Solution component Services

- SoftLayer®

Business challenge: To keep up with increasing demand for cloud-based ERP solutions, UNIT4 Business Software wanted to team with a cloud hosting provider offering a diverse range of services and a global data center presence, including facilities in Canada. Additionally, the company sought a trusted brand leader with a well-established international reputation to help bolster its cloud offerings.

Solution: After evaluating leading cloud hosting providers, UNIT4 determined that IBM and the SoftLayer® cloud platform met its requirements for a strong global brand, worldwide data center locations and a wide-ranging service portfolio. The business deployed a SoftLayer bare metal and virtual server infrastructure to support Canadian customers and anticipates extending its SoftLayer environment further as needed.
