

IBM Phytel Risk Manager

Greater accuracy, higher
efficiency

Key benefits

Coding accuracy

- Capture relevant HCC codes
- Reflect patient risk more accurately

Greater efficiency

- Access action-driving risk data quickly
- Streamline HCC coding with fewer staff
- Simplify communication among care team

Lower costs

- Reduce resources required for post-visit review
- Apply existing Watson Health database to review RAF scores and HCC documentation

Improved patient health

- Quickly spot high-risk patients who are overdue for important appointments
- Cover high-risk conditions during each visit

Approximately 10-15 percent of Medicare Advantage members go unseen by their Primary Care provider annually

One of the biggest challenges in working with Medicare Advantage plans is how to recoup the true cost of care for MA patients, especially high-risk patients who require extensive healthcare services over time. IBM® Phytel Risk Manager for HCC provides a quick, simple way to optimize HCC coding and resulting risk scores, helping ensure greater accuracy, higher efficiency, and more complete reimbursement.

Take charge of risk

Phytel Risk Manager makes HCC coding easier by delivering risk scores and coding specifics for each patient, highlighting HCC codes already documented, and those still pending. Providers can document more accurately during each visit, with fewer gaps to capture during post-visit review. You also can easily identify and focus on high-risk, high-cost individuals – whose care has a higher impact on reimbursements – and even target lapsed high-risk patients for return appointments.

Optimize HCC coding

Providers receive individual patient summaries detailing HCC codes carried over from the past year, clearly indicating which have been addressed so far and which still need to be revisited. Summaries are based on up-to-date patient information from your existing Watson Health registry database, helping ensure timeliness, accuracy and efficiency.

Optimize claims submissions

Improved documentation can increase the accuracy and effectiveness of submissions, raising payments and simplifying the reporting process.

About IBM Watson Health

In April 2015, IBM launched IBM Watson Health and the Watson Health Cloud platform. The new unit will work with doctors, researchers and insurers to help them innovate by surfacing insights from the massive amount of personal health data being created and shared daily. The Watson Health Cloud can mask patient identities and allow for information to be shared and combined with a dynamic and constantly growing aggregated view of clinical, research and social health data.
