## Product overview

IBM Security Verify Directory is the IBM implementation of the Lightweight Directory Access Protocol (LDAP) for AIX®, Linux®, and Microsoft Windows operating systems.

IBM Security Verify Directory provides a server that stores directory information by using a DB2® database, a proxy server for routing LDAP operations to an appropriate directory server, and client utilities. It also provides graphical user interfaces (GUI) for managing servers and users.

### 1. Access the software and documentation.

You can download IBM Security Verify Directory Version 10.0.1 from the IBM Passport Advantage® website at [https://www.ibm.com/software/howtobuy/passportadvantage/pao\\_customers.htm](https://www.ibm.com/software/howtobuy/passportadvantage/pao_customers.htm) in the form of eAssembly packages for supported operating systems. For information about the packages, see *Installation package information*.

You can access the IBM Security Verify Directory documentation on the IBM Documentation at <https://ibm.com/docs/en/svd/10.0.1>.

### 2. Evaluate the hardware and system configuration.

For information about the hardware and system configuration for your operating system, see the Software Product Compatibility Reports at <https://www.ibm.com/software/reports/compatibility/clarity/index.html>. For more information about how to access the system requirements for each operating system, see *IBM Security Verify Directory Product Overview* at <https://ibm.com/docs/en/svd/10.0.1?topic=documentation-product-overview>.

### 3. Review the product architecture.

#### 4. Installing the product.

Follow the instructions in the section *Installing and Configuring* at <https://ibm.com/docs/en/svd/10.0.1?topic=documentation-installing-configuring> in the IBM Documentation for IBM Security Verify Directory.

#### 5. Install a database.

If DB2 is not already installed, you can use IBM Installation Manager or the DB2 commands to complete the installation of DB2 on a computer. For more information, see *Installation of DB2* at <https://ibm.com/docs/en/svd/10.0.1?topic=configuring-installation-db2>.

#### 6. Get started.

After the installation of IBM Security Verify Directory and corequisite software, create a directory server instance. For more information about postinstallation steps, see the section *Instance creation and administration*, <https://ibm.com/docs/en/svd/10.0.1?topic=configuring-instance-creation-administration>.
