

# Cisco Security Connector App for IBM MaaS360

## View, Manage and Protect iOS Devices in the Enterprise

### Benefits

- **Gain exceptional visibility.**  
Gather all network traffic generated by iOS devices and applications. Rapidly scope incidents with precision and ease.
- **Provide protection - anytime, anywhere.** Prevents connections to malicious websites on both a DNS and an IP address level – even over cellular networks and public Wi-Fi.

### Overview

Combining the functionality of Cisco Umbrella and Cisco Clarity (Advanced Malware Protection for Endpoints) into one app, Cisco Security Connector delivers the visibility, control and privacy that the modern IT organizations need to protect supervised iOS devices.

This powerful security functionality afforded by Cisco can now be delivered via IBM MaaS360 with Watson Unified Endpoint Management (UEM), enabling IT pros to:

- Gain an in-depth understanding of policy compliance violations
- Uphold a risk-free mobile browsing experience across intranet, WiFi, and data
- Preserve privacy by encrypting Domain Name System (DNS) requests via the web

### Key Capabilities

#### Roaming security

- Real-time visibility and control
- Who (e.g. iOS identity) goes where (e.g. domain or URL)
- Defend users against phishing attacks and accidental browsing to bad sites
- Protect data against exfiltration to malicious destinations
- Encrypt DNS requests
- Customizable URL-based protection with intelligent proxy

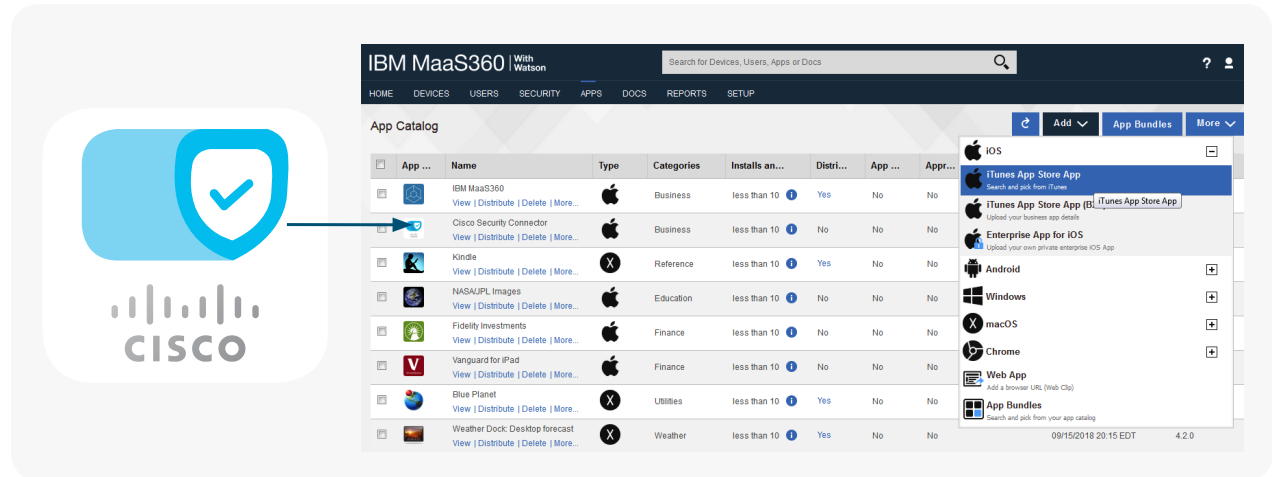

#### Endpoint visibility

- App-layer auditing and correlation
- Log encrypted URL requests without SSL decryption
- Audit all traffic flows generated by users, apps, and processes before encryption
- Gain URL-level granularity
- Correlate traffic flows to gain insights per app or device
- Facilitate incident investigations
- Surface the most/least used apps across your organization to identify policy issues

## Protect users anywhere

Organizations of all sizes across all industries depend on anytime, anywhere accessibility for iOS devices. IT and security pros need appropriate visibility and a way to intervene at the most pivotal moments.

Cisco Security Connector and IBM MaaS360 with Watson ensure that employees are protected and compliant at all times, wherever they may roam.

## The Cisco Security and IBM Security advantage

The ongoing collaboration between Cisco Security and IBM Security helps organizations strengthen their security posture against increasingly sophisticated cyberattacks. Rather than working in silos, these two leading security providers are collaborating to build solutions and share threat information that will empower clients to act at extreme speed and scale to see a threat once - and protect everywhere.

## Next steps

Enterprise IT professionals can now gain visibility into network traffic on iOS devices and block connections to malicious sites, wherever users go. Take advantage of this valuable integration by [visiting the IBM Security App Exchange](#) and downloading the Cisco Security Connector for IBM MaaS360 with Watson.
