3 Reasons to Consider Converged Infrastructure

Yesterday’s IT is not going to keep up with today’s and tomorrow’s needs. To stay in the game and keep up, it’s time to consider converged infrastructure. Here are three reasons why:

**Reason #1: Modernize Your Data Center**

Dive data center efficiency, consolidation, and performance through converged infrastructure, and gain a fresh perspective on your current environment.

99.67% decreases in manpower, increase in performance for computing services.

VERSASTACK converged infrastructure.

"The EM MSA storage solution cuts the routine of key processes, boosting application performance by 57 percent.”

— DANNY, AMER, SOLUTIONS ARCHITECT, DATA CENTER IT

**Reason #2: Increase IT Agility**

Accelerate deployed and make faster transition to the cloud, making IT more cost, efficient and effective.

VERSASTACK is a true platform for the future: we can scale up with ease when we want, and provision new environments within a few weeks rather than the months in the past.

— GARY REED, CIO AMER, VETERANS ADMINISTRATION, HOSPITAL

**Reason #3: Reduce TCO & Achieve a Rapid ROI**

Lower costs by consolidating workloads into fewer systems—without increasing risk—and enable impressive financial benefits.

VERSASTACK delivers 293% ROI in just 3 months.

"We now have higher storage performance combined with 71% lower operational and support costs.”

— DANNY, AMER, SOLUTIONS ARCHITECT, DATA CENTER IT

VERSASTACK should be on the short list of any enterprise looking at next-generation converged infrastructures.

— ICIC
