a non-zero value less than 10 seconds.

System action
The value for the indicated EYUPARM is set to 10 seconds and CMAS initialization continues.

User response
If a value greater than 10 seconds is desired, modify the indicated EYUPARM and restart the CMAS. If a value of 10 seconds is desired, no user response is required for the current execution of the CMAS. However, to avoid this message for future executions of the CMAS, modify the indicated EYUPARM to 10 before the CMAS is restarted.

Module:
EYU0CSLT

XMEOUT parameters/Message inserts
1. date
2. time
3. applid
4. parmname

Destination
Console and COLG

EYUCS0012W  date time applid Request timeout EYUPARM eyuparm has been set less than timeout polling EYUPARM TOPOLLINT.

Explanation
The indicated EYUPARM has been given a value that is less than the TOPOLLINT EYUPARM. While this is allowed, it is not efficient.

System action
CMAS initialization continues.

User response
Since polling is used to determine when to time out a request, specifying a lower value for time out than for polling will most likely result in the request being timed out later than specified. If this is not desired, modify the EYUPARMS so that TOPOLLINT is less than or equal to the indicated EYUPARM and restart the CMAS.

**EYUCS0205W**

```
date time applid Connection to CMAS cmasname being retried due to: {Session Allocation failure / Partner System request / Initialization version reset}.
```

**Explanation**

An unexpected condition was found when the local CMAS attempted to initiate a communications connection. See EYUCSnnnn messages. is one of the following values:

- **Initialization version reset**
  This occurs when an enhanced connection is attempted by the first speaker, but the partner system has responded in such a manner that indicates that it will accept only the standard connection method.

- **Session Allocation failure**
  This may occur only on a CPI-C connection. The CPI-C protocol services have returned a response to the initial connection allocation request that implies that, although a failure has occurred, it is not necessarily severe and may be retried. The CICSPlex SM connection process may retry the CPI-C allocate up to fifteen times before it considers the connection unserviceable.

- **Partner System request**
  This may occur when either of the CMAS partners recognize a temporary processing issue that cannot be resolved at the point of execution (that is, a resource lock required by the local connection process has been withheld). In these situations, the local system may reject the connection request with an indication that it may be retried after a short period of time (typically two minutes). The partner CMAS issues the message and then waits for the instructed period before retrying the connection.

**System action**

The CMAS-to-CMAS connection is retried.

**User response**

If the connection establishes itself properly, no further action is required. If the connection fails to complete, retain the EYULOG, JOBLOG and exception trace records from the CMAS and contact your IBM support center.

**EYUCT0107E**

`date time applid A duplicate packet set was received from CMAS {name / SYSID} (cmasid).`

**Explanation**
A duplicate packet set has been received in this CMAS from another CMAS, where *cmasid* is the ID of the sending CMAS, and where *cmasidtype* indicates whether the ID is the sending CMAS 'name' or 'SYSID'.

**System action**
A dump is requested of the receiving CMAS. If *cmasidtype* is 'SYSID', then a dump could not be requested of the sending CMAS. Processing then continues.

**User response**
If *cmasidtype* is 'SYSID', then a dump of the sending CMAS should be requested manually. The dump should include the CMAS and ESSS address spaces, and the data spaces allocated by the ESSS for the CMAS. See the CICSPlex SM Problem Determination Guide section User-requested dumps for more information on the MVS DUMP command. Then collect the complete job output, auxtrace datasets and dumps from both CMASes.

After the documentation is collected, it is recommended to shutdown and restart the sending CMAS to correct the duplicate packet set problem. Note that since message EYUCT0107E is only issued once during the run of a CMAS, the duplicate packet set condition could continue occurring even though no subsequent messages are issued.

To determine the cause of the duplicate packet set problem, contact your IBM Support center, providing the collected documentation.

---

**EYUCW0105W** *date time applid* Time Period registration failed for definition (definition) in context (plexname) due to `{Insufficient Storage | Time Period not defined | Timing Services Inactive | Internal Error}`.

**Explanation**
A CMAS component attempted to register interest in a time period definition, but the request failed, where:

**plexname**
Identifies the CICSPlex for which the CMAS was registering interest.
reason
Indicates the reason for the failure, as one of the following:

Time Period not defined (defname)
The specified time period is not defined in the data repository.

Timing Services inactive
The Timing Services subcomponent is not available.

Internal Error
The Timing Services subcomponent encountered an error from which it could not recover.

System action
Timing Services fails the request.

User response
The user response depends on the reason for the failure:

- For Time Period not defined (defname), make sure the time period name was specified correctly. Use the PERIODEF view to display a list of time period definitions.
- For Timing Services inactive, stop and restart the CMAS. If this problem persists, contact your IBM Support Center.
- For Internal Error, collect the exception trace records and the job log and contact your IBM Support Center.

6. Value chosen from the following options:
   1=Insufficient Storage,
   2=Time Period not defined,
   3=Timing Services Inactive,
   4=Internal Error

Destination
Console and COLG

EYUCW0106I  date time applid Time Period (periodef) is now {active / inactive / removed} due to online modification.

Explanation
The specified period definition is in use by one or more CICSPlex SM components, such as Monitor Services or real-time analysis. The period definition was either updated or removed using the PERIODEF view and, as a result, its status has changed, where status identifies the new status of the period definition as one of the following:

ACTIVE
A period definition that was inactive is now active. Any definitions that make use of the time period also become active.

INACTIVE
A period definition that was active is now inactive. Any definitions that make use of the time period also become inactive.

REMOVED
The period definition was removed. All definitions that made use of the time period are automatically discarded from the running system.

System action
Timing Services processing continues.

User response
None.

Module:
EYU0CWTR

XMEOUT parameters/Message inserts
1. date
2. time
3. applid
4. perioddef
5. Value chosen from the following options:
   1=active,
   2=inactive,
   3=removed
**Explanation**

As part of CMAS initialization or CICSplex definition, the Timing Services subcomponent reports the monitor interval that is in effect for the specified CICSplex. Various CICSplex SM components perform special processing at the end of each monitor interval, where:

- \( nnnn \)
  - Is the monitor interval in minutes.
- \( plexname \)
  - Identifies the affected CICSplex.

**System action**

Timing Services processing continues.

**User response**

None.

**Module:**

EYU0CWPR

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid
4. nnnn

**Destination**

COLG

**EYUCW0108I** date time applid Time zone offset from GMT computed based on \{TIMEZONE operand in SYS1.PARMLIB(CLOCKxx) or the CMAS time zone\} \{Sysplex Timer\} \{attributes\}.

**Explanation**

As part of CMAS initialization, the Timing Services subcomponent reports how Greenwich Mean Time (GMT) was computed from the CPU clock, where text indicates what the computation was based upon as one of the following:

**CMAS time zone attributes**

The time zone offset specified in the CMAS startup job was added to or subtracted from the CPU store clock value.

**TIMEZONE operand in SYS1.PARMLIB(CLOCKxx) or Sysplex Timer**

The CPU clock was set to GMT, so no adjustment was made.

**System action**

Timing Services processing continues.

**User response**

None.

For a discussion of CICSplex SM time zone attributes, see the Administering CICSplex SM

Console and COLG

EYUMM0079E date time applid Monitor was unable to start a {CICS | Connection | File | Journal | Transaction | Program | Transient Data Queue | Terminal} data collector task.

Explanation
During CMAS initialization, Monitor Services was not able to start the data collector task for the specified resource type where restype is as described in EYUMMnnnn messages.

System action
Monitoring of the specified resource type is not available for any MAS associated with the CMAS that was initializing. A user trace record is written to the CICS trace data set. CMAS initialization continues.

User response
Examine the exception trace records to determine the cause of the problem. Then, if you want to monitor the specified resource type, stop and restart the CMAS.

**EYUMM0606W**  
*date time applid* Monitor could not install *nn* {CICS | Connection | File | Journal | Transaction | Program | Transient Data Queue | Global | Data Base | Terminal} definition(s) for Context(*context*) Scope(*scope*) - {Resource Not Supported | a zero sample interval}.  

**Explanation**  
During installation of a monitor specification, group, or definition, a certain number of definitions could not be installed in the specified CICS system, where *restype*, *context*, and *scope* are as described in EYUMMnnnn messages, and where:  

**nn**  
Identifies how many definitions could not be installed.  

**reason**  
Indicates the definitions could not be installed for one of the following reasons:  

**A zero sample interval**  
The sample interval for the specified resource type was zero, which means no monitor sampling will occur.  

**Resource not supported**  
The specified CICS system does not support the specified resource.  

**System action**  
The monitor definition install process continues. Monitoring of the specified resource type is not available on the specified CICS system.  

**User response**  
Depending on the *reason* value, do one of the following:  

**A zero sample interval**  
Use the MAS view to set the monitoring sample interval for the specified resource type to a nonzero value. Then, reinstall the monitor definitions for that resource type.  

**Resource not supported**  
To prevent this message from appearing the next time monitor definitions are installed, limit...
the scope associated with the specified resource definitions to CICS systems that support the resource. To determine if a particular resource is supported by a particular platform or release of CICS, refer to the System programming reference

EYUMM0607W  date time applid Monitor could not install nn definition(s) for Context(context) Scope(scope) due to Time Period(defname) not being defined.

Explanation
During installation of a monitor specification, group, or definition, Monitor Services attempted to register interest in the specified time period, but the period definition does not exist where scope are as described in EYUMMnnnn messages. The specified number of definitions, which reference the time period, could not be installed, where:

nn
Identifies how many definitions could not be installed.

defname
Is the name of the time period definition that could not be found.

System action
The monitor definition install process continues. Any monitor definitions that reference the specified time period are not installed.

User response
Make sure the time period name was specified correctly on the MONINGRP view. You can use the PERIODEF view to display a list of existing time period definitions and, if necessary, create a new one. Then, reinstall the monitor definitions using the correct time period name.

**EYUNL0089I**

| date | time | applid |

**Explanation**
Alternate LRT is performing message processing.
Explanation
This message is issued when the first alternate long running task in a MAS processes a request.

System action
MAS processing continues after the message is issued.

User response
No action is required unless alternate long running task processing is not desired in the MAS, in which case set EYUPARM MASALTLRTCNT to 0 (zero) and restart the MAS agent.

Normally the absence of this message, when the EYUNL0088I message indicates that at least one alternate LRT was started, indicates that a problem exists. Verify that the CONA transaction is defined to security and that the userid used to start the MAS has authority to start the transaction. If security is not an issue, collect the auxtrace data sets and the complete job output from the MAS and the CMAS it connects to and contact your IBM Support Center.

EYUNL0103E  

`date time applid WAIT`  

**EXTERNAL failed, RESP=respcode RESP2=reasoncode.**
Explanation
An EXEC CICS WAIT EXTERNAL command returned an abnormal response. The respcode and resp2code values are as returned by CICS.

System action
The MAS attempts a normal shutdown. A user trace record is written to the CICS trace data set.

User response
Follow the instructions associated with the respcode and resp2code values for the EXEC CICS WAIT EXTERNAL command.

Module:
EYU0NLRT, EYU0NLRA

XMEOUT parameters/Message inserts
1. date
2. time
3. applid
4. respcode
5. reasoncode

Destination
Console and COLG

EYUNL0120W date time applid ENABLE PROGRAM progname failed, RESP=respcode EIBRCODE=reasoncode.

Explanation
A program required by the MAS subcomponent could not be enabled, where:

prgmid
Identifies the program that could not be enabled as one of the following:
- EYU9NLDC
- EYU9NLDR
- EYU9NLME
- EYU9NMST
- EYU9NMTE
- EYU9XLAP

respcode
Value is as returned by CICS.

eibrcode
Value is as returned by CICS.

System action
The impact on system processing depends on which program could not be enabled:

EYU9NLDC
The XDUREQC Dump Domain exit is not available. MAS processing continues. Transaction dump completion will be detected by the XDUOUT exit. System dump completion will be detected by the heartbeat task.

EYU9NLDR
The XDUREQ Dump Domain exit is not available. MAS processing continues, but transaction dump and system dump (sick health) notifications are not issued.
The XRSINDI exit is not available. MAS processing continues, but topology changes are not communicated to the CMAS.

The XMEOUT Message Domain exit is not available. MAS processing continues, but topology changes are not communicated to the CMAS.

The XMNOUT Monitoring Domain exit is not available. MAS processing continues, but end-of-task monitoring data are not collected.

The XSTOUT Statistics Domain exit is not available. MAS processing continues, but monitoring statistics data are lost.

The CICSPlex SM API is not available. MAS processing continues, but the MAS cannot be accessed by API programs.

In all cases, a user trace record is written to the CICS trace data set.

**User response**

Follow the instructions associated with the `respcode` and `eibrcode` values for the EXEC CICS ENABLE command. Then, depending on which program could not be enabled, do one of the following:

- **EYU9NLDR**, **EYU9NLID**, **EYU9NLME**, **EYU9NMST**, or **EYU9XLAP**
  - Stop the MAS by issuing the STO action command from the MAS view. Then restart the MAS by issuing the COLM (for a local MAS) transaction from CICS; these transactions restart the CICSPlex SM MAS agent code in a running CICS system.

- **EYU9NMTE** or **EYU9NMT2**
  - Stop and restart CICSPlex SM transaction monitoring by using the the CICSSYS view to update the CICS system definition. Specify a sample rate of zero to stop transaction monitoring; change the sample rate back to a nonzero value to restart transaction monitoring.

**EYUNL0140W**  
*date time applid restype*  
monitoring terminated. Retry limit reached.

**Explanation**

Monitoring of the specified resource terminated abnormally and can not be restarted because the abnormal condition has occurred the maximum number of times allowed by CICSPlex SM, where:

*restype*

Identifies the type of resource for which monitoring terminated as one of the following:

- **HTASK**  
  Completed task

- **MCICS**  
  CICS systems

**System action**

The monitoring task for the specified resource is not restarted. MAS processing, including other monitoring tasks, continues. User trace records are written to the CICS trace data set. If the monitoring task abended, a transaction dump is written to the CICS dump data set.

**User response**

Use the MONDEF view to reinstall the monitor definitions for the specified resource. If the condition persists, collect the trace records and the transaction dump, if available, and contact your IBM Support Center.

**Module:**

EYU0NLRT, EYU1NLRT

**XMEOUT parameters/Message inserts**

**Destination**

Console and COLG
**EYUNL0141W** date time applid restype monitoring terminated. Being restarted.

**Explanation**
Monitoring of the specified resource terminated abnormally and is being restarted, where:

`restype`
Identifies the type of resource for which monitoring terminated as one of the following:

- **HTASK**
  Completed task
- **MCICS**
  CICS systems
- **MCONN**
  Connections and modenames
- **MDBX**
  DB2 and DBCTL resources
- **MFILE**
  Files
- **MGLBL**
  Global resources
- **MJRNL**
  Journals
- **MPROG**
  Programs
- **MTDQS**
  Transient data queues
- **MTERM**
  Terminals
- **MTRAN**
  Transactions

**System action**
The monitoring task for the specified resource is automatically restarted.

**User response**
None.

**Module:**
EYU0NLRT, EYU1NLRT

---

**EYUNL0142W** date time applid type monitoring terminated. product release level not supported.

**Explanation**
Monitoring of DB2 resources was requested, but is not available for the specified release of DB2.

**System action**
The monitoring task for DB2 (MDBX) is terminated. MAS processing, including the monitoring of other resources, continues.

**User response**
Review the installation requirements for a list of the DB2 releases supported by CICSPlex SM. If a supported release of DB2 becomes available and you want to monitor its resources, you must restart monitoring for the DB2 resource class.

**Module:**
EYU0NM2T

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid
4. type
5. product
6. level

**Destination**
Console and COLG
**Explanation**

Some or all MTRAN monitoring data is unavailable because CICSPlex SM was not able to process CICS monitor data at exit point XMNOUT, where:

**reason**

Identifies the reason why CICS monitor data could not be processed:

- **missing**
  
The work area for dictionary data was too small. All performance data will be discarded.

- **truncated**
  
The buffers used to pass performance data to the CICSPlex SM monitor component were too small. Performance records will be truncated.

**System action**

CICSPlex SM monitoring of MTRAN resources continues but some or all performance data provided by the CICS monitor domain will be missing. Data provided by CICS statistics domain will be collected and reported at monitor sample intervals.

**User response**

Collect AUXTRACE records and MAS and CMAS job logs and contact your IBM Support Center.

4. Value chosen from the following options:
   - `1=missing.`,
   - `2=truncated.`

**Destination**

Console and COLG

**EYUNL0144W** `date time applid` MAS notifications have been lost - no free message buckets.

**Explanation**

GLUEs capture notification data into pre-allocated data buckets, which are passed forward to the CICSPlex SM management routines for amalgamation of the notification data into the runtime environment. When the notification data has been received and processed by CPSM then the holding data bucket is released onto a free chain of buckets, for re-use in subsequent notifications.

There are a fixed number of the data buckets (default 1024), which is controlled by the MSGBUCKETS EYUPARM value in a MAS. During periods of intense notification activity (such as when a large number of CICS resources are installed or discarded simultaneously), it is possible for no free buckets to be available for passing the notification data. When this occurs, the system event cannot be processed by CPSM. This message is issued just once after a MAS has been started.

**System action**

This message is issued when the first occurrence of a MSGBUCKETS shortage occurs during the execution of the MAS. When the message is issued an exception trace with a debug text of "XDATLOST" is written. Processing then continues with the system event not being processed by CPSM.

If the problem re-occurs during the same run of the MAS, the message is not re-issued - but the "XDATLOST" exception trace entry is still written. As before, the loss of an available message bucket means that the related system event cannot be processed by CPSM.

Note that anytime a MSGBUCKETS shortage occurs due to the installation of an SNA or IP connection, then the MAS will retrieve information about all of its SNA or IP connections and provide them to its CMAS, so that event is not lost.

**User response**

It is possible that this message may be issued occasionally during peaks of notification data from a local MAS. Such an activity could be the simultaneous installation of CEDA defined resources from the CICS CSD dataset, or many user transactions abending at the same time. As such, it may be necessary to re-tune the MAS MSGBUCKETS EYUPARM value (possibly doubling its value) if the auxiliary trace contains many occurrences of "XDATLOST" CPSM exception traces.

**Module:**

EYU0NLXD

**XMEOUT parameters/Message inserts**

1. `date`
2. time
3. applid

**Destination**

Console and COLG

**EYUNL0148W date time applid Warning - active MAS tasks force purged during addspace termination.**

**Explanation**

During termination or restart of the CPSM agent in a MAS, WUI or SMSS region, one or more MAS tasks could not be properly terminated; instead, the tasks were forcibly purged from the CICS system, where:

*addspace*

Identifies the region as a CPSM local MAS (LMAS) or a single server region (SMSS).

**System action**

MAS agent termination continues and a system dump is also taken as indicated by message EYUXZ0910I. Only one system dump will be taken regardless of the number of tasks to be purged. A series of task abend messages (EYUXL09nn) are written to the console for each task that was purged. This message is also accompanied by message EYUNL0149I. After all active tasks are forcibly purged, the MAS waits up to one minute for the tasks to terminate completely. MAS termination then continues and storage areas are freed. The disposition of any task remaining active is unpredictable.

**User response**

If the condition persists, collect the system dump, trace records and the job log and contact your IBM Support Center.

**Module:**

EYU0NLRT

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid
4. addspace

**Destination**

Console and COLG

**EYUNL0149I date time applid Active MAS tasks being terminated by LRT for addspace termination.**

**Explanation**

All active MAS tasks are being terminated as a result of a MAS termination, where:

*addspace*

Identifies the MAS as a local (LMAS).

**System action**

Termination ECB are posted for all active MAS tasks. The MAS waits one minute for the tasks to terminate, then continues its termination process.

**User response**

None.

Chapter 2. CICSPlex SM messages

EYUNL0159I  
\textit{date} \textit{time} \textit{applid} Resource topology data retrieval complete.

Explanation

The collection of resource topology data by the MAS is complete. This message does not necessarily indicate that the data collection process was successful. If any problems occurred during data collection, they would be described in EYUNLnnnn or EYUTSnnnn messages issued before this one.

System action

MAS topology processing is complete and the MAS is ready for work.

User response

None.

Module:

EYU0NLGT, EYU1NLGT

EYUNL0160I  
\textit{date} \textit{time} \textit{applid} Workload registration complete.

Explanation

The region has been joined to the workload.

System action

None.

User response

None.

Module:

EYU0NLSP

EYUNL0161E  
\textit{date} \textit{time} \textit{applid} Resource topology data retrieval failed.

Explanation

During topology connect, an error has occurred during resource topology data retrieval in the MAS.

System action

Topology connect fails and the MAS agent is terminated.

User response

Check for any previous messages in the MAS job log that may indicate why the problem occurred. If the problem cannot be determined, collect the complete job output and auxtrace data sets from the MAS and the CMAS to which it was connecting, and any dumps...
that might have occurred in the MAS or CMAS, and contact your local IBM Support Center.

**Module:**

3. applid

**Destination**
Console and COLG

**EYUNL0170I date time applid History Recorder has been activated.**

**Explanation**
The history recorder long running task has been successfully initialized.

**System action**
CICSPlex SM processing continues. The task history recorder task is ready to accept details of completed CICS transactions.

**User response**
None.

**Module:**
EYU0NHCT

**XMEOUT parameters/Message inserts**
1. date
2. time
3. applid

**Destination**
Console and COLG

**EYUNL01711 date time applid History Recorder has been terminated.**

**Explanation**
The history recorder long running task has been terminated.

**System action**
CICSPlex SM processing continues. No further task history recording will take place.

**User response**
If termination of history recording is not expected examine earlier messages to determine why the history recorder terminated.

**Module:**
EYU0NHCT

**XMEOUT parameters/Message inserts**
1. date
2. time
3. applid

**Destination**
Console and COLG

**EYUNL0172E date time applid An abend has occurred within the History Recorder.**

**Explanation**
The history recorder long running task has detected an abend.

**System action**
The history recorder task will terminate and then attempt to restart. CICSPlex SM processing continues.

**User response**
Check for previous messages to identify the cause of the abend or error that caused the history recorder to terminate. If you cannot determine the cause of the problem, collect the complete job log from the MAS, any dumps that may have been captured, the complete CMAS job log or EYULOG, and CMAS auxiliary trace data sets and contact your IBM support center.

**Module:**
EYU0NHCT

**XMEOUT parameters/Message inserts**
1. date
2. time
3. applid
**EYUNL0173I**  *date time applid* History Recording has switched from dataset *x* to dataset *y*.

**Explanation**
The long running task history recorder task in attempting to record a completed task on VSAM data set EYUHISTx found that the data set was full, and so has switched to start using data set EYUHISTy.

**System action**
Task history recorder continues using data set EYUHISTy. The full data set EYUHISTx remains open and its data is available until such time that the history recorder has filled all data sets and requires use of EYUHISTx again. At this time EYUHISTx will be set closed, emptied and reopened, thereby destroying its previous contents.

**User response**
None.

**Module:**
EYU0NHCT

**XMEOUT parameters/Message inserts**

**Destination**
Console and COLG

---

**EYUNL0174E**  *date time applid* Error returned from *cmdname* command to dataset *dsname*, RESP= *respcode* RESP2= *reasoncode*.

**Explanation**
The long running task history recorder task issued a CICS file control command or CICS SPI command against the specified history data set and received a bad response.

**System action**
This instance of the history recorder task is terminated.

**User response**
None.

**Module:**
EYU0NHCT

**XMEOUT parameters/Message inserts**
1. *date*
2. *time*
3. *applid*
During initialization, the long running task history recorder task detected problems meaning that there are no history data sets available for it to record to.

**System action**
The history recorder task is not started.

**User response**
If you are sure that history recording will not be required on the local CICS region, this message is simply a confirmation that the history recorder process will not be startable. If you anticipate that task history recording will be required at some point during the execution of the current CICS region, you must ensure that the history data sets have been allocated to the local MAS region by means of DD cards. If allocated correctly, examine earlier messages to determine the problem. If you cannot determine the cause of the problem, collect the complete job log from the MAS, any dumps that may have been captured, the complete CMAS job log or EYULOG and CMAS auxiliary trace data sets and contact your IBM support center.

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid

The CICS definitions for the history data sets are created automatically during the initialization of the history recorder task. During this process, the program has determined that the default setting for the DATABUFFS parameter of the EXEC CICS CREATE for the dataset in question has been overridden with an invalid value. As such, the DATABUFFS value has been reset to that shown in this message.

**System action**
CICS file creation for the history data sets continues using the value shown.

**User response**
Re-adjust the HISTDBUFFS EYUPARM to an acceptable numeric value that is at least 1 greater than the HISTIBUFFS specification.

**Module:**
EYU0NHCT

The MAS history file manager detected problems meaning that it was unable to initialize the named history data set with its control information.

**System action**
The named history data set is marked unusable. The history recorder task is terminated.

**User response**
Examine earlier messages to determine the problem. If you cannot determine the cause of the problem, collect the complete job log from the MAS, any dumps that may have been captured, the complete CMAS job log or EYULOG and CMAS auxiliary trace data sets and contact your IBM support center.

**Destination**
Console and COLG

**EYUNL0181E**
*date time applid* Invalid number of History data sets.

**Explanation**
The history file manager detected an invalid number of history data sets (EYUHISTA, EYUHISTB and so on in sequence) at least two history data sets (EYUHISTA and EYUHISTB) must be allocated to the MAS.

**System action**
History recording is not activated.

**User response**
Ensure that at least two history data sets have been allocated and that DD statements (EYUHISTA, EYUHISTB and so on in sequence) have been supplied for the datasets in the MAS JCL.

**Module:**
EYU0NHFM

**Explanation**
The history file manager detected an invalid number of history data sets (EYUHISTx). At least two history data sets (EYUHISTA and EYUHISTB) must be allocated to the MAS.

**System action**
History recording is not activated.

**User response**
None.

**Module:**
EYU0NHFM

**XMEOUT parameters/Message inserts**
1. *date*
2. *time*
3. *applid*

**Destination**
Console and COLG

**EYUNL0182W**
*date time applid* No History buckets available, *nnn* records dropped.

**Explanation**
Completed task history data is passed to the history recorder via a service queue that is loaded by the CPSM Monitor Data Global User Exit. This exit program places tasks data in pre-allocated data slots, or "buckets", to transport the completed task detail to the history long running task. When trying to acquire a free bucket to use for the current completed task detail, the GLUE has determined that there are no buckets available for use.

**System action**
The Glue drops the current completed task datum, and increments a count of dropped records. When the history recorder completes the filing of it's outstanding data queue, it reports this dropped record count, and resets the counter to zero.

**User response**
It is possible that this message may be issued occasionally during peaks of transaction processing on the local MAS. As such, it will be necessary to retune the settings of the controlling parameters of the history recorder to accommodate these processing peaks. This should be performed only under the advice and guidance of qualified CICS service personnel. Please contact you IBM support center to seek advice.

If this situation regularly occurs in a region with a consistently high transaction rate, a review of the CICSPlex SM Transaction Monitoring MTRAN definitions in use for this region is recommended.
to determine if any transactions currently being monitored could be excluded.

**Module:**
EYU0NHCT

2. time
3. applid
4. nnn

**Destination**
Console and COLG

---

**EYUNL0183W**

date time applid No History Exit Workarea available, nnn records dropped.

**Explanation**
Completed task history data is passed to the history recorder via a service queue that is loaded by the CPSM Monitor Data Global User Exit. This exit program places tasks data in pre-allocated data slots, or "buckets", to transport the completed task detail to the history long running task. These buckets reside in a contiguous exit workarea within the MAS dataspace that is allocated by an asynchronous process controlled by the CMAS. When trying to acquire a free bucket (to use for the current completed task detail) the GLUE has determined that the controlling process has not completed the allocation of this exit workarea, and so no buckets are currently available for use.

**System action**
The history recorder long running task is terminated.

**User response**
Use the following EYUNL0185 message to determine which file attribute is invalid.

**Module:**

EYUNXnnnn messages

The following variables are used in EYUNXnnnn messages:

- **eibrcode**
  The EIBRCODE= value as returned by CICS.

- **respcode**
  The RESP= value as returned by CICS.

- **resp2code**
  The RESP2= value as returned by CICS.

Each message that uses these variables identifies the CICS command that returned them.

**EYUNX0001I addspace initialization program starting**

Explanation
The initialization program for a MAS is being started, where:

- **addspace**
  Identifies the MAS as a local MAS (LMAS) or a single server region (SMSS).

System action
CICS passes control to the MAS or an initialization program and processing continues.

User response
None.

Module:
EYU9NXSM

**EYUNX0008E LINK failed: PROGRAM program**

Explanation
An EXEC CICS LINK command for PROGRAM program was issued to begin MAS startup, and it returned an abnormal response.

System action
A system dump is taken with a dump code of EYUN and control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

User response
Collect the dump and contact your IBM Support Center.

See the User Response of message EYUNX0009E, which should follow this message.

Module:
EYU9NXLM

**EYUNX0009E LINK failed: RESP=respcode RESP2=resp2code**
Explanation
An EXEC CICS LINK command was issued to begin MAS startup, and it returned an abnormal response. The respcode and resp2code values are as returned by CICS.

System action
A system dump is taken with a dump code of EYUN and control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

User response
Make sure the load module for this program can be located for this CICS system. The program is named in preceding message EYUNX0008E. Follow the instructions associated with the RESP= and RESP2= values for this message for the EXEC CICS LINK command. If the problem persists, collect the dump and contact your IBM Support Center.

EYUNX0010E addspace1 agent startup failed because region was an addspace2

Explanation
The request to start the addspace1 agent in the CICS failed because the addspace2 agent has previously run in this CICS execution. To change addspace agent types, the CICS region must be restarted.

addspace1 and addspace2 refer to LMAS for a local MAS or SMSS for a single server.

System action
A system dump is taken with a dump code of EYUN and control returns to CICS. The CICS region continues to initialize, but it is not known to CICSPlex SM and single server processing is not available.

User response
If addspace2 is the appropriate agent, use the COLM (LMAS) or CORM (SMSS) transactions to restart the appropriate agent.

If addspace1 is the appropriate agent, restart the CICS region and ensure that the addspace1 agent is initialized.

Module: EYU9NXSM

Destination
Console

EYUNX0012E addspace initialization failed

Explanation
Initialization of a MAS failed in the PLTPI program, where:

addspace Identifies the MAS as a local MAS (LMAS) or a single server region (SMSS).

System action
Control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

User response
Refer to the messages preceding this one for details on the cause of the problem.

Module: EYU9NXSM

Module: EYU9NXSM

Console and SYSPRINT

EYUNX0011W The definition for {PROFILE | PROGRAM | TRANSACTION | TDQUEUE | URIMAP} resourcename has been replaced

Explanation
The initialization program for a MAS has replaced an invalid definition for the CICSPlex SM resource resourcename. Previous message EYUNX0013E gives details of the invalid definition options.

System action
MAS initialization continues.

User response
None

Module: EYU9NXSM

Destination
Console

EYUNX0011W The definition for {PROFILE | PROGRAM | TRANSACTION | TDQUEUE | URIMAP} resourcename has been replaced

Explanation
The initialization program for a MAS has replaced an invalid definition for the CICSPlex SM resource resourcename. Previous message EYUNX0013E gives details of the invalid definition options.

System action
MAS initialization continues.

User response
None

Module: EYU9NXSM

Destination
Console

EYUNX0012E addspace initialization failed

Explanation
Initialization of a MAS failed in the PLTPI program, where:

addspace Identifies the MAS as a local MAS (LMAS) or a single server region (SMSS).

System action
Control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

User response
Refer to the messages preceding this one for details on the cause of the problem.

Module: EYU9NXSM
**Destination**

Console, SYSPRINT and Terminal End User

**EYUNX0013E**

{PROFILE | PROGRAM | TRANSACTION | TDQUEUE | URIMAP | JVMSERVER}

`resourcename` has invalid value: xxxxxxxx for option: yyyyyyyyy

**Explanation**

The initialization program for a MAS detected an invalid definition option for the CICSPlex SM resource `resourcename`.

**System action**

CICSPlex SM takes one of the following actions based on whether the invalid definition is a critical or non-critical definition. For example, the CODB transaction is a non-critical transaction, and the MAS agent can fully function without it.

- **Critical**: CICSPlex SM attempts to replace the definition with the default definition for the resource. If successful, it issues message EYUNX0011W. If the replacement fails it issues message EYUNX0014E and terminates MAS initialization.
- **Non-critical**: CICSPlex SM issues message EYUNX0013E to identify the invalid definition, CICSPlex SM takes no further action and the MAS agent continues the initialization processing.

**User response**

Review your GRPLIST SIT parameter to determine the source of the invalid definition.

This message may be issued if this is the first restart of a MAS region after upgrading the CPSM MAS release (and START=AUTO was used), but the CICS release has not yet been upgraded. If this message is followed by EYUNX0011W, indicating that the resource was replaced, then this message can be ignored.

**Module:**

EYU9NXLM

---

**Destination**

Console

**EYUNX0014E**

The `{PROFILE | PROGRAM | TRANSACTION | TDQUEUE | URIMAP | JVMSERVER}` definition for `resourcename` is invalid. MAS initialization is terminating

**Explanation**

The initialization transaction used on the EXEC CICS START command for a MAS is not defined to the CICS system, where:

- `addspace` Identifies the MAS as a local MAS (LMAS) or a single server region (SMSS).

**System action**

MAS initialization terminates and control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

**User response**

Make sure the transaction and program for the MAS long running task (LRT) are defined in the CSD for this CICS system. The transaction is CONL; the program is EYU9XLEV.

**Module:**

EYU9NXSM

---

**Destination**

Console and SYSPRINT
**Explanation**
The initialization program for a MAS terminated abnormally, where:

addspace

Identifies the MAS as a local (LMAS) or a single server region (SMSS).

**System action**
A system dump is taken with a dump code of EYUN and control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

**User response**
Refer to the messages preceding this one for details on the cause of the problem.

**Module:**
EYU9NXLM, EYU9NXSM, EYU9NXRM

**Destination**
Console and SYSPRINT

**EYUNX0017E**
addspace initialization program - CICS error

**Explanation**
The initialization program for a MAS terminated abnormally due to a CICS error.

**System action**
Control returns to the CICS HANDLE ABEND routine. A system dump is taken with the dump code assigned by CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

**User response**
Collect the dump and contact your IBM Support Center.

**Module:**
EYU9NXSM

**Destination**
Console and SYSPRINT

**EYUNX0019E**
Extract Exit prgmid failed, EIBRCODE=code

**Explanation**
An EXEC CICS EXTRACT EXIT command was issued to obtain the global work area address for the specified program, and it returned an abnormal response. prgmid identifies the program for which an address was requested. The EIBRCODE= value is as returned by CICS.

**System action**
A system dump is taken with a dump code of EYUN and control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

**User response**
Follow the instructions associated with the EIBRCODE= value for the EXEC CICS EXTRACT EXIT command. If the problem persists, collect the dump and contact your IBM Support Center.

**Module:**
EYU9NXSM, EYU9NXSD
Destination
Console and SYSPRINT

**EYUNX0020E**  START failed: **RESP=**respcodex<br>**RESP2=**resp2code

**Explanation**
An EXEC CICS START command was issued to start the MAS long running task (LRT), and it returned an abnormal response. The respcode and resp2code values are as returned by CICS.

**System action**
A system dump is taken with a dump code of EYUN and control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

**User response**
Follow the instructions associated with the respcode and resp2code values for the EXEC CICS START command. If the problem persists, collect the dump and contact your IBM Support Center.

**Module:**
EYU9NXSM

**EYUNX0021E**  addspace global work area size is larger than 32K

**Explanation**
The size of a global work area requested for a MAS is too large, where:

*addspace*  Identifies the MAS as a local (LMAS).

**System action**
A system dump is taken with a dump code of EYUN and control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

**User response**
Collect the dump and contact your IBM Support Center.

**Module:**
EYU9NXSM

**EYUNX0022E**  INQUIRE failed: **RESP=**respcodex<br>**RESP2=**resp2code

**Explanation**
An EXEC CICS INQUIRE SYSTEM command was issued to obtain the CICS release level, and it returned an abnormal response. The respcode and resp2code values are as returned by CICS.

**System action**
A system dump is taken with a dump code of EYUN and control returns to CICS. The CICS system continues to initialize, but it is not known to CICSPlex SM.

**User response**
Follow the instructions associated with the respcode and resp2code values for the EXEC CICS INQUIRE SYSTEM command. If the problem persists, collect the dump and contact your IBM Support Center.

**Module:**
EYU9NXSM, EYU9NXSD

**EYUNX0023E**  CICS release *cicsrel* is not supported.

**Explanation**
The MAS subcomponent can not be initialized because the version of CICS that is installed is not supported by CICSPlex SM, where cicsrel identifies the release of CICS that was encountered.

**System action**
MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

**User response**
Review the CICSPlex SM installation requirements and install a supported release of CICS.

**Module:**
EYU9NXLM, EYU9NXSM
Destination

Console and SYSPRINT

EYUNX0024E  ASSIGN failed, RESP=respcoderesp2=resp2code

Explanation

An EXEC CICS ASSIGN command was issued to obtain the CICS SYSID, APPLID, and TERMCODE; it returned an abnormal response. The respcode and resp2code values are as returned by CICS.

System action

MAS initialization terminates.

User response

Follow the instructions associated with the respcode and resp2code values for the EXEC CICS ASSIGN command.

Module: EYU9NXSM

Destination

Console and SYSPRINT

EYUNX0026E  WAIT EXTERNAL failed, RESP=respcoderesp2=resp2code

Explanation

An EXEC CICS WAIT EXTERNAL was issued to delay PLT processing until the MAS initializes and POSTs the ECB. The EXEC CICS WAIT EXTERNAL command failed. The respcode and the resp2code values are returned by CICS.

System action

MAS PLT processing completes and control is returned to CICS. PLT processing continues while MAS initialization continues.

User response

Follow the instructions associated with the respcode and resp2code values for the EXEC CICS ATTACH command. If BAS is being used to define and install resources, it is possible that resources may not be available when needed by the various applications. If the problem persists, contact your IBM Support Center.

Module: EYU9NXSM

172  CICS TS for z/OS: CICSPlex SM Messages and Codes
**System action**
An EYUN transaction dump will be taken and the MAS initialization will fail.

**User response**
Verify that the exit program is defined and installed in the MAS, that it resides in a DFHRPL library being used by the MAS, and then restart the MAS. If the error continues after the above is verified, collect as much of the following as possible and contact your IBM Support Center:
- The complete job output
- The EYUN transaction dump
- The unformatted AUXTRACE data sets

**Module:**
EYU9NXSM

**Destination**
Console and SYSPRINT

**EYUNX0030I**  addspace successfully initiated from terminal termid

**Explanation**
A MAS has been successfully started by an operator at the specified terminal, where:

   **addspace**
   Identifies the MAS as a local MAS (LMAS) or a single server region (SMSS).

   **termid**
   Identifies the terminal from which the MAS was started.

**System action**
MAS initialization continues. Further messages related to the initialization process appear in the job log.

**User response**
None.

**Module:**
EYU9NXSM

**Destination**
Console and SYSPRINT

**EYUNX0032E**  LOAD Program EYU9XLEV failed, RESP2=resp2code

**Explanation**
An EXEC CICS LOAD command was issued for the specified program to determine if a CICSPlex SM environment could be established. The LOAD command returned an abnormal response, where:

   **resp2code**
   Value is as returned by CICS.

**System action**
MAS initialization terminates.

**User response**
Follow the instructions associated with the **resp2code** value for the EXEC CICS LOAD command.

**Module:**
EYU9NXSM

**Destination**
Console and SYSPRINT

**EYUNX0033I**  RELEASE Program EYU9XLEV failed, RESP2=resp2code

**Explanation**
An EXEC CICS RELEASE command was issued to release the specified program. The RELEASE command returned an abnormal response, where:

   **resp2code**
   Value is as returned by CICS.
**System action**
MAS initialization continues.

**User response**
None.

**Module:**  
EYU9NXSM

**Destination**  
Console and SYSPRINT

**EYUNX0034I**  
Name Token Services call failed.  
\[RC=\text{code}\]

**Explanation**
The MAS agent has attempted to invoke the MVS name token service IEANTRT, but the request has failed with (decimal) return code \text{code}.

**System action**
MAS agent initialization terminates.

**User response**
Check for previous messages to identify the cause of the abend or error that caused the failure. If you cannot identify the cause of the problem, collect the complete job log from the MAS, any dumps that may have been captured, and contact your IBM support center.

**Module:**  
EYU9NXSM

**Destination**  
Console and SYSPRINT

**EYUNX0035I**  
Startup aborted. Previous LRT abnormal termination failure.

**Explanation**
An attempt was made to initialize the MAS agent in an execution of CICS that previously had a MAS agent that failed to terminate correctly.

**System action**
MAS agent initialization terminates.

**User response**
The CICS region must be restarted before the MAS agent will initialize.

See the User Response of messages EYUNL0903E and EYUNL0904E, which should precede this message.

**Module:**  
EYU9NXSM

**Destination**  
Console and SYSPRINT

**EYUNX0037E**  
MAS startup rejected due to LRT abnormal termination

**Explanation**
Transaction COLM was issued in a local MAS to start the MAS agent, but a previous failure of the CICSPlex SM controlling task CONL was detected, so the startup request is rejected.

**System action**
The startup request is ignored.

**User response**
Message EYUXS1018E was previously issued during this execution of the MAS. Please refer to the documentation for this message. Then restart the CICS system to start the MAS agent.

**Module:**  
EYU9NXSM

**Destination**  
Console and SYSPRINT

\[CREATE \{PROFILE | PROGRAM | TRANSACTION | TDQUEUE | URIMAP | JVMSERVER\} resourcename failed: \]  
\[RESP=\text{respcode},\ RESP2=\text{resp2code}\]

**Explanation**
The MAS initialization program issued an EXEC CICS CREATE command to create the resource \text{resourcename} for CICSPlex SM. The CREATE command returned an abnormal response, with the values shown in \text{respcode} and \text{resp2code}.

**System action**
MAS initialization continues.
Examine the CICS trace records to determine what caused the EXEC CICS error. Then restart MAS initialization using the COLM transaction.

**Module:**
EYU9NXLM

**Destination**
Console

**EYUNX0039E**  CICS Transaction Server SMSS release `smssrelease` is different from CICS release `cicsrelease`. SMSS initialization is terminated.

**Explanation**
SMSS initialization has failed because the SMSS and CICS release levels do not match. An SMSS can run only with a CICS Transaction Server at the same release level.

**System action**
Initialization terminates.

**User response**
Ensure that the CICS Transaction Server SMSS release `smssrelease` matches the CICS release `cicsrelease`. Check the CICS STEPLIB and ensure that the SDFHAUTH and SEYUAUTH data sets are for the same CICS TS release. Check CICS DFHRPL and ensure that the SDFHLOAD and SEYULOAD data sets are for the same CICS TS release.

**Explanation**
A PERFORM SHUTDOWN command was issued for the specified CICS system, and it returned an abnormal response. The `respcode` and `resp2code` values are as returned by CICS.

**System action**
The shutdown task returns control to CICS. Shutdown of the CICS system is not initiated.

**User response**
Follow the instructions associated with the `respcode` and `resp2code` values for CEMT PERFORM SHUTDOWN or EXEC CICS PERFORM SHUTDOWN.
Destination
Console and SYSPRINT

EYUNX0045E  applid Shutdown task bad branch value - value

Explanation:
The shutdown task for the specified CICS system received a bad branch value and could not determine what command to execute.

System action:
The shutdown task returns control to CICS. Shutdown of the CICS system is not initiated.

User response:
Collect the job log and contact your IBM Support Center.

Module:
EYU9NPS2

Destination
Console and SYSPRINT

EYUNX0046E  MAS shutdown rejected due to LRT abnormal termination

Explanation:
Transaction COSH was issued in a local MAS to shutdown the MAS agent, but a previous failure of the CICSPlex SM controlling task CONL was detected, so the shutdown request is rejected.

System action:
The shutdown request is ignored.

User response:
Check with the user identified in the message and determine why they issued the COND transaction.

Module:
EYU9NPS2

Destination
Console and SYSPRINT

EYUNX0049E  COND transaction has been issued from a terminal. EIBTRMID=termid, USERID=userid.

Explanation:
The COND transaction has been issued from a terminal. This transaction may only be issued internally by CICSPlex SM in support of the CICSRGN SHUTDOWN action or internal termination requests.

System action:
CICS termination is aborted.

User response:
Check with the user identified in the message and determine why they issued the COND transaction.

Module:
EYU9NPS2

Destination
Console

EYUNX0051I  addspace termination initiated

Explanation:
The MAS shutdown task has been given control by a CICS system that is terminating, where:

addspace
Identifies the MAS as a local MAS (LMAS) or a single server region (SMSS).

System action:
MAS termination begins and control returns to CICS.
User response
None.

Module:
EYU9NXSD, EYU1NXTM

Destination
Console and SYSPRINT

**EYUNX0052I** *compid* termination ECB posted

Explanation
The termination ECB for the specified component has been posted; its task will be terminated, where:

*compid*
Identifies the component as either Kernel Linkage (KNL) or managed application system (MAS).

System action
MAS termination continues.

User response
None.

Module:
EYU9NXSD, EYU1NXTM

Destination
Console and SYSPRINT

**EYUNX0053W** Global area address is zero or invalid

Explanation
The global work area address that was passed to the MAS shutdown program was zero or invalid.

System action
The MAS, if active, cannot terminate normally. Control returns to CICS and termination continues.

User response
If MAS tasks remain active, the CICS system must be either terminated with the IMMEDIATE operand or canceled.

Module:
EYU9NXSD, EYU1NXTM

Destination
Console and SYSPRINT

**EYUNX0055W** MODB list address is zero

Explanation
The address of the list of major object descriptor block (MODB) addresses that was passed to the MAS shutdown program was zero.

System action
The MAS, if active, cannot terminate normally. Control returns to CICS and termination continues.

User response
If MAS tasks remain active, the CICS system must be either terminated with the IMMEDIATE operand or canceled.

Module:
EYU9NXSD

Destination
Console and SYSPRINT

**EYUNX0058W** ASSIGN failed: RESP=**respcode**

**RESP2=** **respcode2**
Explanation
An EXEC CICS ASSIGN TERMINAL command was issued to obtain the type of terminal associated with the task and it returned an abnormal response. The respcode and resp2code values are as returned by CICS.

System action
The MAS agent shutdown task returns control to CICS. The MAS agent code will not be terminated.

User response
The MAS agent code can be stopped by issuing the STOP action from a CICSPlex SM API program.

Module:
EYU9NXTM

Destination
Console and SYSPRINT

EYUNX0060W compid MODB address is zero or invalid

Explanation
The major object descriptor block (MODB) address for the specified component is zero or invalid, where compid identifies the component as either Kernel Linkage (KNL) or managed application system (MAS).

System action
The component tasks are not terminated. Control returns to CICS and termination continues.

User response
If MAS tasks remain active, the CICS system must be either terminated with the IMMEDIATE operand or canceled.

Module:
EYU9NXSD

Destination
Console and SYSPRINT

EYUNX0061W compid OPB address is zero or invalid.

Explanation
The major object descriptor block (MODB) for the specified component has an Object Process Block (OPB) address that is zero or invalid, where compid identifies the component as either Kernel Linkage (KNL) or managed application system (MAS).

System action
The component tasks are not terminated. Control returns to CICS and termination continues.

User response
If MAS tasks remain active, the CICS system must be either terminated with the IMMEDIATE operand or canceled.

