

“With SoftLayer cloud, we can assure our customers that they’re in very good hands.”

—Rikard Zetterberg, Chief Executive Officer, WeCloud AB

Business challenge

To extend the delivery of its antispam, antivirus and email archiving services beyond Scandinavia to customers worldwide, WeCloud AB sought a trusted cloud hosting provider with global data center presence.

Transformation

Although WeCloud evaluated Amazon Web Services (AWS) and Microsoft Azure offerings, the company chose SoftLayer® infrastructure based on its flexibility and hosting locations. WeCloud provisioned virtual servers in SoftLayer data centers in Europe and the United States to begin serving customers in new international markets.
