

# Intelligent Document Processing

Modernize and improve your finance operations

## Challenge

How can you transform the way your agency works today? Every federal agency has financial operations, but are your operations working effectively to manage risk while reducing the risk of fraud, waste and abuse? Can your staff manage and solve complex and high-value activities without being bogged down by inefficient manual processes? Applying intelligent automation (IA) can dramatically improve and modernize your agency's financial operations.

## Solution

IBM has an established IA process which has been proven through our successful past performance work with other federal and commercial clients. This experience enables us to incorporate our best practices and lessons learned to help other clients streamline and modernize their financial operations. Agencies benefit from our "plug-and-play" framework, as we provide and set up a cloud-based business solution. Our technology and experts can adapt your business process to be functional in an automated environment without burdening your existing systems.

Help achieve the following benefits for your agency

### Speed

Work can be done faster on a 24x7 basis, improving output and significantly enhancing efficiency. This cuts the administrative burden for an agency, while also reskilling and helping employees move to more thoughtful work.

### Detect

Detect waste, fraud and abuse: We can utilize IA to effectively detect potential waste, fraud and abuse within your organization.

### Reduce cost

Costs can be reduced through improving operational efficiency by minimizing and streamlining manual operating costs while also increasing work output.

### Minimize risk

The implementation of standardized processes and easily auditable activities increases the compliance and security of activities performed. This standardization creates data that can be monitored and traced back for easy auditability.

## Proven Experience

Army Program Executive Office Soldier: The Army's employee travel auditing processes can be complex and time-consuming. For example, it took about five months to audit one full year of travel for three employees. By applying IA, the auditors can now run an entire sub-organization and perform analysis within a few weeks. This helps facilitate transparency, accuracy and improve decision-making at the Army.
