

Welcome to the future of work

\$ 2.1B

is how much Fortune 500 companies lose each year on unproductive meetings

68%

of US employees are not fully engaged at work

\$ 1B

invested by IBM in cognitive computing to ensure collaboration with Watson™ is secure to the core

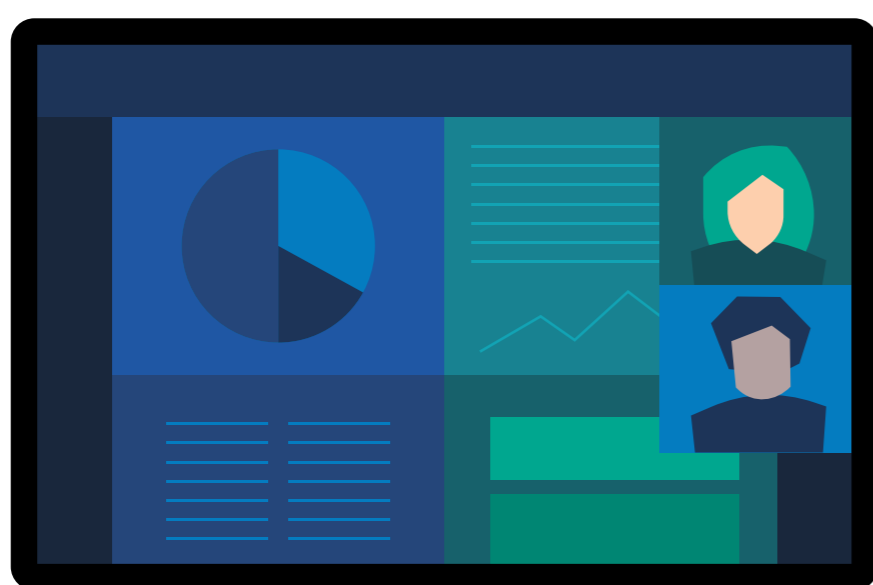

What if you could empower your teams to work smarter and achieve more?

With IBM Watson Workspace, teams can focus on what matters and tap into AI-powered insights to solve problems in minutes or seconds instead of days or hours.

Intelligent collaboration with Watson

Learn

Jenny the Marketing Manager has been on vacation for two weeks. Thanks to Watson™, who has summarized key details, questions and to-do's for her, she can quickly catch up over a morning coffee.

Communicate

Jenny needs to clarify the new product branding with Paul the Designer. The discussion is getting complex, so using Watson™ she switches to video and launches Zoom with one click.

Take action

Jenny and Paul can quickly turn conversations into actions. Watson™ understands their conversation, summarizes the information, prioritizes next best actions, and makes recommendations, helping them to reach better decisions in less time.

Go further

Jenny decides to take her team's collaboration to the next level. She reaches out to Chris the Developer, who taps into ready-to-use APIs and develops his own AI-infused solutions to meet the specific needs of their organization.

Getting started is easy.
