

IBM Maximo Manage

Empower your enterprise to do more with Maximo for asset and performance management

Benefits

- Automate all aspects of maintenance for reduced risk and improved productivity
- Access centralized data and processes to optimize activities and improve uptime
- Leverage role-based UX and applications to optimize productivity in the factory and the field
- Customizable and extensible to support and enhance your enterprise workflow

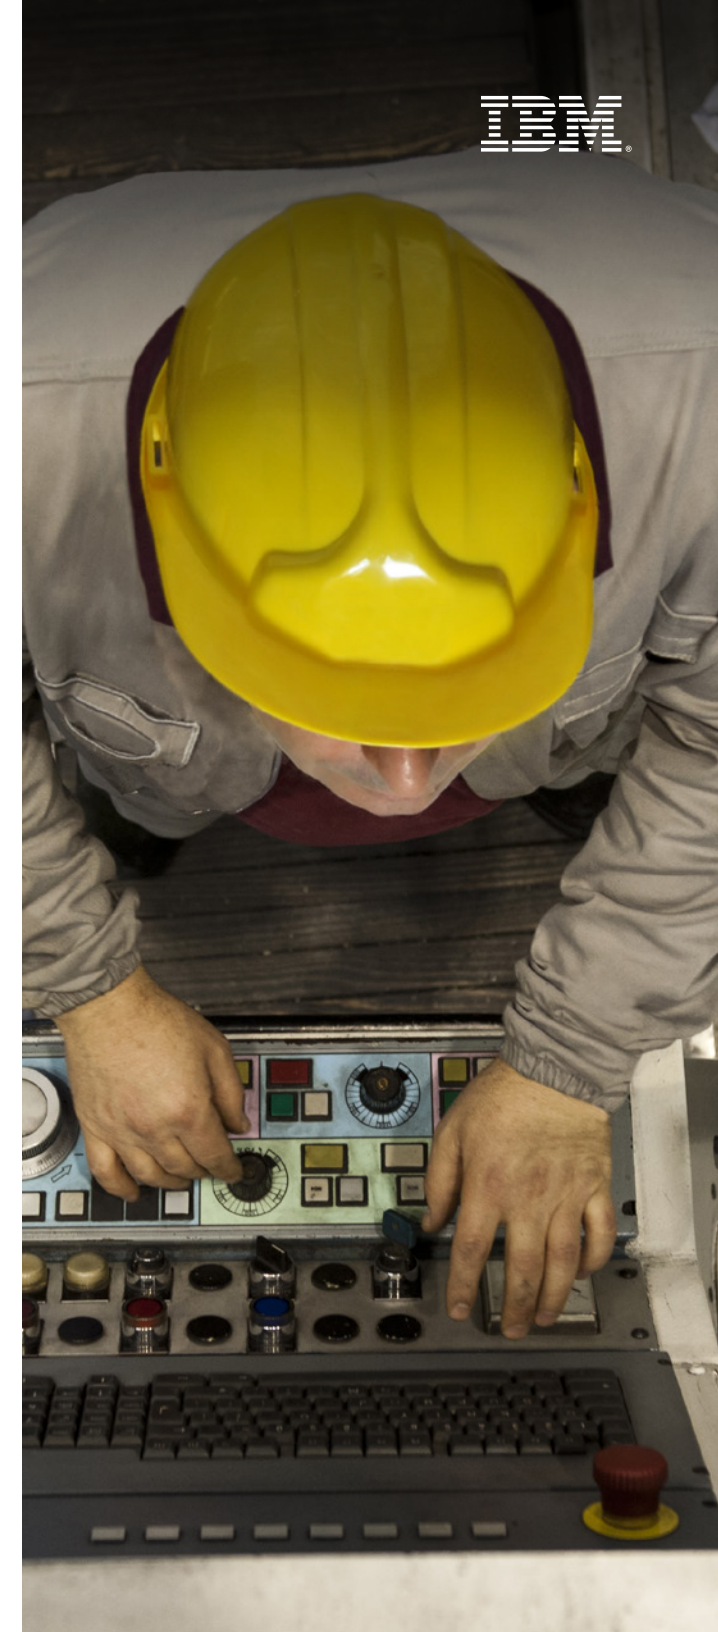

Optimize asset performance and reduce downtime and costs

A resilient enterprise needs productive maintenance and operations. If critical assets aren't managed and maintained effectively and efficiently, labor and maintenance costs go up while ROA – and ultimately ROI – go down.

To sustain uptime and reliability, operations leaders require near real-time access to asset history and operational data. That data needs to be shared across maintenance, operations and reliability teams, too, to help them quickly resolve issues.

