

Sampling Tailored Fit Pricing for IBM Z

Sampling Tailored Fit Pricing for IBM Z

The Tailored Fit Pricing for IBM Z® framework provides technical enhancements to z/OS® and SCRT that allow the metering and reporting of collocated and stand-alone LPAR workloads.

Tailored Fit is not a specific offering or set of offerings; instead, it is a framework for hosting simplified and flexible software pricing for qualified solutions. With Tailored Fit, IBM creates a technical framework that will allow specific workloads to be metered and reported, even if collocated on an existing LPAR. Additional capability is provided as well, with minimal up-front setup, including the ability to optionally cap these workloads.

The Tailored Fit framework relies on a new construct: a “Solution ID”. The Solution ID is a 64-character token that uniquely represents your Solution agreement with IBM. When you agree to a Tailored Fit for IBM Z solution, IBM provides you with a Solution ID via the License Management Support (LMS) web portal. Certain information about your solution, such as the pricing metric and offering type, may be encoded in the Solution ID. The information encoded in the Solution ID may influence the behavior of SCRT or other IBM business systems.

Perhaps though you are just curious about the effect of the Tailored Fit for IBM Z support or would like to utilize the framework to determine the impact of “isolating” a workload... Well, then IBM has a solution to help you too!

IBM is providing a set of “sample” solution IDs for you to use. These solution IDs are valid for use in WLM tenant resource group definitions and in SCRT to define full LPAR solutions. You can use them for your own purposes to test the Tailored Fit framework.

Here is a set of general purpose sample Solution IDs:

```
D9F4555-13446AD-70FF8DA303-0915801A-C0AA-489A-891B-6EF7DD-C744F4

```

Here is a set of sample Solution IDs that indicate the solution is based on an MSU consumption metric. Use of these IDs will cause SCRT to provide MSU consumption measurements instead of 4HRA measurement for the solution:

Sampling Tailored Fit Pricing for IBM Z

When you generate an SCRT report using one of these sample Solution IDs, you will see the full impact of Tailored Fit – your traditional workloads are isolated from Tailored Fit solutions.

The Section E5 product MSU values are adjusted with the direct impact of any executing solutions removed, and a separate report section is generated for each solution.

Remember – these reports are not eligible for submission to IBM. Section D5 of the SCRT report will contain the following message:

Report contains Sample Solution IDs. It is not valid for submission to IBM.

In order to generate a report suitable for IBM submission, you must:

- Using the Update Solution ID SCRT command to replace the sample Solution ID with a valid, IBM provided ID that corresponds to a qualified solution.

OR

- Remove any solution specific (“Container”) commands from SCRT.
- Use the IGNORE command for the entire reporting period for each sample solution ID in use.

Specific details on the SCRT commands mentioned can be found in “Using the Sub-Capacity Reporting Tool”.

Note that when you utilize the IGNORE command, the Solution tenant resource groups and any stand-alone LPAR containers will again be aggregated with your existing environment. Take precautions to ensure that you do not incur any unexpected software costs. The Solution IDs are for test use only, and (as mentioned) are not eligible for submission.