Module:
EYU9NXSD

Destination
Console and SYSPRINT

EYUNX0070I XLWA termination ECB posted

Explanation
The Object Process Block (OPB) for the specified component has a termination ECB address that is zero; the ECB cannot be posted, where compid identifies the component as either Kernel Linkage (KNL) or managed application system (MAS).

System action
The component tasks are not terminated. Control returns to CICS and termination continues.

User response
If MAS tasks remain active, the CICS system must be either terminated with the IMMEDIATE operand or canceled.

Module:
EYU9NXSD

Destination
Console and SYSPRINT

EYUNX0062W compid ECB address is zero
**System action**
Control returns to CICS and termination of the CICS system and the MAS continues.

**User response**
None.

**Module:**
EYU9NXSD, EYU1NXTM

**Destination**
Console and SYSPRINT

**EYUNX0071I**
MAS successfully terminated from terminal termid

**Explanation**
The MAS agent code has been successfully stopped by an operator running transaction COSH at terminal termid.

**System action**
The MAS agent code is stopped. CICS continues to run.

**User response**
None.

**Module:**
EYU9NXTM

**Destination**
Console, SYSPRINT and Terminal End User

**EYUNX0101E**
QUERY SECURITY for TRANSATTACH resourcename failed: RESP= respcode, RESP2= resp2code.

**Explanation**
The MAS initialization program issued an EXEC CICS QUERY SECURITY command to verify that transaction resourcename is defined correctly to the external security manager. The command returned an abnormal response, with the values shown in respcode and resp2code.

**System action**
MAS initialization will continue until all transaction IDs have been processed, then the MAS agent will issue message EYUNX0103E and terminate.

**User response**
Follow the instructions associated with the respcode and resp2code values for EXEC CICS QUERY SECURITY.

**Module:**
EYU9NXLM, EYU9NXRM

**Destination**
Console and SYSPRINT

**EYUNX0102E**
QUERY SECURITY for TRANSATTACH resourcename is incorrect: READ=NOTREADABLE.

**Explanation**
The MAS initialization program issued an EXEC CICS QUERY SECURITY command to verify that transaction resourcename is defined correctly to the external security manager. The userid under which the MAS initialization program executes (the region userid) does not have permission to START transaction resourcename.
**System action**

MAS initialization will continue until all transaction IDs have been processed, then the MAS agent will issue message EYUNX0103E and terminate.

**User response**

Correct the resource profile and permissions for transaction `resourcename` and restart MAS initialization using the COLM transaction.

**Module:**
EYU9NXLM, EYU9NXRM

**Destination**

Console and SYSPRINT

**EYUNX0103E**  Incorrect security profile for one or more resources. CICS is terminating.

**Explanation**

The MAS initialization program issued EXEC CICS QUERY SECURITY commands to verify that each internal CPSM transaction is defined correctly to the external security manager. One or more of the commands returned an abnormal response, or one or more transactions had incorrect security profiles.

**System action**

The CMAS region will terminate.

**User response**

Correct the problems identified by messages EYUNX0101E and EYUNX0102E and restart MAS initialization using the COLM transaction.

**Module:**
EYU9NXLM, EYU9NXRM

**Destination**

Console and SYSPRINT

**EYUNX0110W**  URIMAP `installedurimap` specifies a path which conflicts with `requiredurimap`.

**Explanation**

CICS is attempting to install URIMAP resources to enable SMSS support using the CMCI JVM server. An installed URIMAP conflicts with a URIMAP being installed to enable SMSS. If this region has previously been configured for SMSS support using a TCPIPSERVICE and URIMAP (based on sample resources DFH$WUTC and DFH$WUUR) then consider removing those definitions from your environment.

**System action**

None.

**User response**

Consider removing any pre-existing SMSS interface using resources based on DFH$WUTC and DFH$WUUR.

**Module:**
EYU9NXRM

**Destination**

Console

**EYUPEnnnn messages**

**EYUPE0001I**  `date time applid` RTAEVL initialization complete.

3. applid

**Destination**
COLG

EYUPE0005W  date time applid RTAEVL was unable to call program (prgmid) transaction (tranid) - {Program marked disabled | Unsuccessful link | Transaction marked disabled | Transaction not linked to EYU9XLOP | Unable to start CICS task | Program cannot be found}.

**Explanation**
RTA attempted to call the specified user-written status probe program, but the call was not successful, where:

- **prgmid**
  Is the name of the status probe program.

- **tranid**
  Is the name of the transaction used to start the program.

- **reason**
  Identifies the reason for the failure as one of the following:

  - **Unsuccessful link**
    An attempt to link to the specified status probe program was unsuccessful.

  - **Program marked disabled**
    CICS has marked the specified status probe program as disabled.

  - **Unable to start CICS task**
    A task could not be started to call the specified status probe program.

  - **Transaction marked disabled**
    CICS has marked the transaction used to call the specified status probe program as disabled.

  - **Transaction not linked to EYU9XLOP**
    The transaction used to call the specified status probe program (as defined in the STATDEF view) is not linked to the CICSPlex SM program EYU9XLOP.

  - **Program cannot be found**
    CICS has returned a PGMIDERR condition in response to a CICSPlex SM program inquiry request.

**System action**
RTA processing continues as if the status probe program had returned a status of NORMAL. A user trace record is written to the CICS trace data set.

**User response**
Depending on the **reason** text, do one of the following:
Unsuccessful link
Make sure the program is correctly defined to CICS and that it is located in one of the STEPLIB data sets.

Program marked disabled
Make sure the program is located in one of the CICS STEPLIB data sets.

Unable to start CICS task
Make sure the CICS system where the program is to run is not at MAX TASK. If it is, increase the MAXTASK parameter. Also make sure both the program and the transaction used to call it are correctly defined to CICS.

Transaction marked disabled
Make sure the transaction is correctly defined to CICS.

Transaction not linked to EYU9XLOP
Make sure the CICS definition of the transaction points to EYU9XLOP.

   6=Program cannot be found

Destination
Console and COLG

EYUPE0006W  date time applid RTAEVL was returned an invalid status from program (prgmid).

Explanation
After successfully calling a user-written status probe program, RTA received an invalid return status, where:

prgmid
Is the name of the status probe program.

System action
RTA processing continues as if the status probe program had returned a status of NORMAL.

User response
Review the source code for the status monitor program and determine if and where a return status is being set. Modify the program to return a valid status indicator. For details on writing RTA status probe programs, see the CICS documentation.

**Destination**  
Console and COLG  

**EYUPM0110E**  

| date   | time   | applid       | RTAMRM is not active for Context(plexname) Scope(sysname). No definitions installed. |

**Explanation**  
An attempt was made to install analysis or status definitions in a CICS system, but the MAS resource monitoring subcomponent of real-time analysis is not active, where:  

- **plexname**  
  Identifies the CICSpex to which the CICS system belongs.  

- **sysname**  
  Identifies the CICS system for which definitions could not be installed.  

For real-time analysis to occur, the CICS system must be associated with an analysis specification.  

**System action**  
RTA processing continues.  

**User response**  
Use the RTASPEC view to associate an analysis specification with the CICS system. Because the CICS system is already active, you must also use the UPD action command from the MAS view to turn real-time analysis on. For a description of the RTASPEC view, see the CICS documentation. For a description of the MAS view and its UPD action command, see the System programming reference.  

Once the CICS system has been associated with an analysis specification and real-time analysis has been turned on, you can install the desired definitions.

  Identifies the type of definition as either RTADEF or STATDEF.  

- **defname**  
  Is the name of the definition.  

- **specname**  
  Is the name of the specification.  

- **plexname**  
  Identifies the CICSpex to which the CICS system belongs.  

- **sysname**  
  Identifies the CICS system for which definitions could not be installed.  

**System action**  
RTA processing continues.  

**User response**  
If the analysis or status definition has been updated since the last time it was installed, you must discard the active definition before installing the updated one. Use the RTAACTV view, as described in the System programming reference, to discard the definition from the running CICS system.  

If the definition has not been updated, there is no need to reinstall it; the definition is already active in the CICS system.

*date time applid* Notify created for SAM, Context=plexname,
Target=targetsys, Sev=level, Event=eventname, Text=usertxt.

Explanation
A user-requested external notification was created as the result of a system availability monitoring (SAM) event, where:

plexname
Identifies the CICSplex for which the notification was created.

targetsys
Identifies the target of the notification, which could be a CICS system, CICS system group or CICSplex.

level
Indicates the severity of the notification.

eventname
Is the event name assigned to this notification by SAM:

!!SAMOPS
A CICS system that is scheduled to be active is not.

!!SAMSOS
A CICS system is short-on-storage.

!!SAMSDM
A CICS system is taking a system dump.

!!SAMTDM
A CICS system is taking a transaction dump.

!!SAMMAX
A CICS system has reached its maximum task limit.

!!SAMSTL
A CICS system has stalled.

!!SAMNRM
A CMAS has lost contact with an active MAS.

usertxt
Is text defined by a user for use with SAM notifications. For a list of the default text strings issued for various stall conditions (!!SAMSTL), see the table in System availability monitoring: Default notification values

System action
RTA processing continues.

User response
Check the following for details about the event:

- The EVENT and EVENTD views
- NetView alerts, if requested

Also check the job log or system log to determine the current status of the named CICS system. Then, based upon your enterprise criteria, decide if the event requires any user action. The !!SAMSTL events can be controlled using the STALLxxxCNT and STALLxxxTSK CICSPlex SM system parameters, and these may also need to be reviewed. Refer to CICSPlex SM system parameters to understand how these parameters control stall events for each suspend class.

Although the real-time analysis functions can be used to produce data that helps in the workload routing decisions, CICSPlex SM Workload Manager (WLM) health is assessed independently, does not require RTA to be active, and is not influenced by SAM settings.

created for RTADEF defname
by APM, Context=plexname,
Target=targetsys, Sev=level,
Resource=restype, Key=resname,
Text=usertxt.

Explanation
A user-requested external notification was created as the result of an RTA definition becoming true, where:

defname
Is the name of the RTA definition that caused the notification to be created.
**plexname**
Identifies the CICSpix where the RTA definition was installed.

