

IBM Garage

CLIENT STORY | OpenAdvice

OpenAdvice and the IBM Garage for Cloud, a new innovative partnership!

OpenAdvice is a German based consulting and IT-services company. They primarily focus on developing custom solutions for clients in the area of Monitoring and Business Service Assurance.

Today's market conditions are very competitive in many industries. With very fast changing technologies and solutions, competition is fierce and keeping up with changing customer expectations and digital transformations, is a big challenge. This also demands that Solution Providers like OpenAdvice need to stay agile and leverage new methodologies to architect and develop solutions to achieve faster and more flexible release cycles for their clients.

OpenAdvice experienced these very same conditions with one of their Telecommunications clients. Within this market it has become imperative to bring new offerings to consumers fast and offer a very diversified portfolio of digitalized products. The biggest challenge with this client project was developing a new platform that would allow to automate and digitalize the manual process to manage TV Playout configurations. In addition, automated testing and flexible ways of changing existing configurations fast was key.

This is where the IBM Garage for Cloud came in!

OpenAdvice and the IBM Garage for Cloud collaborated to develop this new configuration platform. The Garage Architecture workshops, and the extreme agile Garage methodologies supported OpenAdvice to transform their IT operations and leverage continuous development for new Software releases. This collaboration also allows for ongoing

education and pushing boundaries to re-invent delivery of new solutions to clients faster.

The experience with the IBM Garage for Cloud for this specific project, convinced OpenAdvice to continue to include the IBM Garage Architecture as an integral part in their approach to new client projects.

“To add the IBM Garage for Cloud to our team definitely helped us to find the right solution architecture right from the start, which contributed significantly to the success of the project. In the course of the project we were able to learn a lot from the developers of the IBM Garage for Cloud, above all we benefited a lot from their experience and their methods. Our end customer was also very happy with the final result, the agile approach ultimately gave him exactly the solution he wanted.”