[IBM Maximo Manage](#), part of the IBM Maximo Application Suite, offers a comprehensive, easy-to-deploy platform that delivers the right asset operational data at the right time to operations and asset management professionals.

Built on 30 years of market leadership in the enterprise asset management (EAM) space, Maximo Manage brings teams together to manage and maintain assets in ways that significantly enhance the asset lifecycle and reduce unexpected issues that impact uptime and team productivity. With Maximo's leading asset management data and workflows at the core, Maximo Manage is the foundation of an effective asset management strategy.

A new, intuitive UX simplifies the job of technicians, serving up information-rich asset and procedural knowledge. That means any technician or maintenance professional can easily leverage an asset's history, logs, inspection records and job plans. And that information continuously improves. Infused with industry best practices, this intelligent EAM solution gets smarter over time. That means improved inspection/rounds, a move to condition-based maintenance, support for field management, increased productivity and first-time fix rates.

The bottom line: when your team has access to real-time asset data and all the information they need at their fingertips, you can rest assured that they have the confidence to get the job done.

Industry solutions for best-of-breed workflows and data models

Not all organizations are created equal, and a "one size fits all" approach to enterprise software often misses the mark. With IBM Maximo, decades of industry-specific data and workflows are embedded in our industry solutions. That means you can adopt the workflows and processes best suited to your needs to enhance not just your operations but your competitiveness, too.

Maximo Manage offers industry solutions for:

- Aviation
- Civil Infrastructure
- Oil and Gas
- Transportation
- Utilities (including Nuclear)

These industry-specific solutions help reduce adoption challenges that impact productivity. They also align to unique industry challenges, as well as market and regulatory requirements. This allows your maintenance, operations and reliability teams to reduce the complexities created when data, process, and even semantics get in the way of solving the enterprise issues and adopting a market-facing orientation.

Add-ons and applications to configure to your unique challenges

Maximo Manage includes popular features like Scheduler, Linear and Calibration. It can also be easily extended with add-on capabilities. These enable your team to better manage, track and connect your assets to your workforce and systems.

IBM Maximo Manage

Choose from Mobile, Spatial, Service Provider, ERP Connectors, HSE (Health, Safety, Environmental) and Configuration Management features to help you address specific functional challenges, and keep your technology integrated with the data your team members rely on every day.

About the IBM Maximo Application Suite

The IBM Maximo Application Suite transforms how organizations operate. It is a market-leading and fully integrated EAM/CMMS/APM suite that uses advanced analytic tools, AI and IoT data to improve operational availability and reduce risk. That gives maintenance, operations and reliability leaders the tools they need to operate high-value physical assets with visibility and control across the enterprise.

By using this centralized platform approach, Maximo Application Suite brings disparate teams and data together to optimize performance, extend asset life cycles, and reduce operational downtime and costs.

With multiple deployment models, you can maintain all asset type no matter where they reside, set up new assets quickly and upgrade enterprise asset management (EAM) software automatically for nonstop uptime, reduced costs and minimized risk.

As part of this IBM Maximo Application Suite, Maximo Manage can be deployed on premises or in any cloud environment. The platform helps your technicians scale their expertise, improve asset reliability, and streamline business operations. By connecting your organization through a single, intuitive and powerful platform, you can achieve true operational resiliency.

IBM Maximo in 90 seconds

Life is full of challenges, but you can take the chaos out of your operations.

Why Maximo Manage?

Complete Asset Management Solution

Maximo Manage is at the core of a comprehensive suite designed to provide maintenance, management and monitoring, all in one shared AI-powered platform.

Industry best practices out of the box

Maximo Manage has embedded industry solutions to that bring best-of-breed workflows and data models to help solve specific vertical challenges.

Customized to your functional business processes

Maximo Manage is configurable to your specific organization and business/industry challenges with dozens of add-ons and applications.

Available anywhere and anytime

Maximo Manage is architected for the hybrid-cloud and supports mobility to provide portability, extensibility and integration with enterprise systems and third-party data sources.

Why IBM?

IBM Maximo Manage expands upon the company's decades of leadership in the asset and operations management space. It leverages our deep commitment to asset and performance management by harnessing data science and AI at enterprise scale, as well as our recognized leadership in IoT platforms, hybrid cloud, security, and now, digital twin technology.

IBM supports your organization's digital re-invention by providing the tools for new efficiencies, risk reduction and improved customer satisfaction. The IBM global ecosystem of business partners has a track record of delivering solutions in over 90 countries, including industry-specific solutions and add-ons that delivers more rapid ROI. You'll find that IBM has the investments, ecosystems and experience to turn your assets and operations into a competitive advantage.