**targetsys**
Identifies the target of the notification, which could be a CICS system, CICS system group or CICSpix.

**level**
Indicates the severity of the notification.

**restype**
Indicates the type of resource to which the notification applies.

**resname**
Identifies the specific resource to which the notification applies.

**usertxt**
Is text defined by a user for use with APM notifications.

**System action**
RTA processing continues.

**User response**
Check the following for details about the event:

  date time applid Notify {removed | resolved} for SAM, Context=plexname,
  Target=targetsys, Sev=level, Event=eventname, Text=usertxt.
```

**Explanation**

An outstanding external notification for a system availability monitoring (SAM) event was either resolved or removed, where:

**action**

Indicates what happened to the notification, as follows:

- **RESOLVED**
  The condition that caused the event was alleviated.

- **REMOVED**
  The condition that caused the event could no longer be monitored because the CICS system went down.

**plexname**

Identifies the CICSPlex to which the notification applied.

**targetsys**

Identifies the target of the notification, which could be a CICS system, CICS system group or CICSPlex.

**level**

Indicates the severity of the notification.

**eventname**

Is the event name assigned to this notification by SAM.

Chapter 2. CICSPlex SM messages 199
Explanation
An outstanding external notification for an RTA definition was either resolved or removed, where:

**action**
Indicates what happened to the notification, as follows:

**RESOLVED**
The condition described by the RTA definition is no longer true.

**REMOVED**
The condition described by the RTA definition could no longer be monitored because the CICS system went down.

**defname**
Is the name of the RTA definition.

**plexname**
Identifies the CICSplex where the RTA definition was installed.

**targetsys**
Identifies the target of the notification, which could be a CICS system, CICS system group or CICSpool.

**level**
Indicates the severity of the notification.

**restype**
Indicates the type of resource to which the notification applies.

**resname**
Identifies the specific resource to which the notification applies.

**usertxt**
Is text defined by a user for use with APM notifications.

**System action**
RTA processing continues.

**User response**
None.

EXUPN0108E  date time applid User-supplied ACTION definition name defname is not defined, internal default will be used.

Explanation
An RTADEF, STATDEF, or CICSSYS definition includes the name of an action that can not be found in the data repository. The internal default action is used instead, where:

* defname
  Is the name of the action definition that could not be found.

System action
RTA uses the default action and continues processing.

User response
Make sure the action name was specified correctly on all RTADEF, STATDEF, and CICSSYS definitions. Use the ACTNDEF view to display a list of existing action definitions. If necessary, create a new action definition with the specified name.

Module:
EXUOPNAN

4. defname

Destination
Console and COLG

EXUPN0109E  date time applid Resource modification for Context=plexname, Target=targetsys, Resource=restype, Key=resname, Evaldef=defname failed, RESP=respcode, RESP2=resp2code, EIBFN=eibrcode, ATTRIBUTE=attrname.

Explanation
CICSPlex SM attempted to issue an EXEC CICS SET command to make the resource modification that was requested in the specified real-time analysis evaluation definition. However, the modification could not be completed because either an attribute value was invalid for the specified CICS system, or CICS returned an abnormal response, where:

* plexname
  Identifies the CICSPlex where the change was to be made.

* targetsys
  Identifies the target of the change as a single CICS system.

* restype
  Indicates the type of resource to which the change applies.

* resname
  Identifies the specific resource to which the change applies.

* defname
  Is the name of the evaluation definition that requested the change.

* respcode
  Is the RESP= value, if the EXEC CICS command failed. A value of 0 is returned if the problem occurred before the EXEC CICS command was issued.

* resp2code
  Is the RESP2= value, if the EXEC CICS command failed. A value of 0 is returned if the problem occurred before the EXEC CICS command was issued.

* eibrcode
  Is the EIBRCODE= value, if the EXEC CICS command failed. A value of 0 is returned if the problem occurred before the EXEC CICS command was issued.

* attrname
  Is the name of the resource attribute that was invalid, if the problem occurred before the EXEC CICS command was issued. A value of N_A is returned if the EXEC CICS command failed.
System action
RTA processing continues. A user trace record is written to the CICS trace data set.

User response
If the problem occurred before the EXEC CICS command was issued (as indicated by the attrname value), refer to the System programming reference manual to determine the values and CICS releases that are valid for the attribute. Then use the EVALDEF view to correct the evaluation definition.

If the EXEC CICS command failed (as indicated by the respcode, resp2code, and eibrcode values) the restype value in this message can help you determine what EXEC CICS SET command was being issued when the problem occurred. For example, if the restype value is LOCTRAN, then an EXEC CICS SET TRANSACTION command was being issued.

Once you have determined what EXEC CICS command was being issued, follow the instructions associated with the respcode and resp2code values for that command. For descriptions of the RESP values for a particular CICS command and the EIBRCODE values, refer to the CICS System programming reference.

Destination
Console and COLG

EYUPP0102E date time applid RTAAPM
termination failed.

Explanation
An error occurred while attempting to terminate the analysis point monitoring subcomponent of RTA.

System action
All other RTA subcomponent s attempt an orderly shutdown. A user trace record is written to the CICS trace data set.

User response
Collect the trace records and any related messages and contact your IBM Support Center.

Module:
EYU0PPTM

XMEOUT parameters/Message inserts
1. date
2. time
3. applid

Destination
Console and COLG

EYUPP0103I date time applid Analysis
Point Specification (specname) unsuccessfullly installed for Context(plexname).

Explanation
The named analysis point specification could not be installed because there was not enough storage available for its internal data structures, where:

specname
Is the name of the specification.
**plexname**
Identifies the CICSpix to which the specification applies.

**System action**
RTA processing continues. A user trace record is written to the CICS trace data set.

**User response**
Examine the exception trace records to determine the cause of the problem.

**Module:**
EYU0PPAS

4. nn

**Destination**
Console and COLG

**EYUPP0105E**  
\[ date \ time \ applid \ RTAAPM long-running task encountered an unknown event notification (nn), event ignored. \]

**Explanation**
The analysis point monitoring long running task (LRT) received an unsolicited event record, where:

**nn**
Is the event notification ID that was not recognized. Given the event notification ID, it is possible to determine which CICSpix SM method created the event.

**System action**
analysis point monitoring ignores the event record and continues processing. The invalid event record is written to the CICS trace data set.

**User response**
Collect the trace records and any related messages and contact your IBM Support Center.

**Module:**
EYU0PPLT

**EYUPP0107E**  
\[ date \ time \ applid \ Install of RTADEF (defname) for APSPEC specname in Context(plexname) Scope(sysname) failed. \]

**Explanation**
The specified RTA definition could not be installed for the named analysis point specification, where:

**defname**
Is the name of the definition.
**specname**

Is the name of the specification.

**plexname**

Identifies the CICSPlex for which the RTA definition was being installed.

**sysname**

Identifies the CICS system for which the RTA definition was being installed.

**System action**

RTA processing continues. A user trace record is written to the CICS trace data set.

**User response**

Collect the trace records and any related messages and contact your IBM Support Center.

**Module:**

EYU0PPRI

**XMEOUT parameters/Message inserts**

1. **date**
2. **time**
3. **applid**
4. **defname**
5. **specname**
6. **plexname**
7. **sysname**

**Destination**

Console and COLG

**Explanation**

RTA attempted to register interest in the specified time period, but it is not defined in the data repository, where:

**defname**

Is the name of the time period that could not be found.

**System action**

RTA processing continues. Any RTADEF definitions that reference the time period are not installed until a time period with that name is defined.

**User response**

Make sure the time period name was specified correctly on all RTADEF definitions. Use the PERIODEF view to display a list of existing time period definitions. If necessary, create a new time period definition with the specified name.

**Module:**

EYU0PPRI

**XMEOUT parameters/Message inserts**

1. **defname**
2. **specname**
3. **plexname**
4. **sysname**

**Destination**

Console and COLG

**Explanation**

An attempt was made to install an analysis definition into an analysis point specification. The installation was unsuccessful because the definition does not have a valid evaluation definition (EVALDEF) associated with it, where:

**defname**

Is the name of the analysis definition that could not be installed.

**specname**

Is the name of the analysis point specification into which the analysis definition was being installed.

**plexname**

Identifies the CICSPlex for which the analysis definition was being installed.
**sysname**
Identifies the CICS system for which the analysis definition was being installed.

**description**
This is one of the following pieces of additional text:
- Evaluation column invalid for version of resource table
- Resource not valid for CICS Release
- Evaldef not found.

**System action**
RTA processing continues.

**User response**
Create an appropriate evaluation definition, associate it with the analysis definition, and then reinstall the analysis definition.

**Module:**
EYUOPPRI

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid
4. defname
5. specname
6. plexname
7. sysname
8. Value chosen from the following options:
   1=Evaldef,
   2=Resource,
   3=Evaluation column
9. Value chosen from the following options:
   1=not found,
   2=not valid for CICS Release,
   3=invalid for version of resource table

**Destination**
Console and COLG

**Explaination**
An attempt was made to install an analysis definition in a CICS system for the named analysis point specification, but the specified definition is already installed, where:

**defname**
Is the name of the definition.

**specname**
Is the name of the specification.

**plexname**
Identifies the CICSplex for which the analysis definition was being installed.

**sysname**
Identifies the CICS system for which the analysis definition was being installed.

**System action**
RTA processing continues.

**User response**
If the analysis definition has been updated since the last time it was installed, you must discard the active definition before installing the updated one. Use the APACTV view, as described in the System programming reference, to discard the definition from the running CICS system.

If the definition has not been updated, there is no need to reinstall it; the definition is already active in the CICS system.

EYUPS0106W date time applid RTASAM event {EMASSTRT | EMASJOIN | EMASSTOP | EMASSICK | EMASWELL | ENETCONN | ENETJOIN | ENETDISC | ENETEXIT | EPLEXCHG | EDEFCHG | ESAMCNCTL | ETIMECHG | ERTADCHG | ECSYSCHG | ELSIGNAL | EMASMNSS} processing failed.

Explanation
The system availability monitoring subcomponent experienced an internal error while attempting to process the specified event, where:

EDEFCHG
Data repository records were changed that require immediate processing in an active CMAS.

ELSIGNAL
A local MAS is taking a CICS system dump.

EMASCNTL
The RTA system availability monitoring (SAM) subcomponent reported changes to an analysis point specification (APSPEC).

EMASJOIN
A MAS established a connection to a CMAS that manages it.

EMASSICK
A MAS is experiencing one of the following sick conditions:
- CICS system dump
- CICS transaction dump
- CICS DSA short-on-storage
- Maximum task limit reached
• CICS system stalled

**EMASSTOP**
A MAS disconnected from the CMASs that manage it.

**EMASSTRT**
A MAS established a connection to its maintenance point CMAS.

**EMASWELL**
A MAS has recovered from a previously reported sick condition.

**ENETCONN**
A connection was established between adjacent CMASs.

**ENETDISC**
A CMAS was disconnected from an adjacent CMAS.

**ENETEXIT**
A CMAS was disconnected from another CMAS to which it was indirectly connected.

**ENETJOIN**
An indirect connection was established between CMASs.

**EPLEXCHG**
Either a CMAS was added to or removed from the management of a CICSpex, or the CICSpex itself was removed.

**ETIMECHG**
The time zone attributes of a CMAS or CICS system were changed.

**System action**
System availability monitoring event processing continues. A user trace record is written to the CICS trace data set.

**User response**
Make a note of the event name, then collect the trace records and the job log and contact your IBM Support Center.

**Destination**
Console and COLG

**EYUPS0107W**
date time applid RTASAM cannot monitor CICS System(sysname) due to undefined Time Period(defname).

**Explanation**
The system availability monitoring subcomponent of RTA cannot monitor the availability of the specified CICS system because the time period associated with it is not defined, where:

**sysname**
Identifies the CICS system that could not be monitored.

**defname**
Is the name of the time period definition that could not be found.

**System action**
System availability monitoring processing continues, but the specified CICS system is not monitored.
User response

Make sure the time period name was specified correctly on the CICSSYS or MAS view. You can use the PERIODEF view to display a list of existing time period definitions and, if necessary, create a new one. If you update the MAS view to include a valid time period name, system availability monitoring starts automatically. If you change the CICSSYS view but do not update the MAS view, the CICS system must be restarted for system availability monitoring to take effect.

Destination
COLG

EYUTI0516E date time applid CICSplex cicsplex
PLATDEF platdef file filename
contains a model for region type
regiontype attribute attribute that
could not be applied to region
region.

Explanation
A region type specification for region type regiontype
in regionTypes.xml file filename contained an attribute
value CICS region region could not accept, either
because the attribute value was incompatible with an
attribute value specified in the CICS region definition,
or because the attribute value was incompatible with
an attribute value specified for another region type
that shares the CICS region.

System action
The platform is not installed.

User response
Correct the attribute value in the CICS region definition
for the specified region, or set it to the same value in
the region type specification and export the platform
bundle again.

Module: EYU0TADX

**EYUTS0023E**

date time applid Topology connect of CICS System sysname not initiated. CPSM Data Repository CSYSDEF (SYSID=definedsysid) and MAS SysId (SYSID=sysidnt) do not match. APPLID(applid) CICSplesx(plexname).

**Explanation**
Topology services could not process a connect for the specified CICS system because the SYSDNT specified in the CICS system definition does not match that specified for the SYSDNT SIT parameter, where:

**sysname**
Identifies the MAS name for the CICS system.

**definedsysid**
Identifies the System ID (SYSID) specified in the CICS System Definition.

**sysidnt**
Identifies the SYSDNT value from the MAS system initialization table.

**applid**
Identifies the APPLID of the CICS system.

**plexname**
Identifies the CICSplesx the CICS system is being processed for.

**System action**
Processing continues, however the CICS system cannot be managed by CICSplesx SM.

**User response**
Either update the CICS system definition, or specify the correct SYSDNT in the SIT.

**Module:** EYU0TIST

**XMEOUT parameters/Message inserts**
1. date
2. time
3. applid
4. sysname
5. definedsysid
6. sysidnt
7. applid
8. plexname
**Explanation**

During Topology connect processing for a MAS, where:

- **mas**
  - is the name of the MAS.

it was determined that resources need to be installed by BAS, but BAS has not yet initialized data structures for the CICSplex, where:

- **plexname**
  - is the name of the CICSplex.

**System action**

Connect processing for the MAS will wait until BAS completes initialization of the CICSplex (EYULOG message EYUBI0005I) or the MAS initialization time expires (as specified by the MASINITTIME EYUPARM).

**User response**

There should not be a need for user response unless the MAS connect fails. If the connect process fails because BAS initialization for the CICSplex (bracketed by EYULOG messages EYUBI0004I and EYUBI0005I) extends beyond the time allowed for the MAS to initialize (as specified by the MAS 's MASINITTIME EYUPARM), then it may be necessary to increase the MASINITTIME EYUPARM for the MAS. If the connect process fails because BAS initialization for the CICSplex failed (message EYUBI0102E), the BAS failure should be pursued according to the comments for message EYUBI0102E.

**Module:**

EYU0TSCI

**XMEOUT parameters/Message inserts**

1. **date**
2. **time**
3. **applid**
4. **mas**
5. **plexname**

The Connect or Join request is terminated.

**System action**

If the message indicates that a Disconnect request was received, this is due to the MAS being shutdown or the MAS agent being terminated while the Connect or Join was in progress.

If the message indicates that the MAS is not active, then this is a Join request and the CMAS the MAS was connected to has indicated the MAS is no longer active or its MAS agent is no longer active.

If this is not expected, review the job log for the MAS to determine the reason.

EYUTS0026I  
*date*  *time*  *applid*  User *ins#1* has issued the FORCEDISCON action for MAS *ins#2* - APPLID(*ins#3*) CICSpool(*ins#4*).

**Explanation**
The specified user has successfully issued the MAS resource table FORCEDISCON action against the specified MAS. If the user ID is *Internal*, the action was generated as the result of internal CICSpool SM processing.

**System action**
The ESSS connection for the MAS is terminated and this message is issued to document the requester of this action.

**User response**
None, unless the user is *Internal*. If so, to determine why the action was issued, collect the complete job output and auxtrace data sets from the MAS and the CMAS that issued this message, along with any dumps that may have been produced at this time by the MAS or CMAS, and contact your local IBM Support Center.

EYUTS0035E  date time applid Topology RODM Manager NetView PPI request failed. Request type=nnnn, RC=rcode.

Explanation

A Topology Services request was sent to the NetView program-to-program interface, but the request failed, where:

* nnnn
  - Is a numeric identifier for the topology request that was issued.

* rcode
  - Is the NetView return code.

System action

The Topology Services interface to NetView terminates.

User response

For a description of the NetView PPI return code, see the Tivoli Netview for z/OS Application Programmer’s Guide. If the cause of the problem is not apparent, collect the CMAS job log and either the NetView network log or the MVS system log, depending on where NetView messages are issued. Then, contact your IBM Support Center.

EYUTS0063E  date time applid Topology encountered an error processing a change to a CICS system group.

Explanation
During the processing of an add or remove of a CICS system to a CICS system group, the CMAS encountered an error while performing the Topology update for the change.

System action
The data repository update is complete, but the Topology updates, and any changes that the Monitor, RTA, WLM, and BAS components need to make to support the change, have not been made.

User response
A dump will also be taken. The dump title will be similar to the following:

EYU0XZPT Dump,cmasjobn,cmasname,1par,CMAS,TIST,tasknum,TRAC,EYU0TSEC,date,time

Collect the dump and the complete job output and auxtrace datasets for the CMAS, and contact your local IBM service center.

Prior to this message in the CMAS’s joblog should be an EYUXD0002E message indicating which change was aborted by Topology. If that change is required during the current run of the CMAS, the CMAS must be restarted, at which point Topology will properly process the request during CMAS initialization.

None.

**Destination**

**EYUVC1005E** Invalid password. Please try again.

**Explanation:**
An invalid password has been entered into the signon form.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Enter the correct password into the form and press "Sign on".

**Administrator response:**
None.

**Destination**

**EYUVC1006E** Signon failed because the User name is revoked.

**Explanation:**
You have attempted to sign on using a user ID which has been revoked by external security manager.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Contact your system administrator.

**Administrator response:**
Investigate the status of the user ID in the external security manager, and reinstate if required.

**Destination**

**EYUVC1007E** The password has expired. Please re-enter the password, enter a new password, and verify the new password.

**Explanation:**
Your password has been expired by external security manager.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Re-enter your password, enter a new password into both the New Password and Verify New Password fields, then press "Sign on".

**Administrator response:**
None.

**Destination**

**EYUVC1008E** The New Password and Verify New Password fields do not match. Please try again.

**Explanation:**
You have attempted to change your password, but did not enter the same password in both the New Password and Verify New Password fields.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Re-enter your old password, enter a new password into both the New Password and Verify New Password fields, then press "Sign on".

**Administrator response:**
None.

**Destination**

**EYUVC1009E** Signon for User (userid) failed. (CICS information: RESP(response1), RESP2(response2), EIBFN(eibfn)) (External security manager information: ESMRESP(esmresp), ESMREASON(esmreason))

**Explanation:**
The signon process has failed for an unusual reason.

**System action:**
Signon terminates.

**User response:**
Contact your system administrator.

**Administrator response:**
Review EIBFN value and consult the documentation for CICS and the external security manager. Collect AUXTRACE and console log and contact IBM service if the problem cannot be resolved.

Chapter 2. CICSPlex SM messages 249
**Destination**

**EYUVC1010E**  The new password was not acceptable. Please try again.

**Explanation:**
You attempted to change the password to a value that was rejected by external security manager.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Re-enter your password, enter a new password into both the New Password and Verify New Password fields, then press "Sign on". Your new password must conform to the external security manager rules.

**Administrator response:**
None.

**Destination**

**EYUVC1011E**  Unable to create User environment. User already signed on.

**Explanation**
You attempted to sign on, but a session was already active for the user ID. This may happen because:

- You are signed on with another browser on this or another workstation.
- You have previously closed all the browser windows without first selecting the "Sign off" link.
- Your browser has not accepted the cookie delivered by the Web User Interface when you signed on previously.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Either go back to the browser on which you are currently signed on, or sign on again specifying the "Reconnect" option. Ensure your browser is configured to accept the cookie delivered by the Web User Interface.

**Administrator response:**
None.

**Destination**

**EYUVC1012E**  Unable to create User environment. Maximum user limit reached.

**Explanation:**
You attempted to sign on, but the server already has the maximum number of users signed on.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Contact your system administrator.

**Administrator response**
Actions to consider include:

- Persuading someone to log off.
- Purging users with COVC if necessary.
- Increasing the value of the MAXUSERS parameter, and restarting the server.

**Destination**

**EYUVC1013E**  Unable to create User environment. Failed to start user task.

**Explanation:**
The signon process has failed.

**System action:**
Signon terminates.

**User response:**
Contact your system administrator.

**Administrator response:**
Refer to associated messages that will have been written in EYULOG.

**Destination**

**EYUVC1014E**  Unable to create User environment. Failure during user task creation.

**Explanation:**
The signon process has failed.

**System action:**
Signon terminates.

**User response:**
Contact your system administrator.

**Administrator response:**
Refer to associated messages that will have been written in EYULOG.

**Destination**

**EYUVC1015I**  Signon complete for User (userid ).
**Explanation:**
The named user has successfully signed on.

**System action:**
The session continues.

**User response:**
None.

**Administrator response:**
None.

**Destination**

**EYUVC1016I** Please confirm User name.

**Explanation:**
Signon was started with a user name specified in the URL. This name must now be confirmed.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Check (and correct, if required) the user name in the form and press "Sign on".

**Administrator response:**
None.

**Destination**

**EYUVC1017E** User task failed to connect to CICSPlex SM

**Explanation:**
The signon process has failed because a connection could not be made to CICSPlex SM for the user name specified.

**System action:**
Signon terminates.

**User response:**
Contact your system administrator.

**Administrator response:**
None.

**Destination**

**EYUVC1018I** CICS_good_morning_message

**Explanation**
The current CICS 'good morning message' is displayed in this message. This message can be issued both before and after signon depending on the Web User Interface server parameter GMMTEXTMSG. The GMMTEXTMSG server parameter may be set as follows:

- **NO** - The EYUVC1018I message is not issued.
- **YES** - The EYUVC1018I message is issued before and after signon.
- **BEFORE** - The EYUVC1018I message is issued before signon.
- **AFTER** - The EYUVC1018I messages is issued after signon.

**System action:**
The session continues.

**User response:**
None.

**Administrator response:**
None.

**Destination**

**EYUVC1019E** You cannot mix passwords and password phrases in a change request.

**Explanation:**
You cannot authorize a new password with a password phrase or a new password phrase with a password.

**System action:**
Sign-on terminates.

**User response:**
Use a password to change a password or a password phrase to change a password phrase.

**Administrator response:**
None.

**Destination**

**EYUVC1020E** The external security manager has not been initialized. Sign-on request failed.

**Explanation:**
The sign-on attempt has failed because the external security manager has not been initialized.

**System action:**
Sign-on terminates.

**User response:**
Ask your security administrator to initialize the external security manager.

**Administrator response:**
Ensure that the external security manager has been initialized.
The external security manager is currently not accepting signons. Please try later.

Explanation:
The sign-on request has failed because the external security manager was in a tranquil state. When in a tranquil state, only signons from special users are accepted.

System action:
Sign-on terminates.

User response:
The external security manager has probably been put into a tranquil state to allow for external security manager database maintenance. Determine whether maintenance is currently occurring and how long it will take. When maintenance is finished the tranquil state should be removed from the external security manager which will allow you to sign-on. If the external security manager has not been put into a tranquil state contact your security administrator.

Administrator response:
Check that the external security manager is not in a tranquil state and ensure that it is running correctly so that sign-on can take place.

Your userid is invalid. Please retype.

Explanation:
Your user ID is invalid.

System action:
The system waits for a response.

User response:
Enter a valid user ID.

Administrator response:
None.

Incorrect password length. Sign-on is terminated.

Explanation:
The value of the Password keyword is incorrect. A password is between 1 and 8 characters. A password phrase is between 9 and 100 characters. Your security administrator might have changed the minimum or maximum password lengths.

System action:
Sign-on terminates.

User response:
Enter a password of the right length. If this still fails, check with your security administrator whether they have changed the minimum or maximum password lengths.

Administrator response:
None.

Incorrect new password length. Sign-on is terminated.

Explanation:
The value of the New Password field is incorrect. A new password is between 1 and 8 characters. A new password phrase is between 9 and 100 characters. Your security administrator might have changed the minimum or maximum lengths.

System action:
Sign-on terminates.

User response:
Enter a new password of the right length. If this fails, check with your security administrator whether they have changed the minimum or maximum password lengths.

Administrator response:
None.

Incorrect user name length. Sign-on is terminated.

Explanation:
The value of the user ID keyword is incorrect. A user ID must be between 1 and 8 characters.

System action:
Sign-on terminates.

User response:
Enter a user ID of the right length.

Administrator response:
None.

Incorrect group name length.

Explanation:
The value of the group name is incorrect. A group name must be between 1 and 8 characters.

System action:
Sign-on continues and the default group associated with the user ID is used if possible.

**User response:**
Sign off and sign on again with a group name of the right length if required.

**Administrator response:**
None.

---

**Destination**

**EYUVC1027E** *Incorrect group name specified*

**Explanation:**
The value of the group name is invalid.

**System action:**
Sign-on continues and the default group associated with the user ID is used if possible.

**User response:**
Sign off and sign on again with a valid group name if required.

**Administrator response:**
None.

---

**Destination**

**EYUVC1028I** *The password or password phrase has been changed.*

**Explanation:**
The password or password phrase was changed successfully.

**System action:**
Sign-on continues unless a session for the current user already exists.

**User response:**
No action is required. However, if an existing user session exists, reattempt the log on using the RECONNECT option.

**Administrator response:**
None.

---

**Destination**

**EYUVC1029E** *Unable to create User environment. User task creation timed out.*

**Explanation:**
The signon process has failed.

**System action:**
Signon terminates.

**User response:**
Retry the signon. If this continues to time out, contact your system administrator.

**Administrator response:**
Examine the system log for problems which could delay completion of user task creation.

**Destination**

**EYUVC1030E** *Invalid user name or password. Try again.*

**Explanation:**
An invalid user name or password has been entered into the signon form.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Enter the correct user name or password into the form and press "Sign on".

**Administrator response:**
None.

---

**Destination**

**EYUVC1031I** *Enter a user name and password.*

**Explanation:**
A user name and password is required for signon.

**System action:**
Signon is suspended. An input form is presented to the user.

**User response:**
Enter your user name and password into the form, and press "Sign on".

**Administrator response:**
None.

---

**Destination**

**EYUVC1100I** *Signoff request accepted.*

**Explanation:**
You have requested to terminate the session by clicking the "Sign off" link.

**System action:**
The user session will be terminated as soon as possible.

**User response:**
Close the browser window.

**Administrator response:**
None.
Destination

EYUVC1101I  Signoff request failed.

**Explanation:**
You have requested to terminate the session by clicking the "Sign off" link, but your request could not be processed correctly.

**System action:**
User session is terminated.

**User response:**
Contact your system administrator.

**Administrator response:**
Collect AUXTRACE, console log, and dump information, and contact IBM service.

Destination

EYUVC1102I  Press button to begin signon.

**Explanation:**
A request has been made to the Web User Interface server but the user has not yet been authenticated.

**System action:**
A page containing a single button is presented to the user.

**User response:**
Press the button presented and then sign on using the form that appears.

**Administrator response:**
None.

Destination

EYUVC1190W  CMAS currently unavailable.

**Explanation:**
The CICSpex SM CMAS address space does not appear to be available to the interface. Attempts to sign on may fail.

**System action:**
A signon form is presented to the user.

**User response:**
Attempt to sign on. If signon attempts continue to fail, contact your system administrator.

**Administrator response:**
Ensure that the CMAS is active and the LMAS component of the Web User Interface server is connected to it.

Destination

EYUVC1209E  Error formatting Kernel Error data.

**Explanation:**
A response was not received from one or more MASes in the requested scope, but an error occurred when trying to format error messages EYUVC1293E or EYUVC1294W.

**System action:**
The WUI screen is refreshed with data from MASes which did respond.

**User response:**
Contact your system administrator.

**Administrator response:**
Collect AUXTRACE records from the WUI Server and the CMAS, and the WUI Server and CMAS joblogs and contact your IBM Support Center.

Destination

EYUVC1210E  Requested View-set (viewsetname) not available.

**Explanation:**
The named view-set was referenced but was either not present in the repository, or you are not authorized to view it.

**System action:**
The view is not displayed.

**User response:**
Contact your system administrator. Press the Back icon to continue.

**Administrator response**
Check EYULOG for security exceptions, and if necessary revise the user’s authorization levels.

Frame-enabled browser required.

**Explanation:**
You have attempted to sign on to the Web User Interface using a browser that does not support frames.

**System action:**
User session has been established but will remain inactive until the user reconnects with a Web browser with frame support or the session is destroyed by the inactivity time out.

**User response:**
Use a Web browser that supports frames or review your Web browser settings to ensure frame support has not been disabled.

**Administrator response:**
None.
If there is no security exception, check the view set name. If it is incorrect, use the editor to correct the view or menu link that caused the error, or correct the DEFAULTxxxxxx server parameter, as appropriate. If the view-set name is correct, use the editor to create the view-set, or use the COVC transaction to import from an export file.

**Destination**

**EYUVC1211E** Requested Menu (menu_name) not available.

**Explanation:**
The named menu was referenced but either could not be loaded from the repository, or you are not authorized to view it.

**System action:**
The menu is not displayed.

**User response:**
Contact your system administrator. Press the Back icon to continue.

**Administrator response**
Check EYULOG for security exceptions, and if necessary revise the user's authorization levels.

If there is no security exception, check the menu name. If it is incorrect, use the editor to correct the menu link that caused the error, or correct the DEFAULTxxxxxx server parameter, as appropriate. If the menu name is correct, use the editor to create the menu, or use the COVC transaction to import from an export file.

**Destination**

**EYUVC1212E** A navigation error has occurred. Please use the following link to go back to your current position.

**Explanation:**
You have requested a page out of sequence, perhaps by using the browser's Back button.

**System action:**
A link is provided to go back to the current page.

**User response:**
Select the link to return to the current page.

**Administrator response:**
None.

**Destination**

**EYUVC1213E** No more windows available. Please close some windows and try again.

**Explanation:**
You have attempted to open more windows than are permitted in a single session.

**System action:**
The session continues.

**User response:**
Use a window that is already open, or close one and try again. If you no longer have the windows open, sign off, then sign on again.

**Administrator response:**
None.

**Destination**

**EYUVC1214E** Window closed.

**Explanation:**
The interface has closed the window for which the message is displayed.

**System action:**
The session continues.

**User response:**
Close the browser window.

**Administrator response:**
None.

**Destination**

**EYUVC1215E** The data required for this print operation is no longer available.

**Explanation:**
The data used to generate a 'print preview' window is no longer available because the window from which the request was generated has been used subsequently.

**System action:**
The request is ignored and the session continues.

**User response:**
Close the browser window containing the message. If a printed display is required, open a new 'print preview' for your required display and use the browser to print the page before using the window from which the request is generated.

**Administrator response:**
None.
Requested View (viewname) not available.

**Explanation:**
The named view was referenced, but was not present in the view-set.

**System action:**
The view is not displayed.

**User response:**
Contact your system administrator. Press the Back icon to continue.

**Administrator response**
If the view name is incorrect, use the editor to correct the view or menu link that caused the error.

If the view name is correct, then use the editor to create the view within the view-set.

**Destination**

Object (objectname) used in View set (viewsetname) is not recognized in this release of CICSPlex SM.

**Explanation:**
The named view set was created for an object that is not known. For example, the view set may have been created on another release of CICSPlex SM.

**System action:**
The view is not displayed.

**User response:**
Contact your system administrator. Press the Back icon to continue.

**Administrator response**
Verify that CICSPlex SM and the Web User Interface is running at the correct release. Use the View Editor to delete the view set, if necessary.

Collect the exported view set definition, AUXTRACE, console log, and dump information, and contact IBM service if the problem cannot be resolved.

**Destination**

CICSPlex SM API command (commname) failed. (apiresponse, apireason)

**Explanation:**
The interface experienced an unexpected response from a CICSPlex SM API command.

**System action:**
The session continues.

**User response:**
Contact your system administrator.

**Administrator response**
Review the CICSPlex SM API response and reason codes and any associated messages in the joblog and/or EYULOG to determine the cause of the problem. If the apiresponse,apireason are NOTPERMIT, USRID, review the job log for each CMAS as follows:

- If the current context is a CICSpex, examine the job log for each CMAS that participates in the management of the CICSpex looking for any messages issued by the external security manager.

This window is still busy with the previous request. Please try again.

**Explanation:**
You have requested a page in a window that has not completed your previous request.

**System action:**
A link is provided to go back to the current page.

User response:
Select the link to return to the current page. If the request still has not completed you may see this message again and have to repeat this action.

Administrator response:
None.
– The 'CMASs managing CICSplex' (EYUSTARTCICSPLEX) Web User Interface view will identify each CMAS that participates in the management of the CICSpix.

• If the current context is a CMAS, examine the job log for that CMAS for any messages issued by the external security manager.

If you cannot resolve the problem, collect AUXTRACE, console log and dump information, and contact IBM service.

**Destination**

**EYUVC1221E** CICSpix SM not available because the CMAS has disconnected.

**Explanation:**
The interface has lost contact with the CMAS.

**System action:**
The session continues but will be terminated shortly.

**User response:**
Sign off from the interface and sign on when the CMAS becomes available again.

**Administrator response:**
None.

**Destination**

**EYUVC1222E** Possible navigation error. Parent stub invalid.

**Explanation:**
The interface detected a problem in internal integrity.

**System action:**
The session continues but may continue to have problems.

**User response:**
Contact your system administrator. Sign off from the interface and try again.

**Administrator response:**
Collect AUXTRACE, console log, and dump information, and contact IBM service.

**Destination**

**EYUVC1223E** Unable to start Editor. User not authorized.

**Explanation:**
You attempted to access the View Editor, but your user ID was rejected by the external security manager.

**System action:**
The session continues but View Editor access is denied.

**User response:**
Contact your system administrator.

**Administrator response:**
Add the user into the View Editor external security manager profile if the user is to be given access to the View Editor.

**Destination**

**EYUVC1224E** A submit error has occurred. Use the following link to go back to your current position.

**Explanation:**
You have submitted a page without an associated action, perhaps by pressing the enter key in a text box rather than selecting a button.

**System action:**
A link to the current page is provided.

**User response:**
Select the link to return to the current page.

**Administrator response:**
None.

**Destination**

**EYUVC1225E** Requested user group or user profile name in repository contains an invalid version identifier.

**Explanation:**
During sign on, the Web User Interface's attempt to retrieve information from the user profile or user group profile failed because the version number associated with the object in the repository is not valid.

**System action:**
Sign on continues. If the message relates to a user group profile, the defaults specified as Web User Interface parameters are used for this session. If the message relates to a user profile, user favorites are not available during this session.

**User response:**
Contact your system administrator.

**Administrator response:**
Ensure that the Web User Interface server repository has been correctly migrated to the current version of CICSpix SM.

**Destination**
**EYUVC1226E** This help page has expired.

**Explanation:**
The data used to generate the help page is no longer available because the window from which the request was generated has been used subsequently.

**System action:**
The request is ignored and the session continues.

**User response:**
Close the browser window containing the message. If a help page is required, return to the required view and click on the help icon.

**Administrator response:**
None.

---

**Destination**

**EYUVC1227W** Not connected to requested group `group1`. Default group `group2` used.

**Explanation:**
During sign on, the Web User Interface user specified a group (`group1`) on the sign on screen. The specified group (`group1`) was not used as the user id is not connected to `group1`.

**System action:**
The sign on will continue, but the Web User Interface will attempt to use the users default group (`group2`) as the name of the Web User Interface user group.

**User response:**
If the default user group profile is not appropriate, sign off the Web User Interface and specify a group on the sign on screen that the user id is connected to.

**Administrator response**
Contact the security administrator to check that the `group1` group specified is appropriate and that the user id is connected to that group.

The sign on group option is only available to Web User Interface users if the Web User Interface system parameter SIGNONPANEL is set to ENHANCED. If the group option is not required, set SIGNONPANEL to BASIC.

---

**Destination**

**EYUVC1230I** 'externact' (apiact) request completed successfully for count records.

**Explanation:**
The request to perform an action on managed resources completed successfully.
A view definition named an invalid attribute for the object in this release of CICSPlex SM.

**System action:**
The action is not performed and the session continues.

**User response:**
Contact your system administrator.

**Administrator response:**
Use the View Editor to correct the view definition.

**Destination**

<table>
<thead>
<tr>
<th>Destination</th>
<th>EYUVC1234E</th>
<th>Parameter (attrname) cannot be altered for Object (objname).</th>
</tr>
</thead>
</table>

**Explanation:**
A view definition named an attribute which cannot be set for this release of CICSPlex SM.

**System action:**
The action is not performed and the session continues.

**User response:**
Contact your system administrator.

**Administrator response:**
Use the View Editor to correct the view definition.

**Destination**

<table>
<thead>
<tr>
<th>Destination</th>
<th>EYUVC1235E</th>
<th>Parameter (parmname) is not valid for Action (action) of Object (objname).</th>
</tr>
</thead>
</table>

**Explanation:**
A view definition named a parameter which does not exist for this release of CICSPlex SM.

**System action:**
The action is not performed and the session continues.

**User response:**
Contact your system administrator.

**Administrator response:**
Use the View Editor to correct the view definition.

**Destination**

<table>
<thead>
<tr>
<th>Destination</th>
<th>EYUVC1236E</th>
<th>Parameter (parmname) has unrecognized type for Action (action) of Object (objname).</th>
</tr>
</thead>
</table>

**Explanation:**
A view definition named a parameter which has an invalid specification.

**System action:**
The action is not performed and the session continues.

**User response:**
Contact your system administrator.

**Administrator response:**
Use the View Editor to remove the parameter from the view definition.

**Destination**

<table>
<thead>
<tr>
<th>Destination</th>
<th>EYUVC1237E</th>
<th>Parameter (parmname) is not valid for Action (action) of Object (objname).</th>
</tr>

</table>

**Explanation:**
A view definition named a parameter which does not exist for this release of CICSPlex SM.

**System action:**
The action is not performed and the session continues.

**User response:**
Contact your system administrator.

**Administrator response:**
Use the View Editor to correct the view definition.

**Destination**

<table>
<thead>
<tr>
<th>Destination</th>
<th>EYUVC1238E</th>
<th>Parameter (parmname) has unrecognized type for Action (action) of Object (objname).</th>
</tr>
</thead>
</table>

**Explanation:**
A view definition named a parameter which has an invalid specification.

**System action:**
The action is not performed and the session continues.

**User response:**
Contact your system administrator.

**Administrator response:**
Use the View Editor to remove the parameter from the view definition.

**Destination**

<table>
<thead>
<tr>
<th>Destination</th>
<th>EYUVC1239E</th>
<th>No Attribute values altered. Action (action) not performed.</th>
</tr>
</thead>
</table>

**Explanation:**
You attempted to perform an action on an object but no attributes were selected for the action.

**System action:**
The action is not performed and the session continues.

**User response:**
Select attributes for update before retrying the action.

**Administrator response:**
None.
Destination

EYUVC1240E Invalid value entered for Attribute (attribute). Action (action) not performed.

Explanation:
You attempted to perform an action on an object but an invalid attribute value was selected for the action.

System action:
The action is not performed and the session continues.

User response:
Enter a valid value for the attribute before retrying the action. See Entering Data for more information.

Administrator response:
None.

Destination

EYUVC1241E Invalid value entered for Parameter (parameter). Action (action) not performed.

Explanation:
You attempted to perform an action on an object but an invalid parameter value was entered for the action.

System action:
The action is not performed and the session continues.

User response:
Enter a valid value for the parameter before retrying the action.

Administrator response:
None.

Destination

EYUVC1242E The name of the map to be used is not available. If possible, the default map object will be used.

Explanation:
The name of the map object associated with the functional area to be mapped could not be obtained.

System action:
In most cases the map hyperlinks are not displayed. However, if the problem was in obtaining a user group profile, the map object specified in the DEFAULTMAPxxx server parameter is used to generate the hyperlinks.

User response:
Contact your system administrator.

Administrator response:
Check the EYULOG for security exceptions, and if necessary revise the user's authorization levels.

Destination

EYUVC1243E The requested map (mapname) is not available. No map hyperlinks will be displayed.

Explanation:
The named map was referenced but was not available from the repository.

System action:
The map hyperlinks are not displayed.

User response:
Contact your system administrator.

Administrator response:
Check the map name. If it is incorrect, use the editor to correct the user group profile, or correct the DEFAULTMAPxxx server parameter, as appropriate. If the map name is correct, use the editor to create the map, or use the COVC transaction to import from an export file.

Destination

EYUVC1244E Map (mapname) has type (namedmaptype) but the map requested is for type (requestedmaptype). No map hyperlinks will be displayed.

Explanation:
The named map was referenced but was of the wrong type for the functional area being mapped.

System action:
The map hyperlinks are not displayed.

User response:
Contact your system administrator.

Administrator response:
Check the map name. If it is incorrect, use the editor to correct the user group profile, or correct the DEFAULTMAPxxx server parameter, as appropriate. If the map name is correct, use the editor to create a map of the correct type.

Destination

EYUVC1245E The requested map (mapname) in the repository contains an invalid version identifier. No map hyperlinks will be displayed.

Explanation:
The requested map cannot be displayed because it contains a version identifier that does not match the current version of CICSPlex SM.

**System action:**
The map hyperlinks are not displayed.

**User response:**
Contact your system administrator.

**Administrator response:**
Ensure that the Web User Interface server repository has been correctly migrated to the current version of CICSPlex SM.

**Destination**

| EYUVC1246E | The requested map (mapname) is not available because the user not authorized. No map hyperlinks will be displayed. |

**Explanation:**
The named map was referenced but you are not authorized to view it.

**System action:**
The map hyperlinks are not displayed.

**User response:**
Contact your system administrator.

**Administrator response:**
Check EYULOG for security exceptions, and if necessary revise the user's authorization levels.

**Destination**

| EYUVC1247E | Invalid character %0 has been entered for attribute %1 at character position %2. |

**Explanation:**
A syntax error has been detected.

**System action:**
The requested operation is not performed.

**User response**
Correct the syntax error. The trace flag syntax rules are:

- Specify bits either singly or as a sequence:
  - To turn bits 1, 5 and 12 on, enter 1, 5, 12.
  - To turn on bits 1, 2, and 3, enter 1-3.
- Bit numbers are valid only in the range 1 to 32.
- Single bits and bit sequences must always be separated by a comma.
- Start and end the input sequence with a bit number; for example 1, 5-8 is valid but both ,1, 5-8 and 1, 5-8, are not.
- Spaces are allowed but can only precede or follow a comma, except for the first bit, which may have preceding spaces.
- Single bits can be specified in any order but sequences must be specified in order; for example 1-3 is valid but 3-1 is not.
- The bits numbers in a sequence cannot be the same.
- All bits can be disabled either by leaving the field empty or by entering blanks.
- Type 1-32 in a field to enable all bits.

**Destination**

| EYUVC1248E | Bit number %0 is out of range for attribute %1 at character position %2. Bits should be within the range 1-32. |

**Explanation:**
An out of range error has been detected.

**System action:**
The requested operation is not performed.

**User response**
Correct the out of range error. The trace flag syntax rules are:

- Specify bits either singly or as a sequence:
  - To turn bits 1, 5 and 12 on, enter 1, 5, 12.
  - To turn on bits 1, 2, and 3, enter 1-3.
- Bit numbers are valid only in the range 1 to 32.
- Single bits and bit sequences must always be separated by a comma.
- Start and end the input sequence with a bit number; for example 1, 5-8 is valid but both ,1, 5-8 and 1, 5-8, are not.
- Spaces are allowed but can only precede or follow a comma, except for the first bit, which may have preceding spaces.
- Single bits can be specified in any order but sequences must be specified in order; for example 1-3 is valid but 3-1 is not.
- The bits numbers in a sequence cannot be the same.
- All bits can be disabled either by leaving the field empty or by entering blanks.
- Type 1-32 in a field to enable all bits.
Administrator response: None.

Destination

EYUVC1249E Invalid bit sequence entered for attribute %0 at character position %1.

Explanation:
A bit sequence that does not conform to the required syntax has been detected.

System action:
The requested operation is not performed.

User response
Correct the bit sequence syntax. The trace flag syntax rules are:

• Specify bits either singly or as a sequence:
  – To enable bits 1, 5 and 12, enter 1, 5, 12.
  – To enable bits 1, 2, and 3, enter 1-3.
• Bit numbers are valid only in the range 1 to 32.
• Single bits and bit sequences must always be separated by a comma.
• Start and end the input sequence with a bit number; for example 1, 5-8 is valid but both ,1, 5-8 and 1, 5-8, are not.
• Spaces are allowed but can only precede or follow a comma, except for the first bit, which may have preceding spaces.
• Single bits can be specified in any order but sequences must be specified in order; for example 1-3 is valid but 3-1 is not.
• The bit numbers in a sequence cannot be the same. All bits can be disabled by either leaving the field empty or by entering blanks.
• Type 1-32 in a field to enable all bits.

Administrator response: None.

EYUVC1250E Attributes cannot be altered for this Object (objname).

Explanation:
You attempted to update attributes for an object which does not support the SET action for this release of CICSPlex SM.

System action:
The action is not performed and the session continues.

User response:
Contact your system administrator.

Administrator response:
Use the View Editor to remove the offending action button from the view definition.

Destination

EYUVC1251E Object (objname) is not recognized in this release of CICSPlex SM.

Explanation:
You attempted to perform an action for an object which is not present in this release of CICSPlex SM.

System action:
The action is not performed and the session continues.

User response:
Contact your system administrator.

Administrator response:
Use the View Editor to correct the view.

Destination

EYUVC1252E Invalid Action name specified on View.

Explanation:
The name of the action which you attempted to perform is not valid in CICSPlex SM.

System action:
The action is not performed and the session continues.

User response:
Contact your system administrator.

Administrator response:
Use the View Editor to review the view definition.

Destination

EYUVC1253E Action (action) not available for Object (objname).

Explanation:
You attempted to perform an action which is not supported by the object in this release of CICSPlex SM.

System action:
The action is not performed and the session continues.

User response:
Contact your system administrator.

Administrator response:
Use the View Editor to review the view definition.
Destination

EYUVC1254I Operation canceled for remaining selections.

Explanation: You selected "No to all" on the confirmation panel.

System action: The action is not performed for the remaining selected objects, and the session continues.

User response: None.

Administrator response: None.

Destination

EYUVC1255I Operation not performed for previous selection.

Explanation: You selected "No" on the confirmation panel.

System action: The action has not been performed for the previous selected object. The confirmation panel is presented again for any remaining selected objects. The session continues.

User response: None.

Administrator response: None.

Destination

EYUVC1258W This action may produce a result set containing \( n \) entries. The warning threshold is \( n \). Click Refresh to retry with different filters or click OK to proceed.

Explanation: The action you have initiated may produce a large amount of data and could take some time to process.

System action: The WUI waits for your response.

User response: Click OK to proceed with the requested action or Refresh to amend the filters.

Administrator response: Use the View Editor to review the definition of the hyperlink that caused the error.

Destination

EYUVC1259I Potential result set size is below the \( n \) warning threshold. Click Refresh to retry with different filters or OK to proceed.

Explanation: You have refreshed the filters in response to message EYUVC1258W and the amount of data in the potential result set is now below the warning threshold.

System action: The WUI waits for your response.

User response: Click OK to proceed with the requested action or Refresh to amend the filters.

Administrator response: The potential results set is now below the value set on the default warning count (DEFAULTWARNCNT) parameter. If users are receiving a lot of these messages, you may want to check that this parameter is set appropriately.

Destination

EYUVC1260E Internal comparison operator value (opervalue) invalid.

Explanation: A request for a filtered view specified an internal operator which is not supported for this release of CICSPlex SM.

System action: The request is canceled but the session continues.

User response: Contact your system administrator.

Administrator response: Use the View Editor to review the definition of the hyperlink that caused the error.

Destination

EYUVC1261E Attribute (attrname) not found for Object (objname).

Explanation: A request for a filtered view specified an attribute name which is not present in the object in this release of CICSPlex SM.

System action: The request is canceled but the session continues.
User response:
Contact your system administrator.

Administrator response:
Use the View Editor to review the definition of the hyperlink that caused the error.

Destination

EYUVC1262E Parameter (parmname) not valid for Object (objname).

Explanation:
A request for a filtered view specified a parameter which is not supported by the object in this release of CICSPlex SM.

System action:
The request is canceled but the session continues.

User response:
Contact your system administrator.

Administrator response:
Use the View Editor to review the definition of the hyperlink that caused the error.

Destination

EYUVC1263E Attribute (attributename) filter contains invalid data.

Explanation:
A request for a filtered view specified an invalid attribute filter value.

System action:
The requested display is presented to the user with no data records.

User response:
Review the filter values and correct as necessary. See Filtering Data Using Selection Criteria for more information. If the problem cannot be resolved, contact your system administrator.

Administrator response:
Use the editor to review the filters specified on the link used and correct if necessary.

Destination

EYUVC1264E Parameter (parmname) filter contains invalid data.

Explanation:
A request for a filtered view specified an invalid parameter filter value.

System action:
The requested display is presented to the user with no data records.

User response:
Review the filter values and correct as necessary. See Filtering Data Using Selection Criteria for more information. If the problem cannot be resolved, contact your system administrator.

Administrator response:
Use the editor to review the filters specified on the link used and correct if necessary.

Destination

EYUVC1265E Attribute (attributename) is not supported as a filter.

Explanation:
A request for a filtered view specified an attribute filter which is not supported. For example, a hidden character attribute cannot be used as a filter.

System action:
The requested display is not presented to the user.

User response:
If the problem resulted from selecting a link on a view or menu then select the Back icon to continue and contact your system administrator. If the problem resulted from entering URL request to the Web User Interface then review the attribute filters specified.

Administrator response:
Use the editor to review the filters specified on the link used and correct if necessary.

Destination

EYUVC1266E Field length exceeded for attribute 'attributedesc' (attributename). Maximum length maxlen. Action (actionname) not performed.

Explanation:
A request to perform action actionname was attempted. This request has failed as attribute 'attributedesc' exceeds the maximum allowed length of maxlen characters.

System action:
The action is not performed and the session continues.

User response:
Enter a valid value for the attribute before retrying the action. See Entering Data for more information.

Administrator response:
None.
Request denied as this action may produce a result set containing $n_1$ entries which exceeds the threshold of $n_2$. After modifying the filters, click Refresh to retry.

**Explanation:**
The action you have initiated might produce $n_1$ records. Your Web User Administrator has determined that you may only process requests of up to $n_2$ records.

**System action:**
The WUI waits for your response.

**User response:**
Either amend the filters and click Refresh to retry the request, or click Cancel to return to the previous view or menu.

**Administrator response:**
The potential result set is larger than the default warning count value. If users are receiving a lot of these messages, you may want to check that this value is set appropriately.

**Explanation:**
This message provides CICS related information about a previous error as follows:

- **eibfn**
  - Identifies the failing CICS command EIB function code.
  - A value of N/A will be displayed if the eibfn value cannot be resolved by the release of CICS supporting the WUI server.

- **eibfn_name**
  - Identifies the failing CICS command name corresponding to eibfn.

- **resp**
  - Identifies the failing CICS numerical (decimal) EIB RESP condition.

- **resp_name**
  - Identifies the failing CICS EIB RESP condition name.
  - A value of N/A will be displayed if the resp value cannot be resolved by the release of CICS supporting the WUI server.

- **resp2**
  - Identifies the failing CICS numerical (decimal) EIB RESP2 value.

**Explanation:**
This message provides additional information following message EYUVC1231E. It is issued for each object (objname) for which CICS (cicsregion) reported a failure processing action action.

The data provided in the CICS information section of the message describes the CICS command and failing condition associated with the error as follows:
Identifies the failing CICS command EIB function code.

Identifies the failing CICS command name corresponding to eibfn.

A value of N/A will be displayed if the eibfn value cannot be resolved by the release of CICS supporting the WUI server.

Identifies the failing CICS numerical (decimal) EIB RESP condition.

Identifies the failing CICS EIB RESP condition name.

A value of N/A will be displayed if the resp value cannot be resolved by the release of CICS supporting the WUI server.

Identifies the failing CICS numerical (decimal) EIB RESP2 high-order halfword value.

Identifies the failing CICS numerical (decimal) EIB RESP2 low-order halfword value.

The session continues.

Use eibfn_name and resp_name to determine the failing command and condition. If further information is required, consult the CICS documentation as follows:

For a failing CSD command, with a resp_name of INVREQ, check section 'RESP2 values for EXEC CICS CREATE and EXEC CICS CSD commands' in the CICS System Programming Reference.

For other commands consult section 'RESP2 values and their meanings' of the CICS User's Handbook. The eibfn_name value identifies the failing 'Command' and the resp_name value identifies the 'Condition'. Use the resp2Hi and resp2Lo values to identify the 'Meaning' of the error.

If the CICS User's Handbook is not available, the CICS Application or System Programming Reference manuals may be used for API or SPI commands respectively.

For failing FEPI commands, consult the 'System programming Reference' section of the CICS Front End Programming Interface User's Guide.

If a value of N/A is displayed for eibfn_name or resp_name use the CICS User's Handbook.

CICS Application Programmers reference, Systems Programmers Reference, or Front End Programming User's Guide to translate eibfn and resp into the command and condition respectively.

Attempt to determine the cause of an eibfn_name command failing with a resp_name/resp2Hi and resp2Lo condition and take the appropriate action.

This message provides additional information following message EYUVC1231E. It is issued for each object (objname) for which CICS (cicsregion) reported a failure processing action action.

The data provided in the CICS information section of the message describes the CICS command and failing condition associated with the error as follows:

Identifies the failing CICS command EIB function code.

Identifies the failing CICS command name corresponding to eibfn.

A value of N/A will be displayed if the eibfn value cannot be resolved by the release of CICS supporting the WUI server.

Identifies the failing CICS numerical (decimal) EIB RESP condition.

Identifies the failing CICS EIB RESP condition name.

A value of N/A will be displayed if the resp value cannot be resolved by the release of CICS supporting the WUI server.

Identifies the failing CICS numerical (decimal) EIB RESP2 value.

The session continues.

Destination

EYUVC1270I Action (action) failed for 'objname' in 'cicsregion'.
(CICS information: EIBFN(eibfn - eibfn_name ) RESP(resp - resp_name ) RESP2(resp2 ))

Explanation

This message provides additional information following message EYUVC1231E. It is issued for each object (objname) for which CICS (cicsregion) reported a failure processing action action.

The data provided in the CICS information section of the message describes the CICS command and failing condition associated with the error as follows:

Identifies the failing CICS command EIB function code.

Identifies the failing CICS command name corresponding to eibfn.

A value of N/A will be displayed if the eibfn value cannot be resolved by the release of CICS supporting the WUI server.

Identifies the failing CICS numerical (decimal) EIB RESP condition.

Identifies the failing CICS EIB RESP condition name.

A value of N/A will be displayed if the resp value cannot be resolved by the release of CICS supporting the WUI server.

Identifies the failing CICS numerical (decimal) EIB RESP2 value.

The session continues.
User response

Use eibfn_name and resp_name to determine the failing command and condition. If further information is required, consult the CICS documentation as follows:

For failing API or SPI CICS commands, consult section 'RESP2 values and their meanings' of the CICS User's Handbook. The eibfn_name value identifies the failing 'Command' and the resp_name value identifies the 'Condition'. Use the resp2 value to identify the 'Meaning' of the error.

If the CICS User's Handbook is not available, the CICS Application or System Programming Reference manuals may be used for API or SPI commands respectively.

For failing FEPI commands, consult the 'System programming Reference' section of the CICS Front End Programming Interface User's Guide.

If a value of N/A is displayed for eibfn_name or resp_name use the CICS User's Handbook, CICS Application Programmers reference, Systems Programmers Reference, or Front End Programming User's Guide to translate eibfn and resp into the command and condition respectively.

Administrator response:

Attempt to determine the cause of an eibfn_name command failing with a resp_name/resp2 condition and take the appropriate action.

Destination

EYUVC1271I Action (action) failed due to attribute, 'description' (attrname).

Explanation:

This message provides additional information following messages EYUVC1231E and EYUVC1278E. It is issued for each individual failure. The explanation field describes the error code (errcode) reported by CICSPlex SM.

System action:

The session continues.

User response:

None.

Administrator response:

None.

Destination

EYUVC1273I Action (action) failed for 'resourcename' (resourcetype) version resourceversion, in 'cicsregion'.

Explanation:

This message provides additional information following message EYUVC1231E. It is issued for each resource (resourcename) for which CICS (cicsregion) reported a failure when attempting to install CICS resources or BAS objects.

action identifies the CICSPlex SM API action that was attempted and caused this error.

resourcename identifies the name of the CICS resource or BAS objects being installed.

resourcetype identifies the resource type of the CICS resource or BAS object.

resourceversion identifies the BAS resource version of the CICS resource or BAS object.

explanation identifies the BAS install error reason as follows:

• System inactive
  The CICS cicsregion is not active.

• Install not authorized
  The install failed as the user is not authorized to install the BAS resource.

• Discard not authorized
  Reserved for future use.

• Install failure
  The install has failed.

• Install not supported
  The resource being installed is not supported by the target system.
• Install discard failure
An EXEC CICS CREATE with the DISCARD option has failed.

• Install complete failure
An EXEC CICS CREATE with the COMPLETE option has failed.

• Install connection failure
There is no CICS CONNECTION object related to the SESSIONS object being installed.

• Install status failure
resourcename is already installed in CICS cicsregion, but is not in a state to allow it to be re-installed. For example, a FILE that is ENABLED.

• Install not forced
The resource being installed is already installed in the target system and 'Force install value' is NO.

• MAS failure
An error occurred in CICS cicsregion during the install.

• MAS failure - ABEND
An ABEND occurred in CICS cicsregion during the CREATE (or equivalent) of resourcetype resources.

• Resource not supported
CICS cicsregion does not support CREATE (or equivalent) of resourcetype resources.

Depending on the explanation value, this message may be followed by EYUVC1279I providing CICS information related to the failure.

**System action:**
The session continues.

**User response**
Depending upon the explanation, take action as follows:

• System inactive
  Check that cicsregion is active.

• Install not authorized
  Check that the user is authorized to install the resource through the CICSPlex SM Simulated Security and CICSPlex SM Object Security (CPSMOBJ) definitions.

• Discard not authorized
  Reserved for future use.

• Install failure
  Contact the Systems Programmer.

• Install discard failure
  Check message EYUVC1279I for details related to the CREATE DISCARD failure.

• Install not forced
  Check message EYUVC1279I for details related to the CREATE COMPLETE failure.

• Install connection failure
  There is no CICS CONNECTION object related to the SESSIONS object being installed.

• Install status failure
  Change the state of the existing installed resourcename object, so that it is in a suitable state to allow re-installation.

• MAS failure
  Contact the System Programmer.

• MAS failure - ABEND
  Contact the System Programmer.

• Resource not supported
  Do not attempt to install the resource into this system, or update the CICS release of the system so that it supports installation of the specified resource.

**Administrator response**
Check the CICS joblog of system cicsregion to check for further messages.

For explanation reasons 'Install failure', 'MAS failure' or 'MAS failure - ABEND', collect the CICS Auxiliary trace data from the CMAS that cicsregion is connected to along with the complete CMAS and MAS joblogs and contact IBM Service.

**Destination**

| EYUVC1274I | Action (action) failed due to inconsistent scope involving 'cicsregion' 'binconsccerrcodeexplanation' (Target details: scope 'targetscope' resource assignment 'targetassignment' resource description 'targetedescription'. Related details: scope 'relatedscope', resource assignment 'relatedassignment', description 'relateddescription'.) |
Explanation
This message provides additional information following message EYUVC1231E. The requested action is checked to ensure that the target and related scope values are not in conflict with each other. CICSPlex SM flags the target and related scopes as inconsistent if:

• There is any overlap between the two (for example, the same CICS system is in both scopes)
• The related scope is anything other than a single CICS system for which a system ID is defined

It is issued for each object for which CICS reported an inconsistent scope error.

System action:
The action is not performed for the indicated resource. This does not affect action requests already performed. Any subsequent actions are held as pending.

User response:
None

Administrator response:
None

Destination

| EYUVC1276I | Candidate resource details: name 'candname' (candtype), version 'candver', resource group 'candrgrp', resource assignment 'candrassg', resource description 'candrdsc', usage 'candusage', system group 'candsgrp', system type 'candtype', assignment override 'candasgovr' |

Explanation:
This message is issued following message EYUVC1275I to provide additional information about the candidate resource involved in an inconsistent resource set error.

System action:
The session continues. This message is always accompanied by message EYUVC1277.

User response:
None

Administrator response:
None

Destination

| EYUVC1277I | Existing resource details: name 'existname' (existtype), version 'existver', resource group 'existgrp', resource assignment 'existrassg', resource description 'existrdsc', usage 'existusage', system group 'existsgrp', system type 'existtype', assignment override 'existrasgovr' |

System action:
The session continues. This message is always accompanied by message EYUVC1276.

User response:
None

Administrator response:
None

Destination

| EYUVC1278E | Unable to obtain data for requested View. externact (apiact) request failed. (apiresponse, apireason) |

System action:
The data for the requested view is not displayed.

System programmer response:
See the CICSPlex System Manager Application Programming Reference for a description of the API response and reason codes.

**User response:**
Use the subsequent messages to determine the nature of the problem. Often the error is caused by an invalid value in a filter attribute or View parameter field.

### Destination

**EYUVC1279I**

CICS information: EIBFN(eibfn - eibfn_name ) RESP(resp - resp_name ) RESP2(resp2Hi, resp2Lo )

**Explanation**

This message provides CICS related information about a previous error as follows:

**eibfn**
- Identifies the failing CICS command EIB function code.

**eibfn_name**
- Identifies the failing CICS command name corresponding to eibfn.
  - A value of N/A will be displayed if the eibfn value cannot be resolved by the release of CICS supporting the WUI server.

**resp**
- Identifies the failing CICS numerical (decimal) EIB RESP condition.

**resp_name**
- Identifies the failing CICS EIB RESP condition name.
  - A value of N/A will be displayed if the resp value cannot be resolved by the release of CICS supporting the WUI server.

**resp2Hi**
- Identifies the failing CICS numerical (decimal) EIB RESP2 high-order halfword value.

**resp2Lo**
- Identifies the failing CICS numerical (decimal) EIB RESP2 low-order halfword value.

**System action:**
The session continues.

**User response**
Use eibfn_name and resp_name to determine the failing command and condition. If further information is required, consult the CICS documentation as follows:

For a failing CREATE command, with a resp_name of INVREQ, check section 'EXEC CICS CREATE RESP2 values' in the CICS System Programming Reference.

For other commands consult section 'RESP2 values and their meanings' of the CICS User's Handbook. The eibfn_name value identifies the failing 'Command' and the resp_name value identifies the 'Condition'. Use the resp2 value to identify the 'Meaning' of the error.

If the CICS User's Handbook is not available, the CICS Application or System Programming Reference manuals may be used for API or SPI commands respectively. For failing FEPI commands, consult the 'System programming reference' section of the CICS Front End Programming Interface User's Guide.

If a value of N/A is displayed for eibfn_name or resp_name use the CICS User's Handbook, CICS Application Programmers reference, Systems Programmers Reference, or Front End Programming User's Guide to translate eibfn and resp to the command and condition respectively.

**Administrator response:**
Attempt to determine the cause of an eibfn_name command failing with a resp_name/resp2hi,resp2lo condition and take the appropriate action.

The specified CMAS context (CMAScontext ) is not available.

**Explanation:**
The requested resource could not be displayed as the specified CMAS context is not available to this Web User Interface server.
System action:
The requested display is presented to the user with no data records.

User response:
Review the CMAS context and, if the input field is available, correct as necessary. See Filtering Data Using Selection Criteria for more information. If the problem cannot be resolved, contact your system administrator. Press the Back icon to continue.

Administrator response
If the CMAS context is incorrect, use the editor to correct the value in link used, or correct the DEFAULTCMASCTX server parameter, as appropriate.

If the CMAS context is correct, ensure that the specified CMAS context is available to the CICSPlex SM API from Web User Interface server.

Destination

**EYUVC1282W**  The specified Context (context) is not available, or is not a CICSPlex.

Explanation:
The requested resource could not be displayed as the specified Context is not available to this Web User Interface server.

System action:
The requested display is presented to the user with no data records.

User response:
Review the Context and, if the input field is available, correct as necessary. See Filtering Data Using Selection Criteria for more information. If the problem cannot be resolved, contact your system administrator. Press the Back icon to continue.

Administrator response
If the Context is incorrect, use the editor to correct the value in link used, or correct the DEFAULTCONTEXT server parameter, as appropriate.

If the Context and Scope are correct, ensure that the specified Scope is available to the CICSPlex SM API from Web User Interface server.

Destination

**EYUVC1283W**  The specified Scope (scope) is not available for this Context (context).

Explanation:
The requested resource could not be displayed as the specified Scope is not available within the specified Context.

System action:
The requested display is presented to the user with no data records.

User response:
Review the Context and Scope and, if the input fields are available, correct as necessary. See Filtering Data Using Selection Criteria for more information. If the problem cannot be resolved, contact your system administrator. Press the Back icon to continue.

Administrator response
If the Context or Scope are incorrect, use the editor to correct the value in link used, or correct the DEFAULTCONTEXT and DEFAULTSCOPE server parameters, as appropriate.

If the Context and Scope are correct, ensure that the specified Scope is defined to the specified Context.

Destination

**EYUVC1284E**  The specified Attribute filter is invalid.

Explanation:
The requested resource could not be displayed as a specified filter was invalid.

System action:
The requested display is presented to the user with no data records.

User response:
Review the filter values and correct as necessary. See Filtering Data Using Selection Criteria for more information. If the problem cannot be resolved, contact your system administrator.

Administrator response:
Use the editor to review the filters specified on the link used and correct if necessary.

Destination

**EYUVC1285E**  The specified Parameter filter is invalid or is required and missing.

Explanation:
The requested resource could not be displayed as a specified filter was invalid or is required and is missing a value.

System action:
The requested display is presented to the user with no data records.
User response:
Review the filter values and correct as necessary. See Filtering Data Using Selection Criteria for more information. If the problem cannot be resolved, contact your system administrator.

Administrator response:
Use the editor to review the filters specified on the link used and correct if necessary.

Destination

EYUVC1286W The CMAS to which the request is directed is not available.

Explanation:
The requested resource could not be displayed because the required CMAS could not be found or contacted.

System action:
The requested display is presented to the user with no data records.

User response:
Review the filter values and correct as necessary. See Filtering Data Using Selection Criteria for more information. If the filter values are correct, check the status of the CMAS network. If the problem cannot be resolved, contact your system administrator.

Administrator response:
Use the editor to review the filters specified on the link used and correct if necessary. If the filter values are correct, check the status of the CMAS network.

Destination

EYUVC1288W The requested resource is not supported by any available MASs in the specified scope.

Explanation:
The requested resource could not be displayed because either none of the MASs within the specified scope are available or none of them support the requested resource object.

System action:
The requested display is presented to the user with no data records.

User response:
Review the filter values and correct as necessary. See Filtering Data Using Selection Criteria for more information. If the filter values are correct, check the status of the MASs within the scope and that the requested resource is available on those releases.

Administrator response:
None.

Destination

EYUVC1289E Action action failed. Record updated by another user or application.

Explanation:
A filter confirmation screen is being displayed for you to review and confirm the current filter criteria.

System action:
The WUI displays the filter confirmation screen and waits for a response.

User response:
Review the filter values and amend as necessary. Click OK to continue.

Administrator response:
None.

Destination

EYUVC1290E
An attempt to update or remove a definition has failed because the definition was updated by another user or application while the record was being viewed.

**System action:**
The action fails.

**User response:**
If you wish to retry the action, first refresh the view to display the updated definition.

**Administrator response:**
None.

**Destination**

**EYUVC1291E**  
*Action action failed. Maintenance point not available.*

**Explanation:**
An attempt to create, update, or remove a definition has failed because the maintenance point CMAS for the CICSPlex is not available. Either the maintainance point CMAS itself, or the link to it, has failed.

**System action:**
The action fails.

**User response:**
Wait for the maintenance point CMAS for the CICSPlex to become available, then retry the action. If necessary, contact your system administrator.

**Administrator response:**
Ensure that the maintenance point CMAS is active and linked to the Web User Interface CMAS.

**Destination**

**EYUVC1292I**  
*Action (action) failed in 'cicsregion': explanation*

**Explanation:**
This message provides additional information following message EYUVC1231E. It is issued for each system that reported a failure.

*action* identifies the CICSPlex SM API action that was attempted and caused this error.

*explanation* identifies the BAS install error.

**System action:**
The session continues.

**User response:**
Examine the explanation provided and take appropriate action.

**Administrator response:**
Check the CICS joblog of system *cicsregion* to check for further messages.

**Destination**

**EYUVC1293E**  
*No response received from CMAS cmasename Reason: Reason Text (Reason Code).*

**Explanation:**
One or more MASes did not respond because of problems communicating with the remote CMAS.

**System action:**
The WUI screen is refreshed with data from MASes which did respond.

**User response:**
Retry the request. If the problem persists, contact your system administrator.

**Administrator response:**
Review any messages written to the console or to the EYULOGs of the CMASes.

**Destination**

**EYUVC1294W**  
*No response received from MAS masname Reason: Reason Text (Reason Code).*

**Explanation:**
A response was not received from one or more MASes in the requested scope, because of problems communicating with the MAS or executing the request in the MAS.

**System action:**
The WUI screen is refreshed with data from MASes which did respond.

**User response:**
Retry the request. If the problem persists, contact your system administrator.

**Administrator response:**
Review any messages written to the console or to the EYULOGs of the CMASes.

**Destination**

**EYUVC1300I**  
*Processing request. Please wait.*

**Explanation:**
The requested action has not completed within a period of time. Normally, this will be due to other activity in the systems being managed.

**System action:**
Processing continues. The results will be displayed when the request is completed.

**User response:**
If your request does not complete within several minutes then contact your system administrator.
Administrator response:
Review any messages that may have been written to the console and EYULOG. If there are errors from the external security manager then ensure that the user has been given the correct authority to sign on to the Web User Interface.

Destination

**EYUVC1310I** Add to favorites operation canceled.

Explanation:
You have clicked Cancel on an Add to favorites screen. No updates have been saved.

System action:
The previous WUI screen is redisplayed.

User response:
None.

Administrator response:
None.

Destination

**EYUVC1311I** Add to favorites operation for **favoritename** complete.

Explanation:
You have successfully added a screen to your favorites menu.

System action:
The screen you have selected as a favorite is redisplayed. A hyperlink to this screen now appears in your favorites menu.

User response:
None.

Administrator response:
None.

Destination

**EYUVC1312W** User (userid) is being updated by another user. You may not alter your favorites.

Explanation:
An attempt to acquire your favorites has failed because another user is updating them. You are unable to alter your favorites until the lock is released.

System action:
Processing continues.

User response:
None.

Administrator response:
None.

Destination

**EYUVC1313E** Repository not available or not authorized for User.

Explanation:
An attempt to add to your favorites has failed because the repository is not available or you do not have the necessary authorization to access it.

System action:
The favorites operation fails. Other processing continues.

User response:
Contact your system administrator.

Administrator response:
Check the EYULOG for security exceptions, and if necessary revise the user’s authorization levels.

Destination

**EYUVC1314I** You currently do not have any favorites.

Explanation:
You have successfully signed on but you do not have any user favorites.

System action:
Processing continues. No Favorites group is displayed on the navigation menu.

User response:
Click on an add to favorites icon.

Administrator response:
None.

Destination

**EYUVC1315I** Attribute, **attribute**, has been successfully updated.

Explanation:
You have successfully chosen an attribute from the picklist.

System action:
The session continues.

User response:
None.

Administrator response:
None.
Destination

**EYUVC1316I** Parameter, parameter, has been successfully updated.

Explanation:
You have successfully chosen a parameter from the picklist.

System action:
The session continues.

User response:
None.

Administrator response:
None.

Destination

**EYUVC1317I** Attribute, attribute, has not been updated.

Explanation:
You have cancelled the attribute selection.

System action:
The session continues.

User response:
None.

Administrator response:
None.

Destination

**EYUVC1318I** Parameter, parameter, has not been updated.

Explanation:
You have cancelled the parameter selection.

System action:
The session continues.

User response:
None.

Administrator response:
None.

Destination

**EYUVC1319E** A value must be selected before clicking the OK button.

Explanation:
You must select a value from the picklist before clicking the OK button.

System action:
The session continues.

User response:
Select a value and click OK or click Cancel to return to the previous screen.

Administrator response:
None.

Destination

**EYUVC1321E** A menu item title is required. It cannot be blank.

Explanation:
You attempted to create a favorite with a blank title. Menu items that are part of your favorites must have a valid title.

System action:
Processing continues.

User response:
Enter a valid title for the menu item.

Administrator response:
None.

Destination

**EYUVC1380I** count records expanded at time.

Explanation:
This message indicates how many records the CICSPlex SM API expanded and returned to the Web User Interface Server and the (local) Web User Interface Server time that they were expanded. The number of records may not be the number of records available on the current view, for example on a detail view the number of records collected may be greater than the number of records available for display.

System action:
The session continues.

User response:
None.

Administrator response:
None.

Destination

**EYUVC1400E** Help page could not be generated for item itemname.

Explanation:
The requested help page could not be built by the server. If you entered the address manually, please ensure that the address was entered correctly. Contact your system administrator if the problem is not resolved.
System action:
The help page is not displayed and processing continues.

User response:
If you entered the address manually, ensure that the address was entered correctly.

Administrator response:
None.

Form item, 'formitemname', cannot be edited as it references an Attribute that is not available in this release of CICSPlex SM.

Form item, 'formitemname', cannot be edited as it references a Parameter that is not available in this release of CICSPlex SM.

Form item title and annotation have been edited.

Form item display options have been edited.

No display option specified. Please select a display option.

Automatic generation of selection list not possible as selected attribute type does not have defined values. Please edit selection list values manually.

Form item, 'formitemname', deleted.

Form items, 'formitemname' and 'formitemname', deleted.

Attribute for form item specified.

Parameter for form item specified.

No Attribute specified. Please select an Attribute to be represented by this form item.

No Parameter specified. Please select a Parameter to be represented by this form item.

Form item default Parameter value has been edited.

Presentation threshold components have been edited.

No color selected. Please select a color for the presentation threshold.

Presentation threshold color specified.

No attribute grid will be displayed for this view.

Attribute grid must be given a caption. Please enter a caption.

Attribute grid contents edited.

No cell selected. Please select a cell.

You must select a column or row header to perform a 'Delete' or 'Insert'.

You cannot insert a column or a row before the column or row headers.

You cannot delete a column or row header.

You cannot delete any more rows from this attribute grid.

You cannot delete any more columns from this attribute grid.

Attribute grid deleted for view viewname.

Attribute not selected. Please select an attribute from the list.

Attribute grid cell contents defined.

Attribute grid row deleted.

Attribute grid column deleted.

Attribute grid cell contents changed.

Attribute grid cell contents edited.

Attribute grid cell title edited.

User group (usergroupname) has been created.

No user group name specified. Enter a new user group name.

New user group contains invalid characters. Enter a new user group name.

User group (usergroupname) already exists. Enter a new user group name.

You are not authorized to create user groups.

User group attribute, attributename, contains an invalid
value. Enter a valid value for attributename.

EYUVE0956I User group (usergroupname) updates saved successfully.

EYUVE0957E No user group selected. Select a user group name.

EYUVE0958E Unable to edit user group (usergroupname) because it is being updated by another user (userid). Select another user group name for edit.

EYUVE0959E Unable to edit user group (usergroupname) as the repository record contains an invalid version. Select another group name for edit.

EYUVE0960E You are not authorized to update user groups.

EYUVE0961I User group (usergroupname) has been opened for edit.

EYUVE0962I User group (usergroupname) has been deleted.

EYUVE0963E User group (usergroupname) not found. Select another group name for deletion.

EYUVE0964E Unable to delete user group (usergroupname) because it is being updated by another user (userid). Select another user group name to delete.

EYUVE0965E You are not authorized to delete user groups.

EYUVE0969I User (username) updates saved successfully.

EYUVE0970E No user name specified. Enter a new user name.

EYUVE0971E New user contains invalid characters. Enter a valid user name.

EYUVE0972E User (username) already exists. Enter a new user name.

EYUVE0973E You are not authorized to create users.

EYUVE0974E No user selected. Select a user name.

EYUVE0975E Unable to edit user (username) because it is already being updated by another user (userid). Select another user name for edit.

EYUVE0976E Unable to edit user (username) because the repository record contains an invalid version. Select another user name for edit.

EYUVE0977E You are not authorized to update users.

EYUVE0978I User (username) has been opened for edit.

EYUVE0979I User (username) has been deleted.

EYUVE0980E User (username) not found. Select a user name for deletion.

EYUVE0981E Unable to delete user (username) because it is being updated by another user (userid). Select a user name to delete.

EYUVE0982E You are not authorized to delete users.

EYUVE0983I User (username) updates saved successfully.

EYUVE0984E User (username) is being updated by another user. You may not alter your favorites.

EYUVE0985E Unable to edit user (username) because the repository record contains an invalid version number.

EYUVE1001E An unrecoverable editor error has occurred (Screen number screennumber).

EYUVE1002E Invalid editor request (Screen number screennumber).

EYUVE1003E Repository not available or not authorized for User.

EYUVE1010I The map (mapname) has been created.

EYUVE1011E No map name specified. Enter a new map name.

EYUVE1012E New map contains invalid characters. Enter a new map name.

EYUVE1013E Map (mapname) already exists. Enter a new map name.

EYUVE1014E Map names starting with 'EYU' are reserved and cannot be created.

EYUVE1015E You are not authorized to create a map with this name (mapname).

### EYUVHnmmm messages

EYUVHnmmm messages are issued by the Web User Interface in response to HTTP response codes.

**EYUVH0400E** Bad HTTP request.

**Explanation:**
The request was incorrectly formatted by the browser.

**System action:**
The request is ignored.

**User response:**
If you are using a different browser from the one normally used to access the server, try the usual one. Contact your system administrator if problem is not resolved.

**Administrator response:**
Collect the AUXTRACE and contact IBM.

**Destination**

**EYUVH0403E** Request forbidden.

**Explanation:**
The user must be signed on to access this resource.

**System action:**
The request is ignored.

**User response:**
Sign on to the Web User Interface server and try again. Contact your system administrator if the problem is not resolved.

**Administrator response:**
Collect the AUXTRACE and contact IBM.

**EYUVH0404E** Request not found.

**Explanation:**
The requested resource was not recognized by the server.

**System action:**
The request is ignored.

**User response:**
If you entered the address manually, ensure that the address was entered correctly. Contact your system administrator if the problem is not resolved.

**Administrator response:**
Check that the URL entered by the user is valid. If the request is for a customized help page then use the View Editor to ensure that the associated view or menu definition specifies the correct member name, and that the member is contained in the DFHHTML.
dataset. Collect the AUXTRACE and contact IBM if you cannot resolve the problem.

**Destination**

**EYUVH0500E** Internal server error.

**Explanation:**
The server experienced an unexpected internal error.

**System action:**
The response is cancelled but the action requested may have completed.

**User response:**
Contact your system administrator.

**Administrator response:**
Collect the AUXTRACE and any dumps and contact IBM.

**Destination**

**EYUVH0501E** HTTP request method not supported.

**Explanation:**
The browser sent a request using an invalid or unsupported HTTP request method.

**System action:**
The request is ignored.

**User response:**
If you are using a different browser from the one normally used to access the server, try the usual one. Contact your system administrator if the problem is not resolved.

**Administrator response:**
Collect the AUXTRACE and any dumps and contact IBM.

**Destination**

**EYUVH0503E** Service temporarily unavailable.

**Explanation:**
The server is not currently available for connections.

**System action:**
The request is ignored.

**User response:**
Try again later. Contact your system administrator if the problem is not resolved.

**Administrator response:**
Review the status of the CICSPlex SM Web User Interface server and restart if necessary.

**EYUVSnnnn messages**

EYUVSnnnn messages are issued by the Web User Interface server to reflect the status of the interface server, written to the EYULOG, administrator terminal and console.

**EYUVS0001I** CICSPlex SM Web User Interface initialization started.

**Explanation:**
The Web User Interface server initialization sequence has begun.

**System action:**
Initialization sequence continues.

**Administrator response:**
None.

**Destination**

Console

**EYUVS0002I** CICSPlex SM Web User Interface initialization complete.

**Explanation:**
The Web User Interface server initialization sequence has completed successfully.

**System action:**

Ready for browser requests.

**Administrator response:**
None.

**Destination**

Console

**EYUVS0003I** CICSPlex SM Web User Interface termination started.

**Explanation:**
The Web User Interface server termination sequence has begun.

**System action:**
Termination sequence continues. Further browser requests will be rejected.

**Administrator response:**
None.
Destination
Console

**EYUVS0004I**  
CICSPlex SM Web User Interface termination complete.

**Explanation:**
The Web User Interface server termination sequence has completed successfully.

**System action:**
The server terminates.

**Administrator response:**
None.

Destination
Console

**EYUVS00005S**  
CICSPlex SM Web User Interface initialization failed. (reason text)

**Explanation:**
The Web User Interface server initialization sequence has failed. Diagnostic messages will have been written to the EYULOG.

**System action:**
The server terminates.

**Administrator response:**
Review EYULOG for server address space.

Destination
Console

**EYUVS00006E**  
CICS shutdown request failed. RESP(resp ) RESP2(resp2 )

**Explanation:**
The request to shutdown the Web User Interface CICS region, as part of the Web User Interface server termination sequence, has failed. The message contains the "RESP" and "RESP2" values returned by the "EXEC CICS PERFORM SHUTDOWN" command.

**System action:**
The Web User Interface server terminates but the CICS region remains active.

**Administrator response:**
Review the "RESP" and "RESP2" values contained in the message to determine the cause of the problem. Shutdown the CICS region manually.

Destination
Console

**EYUVS0007E**  
The server repository version (version ) is not correct.

**Explanation:**
The WUI server repository was initialized by a WUI server executing a version of CICSPlex SM other than the current release. The message contains the "VERSION" of the WUI server that initialized the WUI server repository.

**System action:**
The currently executing server initialization program terminates.

**Administrator response:**
Restart the server address space with a new WUI server repository dataset, or an existing repository which has been initialized by a server executing the current CICSPlex SM release.

Destination
Console

**EYUVS00008I**  
The server repository has been initialized for shared access.

**Explanation:**
The WUI server repository is enabled for RLS and access sharing has been initialized.

**System action:**
Server execution continues.

**Administrator response:**
None.

Destination
Console

**EYUVS0009I**  
CICSPlex SM Web User Interface using DEFAULTWARNCNT(0).

**Explanation:**
The Web User Interface is using a setting of zero for DEFAULTWARNCNT either because the default value is being used or it has been explicitly coded as zero. This means Web User Interface requests, and CMCI requests from CICS Explorer, will not be failed if a request is likely to result in the retrieval of an unacceptably large amount of data.

**System action:**
Processing continues.

**Administrator response:**
Consider if a non zero DEFAULTWARNCNT should be used to limit the amount of data returned.

Destination
Console

**EYUVS0010I**  
Server connected to CMAS, SYSID(sysid ).
Explanation:
The connection to the CMAS is available. Users may now sign on to the Web User Interface server.

System action:
Processing continues.

Administrator response:
None.

Destination

EYUVS0011W  Server connection to CMAS unavailable.

Explanation:
The connection to the CMAS is unavailable. User sessions will be signed off and Web User Interface server will remain unavailable until CMAS connection is established.

System action:
User sessions are be terminated and processing continues.

Administrator response:
Re-establish CMAS connectivity, if appropriate.

Destination

EYUVS0020I  Task initialization complete for User (username).

Explanation:
A User task has been successfully created for the named user as a result of a signon request.

System action:
Processing continues.

Administrator response:
None.

Destination

EYUVS0021I  Task termination complete for User (username). reasontext.

Explanation:
A User task has terminated and the associated session was closed.

System action:
Processing continues.

Administrator response:
None.

Destination

EYUVS0022E  Task for User (username) failed.

Explanation:
An internal error was encountered when attempting to create a User session.

System action:
User signon is cancelled.

Administrator response:
Review any preceding messages associated with the problem. If there are no associated messages, collect AUXTRACE, console log, and dump information, and contact IBM service.

Destination

EYUVS0023E  Task failed to connect to CICSPlex SM for User (username).
(conncode, connreason)

Explanation:
A new user session failed to connect to CICSPlex SM for the named user.

System action:
User signon is cancelled.

Administrator response:
Review the CMAS status and access authorities for the user ID. Note that the message includes the Response and Reason values from the EXEC CPSM CONNECT command.

Destination

EYUVS0024W  User (user) is not connected to requested group (group1). Default group (group2) used.

Explanation:
During sign on, the Web User Interface user (user) specified a group (group1) on the sign on screen. The specified group (group1) was not used as the user id is not connected to group1.

System action:
The sign on will continue, but the Web User Interface will attempt to use the users default group (group2) as the name of the Web User Interface user group profile.

Administrator response
Contact the security administrator to check that the group1 group specified is appropriate and that the user id is connected to that group.

The sign on group option is only available to Web User Interface users if the Web User Interface system parameter SIGNONPANEL is set to ENHANCED. If the group option is not required, set SIGNONPANEL to BASIC.
**Destination**

**EYUVS0030E**  Signon rejected. Maximum user limit (maxusers) reached.

**Explanation:**
A user attempted to sign on to the Web User Interface server but the maximum number of concurrent sessions, as defined by the MAXUSERS parameter, had already been reached.

**System action:**
Processing continues.

**Administrator response:**
If this message occurs frequently, consider increasing the MAXUSERS parameter, reducing the INACTIVETIMEOUT parameter, or introducing additional Web User Interface servers. If the problem must be resolved immediately, use the administration transaction (COVC) to purge a redundant user session.

**Destination**

**EYUVS0031E**  Signon failed. Unable to start task for User (username). (CICS information: RESP(response1) RESP2(response2))

**Explanation:**
A new user session failed to start for the named user, because the user task transaction (COVA) could not be started.

**System action:**
User signon is cancelled.

**Administrator response:**
Review the health of your Web User Interface server and access authorities for the named user ID, and the user ID associated with the COVG transaction. Note that the message includes the RESP and RESP2 values from the EXEC CICS START command.

**Destination**

**EYUVS0101I**  Parameter service initialization complete.

**Explanation:**
Server parameters were read successfully during the initialization sequence and have been made available to other server components.

**System action:**
Initialization sequence continues.

**Administrator response:**
None.

**Destination**

**EYUVS0102I**  Parameter service terminated.

**Explanation:**
Server parameters have been discarded during the termination sequence.

**System action:**
Termination sequence continues.

**Administrator response:**
None.

**Destination**

**EYUVS0103E**  Parameter service failed.

**Explanation:**
The server was unable to read server parameters during the initialization sequence.

**System action:**
The initialization sequence is abended, and the server terminates.

**Administrator response:**
Review previous messages to determine the cause of failure.

**Destination**

**EYUVS0104E**  Parameter (parmname) invalid.

**Explanation:**
The value supplied for the named server parameter in the parameter data set was either badly formatted or out of range.

**System action:**
Initialization fails.

**Administrator response:**
Review the value of the named parameter before attempting to restart the server.

**Destination**

**EYUVS0105E**  Invalid record in parameter data set.

**Explanation:**
The Web User Interface server found a badly formatted line in the server parameters.

**System action:**
Initialization fails.

**Administrator response:**
Review the contents of the server parameter data set before attempting to restart the server.
Destination

**EYUVS0106W** Over-length record in parameter data set ignored.

**Explanation:**
A record in the server parameter data set was too long to process and has been ignored.

**System action:**
Initialization continues.

**Administrator response:**
Review the contents of the server parameter data set before attempting to restart the server.

Destination

**EYUVS0107I** Reading startup parameters.

**Explanation:**
The Web User Interface is reading the server parameters.

**System action:**
Processing continues.

**Administrator response:**
None.

Destination

**EYUVS0108I** Startup parameters read.

**Explanation:**
The Web User Interface has read the server parameters.

**System action:**
Processing continues.

**Administrator response:**
None.

Destination

**EYUVS0109I** \( \text{parmname}(\text{parmvalue}) \)

**Explanation:**
The named server parameter has been read and found to contain the given value.

**System action:**
Processing continues.

**Administrator response:**
None.

Destination

**EYUVS0110E** Required parameter \( \text{ parmname } \) not specified.

**Explanation:**
The Web User Interface server has read all the parameters supplied but failed to find a value for a required parameter.

**System action:**
Initialization fails.

**Administrator response:**
Supply the named parameter before attempting to restart the server.

Destination

**EYUVS0111E** Trace flag specification invalid.

**Explanation:**
The WUITRACE parameter was specified, but was formatted incorrectly.

**System action:**
Initialization fails.

**Administrator response:**
Review value of WUITRACE parameter before attempting to restart the server.

Destination

**EYUVS0112E** Unable to open parameter TDQ \( \text{TDQname} \).

**Explanation:**
The Web User Interface was unable to open the data set containing the server parameters.

**System action:**
Initialization fails.

**Administrator response:**
Check the status of the data set named in the EYUWUI DD card of the server JCL, and ensure it is of the correct record format and is readable.

Destination

**EYUVS0113E** No AUTOIMPORTMEM specified. \( \text{EYUx*} \) is assumed.

**Explanation:**
You have specified a data set name for the AUTOIMPORTDSN WUI server initialization parameter but you have not specified a data set member name for the AUTOIMPORTMEM parameter. The data set member name defaults to \( \text{EYUx*} \), where \( x \) identifies the language in which the definitions are written and the asterisk is a wildcard character. This means that
all of the definitions in the specified language starting with the characters EYU are imported.

**System action:**
Auto-import continues with the default data set member name.

**Administrator response:**
Ensure that the correct data set members have been imported.

**Destination**

**EYUVS0114E** The AUTOIMPORTDSN parameter is missing. This is required when you specify AUTOIMPORTMEM.

**Explanation:**
You have specified a data set member name for the AUTOIMPORTMEM WUI server initialization parameter but you have not specified a data set name for the AUTOIMPORTDSN parameter. You must specify a value for AUTOIMPORTDSN when you specify AUTOIMPORTMEM.

**System action:**
WUI server initialization continues without auto-import being performed.

**Administrator response:**
You can either shut down the WUI server restart initialization with the correct auto-import parameters, or use the COVC transaction to import data repository definitions for the existing WUI server.

**Destination**

**EYUVS0115I** WUI Server is running with Auxtrace off.

**Explanation:**
The user has set auxiliary trace off in the SIT.

**System action:**
Processing continues.

**Administrator response:**
Consider running with AUXTR=ON, SYSTR=OFF and USERTR=ON. This collects minimal tracing for WUI server maintenance.

**Destination**

**EYUVS0120E** Unable to load resource table (restable).

**Explanation:**
The server was unable to load the named module from the SEYULOAD data set.

**System action:**
Initialization fails.

**Administrator response:**
Contact IBM.

**Destination**

**EYUVS0121W** National language specification invalid. Using "ENU".

**Explanation:**
The EYUVKUCE INITPARM was either missing or did not contain a valid national language specification. This message is issued each time the server attempts to use the INITPARM value.

**System action:**
"ENU" is used as the default national language and processing continues.

**Administrator response:**
Review the language specification supplied as EYUVKUCE INITPARM.

**Destination**

**EYUVS0122W** Default codepage specification invalid. Using "ENU1".

**Explanation:**
The EYUVWAN INITPARM was either missing or did not contain a valid codepage specification. This message is issued each time the server attempts to use the INITPARM value, that is, each time a browser request is received with an invalid or missing codepage specification.

**System action:**
"ENU1" is used as the default codepage specification and processing continues.

**Administrator response:**
Review the language specification supplied as EYUVWAN INITPARM.

**Destination**

**EYUVS0123W** The thousand separator and decimal separator are the same.

**Explanation:**
Either by default or by design the Web User Interface startup parameters DECIMALSEPARATOR and THOUSANDSEPARATOR have been set equal. This could cause ambiguity when viewing a numeric in the thousands that also contains decimal places, and DECIMALSEPARATOR server parameters have the
same value. The specified values will be honoured, but the numeric format of displayed numbers may be confusing.

**System action:**
Processing continues.

**Administrator response:**
Consider changing these parameter settings.

---

**Destination**
Console

**EYUVS0150E** Message messageNum could not be written to EYULOG.

**Explanation:**
The specified message could not be written to the EYULOG.

**System action:**
Processing continues.

**Administrator response:**
Review the status of the EYULOG destination. Collect AUXTRACE and contact IBM if the problem cannot be resolved.

---

**Destination**
Console

**EYUVS0200I** Starting CICS Web Interface.

**Explanation:**
The Web User Interface server is attempting to open the CICS Web Interface for incoming requests from the browser.

**System action:**
Initialization continues.

**Administrator response:**
None.

---

**Destination**

**EYUVS0201I** Start of CICS Web Interface transaction (transname) successful.

**Explanation:**
When running on systems prior to CICS Transaction Server V1.3, the server requested the initialization of the CICS Web Interface.

**System action:**
Initialization continues.

**Administrator response:**
None.

---

**Destination**

**EYUVS0202E** Start of CICS Web Interface transaction (transname) failed.

**Explanation:**
When running on systems prior to CICS Transaction Server V1.3, an attempt to start the CICS Web Interface failed.

**System action:**
Initialization fails.

**Administrator response:**
Ensure the CICS Web Interface has been configured correctly.

---

**Destination**

**EYUVS0203I** Discarding previously installed TCP/IP service (tcpipname).

**Explanation:**
When running on CICS Transaction Server V1.3 or later, the named TCP/IP service was already present and is being discarded.

**System action:**
Initialization continues.

**Administrator response:**
None.

---

**Destination**

**EYUVS0204I** TCP/IP service (tcpipname) installed successfully.

**Explanation:**
When running on CICS Transaction Server V1.3 or later, the named TCP/IP service has been installed for CICS Web Interface requests.

**System action:**
Initialization continues.

**Administrator response:**
None.

---

**Destination**

**EYUVS0205E** Failed to install TCP/IP service (tcpipname).

**Explanation:**
When running on CICS Transaction Server V1.3 or later, an attempt to create the named TCP/IP service failed.

**System action:**
Initialization fails.
Administrator response:
Ensure that the CICS Web Interface has been configured correctly, that the port number specified by the TCPIPPORT server parameter is not already in use, and that the related TCP/IP server parameters have valid values.

Destination

**EYUVS0206I** CICS Web Interface enabled on port number *portnum*.

Explanation:
When running on CICS Transaction Server V1.3 or later, a TCP/IP service has been successfully opened on the given port number.

System action:
Initialization continues.

Administrator response:
None.

Destination

**EYUVS0207E** Failed to enable CICS Web Interface on port number *portnum*.

Explanation:
When running on CICS Transaction Server V1.3 or later, a TCP/IP service has not been successfully opened for the given port number.

System action:
Initialization fails.

Administrator response:
Ensure that the CICS Web Interface has been configured correctly, that the port number specified by the TCPIPPORT server parameter is not already in use, and that the related TCP/IP server parameters have valid values.

Destination

**EYUVS0208E** SSL support not available in this release of CICS.

Explanation:
The TCPIPSSL server parameter requested secure socket layer support on a release of CICS on which it is not supported.

System action:
Initialization fails.

Administrator response:
Use unsecure sockets (by removing the TCPIPSSL server parameter) or upgrade the server CICS to an appropriate release.

Destination

**EYUVS0209I** URI map (*urimapname*) installed successfully.

Explanation:
The named URI map has been installed for CICS Management Client Interface requests.

System action:
Initialization continues.

Administrator response:
None.

Destination

**EYUVS0210E** Failed to install URI map (*urimapname*).

Explanation:
An attempt to create the named URI map failed.

System action:
Initialization fails.

Administrator response:
Ensure that the CICS Management Client Interface has been configured correctly and that the PATH specified by the CICS Management Client Interface is not already in use.

Destination

**EYUVS0211I** CICS Management Client Interface enabled on TCP/IP port number *portnum*.

Explanation:
A TCP/IP service has been successfully opened on the given port number for the CICS Management Client Interface.

System action:
Initialization continues.

Administrator response:
None.

Destination

**EYUVS0212E** Failed to enable CICS Management Client Interface on TCP/IP port number *portnum*.

Explanation:
A TCP/IP service has not been successfully opened for the given port number for the CICS Management Client Interface.

System action:
Initialization fails.

Administrator response:
Ensure that the CICS Management Client Interface has been configured correctly, that the port number specified by the CMCIPORT server parameter is not already in use, and that the related TCP/IP server parameters have valid values.

Destination

EYUVS0213I Discarding previously installed URI map (urimapname).

Explanation:
The named URI map was already present and is being discarded.

System action:
Initialization continues.

Administrator response:
None.

Destination

EYUVS0214E CICS Management Client Interface parameter1 parameter is missing. This is required when you specify parameter2.

Explanation:
The parameter1 parameter has not been specified. It is required when parameter2 is specified.

System action:
WUI server initialization continues but CICS Management Client Interface initialization fails.

Administrator response:
You can either restart the WUI server with the correct parameters specified or continue to use the WUI server without the CICS Management Client Interface.

Destination

EYUVS0215E Failed to install JVM server jvmservername.

Explanation:
An attempt to create the named JVM server failed.

System action:
WUI server initialization continues but CICS Management Client Interface initialization fails.

Administrator response:
Ensure the WUI server has been configured to allow the installation of JVM servers. Examine the system logs to determine why the JVM server could not be installed.

Destination

EYUVS0216I JVM server (jvmservername) installed successfully.

Explanation:
The CMCI JVM server has been successfully installed.

System action:
Initialization continues.

Administrator response:
None.

Destination

EYUVS0219I CICS interfacename Interface JVM server jvmservername enabled. Establishing server using port number portnumber.

Explanation:
A client interface has been enabled on the named JVM server.

System action:
Initialization continues.

Administrator response:
None.

Destination

EYUVS0220E Failed to discard previously installed JVM server (jvmservername).

Explanation:
An attempt has been made to disable and discard an existing JVM server. The JVM server could not be disabled or discarded. The system will wait for a period of between 30 and 60 seconds to determine if the JVM server has been successfully disabled. This message is issued if the JVM server does not become disabled during this wait period, or the discard of the JVM server fails.

System action:
WUI server initialization continues but CICS Management Client Interface initialization fails.

Administrator response:
Check the system log to determine why the JVM server could not be disabled or discarded, or restart the system as COLD or INITIAL.
Failed to enable CICS interfacename Interface on JVM server jvmservername.

Explanation:
The resources required to run the interface could not be installed.

System action:
WUI server initialization continues but the interface initialization fails.

Administrator response:
Check the system log to determine why the required interface resources could not be installed.

Destination

CICS interfacename Interface enabled on JVM server jvmservername.

Explanation:
The CICS interface has been sucessfully enabled.

System action:
Initialization continues.

Administrator response:
None.

Destination

Waiting for CICS Management Client Interface JVM server jvmservername to enable.

Explanation:
The CICSPlex SM WUI server has installed a JVM server for the CICS Management Client Interface and will now wait for it to become enabled. The system will wait for up to approximately five minutes. If the JVM server has not reached either the ENABLED or DISABLED state at the end of this time then message EYUVS0218E will be issued.

System action:
None.

Administrator response:
None.

Destination

Web User Interface server start requested from terminal facilityID.

Explanation:
Web User Interface server initialization has been requested using the COVC transaction, from the named terminal.

System action:
Initialization sequence is started.

Administrator response:
None.

Destination

Web User Interface server stop requested from terminal facilityID.

Explanation:
Web User Interface server termination has been requested using the COVC transaction, from the named terminal.

System action:
Termination sequence is started.

Administrator response:
None.

Destination

Web User Interface server is currently active.

Explanation:
Web User Interface server initialization has been requested using the COVC transaction but the server is already active.

System action:
The request is ignored.

Administrator response:
None.

Destination

Web User Interface server is currently inactive.

Explanation:
Web User Interface server termination has been requested using the COVC transaction but the server is already inactive.

System action:
The request is ignored.

Administrator response:
None.
**EYUVS0904E**  Web User Interface control transaction command invalid.

**Explanation:**
The specified operation was not understood by the Web User Interface control transaction (COVC).

**System action:**
The request is ignored.

**Administrator response:**
Retry the operation ensuring that the specification is correct.

**Destination**
Terminal End User

**EYUVS0905E**  Web User Interface control transaction failed.

**Explanation:**
The Web User Interface control transaction suffered an internal error.

**System action:**
The request is ignored.

**Administrator response:**
Collect any abend information, AUXTRACE and dumps, and contact IBM service.

**Destination**
Terminal End User

**EYUVS0906I**  Web User Interface control transaction operation complete.

**Explanation:**
The specified operation was carried out successfully.

**System action:**
Processing continues.

**Administrator response:**
None.

**Destination**
Terminal End User

**EYUVS0907E**  Invalid entry. Enter Y or N.

**Explanation:**
An invalid character has been entered as a flag on the Web User Interface control transaction trace settings panel.

**System action:**
The request is ignored.

**Administrator response:**
Correct the field that is in error.

**Destination**
Terminal End User

**EYUVS0908E**  Web User Interface control transaction requires 3270 terminal for specified display.

**Explanation:**
The requested operation requires a full screen map which is not supported by the current device.

**System action:**
The request is ignored.

**Administrator response:**
Retry the operation from a suitable terminal.

**Destination**
Terminal End User

**EYUVS0909I**  Purge of User (username1 ) requested by User (username2 ).

**Explanation:**
The named user has purged the Web User Interface session for the named user.

**System action:**
The purged user session will be terminated as soon as possible.

**Administrator response:**
None.

**Destination**

**EYUVS0910E**  Purge request failed. User (username ) not found.

**Explanation:**
An attempt to terminate the active Web User Interface session for the named user failed as the user was not signed on.

**System action:**
The request is ignored.

**Administrator response:**
None.

**Destination**

**EYUVS0911E**  Purge request of user (username ) failed.

**Explanation:**
An attempt to terminate the active Web User Interface session for the named user failed due to an internal error.

**System action:**
The request is abended.

**Administrator response:**
Collect any abend information, AUXTRACE and dumps, and contact IBM service.

**Destination**

**EYUVS0912I** Purge request successful.

**Explanation:**
The request to terminate active Web User Interface sessions has been accepted.

**System action:**
The purged user sessions will be terminated as soon as possible.

**Administrator response:**
None.

**Destination**

Terminal End User

**EYUVS0913E** Purge request failed.

**Explanation:**
The request to terminate an active Web User Interface session failed.

**System action:**
The request may not have been completed.

**Administrator response:**
See associated messages in EYULOG.

**Destination**

Terminal End User

**EYUVS0914E** Purge already requested.

**Explanation:**
A request to terminate an active user session has been ignored as the session is already terminating.

**System action:**
The request is ignored.

**Administrator response:**
None.

**Destination**

Terminal End User

**EYUVS0915E** Purge already requested for user *(username)*.

**Explanation:**
A request to terminate an active user session has been ignored as the session is already terminating.

**System action:**
The request is ignored.

**Administrator response:**
None.

**Destination**

Terminal End User

**EYUVS0916E** Import completed successfully. *nn* objects read.

**Explanation:**
The request to import menu or view set definitions has been successful.

**System action:**
Processing continues.

**Administrator response:**
None.

**Destination**

Terminal End User

**EYUVS0917E** Import failed.

**Explanation:**
The request to import menu or view set definitions has failed.

**System action:**
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set are ignored.

**Administrator response:**
See associated messages in EYULOG.

**Destination**

Terminal End User

**EYUVS0918E** Invalid TDQ name.

**Explanation:**
The request to import or export menu or view set definitions specified an invalid TDQ name.

**System action:**
The request is not performed.

**Administrator response:**
Review status of TDQ and correct as necessary.

**Destination**

Terminal End User

**EYUVS0919I** Export completed successfully. *nn* objects written.
**Explanation:**
The request to export menu or view set definitions has been successful.

**System action:**
Processing continues.

**Administrator response:**
None.

**Destination**
Terminal End User

**EYUVS0920E**  Export failed.

**Explanation:**
The request to export menu or view set definitions has failed.

**System action:**
The output in the export data set is truncated at the point where the error is encountered.

**Administrator response:**
See associated messages in EYULOG.

**Destination**
Terminal End User

**EYUVS0921E**  Invalid name pattern.

**Explanation:**
The menu or view set name pattern specified for export was invalid.

**System action:**
The request is ignored.

**Administrator response:**
Correct the pattern name before retrying the operation.

**Destination**
Terminal End User

**EYUVS0922E**  Invalid Object type.

**Explanation:**
The object type specified for export was invalid.

**System action:**
The request is ignored.

**Administrator response:**
Correct input before retrying the operation.

**Destination**
Terminal End User

**EYUVS0923W**  Invalid Object type. "objectname" is assumed.

**Explanation:**
An invalid object type was specified on the import or export panel.

**System action:**
The field is set as indicated.

**Administrator response:**
None.

**Destination**
Terminal End User

**EYUVS0924W**  Invalid duplicate names field. "action" is assumed.

**Explanation:**
An invalid duplicate names action was specified on the import panel.

**System action:**
The field is set as indicated.

**Administrator response:**
None.

**Destination**
Terminal End User

**EYUVS0925W**  Invalid lock option. option is assumed.

**Explanation:**
An invalid lock value is specified in the lock field of the export panel.

**System action:**
The field is set as indicated in the message text.

**Administrator response:**
None.

**Destination**
Terminal End User

**EYUVS0926I**  Import operation partially complete. count objects processed.

**Explanation:**
Some resources could not be imported successfully by the request to import menu or view set definitions.

**System action:**
Processing continues.

**Administrator response:**
See the associated messages in EYULOG.
Destination
Terminal End User

**EYUVS0927W** Import completed. No matching records found.

**Explanation:**
No resources were imported by the request to import menu or view set definitions.

**System action:**
Processing continues.

**Administrator response:**
Check the import request was correctly specified.

Destination
Terminal End User

**EYUVS0928W** Export completed. No matching records found.

**Explanation:**
No resources were exported by the request to export menu or view set definitions.

**System action:**
Processing continues.

**Administrator response:**
Check the export request was correctly specified.

Destination
Terminal End User

**EYUVS0929E** Invalid data set name.

**Explanation:**
The data set name specified is invalid. The name specified may contain invalid characters.

**System action:**
The COVC Import panel is redisplayed with the values you have specified.

**Administrator response:**
Check the data set name has been specified correctly.

Destination
Terminal End User

**EYUVS0930E** Invalid member name.

**Explanation:**
The member name specified is invalid. The name specified may contain invalid characters.

**System action:**
The COVC Import panel is redisplayed with the values you have specified.

**Administrator response:**
Check the member name has been specified correctly.

Destination
Terminal End User

**EYUVS0931E** Import failed. No matching data set found.

**Explanation:**
No data sets matching the data set specified were found.

**System action:**
The COVC Import panel is redisplayed with the values you have specified.

**Administrator response:**
Check the data set name has been specified correctly.

Destination
Terminal End User

**EYUVS0932E** Import terminated. Another user is performing an import.

**Explanation:**
Another user is currently performing an import. Only one user may perform an import at a time.

**System action:**
The COVC Import panel is redisplayed with the values you have specified.

**Administrator response:**
Retry the import at a later time.

Destination
Terminal End User

**EYUVS0950I** Web User Interface server PLT start.

**Explanation:**
The Web User Interface PLT start process has been triggered.

**System action:**
Web User Interface initialization is started.

**Administrator response:**
None.

Destination
Console

**EYUVS0951I** Web User Interface server PLT shutdown.

**Explanation:**

The Web User Interface PLT shutdown process has been triggered.

**System action:**
Web User Interface termination is started.

**Administrator response:**
None.

**Destination**
Console

**EYUVS0952I** Web User Interface server inactive at PLT shutdown.

**Explanation:**
The Web User Interface PLT shutdown process was triggered but the server was not running.

**System action:**
None.

**Administrator response:**
None.

**Destination**
Console

**EYUVS0953E** Web User Interface server PLT start failed.

**Explanation:**
The Web User Interface PLT start process was unable to start the COVG transaction.

**System action:**
The Web User Interface is not started.

**Administrator response:**
Verify Web User Interface installation, including the presence of the CSD resource groups in the group list. Collect AUXTRACE, console log, and any dump information, and contact IBM service if the problem cannot be resolved.

**Destination**
Console

**EYUVS0960E** {create|open} {file |mapset|program|transaction |tdqueue |enqmodel} resourcename failed:

**RESP=** respc ode, **RESP2=** resp2code

**Explanation:**
A WUI server initialization program issued an EXEC CICS CREATE or EXEC CICS SET FILE() OPEN command for the resource resourcename for CICSPlex SM. The CREATE or SET command returned an abnormal response, with the values shown in respc ode and resp2code.

**System action:**
WUI initialization continues.

**Administrator response:**
Examine the CICS trace records to determine what caused the EXEC CICS error. Then restart WUI server initialization using the COVC transaction.

**Destination**
Console

**EYUVS0961E** {file |mapset|program|transaction |tdqueue} resourcename has invalid value: xxxxxxxx for option: yyyyyyyyy

**Explanation:**
The initialization program for a WUI server detected an invalid definition option for the CICSPlex SM resource resourcename.

**System action:**
CICSPlex SM will try to replace the definition with the default definition for the resource. If this is successful, it will issue message EYUVS0962W. If the replacement fails it will issue message EYUVS0963E and will terminate WUI server initialization.

**Administrator response:**
None.

**Destination**
Console

**EYUVS0962W** The definition for {file |mapset|program|transaction |tdqueue} resourcename has been replaced.

**Explanation:**
The initialization program for a WUI server has replaced an invalid definition for the CICSPlex SM resource resourcename. Previous message EYUVS0961E gives details of the invalid definition options.

**System action:**
WUI server initialization continues.

**Administrator response:**
None.

**Destination**
Console

**EYUVS0963E** {file |mapset|program|transaction |tdqueue}
`resourcename` definition is invalid.
WUI server is terminating.

**Explanation:**
The initialization program for a WUI server was unable to replace an invalid definition for the CICSPlex SM resource `resourcename`. Previous message EYUVS0961E gives details of the invalid definition options.

**System action:**
WUI server initialization is terminated. CICS initialization continues.

**Administrator response:**
Review the definition within the group list you use when starting the WUI server. Change the invalid options before reinstalling the definition and restarting the WUI server with the COVC transaction. The default options are shown in the sample EYU$WDEF.

---

**Destination**
Console

**EYUVS0988I** dumpType dump complete.

The dump request for the previously reported abend has completed.

**System action:**
Processing continues.

**Administrator response:**
Collect AUXTRACE, console log, and previous dump information, and contact IBM service.

---

**Destination**
Console

**EYUVS0989I** Dump suppressed.

**Explanation:**
The abend appears to be a duplicate of a previous abend for which a system dump has already been taken.

**System action:**
A dump is not taken.

**Administrator response:**
Collect AUXTRACE, console log, and previous dump information, and contact IBM service.

---

**Destination**
Console

**EYUVS0990I** information

**Explanation:**
This message contains auxiliary information.

---

**System action:**
None.

**Administrator response:**
None.

**Destination**
Console

**EYUVS0991S** Abend recovery failed.

**Explanation:**
The Web User Interface task was unable to recover from a previous abend.

**System action:**
The Web User Interface task terminates.

**Administrator response:**
Collect AUXTRACE, console log, and dump information, and contact IBM service.

---

**Destination**
Console

**EYUVS0993S** Abend while scanning stack. Stack is probably corrupted.

**Explanation:**
An error was detected when attempting to collect diagnostic information for a previous abend.

**System action:**
The Web User Interface task terminates.

**Administrator response:**
Collect AUXTRACE, console log, and dump information, and contact IBM service.

---

**Destination**
Console

**EYUVS0994I** dumpTitle

**Explanation:**
This message contains the title of a system dump that is about to be taken.

**System action:**
A dump is taken.

**Administrator response:**
Collect AUXTRACE, console log, and dump information, and contact IBM service.

---

**Destination**
Console

**EYUVS0995E** dumpType dump request failed. EIBFN=CICS_EIBFN,
RESP=CICS_RESP,  
RESP2=CICS_RESP2.

**Explanation:**
An attempt to take a dumpType dump to record a previous abend has failed.

**System action:**
A dump is not taken and abend processing continues.

**Administrator response:**
Check the CICS_RESP and CICS_RESP2 values (both in decimal) for the CICS command identified by CICS_EIBFN to determine the reason for the failure. If the cause cannot be explained collect AUXTRACE, console log, and dump information, and contact IBM service.

**Destination**

Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. Collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

**Destination**

**EYUVS1006E** Import detected missing punctuation in record number nn of TDQ (tdqname).

**Explanation:**
The import process encountered a badly formatted record in the input data set. The exported definitions have probably been corrupted.

**System action:**
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set are ignored.

**Administrator response:**
Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. Collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

**Destination**
**EYUVS1007E**  Import found an unknown object type at record number \( nn \) of TDQ (\( tdqname \)).

**Explanation:**
The import process encountered an unknown record identifier in the input data set. The exported definitions have probably been corrupted.

**System action:**
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set are ignored.

**Administrator response:**
Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. Collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

**Destination**

**EYUVS1008E**  Import failed at record number \( nn \) in TDQ (\( tdqname \)).

**Explanation:**
The import process has failed due to previously recorded errors.

**System action:**
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set are ignored.

**Administrator response:**
Collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

**Destination**

**EYUVS1009E**  Import failed at record number \( nn \) when the end of TDQ (\( tdqname \)) was unexpectedly encountered.

**Explanation:**
The import process encountered the end of the input data set before the current menu or view set definition had been completed. The input data set has probably been truncated.

**System action:**
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set are ignored.

**Administrator response:**
Ensure that the release and service level of the server is not lower than the release and service level of the

**Destination**

**EYUVS1010E**  Import failed to open TDQ (\( tdqname \)).

**Explanation:**
The request to import menu or view set definitions specified an invalid TDQ name, or the specified TDQ could not be opened.

**System action:**
The request is not performed.

**Administrator response:**
Review the status of the TDQ and correct as necessary.

**Destination**

**EYUVS1011E**  Export failed to open TDQ (\( tdqname \)).

**Explanation:**
The request to export menu or view set definitions specified an invalid TDQ name, or the specified TDQ could not be opened.

**System action:**
The request is not performed.

**Administrator response:**
Review the status of the TDQ and correct as necessary.

**Destination**

**EYUVS1012E**  Import encountered unknown record version in record number of TDQ (\( tdqname \)).

**Explanation:**
The import process has encountered a record in the import data set that has a higher version number than is supported by the server. The import data was written by a server using a higher version of the record.

**System action:**
Menu or view set definitions imported successfully before the definition in error are retained. The menu or view set definition that contains the error is not imported. Further menu or view set definitions in the data set are ignored.

**Administrator response:**
Ensure that the release and service level of the server is not lower than the release and service level of the
server from which the import data set was exported. If the problem cannot be resolved, save the content of the AUXTRACE, EYULOG, and the input data sets, and contact IBM service.

**Destination**

**EYUVS1013E** Resource (resourcetype, resourcename) is being updated by another user (userid). Import terminated.

**Explanation:**
The import of the menu or view set definition, resourcetype, resourcename, has failed because it is being updated by user userid.

**System action:**
The import of the named resource fails but the processing of other resources in the data set continues.

**Administrator response:**
Retry the import operation once the user has finished updating the resource.

**Destination**

**EYUVS1014E** Import 'importType' initiated by user (userid) from TDQ (tdqname). Resource not exported.

**Explanation:**
An import has failed because of a previous security exception. It is likely that the user lacks the necessary authorization to import one or more of the resources included in the operation.

**System action:**
The import operation terminates. Menu or view set definitions imported successfully before the resource in error are retained. The menu or view set definition in error is not imported. The remaining menu or view set definitions in the data set are ignored.

**Administrator response:**
Check the message user log for messages reporting the security exception.

**Destination**

**EYUVS1015W** User (userid) not authorized for resource resourcetype, resourcename. Resource not exported.

**Explanation:**
Web User Interface user userid has attempted to export the resource resourcetype, resourcename but does not have the required access to the resource.

**System action:**
The named resource is not exported but the rest of the input stream is processed. The user is not informed of the failure.

**Administrator response:**
Review the user's security authorizations.

**Destination**

**EYUVS1016I** Import 'importType' initiated by user (userid) from TDQ (tdqname). Resource not exported.

**Explanation:**
Import processing is beginning to import definitions of the specified importType from the named transient data queue.

**System action:**
Processing continues.

**Administrator response:**
None.

**Destination**

**EYUVS1017W** Repository record for resource resourcetype, resourcename contains an invalid version identifier. Resource not exported.

**Explanation:**
An attempt to export the resource resourcetype, resourcename has failed because the record cannot be read by the Web User Interface. This is because the resource contains a version identifier that does not match the current version of CICSPlex SM.

**System action:**
The named resource is not exported but the rest of the input stream is processed. The user is not informed of the failure.

**Administrator response:**
Ensure that the Web User Interface server repository has been correctly migrated to the current version of CICSPlex SM.

**Destination**

**EYUVS1018I** Import completed successfully. count objects read from TDQ (tdqname).

**Explanation:**
The request to import menu or view set definitions has been successful.

**System action:**
Processing continues.

**Administrator response:**
None

---

**Destination**

**EYUVS1019W** Partial import completed. `count` objects from TDQ (`tdqname`) rejected.

**Explanation:** Some resources could not be imported successfully by the request to import menu or view set definitions.

**System action:** Processing continues.

**Administrator response:** See the associated messages in EYULOG.

---

**Destination**

**EYUVS1020E** Import of resources failed. `count` objects from TDQ (`tdqname`) rejected.

**Explanation:** No resources could be imported successfully by the request to import menu or view set definitions.

**System action:** Processing continues.

**Administrator response:** See the associated messages in EYULOG.

---

**Destination**

**EYUVS1030E** TDQ (`tdqname`) is invalid for export.

**Explanation:** No resources could be exported because the export transient data queue (TDQ) is invalid. The TDQ may be in an invalid state or may have been defined incorrectly.

**System action:** Processing continues.

**Administrator response:** Ensure that the TDQ is open and enabled, and has been defined correctly.

---

**Destination**

**EYUVS1050E** Import encountered unexpected character in record number `nn` of data set (`dsname`), member (`membername`).

**Explanation:** The import process encountered a badly formatted record in the input data set member. The definitions have probably been corrupted.

**System action:** Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

**Administrator response:** Review the import data set member to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

---

**Destination**

**EYUVS1051E** Import string missing from record number `nn` of data set (`dsname`), member (`membername`).

**Explanation:** The import process encountered a badly formatted record in the input data set member. The definitions have probably been corrupted.

**System action:** Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

**Administrator response:** Review the import data set member to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

---

**Destination**

**EYUVS1052E** Import unable to obtain version number in record number `nn` of data set (`dsname`), member (`membername`).

**Explanation:** The import process encountered a badly formatted record in the input data set member. The definitions have probably been corrupted.

**System action:**
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

Administrator response:
Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

Destination

**EYUVS1053E** Import unable to obtain index number in record number **nn** of data set ( **dsname** ), member ( **membername** ).

Explanation:
The import process encountered a badly formatted record in the input data set member. The definitions have probably been corrupted.

System action:
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

Administrator response:
Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

Destination

**EYUVS1054E** Import found invalid data in record number **nn** of data set ( **dsname** ), member ( **membername** ).

Explanation:
The import process encountered a badly formatted record in the input data set member. The definitions have probably been corrupted.

System action:
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

Administrator response:
Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

Destination

**EYUVS1055E** Import found invalid string in record number **nn** of data set ( **dsname** ), member ( **membername** ).

Explanation:
The import process encountered a badly formatted record in the input data set member. The definitions have probably been corrupted.

System action:
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

Administrator response:
Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

Destination

**EYUVS1056E** Import detected missing punctuation in record number **nn** of data set ( **dsname** ), member ( **membername** ).

Explanation:
The import process encountered a badly formatted record in the input data set member. The definitions have probably been corrupted.

System action:
Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

Administrator response:
Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

Destination

**EYUVS1057E** Import found an unknown object at record number **nn** of...
Explanation: The import process encountered an unknown record identifier in the input data set member. The exported definitions have probably been corrupted.

System action: Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

Administrator response: Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

Destination

**EYUVS1058E** Import failed at record number **nn**

Explanation: The import process has failed due to previously recorded errors.

System action: Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

Administrator response: Collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

Destination

**EYUVS1059E** Import failed at record number **nn** when the end of data set **dsname**, member **membername** was unexpectedly encountered.

Explanation: The import process encountered the end of the input member (**membername**) before the current menu or view set definition had been completed. The input member has probably been truncated.

System action: Menu or view set definitions that were successfully completed before the definition in error are retained. The menu or view set definition that contained the error is not imported. Further menu or view set definitions in the data set member are ignored.

Administrator response: Review the import data set to see if it has been damaged. Use another copy or export it again from source, if available. If necessary, collect AUXTRACE, EYULOG, and input data set, and contact IBM service.

Destination

**EYUVS1060E** Import failed to open data set (**dsname**).

Explanation: The request to import menu or view set definitions specified an invalid data set name, or the specified data set could not be opened.

System action: The request is not performed.

Administrator response: Review the status of the data set and correct as necessary.

Destination

**EYUVS1061E** Import failed to find any members matching, (**memberpattern**).

Explanation: There are no members matching **memberpattern** in the data set specified in the import request.

System action: The request is not performed.

Administrator response: Review the member pattern and data set name, correct as necessary.

Destination

**EYUVS1062E** Import encountered unknown record version in record **nn** of data set (**dsname**), member (**membername**).

Explanation: The import process has encountered a record in the import member that has a higher version number than is supported by the server. The import data was written by a server using a higher version of the record.

System action: Menu or view set definitions imported successfully before the definition in error are retained. The menu or view set definition that contains the error is not
imported. Further menu or view set definitions in the
data set are ignored.

**Administrator response:**
Ensure that the release and service level of the server
is not lower than the release and service level of the
server from which the import data set was exported.
If the problem cannot be resolved, save the content of
the AUXTRACE, EYULOG, and the input data sets, and
contact IBM service.

**Destination**

**EYUVS1063I** Import 'importType' initiated
for user (userid) from
data set (dsname), member
(memberpattern).

**Explanation:**
Import processing is beginning to import definitions of
the specified importType from the named data set and
member pattern.

**System action:**
Processing continues.

**Administrator response:**
None.

**Destination**

**EYUVS1064I** Import completed successfully.
nn objects read from data
set (dsname), member
(memberpattern).

**Explanation:**
The request to import menu or view set definitions has
been successful.

**System action:**
Processing continues.

**Administrator response:**
None.

**Destination**

**EYUVS1065W** Partial import completed. nn
objects from data set (dsname),
member (memberpattern) rejected.

**Explanation:**
Some resources could not be imported successfully by
the request to import menu or view set definitions.

**System action:**
Processing continues.

**Administrator response:**
See the associated messages in EYULOG.

**Destination**

**EYUVS1066W** Import of resources failed. nn
objects from data set (dsname),
member (memberpattern) rejected.

**Explanation:**
No resources could be imported successfully by the
request to import menu or view set definitions.

**System action:**
Processing continues.

**Administrator response:**
See the associated messages in EYULOG.

**Destination**

**EYUVS1067E** Import of resources failed. Data
set (dsname) is invalid for import.

**Explanation:**
No resources could be imported because the import
data set is invalid. The data set may be in an invalid
state, or may have been defined incorrectly.

**System action:**
The request is not performed.

**Administrator response:**
Ensure that the data set is in a valid state, and has
been defined correctly.

**Destination**

**EYUVS1068E** Import of resources failed. The
CICS temporary storage data set is
full.

**Explanation:**
No resources could be imported because the CICS
DFHTEMP data set is full.

**System action:**
The request is not performed.

**Administrator response:**
Enlarge the DFHTEMP data set and try the import
again.

**Destination**

**EYUVS1069E** Import failed to find data set
(dsname).

**Explanation:**

No data sets matching the data set specified were found.

**System action:**
The request is not performed.

**Administrator response:**
Check the data set name has been specified correctly.

**Destination**

**EYUVS1070E**
Import terminated. Import in progress by another user.

**Explanation:**
Another user is currently performing an import. Only one user may perform an import at a time.

**System action:**
The request is not performed.

**Administrator response:**
Retry the import at a later time.

**Destination**

**EYUVS1071E**
Dynamic allocation of data set (dsname) failed. Return codes X'rrrr', X'cccc', X'dddd'.

**Explanation:**
While importing Web User Interface views or menus, an attempt to dynamically allocate data set dsname has failed. The DYNALLOC macro failed with return code rrrr. cccc is the SVC 99 error reason code, and dddd is the additional SVC 99 error information code.

**System action:**
Import processing is terminated.

**Administrator response:**
For the meaning of the DYNALLOC return codes, see the z/OS MVS Authorized Assembler Services Guide.

**Destination**

**EYUVS1072I**
Acquiring access to server repository for Import.

**Explanation:**
The WUI server initialization program has requested an exclusive enqueue on the server repository EYUWREP for the purpose of importing definitions from a dataset or an extrapartition TDQ.

**System action:**
The WUI server waits until exclusive control of resource EYUWREP_IMPORT has been acquired.

**Administrator response:**

**Destination**

**EYUVS1074E**
Internal CICScmdTS command has failed with response code (resp / resp2).

**Explanation:**
An attempt to write or delete an internal temporary storage queue has failed with the reported command response (RESP/RESP2).

**System action:**
The viewset import operation is not performed.

**Administrator response:**
Check the meaning of the response code against the CICS WRITEQ TS or DELETEQ TS command to determine the error reason. If the import process was unable to interpret the command response value, then the hexadecimal representations of the RESP and RESP2 values are displayed, rather than their English/numeric translations. If the failure is not resolvable then collect AUXTRACE, EYULOG, the input data set and contact IBM service.

**Destination**

**EYUVS1100E**
User (userid) not authorized for required access access for resource resourcetype, resourcename.

**Explanation:**
If this message is followed by message EYUVS1073I, then no action is required. Otherwise, check other WUI Servers which share the server repository to identify the holder of the enqueue. The DISPLAY GRS system command: D GRS,RES=(DFHECPSM,'EYUWREP_**') may also be used to identify the server which holds the repository enqueue.
User userid has attempted an action on resource resourcetype, resourcename but the action has failed because the user does not have the necessary access to the resource.

**System action:**
The action on the named resource fails but the rest of the input stream is processed. The user is not informed of the failure.

**Administrator response:**
Review the user’s security authorizations.

**Destination**

<table>
<thead>
<tr>
<th>EYUVS1101I</th>
<th>User (userid) modified resource resourcetype, resourcename.</th>
</tr>
</thead>
</table>

**Explanation:**
User userid has successfully imported, created, or edited resource resourcetype, resourcename.

**System action:**
Processing continues.

**Administrator response:**
None

**Destination**

<table>
<thead>
<tr>
<th>EYUVS1102I</th>
<th>User (userid) deleted resource resourcetype, resourcename.</th>
</tr>

3. *applid*

**Destination**

Console and COLG

**EYUWG0106E**

*date* *time* *applid* WLM has encountered an error while attempting to release MAS resources.

**Explanation**

When module EYU0WNLM was called to free resources used during CICSPlex SM dynamic transaction routing (DTR) processing, it found that all allocated resources were associated with active tasks.

**System action**

An SVCdump is issued for diagnostic purposes, and processing continues.

**User response**

It appears that there is a long running user application that invokes EYU9XLOP for DTR processing that is not making the required termination call. If that is not the case, or cannot be determined, then collect the SVCdump, the MAS’s AUXTRACE dataset(s), and the complete job output from the MAS and contact your IBM Support Center.

It might also be that the MXT setting in the region has been dynamically increased during the current run of CICS. CPSM allocates a fixed number of certain control blocks based on the MXT setting at region initialization. If MXT is later increased dynamically, and all the preallocated control blocks are legitimately used by active tasks, CPSM issues this message and produce a diagnostic dump.

If you are likely to increase the MXT setting of a region dynamically during the run of CICS, you might want to set the MXT value in the SIT to its maximum value for region initialization, then lower it to its ‘running’ value afterward. This causes CPSM to preallocate a larger number of some control blocks during MAS initialization and reduce the chances of this error message and SVC dump being produced.

**Module:** EYU0WNLM

**EYUWG0500E**

*date* *time* *applid* Workload Manager Task has had a catastrophic error - Reason (*code*)

**Debug Text (text).**

**Explanation**

The Workload Manager (WLM) long running task experienced an unrecoverable error. *code* identifies the reason for the failure, where:

**text**

Provides some additional debugging information for use by the IBM Support Center.

**System action**

WLM terminates. A user trace record is written to the CICS trace data set.

**User response**

Collect the trace records and the job log and contact your IBM Support Center.

**Module:** EYU0WMGR

**EYUWG0501E**

*date* *time* *applid* Workload Manager Task has encountered an unrecoverable error - restarting task.
Explanation
The Workload Manager (WLM) long running task (WMGR) experienced an unrecoverable error. WMGR will attempt to restart itself up to ten times.

System action
An exception trace is issued which may result in a dump being taken. WMGR then restarts itself and processing continues.

User response
Collect the trace records (and possible dumps) and the job log and contact your IBM Support Center.

Explanation
The Workload Manager (WLM) component has been successfully initialized. WLM is now available for work.

System action
CMAS initialization continues.

User response
None.

Module:
EYU0WINT

XMEOUT parameters/Message inserts
1. date
2. time
3. applid

Destination
Console and COLG

EYUWI0010E  date time applid WLM Initialization Failed.

Explanation
As part of WLM warmstart, a CMAS performs processing during initialization to verify that the AORSCOPEs it maintains for the workloads it manages match the CPSM Topology for the CICSGRP named by the AORSCOPEs. If they do not match, then updates are performed to change the WLM view of the AORSCOPEs to match the Topology view of the CICSGRP.

System action
A exception trace record is written, and if this is the first occurrence of the EYUWI0011E or EYUWI0012E message during this execution of this CMAS, then a dump is taken. The title of the dump will be similar to the following:

EYU0XZSD
Dump,jobname,cmasname,lpar,CMAS,LPLT,tasknum,XLEV,
EYU0WMWS,date,time

The CMAS then continues warmstart processing for the next CICSPlex that it manages.
User response

Collect the dump, the auxtrace data sets, and the complete job output from the CMAS and contact your IBM support center.

Access the Explorer "Workload Targets" view (Window -> Show view -> Other - specify "Workload Targets" in the "type filter text" box and select OK) or the WUI "Active workload target distribution factors" view (EYUSTARTWLMWMAWOR.TABULAR) from sessions connected to all CMASes that manage the named CICSPlex. For each workload displayed by the CMAS that received this error, verify that the target members displayed for the workload match the other CMASes that display the workload.

If any discrepancies are found, then the error resulted in AOR normalization not being performed for the CMAS. To resolve the discrepancies, the CMAS can be restarted, and AOR normalization will be attempted again. If the error does not re-occur on the restart, then perform the verification process described above. If the error re-occurs, or the verification continues to indicate discrepancies, then the CMAS, all of its connected MASes, and any active batch API programs that are connected to the CMAS must be terminated at the same time, to allow the WLM dataspaces to be deleted. Note that if a MAS cannot be terminated, then termination of the MAS agent by using the COSH transaction is sufficient.

Once the CMAS, its MASes, and all batch API programs have been terminated, issue the MVS display job command for the ESSS address space on the LPAR to verify that the WLM dataspaces have been deleted. The format of the command is "D J,EYUXvrm", where "vrm" is the CPSM version, release and modification (for example, for CPSM V5R2M0, the command would be "D J,EYUX520"). There are two WLM dataspaces allocated for the CMAS, named WLM1syid and WLM2syid, where "syid" is the CICS SYSIDNT of the CMAS. If the display job output indicates that the WLM dataspaces are still allocated for the CMAS, then at least one connected MAS or batch API program is still active. To identify what MASes or batch API programs are still active, execute the EYU9XENF utility on the LPAR. For information about this utility, please refer to topic "Using the ESSS Information Display Utility (EYU9XENF)" in the CICS Information Center.

Once the MVS display job command is issued and no WLM dataspaces are displayed for the CMAS, the CMAS, MASes and batch API programs can be restarted. Note that for MASes whose MAS agent code was terminated by the COSH transaction, you must use the COLM transaction to restart the MAS agent instead of restarting the region. When the routing regions connect to the CMAS, the workload for the routing regions will be rebuilt properly.

Module:
EYU0WMWS

XMEOUT parameters/Message inserts
1. date
2. time
3. applid
4. plexname

Destination
Console and COLG

EYUWI0012E date time applid WLM warmstart AOR normalization could not complete for AORSCOPE (csysgrp) in all workloads for CONTEXT (plexname).

Explanation
As part of WLM warmstart, a CMAS performs processing during initialization to verify that the AORSCOPEs it maintains for the workloads it manages match the CPSM Topology for the CICSGRP named by the AORSCOPEs. If they do not match, then updates are performed to change the WLM view of the AORSCOPEs to match the Topology view of the CICSGRP.

An error has occurred during this processing, and as a result the CMAS has not been able to normalize the named AORSCOPE for workloads in the named CICSPlex.

System action
A exception trace record is written, and if this is the first occurrence of the EYUWI0011E or EYUWI0012E message during this execution of this CMAS, then a dump is taken. The title of the dump will be similar to the following:

