

Manage business risk by securing workloads with an application gateway.

Businesses can not only need low-code tools that accelerate integration, but also require an innovative approach to application security to support their digital transformation.

Challenges:

Cybersecurity professionals are facing increased workloads and understaffed teams, with 38% surveyed reporting feelings of burnout.¹

Malicious actors may look to exploit vulnerabilities and take advantage of an increased dependency on digital infrastructures.

Without a secure application gateway, your business can be at risk.

39%

of all breaches in 2021 were attributed to attacks on web applications.²

With IBM DataPower Gateway, your business can protect, control, integrate, and optimize the delivery of services with a powerful, drop-in gateway designed to reduce development costs and business risk. IBM supports modern and traditional workloads, providing a secured gateway with an ideal balance of processing power, network capacity, and operational simplicity.

The IBM DataPower Gateway can help you...

Address industry standards and mitigate attacks.

Speed up application response time with dynamic and intelligent load distribution.

Protect applications from over utilization with traffic control and quota enforcement.

Organizations can protect their business with IBM DataPower Gateway.

IBM DataPower is a partner in over 80 countries

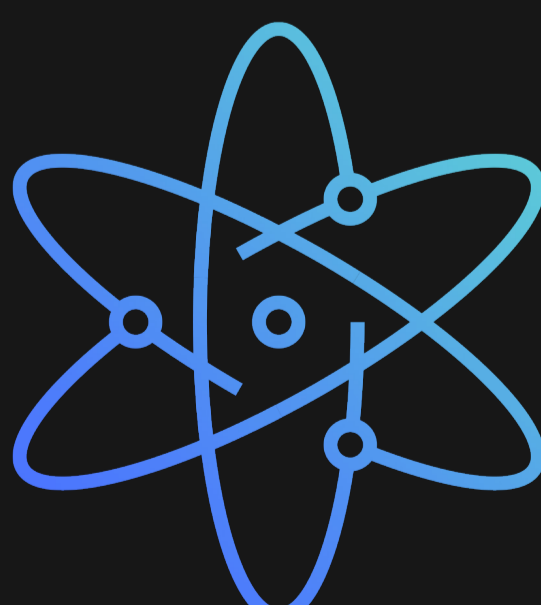

400+

financial institutions worldwide use IBM DataPower.

40+

different industries have companies that use IBM DataPower.

IBM can help you meet the security and integration needs of your modern and traditional workloads with an application gateway.
