

# IBM Spectrum Virtualize Software

Transforming infrastructure with software-defined storage

## Available for

- ✓ IBM SAN Volume Controller
- ✓ IBM FlashSystem V9000
- ✓ IBM Storwize family
- ✓ VersaStack

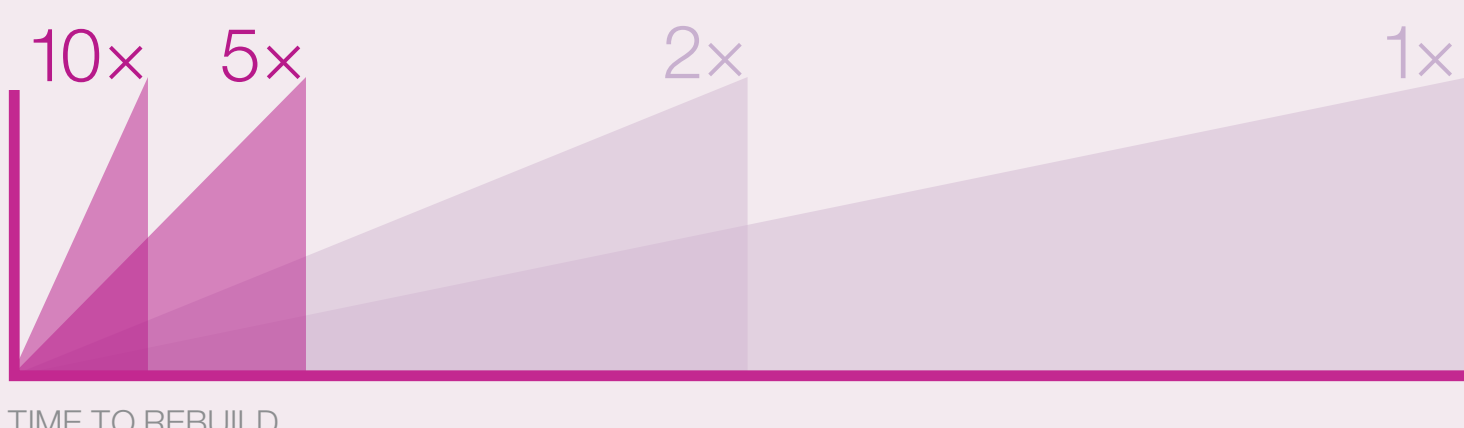

## Encrypt without repurchasing

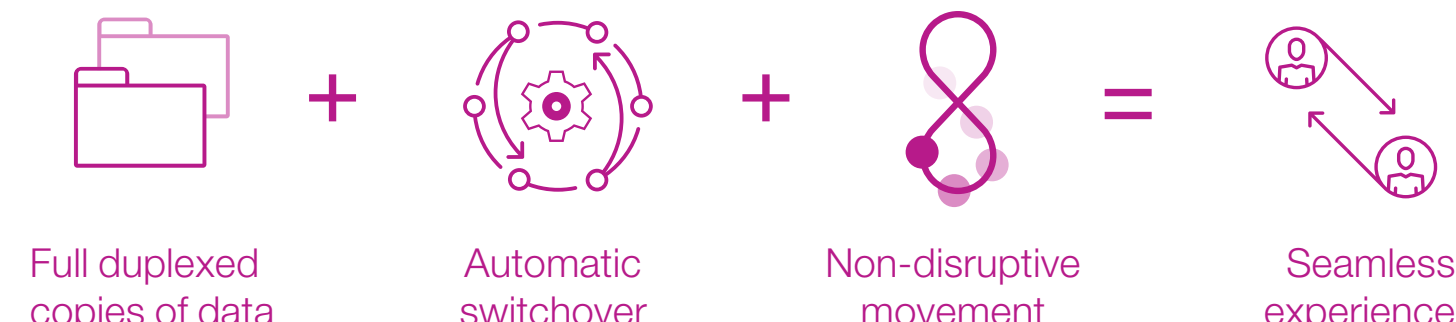

IBM Spectrum Virtualize lets you encrypt data on the storage you already have, rather than buying all-new systems with encryption

## Improves data protection

5-10 times faster rebuild of data following a drive failure

## Improves availability and eliminates downtime

## Improves efficiency of your storage

## Increases the amount of data you can store

Enables up to **5x** as much data to be stored on the storage you already have, and helps reduce the amount you need to buy in future

## Improves storage performance

## Optimizes storage use

## Enhancing Data Simplicity

- Improves agility** with automated provisioning of storage as it is required by applications and integration with tools such as VMware vCenter
- Consolidates all your storage** No matter the vendor For simplified management, consistent functionality, and greater efficiency
- Enables flexibility in storage acquisition** by supporting common capability across all types of storage so you can mix vendors with ease
