IBM Maximo Manage

Empower your operations with intelligent asset and performance management
Benefits:

- Automate all aspects of maintenance for reduced risk and improved productivity
- Access centralized data and processes to optimize activities and improve uptime
- Benefit from role-based UX, dashboards and applications to increase productivity
- Customizable and extensible to support and enhance your enterprise workflow

Optimize asset performance and reduce downtime and costs

A resilient enterprise needs productive maintenance and operations. If critical assets aren’t managed and maintained effectively and efficiently, labor and maintenance costs go up while ROA—and ultimately ROI—go down.

To ensure uptime and reliability, maintenance leaders require near real-time access to operational data aligned to specific asset history. This provides insights that influence the appropriate actions and drive prioritization and work. Considering the operational conditions of assets, including environmental and other factors, it becomes possible to standardize alerts and identify false positives. This data should integrate with your existing enterprise applications and be shared across maintenance, operations, and reliability teams to enable them to resolve issues quickly.

IBM Maximo® Manage, part of the IBM Maximo Application Suite, offers a comprehensive, easy-to-deploy platform that delivers the right data—at the right time—to operations and asset management professionals on or off-line through any device of their choice.

Built on decades of market leadership in the enterprise asset management (EAM) space, Maximo Manage brings teams together to manage and maintain assets in ways that significantly enhance the asset lifecycle and reduce unexpected issues that impact uptime and team productivity. With Maximo’s leading asset management data and workflows at the core, Maximo Manage is the foundation of an effective asset management strategy.

The intuitive UX simplifies the job of maintenance professionals and technicians, serving up information-rich assets and procedural knowledge through a desktop or mobile device. The latest operational dashboard empowers maintenance managers by providing them with key performance indicators (KPIs) and swift actions while delivering critical information on asset’s history, trends, logs, inspection records and job plans to users. Infused with industry best practices, this intelligent EAM solution gets smarter over time. That means improved inspections and rounds, a move to condition-based maintenance, support for field management, increased productivity, and improved first-time fix rates.

The bottom line: when your team has access to real-time asset data, KPIs and all the information they need at their fingertips, you can rest assured that they have the confidence to get the job done.
Industry solutions for best-in-class workflows and data models

A one-size-fits-all approach to enterprise software often misses the mark. That’s why decades of industry-specific data and workflows are embedded in Maximo Manage industry solutions. That means you can adopt the workflows and processes best suited to your needs to enhance both your operations and your competitiveness.

Maximo Manage delivers a comprehensive view of all asset types, their conditions and locations, and the work processes that support them, to provide you with optimal planning, control, audit, and compliance capability across multiple industries: Aviation, Civil Infrastructure, Manufacturing, Oil and Gas, Transportation, and Utilities, including Nuclear.

These industry-specific solutions help reduce adoption challenges and accelerate the implementation time. They also align to unique industry challenges and regulatory requirements. This allows your maintenance, operations, and reliability teams to reduce the complexities created when data, process, and even semantics get in the way of solving enterprise issues and adopting industry standards.

Add-ons and applications available to address unique challenges

Maximo Manage includes popular features for map functions and viewing work and assets spatially, for planning, scheduling and dispatching work, managing linear assets like roads and rail, and the ability to calibrate assets. Further, you can extend it with optional add-on capabilities that enable your team to better manage, track and connect assets to your workforce and systems.

For example, Envizi ESG Suite and Configuration Management features—Service Provider, ERP connectors, and HSE (Health, Safety, Environmental)—can help you address specific business challenges and keep your technology integrated with the data your team members rely on every day.

About the IBM Maximo Application Suite

The IBM Maximo Application Suite transforms how organizations operate. A market-leading EAM (enterprise asset management) and CMMS (computerized maintenance management system), this solution combines asset performance management (APM) and reliability centered maintenance (RCM) capabilities in a single platform that uses advanced analytic tools, AI and IoT data to improve operational availability and reduce risk. This gives maintenance, operations, and reliability leaders the tools they need to manage the critical high-value physical assets with visibility and control across the enterprise.

By using this centralized platform approach, Maximo Application Suite helps bring disparate teams and data together to optimize performance, extend asset life cycles, and reduce operational downtime and costs.

As part of this IBM Maximo Application Suite, Maximo Manage can be deployed as SaaS, on-premises or in any cloud environment. The platform helps your technicians scale their expertise, improve asset reliability, and streamline business operations. By connecting your organization through a single, intuitive, and powerful platform, you can achieve true operational resiliency.
Why Maximo Manage?

Complete asset management solution
Maximo Manage is at the core of a comprehensive suite designed to provide maintenance, monitoring and reliability—all in one shared AI-powered platform.

Industry best practices out of the box
Maximo Manage has embedded industry solutions that bring best-in-class workflows and data models to help solve specific vertical challenges.

Addressing your unique business processes
Maximo Manage can address the specific challenges of your organization, business, and industry with dozens of add-ons and applications that can be tailored to support multiple processes and use cases.

Available anywhere and anytime
Maximo Manage is architected for hybrid cloud and supports mobility to provide portability, extensibility and integration with enterprise systems and third-party data sources.

Why IBM?

IBM Maximo Manage expands upon the company’s decades of leadership in the asset and operations management space. It is underpinned by our deep commitment to asset and performance management by harnessing data science and AI at enterprise scale, as well as our recognized leadership in IoT platforms, hybrid cloud and security.

IBM supports your organization’s digital re-invention by providing the tools for new efficiencies, risk reduction and improved customer satisfaction. The IBM global ecosystem of business partners has a track record of delivering solutions in over 90 countries, including industry-specific solutions and add-ons that delivers more rapid ROI. You’ll find that IBM has the investments, ecosystems, and experience to turn your assets and operations into a competitive advantage.
