

Disaster Recovery as a Service

Zerto Disaster Recovery on IBM Cloud

Zerto Virtual Replication — deployed through IBM Cloud and integrated with IBM Cloud for VMware Solutions including Cloud Foundation™ and vCenter Server — installs seamlessly into the VMware vSphere® environment and is deployed in an automated fashion. Virtual workloads are protected in any IBM Cloud data center and across any distance, through the IBM Cloud private network.

Zerto Virtual Replication can recover cloud applications with minimal data loss and RPOs measured in seconds and RTOs in minutes.

Disaster Recovery as a Service Solution

Hardware Ownership		IBM
IBM Cloud Server Compute, Storage		X
