

## TOP 5 REASONS TO MODERNIZE

Modernize your planning and analytics to a cloud-native architecture and eliminate the need for costly and often competing point solutions.

With IBM Planning Analytics on Cloud Pak for Data, you can synchronize planning across your organization, integrate financial and operational plans, and infuse AI into your planning processes to create dynamic plans with greater speed and accuracy.

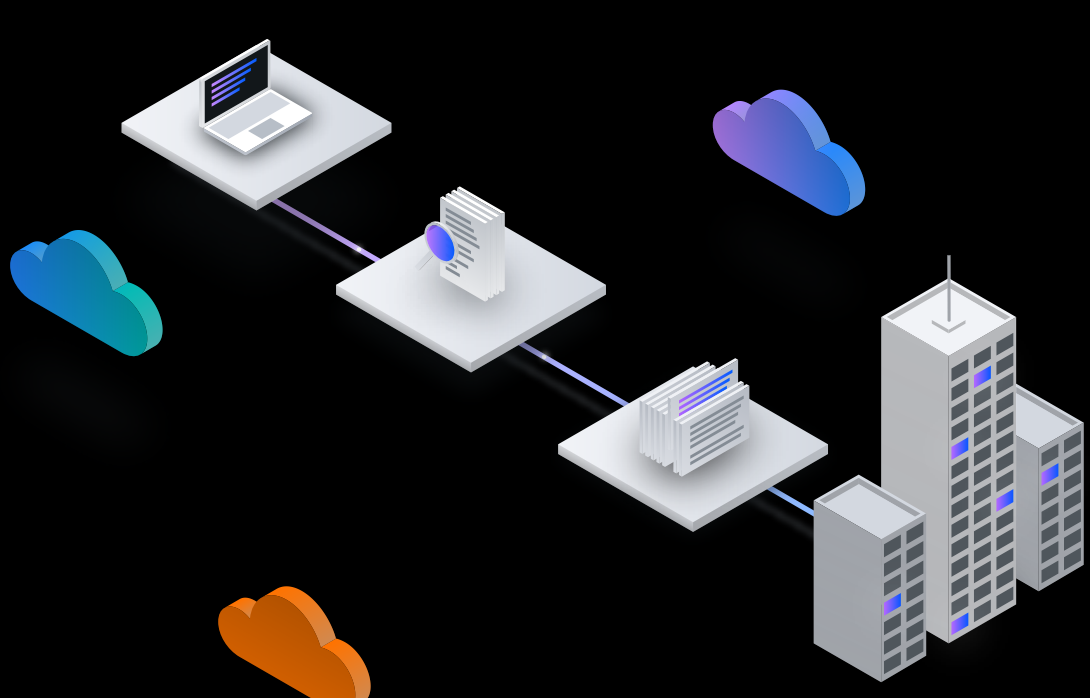

### 1

#### Keep your IT strategy

Deploy across any cloud or multi-cloud environment and private clouds. Plus, you can run your TM1® databases on the OS of your choice.