```
EYUGXZSD
Dump,jobname,cmasname,lpar,CMAS,LPLT,tasknum,XLEV,
EYU0WMWS,date,time
```

The CMAS then continues AOR normalization for the next AORSCOPE associated with the CICSPlex.

User response
Collect the dump, the auxtrace data sets, and the complete job output from the CMAS and contact your IBM support center.
Access the Explorer "Workload Targets" view (Window -> Show view -> Other - specify "Workload Targets" in the "type filter text" box and select OK) or the WUI "Active workload target distribution factors" view (EYUSTARTWLMMAWOR.TABULAR2) from sessions connected to all CMASeS that manage the named CICSplex. For each workload displayed by the CMAS that received this error, verify that the target members displayed for the workload match the other CMASeS that display the workload.

If any discrepancies are found, then the error resulted in AOR normalization not being performed for the CMAS. To resolve the discrepancies, the CMAS can be restarted, and AOR normalization will be attempted again. If the error does not re-occur on the restart, then perform the verification process described above. If the error re-occurs, or the verification continues to indicate discrepancies, then the CMAS, all of its connected MASEs, and any active batch API programs that are connected to the CMAS must be terminated at the same time, to allow the WLM dataspaces to be deleted. Note that if a MAS cannot be terminated, then termination of the MAS agent by using the COSH transaction is sufficient.

Once the CMAS, its MASEs, and all batch API programs have been terminated, issue the MVS display job command for the ESSS address space on the LPAR to verify that the WLM dataspaces have been deleted. The format of the command is "D J,EYUXvrm", where "vrm" is the CPSM version, release and modification (for example, for CPSM V5R2M0, the command would be "D J,EYUX520"). There are two WLM dataspaces allocated for the CMAS, named WLM1syid and WLM2syid, where "syid" is the CICS SYSIDNT of the CMAS. If the display job output indicates that the WLM dataspaces are still allocated for the CMAS, then at least one connected MAS or batch API program is still active. To identify what MASEs or batch API programs are still active, execute the EYU9XENF utility on the LPAR. For information about this utility, please refer to topic "Using the ESSS Information Display Utility (EYU9XENF)” in the CICS Information Center.

Once the MVS display job command is issued and no WLM dataspaces are displayed for the CMAS, the CMAS, MASEs and batch API programs can be restarted. Note that for MASEs whose MAS agent code was terminated by the COSH transaction, you must use the COLM transaction to restart the MAS agent instead of restarting the region. When the routing regions connect to the CMAS, the workload for the routing regions will be rebuilt properly.

EYUWI0081

date time applid WLM
Workload \{analysis / build\}
process for workload(workload) ,
CICSplex(plexname) has been
completed \{- initiated by CMAS \ cmasname\}.

**Explanation**

During connection of a TOR to a CMAS, the Workload Manager determined that the required workload already existed in another CMAS and initiated an query request to that CMAS to retrieve all pertinent information about the workload. This message indicates the successful conclusion of that process and may be issued either by the CMAS initiating the request or by the CMAS receiving the request, where:

**action**

Identifies the action that WLM completed as either:

- **analysis**
  
  One CMAS has analyzed the information received from the other CMAS.

- **build**
  
  One CMAS has constructed the appropriate workload based on information received from the other CMAS.

**direction**

Indicates what role the specified CMAS is playing in the exchange:

- **directed to**
  
  A query is being sent to the specified CMAS.

- **initiated by**
  
  An analysis of information received is being done by the specified CMAS.

**cmasname**

Identifies the CMAS that initiated this stage of workload processing.

**System action**

None.

**User response**

None.

EYUWI0082

date time applid WLM Workload \{query / analysis\} process
failed for workload(workload) ,
CICSplex(plexname) \{- directed to CMAS \ cmasname\}.

**Explanation**

During connection of a TOR to a CMAS, the Workload Manager (WLM) determined that the required workload already existed in another CMAS and initiated an query request to that CMAS to retrieve all pertinent information about the workload. This message indicates the failure of that process and may be issued either by the CMAS initiating the request or by the CMAS receiving the request, where:

**action**

Identifies the action that WLM could not complete as either:

- **query**
  
  A request for information could not be completed.

- **analysis**
  
  An analysis of information could not be completed.
**direction**

Indicates what role the specified CMAS was playing in the exchange:

**directed to CMAS**

A query could not be sent to the specified CMAS.

**initiated by CMAS**

An analysis of information received by the specified CMAS could not be completed.

**System action**

Workload query process fails for the CICSPlex.

**User response**

Other messages should appear with detailed information about the failure.

Destination
Console and COLG

EYUWI0085E date time applid WLM Query Workload has detected a workload synchronization failure for workload(workload), CICSpixel(plexname).

Explanation
During workload analysis, a workload was found to be active on both the inquiring CMAS and the reporting CMAS. Because the workloads were initiated by different CMASs, they cannot be synchronized to reflect the same workload characteristics.

This situation can occur when two unconnected CMASs are initialized with their respective MASs (acting as TORs and AORs) and the workload becomes active in both. When the two CMASs attempt to connect to each other, the workloads do not reflect the same information and cannot be combined into a single workload. Note that this situation does not prevent a TOR that is using one of the workloads from routing to AORs connected to the other CMASs.

System action
The workloads are considered to be unique; they do not share any information. The workload query process continues.

User response
If you want to synchronize the two workloads, first shut down all of the TORs and AORs associated with one of the CMASs, and then shut down the CMAS itself. Then restart the CMAS and wait for it to establish a connection to the other CMAS. After the CMAS is fully initialized and connected, restart the TORs and AORs. The workload on each CMAS is synchronized and treated as a single workload.

Destination
Console and COLG

EYUWI0086I date time applid Cannot import workload specname. Continue install for routing region masname? (Y=Yes,N=No,R=Retry).

Explanation
During connection of a TOR to a CMAS, the workload manager determined that the required workload already existed in another CMAS, however communications with that CMAS were not active. This prevents the import of the required workload.

The console is queried as to whether or not the workload should be installed from the repository records on the local CMAS (possibly creating a duplicate workload) or whether workload installation should be deferred until communications with a CMAS which knows of the workload is reestablished.

Should the operator defer installation of the workload, WLM must be restarted in the TOR using the MAS view after communications is reestablished.

Should the operator continue the installation of a local copy of the workload, it is possible that the newly created workload contains affinity relationships that
conflict with those already established in the original workload.

System action

WLM waits for a response. An exception trace is written to the CICS trace data set. The trace provides a list of CMASes where the workload already exists, but communication with these CMASes is not active.

User response

Entering N on the console aborts installation of any workload. Entering Y on the console causes the workload to be installed at that time. If a CMAS that already has the workload installed has become accessible, the workload is imported from that CMAS. Otherwise the workload is built from the local CMAS's data repository records.

Note:

1. If you enter a Y response before a CMAS that has the workload installed becomes accessible to the local CMAS, a duplicate workload is created. If definitional changes had been made since the original workload was installed, this can result in the workloads routing with different rules. Additionally, affinity cannot be honored between the workloads. If you do not want a duplicate workload, ensure that a CMAS that has the workload installed becomes accessible to the local CMAS before replying Y.

2. The EYUWI0086I message prompt expires 15 minutes after issue. At that time, a check is made to determine whether or not a CMAS that has the workload installed has become accessible. If one has, the workload is imported from that CMAS. If not, the EYUWI0086I message and prompt are reissued.

EYUWM0402E  date time applid Workload {Specification | Definition | Transaction Group} (name) {is not defined | has no transaction links |
has an invalid scope specification for CICSplex(plexname), workload(workload).

Explanation
The specified workload information could not be installed for the specified reason, where:

type
Identifies the type of workload information that could not be installed as one of the following:
• Specification
• Definition
• Transaction Group

name
Is the user-defined name for that information.

reason
Explains why the workload information could not be installed:

is not defined
No record exists in the data repository for the specification, definition or transaction group.

has an invalid scope specification
The AOR scope for the specification or definition is invalid.

has no transaction links
There are no transactions associated with the transaction group.

System action
Workload processing continues, but the specified workload information is not available to the CICSplex. A user trace record is written to the CICS trace data set.

User response
Depending on the reason given, do one of the following:

is not defined
Make sure the specification, definition or transaction group name was specified correctly. If so, then the record has been removed from the data repository.

has an invalid scope specification
Make sure the AOR name in the specification or definition was specified correctly and that the AOR itself still exists.

has no transaction links
Make sure the transaction group name was specified correctly. If so, use the DTRINGRP view to determine what transactions are associated with the group.

COLG

EYUWM0425I  date time applid Target region (sysname) for CICSpix (plexname) has been terminated in workload (name).

Explanation
The indicated AOR is no longer active in the indicated workload. This means that the CMAS no longer has any connection to this MAS and the MAS will not be available for transaction routine.

System action
None.

User response
None.

Module:
EYU0WMAA

EYUWM0426I  date time applid {Definition | Transaction Group | Transaction} (name) already installed in workload (name) for CICSpix(plexname) - parameter ignored.

Explanation
A transaction or transaction group that was to be installed as part of a workload definition was found to already exist in an active workload, where:

type
Indicates what was already installed:

Definition
The definition is already installed.

Transaction
The transaction is already installed as part of another transaction group.

Transaction Group
The definition of the transaction group is different from one that is already installed under the same name; the existing one remains in effect.

A transaction group may not be reinstalled if its TRANGRP definition on the data repository
has been modified, and does not match the already installed transaction group. To install a workload definition with a modified transaction group you must first discard the currently installed definition.

name

Identifies the specific transaction or transaction group and the workload in which it is installed.

The indicated resource is not reinstalled.

System action

A user trace record is written to the CMAS trace destination.

User response

In the case where a definition cannot be installed due to a changed transaction group, compare the transaction group definition with the currently installed transaction group. You can do this either by using the TRANGRP and WLMATGRP views in the web user interface (WUI), or though CICS Explorer by inspecting your workload specification using the Workload Management node in the CICSplex Explorer view.

To install the modified definition, you must first discard the currently installed definition. Alternatively, revert the TRANGRP definition to match what is currently installed.

If you are unable to determine the reason for the failure, then collect the trace records and the job log and contact your IBM Support Center.

EYUWM0430I  date time applid  Workload(workloadid) for CICSPlex(plexname) transition to type: sysname at sysplex reason.

Explanation
The routing algorithm for the specified workload is changing because an application-owning region (AOR) or terminal-owning region (TOR) named in the workload underwent a change in status, where:

workloadid
Identifies the workload that is affected by the change.

type
Identifies the algorithm to which the workload is changing as either GOAL, LNGOAL, QUEUE or LNQUEUE.

sysname
Is the name of the AOR or TOR that caused the change.

sysplex
Is the name of the MVS sysplex where the CICS system is running.

reason
Indicates the reason for the change as one of the following:

Initializing
The specified CICS system is initializing.
Terminating
The specified CICS system is terminating.

Changing status
The sysplex changed its MVS/WLM status.
This message appears only when the CICSPlex SM workload specification (WLMSPEC) identifies GOAL or LNGOAL as the algorithm type.

System action
The routing algorithm for all TORs in the workload changes to the type specified in this message.

TRANGRP (trangrpname) in workload(workloadname) cannot be processed for CICSplex(plexname) due to a CICS BTS Affinity specification.

**Explanation**

Whilst installing a WLMDEF into an existing Workload that is shared with a CICSPlex SM V1R2M0 or V1R3M0 TOR, a TRANGRP with a CICS BTS Affinity specification was found.

**System action**

The WLMDEF install will fail.

**User response**

A Workload that is being used by a CICSPlex SM V1R2M0 or V1R3M0 TOR cannot contain any CICS BTS definitions or attributes. Either remove the candidate TOR from the Workload Scope, or separate the non-CICS BTS TRANGRPs into a different Workload, and include the candidate TOR in the installation scope for the new Workload.

**EYUWM0434W**  
Date time applid  
Multiple {SNA / IPIC} connections are installed from routing region (torname) to target region (aorname). WLM will use connection (conn).

**Explanation**

During activation of a routing region or target region, multiple connections were discovered between the routing region and the target region, where:

- **torname**  
  - is the name of the routing region.

- **aorname**  
  - is the name of the target region.

- **conn**  
  - is the name of the connection that WLM will use to route from the routing region to the target.

**System action**

This message and a trace record are issued. WLM attempts to route from the routing region to the target region using the connection indicated in the message. Note that if routing is not possible over this connection, WLM will not switch to any alternate connection between the routing region and the target region.

CPSM chooses which connection to use according to the following rules:

- After the routing region and target region are joined to the workload, a second connection is then installed which is used by WLM.
- After the routing region is joined to the workload with both connections installed, the target region joins the workload. WLM uses the connection with the name that comes first alphabetically.
- After the target region is joined to the workload with both connections installed, the routing region joins the workload. WLM uses the connection with the name that comes first alphabetically.

**User response**

If you want routing over the connection indicated in the message, no response is necessary. If you want routing over a different connection, discard all the unwanted connections and restart the target region.

**Module:**

EYU0WMAA, EYU0WMTJ

**XMEOUT parameters/Message inserts**

2. time  
3. applid  
4. Value chosen from the following options:
An additional {SNA | IPIC} connection has been installed from routing region \( (\text{torname}) \) to target region \( (\text{aorname}) \). WLM will now use connection \( (\text{newc}) \) instead of \( (\text{oldc}) \).

**Explanation**

While processing an ad-hoc install of a connection between an active routing region and an active target region, WLM determined that a previous connection was installed, where:

- **torname**
  - is the name of the routing region.
- **aorname**
  - is the name of the target region.
- **newc**
  - is the name of the newly installed connection from the routing region to the target.
- **oldc**
  - is the name of the existing connection from the routing region to the target.

**System action**

This message and a trace record are issued. WLM attempts to route from the routing region to the target region using the newly installed connection. Note that if routing is not possible over this connection, WLM will not switch to any alternate connection between the routing region and the target region.

**User response**

If you want routing over the newly installed connection indicated in the message, no response is necessary. If you want routing over a different connection, discard all the unwanted connections and restart the target region.

2. \( \text{time} \)
3. \( \text{applid} \)
4. **ins#1**
5. **ins#2**

**Destination**

Console and COLG
**Explanation**

All Workload Manager (WLM) activity has been quiesced for the specified target region in the specified context because the CICS system is defined to CICSPlex SM as not being a target region at startup. This definition is set by specifying NO in one of:

- The WUI on EYUSTARTCSYSDEF as "AOR dynamic routing mode".
- The API as the DYNROUTE attribute of the CSYSDEF object.

The target region is quiesced for all workloads in the CICSpelx. The fact that a target region is quiesced only indicates that WLM no longer considers it for routing purposes.

**System action**

The target region is marked as quiesced and is no longer available to WLM for routing. Workload processing continues.

**User response**

Change the definition to YES, if the target region should be part of the workload at startup. Alternatively, when the target region is ready to receive work use one of the following methods:

- In the WUI on EYUSTARTWLMAWAOR, use the ACTIVATE action to change the "Target Region status".
- In the API ACTIVATE action, use the WLMWAOR object to update the STATUS.

**Module:**

EYU0WMAA

6. ins#3

---

**Explanation**

CICSpelx SM workload management is using the goal algorithm and has detected a z/OS percentile goal.

**System action**

CICSpelx SM workload management will use z/OS Workload Manager percentile goals as a factor in determining the routing decision for any work requests that have such goals defined.

**User response**

None.

**Module:**

EYU0WTCL

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid

---

**Explanation**

The routing algorithm for the specified transaction group within the specified CICSpelx for workload workload is changing because an application-owning region (AOR) or terminal-owning region (TOR) named in the workload underwent a change in status, where:

`trangrid`

Identifies the transaction group that is affected by the change.
workloadid
Identifies the parent workload of the affected transaction group.

type
Identifies the algorithm to which the workload is changing as either GOAL, LNGOAL, QUEUE or LNQUEUE.
sysname
Is the name of the AOR or TOR that caused the change.
sysplex
Is the name of the MVS sysplex where the CICS system is running.
reason
Indicates the reason for the change as one of the following:

Initializing
The specified CICS system is initializing.

Terminating
The specified CICS system is terminating.

Changing status
The sysplex changed its MVS/WLM status.

This message appears only when the CICSPlex SM transaction group definition (TRANGRP) identifies GOAL or LNGOAL as the algorithm type.

System action
The routing algorithm for all TORs in the workload changes to the type specified in this message.

User response
None.

EYUWM0505I  date time applid Target region (name), CICSplesx(plexname) is running in Sysplex Optimized WLM state.

Explanation
This target region is now successfully switched into sysplex optimized workload management mode, to enable improved dynamic workload routing decisions.

System action
The Optimization Status for the target region is marked as ACTIVE.

User response
CICSPlex SM will assume that any region for which workload optimisation is enabled will act as both a dynamic router and target region. If you require the region issuing this message to adopt a purely routing role, then target region optimisation should be disabled. This is achieved by resetting the UPDATERS attribute of the CICS system definition object (CSYSDEF) within CICSPlex SM to zero. It may be changed in an active region through the MAS resource table or viewset.

EYUWM0507I date time applid Routing region (name), CICSp lex(plexname) optimization termination in workload(workload) reason: ({RS server failure | Optimization disabled | RSPOOLID changed}).

Explanation
Workload optimization in the routing region has terminated. The reason gives an indication of the cause:

RS server failure
The Region Status (RS) server has terminated unexpectedly. Possible reasons for this can include a failure in the z/OS coupling facility. For example, a system operator intervention resulted in the termination or cancellation of the RS server address space.

Optimization disabled
The Optimization enablement status for the routing region has changed from enabled to disabled. This action might have been taken by a CICSp lex SM WUI user or an application program that uses the CICSp lex SM API.

RSPOOLID changed
The "RS Server pool name" attribute in the CPLEXDEF resource definition that describes the current CICSp lex has been modified while regions in the CICSp lex are in-flight. All subsequent dynamic routing requests made by WLM routing regions in the CICSp lex are made in non-optimized mode until the CICSp lex is restarted.

System action
The Optimization Status for the region is marked as INACTIVE. Workload manager continues to handle dynamic routing requests from CICS, but routing regions determine the potential target regions using non-optimized processing.

User response
Depending on the reason, take the following action:

RS server failure
Check the MVS system log for the reason why the RS Server terminated. When appropriate, restart the RS Server address space.

Optimization disabled
Use the MAS WUI view for the reported region to verify the state of the "Optimization enablement" setting. If it is in a disabled state, re-enable the setting.

RSPOOLID changed
Verify the setting of the "RS Server pool name" attribute of the CPLEXDEF resource definition that describes the current CICSp lex.

If the change of name is not valid, change it back to its original name to resume optimized routing on all affected regions.

As soon as the RS server is available, workload manager automatically switches back into optimized routing mode for regions that are enabled for optimization.

Module:
EYU0WNRS,EYU0WNHD

XMEOUT parameters/Message inserts
1. date
2. time
3. applid
4. name
5. plexname
6. workload
7. Value chosen from the following options:

   1=RS server failure,
   2=Optimization disabled,
   3=RSPOOLID changed

**Destination**

Console and COLG

**Explanation**

Workload optimization in the target region has terminated. The reason gives an indication of the cause:

**RS server failure**

The Region Status (RS) server has terminated unexpectedly. Possible reasons for this can include a failure in the z/OS coupling facility. For example, a system operator intervention resulted in the termination or cancellation of the RS server address space.

**Optimization disabled**

The "Optimization enablement" status for the target region has changed from enabled to disabled. This action might have been taken by a CICSPlex SM WUI user or an application program that uses the CICSPlex SM API.

**RSPOOLID changed**

The "RS Server pool name" attribute in the CPLEXDEF resource definition that describes the current CICSplex has been modified while regions in the CICSplex are in-flight. All subsequent dynamic routing requests made by WLM routing regions in the CICSplex are made in non-optimized mode until the CICSplex is restarted.

**Link to DFHRSFDL failed**

The DFHRSFDL program connects the CICSPlex SM workload management function to the Region Status (RS) server. The link to this program has failed and therefore no optimization processes can be started.

**Target record not found**

The record for the target region was not found in the coupling facility data table.

**System action**

The Optimization Status for the region is marked as INACTIVE. Workload manager continues to handle dynamic routing requests from CICS, but routing targets are determined using non-optimized processing.

**User response**

Depending on the reason, take the following action:

**RS server failure**

Check the MVS system log for the reason why the RS Server terminated. When appropriate, restart the RS Server address space.

**Optimization disabled**

Use the MAS WUI view for the reported region to verify the state of the "Optimization enablement" setting. If it is in a disabled state, re-enable the setting.

**RSPOOLID changed**

Verify the setting of the "RS Server pool name" attribute of the CPLEXDEF resource definition that describes the current CICSPlex.

If the change of name is not valid, change it back to its original name to resume optimized routing on all affected regions.

**Link to DFHRSFDL failed**

Check the CICS message log for any message reporting the failure to link to DFHRSFDL. The most likely cause for this failure is that the PROGRAM resource for DFHRSFDL is not installed. Verify that the DFHRS CSD group is part of the group list that is installed when the CICS region is started.

**Target record not found**

This could be due to a timing issue and will be retried when this CMAS receives an EMSTATUS record for the target region. If the retry is successful, then message EYUWM0509 will be issued to document that. If the retry fails for a different reason, then message EYUWM0508 will be reissued with the new failure reason. The presence of the EYUWM0508 message for "Target record not found" by itself should not be considered a problem to be reported unless it is not followed later by an EYUWM0509 message.
As soon as the RS server is available, workload manager automatically switches back into optimized routing mode for regions that are enabled for optimization.

**EYUWRnnnn messages**
The text of these messages, like the program itself, can be modified. If the EYU9WRAM program has been modified at your enterprise, the text and meaning of these messages may vary.

The EYUWRnnnn messages are issued by the user-modifiable program called EYU9WRAM, which CICSPlex SM distributes as part of its Workload Manager component. The EYU9WRAM program can be modified to control the dynamic transaction routing process used by CICSPlex SM. For more information about EYU9WRAM and the CICSPlex SM Workload Manager, refer to the product documentation.

The following variables are used in EYUWRnnnn messages, as distributed by:

**fname**
The name of the EYU9WRAM function being processed, as one of the following:

**SM_BALANCE**
Selects a target AOR from a list of candidates.

**SM_CREAFF**
Creates an affinity to an AOR.

**SM_DELAFF**
Deletes an affinity to an AOR.

**SM_ROUTE**
Routes a transaction to a named AOR, bypassing normal CICSPlex SM processing.
**SM_SCOPE**
Returns a list of candidate AORs.

**fcode**
The numeric code of the EYU9WRAM function being processed, as one of the following:

- 0  Route Select
- 1  Route Error
- 2  Route Termination
- 3  Transaction ABEND
- 4  Route Notify

**EYUWR0001E  Internal Error Raised in EYU9WRAM: Error is text**

**Explanation**
The EYU9WRAM program detected an unexpected error, where:

**text**
Identifies the error as one of the following:

**Nonzero return code from API: RC=code.**
A call to the WLM internal API returned a nonzero return code. The return code from the WLM API should always be zero, where:

**code**
Identifies the return code as a decimal value.

The WLM API function processor was not called.

**Invalid input COMMAREA size: Size=nnn.**
The size of the COMMAREA passed to EYU9WRAM was not as expected, where:

**nnn**
Is the size of the COMMAREA as a decimal value.

**Unknown Function in WCOM_CTYPE:**
**Function=fcode.**
The specified function code is not known to the EYU9WRAM program where fcode is as described in EYUWRnnnn messages.

**Unknown API Response from fname:**
**RESPONSE=code.**
The API response code received from the specified EYU9WRAM function is not known, where:

**code**
Identifies the response code as a decimal value.

**Unknown API Reason from fname: REASON=code.**
The API reason code received from the specified EYU9WRAM function is not known, where:

**System action**
The transaction that was using the EYU9WRAM program is not routed.

**User response**
Report the problem to the person at your site who is responsible for workload management and the EYU9WRAM program.

The most likely causes of an internal error in EYU9WRAM are:
- An improper user modification to EYU9WRAM.
- Maintenance being applied to CICSPlex SM but not to the EYU9WRAM program.

**Module:**
EYU9WRAM

**Destination**
Terminal End User

**EYUWR0002W  warning text**

**Explanation**
The EYU9WRAM program was invoked for a Route Error function after having selected an AOR for routing. The selected AOR is not available and there are no other AORs from which to select, where:

**warning text**
Identifies the problem as one of the following:
- The CICS link to the selected AOR (typeid) was not found.
• The CICS link to the selected AOR (typeid) is currently out of service.
• No sessions are available for route to AOR (typeid).
• An allocation timeout occurred on the transaction route to AOR typeid.

**typeid**
Identifies the AOR that is not available by its:

- **APPLID applid**
  Eight-character application identifier, if available.
- **SYSID sysid**
  Four-character system identifier, if the APPLID is not available.

**System action**
The transaction that was using the EYU9WRAM program is not routed.

**User response**
Report the problem to the person at your site who is responsible for workload management and the EYU9WRAM program.

**Module:**
EYU9WRAM

**Destination**
Terminal End User

**EYUWR0003W**
The Affinity AOR (typeid) is not available because the reason. text

**Explanation**
The EYU9WRAM program was invoked for a Route Select or Route Error function and call SM_SCOPE to obtain a scope list. The scope list contained a single affinity AOR, which was not available, where:

- **typeid**
  Identifies the AOR that is not available by its:
  - **APPLID applid**
    Eight-character application identifier, if available.
  - **SYSID sysid**
    Four-character system identifier, if the APPLID is not available.

  dt.reason dd.identifies the reason the AOR is not available, as one of the following:
  - **AOR is down.**
    The AOR is not active.

**CICS Link to the AOR is not available.**
The link to the AOR is either not defined or not in service.

**AOR job is different.**
The AOR is active but the Job terminated and restarted again after the affinity was initially created.

**text**
describes the new state of the affinity

**The affinity remains.**
Neither the EYU9WRAM program nor CICSPlex SM deleted the affinity.

**The affinity is ended.**
Either EYU9WRAM or CICSPlex SM deleted the affinity.

**System action**
The transaction that was using the EYU9WRAM program is not routed.

**User response**
Report the problem to the person at your site who is responsible for workload management and the EYU9WRAM program.

Is as described in EYUWRnnnn messages

\textit{code}
Identifies the reason code as a decimal value.

System action

The transaction that was using the EYU9WRAM program is not routed. A user trace record is written to the CICS trace data set.

User response

Report the problem to the person at your site who is responsible for workload management and the EYU9WRAM program.

Module:
EYU9WRAM

Destination
Terminal End User

EYUWR0104E CPSM Reports an unexpected error on FUNCTION \textit{fname}.

Explanation

The specified EYU9WRAM function encountered an unexpected error where \textit{fname} is as described in EYUWRnnnn messages.

System action

The transaction that was using the EYU9WRAM program is not routed. A user trace record is written to the CICS trace data set.

User response

Report the problem to the person at your site who is responsible for workload management and the EYU9WRAM program.

Module:
EYU9WRAM

Destination
Terminal End User

EYUWR0201W The CICS link to the SM\_ROUTE selected AOR (\textit{typeid}) is not available.

Explanation

The SM\_ROUTE function of the EYU9WRAM program determined that the selected AOR is not available for routing, where \textit{typeid} identifies the AOR that is not available by its:

\textbf{APPLID applid}
Eight-character application identifier, if available.
SYSID sysid
Four-character system identifier, if the APPLID is not available.

System action
The transaction that was using the EYU9WRAM program is not routed.

User response
Report the problem to the person at your site who is responsible for workload management and the EYU9WRAM program.

Module:
EYU9WRAM

Destination
Terminal End User

EYUWR0401W  warning text

Explanation
The SM_BALANCE function of the EYU9WRAM program returned a warning response, where:

warning text
Identifies the problem as one of the following:

No AORs are available for Transaction Routing.
SM_BALANCE determined that none of the AORs presented to it for selection were available for routing.

The required affinity AOR (typeid) is not active.
SM_BALANCE identified an affinity with the specified AOR and is obligated to select that AOR for routing. However, the AOR is not active and cannot be selected.

The CICS link to the affinity AOR (typeid) is not available.
SM_BALANCE identified an affinity with the specified AOR and is obligated to select that AOR for routing. However, the CICS link to the AOR is not available.

The affinity transaction cannot be routed because required CICSPlex SM services are not available.
SM_BALANCE is obligated to create an affinity with one of the AORs presented to it, but the required CICSPlex SM services are not available.

typeid
Identifies the affinity AOR by its:

APPLID applid
Eight-character application identifier, if available.

SYSID sysid
Four-character system identifier, if the APPLID is not available.

System action
The transaction that was using the EYU9WRAM program is not routed.

User response
Report the problem to the person at your site who is responsible for workload management and the EYU9WRAM program.

Module:
EYU9WRAM
Destination
Terminal End User

**EYUWR0501W**  Affinity to AOR (typeid) was not created because the reason.

Explanation
The SM_CREAFF function of the EYU9WRAM program returned a warning response, where:

**typeid**  Identifies the AOR by its:

**APPLID applid**  Eight-character application identifier, if available.

**SYSID sysid**  Four-character system identifier, if the APPLID is not available.

**reason**  Identifies the reason, as one of the following:

**AOR is quiesced**  The AOR is quiesced; no new affinities can be created to it.

**AOR is marked ignore**  The EYU9WRAM program previously marked the AOR to be ignored by CICSpex SM.

---

**EYUWTnnnn messages**

**EYUWT0050I**  date time applid WLM Termination Started.

**Explanation**  No explanation available.

**System action**  None

**User response**  None.

**Module:**
Module unknown

**XMEOUT parameters/Message inserts**
1. date

3. applid

---

**EYUWT0051I**  date time applid Workload Manager Task Termination Complete.

**Explanation**  The Workload Manager (WLM) long running task has been terminated.

**System action**  WLM termination continues.

**User response**  None.

**Module:**
EYU0WMGR

**XMEOUT parameters/Message inserts**
1. date
The Workload Manager (WLM) component has been terminated. WLM is no longer available for work.

System action
CMAS termination continues.

User response
None.

Module: EYU0WTRM

XMEOUT parameters/Message inserts
1. date
2. time
3. applid
4. plexname
5. Value chosen from the following options:
   1=routing,
   2=target

Explanation
During Workload Manager (WLM) long running task termination of CMAS that has workloads installed for a CICSPlex, workload manager determined it could not remove the workloads for the CICSPlex because at least one routing region or target region for at least one workload associated with the CICSPlex is still connected to the CMAS, where:

plexname
   is the name of the CICSPlex that the workloads are associated with, and
regiontype
   is either:

routing
or:
target

System action
After issuing message EYUWT0053W, message EYUWT0054I will be issued, identifying the first connected routing or target region that is determined to still be connected to the CMAS. CMAS termination then continues without terminating any workloads for the CICSPlex. WLM

User response
Since the CMAS terminated without removing its installed workloads, other CMASes can experience problems when trying to install the workloads, issuing message and prompt EYUWI0086I, and, if PTF UK62967 is applied, message EYUWI0090I.

To avoid this, the terminated CMAS must be restarted and connected into the CMAS network before any other CMAS in the network tries to install any workloads that were installed in the terminated CMAS.

To ensure that a CMAS removes all installed workloads for a CICSPlex when it terminates, you must ensure that all MASes that are connected to the CMAS that are routing or target regions for any workload associated with the CICSPlex, are terminated before starting CMAS termination.

Module: EYU0WTRM

XMEOUT parameters/Message inserts
1. date
2. time
3. applid
4. masname
5. Value chosen from the following options:
   1=routing,
   2=target

Explanation
Console and COLG

EYUWT0054I date time applid MAS masname is connected to the CMAS as a (routing | target) region in Workload(workload) for CICSPlex(plexname).
**Explanation**

During Workload Manager (WLM) long running task termination of CMAS that has workloads installed, workload manager determined it could not remove the workloads for a CICSpex because at least one MAS is still connected to the CMAS, as a routing or target region in a workload associated with the CICSpex, where:

- **masname** is the name of the first connected MAS
- **regontype** is either:
  - routing
  - target
- **plexname**

**System action**

This message will be issued after message EYUWI0053W is issued, identifying the routing or target region. CMAS termination then continues without removing any workloads for the CICSpex.

**User response**

This message is informational only. Please refer to the documentation for message EYUWT0053W for user action.

4. compid

**Destination**
Console and COLG

**EYUXC0021S**  
```
date time applid {CPSM | Total} auxiliary storage limit has been reached.```

