

How frameworks transform cybersecurity challenges into successes

Focusing on the strategic

Communicating priorities

Making cybersecurity strategy consumable

“Security has to have a basis to argue its point of view in a compelling story with some thought behind it, rather than ‘I want to get this thing because it’s the next cool security thing that’s out there.’”
– CISO, Retail

CISOs rank **frameworks** as the **top prioritization approach** to determine risk and threats to the organization*

85% of CISOs reported that upper-management support for cybersecurity efforts has increased

Move beyond compliance to risk-based strategy

Use custom frameworks to assess security challenges, identify gaps and prioritize cybersecurity initiatives

Increase collaboration with the C-suite

Translate requirements into clear language to relay cybersecurity strategy to upper management for buy-in

Apply framework-driven cybersecurity insights

Define areas of perceived risk that might require new talent, technologies or third-party information to achieve reduction

Transform your cybersecurity strategy
