

Six reasons to expand your content investments with IBM Cloud Pak® for Business Automation

IBM Cloud Pak for Business Automation is a comprehensive platform that automates processes end-to-end, interconnects systems and delivers AI-powered insights. With a trade-up to FileNet Content Manager in the IBM Cloud Pak, you get much more than what you could get in a stand-alone implementation of FileNet. Here are six reasons to make the move.

Orchestrate and automate all types of business processes

Automate simple business processes on your own while reducing bottlenecks and manual work to improve customer experiences and outcomes.

Gain enterprise-grade container security and simplified administration

Built-in tools enforce container lifecycle security allowing for more secure applications. Reduce time to complete administrative tasks from days to minutes.

Automatically classify and enrich document metadata

Effortlessly govern your business processes and create models without needing a data scientist.

Gain low-code app development tooling for citizen developers

Integrate content into custom no-code and low-code applications, eliminating content silos to provide visibility across the organization.

Auto-collect, archive, and govern sensitive or regulated content

Reduce costs and control content explosion while meeting regulatory and legal retention requirements.

Monitor content actions in real-time using dashboards

Automatically detect errors and service level issues without coding to continuously improve customer experiences and monitor KPIs in real-time.

Get these capabilities and modernize for your changing customer needs. We can do an evaluation of your specific workflows and help sort through potential opportunities with no obligation.