**Explanation**
The Data Cache Manager has determined that the current request would cause CICSPlex SM to exceed the auxiliary Storage usage limit for this CMAS or for the MVS image.

This message is normally issued as a result of abnormal growth of one or more cache data spaces due to an exceptional condition. When the CMAS is restarted the Cache component is reinitialized and some excess cache storage is released. If the CMAS
terminates repeatedly after issuing this message, there may be insufficient auxiliary storage available to support the normal storage requirements of the CMAS. It may be necessary to provide additional auxiliary storage by adding or expanding external page data sets, where:

**type**
identifies the limit which would be exceeded:

- **CPSM**
  The maximum percent of auxiliary storage slots which may be committed to a CMAS.

- **total**
  The maximum percent of auxiliary storage slots which may be in use.

**System action**

Message EYUXC0024S is issued, SDUMP is taken and the CMAS is terminated. If CMAS initialization completed before the failure, an attempt is made to ARMRESTART the CMAS.

**User response**

If the CMAS failed during initialization, increase one or both of the MAXAUXCPMS and MAXAUXTOTL parameters and restart the CMAS. If CMAS initialization completed before the failure, capture the CMAS job output and the SDUMP created in response to this error, and contact your IBM Support Center.

Recovery failed for MAS data cache storage

Explanation
A CMAS or MAS has encountered an error while attempting to release a MAS CPSM TRUE storage area allocated in the MAS data cache for MAS masname, CICSplex plexname. The area had been allocated and used for a previous instance of the MAS, and had not been released because that instance of the MAS or its connected CMAS terminated without going through normal termination.

System action
An exception trace and this message is issued and processing continues.

User response
Collect the complete job output and auxtrace datasets for the MAS and the CMAS it is connected to, and contact your IBM Support Center.

EYUXC0026S  

date  
time  
applid  
CMAS warm restart with EYUPARM CACHEDSNUM(parmval), conflicts with previous value (prevval). CMAS is terminating.

Explanation
The CMAS performed a CPSM warm start because the shared data spaces existed when the CMAS was restarted. The CACHEDSNUM EYUPARM value must be equal to the previous value.

System action
The CMAS terminates abnormally. A user trace record is written to the CICS trace data set.
Message EYUXL0112E will subsequently be issued.

**User response**

If the new CACHEDSNUM EYUPARM value is not required, the CMAS can be restarted successfully by setting the CACHEDSNUM EYUPARM to the previous value.

If the new CACHEDSNUM EYUPARM value is required, then the CMAS must be CPSM cold started. That is, the CMAS and all directly connected MASes and batch API programs must be terminated at the same time so that both the private and shared data spaces are terminated. Then the CMAS can be restarted.

If the problem persists, collect the exception trace records and complete CMAS job output and contact your IBM Support Center.

**Module:**
EYU0XCIN

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid
4. parmval
5. prevval

**Destination**

Console and COLG

**EYUXC0027I** date time applid Data Cache initialization will be performed start_type.

**Explanation**

This indicates whether a CPSM CMAS warm or cold start will be performed.

When a CMAS starts, if no data spaces that the CMAS used the last time it was active still exist, the start is a CPSM CMAS cold start; if such data spaces exist, the start is a CPSM CMAS warm start.

Note that there is no way to deliberately specify a CPSM cold or warm start. The CICS system initialization parameter START has no effect on determining whether the restart of a CMAS is a CPSM CMAS cold or warm start.

For further information on CPSM CMAS restarts refer to Managing CMAS restarts in Administering CICSPlex SM.

**System action:**

None

**User response:**

None

**Module:**
EYU0XCIN

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid
4. start_type

**Explanation**

The combined allocated data space storage for all data spaces in CICSPlex SM component component, has exceeded percentage% of the total available storage capacity. This message is issued when a component's combined data space storage for all of its data spaces exceeds 70, 80, 90 and 95% of its total data space storage capacity.

If a CICSPlex SM component exhausts its data space cache storage, the CMAS takes protective actions which may involve CMAS shutdown or result in request failure.

Note that it is necessary to have sufficient auxiliary storage to support all of the data spaces used by CICSPlex SM, see CICSPlex SM system parameters in Configuring CICSPlex SM for more information.

**System action:**

None

**User response**

Investigate the cause of the high cache storage allocation by the CICSPlex SM component.

If the CMAS frequently allocates a large amount of CICSPlex SM data space cache storage for a component, it may be prudent to increase the number of data spaces that are available for each CICSPlex SM component to use.

For more information about the CICSPlex SM EYUPARM parameter CACHEDSNUM, see CICSPlex SM auxiliary storage usage in Configuring CICSPlex SM.

**Explanation**
A change was made to the data repository; this message serves as a record of the change, where:

**action**
The type of change that was made, as one of the following: ADD, UPDATE, DELETE, GENERIC DELETE, or INTERNAL DELETE.

A generic delete is one that used a generic name (including the characters + or *) to affect multiple instances of a definition. An internal delete is one that was made as a result of another delete to maintain the referential integrity of the data repository.

**plexname**
The name of the CICSpelx that was affected by the change.
**deftype**
The type of definition that was changed, which corresponds to an administrative definition such as CPLXCMAS or MONDEF.

**defname**
The name of the definition that was changed.

**defver**
The version of the definition that was changed. When the MAJOR_ID matches either APPLDEF or APPLCTN, the defver value will be derived from the MAJORVERSION, MINORVERSION, and MICROVERSION fields of that record. The format of the defver value will be majorversion.minorversion.microversion. Note that this value represents specific fields within the record and not the data repository record key structure.

**userid**
The ID of the user who made the change.

**sysname**
The name of the CICS system where the change was made.

**dddyy**
The date on which the change was made, in Julian format.

**hh.mm.ss**
The time at which the change was made.

**System action**
None.

**User response**
If this message accurately reflects a change that was made by a user, no action is required. If, however, this message contains information that you consider invalid, contact your IBM Support Center.

**EYUXD0017E** date time applid The data repository records for CICSplox (cicsplex) appear to be corrupted. Resynchronization with the Maintenance Point CMAS (cmasname) is required.

**Explanation**

While this CMAS was processing Data Repository updates for a CICSplox that were shipped from the maintenance point CMAS for the CICSplox, an unrecoverable error was encountered, where:

- **cicsplox** is the name of the CICSplox
- **cmasname** is the name of the maintenance point CMAS.

**System action**

The error is noted internally, a dump is taken, and CMAS execution continues. However, no further updates to this CMAS's repository for this CICSplox is processed.

**User response**

All MASs connected to this CMAS should be terminated, and the CMAS should then be restarted. This results in this CMAS performing repository synchronization with the maintenance point CMAS. Because the system has noted that this CMAS's repository is corrupted for this CICSplox, the CICSplox is removed from and then re-added to this CMAS.

**EYUXD0030W**  
*date time applid* The performance of the operation on the data repository records for CICSplex (*cicsplex*) may be degraded due to the recoverable attribute of EYUDREPN.

**Explanation**
The EYUDREPN file has taken on the recoverable attribute of the data repository data set. The result is a degradation of performance (logging will occur) on the data repository records when adding or deleting a CICSplex.

EYUDREPN's recovery definition change from non-recoverable to recoverable could have occurred in one of two ways:

1. The Backup While Open (BWO) option was specified for the data repository data set associated with EYUDREP in the ICF catalog via the IDCAMS DEFINE CLUSTER definition. IDCAMS marks the EYUDREP data set as recoverable. Thus, when the EYUDREPN file name is associated with the EYUDREP data set, EYUDREPN is marked as recoverable. The ICF catalog definition takes precedence over the EYUDREPN RDO definition.
2. EYUDREPN RDO definition was copied to a user group and RECOVERY(NONE) was modified.

**System action**
CICSPlex SM processing continues. However, because EYUDREPN was defined as recoverable, the operation on the data repository records may be degraded.

**User response**
To make the data repository eligible for backup while open, you must change the default RDO EYUDREP definition by copying the RDO EYUDREP definition to a user group and specifying the following keywords:

- RECOVERY(ALL)
- FWDRECOVLOG(*nn*)
- BACKUPTYPE(DYNAMIC)

where *nn* is a number between 1 and 99.

This definition change marks the file EYUDREP as recoverable and any data set, while associated with the EYUDREP file name, is marked as recoverable.

Requesting BWO for the CICSPlex SM data repository data set via the IDCAMS DEFINE CLUSTER definition within the ICF catalog is not supported.
You should not change the recovery options of the EYUDREPN FILE definition.

Console and COLG

EYUXD0031E  date time applid Capability mismatch (relationship) for table rtnum/rtname (Service=servlevel) Local=lver/lsub : Remote=rver/rsub.

Explanation
The service and maintenance level of a resource table is incompatible with the partner system where:

relationship
is the relationship between the service and maintenance levels of the local and remote systems and can be:

  HIGH
  where the partner system is at a higher level than the local system.

  LOW
  where the partner system is at a lower level than the local system.

rtnum/rtname
is the number and name of the CICSPlex SM resource table.

servlevel
is the service and maintenance level of the resource table as defined in the local CMAS.

lver/lsub
is the local version and subversion of the resource table.

rver/rsub
is the remote version and subversion of the resource table.

The partner name is given in a later message, which is EYUCL0130E if the partner is a MAS, or EYUCP0022E if the partner is a CMAS.

System action
Information about the system action is given in a later message, either EYUCL0130E or EYUCP0022E.

User response
For CMAS-to-CMAS connections, the maintenance point CMAS must not be at a lower level than the non-maintenance point CMAS. Restart one of the CMASs with a version of the CICSPlex SM load libraries that is at a maintenance level compatible with the other CMAS.

For CMAS-to-MAS connections, the CMAS must not be at a lower level than the MAS. Restart either the MAS or the CMAS with a version of the CICSPlex SM load libraries that is at a maintenance level compatible with the other system.

Console and COLG

**EXY U0XD0033E**

**date** time applid Definitions delivered for CICSp lex (plexname) by maintenance point CMAS (cmasname) cannot be processed because the local data repository is full.

**Explanation**
A data repository update for a CICSp lex could not be added to the local CMAS's data repository because the local CMAS's data repository is full, where:
- *plexname* identifies the name of the CICSp lex the definitions are associated with.
- *cmasname* identifies the maintenance point CMAS for the CICSp lex.

**System action**
This message is written to the console and to the job log and EYULOG of the local CMAS, and an exception trace is written to the local CMAS's auxtrace data sets. The CMAS continues to execute, but all subsequent updates to the local data repository for the CICSp lex fail. Note that the message and trace only occurs once, regardless of how many updates for the CICSp lex fail.

**User response**
This message is preceded by message EYU0X011S. As the instructions in that message indicate, the local CMAS should be terminated and its data repository reorganized or expanded. When the local CMAS is restarted and performs repository synchronization with the maintenance point CMAS of the CICSp lex, the missing updates will be added to the local data repository.

DAYLSV=option written to EYUDREP.

Explanation

A repository batch header record for the specified CMAS has been successfully formatted. The parameters are shown as they were specified in the EYU9XDUT repository initialization program, where:

- **cmasid**  
  Identifies the CMAS for which the data repository was defined.

- **sysid**  
  Is the CICS system ID of the CMAS.

- **x**  
  Is a time zone code, from B ? Z.

- **nn**  
  Is a time zone offset in minutes, from 00 ? 59.

- **option**  
  Indicates whether daylight saving time is in effect, as Y or N.

**SYSPRINT**

**EYUXD0602E**  
SYSPRINT must be specified.

Explanation

The SYSPRINT DD statement for the CMAS data repository was missing or invalid.

System action

Data repository initialization terminates.

User response

Make sure a valid SYSPRINT DD statement is included in the data repository initialization routine, then resubmit the job.

Module: EYU9XDUT

**SYSPRINT**

**EYUXD0603E**  
SYSPRINT must be specified.

Explanation

The SYSPRINT DD statement for the CMAS data repository was missing or invalid.

System action

Data repository initialization terminates.

User response

Make sure a valid SYSPRINT DD statement is included in the data repository initialization routine, then resubmit the job.

Module: EYU9XDUT

**Destination**

Console and COLG

**EYUXD0603E**  
SYSPRINT must be specified.
User response
Make sure a valid SYSPRINT DD statement is included in the data repository initialization routine, then resubmit the job.

Module:
EYU9XDUT

Destination
Console and SYSPRINT

EYUXD0604E EYUDREP VSAM file must be specified. EYUDREP Init terminated.

Explanation
The EYUDREP DD statement for the CMAS data repository was missing or invalid.

System action
Data repository initialization terminates.

User response
Make sure a valid EYUDREP DD statement is included in the data repository initialization JCL.

Module:
EYU9XDUT

Destination
SYSPRINT

EYUXD0605E Invalid parm data
SYSID=status CMASNAME=status TIMEZONE=status ZONEOFFSET=status DAYLIGHT=status. EYUDREP Init terminated.

Explanation
One of the parameters specified for the EYU9XDUT repository initialization program was invalid, where:

status
Identifies the status of each parameter as:

ERR
The parameter was in error.

OK
The parameter was correctly specified.

System action
Data repository initialization terminates.

User response
Correct the length of the parameters in error, as follows:

SYSID=
1- to 4-characters.

CMASNAME=
1- to 8-characters.

TIMEZONE=
1-character.

ZONEOFFSET=
2-characters.

DAYLIGHT=
1-character.

Module:
EYU9XDUT

Destination
SYSPRINT

EYUXD0606E Invalid parm length
SYSID=1- to 4-characters.
CMASNAME=1- to 8-characters.
TIMEZONE=1-character.
ZONEOFFSET=2-characters.
DAYLIGHT=1-character. EYUDREP Init terminated.

Explanation
The length of one of the parameters specified for the EYU9XDUT repository initialization program was invalid, where:

status
Identifies the status of each parameter as:

ERR
The parameter was in error.

OK
The parameter was correctly specified.

System action
Data repository initialization terminates.

