

“With SoftLayer, we can really tap in to the full power of the hardware and run things as quickly as we need to.”

—Julian Lee, Founder and Chief Executive Officer, Ambi Labs

Business challenge

To launch a self-learning climate-control solution, Ambi Labs needed powerful infrastructure to host the offering’s machine-learning algorithms and data.

Transformation

Evaluating cloud hosting solutions that included the DigitalOcean platform, Ambi Labs chose SoftLayer® infrastructure based on its global data center presence and high-performance technology. The company provisioned virtual and bare metal servers in the SoftLayer data center in Singapore, creating a high-performance hybrid hosting environment.

 Ambi Labs

Business benefits

Turnkey infrastructure

for a smooth, rapid launch of the new Ambi Climate offering

Powerful bare metal servers

to run intensive machine-learning and data workloads

Complimentary data sharing

among SoftLayer locations supports cost-effective growth

Ambi Labs

Powering self-learning climate-control capabilities with SoftLayer technology

Founded in 2012 and headquartered in Hong Kong, Ambi Labs is an electronics developer working to improve consumer interactions with household products. The company creates hardware and software solutions that seamlessly enhance device usability and solve common domestic challenges.
