Data Sheet

Drive digital business with a leading API partner

IBM Micromedex Content API

IBM Micromedex provides evidence-based medication management information in a single, consolidated search across multiple resources.

Micromedex curates clinical evidence from surveillance and research from 8,500 journals and over 750,000 publications annually. For over 45 years, IBM Micromedex has provided over 4,500 hospitals in 80+ countries with this unique content through a subscription-based model.

We are now extending access to this extraordinary content with the IBM Micromedex Drug APIs for Embedded Use. Our new APIs will help technology partners accelerate time-to-market and reduce maintenance costs associated with software programming and content curation.

For companies that want to become the disrupter instead of being disrupted, the need for speed, agility and trusted content has never been greater.

The right knowledge in real-time

Making the best clinical decisions starts with having the right information. Support your team's ability to make those decisions with real-time, evidence-based clinical content at your fingertips.

Intuitive Technology

Built on the IBM Micromedex Platform, the Micromedex API technology makes it simple for application developers to seamlessly leverage, publicize and aggregate medication data.

With access to detailed developer resources to help you get started, this easy-to-understand interface allows you to extract, integrate, and customize the Micromedex evidence to help meet your organization's needs, achieve business goals, and deliver essential clinical content to your end-users.

Two options to meet your needs:

IBM Micromedex Summary Drug API
Efficiently gain insights on medication administration questions, used by nurses, insurance companies, and the general public for basic knowledge.

IBM Micromedex In-Depth Drug API
Detailed answers for complex medical care, used by healthcare professionals, academics, researchers, or those that are interested in a deeper dive. Included in the package, Drug Consults from IBM Micromedex provides consolidated insights focused on drug therapies and treatment guidelines for specialized populations.

Benefits

→ Curated, evidence-based content with the delivery flexibility to meet your needs
→ Efficiently integrate Micromedex clinical content
→ Publish full documents or deliver succinct clinical insights relevant to your application

Key Features

→ Curated, evidence-based content with the delivery flexibility to meet your needs
→ Efficiently integrate Micromedex clinical content
→ Publish full documents or deliver succinct clinical insights relevant to your application

About IBM Watson Health

IBM Watson Health is a data, analytics, and technology partner for the health industry. Supported by the innovation of IBM and intelligence of Watson, we are committed to helping build smarter health ecosystems. Through the combination of our deep industry expertise in health, data and analytics, actionable insights, and reputation for security and trust, Watson Health is working together with its clients and partners to help them achieve simpler processes, better care insights, faster breakthroughs, and improved experiences for people around the world.