User response
Correct the parameters in error, as follows:

SYSID=
1- to 4-character CICS system ID of the CMAS.

CMASNAME=
1- to 8-character name of the CMAS.
**TIMEZONE=**
1-character time zone code, from B?Z.

**ZONEOFFSET=**
2-character time zone offset in minutes, from 00?59.

**DAYLIGHT=**
Y or N, to indicate whether daylight saving time is in effect.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0607E**
CMASNAME=xxxxxxx 1st position invalid. EYUDREP Init terminated.

**Explanation**
The first character of the CMASNAME= parameter as specified for EYU9XDUT was invalid. The first character must be one of the following: A?Z a?z @ $ or #.

**System action**
Data repository initialization terminates.

**User response**
Correct the parameter, then resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0610E**
EYUDREP KEYLEN must be (nnnnnnnnn). EYUDREP Init terminated.

**Explanation**
The EYUDREP relative key length was invalid.

**System action**
Data repository initialization terminates.

**User response**
Initialize EYUDREP with the IDCAMS utility, using KEYS(64,0), then resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0611I**
Error is terminating execution

**Explanation**
An error is causing the data repository initialization routine to terminate. One or more EYUXDnnnn messages issued before this one describe the error.
**System action**
Data repository initialization terminates.

**User response**
Follow the instructions associated with the EYUXDnnnnn messages issued to SYSPRINT.

**Module:**
EYU9XDUT

**Destination**
Console and SYSPRINT

**EYUXD0612E**  VSAM Error Processing
  EYUDREP Return Code=code
  Feedback=chars
  MACRO=macro
  Mode=mode.

**Explanation**
This message describes a VSAM error encountered during data repository processing.

**System action**
Data repository initialization terminates.

**User response**
Refer to the VSAM documentation for a description of the specified error and follow the instructions given there for correcting the problem. Once the problem has been corrected, resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0613E**  SYSID= cannot be binary zeroes.
  EYUDREP Init terminated.

**Explanation**
The SYSID= parameter specified for EYU9XDUT was invalid; it contained binary zeroes.

**System action**
Data repository initialization terminates.

**User response**
Correct the SYSID= parameter by specifying the 1-to 4-character CICS system ID of the CMAS, then resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0614E**  Invalid KEYWORD
  SYSID=status
  CMASNAME=status
  TIMEZONE=status
  ZONEOFFSET=status
  DAYLIGHT=status.
  EYUDREP Init terminated.

**Explanation**
One of the keywords specified for the EYU9XDUT repository initialization program was invalid, where status identifies the status of each keyword as:

- **ERR**  The keyword was in error or was not specified.
- **OK**  The keyword was correctly specified.

**System action**
Data repository initialization terminates.

**User response**
Correct the keywords in error, as follows:

- SYSID=
- CMASNAME=
- TIMEZONE=
- ZONEOFFSET=
- DAYLIGHT=

Then resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0615E**  Invalid KEYWORD
  WUINAME=status
  WUIPLEX=status
  WUISYSID=status
  WUIAPPLID=status.
  EYUDREP Init terminated.
Explanation
One of the keywords specified for the EYU9XDUT repository initialization program was invalid, where status identifies the status of each keyword as:

ERR
  The keyword was in error or not specified.

OK
  The keyword was correctly specified.

System action
Data repository initialization terminates.

User response
Correct the keywords in error, as follows:
- WUINAME=
- WUIPLEX=
- WUISYSID=
- WUIAPPLID=
Then resubmit the job.

Module:
EYU9XDUT

Destination
SYSPRINT

EYUXD0617I  Successful CPLEXDEF
CICSplex=CICSplex MP=mp
SYSID=sysid written to EYUDREP.

Explanation
The parameters are shown as they were specified in the EYU9XDUT repository initialization program, where:

CICSplex
  Identifies the CICSplex the maintenance point CMAS is to manage.

mp
  Refers to the maintenance point CMAS that manages the CICSplex.

sysid
  Is the CICS system ID of the maintenance point CMAS.

System action
The data repository (EYUDREP) is updated.

User response
None.

Module:
EYU9XDUT

Destination
SYSPRINT

EYUXD0618E  Invalid parm
length WUINAME=status
WUIPLEX=status
WUISYSID=status
WUIAPPLID=status EYUDREP Init terminated.

Explanation
The length of one of the parameters specified for the EYU9XDUT repository initialization program was invalid, where:

status
  Identifies the status of each parameter as:

ERR
  The parameter was in error.

OK
  The parameter was correctly specified.
**System action**
Data repository initialization terminates.

**User response**
Correct the length of the parameters in error, as follows:

**WUINAME=**
1- to 8-character name of the WUI.

**WUIPLEX=**
1- to 8-character name of the WUI CICSplex.

**WUISYSID=**
1- to 4-character CICS system ID of the WUI.

**WUIAPPLID=**
1- to 8-character APPLID of the WUI.

Then resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0619E**
Invalid parm data WUINAME=status WUIPLEX=status WUISYSID=status WUIAPPLID=status EYUDREP Init terminated.

**Explanation**
One of the parameters specified for the EYU9XDUT repository initialization program was invalid, where:

*status*
 Identifies the status of each parameter as:

**ERR**
The parameter was in error.

**OK**
The parameter was correctly specified.

**System action**
Data repository initialization terminates.

**User response**
Correct the parameters in error, as follows:

**WUINAME=**
1- to 8-character name of the WUI.

**WUIPLEX=**
1- to 8-character name of the WUI CICSplex.

**WUISYSID=**
1- to 4-character CICS system ID of the WUI.

**WUIAPPLID=**
1- to 8-character APPLID of the WUI.

Then resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0620E**
WUINAME=xxxxxxx 1st position invalid. EYUDREP Init terminated.

**Explanation**
The first character of the WUINAME= parameter as specified for EYU9XDUT was invalid. The first character must be one of the following: A?Z a?z @ $ or #.

**System action**
Data repository initialization terminates.

**User response**
Correct the parameter, then resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT

**EYUXD0621E**
WUIPLEX=xxxxxxx 1st position invalid. EYUDREP Init terminated.

**Explanation**
The first character of the WUIPLEX= parameter as specified for EYU9XDUT was invalid. The first character must be one of the following: A?Z a?z @ $ or #.

**System action**
Data repository initialization terminates.

**User response**
Correct the parameter, then resubmit the job.

**Module:**
EYU9XDUT

**Destination**
SYSPRINT
**EYUXD0622E**  
WUIAPPLID=xxxxxxx 1st position invalid. EYUDREP Init terminated.

**Explanation**  
The first character of the WUIAPPLID = parameter as specified for EYU9XDUT was invalid. The first character must be one of the following: A?Z a?z @ $ or #.

**System action**  
Data repository initialization terminates.

**User response**  
Correct the parameter, then resubmit the job.

**Module:**  
EYU9XDUT

**Destination**  
SYSPRINT

**EYUXD0624E**  
WUISYSID= cannot be binary zeroes. EYUDREP Init terminated.

**Explanation**  
The WUISYSID= parameter specified for EYU9XDUT was invalid; it contained binary zeroes.

**System action**  
Data repository initialization terminates.

**User response**  
Correct the WUISYSID= parameter by specifying the 1 to 4 character CICS system ID of the WUI, then resubmit the job.

**Module:**  
EYU9XDUT

**Destination**  
SYSPRINT

**EYUXD0625E**  
Parameters XXXX and XXXX must be set to different values. EYUDREP Init terminated.

**Explanation**  
Two parameters as specified for EYU9XDUT were set to the same value. The values must be different.

**System action**  
Data repository initialization terminates.

**User response**  
Ensure different values are specified for these parameters, then resubmit the job.

**Module:**  
EYU9XDUT

**Destination**  
SYSPRINT

**EYUXD0626E**  
Invalid EYUXDPRM found. EYUDREP Init terminated.

**Explanation**  
Invalid parameters were entered for EYUXDPRM. Valid parameters are WUINAME, WUIPLEX, WUISYSID, and WUIAPPLID.

**System action**  
Data repository initialization terminates.

**User response**  
Enter valid parameters for EYUXDPRM, then resubmit the job.

**Module:**  
EYU9XDUT

**Destination**  
SYSPRINT

**EYUXD0627E**  
EYUXDPRM could not be opened. EYUDREP Init terminated.

**Explanation**  
The EYUXDPRM job stream could not be read.

**System action**  
Data repository initialization terminates.

**User response**  
Ensure EYUXDPRM is specified correctly, then resubmit the job.

**Module:**  
EYU9XDUT
Destination
SYSPRINT

**EYUXD0628E**  EYUXDPRM DD Statement must be specified

**Explanation**
The EYUXDPRM DD statement for EYU9XDUT parameters was missing or invalid.

**System action**
Data repository initialization terminates.

**User response**
Make sure a valid EYUXDPRM DD statement is included in the data repository initialization JCL. It is required when PARM=('TARGETVER=xxxx') is not specified as input. That is, the EYUXDPRM DD statement is required when you are initializing a data repository but not when you are migrating a data repository.

**Module:**  EYU9XDUT

Destination
SYSPRINT

**EYUXD0700E**  Invalid TARGETVER= value, Four numeric characters are required.

**Explanation**
The TARGETVER= parameter specified for the EYU9XDUT repository initialization program was invalid. The TARGETVER= value must be a numeric that represents a version of CICSPlex SM. For example, TARGETVER=0230 represents CICSPlex SM for Version 5.6.

**System action**
The data repository is not converted.

**User response**
Correct the TARGETVER= parameter, then resubmit the job.

**Module:**  EYU9XDUT

Destination
SYSPRINT

**EYUXD0701E**  VSAM Error Processing

**SYUDREP Return Code=**code
**Feedback=**chars
**MACRO=**macro.

**Explanation**
This message describes a VSAM error encountered during the data repository conversion process.

**System action**
The data repository conversion process terminates.

**User response**
Refer to the VSAM documentation for a description of the specified error and follow the instructions given there for correcting the problem. Then resubmit this job.

**Module:**  EYU9XDU1

Destination
SYSPRINT

**EYUXD0702I**  Repository successfully converted.

**Explanation**
The EYU9XDUT repository initialization program successfully converted the data repository to the version of CICSPlex SM specified by the TARGETVER= parameter.

**System action**
None.

**User response**
None.

**Module:**  EYU9XDU1

Destination
SYSPRINT

**EYUXD0703E**  Internal conversion error.

**Explanation**
The EYU9XDUT repository initialization program encountered a problem while attempting to convert the data repository to a new version of CICSPlex SM.
System action
The data repository conversion process terminates with a 2048 abend. A system dump is produced.

User response
Collect the dump output and contact your IBM Support Center.

Module:
EYU9XDU1

Destination
SYSPRINT

EYUXD0704E DDNAME NEWREP key length incompatible with target version.

Explanation
While attempting to convert the data repository, the EYU9XDUT utility determined that the target data repository specified in the NEWREP DD statement has a key length that is incompatible with the version of CICSPlex SM specified in the TARGETVER parameter.

System action
The EYU9XDUT utility terminates.

User response
Verify that the desired CICSPlex SM version is specified in the TARGETVER parameter. If it is, verify that the correct data set is specified on the NEWREP DD statement and that the data set is defined with the appropriate key length for the target version. Refer to the Installing CICS TS manual for key length information.

Module:
EYU9XDU1

Destination
SYSPRINT

EYUXD0705E DDNAME EYUDREP record nnnnn length incompatible with target repository.

Explanation
While attempting to convert the data repository, the EYU9XDUT utility encountered a record whose length, after conversion, would exceed the maximum record length for the target data repository, where nnnnn is the number of the record.

System action
The specified record is not updated or added to the target data repository. The EYU9XDUT utility continues processing.

User response
Ensure that the attributes of the target data repository are correct for version of CICSPlex SM specified in the TARGETVER parameter. Refer to the Installing CICS TS manual for sample JCL containing the appropriate DEFINE CLUSTER information.

Module:
EYU9XDU1

Destination
SYSPRINT

EYUXD0706W DDNAME NEWREP nnnnn records were bypassed.

Explanation
While attempting to convert the data repository, the EYU9XDUT utility encountered some records that will not be written to the new target data repository, where nnnnn is the number of the record(s) bypassed.

System action
The bypassed record(s) are not added to the new target data repository. The EYU9XDUT utility continues processing with a return code of 4. The bypassed records are not correct for the version of CICSPlex SM specified in the TARGETVER parameter and have been printed to the //BYPASS DD statement.

User response
This may not be a problem situation. If you suspect an error has occurred collect your EYUDREP and NEWREP data repositories, the job log output from the EYU9XDUT batch utility, and contact your IBM support center.

Note: If you specify a TARGETVER that is less than the VERSION of your current EYUDREP, records may be bypassed because they are not supported on the lower level of CICSPlex SM as specified by the TARGETVER parameter. In this case the message is normal and can be expected. In other cases it is not and should be investigated.

Module:
EYU9XDU1
**Destination**
SYSPRINT

**EYUXD0707E** BYPASS DD statement must be specified. TARGETVER BYPASS DD statement must be specified. TARGETVER init terminated.

**Explanation**
The BYPASS DD statement for the CMAS data repository was missing or invalid.

**System action**
Data repository initialization terminates.

**User response**
Make sure a valid BYPASS DD statement is included in the data repository initialization JCL. It is required when PARM=('TARGETVER=xxxx') is specified as input.

**Module:**
EYU9XDU1

**Destination**
SYSPRINT

**EYUXD0708I** CRESxxxx resource table nnnnn records not converted.

**Explanation**
CRESxxxx is a CICSPlex SM topology manager object that describes instances of a resource within a CICS system. They will not be converted by the EYU9XDU1 batch utility. These object types will be recreated when a MAS joins to the CMAS. CRESxxxx resource descriptions can be found in the System programming reference.

**System action**
Data repository initialization continues.

**User response**
None

**Module:**
EYU9XDU1

**Destination**
SYSPRINT

**EYUXD0709E** The TARGETVER value (xxxx) is greater than the CICSPlex SM version of EYU9XDU1 (yyyy)

**Explanation**
To ensure that the data repository conversion works properly, it is required that the value provided on the PARM=('TARGETVER=xxxx') statement cannot be greater than the version of EYU9XDU1 being loaded from the SEYUAUTH data set.

**System action**
Data repository initialization terminates.

**User response**
Ensure that your STEPLIB DD statement is referencing the correct SEYUAUTH data set.

**Module:**
EYU9XDU1

**Destination**
SYSPRINT

**EYUXD0710E** The CICSPlex SM version of the EYUDREP (xxxx) is greater than the CICSPlex SM version of EYU9XDU1 (yyyy)

**Explanation**
To ensure that the data repository conversion works properly, it is required that the version of the EYUDREP (data repository) cannot be greater than the version of EYU9XDU1 being loaded from the SEYUAUTH data set.

**System action**
Data repository initialization terminates.

**User response**
Ensure that your STEPLIB and EYUDREP DD statements are correct.

**Module:**
EYU9XDU1

**Destination**
SYSPRINT

**EYUXD0711E** TARGETVER value (xxxx) is not a valid CICSPlex SM version.
Explanation
An invalid value was entered on the TARGETVER=xxxx parameter. The value given is not a valid CICSPlex SM version.

System action
Data repository initialization terminates.

User response
Ensure that your PARM=(TARGETVER=xxxx) specifies a valid CICSPlex SM version.

Module:
EYU9XDU1

Destination
SYSPRINT

EYUXD0712E NEWREP contains at least one(1) record. Data Repository conversion terminated.

Explanation
The NEWREP DD statement references a data set that is not empty. This data set must be empty before the EYUDREP can be migrated to it.

System action
Data repository initialization terminates.

User response
Ensure that your NEWREP DD statement references an empty data set.

Module:
EYU9XDU1

Destination
SYSPRINT

EYUXD0714I DDNAME NEWREP Switched to DIRECT update after nnnnnn records were written.

Explanation
During CICSPlex SM data repository conversion a record key was modified requiring a switch from SEQUENTIAL to DIRECT updating of the new data repository. This may result in an increase in the time required to complete the repository conversion.

System action
Processing continues.

User response
None.

Module:
EYU9XDU1

Destination
SYSPRINT

EYUXD0716W The data repository may be incomplete for CICSPlex (cicsplex).

Explanation
While this data repository was being upgraded from an earlier release, it was found that one or more resources for a CICSPlex were dropped because the resource type did not exist at the earlier release, where:

cicsplex is the name of the affected CICSPlex.

System action
The error is noted internally, and EYU9XDUT conversion continues. When conversion is complete, if no more serious errors were found, a return code of 4 is issued.

User response
Restart this CMAS with the upgraded data repository. Before any MAS connects to this CMAS, it must connect to the maintenance point CMAS. This results in this CMAS performing repository synchronization with the maintenance point CMAS. Because the utility has noted that this CMAS's repository is incomplete for this CICSPlex, the maintenance point CMAS delivers the required missing records to this CMAS as part of the repository synchronization process. If the delivery is successful, this CMAS issues message EYUXD0038I. If the delivery is not successful, the CICSPlex is removed and then re-added to this CMAS's repository.

Module:
EYU9XDU1

Destination
SYSPRINT

EYUXD0717E The CPSM version of EYU9XDUT (xxxx) must match the version

Explanation
CICSPlex TS for z/OS: CICSPlex SM Messages and Codes
of the EYUDREP (yyyy) or the
TARGETVER (zzzz)

**Explanation**

To ensure that the data repository conversion works properly, you must ensure that the version of EYU9XDUT that is being loaded from the SEYUAUTH data set matches the version of the data repository (EYUDREP) or the value provided on the PARM=('TARGETVER=zzzz') statement.

**System action**

Data repository conversion terminates.

**User response**

Ensure that your STEPLIB DD statement is referencing the correct SEYUAUTH data set.

**Module:**

EYU9XDU1

**Destination**

SYSPRINT

**EYUXD0718E**

EYUDREP does not contain a CMASDEF record. The upgrade process has been terminated.

**Explanation**

When using EYU9XDUT to upgrade the data repository for a CMAS to the release that matches the version of EYU9XDUT, the CMASDEF record could not be found in the EYUDREP file.

**System action**

Data repository upgrade processing terminates unsuccessfully.

**User response**

The current EYUDREP file is corrupt. Restore it from a back up file and rerun the data repository upgrade.

**Module:**

EYU9XDU1

**Destination**

SYSPRINT

**EYUXD0719I**

Non maintenance point CICSpex nnnnn records not converted.

**Explanation**

When using EYU9XDUT to upgrade the data repository for a CMAS to the release that matches the version of EYU9XDUT, records relating to CICSplices for which the CMAS is not the maintenance point (MP) CMAS are not written to the new EYUDREP file, NEWREP, created by EYU9XDUT. The records will be written to the new EYUDREP file when the CMAS first connects to the MP CMAS after the upgrade.

**System action**

Data repository initialization continues.

**User response**

None

**Module:**

EYU9XDU1

**Destination**

SYSPRINT

**EYUXD0720E**

EYU9XDU1 MP plex list getmain/ freemain failed. The upgrade process has been terminated.

**Explanation**

When using EYU9XDUT to upgrade the data repository for a CMAS to the release that matches the version of EYU9XDUT, a getmain or freemain request failed.

**System action**

Data repository upgrade processing terminates unsuccessfully.

**User response**

If the error occurred with getmain, increase the region size associated with the data repository upgrade job and rerun. If the problem persists, or if the error occurred with freemain, look for error messages associated with the failed getmain or freemain in the joblog to see if the problem can be determined and resolved. If not, collect the complete job output, along with a copy of the EYUDREP file, and contact your IBM Support center, providing the collected documentation.

**Module:**

EYU9XDU1

**Explanation**
A CMAS attempt to communicate with the Environment Services System Services (ESSS) address space on behalf of the API failed, where:

**userid**
Identifies the API user. This ID was either supplied by the user on a CONNECT command or determined by CICSPlex SM based on the operating environment.

**action**
Indicates that the user was either signed on or signed off, depending on which EXEC CPSM command was issued.
System action
API processing continues.

User response
None. This message may be suppressed by setting the CMAS CICSPlex SM system parameter APISIGNMSG(NO).

applid
API User(userid) has failed to {signoff | signon} from
{Jobname | MASname}(ins#4) {Asid
| CICSplex}(ins#6).

Explanation
An application programming interface (API) user issued either an EXEC CPSM CONNECT or DISCONNECT command, but the command failed, where:

userid
Identifies the API user. This ID was either supplied by the user on a CONNECT command or determined by CICSPlex SM based on the operating environment.

action
Indicates that the user could not either sign on or sign off, depending on which EXEC CPSM command was issued.

System action
API processing continues. A user trace record is written to the CICS trace data set.

User response
Make sure the CONNECT or DISCONNECT command was correctly specified. If it was and the problem persists, collect the exception trace records and the job log and contact your IBM Support Center.

CPSM resources will remain outstanding for API User(userid) due to resource release failures.
**Explanation**
As part of its disconnection process, the API attempted to release resources that had been allocated for its use. However, the attempt was not completely successful, where:

**userid**
Identifies the API user with which the resources were associated. This ID was either supplied by the user on a CONNECT command or determined by CICSPlex SM based on the operating environment.

**System action**
The API user is signed off. However, some of the resources associated with that user's API thread remain allocated. A user trace record is written to the CICS trace data set.

**User response**
Collect the exception trace records and the job log and contact your IBM Support Center.

**EYUXD0912E** Error code nn supplied in feedback information not recognized

**Explanation**
Feedback information supplied error code nn which was not recognized.

**System action**
The batched repository update utility abnormally terminates.

**User response**
Examine the job log for messages issued earlier which might indicate the reason for the failure. Also examine the job log for the CMAS. Examine any dumps and traces which have been produced, including those produced by the CMAS. If no reason for the failure can be found, collect the job log and trace for the CMAS, and the job log and dump for the batched repository update utility. Contact your IBM Support Center.

**Module:** EYU9XDBC

---

**Destination**
Console and SYSPRINT

**EYUXD0913E** Feedback information contained error code nn - feedback text

**Explanation**
An attempt by the batched repository update utility to submit a batched repository update in the CMAS failed. The reason for the failure is described by feedback text and is one of the following:

- **Duplicate request for this input data set and member**
  The batched repository update job could not be submitted because there was already a batched repository update in progress in the CMAS for the same input data set name and input data set member.

- **Failure to obtain storage for job**
  There was insufficient storage in the CMAS to run the batched repository update.

- **Failure during print processing**
  The batched repository update could not run because an error occurred during spooled print output processing in the CMAS.
**Security violation with input data set**
The batched repository update job could not run because the userid for the batched repository update utility was not authorized for access to the input data set.

**Spool found to be not available**
The batched repository update job could not run because spooled print output was not available in the CMAS.

**Input data set not found**
The batched repository update could not run in the CMAS because the input data set was not be found.

**Security violation with output data set**
The batched repository update job could not run because the userid for the batched repository update utility was not authorized for access to the output data set.

**System action**
The batched repository update utility terminates.

**User response**
Correct the cause of the error that prevents the batched repository update from being submitted and rerun the batched repository update utility.

**Module:** EYU9XDBC

**Destination**
Console and SYSPRINT

**EYUXD0914E** Invalid input parameter

**Explanation**
An invalid input parameter for the batched repository update utility was detected.

**System action**
The batched repository update utility terminates without submitting a batched repository update to run in a CMAS.

**User response**
Correct the input parameter and rerun the batched repository update utility. Consult the Administering CICSPlex SM manual for a description of the input parameters.

**Module:** EYU9XDBC

**Destination**
Console and SYSPRINT

**EYUXD0916E** Run type is not specified

**Explanation**
A run type input parameter for the batched repository update utility is required but has not been specified.

**System action**
The batched repository update utility terminates without submitting a batched repository update to run in a CMAS.

**User response**
Supply the correct input parameter and rerun the batch repository update utility. Consult the Administering CICSPlex SM manual for a description of the input parameters.

**Module:** EYU9XDBC

Chapter 2. CICSPlex SM messages

EYUXEnnnn messages

**EYUXE0001I**  CPSM subsystem (EYUX) initialization complete

**Explanation**
The CICSPlex SM address space (CMAS) startup program, EYU9XECs, has completed initialization of the CICSPlex SM MVS subsystem entry, which is called EYUX. The CICSPlex SM subsystem entry is only created the first time a CMAS is started after an IPL. Subsequent CMAS startups verify the existence of the subsystem entry for the required release of CICSPlex SM.

**System action**
CMAS initialization continues.

**User response**
None.

**Module:** EYU9XECs

**Destination**
Console and SYSPRINT

**EYUXE0002I**  CICSPlex SM Service Address Space active

**Explanation**
This message confirms the existence of the Environment Services System Services (ESSS) address space. The first CICSPlex SM address space (CMAS) to start after an IPL creates the ESSS address space. All subsequent CMAS startups verify that the address space is active. If the address space exists but is not active, the CMAS currently being started must restart it.

**System action**
CMAS initialization continues.

**User response**
None.

**Module:** EYU9XECs

**Destination**
Console and SYSPRINT

**EYUXE0003I**  End of Task entered for CICSPlex SM relnum

**Explanation**
The CICSPlex SM subsystem end of task routine, EYU9XEET, was entered due to the abnormal termination of a CICSPlex SM address space, where:

- **relnum** Identifies the release of CICSPlex SM that was affected.

**System action**
CICSPlex SM releases all its environment dependencies in the Environment Services System Services (ESSS) address space.

**User response**
Examine the exception trace records, and any messages issued before this one, to determine the cause of the abnormal termination.

**Module:** EYU9XEET

**Destination**
Console and SYSPRINT

**EYUXE0004E**  CPSM subsystem (EYUX) not found

**Explanation**
The Environment Services System Services (ESSS) utility program, EYU9XEUT, was invoked, but no CICSPlex SM MVS subsystem could be found. EYUX is the name of the subsystem that EYU9XEUT expected to find. At least one CICSPlex SM address space (CMAS) must be running for the CICSPlex SM subsystem to exist.

**System action**
The ESSS utility program terminates.

**User response**
Make sure there is a CMAS running and then restart the ESSS utility program.

**Module:** EYU9XEUT
**Destination**
Console and SYSPRINT

**EYUXE0005E**  Invalid ESSS function request

**Explanation**
An invalid Environment Services System Services (ESSS) utility function was requested. The valid functions are:

- DUMP
- RELOAD

**System action**
The ESSS utility program terminates.

**User response**
Check the SYSIN statement on the utility program JCL and specify a valid function.

**Module:**
EYU9XEUT

**Destination**
Console and SYSPRINT

**EYUXE0006E**  Invalid CICSPlex SM version request

**Explanation**
An Environment Services System Services (ESSS) utility function was requested for an invalid version of CICSPlex SM.

**System action**
The ESSS utility program terminates.

**User response**
Check the version specified on the ESSS utility request and make sure it is a valid version of CICSPlex SM running at your site.

**Module:**
EYU9XEUT

**Destination**
Console and SYSPRINT

**EYUXE0008E**  Invalid ESSS function request options

**Explanation**
An Environment Services System Services (ESSS) utility request contained invalid options.

**System action**
The ESSS utility program terminates.

**User response**
Refer to the Troubleshooting CICSPlex SM manual for a list of valid ESSS utility request options.

**Module:**
EYU9XEUT

**Destination**
Console and SYSPRINT

**EYUXE0009E**  Invalid ESSS request syntax

**Explanation**
The syntax of an Environment Services System Services (ESSS) utility request was invalid.

**System action**
The ESSS utility program terminates.
User response
Refer to the Troubleshooting CICSPlex SM manual for the correct syntax of ESSS utility requests.

Module:
EYU9XEUT

Destination
Console and SYSPRINT

**EYUXE0010E**  CICSPlex SM version required

Explanation
The Environment Services System Services (ESSS) utility request that was made requires a specific version of CICSPlex SM.

System action
The ESSS utility program terminates.

User response
Check the ESSS utility program JCL and add the VERSION keyword to the appropriate utility request. Refer to the Troubleshooting CICSPlex SM manual for the correct syntax of ESSS utility requests.

Module:
EYU9XEUT

Destination
Console and SYSPRINT

**EYUXE0011E**  Program name is not APF authorized.

Explanation
The specified program should be in an APF-authorized library, but is not, where:

*name*
Identifies the program as one of the following:

- **EYU9XECS**
  The CICSPlex SM address space (CMAS) startup program

- **EYU9XEUT**
  The Environment Services System Services (ESSS) utility program

Be aware that the specified program may be in an APF-authorized library, but if that library is in a STEPLIB concatenation with other libraries that are not APF-authorized, it becomes unauthorized.

System action
The ESSS utility program terminates.

User response
Make sure the specified program, and all other libraries in the STEPLIB concatenation, are APF-authorized. Then, restart the job.

Module:
EYU9XECS, EYU9XEUT

Destination
Console and SYSPRINT

**EYUXE0012E**  dsname data set not opened

Explanation
One of the following data sets could not be opened by the Environment Services System Services (ESSS) utility program:

- SYSIN DD
- UTILPRINT DD
- UTILLIB DD

System action
The ESSS utility program terminates.

User response
Determine the cause of the OPEN error and then restart the utility program.

Module:
EYU9XEUT

Destination
Console and SYSPRINT

**EYUXE0013E**  BLDL error has occurred

Explanation
An error occurred while attempting to issue a BLDL for a module in the UTILLIB data set, while executing the EYU9XEUT utility or during CMAS initialization.

System action
The ESSS utility program or CMAS initialization terminates, depending on which environment produced the error.
User response
Determine the cause of the BLDL error and then restart the utility program or the CMAS, depending on which environment produced the error.

Module:
EYU9XEUT, EYU9XECS

Destination
Console and SYSPRINT

EYUXE0014E  modname module not found

Explanation
The specified module could not be located in the UTILLIB data set if executing utility program EYU9XEUT, or the specified module could not be located in the MVS linklist or LPALIB if this message was issued during CMAS initialization.

System action
The ESSS utility program or CMAS initialization terminates, depending on which environment produced the error.

User response
Place the module in the UTILLIB data set and then restart the utility program if running EYU9XEUT, or ensure that the module is in the MVS linklist or LPALIB if the message was issued during CMAS initialization.

Module:
EYU9XEUT, EYU9XECS

Destination
Console and SYSPRINT

EYUXE0015E  modname module not executable

Explanation
The specified module is in a nonexecutable format.

System action
The ESSS utility program or CMAS initialization terminates, depending on which environment produced the error.

User response
Determine the reason for the module being nonexecutable and then restart the utility program, or restart the CMAS, depending on which environment produced the error message.

Module:
EYU9XEUT, EYU9XECS

Destination
Console and SYSPRINT

EYUXE0016E  type GETMAIN failure

Explanation
A GETMAIN for the specified type of storage has failed, where:

  type

  Identifies the type of storage that could not be obtained as CSA, DSA, or ECSA.

System action
The ESSS utility program or CMAS initialization terminates, depending on which environment produced the error.

User response
Increase the appropriate region size and then restart the utility program, or restart the CMAS, depending on which environment produced the error.

Module:
EYU9XEUT, EYU9XECS

Destination
Console and SYSPRINT

EYUXE0017E  Module modname cannot be loaded

Explanation
An attempt to load the specified module has failed.

System action
The ESSS utility program or CMAS initialization terminates, depending on which environment produced the error.

User response
Determine the reason for the LOAD failure and then restart the utility program, or restart the CMAS, depending on which environment produced the error.

Module:
EYU9XEUT, EYU9XECS
**Destination**
Console and SYSPRINT

**EYUXE0019E**  ESSS PC REPLACE request failed

**Explanation**
An attempt to update the CICSPlex SM program call routines in the ESSS service address space has failed.

**System action**
System continues to run using existing PC routines.

**User response**
Attempt to rerun the EYU9XEUT utility, if the problem persists contact IBM service.

**Module:**
EYU9XEUT

---

**Destination**
Console and SYSPRINT

**EYUXE0020E**  ESSS IDENTIFY Failed Return code = X'code'

**Explanation**
The CICSPlex SM address space (CMAS) startup program, EYU9XECS, received a nonzero return code while attempting to identify itself to the Environment Services System Services (ESSS) address space, where:

- `code` is the hexadecimal return code.

**System action**
CMAS initialization terminates.

**User response**
Use the DUMP option of the ESSS utility program, EYU9XEUT, to obtain a report on the data structures in the ESSS address space. Then, contact your IBM Support Center.

**Module:**
EYU9XEUT

---

**Destination**
Console and SYSPRINT

**EYUXE0022E**  ESSS not active

**Explanation**
The Environment Services System Services (ESSS) utility JCL included a request for a release of CICSPlex SM that is not currently active.

**System action**
The ESSS utility program terminates.

**User response**
Check the ESSS utility program JCL and specify a valid VERSION keyword. Then, restart the utility program.

**Module:**
EYU9XEUT

---

**Destination**
Console and SYSPRINT

**EYUXE0023E**  ESSS address space not created - reason

**Explanation**
The Environment Services System Services (ESSS) address space could not be created, where:

- `reason` indicates one of the following errors:
  - Invalid return code from EYU9X560
  - EYUXTEPC cannot be loaded
  - Getmain for region storage failed
  - Getmain for common storage failed
• ESSS control block build failed
• EYUX560 address space abended
• ESSS initialization timed-out
• EYU9X560 cannot be loaded

This message will be followed by message EYUXE0045I providing additional service information.

**System action**
A dump is taken of the ESSS address space. For the EYUX560 address space abended error, the title of the dump is EYU9X560 . SYSTEM . FAILURE. For all other errors the dump title is EYU9X560 . CREATE . FAIL . DUMP. The creating CMAS issues this message and then terminates.

**User response**
Make sure the ESSS initialization routine, EYU9X560, resides in one of the following places:
- An authorized library in LINKLIB
- The extended link pack area (ELPA)

Then, restart the CMAS startup program.

Determine the cause of the error from the message insert. Depending upon the message, you may be able to correct the error:

**EYUTXEPC cannot be loaded**
Ensure that EYUTXEPC is in a data set allocated to the SEYUAUTH file in the CMAS, then restart the CMAS.

**Getmain for region storage failed**
Ensure that any IEFUSI exit in place allows the EYUX560 address space to allocate at least 32 MB of storage above the 16 MB line, then restart the CMAS.

**Getmain for common storage failed**
Ensure that at least 8 KB of contiguous ECSA storage (SP241 above the 16 MB line) is available, then restart the CMAS.

**ESSS initialization timed-out**
Restart the CMAS as the ESSS may be available by the time that the CMAS restart occurs or the system events that caused the ESSS startup delay may have passed.

If the error cannot be rectified as specified above, and for all other messages, collect the dump, the CMAS job output, and the system log from the time of the error, and contact your IBM support center.

**Module:**
EYU9XECS

---

**Destination**
Console and SYSPRINT

**EYUXE0024E**  **ESSS release limit exceeded**

**Explanation**
The maximum number of different CICSPlex SM releases allowed in a system at one time has been reached.

**System action**
The CICSPlex SM address space (CMAS) startup program, EYU9XECS is terminated.

**User response**
Remove at least one previous release of CICSPlex SM from your system. Then, restart the CMAS startup program.

**Module:**
EYU9XECS

**Destination**
Console and SYSPRINT

**EYUXE0025E**  **ESSS and PC Routines Mismatch Encountered.**

**Explanation**
During CMAS initialization, the Environment Services System Services (ESSS) IDENTIFY function determined that the generation dates of the ESSS address space code and the program call (PC) routines it uses were not the same.

**System action**
A dump is taken of the ESSS address space. The title of the dump is EYU9X560 . CREATE . FAIL . DUMP. The creating CMAS issues this message and then terminates.

Message EYUXE0046E is issued by the ESSS address space to the z/OS console providing more information about the generation dates of the modules and their service levels.

**User response**
Verify the following:
- You have the latest versions of modules EYU9X560 and EYUTXEPC.
• The library containing module EYU9X560 resides in the linklist.

Issue the MVS command **F LLA,REFRESH** to refresh the LNKLST LOOKASIDE address space (LLA). Then try to restart a CMAS. If this problem reoccurs, you must reIPL the system.

**Module:**
EYU9XECs

**Destination**
Console and SYSPRINT

**EYUXE0026I**  **EYU9XECs Recovery Routine**

**Explanation**
The CICSPlex SM address space (CMAS) startup recovery routine has been entered due to an abnormal termination of the startup program, EYU9XECs.

**System action**
CICSPlex SM attempts to recover from the abend and obtain an SVC dump.

**User response**
Examine the SVC dump, if available, and any messages issued prior to this one, to determine the cause of the abnormal termination.

**Module:**
EYU9XECs

**Destination**
Console and SYSPRINT

**EYUXE0027W**  **Lock recovery failed - reason**

**Explanation**
CICSPlex SM uses its own logical lock scheme to serialize access to its shared resources. During CICSPlex SM address space (CMAS) or managed application system (MAS) termination, the MVS end-of-task routine provided by CICSPlex SM invokes a lock recovery PC routine to:

• Release control of any held locks
• Remove the CMAS or MAS from any queues on which it is waiting for control of locks.

This lock recovery routine has failed for one of the following reasons:

1. Insufficient storage for work area There was insufficient storage for a local work area required by the PC routine.
2. Parameter list not addressable The parameter list passed as input to the PC routine was in storage that could not be addressed.
3. Invalid parameter(s) One or more invalid parameters were found in the parameter list passed as input to the PC routine.
4. Abnormal termination An abnormal termination was interrupted by the PC routine.

**System action**
The impact on system processing depends on the reason for the failure:

1. The PC routine is unable to fulfill any of its responsibilities. This may result in errors in associated address spaces (that is, MASs associated with a CMAS or the CMAS associated with a MAS). It may also make it impossible to restart the terminating address space without first terminating all associated address spaces.
2. The PC routine is unable to fulfill any of its responsibilities. This may result in errors in associated address spaces (that is, MASs associated with a CMAS or the CMAS associated with a MAS). It may also make it impossible to restart the terminating address space without first terminating all associated address spaces.
3. The PC routine is unable to fulfill any of its responsibilities. This may result in errors in associated address spaces (that is, MASs associated with a CMAS or the CMAS associated with a MAS). It may also make it impossible to restart the terminating address space without first terminating all associated address spaces.
4. The PC routine may have managed to partially fulfill its responsibilities before encountering the abnormal termination. Therefore, the result of the error cannot be predicted. Before returning control to the end-of-task exit, an attempt is made to obtain an SVC dump and a software error recording request is made to the MVS LOGREC facility.

**User response**
The appropriate response depends on the reason for the failure:

1. Terminate all address spaces associated with the terminating address space. Then, restart all the address spaces. If the problem persists, contact your IBM Support Center.
2. Terminate all address spaces associated with the terminating address space. Then, restart all the address spaces. If the problem persists, contact your IBM Support Center.

3. Terminate all address spaces associated with the terminating address space. Then, restart all the address spaces. If the problem persists, contact your IBM Support Center.

4. Collect the following information and contact your IBM Support Center:
   - The SVC dump, if one was obtained
   - The job log, and
   - The record written to the SYS1.LOGREC data set

**Module:**
EYU9XEET

**Destination**
Console and SYSPRINT

**EYUXE0028I** End of Memory entered for CICSPlex SM relnum, JOB jobname
Return code = X'code'

**Explanation**
The CICSPlex SM subsystem end of memory routine, EYU9XEEM, was entered due to an abnormal termination of a CICSPlex SM address space, where:

*relnum*  Identifies the release of CICSPlex SM that was affected.

*jobname*  Is the name of the address space that terminated.

*code*  Is the hexadecimal return code.

**System action**
CICSPlex SM releases all its environment dependencies in the Environment Services System Services (ESSS) address space.

**User response**
Examine the exception trace records, and any messages issued before this one, to determine the cause of the abnormal termination.

**Module:**
EYU9XEEM

**Destination**
Console and SYSPRINT

**EYUXE0029E** ESSS connection termination failed: Return Code = X'code'

**Explanation**
The CICSPlex SM subsystem end of task routine, EYU9XEET, could not terminate the connection between a CMAS or MAS and the Environment Services System Services (ESSS) address space, where:

*code*  Is the hexadecimal return code.

**System action**
End of task processing continues. However, some dependencies still exist between the CMAS or MAS and the ESSS address space.

**User response**
Use the DUMP option of the ESSS utility program, EYU9XEUT, to dump the data structures in the ESSS address space. Collect the dump output and contact your IBM Support Center.

**Module:**
EYU9XEET

**Destination**
Console and SYSPRINT

**EYUXE0030E** Insufficient storage for Subsystem function routing

**Explanation**
The CICSPlex SM subsystem preprocessor routine (EYU9XEER) attempted to create a work area for end of task or end of memory processing, but there was not enough storage available. The routine requires approximately 100 bytes above the 16Mb line.

**System action**
The subsystem preprocessor routine terminates. No CICSPlex SM-related end of task or end of memory processing occurs.

**User response**
Increase the appropriate region size.

**Module:**
EYU9XEER

**Destination**
Console and SYSPRINT
**EYUXE0031E**  
**Function** *funcname* **not performed:**  
MASs are active

**Explanation**
The TERMINATE or REPLACE request cannot be processed because of active CICSPlex SM MASs.

**System action**
EYU9XEUT utility terminates.

**User response**
Ensure that the CICSPlex SM function in MAS regions is shut down before rerunning EYU9XEUT.

---

**EYUXE0032E**  
CICSPlex SM *relnum* Service Address Space Dump termination requested. Reply Y when a Dump Data set is available.

**Explanation**
The program call (PC) routines detected possible corruption in the internal data structures of the Environment Services System Services (ESSS) address space, where:

*relnum*
Identifies the release of CICSPlex SM that was affected.

**System action**
This message remains on the console until a reply is received.

Once a reply of Y is received, a system dump is taken and the ESSS address space terminates. Any CMAS or MAS that was connected to the ESSS address space also abends as a result of ESSS not being available. Additional messages related to CMAS or MAS abends may be issued to the console.

**User response**
Make sure a system dump data set is available and then issue a reply of Y to this message. Collect the dump output and contact your IBM Support Center.

---

**EYUXE0033E**  
ESSS Shutdown detected: CMAS startup terminated

**Explanation**
During CMAS initialization, CICSPlex SM detected that the ESSS service address space is being shutdown.

**System action**
The CMAS startup is terminated and the CICS job ends.

**User response**
Wait until ESSS shutdown completes and restart the CMAS

---

**EYUXE0034E**  
Invalid Version Detected for *module*, found *version*, expected *version*

**Explanation**
This message is issued during CMAS startup while loading the specified module in preparation for initializing or restarting the ESSS address space.

The CICSPlex SM version of the module does not match the version of EYU9XECS. The possible values for *module* are:

- EYU9XEEM (End Of Memory Exit)
- EYU9XEET (End Of Task Exit)
- EYUTXEPCE (ESSS PC routines)

**System action**
CMAS startup fails, the ESSS address space is not created.
User response
Ensure that the named module at the proper version is in a load library which is first in the concatenation of the following search order:

1. steplib/joblib
2. link list
3. LPA
then restart the CMAS.

Module: EYU9XECS

Destination
Console

EYUXE0035W Site security user exit program, EYU9XESV, not found

Explanation
The security exit program could not be found.

System action
The system continues and uses the default security validation processing.

User response
Ensure EYU9XESV is in a library in the CMAS STEPLIB concatenation if you have written a security validation exit.

Module: EYU9XECS

Destination
Console and SYSPRINT

EYUXE0036E Address Space Create program failed - R15=’x’xxxxxx '

Explanation
When attempting to create the EYUX560 address space the CMAS’s LINK to the address space create program ended with the specified non-zero return code in general register 15.

System action
A dump is taken of the CMAS address space. The title of the dump is EYU9XECS.AS.CREATE.FAIL.DUMP. The CMAS then issues this message and terminates.

User response
Collect the dump, the CMAS job output, and the system log from the time of the error, and contact your IBM support center.

Module: EYU9XECS

Destination
Console and SYSPRINT

EYUXE0037E Insufficient storage for Subsystem function End Of Task (EOT)

Explanation
The CICSPlex SM subsystem end of task (EOT) routine (EYU9XEET) attempted to create a work area for end of task processing for a CMAS or MAS, but there was not enough storage available. The routine requires approximately 600 bytes above the 16Mb line.

System action
The subsystem EOT routine terminates. No CICSPlex SM-related end of task processing occurs for the CMAS or MAS.

User response
Increase the appropriate region size.

Module: EYU9XEET

Destination
Console and SYSPRINT

EYUXE0038I ESSS not active - ESSS address space is being started.

Explanation
The Environment Services System Services (ESSS) address space is not active. The first CICSPlex SM address space (CMAS) to start after an LPAR’s IPL creates the ESSS address space. All subsequent CMAS startups verify that the address space is active.

System action
CMAS initialization continues.

User response
None

Module:
**Explanation**
The Environment Services System Services (ESSS) address space has begun performing function *function* where

*function* is one of the following:
- INITIALIZE
- RESTART
- TERMINATE
- REBUILD
- TERMINATE WITH DUMP
- DUMP ESSS ASID

**System action**
None

**User response**
None

---

**Explanation**
The Environment Services System Services (ESSS) address space has completed its shutdown procedure.

**System action**
None

**User response**
None
Explanation
The Environment Services System Services (ESSS) address space is not available and the CICSp lex SM address space (CMAS) is not able to continue processing.

System action
The CMAS begins terminating.

User response
Determine the cause of the error message.

Module:
EYU9XECS

Destination
Console and SYSPRINT

EYUXE0045I RETURN / REASON / DIAG = return / reason / diag

Explanation
This serviceability message will be preceded by message EYUXE0023E and is issued to display the return, reason and diagnostic codes from the Environment Services System Services (ESSS) address space program.

System action
Please refer to the System action for message EYUXE0023E.

User response
Please refer to the User response for message EYUXE0023E. The RETURN, REASON and DIAG codes should be passed to IBM service should they be requested.

Module:
EYU9XECS

Destination
Console and SYSPRINT

EYUXE0046E jobname ESSS module mismatch between EYU9X560 (LVL PPnnnnn MM/DD/YYYY) and EYUTXEPC (LVL PPnnnnn MM/DD/YYYY).
Explanation
During CMAS initialization, the Environment Services System Services (ESSS) IDENTIFY function determined that the service levels (LVL) of the ESSS address space code and the Program Call (PC) routines module (EYU9TXEPC) it uses were not the same.

System action
A dump is taken of the ESSS address space. The title of the dump is EYU9X560.CREATE.FAIL.DUMP. The creating CMAS issues this message and then terminates.

Message EYUXE0025E will also be issued by the CMAS attempting to start the ESSS address space.

User response
Verify the following:
• You have the latest versions of modules EYU9X560 and EYUTXEPC.
• The library containing module EYU9X560 resides in the linklist.

Issue the MVS command F LLALLIST,REFRESH to refresh the LNKLIST LOOKASIDE address space (LLA), then try to restart a CMAS. If this problem reoccurs, you must re-IPL the system.

Module:
EYU9X560

Destination
Console and SYSPRINT

EYUXE0047E Abend X'abend_code' in CICSpex SM releum PC routine routine_name could not be retried.

Explanation
When abend occurs in CPSM PC routines, FRR fails to retry, where:

abend_code
is the completion code of the PC routine.

relnum
Identifies the release of CICSpex SM that was affected.

routine_name
is the name of the PC routine where abend occurs.

System action
A system trace is issued to record the abend information.

User response
NONE.

Module:
EYUTXEPC

Destination
Console and SYSPRINT

EYUXE0048E CMAS initialization is not supported on this level of operating system

Explanation
CMAS startup has detected that the release level of the operating system is earlier than the pre-requisite release level required to run CICS, or the required maintenance for the operating system has not been applied.

