

IBM Copy Services Manager

Make business continuity a reality with **one touch control**.
Multi-site migration and disaster recovery for **IBM Storage** Systems.

Challenges

Ensuring a Disaster Recovery plan

Overall complexity & managing backup

Backup redesign

#1

storage challenge for businesses*

2

of the top backup pain points**

3rd

most important storage-related project***

Solution

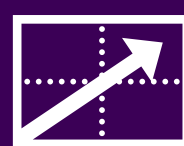

Replication Services

Simplify

Automate

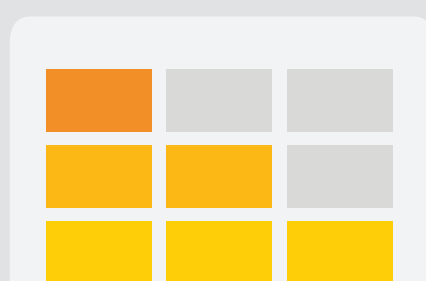

Scale

with only **1** command

One Command setup for multiple solutions

Provides a single start command to manage all relationships for the solution across multiple sites and systems.

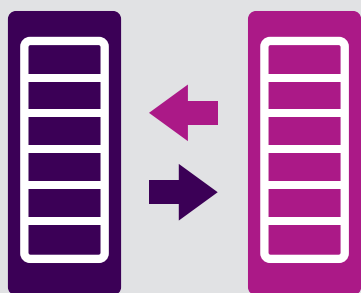

One Command Recovery

Dramatically simplifies the steps to recover to a single command.

command

One Command Site Swap for more than 6-9's availability

A single z Systems HyperSwap command will swap from one site to a new site with virtually no impact on the application.

One Command Practice Copy

Single flash command creates a consistent point in time copy at the remote site and restarts replication, enabling DR testing with minimized downtime to facilitate recovery actions.
