

One size **doesn't** fit all

Different workloads require different features and functions; it's crucial to match them to the appropriate all-flash storage solution to maximise performance and return on investment.

When you need speed and high volume processing...

...opt for a high-end all-flash array. Tier 0 storage offers blistering speed and acceleration, perfect for workloads like high-level online transaction processing.

When you need high performance for low cost...

...opt for a mid-range all-flash array. It delivers high performance and competitive pricing, perfect for mid-sized businesses that need top levels of functionality but are constrained by IT budgets.

When you need efficiency and dependability...

...opt for an entry-level all-flash array. It provides the same performance and robust security of higher-end arrays, but with lower deployment costs, perfect for startups looking to hit the ground running.

When you need large-scale capacity...

...opt for capacity-focused production storage. It offers high-reliability, petabyte-range all-flash storage at a competitive price, perfect for big data analysis.

When you need a simplified and efficient infrastructure...

...opt for converged infrastructure solutions. They will drive technical and business efficiencies within data centres and lower costs by combining server, storage and networking.

Whatever you need, all-flash storage has the solution your business needs to suit your strategy and your budget.