System action
CMAS startup will terminate. The CICS job step terminates with return code 12.

User response
Refer to the CICS TS Program Directories and install the pre-requisite operating system release level or higher. Check also that any listed pre-requisite maintenance for the operating system has been applied.

Module:
EYU9XECs

Destination
Console and SYSPRINT

EYUXE0049E CMAS initialization is not supported on this level of hardware

Explanation
CMAS startup has detected that the level of hardware is earlier than the pre-requisite required to run CICS.

System action
CMAS startup will terminate. The CICS job step terminates with return code 12.
User response
Refer to the CICS TS Program Directories to see the pre-requisite hardware required.

Module:
EYU9XECS

Destination

**EYUXL0020I**  
*date time applid ESSS connection in progress {to CICSPLEX( | )} plexname { | | | |} {for SYSID( | )} sysname { | | | |}*

Explanation

As part of initialization, the Kernel Linkage (KNL) subcomponent is attempting to establish a connection between Environment Services System Services (ESSS) and a CMAS or MAS. This connection provides CICSp1ex SM with access to certain required MVS program call routines, where target identifies the target of the connection. For a CMAS, there is no target information; the CMAS being connected to can be identified by the APPLID in the message prefix. For a MAS, target is one of the following:

- **to CICSp1ex (plexname)**
  The CICSp1ex specified in the MAS startup parameters, when no CMAS was specified.

- **to CICSp1ex (plexname) for SYSID(cmasname)**
  The CICSp1ex and CMAS specified in the MAS startup parameters.

System action

The attempt to establish a connection to ESSS continues. This message is followed by one of two messages indicating the success or failure of the connection attempt: EYUXL0004I indicates the connection was successful, while EYUXL0105E indicates it was not.

User response

None.

**EYUXL0022I**  
**addspace Phase I initialization complete**

**Explanation**  
An address space of the specified type has completed the first of its initialization phases, which verifies CICSPlex SM requirements and sets up the Major Object Base environment, where:  
*addspace*  
Identifies the type of address space that is initializing as one of the following:  
- CMAS  
  CICSPlex SM address space  
- LMAS  
  Local managed application system  
- SMSS  
  Single server region

**System action**  
CICSPlex SM initialization continues.

**User response**  
None.

**Module:**  
EYU9XLEV

**Destination**  
Console and SYSPRINT

**EYUXL0023I**  
**Trace Services termination requested**

**Explanation**  
The Kernel Linkage component has requested termination of Trace Services as part of CICSPlex SM shutdown.

**System action**  
This message is issued by the external message processor because the Message Services component is no longer active. Trace Services termination begins.

**User response**  
None.

**Module:**  
EYU0XLES, EYU3XLES

**Destination**  
Console and SYSPRINT

**EYUXL0024I**  
**Waiting for CICSPlex SM subsystem activation**

**Explanation**  
Initialization of a local MAS was suspended because the Environmental Services System Services (ESSS) subsystem is not yet active. ESSS is initialized by the first CMAS to start up in the MVS image. Message EYUXL0103E is issued before this one.

**System action**  
Initialization is suspended. The CICS system remains active but is not known to CICSPlex SM. As long as the CICS system is active, the MAS checks at regular intervals to determine if the ESSS subsystem is active. Once the ESSS subsystem is available, MAS initialization completes.

**User response**  
Start the CMAS.

**Module:**  
EYU9XLBE
Destination
Console and SYSPRINT

EYUXL0025I  Waiting for ESSS for CICSPlex SM release

Explanation
Initialization of a local MAS was suspended because the release descriptor block (RDB) is not yet available from the CICSPlex SM subsystem (CPSM). The RDB identifies the CICSPlex SM release that is running; it is built during initialization of the first CMAS. Message EYUXL0104E is issued before this one.

System action
The CICS system continues to run normally, but it is not known to CICSPlex SM. As long as the CICS system is active, the MAS tries at regular intervals to find the RDB. Once the RDB is available, MAS initialization completes.

User response
None.
Module: EYU9XLB

Destination
Console and SYSPRINT

EYUXL0026I  date time applid Automatic Restart request from \{API | EUI | RTA\} for sysname in plexname issued by \{event | userid\} requestor.

Explanation
A request was issued to cancel and restart the specified CICS system using the MVS automatic restart manager (ARM), where:

**compid**
Identifies the component that issued the request as one of the following:

- API
  - Application programming interface.

- RTA
  - real-time analysis, which means the ACTNDEF for a notification condition specified the restart.

**sysname**
Identifies the CICS system that will be cancelled and restarted.

**plexname**
Identifies the CICSpex of which the CICS system is a member.

**entity**
Identifies the entity that issued the request as one of the following:

- event
  - an RTA event.

- userid
  - an API user.

**requestor**
Identifies the RTA event or API user.

System action
The automatic restart request is passed to ARM. If the request is accepted and completes successfully, the CICS system is immediately cancelled and automatically restarted.

If the request can not be processed, MVS writes messages to the console and CICSPlex SM writes a user trace record to the CICS trace data set.
User response
Check the MVS console log to determine if the restart request was successful.

4. jobname

Destination
Console and COLG

EYUXL0029I date time applid ESDUMP value set to value through process.

Explanation
During CMAS or MAS execution, the value for the ESDUMP EYUPARM has been updated, where:

value
Identifies the value the ESDUMP was set to:
YES
No SVC dumps are suppressed.
NO
Duplicate SVC dumps taken by EYU9XLRV and EYU0XZPT may be suppressed, depending upon the value of the ESDUMPLIMIT EYUPARM.

process
Identifies how the ESDUMP value was updated:
COD0
The update was performed through the COD0 transaction SET command.
CMAS resource table
The update was performed by changing the CMAS resource table through the API, or WUI.

System action
Processing continues.

User response
None.

Module:
EYU9DBG1, EYU0XLAU

XMEOUT parameters/Message inserts
1. date
2. time

EYUXLO033I date time applid Attempting to PURGE TRANID(tranid), TASKID(taskid), METHOD(method), CALLER(caller).

Explanation
When attempting to terminate an active task, the task did not respond to the post of its termination ECB. A purge was issued, where:

tranid
is the transaction name of the task.

taskid
is the number of the CICS task the transaction is running under.

method
is the name of the CPSM method that is active at the time of the purge request.

caller
is the name of the CPSM method that called the active method.

System action
After issuing this message, a purge is issued for the specified task.

If the purge is occurring during the termination or restart of the CPSM agent in a MAS, WUI or SMSS region, this message may be additionally preceded by message EYUNL0148W. A system dump is taken for the first of these messages only. In either case the dump will be accompanied by message EYUXZ0910I. Only one system dump will be taken regardless of the number of tasks to be purged. Processing then continues.

If the purge is occurring during the termination of a CMAS, then a system dump is also taken as indicated by message EYUXZ0910I. Only one system dump will be taken regardless of the number of tasks to be purged. Processing then continues.

User response
If the condition persists, collect the system dump, trace records and the job log and contact your IBM Support Center.

Module: EYU0XLTP

XMEOUT parameters/Message inserts

4. tranid
5. taskid
6. method
7. caller

Destination
Console and COLG

EYUXL0075W CMAS recovery entered.

Explanation
The MVS recovery routine was entered.

System action
MVS diagnostic messages are written to the CMAS job log.

CMAS processing continues, but the ISPF end user may receive unexpected results because of the failure.

User response
Review the job log for MVS or CMAS-related messages issued before this one. Collect any related messages and a dump of the CMAS address space, and contact your IBM Support Center.

Module: EYU9XLCI

Destination
Console and SYSPRINT

EYUXL0076W CMAS STCB corruption detected - STCB will be orphaned

Explanation
During processing of an ISPF end-user interface request, the CMAS attempted to locate an available
server task control block (STCB). The CMAS found an STCB, but it could not be validated; it may have been overwritten.

**System action**
The CMAS unchains the STCB at the point of the validation failure. If another STCB cannot be located and validated, a new one is allocated to satisfy the end-user interface request.

**User response**
If this problem persists, obtain a dump of the CMAS address space and contact your IBM Support Center.

**Module:**
EYU9XLCI

**Destination**
Console and SYSPRINT

**Explanation**
During CMAS or MAS execution, the value for the ESDUMP EYUPARM has been set to NEVER, where:

**process**
Identifies how the ESDUMP value was updated:

- **EYUPARM**
  The update was performed through the ESDUMP EYUPARM.

- **COD0**
  The update was performed through the COD0 transaction SET command.

- **CMAS resource table**
  The update was performed by changing the CMAS resource table through the API, or WUI.

**System action**
Processing continues. All SVC dumps that would normally be issued by CICSPlex SM in the system will be suppressed.

**User response**
Suppression of SVC dumps may affect the ability to debug problems. If a problem occurs with SVC dump suppression active, users may be required to reproduce the problem without SVC dump suppression active before debugging can be performed for the problem. It is strongly recommended by CICSPlex SM service that ESDUMP is not set to NEVER.

**Module:**
EYU0XLBV, EYU9DBG1, EYU0XLAU

**XMEOUT parameters/Message inserts**
1. date
2. time
3. applid
4. process

**Destination**
Console and COLG

**Explanation**
The PLTPI program for the CMAS has replaced an invalid definition for the CICSPlex SM resource resourcename. Previous message EYUXL0155E gives details of the invalid definition options.

**System action**
CMAS initialization continues.

**User response**
None

**Module:**
EYU9XLCD

**Destination**
Console

**Explanation**
Processing of the CICS initialization PLT continues but the MAS agent will continue to wait for the CICSPlex to be registered with the ESSS subsystem by a starting CMAS.
System action

The CICS system continues to run normally, but it is not known to CICSPlex SM. When a CMAS registers the CICSPlex with the ESSS subsystem, MAS agent initialization will continue.

User response

Ensure that the CMAS to which the MAS will connect is started. If the functioning of the region depends upon CICSPlex SM facilities (for example, BAS resource installation or WLM routing) it may be desirable to shut down the CICS region until a CMAS can be started.

Module:
EYU0XLBV

XMEOUT parameters/Message inserts

1. date
2. time
3. applid

Destination
Console and COLG

EYUXL0100E  No CICS CWA available

Explanation

The CICS common work area (CWA) is not large enough to contain the CICSPlex SM Kernel Linkage work area, EYURXLWA, which is required for CMAS initialization.

System action

CMAS initialization terminates.

User response

The default CWA size is 512 bytes, which is not large enough for EYURXLWA. Make sure WRKAREA=2048 is included as one of the initialization parameters for the CMAS.

Module:
EYU9XLCS

Destination
Console and SYSPRINT

EYUXL0102E  Unable to set type option

Explanation

The CICSPlex SM address space (CMAS) PLTPI program issued an EXEC CICS SET command for the specified trace option, but it received an error code, where:

| type | Identifies the option as either TRACEDEST or TRACEFLAG. |

System action

The PLTPI program ends with an error condition, which forces the CMAS to terminate.

User response

Examine the CICS trace records to determine what caused the EXEC CICS error. Then, restart the CMAS initialization job.

Module:
EYU9XLCS

Destination
Console and SYSPRINT

EYUXL0103E  CICSPlex SM subsystem (EYUX) not active
Explanation
The CICSPlex SM MVS/ESA subsystem entry is not active.

System action
The impact on system processing depends on what type of address space was being initialized:
CMAS
CMAS initialization terminates.
Local MAS
The MAS issues message EYUXL0024I and then waits for a CMAS to initialize and restart the ESSS address space.

User response
The appropriate response depends on what type of address space was being initialized:
CMAS
Make sure the startup JCL is executing program EYU9XECs.
Local MAS
None. MAS initialization continues once the ESSS address space is available.

Module:
EYU9XLEV

Destination
Console and SYSPRINT

EYUXL0104E       No ESSS for current CICSPlex SM release

Explanation
The ESSS address space does not contain an entry for the release of CICSPlex SM that is attempting to initialize.

System action
The impact on system processing depends on what type of address space was being initialized:
CMAS
CMAS initialization terminates. CICSPlex SM takes an SVC dump with a dump code of EYUXL001.
Local MAS
The MAS issues message EYUXL0025I and then waits for a CMAS of the required version to initialize and restart the ESSS address space.

User response
The trace record indicates the reason for the ESSS connection failure. Depending upon what type of address space was initializing when the failure occurred, take one of the following actions:
CMAS
Make sure the JCL specifies the proper PLTPI program to identify the CMAS to the ESSS.
MAS
If the JCL specifies both a CICSPlex and a CMAS, make sure the named CMAS is active.
If the JCL specifies only a CICSplex, make sure the CICSplex exists in at least one CMAS attached to the ESSS.

**EYUXL0112E**  
*addspace initialization failed*

**Explanation**
An address space of the specified type could not be initialized, where:

**addspace**
Identifies the type of address space as one of the following:

- **CMAS**  
  CICSPlex SM address space
- **MAS**  
  Local managed application system
- **SMSS**  
  Single server region

**System action**
The impact on system processing depends on the type of address space that was being initialized:
CMAS
The CMAS is terminated. CICSPlex SM produces an SVC dump with a dump code of EYUXL001.

MAS
The MAS is terminated. CICSPlex SM produces a transaction dump with a dump code of EYUI and returns control to CICS.

SMSS
The SMSS is terminated. CICSPlex SM produces a transaction dump with a dump code of EYUI and returns control to CICS.

User response
Examine the user trace records, and any messages issued before this one, to determine the cause of the problem.

Module: EYU1XLEV, EYU9XLEV

**EYUXL0115E** CMAS initialization transaction not found

Explanation
An EXEC CICS START TRANID command was issued for the transaction XLEV, by the CMAS PLTPI program EYU9XLCS, but the transaction XLEV could not be found.

System action
The PLTPI program ends with an error condition, which forces the CMAS to terminate.

User response
Make sure transaction XLEV is defined in the CSD and that the CMAS PLTPI program EYU9XLCS is being run during PLTPI stage 2 processing (that is EYU9XLCS should appear after the DFHDELIM statement in the CMAS PLTPI).

Module: EYU9XLCS

Destination
Console and SYSPRINT

**EYUXL0116E** addspace initialization program abended

Explanation
The startup program for a CICSPlex SM address space (CMAS) terminated abnormally.

System action
Initialization terminates. CICSPlex SM takes a CICS system dump.

User response
Collect the dump, and any messages issued before this one and contact your IBM Support Center.

Module: EYU9XLCS

Destination
Console and SYSPRINT

**EYUXL0117E** addspace initialization program - reason text
Explanation

The startup program for a CICSPlex SM address space (CMAS) terminated.

reasoncontext identifies the reason for the premature termination as follows:

CICS error
Initialization terminated because of a CICS error

Already started
Both CPSMCONN=CMAS and initialization=CM were encountered in the system initialization parameters in effect.

System action
The currently executing initialization program terminates.

User response
This depends on the reason for the termination:

CICS error
Examine the messages issued before this one to determine the cause of the CICS error. Correct the problem and restart the job.

Already started
The CMAS was started by another instance of the program EYU9XLCS. Ensure that only one of CPSMCONN or initialization is coded in the system initialization parameters.

Module:
EYU9XLCS

Destination
Console and SYSPRINT

EYUXL0118E PERFORMANCE SHUTDOWN failed: RESP=respcoderesp2code

Explanation
A PERFORMANCE SHUTDOWN command was issued during CMAS shutdown, and it returned an abnormal response, where:

respcodereq
Is the value returned by CICS.

resp2code
Is the value returned by CICS.

System action
The shutdown task returns control to CICS. Shutdown of the CICS system is not initiated.

User response
Follow the instructions associated with the respcoderesp2code values for CEMT PERFORMANCE SHUTDOWN or EXEC CICS PERFORMANCE SHUTDOWN. For descriptions of the respcoderesp2code values associated with these commands, refer to the CICS System programming reference.

Module:
EYU9XLEV

EYUXL0122E No XLWA found

Explanation
The parameters passed to the Kernel Linkage startup program by the PLTPI program did not contain the EYURXLWA control block.

System action
The impact on system processing depends on what type of address space was being initialized:
CMAS
The CMAS is terminated. CICSPlex SM takes an SVC dump with a dump code of EYUXL001.

MAS
The MAS is terminated. CICSPlex SM takes a transaction dump with a dump code of EYUI and returns control to CICS. CICSPlex SM takes a transaction dump with a dump code of EYUI.

User response
Make sure the startup JCL is invoking the proper PLTPI program.
Module:
EYU1XLEV, EYU9XLEV

Destination
Console and SYSPRINT

EYUXL0123E name is not a supported CICSPlex SM environment

Explanation
The parameters passed to the Kernel Linkage startup program by the PLTPI program contained an invalid four-character address space name.

System action
The impact on system processing depends on what type of address space was being initialized:
CMAS
The CMAS is terminated. CICSPlex SM takes an SVC dump with a dump code of EYUXL001.
MAS
The MAS is terminated. CICSPlex SM takes a transaction dump with a dump code of EYUI and returns control to CICS.

User response
Make sure the startup JCL is invoking the proper PLTPI program.
Module:
EYU1XLEV, EYU9XLEV

Destination
Console and SYSPRINT

EYUXL0124E Parameter block not passed from PLTPI program

Explanation
The Kernel Linkage startup program could not obtain the parameter block passed by the PLTPI program.

System action
The impact on system processing depends on what type of address space was being initialized:
CMAS
The CMAS is terminated. CICSPlex SM takes an SVC dump with a dump code of EYUXL001.
MAS
The MAS is terminated. CICSPlex SM takes a transaction dump with a dump code of EYUI and returns control to CICS.

User response
Make sure the startup JCL is invoking the proper PLTPI program.
Module:
EYU1XLEV

Destination
Console and SYSPRINT

EYUXL0125E Not authorized to INQUIRE SYSTEM

Explanation
The Kernel Linkage startup program is not authorized to issued the EXEC CICS INQUIRE SYSTEM command.

System action
The impact on system processing depends on what type of address space was being initialized:
CMAS
The CMAS is terminated. CICSPlex SM takes an SVC dump with a dump code of EYUXL001.
MAS
The MAS is terminated. CICSPlex SM takes a transaction dump with a dump code of EYUI and returns control to CICS.

User response
Obtain the required authority and restart the job.
Module:
EYU9XLEV
**Explanation**

During Environment Services System Services (ESSS) connect processing, the ESSS address space determined that a CMAS with the same name or SYSID as the connecting CMAS was either active or, if inactive, had API applications or local MAS systems connected to it and is therefore encumbered, where:

- **status**
  - Is either active or encumbered
- **name**
  - Is either the CMAS name or SYSID

This message follows EYUXL0020I (ESSS connection in progress) and precedes message EYUXL0105E (ESSS connection failed).

**System action**

CMAS initialization fails.

**User response**

Make sure that no two CMASs have the same name and/or SYSID if run on the same MVS image for the same release of CICSPlex SM.

**Module:**

EYU0XLBV

Console and COLG

---

**EYUXL0127E**

*date time applid (LMAS) restart attempt failed.*

**Explanation**

An attempt to restart a CICSPlex SM component after a CMAS shutdown or abend was not successful, where addspace identifies the type of address space that was attempting to restart as a local MAS (LMAS). A MAS connection to the CMAS cannot be established if, after the CMAS becomes active, it no longer manages the CICSpelx to which the MAS needs to connect.

**System action**

MAS initialization terminates. The CICS system continues to execute normally, but it is not known to CICSpelx SM.

**User response**

Make sure the MAS JCL specifies the correct CICSpelx and, if appropriate, CMAS.

**Module:**

EYU9XLEV

**EYUXL0132I**

*date time applid Notification Services Long Running Task has started.*

**Explanation**

The Notification Services subcomponent of Kernel Linkage was either initialized as part of CICSPlex SM initialization or was restarted after an abnormal termination.

**System action**

Processing continues.

**User response**

None.
Module: EYU0XLNX

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid

**Destination**

COLG

```
EYUXL0133I date time applid Notification Services Long Running Task terminated {abnormally / normally}.
```

**Explanation**

The Notification Services subcomponent of Kernel Linkage has been terminated, where type indicates the type of termination that occurred:

**Normally**

Notification Services was terminated as part of CICSPlex SM termination.

**Abnormally**

Notification Services terminated abnormally and will be restarted.

**System action**

If Notification Services terminated normally, CICSPlex SM termination continues. If Notification Services terminated abnormally, a user trace record is written to the CICS trace data set and it restarts itself. Message EYUXL0132I is issued when Notification Services has been restarted.

**User response**

If Notification Services terminated normally, no action is required. If it terminated abnormally, examine the trace records to determine the cause of the problem.

If Notification Services terminates abnormally and restarts itself repeatedly (as indicated by this message and message EYUXL0132I being issued recursively), then shut down the CMAS. If Notification Services terminates abnormally and restarts itself ten times, the CMAS shuts down automatically. Collect the trace records and the job log and contact your IBM Support Center.

**Destination**

COLG

```
EYUXL0134E ESSS for current CICSPlex SM release is not active
```

**Explanation**

During CMAS or local MAS initialization, no Environment Services System Services (ESSS) address space was found to be active for the release of CICSPlex SM identified by the release descriptor block (RDB). The CICSPlex SM subsystem (CPSM) and the RDB were found, but the ESSS address space itself had been terminated.

**System action**

In the case of a CMAS, initialization terminates.

In the case of a local MAS, initialization is suspended and message EYUXL0026I is issued.

**User response**

Restart the ESSS address space by starting a CMAS.

**Module:**

EYU9XLBE

---

**Destination**

Console and SYSPRINT

```
EYUXL0135E CPSM subsystem (EYUX) or version ESSS still not available. Reply 'C' to terminate wait processing.
```

**Explanation**

During local MAS initialization, module EYU9XLBE has determined that either the CPSM subsystem EYUX or the ESSS address space is not available, where version identifies the ESSS CPSM release.
**System action**

The message remains on the console until a reply is received or the EYUX subsystem and/or ESSS become available.

If the proper reply is made, local MAS initialization is terminated with message EYUXL0136E, and CICS initialization continues without the CPSM MAS agent present.

**User response**

Start a CMAS of the appropriate release to create the EYUX subsystem and ESSS. When EYU9XLBE detects that the proper environment has been reached, it cancels the message from the console.

If the appropriate CMAS cannot be started, reply 'C' to terminate local MAS initialization and continue with CICS initialization in the region. If a CMAS is started at a later time, the COLM transaction can be used to initialize the CPSM MAS agent in the region.

**Module:**

EYU9XLBE

**Destination**

Console and SYSPRINT

EYUXL0136E  **LMAS initialization is terminating due to operator reply to EYUXL0135A**

**Explanation**

The operator has replied 'C' to message EYUXL0135A.

**System action**

Local MAS initialization is terminated, and CICS initialization continues without the CPSM MAS agent present.

**User response**

After a CMAS has been started that the MAS can connect to, issue the COLM transaction to initialize the CPSM MAS agent in the region.

**Module:**

EYU9XLBE

**Destination**

Console and SYSPRINT

EYUXL0138I  **EYU9XLOP waiting for workload**

**Explanation**

This message occurs in a region that has specified EYU9XLOP as the distributed or dynamic routing exit, when that region is not connected to a workload.

**System action**

If EYU9XLOP was specified, and there is no workload associated with the region, then any request to CICS that drives the appropriate routing exit causes CICS to invoke EYU9XLOP, which then goes into a wait state. Requests that may drive one of the routing exits include, for example, dynamic and undefined transactions, EXEC CICS START commands, CICS BTS activities, and dynamic program link requests.

**User response**

Ensure that you only specify EYU9XLOP when you have a workload associated with the region, by using one of the following procedures:

- Change the specified routing module
- Associate the region with a workload, then activate WLM in the region in one of the following ways:
  - Recycle the region
  - Stop and restart the MAS agent code in the region.

For example, use the COSH transaction to stop the MAS agent code and the COLM transaction to restart the MAS agent code.

**Module:**

EYU9XLBE
Destination
Console and SYSPRINT

EYUXL0140E date time applid Automatic Restart request not issued for CMAS jobname (cmas), reason: {ARM not active | CMAS CICS release not valid for ARM | CMAS jobname invalid | Operating System level not valid for ARM | Unexpected status returned from XLTA | Restart not allowed for jobname | No ARM policy for jobname | XLTA failed}. CMAS terminating without restart.

Explanation
An attempt to perform an automatic restart of the named CMAS failed for the reason given, where:

*cmas*

is the job name of the failing CMAS.

*reason*

is the reason why an ARM Restart of the CMAS could not be attempted.

System action
The CMAS is terminated.

User response
Perform the recommended actions for any messages which preceded this message and restart the CMAS.

Module:
EYU0XLES

Destination
Console and COLG

EYUXL0141E (tranname transaction definition missing or incorrect

Explanation
During CMAS or MAS initialization the CICS transaction definition for *tranname* is not found or does not specify the correct program name.

System action
Initialization continues, but unpredictable results may occur due to the missing or incorrect transaction definition.

User response
Ensure that the CSD used by the CMAS or MAS is correct and the appropriate CICSPlex SM definitions have been installed.

Module:
EYU9XLBE

Destination
Console and SYSPRINT

EYUXL0142E CICS Transaction Server CMAS release *cmasrelease* is different from CICS release *cicsrelease*. CMAS initialization is terminated.

Explanation
CMAS initialization has failed because the CMAS and CICS release levels do not match. A CMAS can run only with a CICS Transaction Server at the same release level.

System action
Initialization terminates.

User response
Ensure that the CICS Transaction Server CMAS release *cmasrelease* matches the CICS release *cicsrelease*.

Module:
**System action**

MAS agent termination is delayed until a correct response is received for the prompt, the COSH transaction is issued, or the region is terminated.

**User response**

Verify that the exit program is defined and installed in the CMAS, that it resides in a DFHRPL library being used by the CMAS, and then restart the CMAS. If the error continues after the above is verified, collect as much of the following as possible and contact your IBM Support Center:

- The complete job output
- The EYUS transaction dump
- The unformatted AUXTRACE data sets

**Module:**

EYU9XLCS

**Explanation**

A request to terminate the MAS agent in the MAS is being delayed because it has been determined that the MAS is functioning as a CPSM WLM routing region (ROUTER). The delay allows the region to continue functioning as a routing region. Once the MAS agent is terminated, the region will no longer function as a routing region until it re-connects to a CMAS.

**System action**

An EYUS transaction dump will be taken and the CMAS initialization will fail.

**User response**

Verify that the exit program is defined and installed in the CMAS, that it resides in a DFHRPL library being used by the CMAS, and then restart the CMAS. If the error continues after the above is verified, collect as much of the following as possible and contact your IBM Support Center:

- The complete job output
- The EYUS transaction dump
- The unformatted AUXTRACE data sets

**Module:**

EYU9XLCS

**Destination**

Module:
EYU9XLCS

Destination
Console and SYSPRINT

EYUXL0154E CREATE {FILE | PROFILE | PROGRAM | TRANSACTION | TDQUEUE} resourcename failed: RESP=respcode, RESP2=resp2code

Explanation
The CICSPlex SM address space (CMAS) PLTPI program issued an EXEC CICS CREATE command to create the resource resourcename for CICSPlex SM. The CREATE command returned an abnormal response, with the values shown in respcode and resp2code.

System action
CMAS initialization continues.

User response
Examine the CICS trace records to determine what caused the EXEC CICS error. Then restart the CMAS initialization job.

Module:
EYU9XLCD

Destination
Console
EYUXL0155E {FILE | PROFILE | PROGRAM | TRANSACTION | TDQUEUE} resourcename has invalid value: xxxxxxxxxx for option: yyyyyyyyyy

Explanation
The PLTPI program for a CMAS detected an invalid definition option for the CICSPlex SM resource resourcename.

System action
CICSPlex SM will try to replace the definition with the default definition for the resource. If this is successful, it will issue message EYUXL0078W. If the replacement fails it will issue message EYUXL0156E and will terminate CICS.

User response
None

Module: EYU9XLCD

Destination
Console

EYUXL0156E The {FILE | PROFILE | PROGRAM | TRANSACTION | TDQUEUE} definition for resourcename is invalid. CICS is terminating

Explanation
The PLTPI program for the CMAS was unable to replace an invalid definition for the CICSPlex SM resource resourcename. Previous message EYUXL0155E gives details of the invalid definition options.

System action
CICS is terminated.

User response
Review the definition within the group list you use when starting the CMAS and change the invalid options before restarting CICS. The default options are shown in the sample EYUuCDEF.

Module: EYU9XLCD

Destination
Console

EYUXL0157E QUERY SECURITY for TRANSATTACH resourcename failed: RESP= respcode, RESP2= resp2code.

Explanation
The CMAS initialization program issued an EXEC CICS QUERY SECURITY command to verify that transaction resourcename is defined correctly to the external security manager. The command returned an abnormal response, with the values shown in respcode and resp2code.

System action
CMAS initialization will continue until all transaction IDs have been processed, then the CMAS will issue message EYUXL0159E and terminate.

User response
Follow the instructions associated with the respcode and resp2code values for EXEC CICS QUERY SECURITY.

Module: EYU9XLCD

Destination
Console and SYSPRINT

EYUXL0158E QUERY SECURITY for TRANSATTACH resourcename is incorrect: READ=NOTREADABLE.

Explanation
The CMAS initialization program issued an EXEC CICS QUERY SECURITY command to verify that transaction resourcename is defined correctly to the external security manager. The userid under which the CMAS initialization program executes (the region userid) does not have permission to START transaction resourcename.

System action
CMAS initialization will continue until all transaction IDs have been processed, then the CMAS will issue message EYUXL0159E and terminate.
User response
Correct the resource profile and permissions for transaction resourcename and resubmit the CMAS job.

Module:
EYU9XLCD

Destination
Console and SYSPRINT

**EYUXL0159E** Incorrect security profile for one or more resources. CICS is terminating.

Explanation
The CMAS initialization program issued EXEC CICS QUERY SECURITY commands to verify that each internal CPSM transaction is defined correctly to the external security manager. One or more of the commands returned an abnormal response, or one or more transactions had incorrect security profiles.

System action
The CMAS region will terminate.

User response
Correct the problems identified by messages EYUXL0157E and EYUXL0158E and resubmit the CMAS job.

Module:
EYU9XLCD

Destination
Console and SYSPRINT

**EYUXL0160E** date time applid Unable to purge CICSPlex SM system task - TRANID() TASKID().

Explanation
The specified CICSPlex SM system task cannot be purged.

System action
CICSPlex SM continues with its termination.

User response
When possible, shut down and restart the CICS region.

**Destination**

Console and COLG

**EYUXL0900I** *Starting Environment Recovery*

**Explanation**

The CICSPlex SM recovery routine has been entered as a result of an abend in a CMAS or a MAS.

**System action**

The recovery routine attempts to capture and format any relevant diagnostic information. All available information is presented in EYUXL09nn messages that follow this one.

A transaction dump is taken. If a CMAS or local MAS abended and the method that abended was found to be in access register (AR) mode improperly, an SVC dump may also be taken.

**User response**

Collect as much of the following information as possible, and contact your IBM Support Center:

- Job log for the job that received the abend. If the job log is not available, get the system log.
- EYULOG file. If a CMAS abended, get the EYULOG file for that CMAS. If a MAS abended, get the EYULOG file for the CMAS to which the MAS was connected.
- Formatted transaction dump.
- Unformatted SVC dump, if one was taken.
- AUXTRACE file, if available. If a MAS abended and AUXTRACE was not active in that CICS system, get the AUXTRACE file from the CMAS to which the MAS was connected.

Console and SYSPRINT

**EYUXL0902I**  ABEND Outputting Storage Areas

**Explanation**

While attempting to capture and format diagnostic information, the CICSPlex SM recovery routine encountered addresses that could not be accessed.

**System action**

The recovery routine terminates and no further diagnostic information is presented.

**User response**

Follow the instructions in message EYUXL0900I.

**Module:**

EYU9XLRV

---

**Destination**

Console and SYSPRINT

**EYUXL0903I**  Branch to location ZERO, Using R14 for Offset

**Explanation**

A calling program attempted to branch to an invalid address. The CICSPlex SM recovery routine uses the address in register 14 in an attempt to format any relevant diagnostic information.

**System action**

The recovery routine begins formatting diagnostic information.

**User response**

Follow the instructions in message EYUXL0900I.

**Module:**

EYU9XLRV

---

**Destination**

Console and SYSPRINT

**EYUXL0904E**  applid abcode IN method call-type in AR MODE, Displaying from call

**Explanation**

A program was found to be in access register (AR) mode when it should not be, where:

- **call-type**
  Indicates whether the problem was found by a calling program (CALL) or a returning program (EXIT).

- **method**
  Is displayed only for a call-type of EXIT, and identifies the CICSPlex SM method that detected the problem.

**System action**

The recovery routine identifies the problem program and displays its name in message EYUXL0905E.

**User response**

Follow the instructions in message EYUXL0900I.

**Module:**

EYU9XLRV

---

**Explanation**

This message describes the location and conditions of an abend that occurred in CICSPlex SM, where:

- **applid**
  z/OS Communications Server application ID of the CICS system that abended.

- **abcode**
  Four-digit CICS user abend code.

- **method**
  CICSPlex SM method that abended.

- **nnnnnnnn**
  Offset within the method where the abend occurred.

- **psw1/psw2**
  Contents of the PSW at the time of the abend.

- **level**
  Service level of the module.

- **prefix**
  Prefix of the module.

- **intcode**
  Interrupt code.
**len**
Length of the instruction.

**addr**
Address of the last translation exception.

**syscode**
Three-digit system abend equivalent of the CICS user abend code.

**tranid**
CICS transaction id.

**tasknum**
CICS task number.

**methnames**
Names of all CICSPlex SM methods active in the failing task.

**System action**
The recovery routine continues to format diagnostic information.

**User response**
Follow the instructions in message EYUXL0900I.

**Module:**
EYU9XLRV

**Destination**
Console and SYSPRINT

---

<table>
<thead>
<tr>
<th>EYUXL0908I</th>
<th>Storage At ABEND</th>
</tr>
</thead>
</table>

**Explanation**
The contents of storage at the location of the abend have been formatted; this message serves as a header for the content records that follow.

**System action**
The recovery routine continues to format diagnostic information. The contents of storage are displayed in EYUXL0909I messages immediately following this header.

**User response**
Follow the instructions in message EYUXL0900I.

**Module:**
EYU9XLRV

**Destination**
Console and SYSPRINT

---

<table>
<thead>
<tr>
<th>EYUXL0909I</th>
<th>+/-nn storage contents</th>
</tr>
</thead>
</table>

**Explanation**
The contents of storage at each of the following locations is displayed:

- **-20**
  32 bytes before the PSW

- **-10**
  16 bytes before the PSW

- **+00**
  Start of the PSW
System action

The formatting of diagnostic information is complete. The recovery routine terminates.

The impact on system processing depends on when the abend occurred:

**During CMAS initialization**

The CMAS terminates.

**During MAS initialization**

All MAS agent code is removed from the CICS system. The CICS system continues to initialize, but it is not known to CICSPlex SM.

**After CMAS or MAS initialization**

CICSPlex SM attempts to return control to the last point of processing before the abend.

User response

Follow the instructions in message EYUXL0900I.

Module:

EYU9XLRV

Destination

Console and SYSPRINT

---

**EYUXL0910I dump_title**

Explanation

This message indicates that an SDUMP has been requested by CPSM recovery, where:

**dump_title**

Is the title string passed to the system dump routine.

System action

An SDUMP has been requested, containing the current region, the ESSS Address Space, and cache data spaces for components accessed in the abending task.

User response

Follow the instructions in message EYUXL0900I.

Module:

EYU9XLRV

Destination

Console and SYSPRINT

---

**EYUXL0911W EYU9XLRV dump suppressed because ESDUMP is set to NEVER**

Explanation

A SVC dump that would have been issued by abend recovery module EYU9XLRV has been suppressed because the value of the ESDUMP EYUPARM is NEVER.

System action

Processing continues.

User response

Suppression of SVC dumps may affect the ability to debug problems. If a problem occurs with SVC dump suppression active, users may be required to reproduce the problem without SVC dump suppression active before debugging can be performed for the problem. It is strongly recommended by CICSPlex SM service that ESDUMP is not set to NEVER.

Module:

EYU9XLRV

Destination

Console and SYSPRINT

---

**EYUXL0912W EYU9XLRV dump suppressed because ESDUMPLIMIT has been reached for job jobname date dd/mm/yyyy time hh:mm:ss.**

Explanation

A SVC dump was requested but the dump was suppressed because the CICSPlex SM system parameter ESDUMP is set to NO and the number of dumps requested with this program name, abend code, offset and region type (CMAS or MAS) combination exceeds the value specified on the CICSPlex SM system parameter ESDUMPLIMIT.

**<jobname>**

Is the job name of the CICS system when the last abend was captured.

**<dd/mm/yyyy>**

Is the date when the last abend was captured.

**<hh:mm:ss>**

Is the time when the last abend was captured.

System action

Processing continues.
User response

This is normal and can be ignored unless a new dump is needed. If a new dump is needed, set the ESDUMP parameter to YES, reproduce the problem, and then reset ESDUMP back to NO. Refer to the ESDUMP and ESDUMPLIMIT documentation in Troubleshooting CICSp1ex SM.

Module:
EYU9XLRV

Destination

Console and SYSPRINT

EYUXL0913E  EYU9XLRV request to take an SDUMPX failed with return code X'retcde', reason code X'reason'.

Explanation

An SDUMPX request issued by this CICS region failed to complete successfully, where retcde is the hexadecimal return code and where reason is the hexadecimal reason code returned by the SDUMPX macro.

System action

This message is issued and the dump is not taken. Processing then continues.

User response

Refer to the z/OS Authorized Assembler Services Reference manual that documents the SDUMPX macro, to determine the meaning of the return code and reason code.

EYUXL0951E  Exception occurred on mm/dd/yy at hh:mm:ss

Explanation

This message identifies the date and time at which the abend described in message EYUXL0950E occurred, where:

- mm/dd/yy
  Is the date when the abend occurred.

- hh:mm:ss
  Is the time when the abend occurred.

System action

The recovery routine continues to format diagnostic information.

User response

Follow the instructions in message EYUXL0900I.

Module:
EYU1XLRV

Destination

Console and SYSPRINT

EYUXL0952E  CPSM method name at offset offset

Explanation

This message identifies the CICSp1ex SM method where the abend occurred, where:

- name
  Is the name of the method.

- offset
  Is the offset within the method where the abend occurred.
**System action**
The recovery routine continues to format diagnostic information.

**User response**
Follow the instructions in message EYUXL0900I.

**Module:**
EYU1XLRV

**Destination**
Console and SYSPRINT

**EYUXL0955I  Registers at ABEND:**

**Explanation**
The register contents at the location of the abend have been formatted; this message serves as a header for the content records that follow.

**System action**
The recovery routine continues to format diagnostic information. The register contents are displayed in EYUXL0956I messages immediately following this header.

**User response**
Follow the instructions in message EYUXL0900I.

**Module:**
EYU1XLRV

**Destination**
Console and SYSPRINT

**EYUXL0956I  CS=cs DS=ds ES=es FS=fs GS=gs SS=ss EIP=eip EAX=eax EBX=ebx ECX=ecx EDX=edx EBP=ebp EDI=edi ESI=esi ESP=esp FLAGS=flags PID=pid TID=tid**

**Explanation**
The name of each register that was formatted is displayed along with its content. The registers are displayed in logical groups. The first group includes the machine registers, where:

- **cs**: Code segment
- **ds**: Data segment
- **es**: Extra segment
- **fs**: Far segment
- **gs**: General segment
- **ss**: Stack segment

The next group includes the extended (32-bit) registers, where:

- **eip**: Instruction pointer
- **eax**: Extended ax
- **ebx**: Extended bx
- **ecx**: Extended cx
- **edx**: Extended dx
- **ebp**: Base pointer
- **edi**: Destination index
- **esi**: Source index
- **esp**: Stack pointer

The last group includes hardware and operating system registers, where:

- **flags**: Hardware status flags
- **pid**: Operating system process ID
- **tid**: Operating system thread ID

**System action**
The recovery routine continues to format diagnostic information.

**User response**

EYUXM0506E IYP2Z002 Var num = vv Type = tt Len = ll Val = vvvvvvv

Explanation
An error occurred while attempting to process an insert variable when generating a message, where:

vv
Is the number of the message insert variable.
tt
Is the type of the message insert variable.
ll
Is the length of the message insert variable.
vvvvvv
Is the value (in hexadecimal) of the first four bytes of the message insert variable.

If this message is issued EYUXM0505E will be issued as well providing additional information.

System action
The requested message is either not created or not directed to its destination.

User response
Refer to the related messages issued in association with this one, including EYUXM0505E and DFHME0109, to determine the cause of the problem. You may need to contact your IBM Support Center.

Module: EYU0XMIN

Destination
Console and SYSPRINT

EYUXM0507E Message Service initialization has failed - CICS compatibility APAR is missing.

Explanation
CICSPlex SM message services have failed to start in either a CMAS, MAS, or in a SSMS because it could not generate messages via CICS message services. The probable cause is that the CICSPlex SM message definition module (EYUMCT1x) is not present in any of the STEPLIB libraries. Message EYUXM0507E is preceded by one or more CICS message domain messages (DFHMEennnn) which give additional information about the cause of the failure.

System action
Depending on the environment, message EYUXL0112E might subsequently be issued. See the explanation for EYUXL0112E for further information.

In an SMSS environment, the CMCI call fails, reporting an error in the CONNECT api_function.

User response
Ensure that the CICSPlex SM SEYUAUTH data set, containing the message definition module (EYUMCT1x), is in the STEPLIB.

EYUXS0006W  date time applid Extract for exit program EYU9XSTR failed, RESP=respcode, EIBRCODE=reasoncode.

Explanation:
An error occurred in a CMAS or local MAS while attempting to extract the address of the global area for the CICSPlex SM task recovery task related user exit (TRUE), where:

nn
   Is the CICS numeric RESP value

xxxxxxxxxxxx
   Is the CICS hexadecimal EIBRCODE

System action:
CICSPlex SM Common Services initialization fails. If the system is a CMAS, an EYUXL001 system dump will be taken, CMAS initialization will fail, and the CMAS will terminate. If the region is a local MAS, an EYUI transaction dump will be taken and the MAS agent initialization will fail.
Verify that the exit program, EYU9XSTR, is defined and installed in the CMAS or local MAS, and that it resides in a DFHRPL library being used by the CMAS or local MAS. If the error continues after the above is verified, collect as much of the following as possible and contact your IBM Support Center:

- The complete job output.
- The unformatted SVC dumps for any abends that may have occurred during the execution of the CMAS or MAS.
- The unformatted AUXTRACE data sets (if the system is a MAS and AUXTRACE was not active in that system, collect the AUXTRACE data sets from the CMAS to which the MAS was connected).

Explanation:
An abnormal termination has occurred in the Interval Timing subcomponent.

System action:
Interval Timing recovery processing is initiated.

User response:
None.

Module:
Interval Timing recovery has started

**Explanation:**
The Interval Timing subcomponent has initiated its recovery processing in response to an abnormal termination.

**System action:**
Interval Timing takes an SVC dump and attempts to recover from the error.

**User response:**
None.

**Module:**
EYU9XSTC

Interval Timing recovery complete

**Explanation:**
The Interval Timing subcomponent has successfully recovered from an abnormal termination.

**System action:**
Processing continues.

**User response:**
If an SVC dump was produced by Interval Timing, notify your IBM support center.

**Module:**
EYU9XSTC

Interval Timing recovery impossible - control task is terminated

**Explanation:**
The Interval Timing subcomponent was unable to recover from an abnormal termination.

**System action:**
Interval Timing takes an SVC dump. CMAS execution is terminated.

**User response:**
Collect the SVC dump and contact your IBM support center.

**Module:**
EYU9XSTC

Interval Timing has detected possible recursive error condition

**Explanation:**
The Interval Timing recovery routine detected an error condition from which recovery is not possible.

**System action:**
Interval Timing takes an SVC dump. CMAS execution is terminated.

**User response:**
Collect the SVC dump and contact your IBM support center.

**Module:**
EYU9XSTC

applid Interval Timing could not load the external security manager interface

**Explanation:**
During initialization, the Interval Timing subcomponent could not load the EYU9XSEC external security manager (ESM) interface, where:

**applid**
Is the z/OS Communications Server application ID of the CMAS.

**System action:**
CMAS execution is terminated.

**User response:**
Make sure the EYU9XSEC module is contained in the CMAS STEPLIB, the MVS linklist, or the LPA library concatenation, and then restart the CMAS.

**Module:**
EYU9XSTC

applid Interval Timing unable to attach the external security manager interface

**Explanation:**
During initialization, the Interval Timing subcomponent attempted to use an MVS ATTACH
command to start the external security manager task and the ATTACH failed, where applid is the z/OS Communications Server application ID of the CMAS.

**System action:**
Interval Timing initialization terminates. CMAS initialization terminates.

**User response:**
Check the system log for MVS Contents Supervisor messages, which begin with the prefix CSVnnn; these messages should explain the cause of the problem. If the cause of the problem is not apparent, collect the MVS system log and the CMAS job log and contact your IBM support center.

**Module:**
EYU9XSTC

**Destination**
Console and SYSPRINT

**EYUXS1013I** Interval Timing detached the external security manager interface

**Explanation:**
The interval timing subcomponent has quiesced the external security manager interface. CICSPlex SM security services are now no longer available.

**System action:**
Processing continues.

**User response:**
None

**Module:**
EYU9XSTC

**Destination**
Console and SYSPRINT

**EYUXS1014I** Task recovery starting for task nnnnn transaction cccc

**Explanation:**
The CICSPlex SM task recovery TRUE, EYU9XSTR, executing in a CMAS or local MAS, encountered a terminating task that did not go through CICSPlex SM cleanup processing, where:

- **nnnnn**: Is the task number
- **cccc**: Is the transaction ID for the task

**System action:**
CICSPlex SM cleanup processing will be attempted for the task. The results of this recovery processing will be reported after recovery is complete by message EYUXS1015I or EYUXS1016E.

**User response**
The most common causes for a CICSPlex SM task to not go through cleanup processing is if a monitor, interactive debugger, or EYU9WRAM program is being used to "KILL" tasks, either automatically or on demand, or otherwise cause an abnormal termination that does not go through normal CICS HANDLE ABEND processing (for example, issues EXEC CICS ABEND with the CANCEL option). If this message occurs without the benefit of one of the above, or if there is no subsequent EYUXS1015I or EYUXS1016E message to pair with this EYUXS1014I message, then collect as much of the following as possible and contact your IBM Support Center:

- The complete job output.
- The unformatted SVC dumps for any abends that may have occurred during the execution of the CMAS or MAS.
- The unformatted AUXTRACE data sets (if the system is a MAS and AUXTRACE was not active in that system, collect the AUXTRACE data sets from the CMAS to which the MAS was connected).

**Module:**
EYU9XSTR

**Destination**
Console and SYSPRINT

**EYUXS1015I** Task recovery complete for task nnnnn flags 123456789

**Explanation**
The CICSPlex SM task recovery TRUE, EYU9XSTR, executing in a CMAS or local MAS, completed task recovery for a terminating task where:

- **nnnnn**: Is the task number

1. **1**: Is Y if recovery successfully unchained the task's CICSPlex SM task work area, N if it did not.
2. **2**: Is Y if recovery successfully completed global lock recovery for the task, N if it did not.
3. **3**: Is Y if recovery successfully freed a global lock holder element for the task, N if it did not. If ? is displayed for this flag, the ESSS address space was not restarted after applying the PTF for APAR PQ79290.
Is Y if recovery successfully freed a global lock waiter element for the task, N if it did not. If ? is displayed for this flag, the ESSS address space was not restarted after applying the PTF for APAR PQ79290.

