## Performance Problem Decision Tree

Updated October 24, 2017 by Jay.Manaloto | Tags: best\_practices, performance, problem\_determination, system\_performance, tririga, troubleshoot

Page Actions

Performance	Performance Best Practices	Performance Decision Tree	Performance Analyzer	Workflow Analysis Utility
-------------	----------------------------	---------------------------	----------------------	---------------------------

The Performance Problem Decision Tree was developed for IBM TRIRIGA Application Platform 3.5.3. Portions of the decision tree might not be applicable to your platform version.

### What is the Performance Problem Decision Tree?

The Performance Problem Decision Tree helps you to troubleshoot system performance issues in IBM TRIRIGA. The decision tree progressively narrows the focus of your issue and provides targeted information for troubleshooting the issue.

#### Notes:

- IBM TRIRIGA Application Platform 3.5.3 introduced the [Performance Analyzer](#). The Performance Analyzer is a platform tool that helps you analyze and diagnose issues in system performance. You are encouraged to use both the Performance Analyzer and this decision tree to help you troubleshoot system performance issues.

### Start: What type of performance issue are you experiencing?

[Entire system is slow](#)

[Specific process is slow](#)
