

Make EDI Your Competitive Advantage with the IBM Value-Added Network

Today's supply chains are complex. Every order includes dozens of ever-changing transactions and documents. Every interaction with customers, suppliers, financial institutions and other trading partners represents one piece of the puzzle. How does your organization consolidate the information needed to understand the status of an order or other process in your supply chain?

Are you finding it more difficult to:

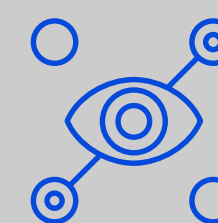

Control maintenance costs of critical supply chain systems and connections?

Meet service level agreements (SLAs) due to downtime with your current B2B network?

Manage B2B integration technologies due to a lack of internal EDI skills and resources?

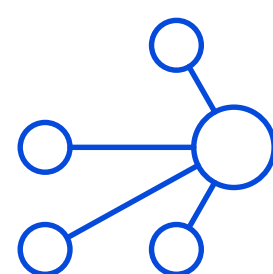

Improve visibility into the status of exchanges so that business users can quickly respond to customers and suppliers?

IBM Supply Chain Business Network can help.

The value-added network leverages the cloud to streamline connectivity and protocols standards you needed to enable frictionless B2B collaboration. With Supply Chain Business Network, you don't need to have EDI expertise to connect with customers, including smaller partners. And you can easily automate phone, fax and email documents to provide self-service visibility for business users.

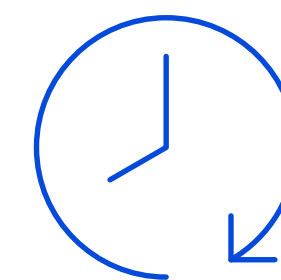

Supply Chain Business Network offers:

400,000
pre-connected
trading partners

Billions
of global documents
exchanged annually

24x7x365
always-on
uptime/reliability