Is Y if recovery successfully completed local lock recovery for the task, N if it did not.

Is Y if recovery successfully freed a local lock holder element for the task, N if it did not.

Is Y if recovery successfully freed a local lock waiter element for the task, N if it did not. If ? is displayed for this flag, the ESSS address space was not restarted after applying the PTF for APAR PQ79290.

Is Y if recovery successfully freed a local lock waiter element for the task, N if it did not. If ? is displayed for this flag, the ESSS address space was not restarted after applying the PTF for APAR PQ79290.

Is Y if recovery successfully completed local lock recovery for the task, N if it did not.

Is Y if recovery successfully freed a local lock holder element for the task, N if it did not.

Is Y if recovery successfully freed a local lock waiter element for the task, N if it did not.

Is Y if recovery successfully freed 64-bit storage for the task, N if it did not.

Is Y if recovery successfully freed a local lock holder element for the task, N if it did not.

Is Y if recovery successfully freed a local lock waiter element for the task, N if it did not.

Is Y if recovery successfully freed 64-bit storage for the task, N if it did not, or F if a failure occurred freeing storage.

Is Y if a dump was taken because of errors during recovery for the task, S if a dump was requested but suppressed because a previous dump was taken for this execution of the CMAS or MAS, E if the CMAS or MAS is not connected to the ESSS, or F if a failure occurred taking the dump.

System action:
CICSplex SM cleanup processing has completed for the task. The start of this recovery processing has been reported by a previous EYUXS1014I message.

User response:
Please refer to the documentation for partner message EYUXS1014I to determine whether or not the issuing of these messages should be reported to IBM support.

Module:
EYU9XSTR

Destination
Console and SYSPRINT

EYUXS1016E Task recovery in error for task nnnnn flags 123456789

Explanation
The CICSplex SM task recovery TRUE, EYU9XSTR, executing in a CMAS or local MAS, encountered at least one error while performing task recovery for a terminated task, where:

nnnnn
Is the task number

1
Is Y if recovery successfully unchained the task's CICSplex SM task work area, N if it did not.

2
Is Y if recovery successfully completed global lock recovery for the task, N if it did not, or E if the address space was not connected to the ESSS.

System action:
CICSplex SM cleanup processing has completed for the task. The first time this message occurs during the execution of the CMAS or MAS, an SVC dump will be requested, along with message EYUXS0910I.

User response
Collect as much of the following as possible and contact your IBM Support Center:

- The complete job output.
- The unformatted SVC dumps for any abends that may have occurred during the execution of the CMAS or MAS.
- The unformatted AUXTRACE data sets (if the system is a MAS and AUXTRACE was not active in that system, collect the AUXTRACE data sets from the CMAS to which the MAS was connected).

Module:
EYU9XSTR
**Destination**

Console and SYSPRINT

**EYUXS1017E** The controlling task for this region, transaction cccc, is terminating abnormally.

**Explanation**
The CICSPlex SM task recovery TRUE, EYU9XSTR, executing in a CMAS or local MAS, determined that the terminating task for which cleanup processing is being performed is the CICSPlex SM controlling task in the region where:

ccc 
Is the transaction ID for the task

**System action**
An SVC dump will be requested, along with message EYUXS0910I, if one has not already been requested for this task. If the region is a CMAS, it will be cancelled. If the region is a local MAS, it will be disconnected from the ESSS and a restart of the region will be required in order for it to reconnect.

**Note:** This message will be preceded by message EYUXS1014I and will be followed by message EYUXS1015I or EYUXS1016E.

**User response**
Refer to the documentation for the accompanying EYUXS1015I or EYUXS1016E message, and then restart the region.

**Note:** Additional errors (for example, abends) may occur in the region as a result of the cancel (CMAS) or ESSS disconnection (local MAS). These errors are to be expected and should be ignored.

**Module:**
EYU9XSTR

**Destination**
Console and SYSPRINT

**EYUXS1018E** ESSS disconnect failed, RESP nnn

**Explanation**
The CICSPlex SM task recovery TRUE, EYU9XSTR, executing in a local MAS, encountered an invalid return code when requesting that the MAS be disconnected from the ESSS where:

nnn 
Is the invalid return code

**System action:**
CICSPlex SM cleanup processing continues. This message will be preceded by message EYUXS1014I and followed by message EYUXS1015I or EYUXS1016E.

**User response:**
The API resources orphaned reside in the local MAS and in the CMAS to which it is connected. If this message occurs frequently, the local MAS receiving the message and the CMAS to which it is connected should be restarted to release the orphaned resources.

**Module:**
EYU9XSTR

**Destination**
Console and SYSPRINT

**EYUXS1019W** API resources allocated for task nnnnnn may be orphaned.

**Explanation**
The CICSPlex SM task recovery TRUE, EYU9XSTR, executing in a local MAS, is performing cleanup for a task that allocated CICSPlex SM API resources which have not been freed where:

nnnnn 
Is the task number

**System action:**
CICSPlex SM cleanup processing continues. This message will be preceded by message EYUXS1014I and followed by message EYUXS1015I or EYUXS1016E.

**User response:**
The API resources orphaned reside in the local MAS and in the CMAS to which it is connected. If this message occurs frequently, the local MAS receiving the message and the CMAS to which it is connected should be restarted to release the orphaned resources.

**Module:**
EYU9XSTR

**Destination**
Console and SYSPRINT
**EYUXS1020E** Terminating the MAS agent due to the termination of the task for transaction cccc.

**Explanation**
The CICSPlex SM task recovery TRUE, EYU9XSTR, executing in a local MAS, determined that the terminating task for which cleanup processing is being performed is the receive task (transaction COI0) or the status task (transaction COIE), where:

cccc

Is the transaction ID for the task

**System action:**
An SVC dump will be requested, along with message EYUXS0910I, if one has not already been requested for this task. The MAS agent is then terminated.

**User response:**
Refer to the documentation for the accompanying EYUXS1015I or EYUXS1016E message, and then restart the region or issue the COLM transaction to restart the MAS agent.

**Module:**
EYU9XSTR

**EYUXS1102I**  
Interval Timing termination complete

**Explanation:**
The Interval Timing subcomponent has been terminated.

**System action:**
CICSPlex SM termination continues.

**User response:**
None.

**Module:**
EYU9XSTC

**EYUXUnnnn messages**

The EYUXUnnnn messages are issued by various utilities of the kernel linkage component, such as the online utility transaction (COLU) and the batched repository-update facility.

The COLU transaction is a diagnostic tool that you can use when requested by IBM support; it is described in Using the online utility transaction (COLU).

**Note:** If the COLU transaction is issued from an MVS console, its messages (EYUXU0001 – EYUXU0017) are returned to the console, rather than to a CICS terminal.

The batched repository-update facility can be used to create and modify definitions in a CMAS data repository. Some of these messages describe problems with the batched repository input file, such as invalid commands or resource objects. For a description of the input file and its commands, see The batched repository-update facility. For a list of valid resource objects and keywords, see CICSPlex SM resource tables.

*date time applid Online Utility Terminated with {error(s) / no errors}.*

**Explanation**
The COLU transaction has completed processing, where:

- **result**
  - Indicates the result of COLU processing, as one of the following:
    - **no errors**
      - The transaction completed successfully.
    - **error(s)**
      - The transaction encountered one or more error conditions.

**System action**
The COLU transaction completes its processing.

**User response**
If this message indicates there were errors, review any EYUXUunnnn messages issued before this one to determine the cause of the problem. Then correct the input to COLU and rerun the transaction.

**Module:**

**EYUXU0003E**  
*date time applid CICS {GETMAIN | SPOOLCLOSE | SPOOLOPEN | SPOOLWRITE} failed, RESP=respcode, RESP2=resp2code.*

**Explanation**
An EXEC CICS command returned an abnormal response, where:

- **command**
  - Is the EXEC CICS command that caused the error, and is one of the following:
    - FREEMAIN  
    - GETMAIN  
    - SPOOLCLOSE  
    - SPOOLOPEN  
    - SPOOLWRITE

- **respcode**
  - Is the EIBRESP code returned by CICS.

- **resp2code**
  - Is the EIBRESP2 code returned by CICS.

**System action**
The COLU transaction terminates.

**User response**
evaluate the RESP= and RESP2= values for the specified EXEC CICS command. Then correct the input to COLU, if possible, and rerun the transaction. If the
problem persists, contact your IBM Support Center with the text of this message.

5. *parm*

**Destination**
Console and COLG

**EYUXU0006E** *date* *time* *applid* {MODB | MOEB} For *compid* Is not available.
Explanation

A control block that is required by COLU is not available for the specified component, where:

cblock
Identifies the required control block as either MODB or MOEB.

compid
Identifies the component that COLU was trying to access.

The component may not be initialized in the CMAS or MAS where COLU was issued.

System action
The COLU transaction terminates.

User response
Make sure the specified component is fully initialized and then rerun the transaction.

**Destination**  
Console and COLG

**EYUXU0200E**  
*date time applid Failure {allocating | unallocating} input file (dsname) - reason code (code).*

**Explanation**  
A failure occurred during allocation processing of the specified batched repository input file, where:

**action**  
Identifies the action being performed as either allocating or unallocating.

**dsname**  
Is the name of the data set that was being processed.

**code**  
Is the reason code returned from the MVS dynamic allocation call.

**System action**  
The batched repository run terminates.
**User response**

Refer to the z/OS MVS Programming: Authorized Assembler Services Guide for an explanation of the reason code returned by dynamic allocation. Correct the problem and resubmit the batched repository job.

**Module:**
EYU0XDBI

**XMEOUT parameters/Message inserts**
1. date
2. time
3. applid
4. Value chosen from the following options:
   - 1=allocating,

5. dsname
6. code

**Destination**
Console and COLG

**EYUXU0201E**

`date time applid Failure {closing | opening | reading} input file (dsname) - return code (code).`

**Explanation**

A failure occurred during the input/output processing of the specified batched repository input file, where:

- **action**
  - Identifies the action being performed as opening, reading, or closing.
- **dsname**
  - Is the name of the data set that was being processed.
- **code**
  - Is the return code from the MVS BSAM call.

**Note:**
A return code of zero (0) means an abend occurred during MVS input/output processing. When the batched repository-update facility intercepts an abend, a return code cannot be set.

**System action**

The batched repository run terminates.

**User response**

Check the job log of the appropriate CMAS for MVS messages related to the problem. Then refer to the z/OS MVS System Messages manual for an explanation of those messages.

Correct the problem and resubmit the batched repository job.

**Module:**
EYU0XDBI

**XMEOUT parameters/Message inserts**
1. date
2. time

**EYUXU0203E**  
*date time applid Method failure in (module) - response (respcode) - reason (rcode).*

**Explanation**
A failure occurred during execution of the specified CICSPlex SM module by the batched repository facility, where:

*module*
Is the name of the module that failed.

*respcode*
Is the response code returned by the module.

*rcode*
Is the reason code returned by the module.

**System action**
The batched repository run terminates. User trace records are written to the CICS trace data set.

**User response**
Collect the following information and contact your IBM Support Center:
- batched repository process report
- EYULOG
- CICS trace data set

**Module:**
EYU0XDBM

**EYUXU0204E**  
*date time applid Utility (command / parameter / object) (parmname) too long.*

**Explanation**
The length of a parameter used as input to the batched repository facility was too long, where:

*parmttype*
Identifies the type of parameter as one of the following:
- **Command**
  7 characters or less
- **Object**
  8 characters or less
- **Keyword**
  12 characters or less

*parmname*
Is the name of the parameter that was too long.

**System action**
If the input file was being executed, further processing is limited to syntax checking. If the input file was being checked, the run continues.

**User response**
Correct the input parameter and resubmit the batched repository job.

**Module:**
EYU0XDBP

**XMEOUT parameters/Message inserts**

1. date
2. time
3. applid

**Destination**

Console and COLG

| EYUXU0208E | date time applid Invalid Context (context) for execution of (command). |

**Explanation**

The specified context is not appropriate for processing of the specified batched repository command, where:

- **context**
  - Identifies the CMAS or CICSplox that was specified on the CONTEXT command. Note that if CONTEXT is used with no parameter, the local CMAS (that is, the CMAS under which the repository facility is running) is assumed.

- **command**
  - Is the name of the command that could not be processed.

**System action**

Processing of the current command terminates. If the input file was being executed, further processing is limited to syntax checking. If the input file was being checked, the run continues.

**User response**

Check the last CONTEXT command before the command statement. Make sure it specifies an appropriate context (either the local CMAS or a CICSplox) for the command being processed. Correct any errors and resubmit the batched repository job.

**Module:** EYU0XDBM

---

**XMEOUT parameters/Message inserts**

Explanation

A failure occurred while processing the batched repository output spool file, where:

action

Identifies the action being performed as either opening, writing, or closing.
Indicates the reason for the failure as one of the following:

- Allocation Failure
- Invalid Class Value
- Invalid Output Record Length
- Unidentified Node/User Combination
- Storage GETMAIN Error
- Storage FREEMAIN Error
- Unsupported Language
- Unsupported Function
- UserId Missing
- Node Missing
- From Missing
- Invalid Keep/Delete
- Input/Output Missing
- CICS SSI Already Enabled
- No Subsystem Present
- Interface Being Disabled
- Interface Stopped
- Data Set Not Open
- Open Macro Failure
- Internal Spool Error
- VSAM SHOWCB Failure
- JES Thread Unavailable
- Spool In Use by Another Task
- Spool In Use by Current Task
- MVS Interface Failure

System action
The batched repository run terminates.

Destination
Console and COLG

EYUXU0239W date time applid Invalid filter-attributes have been modified.

Explanation

The MP CMAS has shipped a Resource Assignment (RASGNDEF) to a CMAS running a lower level of CICSpex SM, as part of repository synchronization. The RASGNDEF in question contains a Filter string that identifies an attribute that is not applicable to the lower level CMAS.

System action

The unknown attribute is modified internally to generate a FALSE condition in the lower level CMAS. An exception trace entry will be taken to identify the filter-attribute that has been changed. This message will be issued only once in the CMAS job step, regardless of the number of invalid filter-attributes detected.

User response

The system is reporting an attribute test that is being modified to enable the filter to be executed. However, users should be aware that the modified test will be updated to produce an unconditional FALSE state. This means that resources that you would assume to be successfully installed may now not be defined at their target scopes - particularly if these invalid filter-attributes are part of a compound specification connected with the AND logical operator. If there is any doubt as to the integrity of system resources after this message is issued, then collect the CMAS Auxiliary Trace Datasets and contact your IBM Support Center.

EYUXU1401I Initializing CICSPlex SM API environment

Explanation
The EYUINIT() program fails to initialize because it is unable to access or run the CICSPlex SM initialization program.

System action
The CICSPlex SM batch utility stops.

User response
Either your REXX or CICSPlex SM environment is not properly installed.

Module: EYU9XDBT

Destination
SYSPRINT

EYUXU1403E CONTEXT must be the first command parameter
**Explanation**
The CONTEXT parameter in the EYU9XDBT job is not the first option. The first occurrence of the CONTEXT command parameter in the EYU9XDBT job defines the name of the CMAS.

**System action**
The CICSPlex SM batch utility stops.

**User response**
Edit the EYU9XDBT job and move the CONTEXT parameter to the beginning.

**Module:** EYU9XDBT

**Destination**
SYSPRINT

**EYUXU1404W** Data following CONTEXT value has been ignored

**Explanation**
The only data that should be associated with the CONTEXT parameter is the name of the context.

**System action**
The CICSPlex SM batch utility stops.

**User response**
Edit the EYU9XDBT job and delete the extraneous data.

**Module:** EYU9XDBT

**Destination**
SYSPRINT

**EYUXU1405E** CONTEXT must be the first command specification of the CPSMDEFS input stream

**Explanation**
The CONTEXT parameter in the EYU9XDBT job is not the first option.

**System action**
The CICSPlex SM batch utility stops.

**EYUXU1406E** CICSPlex SM API environment initialization has failed

**Explanation**
Unknown DEFINE command parameter.

**System action**
The CICSPlex SM batch utility stops.

**User response**
Edit the EYU9XDBT job and ensure that the parameters are valid and spelt correctly.

**Module:** EYU9XDBT

**Destination**
SYSPRINT

**EYUXU1407E** Resource type must be explicit for object deletion

**Explanation**
The name of the object that follows the DELETE command in the EYU9XDBT job has not been recognized or is missing.

**System action**
The CICSPlex SM batch utility stops.

**User response**
Review the log. Edit the EYU9XDBT job and ensure that the name of the object is valid.

**Module:** EYU9XDBT

**Destination**
SYSPRINT
EYUXU1408E  Unsupported ADD command resource type

Explanation
The ADD command supports two resource types; TOGROUP and REGION.

System action
The CICSPlex SM batch utility stops.

User response
Review the log. Edit the EYU9XDBT job and ensure that the name of the object is valid.

Module:
EYU9XDBT

Destination
SYSPRINT

EYUXU1409E  Unsupported REMOVE command resource type

Explanation
The REMOVE command supports the resource type FROMGROUP.

System action
The CICSPlex SM batch utility stops.

User response
Review the log. Edit the EYU9XDBT job and ensure that the name of the object is valid.

Module:
EYU9XDBT

Destination
SYSPRINT

EYUXU1410E  Input file reference omitted from IMPORT command, request rejected.

Explanation
The DD name is either invalid or is missing following the IMPORT command.

System action
The CICSPlex SM batch utility stops.

User response
Edit the input file.

Module:

Mandatory resource name parameter omitted

**Explanation**
A valid parameter is missing.

Chapter 2. CICSPlex SM messages  501
**System action**
The CICSPlex SM batch utility stops.

**User response**
Correct the EYU9XDBT input stream.

**Module:**
EYU9XDBT

**Destination**
SYSPRINT

**EYUXU1434E**  Mandatory resource type parameter omitted

**Explanation**
A valid resource type is missing.

**System action**
The CICSPlex SM batch utility stops.

**User response**
Correct the EYU9XDBT input stream.

**Module:**
EYU9XDBT

**Destination**
SYSPRINT

**EYUXU1435E**  Command parameter repeated

**Explanation**
A command parameter has been used twice in the batch program.

**System action**
The CICSPlex SM batch utility stops.

**User response**
Correct the EYU9XDBT input stream.

**Module:**
EYU9XDBT

**Destination**
SYSPRINT

**EYUXU1437E**  DDname data set is empty

**Explanation**
The named data set is empty or missing.

**System action**
The CICSPlex SM batch utility stops.

**User response**
Ensure that you are using the correct level of CICS TS.

**Module:**
EYU9XDBT

**Destination**
SYSPRINT

**EYUXU1439E**  Resource name length must not be longer than resource key length.

**Explanation**
The resource name length is longer than the key length.

**System action**
The CICSPlex SM batch utility stops.

**User response**
Correct the EYU9XDBT input stream.

**Module:**
EYU9XDBT

**Destination**
SYSPRINT

**EYUXU1436E**  Version ID version is not allowed for this program
TPARSE failed for resourceName

data: status

Explanation
The CICSPlex SM TPARSE command failed to access the attribute data in a resource table record. See CICSPlex SM commands for more information about the TPARSE REXX command STATUS option.

System action
The CICSPlex SM batch utility stops.

User response
Check the input stream is valid for the version of CICSPlex SM in use.

Module: EYU9XDBT

TBUILD failed for resourceName

data: status

Explanation
The CICSPlex SM TBUILD command failed to build a CICSPlex SM definition or a CICS resource table record from the data that was supplied. status is the STATUS option that is returned by the TBUILD command. See CICSPlex SM commands for more information about the TBUILD REXX command STATUS option.

System action
The CICSPlex SM batch utility stops.

User response
Check the feedback cpsmresponse and cpsmreason codes to identify the reuse of the feedback failure.

Module: EYU9XDBT

CICSPlex SM FEEDBACK

OBJECT data is not available: RESP=cpsmresponse

REASON=cpsmreason

Explanation
CICSPlex SM is unable to create a buffer in preparation for receiving records.

System action
The CICSPlex SM batch utility stops.

User response
Check the feedback cpsmresponse and cpsmreason codes to identify the reuse of the feedback failure.

Module: EYU9XDBT

CICSPlex SM FEEDBACK data is not available: RESP=cpsmresponse

REASON=cpsmreason

Explanation
The feedback buffer has been created but there is no feedback data available to populate it.

System action
The CICSPlex SM batch utility stops.
User response
Check the feedback cpsmresponse and cpsmreason codes to identify the reuse of the feedback failure.

Module:
EYU9XDBT

Destination
SYSPRINT

**EYUXU1445S**  CICSPlex SM FEEDBACK cannot be extracted

Explanation
This has received an attribute but CICSPlex SM is unable to provide feedback data.

System action
The CICSPlex SM batch utility stops.

User response
Check for other messages to determine the cause of the problem.

Module:
EYU9XDBT

**Explanation**
The model record is invalid.

**System action**
The CICSPlex SM batch utility continues.
User response
None

Module: EYU9XDBT

Destination
SYSPRINT

EYUXU1456E ResourceType name is invalid

Explanation
You have tried to define a CICSPlex, region or group with an invalid name, that is, a name that does not follow the CICSPlex SM naming standards.

System action
The program rejects the rest of the command stream and terminate with return code 8.

User response
You should supply a name that follows the CICSPlex SM naming standards.

Module: EYU9XDBT

Destination
SYSPRINT

EYUXU1457I Export is not supported for ResourceType records

Explanation
An EXPORT request was issued to the CICSPlex SM batch utility for a record type, ResourceType, that is not supported for EXPORT.

System action
The EXPORT request is ignored and the CICSPlex SM batch utility continues.

User response
None.

Module: EYU9XDBT

Destination
SYSPRINT

EYUXU1458I numberof records records skipped export to file DDname

Explanation
This reports the number of records that did not get exported to the specified output file as they belong to a platform.

System action
The specified output file is created.

User response
None.

Module: EYU9XDBT

Destination
SYSPRINT

EYUXU1459I Duplicate CONTEXT context has been ignored.

Explanation
A CONTEXT command has been ignored as a previous CONTEXT command has specified the same context name.

System action
None.

User response
None.

Module: EYU9XDBT

Destination
SYSPRINT

EYUXU1460E Object update failed for resourcetype resourcename

Explanation
The object update failed because an error was encountered.

System action
The CICSPlex SM batch utility stops.
User response

This message is followed by message EYUXU1446E, which describes the CPSM UPDATE API failure. If you have specified the verbose feedback option then EYUXU1430 will also follow. This marks the start of the section containing the error feedback data, including error codes. Review the error feedback information, correct the error, and retry the action.

**EYUXZnnnn messages**

**EYUXZ0001I**  Trace Services termination complete

**Explanation**
The Trace Services subcomponent has been terminated.

**System action**
CICSPlex SM can no longer issue user trace records to the CICS trace data set.

**User response**
None

**Module:**
EYU0XZTM, EYU3XZTM

**Destination**
Console and SYSPRINT

**EYUXZ0002E**  Filename *filename* could not be opened.

**Explanation**
The specified file, which is used by the EYU9XZUT trace format utility, could not be opened, where:

*filename*  Identifies the file as SYSIN, TRCEIN, or TRCEOOUT.

**System action**
The trace format utility terminates.

**User response**
Make sure the JCL contains the proper DD statements and the named files exist. Then, resubmit the job. Refer to the Troubleshooting CICSPlex SM manual for sample JCL.

**Module:**
EYU9XZUT

**Destination**
SYSPRINT

**EYUXZ0003E**  Component text *text* is not a valid CPSM component.

**Explanation**
An invalid component ID was specified on the COMPID= option of the EYU9XZUT trace format utility, where:

*text*  Is what was specified.

**System action**
The trace format utility terminates.

**User response**
Correct the component ID and then resubmit the job. Refer to the Troubleshooting CICSPlex SM manual for a list of valid component IDs.

**Module:**
EYU9XZUT

**Destination**
SYSPRINT

**EYUXZ0004I**  Please correct and resubmit.

**Explanation**
This message follows one or more EYUXZnnnnE messages that describe a problem with the EYU9XZUT trace format utility.

**System action**
The trace format utility terminates.
User response
Correct the problem described in previous messages and then resubmit the job.

Module:
EYU9XZUT

Destination
SYSPRINT

**EYUXZ0005E** Keyword *text* is not a valid selection criteria keyword.

**Explanation**
An invalid keyword was specified for the EYU9XZUT trace format utility, where:

*text* is what was specified.

**System action**
The trace format utility terminates.

**User response**
Correct the keyword and then resubmit the job. Refer to the Troubleshooting CICSPlex SM manual for a list of valid EYU9XZUT options.

Module:
EYU9XZUT

Destination
SYSPRINT

**EYUXZ0008W** Filename *filename* is required, processing is terminated.

**Explanation**
The specified file, which is required for the EYU9XZUT trace format utility, was not available, where:

*filename* Identifies the file as TRCEIN or TRCEOUT.

**System action**
The trace format utility terminates.

**User response**
Make sure the JCL contains the proper DD statements and the named files exist. Then, resubmit the job. Refer to the Troubleshooting CICSPlex SM manual for sample JCL.

Module:
EYU9XZUT

Destination
Console and SYSPRINT

**EYUXZ0010E** Trace Services termination failed
Explanation
An error occurred while attempting to terminate the Trace Services subcomponent.

System action
CICSPlex SM can no longer issue user trace records to the CICS trace data set. Trace records may have been written to the data set before this error occurred.

User response
Examine the exception trace records, and any messages issued prior to this one, to determine the cause of the problem.

Module: EYU0XZTM

Destination
Console and SYSPRINT

EYUXZ0011E Internal SORT failed - examine SORT messages for reason.

Explanation
An error occurred while attempting to terminate the Trace Services subcomponent.

System action
CICSPlex SM can no longer issue user trace records to the CICS trace data set. Trace records may have been written to the data set before this error occurred.

User response
Examine the exception trace records, and any messages issued prior to this one, to determine the cause of the problem.

Module: EYU0XZTM

Destination
Console and SYSPRINT

EYUXZ0011E Internal SORT failed - examine SORT messages for reason.

Explanation
An error occurred while attempting to terminate the Trace Services subcomponent.

System action
CICSPlex SM can no longer issue user trace records to the CICS trace data set. Trace records may have been written to the data set before this error occurred.

User response
Examine the exception trace records, and any messages issued prior to this one, to determine the cause of the problem.

Module: EYU0XZTM

Destination
Console and SYSPRINT

EYUXZ0011E Internal SORT failed - examine SORT messages for reason.

CVT time adjustments
The time zone offset and leap second adjustment from the CVT on the system where the CMAS or MAS executed.

System action
All time and dates in the formatted trace records have been adjusted as specified.

User response
None

Module: EYU9XZUT

Destination
Console and SYSPRINT

EYUXZ0013I Time and date formatting has been switched to use CPSM time adjustments, starting with sequence number nnnnnnnnnn.

Explanation
Starting with the specified trace record sequence number nnnnnnnnnn, EYU9XZUT will switch from using CVT adjustments to CPSM adjustments when formatting the time and date. Please see the description for message EYUXZ0012I for information about the different types of time adjustments.

System action
All time and dates in the formatted trace starting with the specified sequence number have been adjusted using the CPSM time zone and time zone offset for the CMAS or MAS.

User response
None

Module: EYU9XZUT

Destination
Console and SYSPRINT

EYUXZ0100I date time applid MAS trace processing long running task started.

CPSM time adjustments
The CPSM defined time zone and time zone offset for the CMAS or MAS.
Explanation
The MAS trace processing long running task, XZLT, has successfully started in the CMAS.

System action
CMAS initialization continues.

User response
None.

Module: EYU0XZLT

XMEOUT parameters/Message inserts

3. applid

Destination
COLG

EYUXZ0101I date time applid MAS trace processing long running task terminated.

Explanation
The MAS trace processing long running task, XZLT, has terminated normally in the CMAS.

System action
CMAS execution continues.

User response
Collect the AUXTRACE datasets and the complete JOB output from the CMAS and contact your IBM support center.

Module: EYU0XZLT

XMEOUT parameters/Message inserts
1. date
2. time
3. applid

Destination
Console and COLG

EYUXZ0901I date time applid A dump of this CMAS, code (dumpcode), has been requested by CMAS (cmasname).

Explanation
A dump of this CMAS, where dumpcode is the code associated with the dump, has been requested by another CMAS, where cmasname is the name of the requesting CMAS. If a dump is taken in this CMAS, dumpcode will be contained in the title of the dump.

System action
A dump is requested of this CMAS. If it is successful, it will be followed by message EYUXZ0910I, containing the title of the dump. If it is not successful, it will be followed by message EYUXZ0913E. Processing then continues.

User response
Refer to the job log of the requesting CMAS, which will have issued one of the following messages:
EYUXZ0902I, EYUXZ0903I, EYUXZ0904I, EYUXZ0905I
Then refer to that message description to determine how to respond.

Module:
XMEOUT parameters/Message inserts

1. date
2. time
3. applid
4. dumpcode
5. cmasname

Destination
Console and COLG

EYUXZ0902I  date time applid This CMAS has requested dumps, code (dumpcode), of this CMAS and of CMAS (cmasname).

Explanation
A dump of this CMAS and of another CMAS that is directly or indirectly connected to it, where cmasname is the name of the connected CMAS, has been requested by this CMAS. A code, dumpcode, has been associated with both dumps and will be contained in the dump title of the dumps.

System action
A dump is requested of this CMAS and the CMAS identified as cmasname, which will issue message EYUXZ0901I. If the dumps are successful, they will be followed by message EYUXZ0910I, containing the title of the dump. If they are not successful, they will be followed by message EYUXZ0913E. Processing then continues.

User response
Search the job log of the requesting CMAS for additional messages indicating a problem, referring to those message descriptions to determine how to respond. If there are no other messages, then collect the complete job output, auxtrace datasets and dumps from both CMASes, and contact your IBM support center.

4. dumpcode

Destination
Console and COLG

EYUXZ0903I  date time applid This CMAS has requested dumps, code (dumpcode), of this CMAS and of all CMASes connected to it.

Explanation
A dump of this CMAS and of all CMASes directly or indirectly connected to it, has been requested by this CMAS. A code, dumpcode, has been associated with all of the dumps and will be contained in the dump title of the dumps.

System action
A dump is requested of this CMAS and all CMASes connected to it. The connected CMASes will issue message EYUXZ0901I. If the dumps are successful, they will be followed by message EYUXZ0910I, containing the title of the dump. If they are not successful, they will be followed by message EYUXZ0913E. Processing then continues.

User response
Search the job log of the requesting CMAS for additional messages indicating a problem, referring to those message descriptions to determine how to respond. If there are no other messages, then collect the complete job output, auxtrace datasets and dumps from all CMASes, and contact your IBM support center.

6. plexname

**Destination**

Console and COLG

**EYUXZ0910I  date time applid dump_title.**

**Explanation**

This message indicates that an SDUMP has been requested by CPSM recovery, where:

**applid**

Is the application ID of the CICS system that requested the dump.

**dump_title**

Is the title string passed to the system dump routine.
System action

An SDUMP has been requested, containing the current region, the ESSS Address Space, and cache data spaces for components accessed in the requesting task.

User response

Collect as much of the following information as possible, and contact your IBM Support Center:

- The job log for the job for which the dump was taken. If the job log is not available, get the system log.
- The EYULOG file. If the dump was taken for a CMAS, the EYULOG file for that CMAS. If the dump was taken for a MAS, the EYULOG of the CMAS to which the MAS was connected.
- The unformatted SVC dump (SDUMP). The dump title in the message can be used to identify the required dump.
- The AUXTRACE file. If the dump was taken for a MAS, and AUXTRACE was not active in that CICS system, then the AUXTRACE file from the CMAS to which the MAS connected.

Module:
EYU0XZPT, EYU0XZSD

XMEOUT parameters/Message inserts

1. date

3. applid
4. dump_title

Destination

Console and COLG

EYUXZ0911W  date time applid method dump_title

Explanation

An on demand request for an SVC dump has been suppressed because the value of the ESDUMP EYUPARM is NEVER, where:

- method
  identifies the CPSM method that suppressed the dump:
  EYU0XZPT
  EYU0XZSD

System action

Processing continues.

User response

Suppression of SVC dumps may affect the ability to debug problems. If a problem occurs with SVC dump suppression active, users may be required to reproduce the problem without SVC dump suppression active before debugging can be performed for the problem. It is strongly recommended by CICSPlex SM service that ESDUMP is not set to NEVER.

Module:
EYU0XZPT, EYU0XZSD

XMEOUT parameters/Message inserts

Destination

Console and COLG

EYUXZ0912W  date time applid method

dump suppressed because ESDUMPLIMIT has been reached for Job(ins#1) Date(ins#2) Time(ins#3).

Explanation

An SVC dump was requested but the dump has been suppressed because the CICSPlex SM system parameter ESDUMP is set to NO and the number of dumps requested with this program name, abend code, offset and region type (CMAS or MAS) combination exceeds the value specified on the CICSPlex SM system parameter ESDUMPLIMIT.

<jobname>
  Is the job name of the CICS system when the last abend was captured.

<dd/mm/yyyy>
  Is the date when the last abend was captured.

<hh:mm:ss>
  Is the time when the last abend was captured.

System action

Processing continues.
User response
This is normal and can be ignored unless a new dump is needed. If a new dump is needed, set the ESDUMP parameter to YES, reproduce the problem, and then reset ESDUMP back to NO. Refer to the ESDUMP and ESDUMPLIMIT documentation in Troubleshooting CICSPlex SM.

COD0 and CODB messages
These messages are issued by the CICSPlex SM COD0 and CODB debugging transactions.

If you receive one of these messages and you are not working with an IBM support representative at the time, collect the following information and contact IBM support:

• Error messages
• Transaction dump
• Other appropriate diagnostic information

COD0 messages
COD0 messages

COD0 IS ABENDING! EIBFN: fcode RESP1: resp1code RESP2: resp2code RC: rcode
The COD0 debugger transaction encountered an error from which it could not recover. The transaction terminates and this message is issued to the CICS terminal. In order to protect the CICSPlex SM control block chains, no CICS abend occurs.

The message contains the following diagnostic information:

fcode
The last CICS command function code returned by DFHEIBFN.
**resp1code**
The last RESP code returned by a CICS command.

**resp2code**
The last RESP2 code returned by a CICS command.

**rcode**
The reason code, which can be one of the following:

01  The DBG1 internal transaction was issued instead of COD0. Use the COD0 transaction to start
    the debugger.

02  A CICS error occurred while requesting information about the terminal.

03  CICS reported a non-3270 style terminal.

04  The terminal width is not 80 characters. The debugger runs only in 80-character mode
    (Models 2 - 4).

06  Module DBG9DBG3, which is used by the COD0 ATTACH command, could not be loaded by an
    MVS LOAD command.

07  Internal error. The table of started and attached tasks indicated an entry was available, but
    none could be found.

11  A CICS WRITE TS command, which is used to list started and attached tasks and allocated
    resources, failed.

12  A CICS GETMAIN command failed.

13  A CICS PUSH HANDLE command failed.

14  A CICS POP HANDLE command failed.

15  Internal error. A stack frame request was issued, but it would have exceeded the maximum
    number of frames allowed.

16  A CICS HANDLE ABEND command failed.

17  Internal error. A request was issued to add a line to a terminal buffer, but it would have
    exceeded the maximum number of lines allowed.

18  Internal error. The calculation of a terminal buffer size was incorrect.

20  A CICS CONVERSE command failed.

21  Internal error. An attribute that was expected in the terminal buffer could not be found.

22  A create cache method call, which is used to create a kernel linkage cache, failed.

23  Internal error. There was a mismatch between the number of fields on a panel and the number
    of fields passed to the panel processor.
Internal error. There was a mismatch between the number of fields in a panel header and the number found on the panel.

Internal error. A requested panel could not be found.

A CICS FREEMAIN command failed.

Internal error. A message number could not be found in the message table.

Program EYU9XLCI, which is required by the COD0 ATTACH command, was not loaded during CMAS initialization and could not be loaded by an MVS LOAD command.

Either the CICSPlex SM XLWA could not be found or its eyecatcher could not be validated.

Internal error. A field in an XLTD (method table) entry was not either one or two bytes long, as expected.

Module DBG9DBG2, which is used by the COD0 START command, could not be loaded by an MVS LOAD command.

In the output of a COD0 ATTACH command, the length of a message argument list (MAL) was found to be longer than 256 bytes.

**CODB messages**

These messages are displayed in the MSG==> field at the bottom of the CODB display panel.

**THE SPECIFIED ALET IS NOT A VALID ONE.**

The value entered in the ALET==> field, or selected by PF22, is not a valid ALET.

**DISPLAY COMMAND IGNORED, CURSOR NOT ON VALID FIELD.**

PF9, PF10, or PF22 was pressed, but the cursor was not on a field that could be used to develop a display address.

**TO ALTER MEMORY, PF11.**

The memory display portion of the screen was modified. Press PF11 to make the change take effect.

**MEMORY CHANGED SINCE DISPLAY, PF11 TO ALTER.**

The data at the memory location to be altered has been modified since it was displayed. Press PF11 to make the change take effect.

**DATA IS FETCH PROTECTED AT LOCATION address**

An attempt was made to display memory in protected storage. If the problem was caused by scrolling an existing display, the display is automatically adjusted. address identifies the storage location that can not be displayed.

**DATA IS STORE PROTECTED AT LOCATION address**

An attempt was made to alter protected memory. address identifies the storage location that can not be altered.

**'NEXT' PFKEY NOT ACTIVE FOR CURRENT COMMAND.**

The current command or display mode (as indicated by the ADDR field, PF9, PF10, or PF22), does not support the NEXT function.

**'PREVIOUS' PFKEY NOT ACTIVE FOR CURRENT COMMAND.**

The current command or display mode (as indicated by the ADDR field, PF9, PF10, or PF22), does not support the PREVIOUS function.

**CURSOR NOT ON VALID QUEUE/CACHE TOKEN.**

PF13 was pressed, but the data pointed to by the cursor is not a valid queue token.
REQUSTED QUEUE/CACHE TOKEN CANNOT BE FOUND.
The queue defined by the queue token no longer exists.

END OF QUEUE/CACHE OR QUEUE/CACHE EMPTY.
Either the queue is empty, or the end of the queue had been reached when the NEXT function was requested.

'TOP' NOT ACTIVE FOR CURRENT DISPLAY.
The current command or display mode (as indicated by the ADDR field, PF9, PF10, or PF22), does not support the TOP function.

'BOTTOM' NOT ACTIVE FOR CURRENT DISPLAY.
The current command or display mode (as indicated by the ADDR field, PF9, PF10, or PF22), does not support the BOTTOM function.

AN UNEXPECTED ABEND OCCURRED, DUMP TAKEN, AND RESTARTING THE TRANSACTION.
The CODB transaction terminates and is automatically restarted. This problem can be caused by corrupted CICSPlex SM control blocks or chains.

CMAS shutdown transaction messages

These messages are issued by the CICSPlex SM shutdown transaction COSD. They are informational messages only, issued by the terminal user. No user action is required.

CMASSTOP SUCCESSFULLY INITIATED
The CMAS shutdown process has begun.

CMASSTOP REQUESTED, SYSTEM NOT A CMAS - IGNORED
The COSD transaction may only be used to shut down a CMAS. The transaction is ignored.
Chapter 3. CICSPlex SM Abend and dump codes

When abnormal conditions occur, CICSPlex SM attempts to recover in an orderly manner and continue with normal processing. Occasionally conditions arise that prevent or preclude such recovery and a task, component, or system might end. In this situation, an abend or dump code is issued.

CICS abend and dump codes

If you have to contact IBM in response to an abend or dump code, gather as much diagnostic information as possible.

The following diagnostic information is required by IBM support to help diagnose the problem:

- Job log from the MAS.
- EYULOG from the CMAS to which the MAS was connected or was attempting to connect.
- CICS TRANDUMP data set from the MAS. Use the CICS DFHDUP utility to format the dump data set.
- CICS AUXTRACE data set from the MAS, if available. Use the EYU9XZUT trace format utility to format the data set, as described in Using trace in CICSPlex SM. Also keep a copy of the unformatted trace data set.

EYUI

Explanation:
A non-recoverable error occurred during initialization.

System action:
MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

User response:
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then restart the MAS. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLEV

EYUK

Explanation:
Either a non-recoverable abend occurred during MAS initialization or a proper environment did not exist when attempting to recover from an abend.

System action:
MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

System action:
If this abend occurred during initialization, MAS initialization terminates. The CICS system continues to run normally, but it is not known to CICSPlex SM.

User response:
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then restart the MAS, if necessary. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLRV

EYUO

Explanation:
The environment create routine in a CMAS or MAS was called invalidly. The calling process was not a CICSPlex SM service.

System action:
CICS system processing continues.

User response
Make sure that:

- No site-written programs are attempting to call CICSPlex SM environment create.
- Users are not attempting to use CICSPlex SM TRANIDS directly, either from a terminal or via an EXEC CICS START.

If neither of these conditions exists, gather the specified diagnostic information and contact your IBM support center.

Module:
EYU9XLOP

EYUR
**Explanation:**
An error occurred while attempting to recover from an abend.

**System action:**
The failing task terminates. The CICS system continues to run normally, but it may not be known to CICSPlex SM.

**User response:**
Examine the MAS job log for any messages that might indicate a problem. If such messages exist, follow the instructions associated with those messages and then restart the MAS, if necessary. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

**Module:**
EYU9XLRV

---

**EYUV**

**Explanation:**
The Web User Interface environment create routine in a CMAS or MAS was called invalidly. The calling process was not a CICSPlex SM service.

**System action:**
The failing task terminates. A transaction dump is taken. CICS system processing continues.

**User response**
Make sure that:

- No site-written programs are attempting to call CICSPlex SM Web User Interface environment create.
- Users are not attempting to use CICSPlex SM TRANIDS directly, either from a terminal or via an EXEC CICS START.

If neither of these conditions exists, contact your IBM Support Center.

**Module:**
EYU9XLEV, EYU9XLOP

---

**EYUY**

**Explanation:**
An exception condition was detected in a remote MAS but a full CICSPlex SM exception trace could not be written at that time. This condition is not necessarily a failure in the application, but the reporting of an exception condition, which is usually the result of communications problems. Communications exceptions cannot be sent to the connected CMAS.

**System action:**
A transaction dump is taken to document the exception. Task execution continues, taking the appropriate action for the exception condition.

**User response:**
Examine the MAS and CMAS job logs for any messages that might indicate a problem, especially for those related to the communications network. If such messages exist, follow the instructions associated with those messages. If no messages exist, or if no appropriate action is indicated, gather the specified diagnostic information and contact your IBM support center.

**Module:**
EYU0VGIN

---

**Uxxxx abend codes**

In response to any of the Uxxxx abend codes, gather as much diagnostic information as possible and contact IBM support.

For a list of available diagnostic information, see “CICS abend and dump codes” on page 519.

**U100**

**Explanation:**
An ISPF interface failure has occurred.

**U1600**
**Explanation:**
A PC has issued a call to an unavailable service.

**U1700 through U1798**
**Explanation:**
Recovery Manager abends.

**U1799**
**Explanation:**
A should-not-occur condition has occurred.

**U1800**
**Explanation:**
Indicates that a C housekeeping failure has occurred.

**U1801**
**Explanation:**
A failure has occurred in GSI housekeeping.

**U1802**
**Explanation:**
A failure has occurred in GSI router housekeeping.

**U1803**
**Explanation:**
A transaction manager housekeeping failure has occurred.

**U1804**
**Explanation:**
A failure has occurred in the SAS/C resident module.

**U1899**
**Explanation:**
System environmental conditions have caused a failure with DYNAECP EPD.

**U1900**
**Explanation:**
A failure has occurred with the storage manager.

**U3000**
**Explanation:**
Indicates that a pseudo GSI service failure has occurred.

**U4000**
**Explanation:**
An unrecoverable control task error has occurred.

**U4090**
**Explanation:**
A server or application initialization error has occurred.

**U4095**
**Explanation:**
A task has been terminated by PGTERM.

---

**System dump codes**

In response to any of these dump codes, gather the following diagnostic information and contact your IBM Support Center:

- Job log and EYULOG from the CMAS.
- Unformatted SVC dump (SDUMP). Have access to IPCS.
- CICS AUXTRACE data set from the CMAS. Use the EYU9XZUT trace format utility to format the data set. Also keep a copy of the unformatted trace data set.

**EYUXL001**
**Explanation:**
The initialization process failed.

**System action:**
initialization terminates.

**Module:**
EYU9XLEV

**EYUXL002**
**Explanation:**
The recovery routine was entered during initialization.

**System action:**
initialization terminates.

**Module:**
EYU9XLRV

**EYUXL003**
**Explanation:**
The recovery routine was entered, but could not successfully recover from the abend.

**System action:**
processing terminates.

Programming interface information

IBM CICS supplies some documentation that can be considered to be Programming Interfaces, and some documentation that cannot be considered to be a Programming Interface.

Programming Interfaces that allow the customer to write programs to obtain the services of CICS Transaction Server for z/OS, Version 5 Release 6 (CICS TS 5.6) are included in the following sections of the online product documentation:

• Developing applications
• Developing system programs
• CICS TS security
• Developing for external interfaces
• Application development reference
• Reference: system programming
• Reference: connectivity

Information that is NOT intended to be used as a Programming Interface of CICS TS 5.6, but that might be misconstrued as Programming Interfaces, is included in the following sections of the online product documentation:

• Troubleshooting and support
• CICS TS diagnostics reference

If you access the CICS documentation in manuals in PDF format, Programming Interfaces that allow the customer to write programs to obtain the services of CICS TS 5.6 are included in the following manuals:

• Application Programming Guide and Application Programming Reference
• Business Transaction Services
If you access the CICS documentation in manuals in PDF format, information that is NOT intended to be used as a Programming Interface of CICS TS 5.6, but that might be misconstrued as Programming Interfaces, is included in the following manuals:

- Data Areas
- Diagnosis Reference
- Problem Determination Guide
- CICSPlex SM Problem Determination Guide

If this Software Offering uses cookies to collect PII, specific information about this offering’s use of cookies is set forth below:

**For the CICSPlex SM Web User Interface (main interface):**

Depending upon the configurations deployed, this Software Offering may use session and persistent cookies that collect each user’s user name and other PII for purposes of session management, authentication, enhanced user usability, or other usage tracking or functional purposes. These cookies cannot be disabled.

**For the CICSPlex SM Web User Interface (data interface):**

Depending upon the configurations deployed, this Software Offering may use session cookies that collect each user’s user name and other PII for purposes of session management, authentication, or other usage tracking or functional purposes. These cookies cannot be disabled.

**For the CICSPlex SM Web User Interface ("hello world" page):**

Depending upon the configurations deployed, this Software Offering may use session cookies that do not collect PII. These cookies cannot be disabled.
For CICS Explorer*: Depending upon the configurations deployed, this Software Offering may use session and persistent preferences that collect each user’s user name and password, for purposes of session management, authentication, and single sign-on configuration. These preferences cannot be disabled, although storing a user's password on disk in encrypted form can only be enabled by the user's explicit action to check a check box during sign-on.

If the configurations deployed for this Software Offering provide you, as customer, the ability to collect PII from end users via cookies and other technologies, you should seek your own legal advice about any laws applicable to such data collection, including any requirements for notice and consent.

For more information about the use of various technologies, including cookies, for these purposes, see IBM Privacy Policy and IBM Online Privacy Statement, the section entitled Cookies, Web Beacons and Other Technologies and the IBM Software Products and Software-as-a-Service Privacy Statement.
