IBM Cloud for Financial Services

IBM Cloud for Financial Services is a cloud designed to build trust and enable a transparent public cloud ecosystem with the specific features for security, compliance and resiliency that financial institutions require.

IBM secure and enterprise-grade public cloud with extensive service-deployment options—like VMware and Red Hat OpenShift as a service—is equipped to meet the specific requirements of financial services institutions.

Mission-critical workloads

"Lift and shift" workloads from on-premises and private cloud environments to the public cloud.

IBM Cloud Security and Compliance Center

This platform and dashboard provides a unified experience to view and manage security and compliance postures.

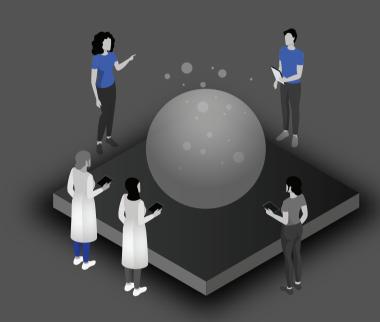

End-to-end data encryption with extensive control

IBM offers the industry's strongest commercially available state-of-the -art cryptographic technology.

Workload-centric security by default

Integrated container security and DevSecOps for cloudnative applications with Red Hat OpenShift as a service.

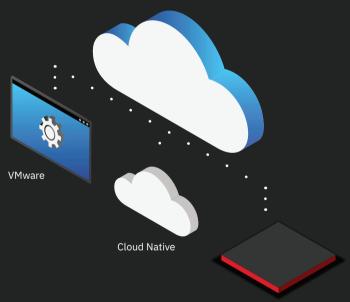

Technology Compliance Advisor

A joint IBM Security Services and Promontory solution aimed at identifying and incorporating enhanced controls within the IBM Framework to align with changing regulatory requirements.

IBM Cloud Framework for Financial Services

Set of rules and policies developed by IBM, Promontory and leading banks (such as Bank of America and BNPP) that define configurations and controls to be put in place in line with industry requirements.

RedHat Open Shift

Management & Control

IBM Cloud offers the Architecture for Regulated Workloads, built with IBM Cloud services and mapped to the Framework.

Key Benefits

Reshape the customer experience

Digitalize operations

Gain competitive advantage and unlock revenue opportunities

Reduce risk
