## Jboss Security Remediation

 | Updated April 2, 2014 by [dmazzella](#) | Tags: *None*

Page Actions ▾

There are two security issues with Jboss 5.1.0 involving the [JMX Console](#)<sup>1</sup> and the [EJBInvoker](#)<sup>2</sup>. For detailed information, please view the following vulnerability database sources links below:

<http://www.osvdb.org/show/osvdb/97153><http://web.nvd.nist.gov/view/vuln/detail?vulnId=CVE-2013-4810><http://zerodayinitiative.com/advisories/ZDI-13-229/>

===== PART 1 =====

### I. For JMX - there are two options.

Option 1. See the following site: <https://community.jboss.org/wiki/SecureTheJmxConsole> - we reference this in our installation docs: [http://pic.dhe.ibm.com/infocenter/tivihelp/v49r1/index.jsp?topic=%2Fcom.ibm.tap.doc\\_3.3.1%2Fins\\_install%2Fist\\_install\\_on\\_jboss\\_and\\_mss.html](http://pic.dhe.ibm.com/infocenter/tivihelp/v49r1/index.jsp?topic=%2Fcom.ibm.tap.doc_3.3.1%2Fins_install%2Fist_install_on_jboss_and_mss.html)

----- or -----

Option 2. The JMX-Console could be removed all together. This is done by going into the jboss-5.1.0.GA/server/all/deploy directory and delete both of the jmx\* directory and xml. (jmx-console.war and jmx-invoker-service.xml)

For the JMXInvokerServlet, Edit jboss-5.1.0.GA/server/all/deploy/http-invoker.sar/invoker.war/WEB-INF/web.xml

Find and remove these three sections:

1. ....remove.....

```
<servlet>
  <servlet-name>JMXInvokerServlet</servlet-name>
  <description>The JMXInvokerServlet receives posts containing serlized
  MarshalledInvocation objects that are routed to the invoker given by
  the the MBean whose object name hash is specified by the
  invocation.getObjectname() value. The return content is a serialized
  MarshalledValue containg the return value of the inovocation, or any
  exception that may have been thrown.
  </description>
  <servlet-class>org.jboss.invocation.http.servlet.InvokerServlet</servlet-class>
  <load-on-startup>1</load-on-startup>
</servlet>
```

2. ....remove.....

```
<servlet-mapping>
  <servlet-name>JMXInvokerServlet</servlet-name>
  <url-pattern>/JMXInvokerServlet/*</url-pattern>
</servlet-mapping>
```

3. ....remove.....

```
<servlet-mapping>
  <servlet-name>JMXInvokerServlet</servlet-name>
  <url-pattern>/readonly/JMXInvokerServlet/*</url-pattern>
</servlet-mapping>
```

===== PART 2 =====

### II . For EJBInvoker

Edit jboss-5.1.0.GA/server/all/deploy/http-invoker.sar/invoker.war/WEB-INF/web.xml

Find and remove these two sections:

1. .... remove .....

```
<servlet>
  <servlet-name>EJBInvokerServlet</servlet-name>
  <description>The EJBInvokerServlet receives posts containing serlized
  MarshalledInvocation objects that are routed to the EJB invoker given by
  the invokerName init-param. The return content is a serialized
  MarshalledValue containg the return value of the inovocation, or any
  exception that may have been thrown.
  </description>
  <servlet-class>org.jboss.invocation.http.servlet.InvokerServlet</servlet-class>
  <init-param>
    <param-name>invokerName</param-name>
    <param-value>jboss:service=invoker,type=http</param-value>
  </init-param>
  <description>The RMI/HTTP EJB compatible invoker</description>
  </init-param>
  <load-on-startup>1</load-on-startup>
</servlet>
```

2. ....remove .....

```
<servlet-mapping>
  <servlet-name>EJBInvokerServlet</servlet-name>
  <url-pattern>/EJBInvokerServlet/*</url-pattern>
</servlet-mapping>
```
