

As hybrid cloud adoption grows, so does the need to manage and access data across the enterprise including the public cloud.

60%

It is predicted that by 2022, 60% of organizations will have invested in automation, orchestration and development of life-cycle management for cloud-native applications and platforms.¹

57%

57% of respondents have deployed containers in production.²

2025

It is predicted that by 2025, nearly 66% of enterprises will be prolific software producers with code deployed daily, and that over 90% of new enterprise apps will be cloud native.³

Storage platform

Storage services

Application runtime management

Enterprise storage architecture for next-generation applications

IBM Spectrum[®] Fusion

(anticipated release date 2H 2021), is being designed with the aim of:

Providing a faster and lower-cost path to AI and hybrid cloud

Bridging the gap between applications and the storage platform

Fusing storage platform and services into a single application-aware storage architecture
