

IBM Managed Services for Cloud Consumption SaaS/laaS -

IBM Managed Services for Cloud Consumption – AWS

IBM Managed Services for Cloud Consumption (IMS4CC) provides a SaaS platform that bundles value-added management services combined with the ability to procure a single Cloud Service Provider (CSP) cloud consumption. The first IMS4CC family offering provides a “pay-per-use” cloud consumption and delivery model, initially for AWS usage with other CSPs to follow.

IBM Managed Services for Cloud Consumption Silver provides account management including billing and administration, cost reporting and optimization services. This base level of managed services capability, “Silver”, is often requested as a minimum level of cloud management support by Federal clients and is enabled by IBM Cloud Management Platform tooling.

IBM Managed Services for Cloud Consumption runs in a DISA Impact Level 5 (IL5) and FedRAMP High cloud enclave so the client’s data is always protected at the appropriate level.

IBM’s Cloud Services provides access to the Government approved cloud services from AWS including all AWS US Commercial Regions and AWS GovCloud Region.

GSA Pricing for Cloud IMS4CC w/ AWS Consumption				
SIN	Item	PPA DESCRIPTION	IBM Price w/out GSA IFF	IBM Price Including the GSA IFF
518210C	Set Up Fee	One Time Charge Set up Fee	\$ 4,950.00	\$4,987.41
