

Dev/Test/Demo Environments

VMware on IBM Cloud

Dev/Test/Demo Environments

Get the agility, scalability, and security you need to support rapid application development and testing cycles with VMware on IBM Cloud.

The VMware on IBM Cloud gives you all the tools and resources you need to increase dev/test productivity and simplify infrastructure operations.

Create your cloud, fast.

As your development, test, sandbox, and demo environments begin to grow and consume more resources than anticipated, it's difficult to quickly provision and scale up your resources when you're running out of data center space, power, and time, while trying to improve your continuous development cycles.

With the VMware on IBM Cloud solution, you now have the ability to quickly order, provision, and move your application development infrastructure to its own environment in a matter of hours.

Need another environment for a new application integration project in a different location? Expand your environment within the IBM Cloud portal. You also have the ability to catalog environments so you can easily snapshot production applications and deploy multiple development and test beds for developers.

Safeguard Production

When you keep your production, sandbox, development, test, and demo environments on the same infrastructure, you run the risk of your developers stealing CPU, storage, and network resources from your mission critical workloads. You also increase the chances of corrupting your production environment and data when you share storage resources between your application environments.

By utilizing VMware on IBM Cloud, you can physically separate and extend your on-premises composite application development, test environments into the IBM Cloud. Extend what you wish in whole or in part.

Product Features

Scale on Demand

Accelerate your VMware deployments in the cloud within hours. When you need more resources, simply spin up and add capacity to your environment.

Global Footprint

Expand your cloud environment around the world. Put the data close to your development and sales teams.

Highly Available

Provision multiple sites to add high availability benefits to your multiple dev/test sites.

Secure

Ensure logical and physical separation between dev/test and production. Demo applications without external users accessing your on-premises environments.