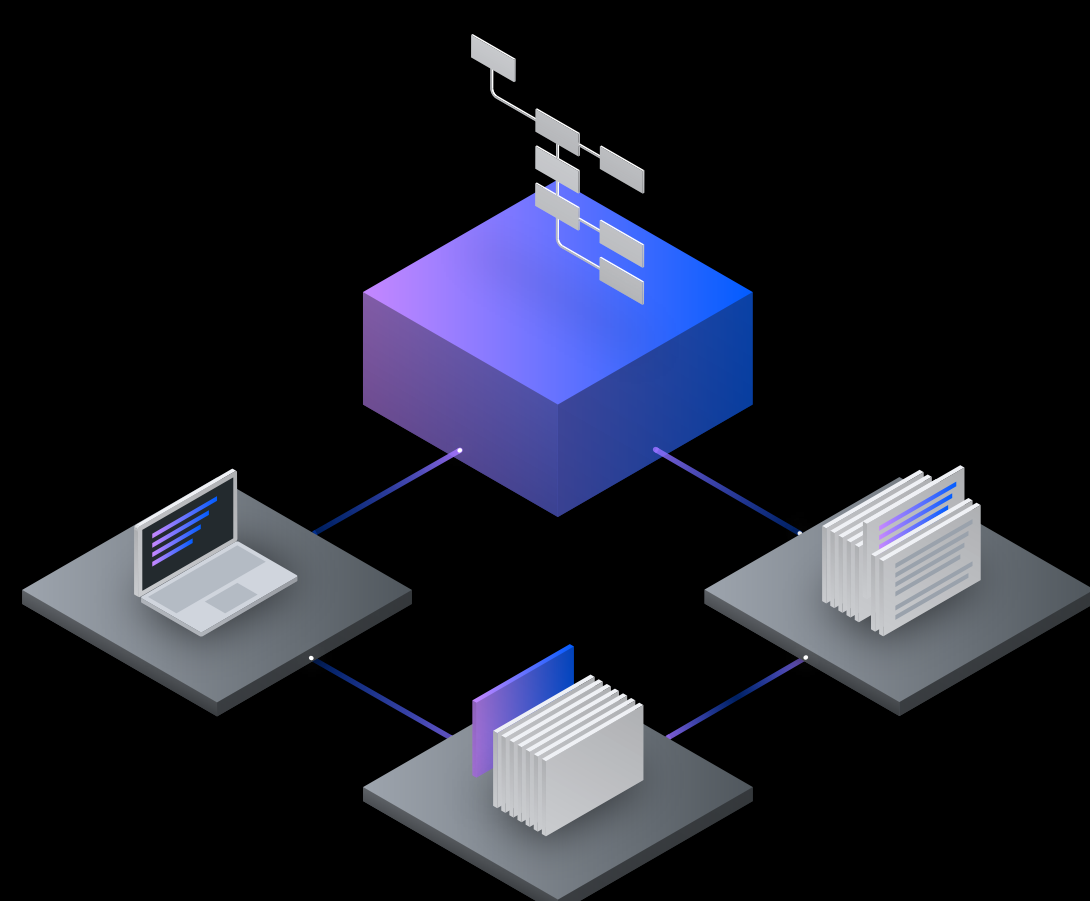

This flexibility allows you to maintain your existing IT strategy and avoid vendor lock-in.

