

IBM i + IBM Power Systems is a winning combination for Insurance

Insurers are undergoing rapid transformation in the digital era. Customers demand the best service and experience 24/7, from anywhere, on any device. As customer demographics shift, self-service capabilities through mobile apps and chat bots are no longer a “nice to have,” but are now required to reach new buyers. Customers also expect that their personal information is being kept secure and protected at all times.

To support this transformation and provide customers with the best service and digital experience possible, insurers need an IT

infrastructure that can rapidly scale up and is secure at all layers of the stack. IBM i on IBM Power Systems has been the foundation of insurers for 30 years, and is powering new business initiatives and revenue streams with cloud and IBM Watson capabilities. PowerHA for IBM i provides local high availability solutions so your business is never down when a customer needs your service the most. See below how IBM’s insurance clients are transforming their businesses and supporting mission critical applications with IBM i on Power Systems.

Real Clients. Real Results.

Admiral Insurance

Admiral Insurance’s business depends on a number of core systems that run on IBM i on Power Systems. To protect the business-critical data held in these systems, Admiral has built a highly resilient IT architecture, mirroring their production data center with a disaster recovery data center offsite. The company has recently upgraded its IBM Power Systems to support its growing business and revenue.

Manhattan Life Group
