

Starting January 2017: IBM Explorys data can be accessed by Truven Health researchers in support of Truven Health Analytics projects

A smart combination for discovery and application of insights from real-world data

39+ Health partners	400 Acute care facilities	64M Patients and members
400K Providers and physicians	\$118B Network patient revenue	400B Longitudinal data points

Scope of the IBM Explorys data set (as of December 2016) and US distribution of represented patients. Note: data for approximately 50 million individual patients is available for secondary use.

IBM® Watson Health™ is pleased to announce that starting in January 2017, Truven Health researchers can help deliver real-world insights using IBM Explorys® clinical data sets. Truven Health researchers are skilled in conducting analytic projects for clients across the full range of therapeutic areas. These researchers can now use the deep clinical data from Explorys to help enhance the quality of your epidemiology, market analytics and health economics and outcome studies.

IBM Explorys: A living clinical data asset

- Grows through direct connections to an expanding array of large health system networks
- Generates de-identified, longitudinal clinical data with rich breadth and depth for more than 50 million unique patients, many with linked financial records
- Closes data gaps, helping to provide a comprehensive picture of the patient experience, with individual patient data spanning an average of 3-4 years across the continuum of care, from ambulatory and inpatient to specialty care and post-acute care settings
- Captures rich detail about clinical outcomes including laboratory test results, vitals, biometrics, and patient reported outcomes, as well as specialized data, such as for medical devices, microbiology and oncology
- Supports unique opportunities for data expansion and enrichment, innovative customized projects, and, with updated data published weekly, near real-time analyses