### 2

#### Simplified lifecycle management

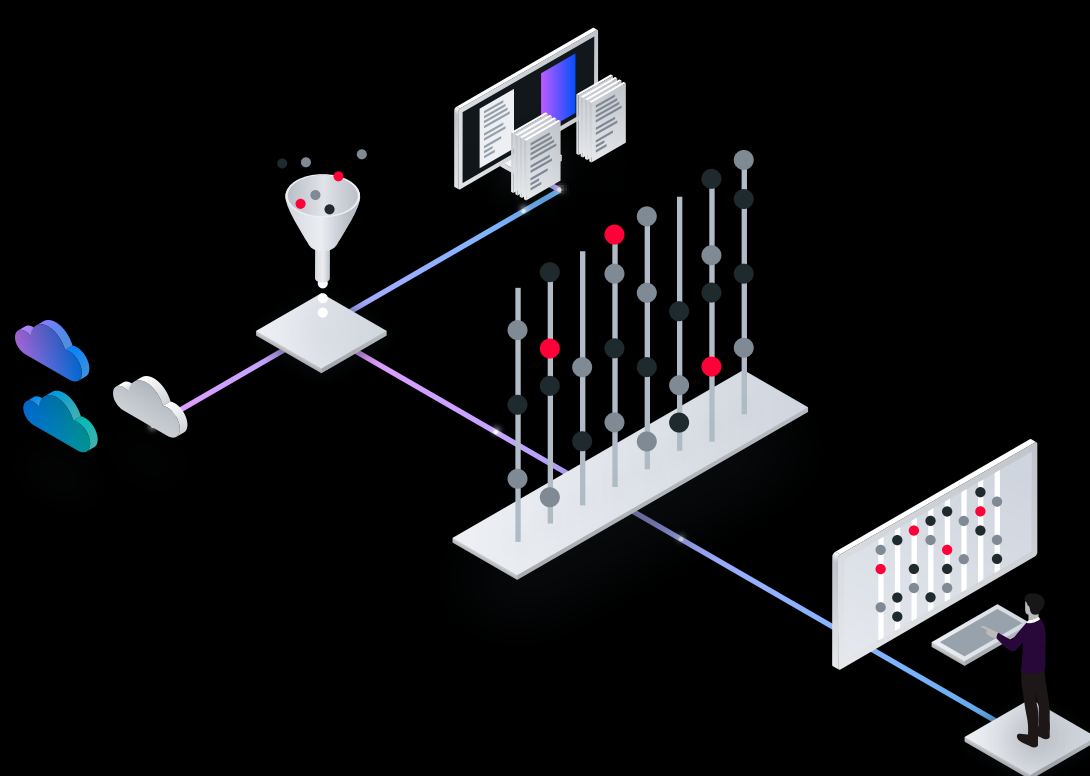

With easy install, you can deploy and configure in minutes instead of hours. And as part of the cloud infrastructure, maintenance and upgrades are simplified and streamlined, saving you time and money.

### 3

#### Leverage your existing investment

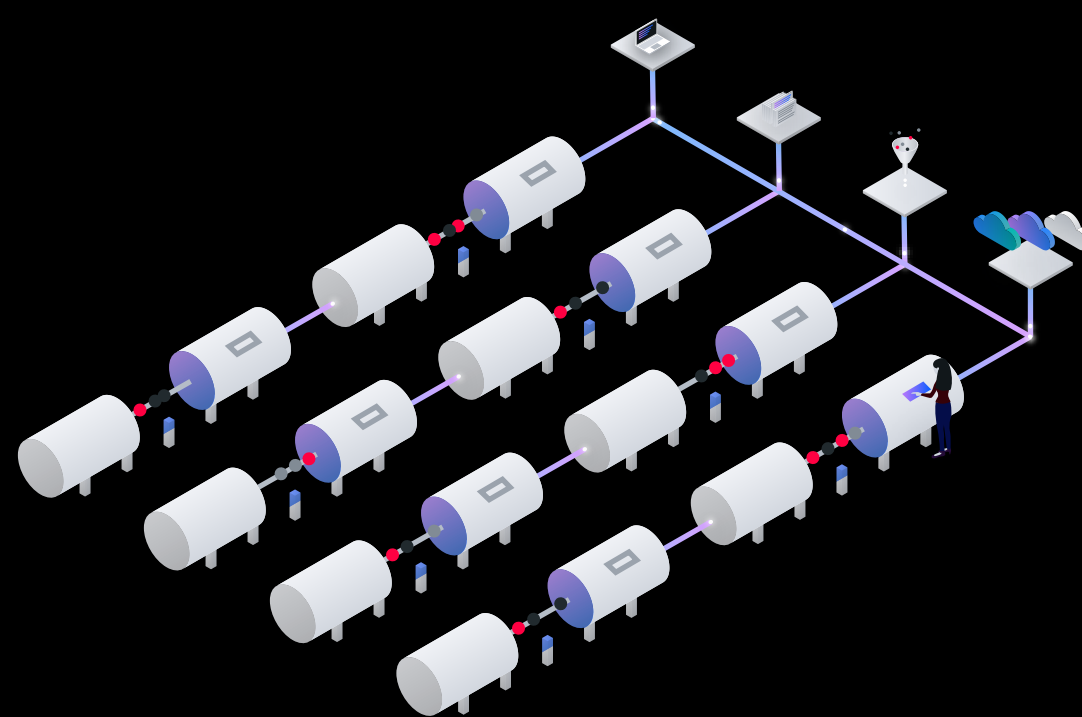

Modernize at your own pace while maintaining existing on-premises investments, including your existing TM1 databases. Continue using clients such as IBM Planning Analytics for Microsoft Excel, Perspectives, TM1Web, etc., as you would today\*.

### 4

#### Access to premium components

Modernization provides entitlement to IBM Planning Analytics Workspace distributed (high availability), supporting high volumes of concurrent users. You can also access an additional unrestricted Cloud Pak for Data instance to easily add or try new services.

### 5

#### Easily add more resources and services

Take advantage of a scale-as-you-go approach. With license ownership flexibility, you can trade-up or upgrade to a licensing model that meets your funding requirements.

Infuse AI into your planning process by easily integrating Planning Analytics with services such as descriptive, predictive, or prescriptive analytics and Watson to operationalize AI.

## Why wait to enjoy these benefits?

## Modernize today!
