

Data Sheet

Enterprise-wide federated image viewing and sharing in a single, interoperable platform

iConnect Access

Patients are imaged in multiple locations and their files must follow them to the point of care so they are available to the entire care team when needed. Providing cost-effective treatment requires the ability to holistically view and share the complete longitudinal record anytime, anywhere. However, delivering on these expectations is far easier said than done.

Almost \$100 billion is spent on imaging in the US annually. Factor in its growth rate, and that figure could almost double in five years.

PayerFusion, "Diagnostic Imaging Cost Containment Strategies", Blog Post, March, 2014

Watson Health Interoperability Solution Suite

IBM iConnect Enterprise Archive

Archive enterprise-wide DICOM and non-DICOM information for a consolidated view of patient images at the point of care.

iConnect® Capture

Ingest, store, and manage any type of non-DICOM content.

How we can help

iConnect® Access* image-enables applications at the point of care, creating a more efficient environment for both physicians and patients. With this powerful solution, you can view and share images through a zero-footprint, universal viewer, providing a complete longitudinal history of DICOM and non-DICOM images—including advanced 3D visualization, and side-by-side image comparisons—all in a single view. With no user seat license limits, iConnect Access can also help grow referral business, providing the ability to view and share images throughout the referring community, the entire care team, and across the enterprise.

iConnect Access is a zero-download image viewer and sharing platform that empowers your enterprise to review DICOM and non-DICOM images in a single pane of glass with advanced tools from your browser-based device whenever and wherever needed. iConnect Access enables you to:

- Create a single view of images from any department, -ology or service line including but not limited to radiology, cardiology, ophthalmology, orthopedics, dermatology and ENT
- Grow your referral business by providing access to view, upload, share and use 3D functionality on exams
- Reduce IT costs with a zero-download viewer and simultaneously use both LDAP directories and local application accounts for the user
- Image- and upload-enable EMRs and portals to streamline workflows
- Exchange images to create a more complete patient record

Watson Health Interoperability Solutions

As a key component of the Watson Health Interoperability Solution Suite, iConnect Access creates a better imaging experience by empowering physicians and patients to access images anywhere, anytime.

The Watson Health Interoperability Solution Suite, which includes IBM iConnect® Enterprise Archive, iConnect Access and iConnect® Capture, provide advanced capabilities designed to help healthcare organizations seamlessly ingest, manage, store, view, share and exchange imaging-related healthcare data. They also enable users to leverage existing applications and widely-used web and healthcare technology standards to create a vendor-neutral, interoperable environment that enhances collaboration. This capability extends beyond the four walls of the enterprise. Patients are more engaged with their care by actively sharing pictures, videos, etc. with their physicians who can add this information to the EHR record.

Statement of Good Security Practices: IT system security involves protecting systems and information through prevention, detection and response to improper access from within and outside your enterprise. Improper access can result in information being altered, destroyed, misappropriated or misused or can result in damage to or misuse of your systems, including for use in attacks on others. No IT system or product should be considered completely secure and no single product, service or security measure can be completely effective in preventing improper use or access. IBM systems, products and services are designed to be part of a lawful, comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products or services to be most effective. IBM does not warrant that any systems, product or services are immune from, or will make your enterprise immune from, the malicious or illegal conduct of any party.
