

Protect your withdrawn equipment with IBM Hardware Support Extension

Keep your IBM equipment productive after withdrawal with an IBM Hardware Support Extension from IBM Technology Support Services

There are many reasons why you may need to keep withdrawn machines operating in your IT environment—purchasing delays, development and test cycles, lagging migration projects.

IBM offers a continued service extension support agreement so you can protect your current hardware investment while planning your budget more easily.

IBM Hardware Support Extension helps you achieve key goals

Continue using existing servers, storage units and other hardware for longer.

Gain time to complete technology upgrades.

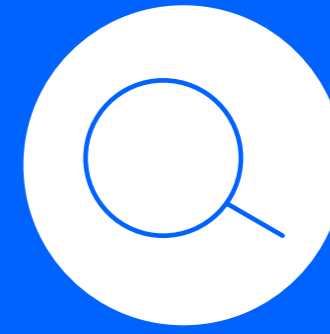

Acquire additional time for better capital expenditure planning.

Avoid business delays, lost data and declines in revenue and productivity.

Retain shareholder trust, consumer confidence and customer loyalty.

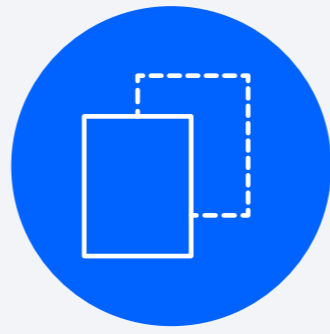

Support your IT infrastructure while keeping IT staff focused on business-critical goals.

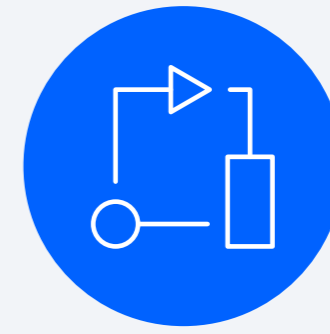

Here's what you can gain from an IBM Hardware Support Extension

World-class support for your hardware beyond the withdrawal date.

Agreements tailored to your organization needs no matter its size.

Uninterrupted hardware support that is globally consistent.

No one knows your hardware environment better than IBM

IBM Technology Support Services specialists understand not only your hardware but how that technology fits into your entire IT environment.

This in-depth knowledge and experience make it easier for IBM to provide known defect support, including existing microcode fixes and patches. The service also covers parts replacement, depending on availability.
