

Milliseconds Matter

Solve today's most challenging data science issue: simplify the production implementation of AI models

IBM Watson Machine Learning for z/OS offers an end-to-end machine learning platform that **operationalizes predictive models while also benefiting from core IBM Z qualities of service.**

- Leverage enterprise-grade, open source software
- Quickly develop models on your platform of choice
- Readily deploy models within transactional applications for real-time insights
- Integrate data from any platform
- Deliver production-essential model versioning, auditing and monitoring as well as high availability, high performance, low latency and machine learning model automation (ML as a service)

It helps **drive productivity and profitability** by:

- Improving employee and operational productivity
- Detecting fraud before a transaction completes
- Personalizing interactions
- Extending demographic reach
- Disrupting industry players

IBM Watson Machine Learning for z/OS brings AI to your most critical business applications on IBM Z to not only help you build models, but to actually put them into production within today's high-volume business applications.
