

PROGRESS IS

connecting cities to fuel growth and prosperity via the cloud

IBM Municipal Shared Services Cloud | Inefficiency is an issue that impacts all 1,600 local governments in New York State. But IBM Research and SCA are partnering with the State of New York to help reduce inefficiencies and eliminate waste — by creating a shared service cloud for its municipalities, the state government can streamline applications and provide a uniform view of the same citizen.

With cloud on the mainframe, municipalities will share vital data to increase productivity and attract new growth.

Streamlining costs while fostering growth
That's government, redefined
