

IBM Aspera client software

Functionality comparison

Key benefits & capabilities

- High-speed, FASP transport with real-time transfer monitoring and bandwidth control
 - Built-in security with user authentication, encryption in transit and at rest, and data integrity verification
 - Pause, cancel and resume functionality with automatic retry on failure
 - Advanced features include automation with hot folders, scripting, custom post-processing as well as integrated scheduling, queuing, and reordering control
-

IBM® Aspera® client applications and SDKs enable high-speed FASP® - powered file transfers of any size, across global distances from anywhere in the world, and with any Aspera transfer server running on-premises or on a cloud platform. Available on Windows, Mac, and Linux, and as a plug-in for web browsers and an add-in for Microsoft Outlook, Aspera client applications provide an intuitive user interface, transfer monitoring and rate control, built-in security, and highly reliable transfers.

The table on pages two and three provides a functionality comparison of IBM Aspera's client software across several areas including the transfer paradigm, management paradigm, automation, monitoring and reporting, licensing and deployment, platform and browser support.

Functionality comparison

	Aspera Desktop Client	Aspera Connect	Aspera Drive	Aspera Cargo	Aspera Add-in for Microsoft Outlook	Command-Line Interface	Embedded Client (SDK)

About IBM Aspera

Aspera, an IBM company, is the creator of next-generation transport technologies that move the world's data at maximum speed regardless of file size, transfer distance and network conditions. Based on its patented, Emmy® award-winning FASP® protocol, Aspera software fully utilizes existing infrastructures to deliver the fastest, most predictable file-transfer experience. Aspera's core technology delivers unprecedented control over bandwidth, complete security and uncompromising reliability. Organizations across a variety of industries on six continents rely on Aspera software for the business-critical transport of their digital assets.
