IBM Security: Protect critical assets

Safeguard your data, apps and endpoints

Data is a critical asset, the lifeblood of the modern enterprise. To truly protect data against an onslaught of coordinated cyberattacks, you need an equally coordinated defense. Secure your network with protection that fuels your digital transformation.

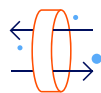

IBM Security solutions

Help you secure data, apps and endpoints by giving you intelligent visibility, proactive mitigation and continuous control.

Intelligent visibility

Find assets easier; accurately identify risks in less time and prioritize smarter

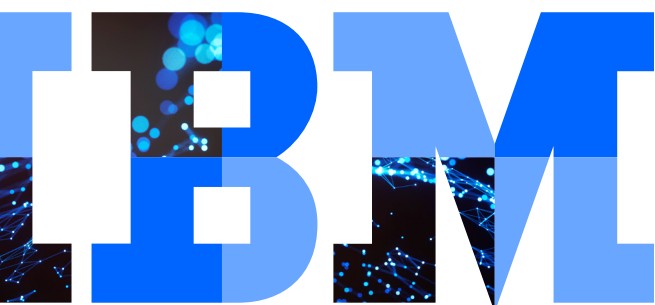

Proactive mitigation

Safeguard assets with automated threat response without sacrificing accessibility

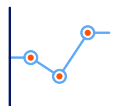

Continuous control

Security that keeps pace with the speed of business and rapid regulatory changes

Data

Dynamic data security

Protect your business data in storage, transit or use across databases, cloud, file systems and more. IBM solutions bring automation, real-time monitoring, encryption, cognitive analytics and regulation to your data security arsenal.

IBM Guardium offers *intelligent visibility* into your organizational data with automated discovery and classification, real-time data activity monitoring and cognitive analytics across a full range of environments—from databases to big data, cloud, file systems and more.

Proactively mitigate threats to your data through the use of encryption, masking, redaction and dynamic blocking and alerting from one system. Real-time security policies protect data across the enterprise. Safeguard sensitive data with cognitive analytics that learn regular user access patterns, identify suspicious activities and dynamically block or quarantine threats.

Gain *continuous control* over data as **IBM Guardium** adjusts when new users, platforms and types of data are added. Also gain a tamper-proof data access audit trail and automated data discovery for regulatory information.

 **See proactive and scalable data protection in action**

Apps

App security at the speed of business

Development environments introduce vulnerabilities by exposing assets, risking compliance and requiring high-risk testing. IBM helps you protect apps during build and after deployment with lifecycle security and compliance tools.

IBM Security AppScan/IBM Application Security on Cloud gives you *intelligent visibility* into vulnerabilities early in the app development cycle. Classify and prioritize application assets based on business impact and identify high-risk areas before release. See risk and compliance information with enterprise-level dashboards.

They make *proactive mitigation* against threats easier by integrating with key build environments and IDEs. They give you a seamless testing environment for application security vulnerabilities and fast, targeted remediation.

IBM Security AppScan/IBM Application Security on Cloud cognitive capabilities deliver deeper, faster scan coverage of applications. Eliminate false positives for *continuous control* and gives your DevOps teams timely, broad coverage and faster times to remediation.

 **AppSec on Cloud creates actionable results for fast code fixes**

IBM MaaS360 with Watson gives you *intelligent visibility* into enterprise apps deployed across all the major mobile operating systems and devices from one dashboard.

Whitelists and blacklists offer *proactive mitigation* against harmful apps. Reduce shadow IT activities with an easy-to-manage, unified app catalog. **IBM MaaS360** enables a secure app container for your enterprise and third-party (public) apps flexible enough to meet your specific compliance needs.

Continuously control your apps via mobile application lifecycle management with automated policies. Manage apps that have become outdated, need to be updated or when someone leaves the organization — in addition to app volume purchase program support for easy deployment of the latest tools.

Endpoints

Enable endpoints securely and quickly

Each device in use across your business presents an opportunity for breach. IBM endpoint security covers your IoT network, from mobile devices to workstations and beyond, with continuous monitoring, patching and updates.

IBM MaaS360 with Watson and **IBM BigFix** give you *intelligent visibility* into every endpoint across all operating systems and types. See non-compliant devices, patches that need applied or OS updates unaccepted by end users. Also, SOC security teams can see endpoint data within their existing security information and event management (SIEM) and incident response tools.

Proactively mitigate threats across **IBM MaaS360** and **IBM BigFix**. IBM BigFix quickly deploys and patches operating systems and third-party software. IBM MaaS360 lets you remotely protect devices with locate, lock and buzz along with full or selective wipe when security policies are out of compliance.

Continuously control endpoints with automated configurations deployed over the air, continuous monitoring, patching and enforcement of security policies across endpoints and granular control over data sharing.
