Product overview

IBM Security Verify Directory is the IBM implementation of the Lightweight Directory Access Protocol (LDAP) for AIX®, Linux®, and Microsoft Windows operating systems.

IBM Security Verify Directory provides a server that stores directory information by using a DB2® database, a proxy server for routing LDAP operations to an appropriate directory server, and client utilities. It also provides graphical user interfaces (GUI) for managing servers and users.

1. Access the software and documentation.

   You can download IBM Security Verify Directory Version 10.0 from the IBM Passport Advantage® website at http://www.ibm.com/software/howtobuy/passportadvantage/pao_customers.htm in the form of eAssembly packages for supported operating systems. For information about the packages, see *Installation package information*.

   You can access the IBM Security Verify Directory documentation on the IBM Documentation at https://ibm.com/docs/en/svd.

2. Evaluate the hardware and system configuration.

   For information about the hardware and system configuration for your operating system, see the Software Product Compatibility Reports at http://pic.dhe.ibm.com/infocenter/prodguid/v1r0/clarity/index.html. For more information about how to access the system requirements for each operating system, see *IBM Security Verify Directory Product Overview* at https://ibm.com/docs/en/svd?topic=documentation-product-overview.

3. Review the product architecture.

4. Installing the product.

   Follow the instructions in the section *Installing and Configuring* at https://ibm.com/docs/en/svd?topic=documentation-installing-configuring in the IBM Documentation for IBM Security Verify Directory.

5. Install a database.

   If DB2 is not already installed, you can use IBM Installation Manager or the DB2 commands to complete the installation of DB2 on a computer. For more information, see *Installation of DB2* at https://ibm.com/docs/en/svd?topic=configuring-installation-db2.

6. Get started.

   After the installation of IBM Security Verify Directory and corequisite software, create a directory server instance. For more information about postinstallation steps, see the section *Instance creation and administration*, https://ibm.com/docs/en/svd?topic=configuring-instance-creation-administration.
