

Highlights

- IBM Connections Docs can integrate with third party repositories and can work as a single editing UI across many repositories
 - Enables up to 20 editors per document allowing greater participation and easier collaboration for teams
 - Increased supported file sizes allows for broader range of documents to be edited with IBM Docs
 - Improved first time user experience — New Feature Tour (inside the editor) , combined with Auto Publish and Upload New Version make for simple and intuitive editing
 - High Fidelity File Viewer provides preview of file content, reducing the need to download files in order to review content. Ability to interact with content — e.g. copy , show/hide columns and filter
-

IBM Connections Docs

Single Docs Editor for Many Repositories

IBM Connections Docs is a socially enabled, online office editing and productivity suite that is available on IBM's Cloud and on premises in the privacy of your own data center. Create, share and edit documents, spreadsheets and presentations with your teams across the globe in one sitting or at your convenience. In addition to IBM Connections Files, Connections Content Manager, and IBM FileNet— with Docs 2.0, you can now apply IBM Docs on premises solution to 3rd party repositories (CMIS and REST API).

IBM Docs is designed to improve productivity by accelerating collaboration in business documents—by reducing the time it takes for multiple contributors to produce documents and enabling editing without the need for downloads or desktop editing tools. IBM Docs improves the quality of the assets and work produced and reduces the many copies and emails that typically hinder the document editing process. Also, the new preview capability significantly increases value as viewers can see and even copy data, without downloading and opening the file in a desktop suite. Finally, IBM Docs helps you minimize format problems as you share document types between MS formats and open source formats.

IBM Connections Docs has the Following key benefits:

- Integration with the IBM Connections Portfolio of products: IBM Connections Files including Community Files, IBM Connections Content Manager (CCM), and IBM FileNet. This brings a single and robust editing experience to all your IBM collaboration products
- Support for Microsoft Office and Open Document file formats to maximize sharing, compatibility and portability

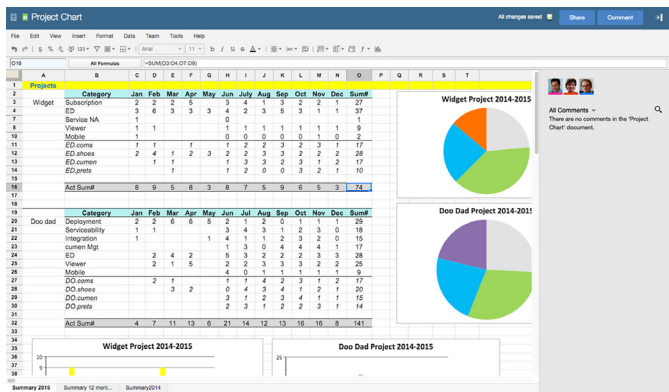

- No need to manage document versions; users can always access most up-to-date data—one version of the truth. The built in dual publishing model (automatic or manual publish) provides private drafts for editors or real time instant publishing. Of course, it also follows work flows from IBM CCM and FileNet as well!
- A common platform for every participant to co-edit and provide inputs reduces the waste of time, efforts and resources in typical review and rework cycles
- Easy to notify others with @mention functionality inside Comments. Start a conversations about any cell, sentence or word in a document. The person gets notification via Connections notifications home page and comments will be seen and available offline when using Microsoft Office

System requirements for IBM Connections Docs
