

# Bring Anaconda Repository + IBM Watson Studio into IBM Cloud Pak for Data

Innovate. Govern and secure. Optimize.

## Complete the data science and AI picture

Open source meets the enterprise on a multicloud data and AI platform.

### IBM Cloud Pak for Data

- Reduce time to value with a single platform that integrates data management, governance and analysis for greater efficiency.
- Run AI models across public clouds from any vendor, and even private cloud deployments.
- Enhance compliance with regulations with embedded governance capabilities.

→ [Learn more](#)

### IBM Watson Studio

- Build, run, deploy and manage AI models anywhere on IBM Cloud Pak for Data.
- Build optimization models using a natural language interface with IBM Decision Optimization.
- Empower everyone to build models with automated and visual data science.

→ [Explore IBM Watson Studio](#)

### Anaconda Repository

- Deliver enterprise-grade open source technology across the data science lifecycle.
- Centralize access to packages to increase productivity and optimize resources.
- Meet security thresholds that you set and enforce your governance policies.

## The case for governed, open, and secure data science and AI for any cloud

By bringing together IBM Watson® Studio and Anaconda Repository for IBM Cloud Pak® for Data, you can accelerate better outcomes on a fully integrated data science and AI platform with access to open source innovation.

# 25M

users are part of the largest Python community\*

### Community

Leverage the wisdom and innovation of the crowd with confidence.

### Speed

Accelerate AI innovation by combining prediction and optimization.

# 7500

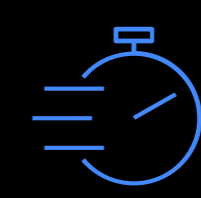

open source packages and libraries\*

### Comprehensiveness

Access a curated, comprehensive repository of packages updated in real time.

### Security

Secure and govern AI lifecycles by getting ahead of vulnerabilities and new threats.

Quickly generate actionable plans, schedules and allocations

### Productivity

Enable your teams to be more productive with data science packages and automated AI.
